	Believing each of these to be and to exist, the Father truly Father, and the Son truly Son, and the Holy Ghost truly Holy Ghost, as also our Lord, sending forth His disciples for the preaching, said, 'Go teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost.' Concerning whom we confidently affirm that so we hold, and so we think, and so we have held aforetime, and we maintain this faith unto the death, anathematizing every godless heresy.	But those who say 'Once He was not,' and 'Before He was begotten He was not,' and 'He came into existence out of what was not,' or 'That the Son of God was of a different essence (*hypostasis*) or being (*ousia*),' or 'That He was made,' or 'is changeable or mutable,' those the Catholic Church anathematizes.

As Gwatkin has shown so clearly, the victory of Nicæa was a surprise rather than a solid conquest—a revolution which a minority had forced through by sheer strength of clearer Christian thought.[1] Therefore a reaction was inevitable and a long controversy followed. It was not till A.D. 362 that all the scheming and creed-making on Arian lines came to an end, when the most influential of the semi-Arian leaders, who had consistently opposed the introduction of un-Scriptural words, such as *homoousios*, into Creeds, were won over to the orthodox side because they found that only thus could they guard the sense of Scripture.

About this time many local Creeds were revised by the insertion of Nicene terms. By far the most important was the revised Jerusalem Creed, which is found in a treatise of Epiphanius, Bishop of Salamis, called *The Anchored One*, written about A.D. 374. A French scholar of the 17th cent., Denys Petau, pointed out that this was the Creed afterwards ascribed to the Council of Constantinople. But it was Hort[2] who first pointed out the importance of the argument which may be built up on the fact, and his theory connecting it with Cyril of Jerusalem has been accepted by most critics. He compared it with the form which Cyril taught his catechumens in his Catechetical Lectures (*c.* 347).[1]

	Creed of Jerusalem.	Creed of Epiphanius.
I.	1. We believe in one God, the Father Almighty, maker of heaven and earth, and of all things visible and invisible.	1. We believe in one God, the Father Almighty, maker of heaven and earth, and of all things *both* visible and invisible.
II.	2. And in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father, very God, before all worlds, by whom all things were made,	2. And in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father before all worlds—*that is of the substance of the Father*,—Light of Light, very God of very God, begotten, not made, being of one substance with the Father, by whom all things were made, *both that are in heaven and that are in earth*; who for us men and for our salvation came down from heaven,
	3. and was incarnate and was made man,	3. and was incarnate of the Holy Ghost and the Virgin Mary, and was made man,
	4. was crucified and was buried,	4. and was crucified for us under Pontius Pilate, and suffered and was buried,
	5. and rose again the third day,	5. and rose again the third day, according to the Scriptures.
	6. and ascended into heaven,	6. and ascended into heaven,
	7. and sat at the right hand of the Father,	7. and sitteth at the right hand of the Father,
	8. and is coming in glory to judge the quick and the dead, whose kingdom shall have no end.	8. and is coming again with glory to judge the quick and the dead; whose kingdom shall have no end.
III.	9. And in one Holy Ghost, the Paraclete, who spake in the prophets,	9. And in the Holy Ghost, the Lord and Giver of life, who proceedeth from the Father, who with the Father and the Son together is worshipped and glorified, who spake by the prophets:
	11. and in one baptism of repentance for the remission of sins,	10. in one Holy Catholic and Apostolic Church.
	10. and in one Holy Catholic Church,	11. We acknowledge one baptism for the remission of sins.
	12. and in the resurrection of the flesh, and in the life eternal.	12. We look for the resurrection of the dead, and the life of the world to come.

Three important changes must be noted, which tend to prove that Cyril was the author of this revision, since they agree with the teaching in his lectures; (i.) Art. 7 from *sat* to *sitteth*;[2] (ii.) Art. 8 from *in glory* to *with glory*;[3] (iii.) Art. 12 from *resurrection of the flesh* to *resurrection of the dead*.[4] To these we add the skilful insertion of some of the Conciliar language, including the term *homoousios*, which marked the return to full communion with Athanasius and his allies. What could be more natural than that Cyril, after his return from exile in A.D. 362–364, should so revise his Creed? Epiphanius had connexions with Jerusalem and had lived in Palestine, so his acquaintance with the Creed is easily explained. The theory has been questioned by Lebedeff, who maintains that Epiphanius wrote down the original Nicene Creed, and that the revised Creed has been interpolated

by a copyist. He also maintains that the Jerusalem Creed reconstructed from the pages of Cyril is the invention of scholars.[1] Gibson also calls attention to the new material in the second division of the Creed 'new both to the Creed of Nicæa and to the Creed of Jerusalem, so that even if the Creed of Jerusalem lies at the basis of the Enlarged Creed, it has been revised by the help of other Creeds, as those of the *Apostolic Constitutions* and the Church of Antioch.'[2] This dependence had not escaped the notice of Hort, and the sources may be regarded as one, since the Seventh Book of the *Apostolic Constitutions* comes from Antioch, and was put together *c.* A.D. 375. Cyril's friendship with Meletius, Bishop of Antioch, is quite enough to explain why he should also make use of the Creed of Antioch.

We may regard the case for the opposition as 'not proven,' but it is clear that Hort's theory must be tested again in the light of all new evidence. He supposed that the subsequent connexion of the revised Creed with the Council of Constantinople in A.D. 381 could be explained by the suggestion that Cyril brought it to prove his orthodoxy. But, since Cyril's leader, Meletius, became first President of that Council, there could be no question about Cyril. A more probable theory has been suggested by Kunze. After the death of Meletius, and the resignation of Gregory of Nazianzus who succeeded him, the new Bishop of Constantinople was Nectarius, Prætor of the city, who at the time of his election was unbaptized. His name seems to have been suggested to the Emperor by Diodore of Tarsus. At the end of the Council of Chalcedon (A.D. 451) all the Bishops signed the decrees with little notes. One of them, Callinicus, Bishop of Apamea (=Myrlea) in Bithynia, referred to the Council of Constantinople as having been held at the ordination of the most pious Nectarius the Bishop, and Kunze suggests that there was some connexion in his mind between the Creed and the consecration of Nectarius. Probably the revised Creed was professed at his baptism, and became from that date the Baptismal Creed of the city. It would naturally be quoted in the Acts of the Council, now lost, from which it was cited at the Council of Chalcedon as the Creed of the 150 Fathers, the original Nicene Creed being accurately distinguished from it as the Creed of the 318 Fathers.

It is not easy to decide on the true form of the text cited at Constantinople, since the form quoted at the second Session varied from the form quoted at the sixth Session, and both from the form in Epiphanius. Copyists were continually at work assimilating the forms, and to them may be attributed the slight variations found in the pages of Epiphanius which are printed in italics. It is possible that the variations in the texts used at Chalcedon represent the already divergent texts used at Constantinople and Rome.[3]

The later history of the Creed is coming out into clear light. It is probable that the words 'and the Son' in the clause about the Procession of the Spirit were added not by the Council of Toledo in A.D. 589, when King Reccared accepted the Nicene Creed and abjured Arianism, but by later copyists. The Creed thus interpolated spread into Gaul. In A.D. 802, Charles the Great sent a deputation to consult Pope Leo on the text, controversy having already arisen in Palestine between representatives of the Eastern and Western Churches on the point. Leo freely admitted that it was quite orthodox to teach that the Spirit proceeded from the Father and the Son, but deprecated the insertion of the words in the Creed, the Roman Church agreeing with the Eastern theologians as to its form. He even advised the Emperor to give up singing it in his chapel, thus emphasizing the interpolation. But the use continued, and in A.D. 1014 the Emperor Henry II. prevailed on Benedict VIII. 'to chant the Symbol at the Holy Mysteries'; and thus came in the use of the interpolated Creed.

The Western theologians start from the point of view of the immanent Trinity, from meditation on the *coinherence* of the Divine Persons, while their Eastern brethren are willing to accept the phrase 'from the Father *through* the Son,' as guarding the truth that there is only one Fount of Deity. It is one of the saddest facts of history that a merely verbal difference should keep Churches apart, since frank explanation on both sides could clear up the theological as well as the historical question.[1]

3. The 'Athanasian' Creed.—The history of the so-called Athanasian Creed—more correctly designated, after the analogy of the *Te Deum*, by its first words, *Quicunque vult*—is still at some points obscure. But we are no longer in doubt as to the dates of the important MSS. With the help of photographs, palæographers are enabled to decide that some MSS belong to the 8th cent.; one, in the famous Ambrosian Library at Milan, may even be of the end of the 7th (*Cod. Ambrosianus*, O. 212 *sup.*).

The famous two-portion theory, put forward by Swainson and Lumby, has been shown to rest on precarious foundations, and may be dismissed without further notice. We have not yet reached ultimate certainty about small details in the text, the order of certain words, the use of the conjunction *et*, or the claim of the form *surrexit* against the reading *resurrexit*, but any polishing which the Creed had received in the course of its long history is of small account, now that we can say that it reaches us substantially as it was written. It belongs to the class of individual, private confessions of faith, and is, properly speaking, an instruction rather than a Creed, which may be offered as a substitute for the Apostles' Creed, or a canticle parallel to the *Te Deum*, with which it found its way into an appendix to the Psalter from the end of the 8th century.

There is little doubt that it can be identified with 'the Faith of the holy prelate Athanasius' commended by a Synod of Autun, which was presided over by Bishop Leodgar (*c.* A.D. 670), to be learnt by heart by all clergy.

Some forty years earlier, in A.D. 633, it had been quoted by the Fourth Council of Toledo together with the so-called Creed of Damasus. The clauses quoted were 4, 20, 21, 22, 28, 29, 31, 33, 35, 36, 37, (39), 40, so that it is evident that the Spanish theologians had the whole text before them.

We can also trace quotations with great probability in the sermons of Cæsarius of Arles, the great preacher of the 6th cent. (†543), as has been proved beyond question by Morin.[2]

Any doubts which may be felt about the authorship of the pseudo-Augustinian sermon 244 do not affect the general argument. Morin pointed out that the Creed reproduces both the qualities and the literary defects of Cæsarius. In his recent lectures at Oxford he was disposed to put the date later.[3]

The proof is not yet forthcoming that the *Quicunque* belongs to the time of Cæsarius, if it is not from his pen. The argument of Waterland,

[3] *JThSt*, Jan. 1911, p. 161. His criticism of all current theories, including his own, is too sweeping, but deserves most careful study.

that it belongs to Apollinarian times, still carries much weight. The fact remains that the illustration from the constitution of man's nature in clause 35, though it had been used freely by St. Augustine, as before him by St. Ambrose, was misused by the Eutychians, who pleaded for one nature in Christ, as soul and body make one nature in man. After the rise of their heresy, Catholic writers shrank from using it, but there is no hint that the author of the *Quicunque* feared such doctrine, since he could easily have inserted teaching that Christ is consubstantial with us in the one nature as He is consubstantial with the Father in the other. Such phrases had been used in Gaul by Cassian before the rise of Eutychianism, and so were ready to hand.

Waterland points out that the Unity of Christ's Person is taught, but not as if it were endangered by Nestorian error. 'There is not a word of the Mother of God, or of one Son only, in opposition to two Sons, or of God's being born, suffering, dying—the kind of expressions of which the Creeds are full after Nestorius's times, and after the Council of Ephesus.'[1] Indeed, the parallels to clauses 32–35 in Vincentius and Faustus are, as it were, sharpened by subtle turns of phrase, just as we find Alcuin and Paulinus of Aquileia sharpening by slight changes their quotations from the *Quicunque*, against the revived Nestorianism of the Adoptianists of the 8th century.

Moreover, there is a new line of argument which was not open to Waterland. In the recently discovered writings of Priscillian we have trustworthy evidence of a heresy which spread from Spain to Gaul in the beginning of the 5th cent., and which called for close vigilance and reasoned arguments from Church teachers to counteract it. The *de Fide* of Bacchiarius is the apology of a monk who came from Spain into Gaul at that time, and was closely examined by the Gallican bishops as to his faith, and it is a significant fact that it has been preserved only in the Ambrosian MS of the *Quicunque*. The heresy of Priscillian was both Sabellian and Apollinarian. He confused the Persons of the Trinity, and denied that the Lord had a human soul, as the following passages may suffice to prove. In his *Blessing over the Faithful* he writes:

'For thou art God who . . . art believed as one God, invisible in the Father, visible in the Son, and art found as Holy Spirit united in the work of both';[2] and 'Finally our God assuming flesh, assigning to Himself the form of God and Man, that is, of Divine soul and human flesh' . . .[3]

When language so inaccurate was vehemently put forward as Catholic teaching, there was need of a summary of Catholic belief on the Trinity and the Incarnation, which should lay due stress on the responsibility of the intellect in matters of faith, and at the same time do justice to the moral aspect of these problems, and prove that faith worketh by love, that only they that have done good shall go into life eternal. The *Quicunque* exactly meets these requirements. May it not have been written for the purpose?[4]

This suggestion of the present writer has been warmly accepted by Künstle,[5] who has made a special study of Spanish canons and treatises against Priscillianism, though he vitiates the argument by assuming that all such writings against Priscillian must have a Spanish origin—for which there is no proof.

From the time of Antelmi the parallels in the *Commonitorium* of Vincentius of Lérins have been held to prove his acquaintance with the *Quicunque*, if not his authorship, which seemed probable to Ommanney (1897) as to Antelmi (1693). Perhaps it is rash to attempt to discover the author. Certainly Waterland's quotation from the funeral sermon which Hilary of Arles preached after the death of Honoratus, his predecessor both in the See of Arles and in the Abbey of Lérins, if it suggests acquaintance with the *Quicunque*, suggests also that Honoratus, rather than Hilary, was the author:

'A daily witness wast thou, moreover, in thy most sincere discourses of the confession of Father, Son, and Holy Spirit: nor surely has any one treated so emphatically, so clearly, of the Trinity of the Godhead, since thou didst distinguish the Persons therein and yet didst associate them in eternity and majesty of glory' (*Vita Honorati*, 38).

With this we may compare a quotation from a sermon on the same lines by Faustus, who, like Hilary, had been a loyal disciple of Honoratus:

'Therefore, beloved, that we may gain that which he has obtained, let us first follow that which he taught: and, first of all, let us hold the right faith: let us believe Father and Son and Holy Ghost (to be) one God. For, where there is unity, there cannot be inequality: and, since the Son, because He is God, is perfect, complete, and full, that fullness certainly cannot be described as "less"' (*in Depositione S. Honorati*).

Whatever may be thought about the praise here given to Honoratus as a teacher on the very lines of the *Quicunque*, there can be no question as to the ability and earnestness of the community which he had gathered round him during the years A.D. 420–430. In their happy island-home was focused all that the Gallican Church could show of learning and piety. Their age contrasts favourably with the following century, when Cæsarius represents the last hope of the ancient culture, and when the rising tide of barbarism was about to sweep away all its landmarks—a century in which the composition of the *Quicunque* would seem to be incredible.

The arguments of Brewer, that the *Quicunque* is a work of St. Ambrose, have not received any measure of support, and do not seem to be based on any fresh evidence; but they certainly strengthen the argument for a 5th cent. date, by proving, far more conclusively than any one has hitherto discovered, that St. Ambrose, no less than St. Augustine, came close to the very language of the Creed.

The early history of the Creed is, however, of less importance than the history of its use. The revived interest in Church music, which was fostered in the schools of Charles the Great, led to its use as a Canticle. Abbot Angilbert of St. Riquier (*c.* 814) records that it was sung in procession on Rogation Days, and before long it was so sung in the Office of Prime. But such was not the only use made of it, or, indeed, the most primitive, since the extremely interesting preface to the (so-called) Oratorian Commentary, possibly from the pen of Theodulf of Orleans, speaks of its use by clergy as a manual of Christian teaching, which reminds us of the Canon of Autun as well as of the use made of it by Cæsarius. Addressing a Synod, the writer says that he has carried out their instructions 'to provide an exposition of this work on the Faith, which is up and down recited in our churches and continually made the subject of meditation by our priests.' Similar use is directed in the 9th cent. by many prominent teachers—Hayto of Basel, Anskar of Bremen, and Hincmar of Rheims.

In the Middle Ages the use at Prime spread everywhere, and recent researches have proved that the whole service of Matins, including Lauds, Prime, and Terce, was most popular in England as a preparation for the Mass. William Langland, in 'Piers the Plowman,' at the end of the 14th cent., writes of the duty of all classes to cease from work on Sundays, 'God's service to hear, Both Matins and Mass.' But the fact remains that comparatively few of the people understood Latin, although the devout layman of the upper classes who could afford to possess a breviary would, of course, be able to read and follow it in

the Office. There are several early translations into the vernacular, at one time Norman French, at another Old English; but there is no evidence of any wide-spread acquaintance with it in such translations. In the First Prayer Book of Edward VI. the English Reformers directed that the Athanasian Creed should be 'sung or said' after the Benedictus, at the greater Feasts. In the Second Prayer Book the number of Feasts was increased at which the use of it was obligatory, and only in 1662 was it substituted for the Apostles' Creed, which had hitherto followed it.

In the controversy of the present day no amended translation is likely to bring peace, such as the translation put forward by the Archbishop of Canterbury's Committee. The real crux lies in the difficulty which is felt about using the warning clauses in a mixed congregation on days when it is impossible to preach an explanatory sermon. A relaxation of the rule, such as permission to use it at the first evensong of the Festivals of Christmas, Easter, and Whitsunday (when the clergy, and presumably the instructed faithful, could well make it, as the author of the Oratorian Commentary suggests, 'a subject of meditation'), would meet the difficulties of wounded consciences on both sides. The Roman Catholic Church uses it still in Prime, chiefly in Advent and Lent. The Eastern Church has only put it in an Appendix to the Hour Offices, without any directions for use.

Conclusion.—Looking back over the history of the three great Creeds, one is amazed at the comparative simplicity of the great truths thus singled out by the common sense of the Church, through the centuries, as of primary importance. We are not concerned with the credibility of miracles as such, only with the evidence that the first witnesses believed that Christ rose from the dead and sent down His Spirit. The earliest forms of Creed present an Historic Faith which summed up their gratitude for the mystery at last revealed through the Spirit to the Church, with the assurance of forgiveness of sins and resurrection to a better life. The theological terms of the Nicene and Athanasian Creeds do not bring in metaphysics of set purpose, or condemn the Church to wander in a barren wilderness of controversy. Athanasius himself did not invent or suggest the use of the phrase '*of one substance.*' He was moulded by it. He found in it a bulwark of the ancient belief that the Son was one with the Father (Jn 10^{30}) and to be worshipped with Him. He had no word for 'Person.' It was reserved for the genius of Augustine to make that term current coin, even though he shrank from the boldness of his thought. Let us note that it was on psychological rather than metaphysical lines that he approached the problem, led on by deep musing on the mystery of his own personality to speculation on the deeper mystery of Divine Personality. And in the first part of the *Quicunque*, whether the author owed little or much to Augustine, it is by the measure of such musings that it must be valued. The very bravery of the antitheses ranging through the great series of Divine attributes—uncreated, infinite, eternal, almighty—shadows forth the truth of the equal glory and co-eternal majesty, and excludes every rationalistic explanation—Sabellian, Arian, or Priscillianist. But this is definitely the Creed of the Church teacher, face to face with errors which are common to the human mind in every age and everywhere. In the hour of death the words of the ancient Baptismal Creed suffice as 'an anchor of the soul . . . entering into that which is within the veil' (He 6^{19}).

A. E. BURN.

CREED (Egyptian).—In seeking to arrive at a conception of the Egyptian creed, we are met by the fact that, generally speaking, the Egyptian never attempted to formulate or define a body of doctrine with regard to the multitude of gods worshipped in his land. This absence of any systematic theology is due mainly to the prevalence of the idea of the local god. The Egyptian State rose out of a number of small independent tribes, and, even after the unification of the kingdom at the beginning of the Dynastic period, the original subdivisions still existed in the shape of the 'nomes' or provinces, roughly 42 in number, into which the land was divided. Each original tribe possessed its own local god, supreme in his own district; and these gods continued to be worshipped as separate divinities, though they were, in many cases, mere duplicates of those existing in other localities. The Egyptian never attempted to bring any unity out of this confused mass of deities, to reduce to order the conceptions held with regard to them, or to discard their inconsistencies and contradictions. If, as frequently happened, one local god came to be acknowledged in another locality, his new worshippers simply took over his old titles and myths, regardless of the fact that thus they sometimes duplicated the legends of their own local god, and sometimes introduced contradictions to them. The extraordinary confusion of ideas thus produced is apparent everywhere, and can perhaps be seen most clearly in the different strata of beliefs with regard to the life after death which lay side by side in the Egyptian mind, apparently without its ever being perceived that they were inconsistent with one another, or at least without any attempt being made to remove their contradictions and to arrive at a coherent system of belief.

This statement has to be qualified to some extent by the fact that, at certain periods of Egyptian history, particular gods did rise to much more than merely local supremacy, and attained a more or less general acknowledgment. Thus from the time of the Vth dynasty the solar god Ra, who was looked upon as the founder of the reigning house, rose into prominence, and from that time onwards secured fairly general acknowledgment, the local gods being frequently identified with him. In the XVIIIth dynasty, again, Amen, the local god of Thebes, rose, with the rise of the Theban princes, to a position of supremacy which was not lost till far on in the decline of the Empire. And the worship of Osiris, the god of the dead and of the resurrection—probably one of the very oldest of Egyptian cults—was always more or less general, though he, too, had his local supremacy. In spite, however, of these exceptions, the local gods still continued to be worshipped side by side with the deity whose cult was for the time prevalent, and their myths were still accepted, regardless of the fact that they might be either identical with, or contradictory to, those of their brother god. It is evident, therefore, that we cannot expect to find any single and definite summary of doctrine which can be called the Egyptian 'creed.' All that can be done is to summarize the beliefs most generally accepted on certain aspects of religion.

1. Beliefs with regard to the Creation and the cosmic gods.—Various attempts were made to arrive at something like a systematic idea of the

cosmic gods and their relationship to the Creation. The most complete and popular of these was due to the priestly college of An, or Heliopolis (the Biblical On). The priests of the sun-god at this town—from the most ancient times the most noted theological centre of Egypt—elaborated at a very early period a scheme of the relationship of the various members of the cycle of cosmic gods to one another and to the universe, and their doctrine of the great Heliopolitan *ennead* gives us what was perhaps the prevailing belief in the land, though it was held with various modifications in different localities. In their scheme there existed in the beginning a primordial liquid element, the *Nun* or *Nu*, from which there emerged the sun-god Ra-Tum. Ra-Tum begat of himself, and produced the male and female divinities Shu and Tefnut, who may be regarded as representing air (or the firmament) and moisture. From Shu and Tefnut, or perhaps by a fresh procession from Ra, came Seb and Nut, the earth and the starry heaven, and from Seb and Nut came the two further pairs of gods, Osiris and Isis (the Nile and the fruitful ground [?]), and Set and Nephthys (the barren desert land and its animal life [?]). The Creation reached its present form by the interposition of Shu, the air-god, who came between Seb and Nut, the earth and the heavens, as they were locked in embrace, and lifted up Nut, who since his interposition stands arched over Seb, her hands and feet touching the earth at the cardinal points, and her body adorned with the stars.

The Heliopolitan ennead must have been formulated at a very early period of Egyptian history, for in the Pyramid texts the list of the nine gods is given as above. The popularity of this scheme gave rise to various imitations of it, and other towns and districts formed enneads of their own, sometimes displacing one of the nine gods of Heliopolis to make room for their own local god, sometimes adding him to the nine, careless of the fact that thus their ennead contained ten divinities. Even as thus modified to suit local preferences, however, the Heliopolitan scheme did not meet with universal acceptance, and side by side with its doctrine of creation there existed other beliefs quite inconsistent with it. At Memphis the fabrication of the world was attributed to Ptah, who carved the earth like a statue; at Elephantinē to Khnum, who fashioned the world-egg like a potter working with his wheel; and at Sais to Neith, who wove the universe as a weaver weaves a piece of cloth. In the Creation-story preserved in the famous legend of the destruction of mankind, the heavens are represented, not by the woman-goddess Nut, but by the celestial cow, across whose body the sun-god journeys in his barque. It is probable that this attempt at a scientific grouping of the gods and explanation of the Creation was not so much a popular doctrine as a cherished possession of the various priestly colleges, who elaborated it and modified it to suit their local tastes and rivalries. See COSMOGONY AND COSMOLOGY (Egyp.).

2. **Beliefs with regard to immortality and the life after death.**—In dealing with these, we come into touch with what probably makes the nearest approach to a universally accepted body of doctrine to which the Egyptians ever attained. The idea of immortality has been nowhere more tenaciously held than in ancient Egypt, and the documents relating to it have an overwhelming preponderance in the religious literature of the nation. The most accepted form of belief is that associated with the cycle of Osiris legends. Osiris appears in the Heliopolitan ennead, though in a comparatively subordinate position; but as early as the period of the Pyramid texts he figures in a much more important rôle as the god of the dead and the source of immortal life to the blessed dead. The details of his myth do not concern us; but, briefly, the doctrine of the Egyptian religion taught that Osiris, a beneficent god and king, after being slain by the treachery of Set his malevolent antithesis, was restored to life again, justified before the gods against the accusations of Set, and made god and judge in the under world. Already by the time of the Vth dynasty the idea had been conceived that the story of Osiris was repeated in the case of each Pharaoh, and the conception gradually filtered down, until it was held that every man who was possessed of the necessary knowledge might after death become an Osiris, be restored to life, be justified before the gods, and enter into everlasting blessedness. Practically the Egyptian believed, from the earliest historical period, that, because Osiris died and rose again, and after being justified entered into everlasting life, therefore those who believed in him would share the same destiny. Ch. cliv. of the Book of the Dead makes the definite assertion of parallelism between the god and his worshipper:

'Homage to thee, O my divine father Osiris! Thou hast thy body with thy members. Thou didst not decay . . . thou didst not become corruption. I shall not decay . . . and I shall not see corruption . . . I shall have my being, I shall live, I shall germinate, I shall wake up in peace.'

It is impossible to say whether or not the Egyptian believed that Osiris suffered death on his behalf; certainly he believed that there was an essential connexion between the death and resurrection of Osiris and his own immortality. This belief is held, with no essential variations, throughout the whole historic period.

Definiteness ceases at once, however, when we pass from the fact of immortal life to the manner in which it is to be spent. Nowhere is the jumble of inconsistencies, which seemingly never worried the Egyptian mind, more hopeless than here. The prominent beliefs regarding the state and the abode of the blessed dead are at least four in number, each quite distinct from, and quite inconsistent with, all the others. The oldest and most wide-spread belief was that after death the deceased leads a second life under much the same conditions as those which ruled the first, dependent upon constant supplies of food and drink, and partaking in his new existence of joys similar to those of his former state. In this state the centre of the life after death is the tomb. Another very ancient idea places the abode of the dead in heaven, where they shine as stars in the firmament, and are privileged to take a place in the barque of the sun-god and to accompany him on his voyage through the heavens. A third conception assigns to the blessed dead a life of blissful labour and pleasure in the Egyptian Elysian Fields. The dead man flies up to heaven like a bird, or ascends a gigantic ladder, and, after passing through many difficulties, arrives at the *Sêkhet-Aaru*, or 'Field of Bulrushes,' where he spends his time in the same agricultural pursuits and field-sports which had occupied him on earth.

Finally, another belief was that the souls of the departed dwell in the under world through which the sun passes during the hours of the night—a land that in the daytime is one of darkness and desolation. Only at night, as the sun in his barque passes through the twelve domains of the darkness, do the deceased experience something of joy and activity in the hour when he traverses the particular domain in which their lot is cast. Later the belief arose that the illuminated soul, if instructed in the proper formulæ, might share the voyage of the god through the *Duat*, or under world, instead of merely being gladdened by a passing glimpse of him. These various views co-existed with the Osirian doctrine, though they are essentially quite

independent of it, and, indeed, can be accommodated to it only with difficulty. The popularity of the last of them—the belief in the abode in the *Duat*, and the voyage of the sun-god there—was mainly confined to the period of the XIXth and XXth dynasties.

3. Beliefs with regard to the nature and attributes of the gods.—Discarding all that is of merely local significance in regard to the various divinities, it is possible to arrive at a fairly clear idea of what the Egyptian believed concerning the nature of the gods. The material is mainly to be found in the various hymns extant, and especially in those addressed to Ra, to Amen-Ra, to Osiris, and to the Aten, the god whom Amenhotep IV. (Akhenaten) attempted to make sole god of Egypt. In most of these hymns we are met by a great and almost meaningless accumulation of epithets which are applied indifferently to various gods in the most bewildering fashion. Setting these aside as mere formalities, we generally find a residuum of evidence as to the nature of the god who is being addressed. Thus, from a fine hymn to Amen at Cairo, we have the following:

'Sole form, producing all things, the one, the sole one, who creates all beings. All human beings have come from his eye, and the gods from the word of his mouth. He it is who makes pastures for the herds and fruit-trees for men; who creates that whereby fish live in the river and the birds under the heavens. . . .' Amen is thus the creator and sustainer of being. Further, he is a god of mercy and justice, 'listening to the poor who is in distress, gentle of heart when one cries unto him; deliverer of the timid man from the violent, judging the poor and the oppressed. . . . Lord of mercy most loving, at whose coming men live. . . . Maker of beings, Creator of existences, Sovereign of life, health, and strength, chief of the gods. We worship thy spirit, who alone hast made us, . . . we give thee praise on account of thy mercy to us.'

Again, from a hymn to Ra in the papyrus of Hu-nefer, we have a remarkably clear statement of the unity, the eternity, and the inscrutable nature of the god:

'Thou art unknown, and no tongue is worthy to declare thy likeness; only thou thyself. Thou art One. . . . Millions of years have gone over the world; I cannot tell the number of those through which thou hast passed. Thou dost travel through unknown spaces requiring millions and hundreds of thousands of years. . . . This thou doest in one little moment of time.'

Strangely enough, it is in the hymns to Osiris, otherwise 'the most human of all the gods,' that we find, on the whole, the most endless multiplication of ceremonial epithets, and the greatest dearth of statement as to his nature and attributes. There are, of course, in the hymns and other portions of the Book of the Dead frequent references to his functions as the bestower of immortality, and prayers that the deceased might share in everlasting life; beyond that there is little that distinguishes him from such gods as Amen and Ra. One of the best known of his hymns has the following:

'The circle of the solar disk is under his orders; winds, rivers, inundation, fruit-trees, as well as all the annual plants. . . . Every being invokes him, every man adores his beauties. Delightful for us is his love; his grace environs the heart.'

There is nothing here which might not be said of Ra, Amen, or any other of the great gods.

By far the most remarkable statement of belief in Egyptian religious literature is to be found in the hymns addressed to the Aten, or vital power of the solar disk, the god of the heretic king Akhenaten (XVIIIth dynasty). These hymns, the composition of which has been ascribed to the king himself, express the elements of that belief in a sole god, invisible, spiritual, and universal, which Akhenaten endeavoured to make the national religion. The longer of the hymns has been frequently translated, and its teaching may be summarized as follows:

To Aten is ascribed rule over the times of the day and the activities of men and animals. The strength in which men go forth to their labours comes from him, and all the blessings with which the creatures, even to the fishes in the river and the depths of the sea, are endowed are his gifts. He is confessed as the source of life, alike in man and in the smallest of created existences. 'Thou greatest conception in women, making the issue of mankind . . . the small bird in the egg, chirping within the shell, thou givest it its breath within the egg.' Aten is omnipresent, and is the universal god of all mankind, appointing to men their different abodes, and their diversity of appearance and speech. 'In the hills from Syria to Kush, and in the plain of Egypt, thou givest to every one his place, thou framest their lives, to every one his belongings, reckoning his length of days. . . . As a divider thou dividest the strange peoples' (cf. Ac $17^{24\text{-}28}$). Further, Aten is the source of all fertility in the world, the maker of that Nile in heaven which brings rain for the outlandish folk, and of the Nile from the nether world which fertilizes Egypt. 'Thou placest a Nile in heaven, that it may rain upon them. . . . O, Lord of Eternity, the Nile in heaven is for the strange people . . . the Nile that cometh from below the earth is for the land of Egypt, that it may nourish every field.' Finally, he is the creator of the seasons and the maker of the far-off heaven for his own abode. The hymn closes with a notable declaration of personal relationship to God: 'Thou art in my heart, there is none other that knoweth thee, save thy son Akhenaten. Thou hast made him wise in thy designs and thy might. . . . Thou hast raised them up for thy son, who came forth from thy limbs, the king living in Truth, the Lord of the Two Lands, Nefer-kheperu-ra-ua-en-ra.'

On the whole, while the hymn to Aten is immeasurably finer as a poetical composition than the hymns to the other gods, it can scarcely be said to present any very original thoughts, two points being excepted. All the statements about the creative and sustaining power of the Aten could be fairly matched in substance by phrases from hymns to Ra and Amen. The real distinctions of the poem are its acknowledgment of a god who is universal, whose providence and rule are not for Egypt alone, but for all lands; and its profession of a personal relationship of faith and inspiration between the royal psalmist and his divinity.

Summing up, we find that, in his best presentations of his faith, the Egyptian professed belief in a self-existent God who was the Creator and Preserver of all things, merciful and gentle, specially careful of the most helpless of His children, invisible and inscrutable, one alone, eternal, omniscient, and omnipresent; while the development of thought under Akhenaten gives the further conceptions of His spirituality, His universality, and His personal relationship to His adorer. All this was overlaid and confused by the chaos of merely local aspects of divinity which forms the surface of Egyptian religion; but still this was the nature of the God behind the gods of Egypt.

JAMES BAIKIE.

CREED (Jewish).—Articles of creed in the modern sense were unknown in the earlier period of the post-Biblical Judaism. No necessity had been felt to express man's relation to God in other forms than those found in Dt $6^{4\text{-}6}$ 10^{12} and similar passages of the OT. The belief in God being based on the Biblical report of revelation to the patriarchs, and assuming the character of a postulate, obedience to His law was considered a mere logical consequence. The simplicity of this system contrasts strangely with the elaborate array of articles of faith adopted in later centuries. It is therefore desirable to examine the factors that bridged the gulf.

It was inevitable that Judaism should absorb a certain amount of the metaphysical speculations of the various Greek schools. The first outcome of this was Philo's theology. In the concluding chapter of his treatise on the 'Creation of the

World' (*de Opificio Mundi*, ch. lxi.) he gives the result of his investigations in the form of the following *five* 'lessons' taught by Moses:

(1) God has real existence; (2) God is one; (3) the world is created; (4) the world is one; (5) God's providence embraces the world.

The early Jewish Rabbis, however, being concerned with the practice of the Law rather than with speculations, sought to check their propagation among the people.

'The work of creation,' the Mishnā teaches, 'should not be studied by a company of two, and the Chariot not even in solitude, unless the student be sagacious and capable of drawing the right conclusions' (*Ḥagīgā*, ii. 1).

The terms 'work of creation' and 'Chariot' stand for metaphysics in general. In an additional note the Mishnā says explicitly that for him who inquires into

'what is above and below, what was heretofore and will be hereafter, or deals lightly with the glory of his Maker, it would be better for him never to have been born.'

Moreover, Ben Sira (Sir $3^{21f.}$) utters a solemn warning against the study of metaphysics, and several authorities of the Talmud (of the 4th cent. A.D.), commenting on the words both of the Mishnā and of Ben Sira, make no other concession than that of allowing the communication of the 'headings of the chapters' to scholars of ripened wisdom (*Ḥagīgā*, fol. 13). We find, however, in the Mishnā an attempt to formulate, in a negative way, something like a creed.

'The following,' we read (*Sanh.* x. 1), 'have no part in the future happiness: he who asserts that the resurrection of the dead is not intimated in the Tōrāh; that the Tōrāh is not of Divine origin; and the heretic.'

The passage thus enjoins, by way of climax, the belief in retribution after death, revelation, and the existence of God; and we shall see, later on, that the same passage was made the basis of real articles of creed. The authorities of the Talmud, however, proceeded in a different way. Instead of formally demanding theoretical belief, they selected from the moral code three of the most important prohibitions, viz. idolatry, incest, and murder, and laid down that death was to be chosen rather than transgression even under compulsion (*Sanh.* fol. 74). An enlarged list of laws was imposed upon mankind in general under the name of the 'Seven Noachian Laws,' forming the nucleus of a religious system. They comprised the command of jurisdiction, and the prohibitions of blasphemy, idolatry, murder, incest, robbery, and the eating of flesh from a living animal (*Sanh.* fol. 56). A kind of creed in epigrammatic form is Hillēl's famous recommendation to the heathen who desired to learn the essence of Judaism in a moment: 'What is hateful to thee, do not do to thy neighbour' (*Shabb.* fol. 31).

The first steps in the changing of this attitude were indirectly prompted by Muslim theologians, who created a speculative theology known by the name of *Kalām*. The Muhammadan criticism of the anthropomorphisms of the OT interfered with the Jewish antipathies to metaphysical research, and the struggle was carried right into the Jewish camp by the sect of the Karaites who, rejecting all Rabbinic tradition and attaching no value to the authority of Mishnā and Talmud, took up the method of the Mu'tazilite (dissenting) *Kalām* for their own needs. The consequence was that Rabbanite Jews were compelled to follow suit and to employ philosophic arguments for the defence of revealed religion. This marks the beginning of the religious philosophy of the Jews, and its oldest expounder was Sa'adyā of Fayyūm, who died in 942 at Sura, in Babylonia. In his work on 'Creeds and Beliefs' he set aside the warning of the Mishnā against metaphysical speculation, on the plea that the Sages did not forbid honest reflexion (*Amānāt*, ed. Landauer, p. 21). He was also the first to venture a definition of the idea of creed. 'Faith,' he says, 'is a notion arising in the soul with regard to a subject, the true nature of which has been recognized' (*ib.* 11). What he really means is conviction gained by one of the various processes of recognition, such as personal perception, truthful evidence, and logical conclusion. As none of these applies to the tenets of the Jewish religion, he adds, as a fourth source, 'reliable tradition based on revelation'—a phrase which marks the difference between the creed of Rabbanite Judaism on the one side, and Muhammadan as well as Karaite *Kalām* on the other. Beyond this first attempt, however, Sa'adyā has specified no real articles of faith, employing for the remainder of his theories the usual methods of the Mu'tazilite *Kalām*, which held sway among Jewish philosophers for two centuries afterwards.

The heterodox colouring of the *Kalām* in the writings of the famous Arab philosopher Avicenna (Ibn Sīnā), in connexion with the criticism of Muslim theologians and the growing pretensions of the Karaites, gradually brought about a reaction in favour of a more decided accentuation of the tenets of Rabbanite Jewish religion. As its doctors, however, had little practice in formulating articles of creed, they again turned to the Arabs, who employed the term *'aqīda* (plur. *'aqā'id*) for this purpose. The first Muslim who formulated articles of creed was the famous Abul-Laith Naṣr of Samarkand (†993), who laid down the tenets of his faith in a work entitled *'Aqīda* (Cod. Brit. Mus. Add. 19413), written in the form of a catechism. Of greater popularity, in fact the standard work on the subject, is the *'Aqā'id* of al-Nasafī (†1142), which, it is probable, served Jewish writers as a model for the formation of their articles of creeds. For it should be noted that the first Jewish work which contained something approaching axioms of faith did not see the light till that period. About 1140 the poet and philosopher Judah Hallēvi of Castile composed his famous work *al-Khazari* in defence of 'the despised faith.' The book (which is written in Arabic) is based on a narrative dealing with the search of the king of the Khazars for the right belief. Being dissatisfied with the doctrines offered to him by a philosopher of the Avicenna type, a Christian scholastic, and a Muslim doctor of the Mu'tazilite school, he finally asks a Jewish Rabbi for his creed. The last named, in contradistinction to his predecessors with their more or less speculative theories, answers:

'I believe in the God of Abraham, Isaac, and Israel, who led the children of Israel out of Egypt with signs and miracles . . our belief is comprised in the Tōrāh' (*al-Khazari*, p. 44).

This formal confession is subsequently supplemented by the following sentence:

'To this [prayer] the believer attaches the following *articles of creed* ['*aqā'id*] which complete the Jewish belief, viz. (1) the recognition of God's sovereignty, (2) His eternity, (3) the providential care which He bestowed upon our forefathers, (4) that the Tōrāh emanated from Him, and (5) that the proof of all this is found in the delivery from Egypt' (*ib.* 154).

From these words we conclude that the notion of articles of creed was familiar to Judah Hallēvi, though he saw no necessity to formulate them for the benefit of his Jewish brethren. Sweeping away speculation of all kinds, he substitutes for it *a priori* belief, from which everything else follows as a necessary consequence (*ib.* 270). In order to show the contrast between his attitude and that of religious speculators, he reproduces in ten axioms the system of the Karaite *Kalām* (*ib.* 275–278). Judah Hallēvi's omission to condense the results of his investigations into a similar system is thus far quite consistent with his views. A more definite attempt to formulate axioms of belief on Arab-Aristotelian lines was made by Abraham b. David of Toledo (1161)—the author of a work (like-

wise written in Arabic) which bears the name *al-'Aqīda al-rafī'a* ('The Lofty Creed'). The first part is purely speculative, but the second consists of *six* somewhat crudely formed dogmas, viz.

(1) God's existence and incorporeality; (2) His unity or oneness; (3) His attributes; (4) His rule of the universe; (5) belief based on tradition and belief in prophecy; (6) metaphorical names of God, Divine Providence, and human free will.

This attempt was subsequently eclipsed by Abraham's contemporary Moses Maimonides, who supplied what he considered to be a want, being, no doubt, urged to take this step by the continued attacks of Muslim theologians, as well as by his inborn love of systematizing. It is to him that Judaism owes the famous 'Thirteen Articles of Creed,' which both in abridged Hebrew prose and in verse were introduced into the Jewish prayer-book, and which enjoy an unbounded popularity among Jews all over the world. It is doubtful, however, whether this was his aim. The Articles were originally composed in Arabic, and form part of his commentary on the Mishnā *Sanh.* x. 1 quoted above. A perusal of these Articles makes it clear that they were meant, in the first instance, as a protest against various Christian and Muhammadan statements: (1) that Biblical anthropomorphism was a departure from pure monotheism; (2) that Moses' prophetship was eclipsed by that of Muhammad; (3) that the Rabbis had altered the Tōrāh; (4) that the law of Moses had been abrogated by that of Muhammad; and (5) that the Messiah was still expected. The Hebrew version of these Articles by Samuel b. Tibbōn (*c.* 1200) is attached to the ordinary editions of the Talmud. For the purposes of this sketch the following short abstract of the Articles must suffice:

I. God exists, and is the cause of all existing beings.
II. God's unity is absolute, and is not to be compared with other units which are subject to division.
III. God is incorporeal and, therefore, exempt from any accidental attribute. The anthropomorphistic passages in the Bible must be taken metaphorically.
IV. God's unity is without beginning.
V. No other being besides God must be worshipped. This also holds good for angels, spheres, and elements.
VI. Prophecy is a distinction granted to human beings of superior degree, whose souls enter into intimate connexion with the Creative intellect.
VII. Moses is the father of all prophets both before and after him. He is distinguished from other prophets by *four* characteristics. (1) With no prophet did God hold direct intercourse as with Moses (Nu 12^{8}). (2) God did not appear to Moses in dreams, as to other prophets (v.^{8}). (3) Other prophets experienced in the hour of vision a weakening of their vital power, and a great fear (Dn $10^{8.16}$), which was not the case with Moses. (4) Other prophets were obliged to wait for revelations (2 K 3^{15}), whilst Moses was empowered to solicit them (Nu 9^{8}, Lv 16^{2}).
VIII. The Tōrāh is of Divine origin: 'It is incumbent to believe that the whole of this law, as it is in our hands this day, is the Tōrāh which was revealed to Moses. It is all Divine, which means that it reached him by what is metaphorically termed speech.'
IX. This law will not be abrogated, nor will there be any other law of Divine origin. Nothing will be added to, or taken away from, it.
X. God knows the actions of all mankind.
XI. God rewards those who obey the Law, and punishes its transgressors.
XII. The Messiah will arrive without fail, no matter how long he tarry.
XIII. Resurrection of the dead.

It can easily be seen that these thirteen Articles consist of three groups, viz. I.–V., VI.–IX., X.–XIII., reducing the whole system to the three fundamental principles of belief in God, Revelation, and Retribution after death. This reduction was, indeed, carried out and proved by Joseph Albo (first half of 15th cent.) in his work on 'Fundamental Principles' (Introd. and pt. i. ch. 4). It is impossible that Maimonides should not have been aware of this, but the anti-Muhammadan as well as anti-Christian tendencies of several of the paragraphs cannot be mistaken. The anonymous redactor of the most popular recension of these Articles for liturgical purposes prefaced each paragraph with the words 'I believe with perfect faith'—words which are absent from Maimonides' original. It was Samuel b. Tibbōn who placed the word להאמין ('to believe') at the head of several articles. Of the diverse attempts to reproduce these articles in poetic form the most popular is the Yigdal hymn by an unknown (but probably Spanish) author.[1] Those who followed Maimonides, writing on the same subject, as Ḥisdai Crescas († 1410) and Isaac Abravanel (1437–1508), have added nothing new, and need not, therefore, be further considered.

There now remains a word to be said on the tenets of the creed of the Karaites. By rejecting the Rabbinic method of interpreting the Bible, they avoided the Muhammadan charge of having altered the Tōrāh, and, being disciples of the Mu'tazilite school, they were under no suspicion regarding their conception of Biblical anthropomorphisms. They had, however, to defend their belief in (1) the prophetship of Moses and the other prophets; (2) the validity of the Tōrāh, and their own interpretation of it; and (3) the arrival of the Messiah. Now the ten axioms reproduced by Judah Hallēvi (see above) touch only the metaphysical side of the question, and it was left to others to supply the religious element. Judah b. Elijah Hadassi (1149) was the first to attempt this by grouping the Karaite laws round the Decalogue. Kālcb Afendopulo, who (in 1497) wrote an introduction to Hadassi's work, extracted from it the following ten Articles:

I. God is the creator of all creatures.
II. He is one and eternal.
III. Every [other] existing being is created.
IV. God sent Moses and all other prophets mentioned in the Bible.
V. The law of Moses is true.
VI. Believers must have knowledge of the Tōrāh and its interpretation.
VII. The Sanctuary [at Jerusalem] is the palace of the Most High King.
VIII. The resurrection of the dead [will take place] at the time of the arrival of the Messiah.
IX. There will be a final judgment.
X. Just retribution.

In view of the close relationship between the paragraphs I.–III., IV.–VIII., IX.–X., the artificiality of the number *ten* is conspicuous. Israel Haddāyyān of Alexandria, who (in 1257) composed a digest of the Karaite laws, condensed the Articles into the following six: (1) God; (2) the messengership of Moses; (3) the other prophets; (4) the Tōrāh revealed through Moses; (5) Jerusalem; and (6) the day of judgment.

HARTWIG HIRSCHFELD.

CREED (Muhammadan).—The Muhammadan creed or profession of faith (*kalimat al-shahāda*, or, shortly, *kalima*) is the well-known formula, 'I testify that there is no god but God, and I testify that Muhammad is the apostle of God.' It is one of the articles (*'aqā'id*) of faith (*'imān*), and also one of the 'five pillars' of practical religion (*dīn*;

[1] According to Luzzatto (*Mebo*, Leghorn, 1856, p. 18) and Zunz (*Literaturgesch. der synagog. Poesie*, Berlin, 1865, p. 507), this hymn was completed in 1404 by Daniel ben Judah Dayyan of Rome.

see ISLĀM). The creed as a whole is not formulated in the Qur'ān ; but the first article is enunciated in *Sūra* cxii. : 'Say, "He is One God ; God the Eternal ; He begetteth not, nor is begotten, nor is there one like unto Him."' The creed, however, occurs in a tradition of 'Omar, the second khalīf, who related that the Prophet, on being asked to define Islām, said : 'Islām is that thou bear witness that there is no god but God and that Muhammad is His messenger ; and be steadfast in prayer, and charitable ; and fast during the month of Ramadān ; and make the pilgrimage to the Ka'ba if it is in thy power' (*Mishkāt al-Masābīḥ*, tr. Matthews, Calcutta, 1810, I. i. 1). According to the *Sharḥ al-Wiqāya* (*ap.* Hughes, *DI*, *s.v.* 'Creed'), the *kalima* is to be recited by every Muslim aloud and correctly, with full comprehension of its meaning and belief in his heart, at least once in his lifetime, and to be always professed without hesitation until his death.

STANLEY LANE-POOLE.

CREED (Parsi).—1. According to *Yas.* xxx. 2, man must make a choice between the two 'creeds' or 'confessions' (*āvarenō*). In the beginning the Holy Spirit said of himself and of his spiritual antagonist that their 'confessions' (*varanā*) did not agree (*Yas.* xlv. 2). The word translated 'confessions' implies a choice, and the corresponding verb is used in the middle voice with *fra-* as a technical term to express the profession of a religion, especially of the Mazdayasnian faith : *fravaretar*, 'confessor,' *frāvarānē*, 'I make my profession of faith,' etc. Although from the very beginning Zarathushtrian Mazdaism thus meant a sharp contrast with surrounding worship and practice (cf. *Vend.* xix. 6 : Zarathushtra's mother had invoked the *Aŋra Mainyu*), neither proselytizing aims nor doctrinal discussions produced a creed in the same sense as in Christianity. The Zarathushtrian reform was of a moral, economic, and ritual kind, rather than intellectual. But the Avesta contains several formulæ, used on different occasions, *e.g.* in putting on the sacred cord, on rising in the morning, in the *nyāyishes* and other prayers, etc. These formulæ sum up the most peculiar tenets and practices of the Parsi religion. It may be that some of them originated during the Sasanian restoration, owing to the need of briefly distinguishing their own faith from Christianity and other rivals. We shall mention only the most important formulæ. In the post-Avestan time the Parsis who settled in India were required to present a summary of their beliefs and sacred customs to Indian rulers.

2. In its shortest form the *Fravarānē* (*Yas.* xi. 16, xii. 1, xxvii. 12 ; *Yt.* xiii. 89, etc.) contains four points : *Fravarānē Mazdayasnō, Zarathushtrish, Vīdaēvō, Ahuraṭkaēshō* ; 'I profess myself a Mazda-worshipper, a Zarathushtrian, an anti-devil (enemy of the demons), a servant (or proclaimer) of the Lord.' That is, the believer declares himself (1) a monotheist ; (2) a member of a historically founded religion ; (3) a dualist. Or, to put it differently, (1) the revealed God is Ahura Mazda ; (2) the revealer is Zarathushtra ; (3) the peculiar higher form of life instituted by the revealer as the due service of God consists in the fight against the demons. Those points are co-ordinated in a way characteristic of revealed or founded religion (cf. *Transactions of the 3rd Int. Congr. for the Hist. of Rel.*, Oxford, 1908, ii. 403 ff.). (4) The last word seems to sum up comprehensively the whole faith, *yasnō* designating more particularly the Divine worship, and *ṭkaēshō* designating the doctrines and tenets of religion in general. Additions are sometimes made to the *Fravarānē* : homage to the genii of the *gāhs* (hours, watches), of the days, of the months, of the seasons, of the years (Introd. to the *Yasna ; Yas.* xi. 16, xxiii. 5 ; esp. in the five *gāhs* recited at the five hours of prayer of the day and contained in the *Khordah Avesta* [the book of prayer], etc.) ; or—a more authentic addition—homage to the Amesha-Spentas (*Yas.* xii. 1), or other amplifications. A still shorter form (*Yas.* xii. 8) runs thus : 'I profess myself a Mazda-worshipper, a Zarathushtrian, having made both my avowal and my profession (of faith).' Another short formula in Pahlavi runs : 'I declare my adherence to the Mazda-worshipping religion, and renouncement of all evil beings and things' (E. S. Dadabhai Bharucha, *Khorda-avestā-arthah*, Bombay, 1906, p. 2).

3. A more explicit creed is formed by the *Hās* xii. and xiii. of the *Yasna*, designated, according to Anquetil Duperron, by the Parsis as *Fraoreti*, 'confession,' 'creed,' and called after the opening words *Frastuyē*, 'I praise' (*Yas.* xi. 17–xii. 7), and *Āstuyē*, 'I avow' (*Yas.* xii. 8–xiii., as divided by Darmesteter). *Āstuyē*, with the shortest *Fravarānē*, belongs, *e.g.*, to the prayer of the investiture with the *kosti*. *Frastuyē* is placed at the head of each *Yasht* and of each *Patēt*, and it occurs in a shorter and in a longer—evidently more original—form, which contains elements of really ancient aspect. It begins with the usual Avestan triad : 'I avow good thoughts, good words, good actions.' In the course of the confession, cattle-stealing and destruction of the villages of the Mazdayasnians are abjured ; folk and cattle ought to live in peace. All communion with demons and their crew, with sorcerers and their crew, and with all kinds of adversaries and devilish, treacherous persons, is abjured. As Zarathushtra abjured the devils in his colloquies with Ahura Mazda, so the Mazdayasnian and Zarathushtrian gives up communion with them. In addition to the predominating fight against the devils, and in particular against savage disturbance of the regular cattle-breeding village-life ('the Mazda-worshipping religion suppresses battles and lays down arms'), two other features of this creed deserve attention : (*a*) the importance of tradition ; this creed has been professed by the waters, by the plants, by the cattle, by the Creator, by the first man, by Zarathnshtra, by Vishtāspa, by Frashaoshtra and Jāmāspa, by all the Saoshyants ; (*b*) the excellence of intermarriage between the nearest relations, repudiated and interpreted in a different sense by later Parsiism. The *xvaētvadaṭha*, or next-of-kin-marriage, is also exalted by the *Āstuyē*.

4. Anquetil Duperron describes the ceremonies to be undertaken by an unbeliever desiring to join the Parsi faith. The Parsi creed belonging to that ritual and included by Spiegel in the Khordah Avesta is evidently much later than the Avestan formulæ. It runs : 'The good, pious, right religion, which the Lord of the created beings has sent, is the one brought by Zartūsht. The religion is the religion of Zartūsht, the religion of Ormazd, given to Zartūsht.' The reception of an outsider into the Parsi communion is, in fact, nowadays almost an unheard-of thing ; such requests have been rejected lately.

5. The Mazdayasnian who confesses his sins and seeks absolution is, of course, in quite a different position from a proselyte not belonging to the sacred blood. The explicit formulæ of penance, *Patēts*, give a good idea of what was considered by later Mazdaism to be essential to the Parsi practice and faith. In the so-called Iranian *Patēt*,[1] after having enumerated at length the sins and wickednesses repented of, and having referred to the fact

[1] Translated by Spiegel, *Av. übersetzt*, Leipzig, 1852–63, iii. 219 ff., and Darmesteter, *Zend-Avesta*, Paris, 1892–93, iii. 167 ff. ; ed. de Harlez, *Manuel de Pehlevi*, Paris, 1880, p. 144 ff. The Pāzand *Patēts* (cf. West, *GIrP* ii. 109 f.) are now accessible in Antia's *Pāzend Texts*, Bombay, 1909, pp. 118–152.

that the same faith had been professed by the men of the holy tradition, mentioned in the *Frastuyē*, and by Adarbād Mahraspand (4th cent. A.D.), the believer proclaims that neither happiness nor a longer life, power nor wealth, nor even the penalty of death, can separate him from the right religion, because he dreads hell and hopes for paradise.

6. On the arrival of the emigrating Parsis at Sanjan in A.D. 716, they presented to the Indian prince of Gujarāt a list of sixteen *ślokas*, composed by the most learned of their dasturs, and containing the principal rules and tenets of their religion, selected and stated in a way fitted to conciliate the ruler, without denying or concealing the real content of Mazdaism. The points were as follows: (1) the adoration of Ahura Mazda, of the Sun, and of the five elements; (2) silence during the bath, in reciting prayers, in presenting offerings to the fire, and in eating; (3) the use of incense, perfumes, and flowers in religious ceremonies; (4) the honour accorded to the cow; (5) the use of the sacred shirt, string, and cap; (6) singing and music at weddings; (7) the adornments and perfumes of ladies; (8) the precepts of generosity in giving alms, and of digging tanks and wells; (9) the precept to extend one's sympathies to all male and female beings; (10) the ablutions with *gomūtra* (euphemistically called 'one of the products of the cow'); (11) the wearing of the sacred cord in praying and in eating; (12) the sacred fire fed with incense; (13) the five devotions every day; (14) conjugal fidelity and purity; (15) the annual ceremonies in honour of the forefathers; (16) the precautions to be observed by women after child-birth and during menstruation. There exist different versions in Gujarati and Sanskrit.

CRIMES AND PUNISHMENTS (Primitive and Savage).—1. **Introduction.**—While *revenge* is the action of an individual against one who has done him wrong, *punishment* is the action taken by society against one who has transgressed its laws. Revenge may, however, be followed up by a group of persons in sympathy with the injured person, in this case passing over to the blood-feud (*q.v.*); and individual or collective revenge may be recognized by the society as the specific form of punishment to which it lends its sanction or its aid. Men seek revenge because they feel that their rights or interests have been encroached upon. The act of revenge is one strictly of self-defence, and is primarily a reflex action. It seeks to destroy or render powerless what constitutes a menace, but it contains a rough notion of justice, of the idea that no one can intrude upon the rights of another without suffering the consequences. The exercise of justice by a community or its representatives against an individual who is obnoxious to it, or to any of its members, is based primarily on the feeling which underlies revenge. Punishment is to some extent vengeance—the vengeance of society for its own preservation. The criminal must suffer, must expiate his crime, whatever other notions may in time enter into the idea of punishment. Private vengeance and public justice are thus so far similar in their point of view and in their action, save that the latter tends to be more discriminating and impartial. Not the individual sufferer himself, but others judge and condemn the guilty person. Public justice at lower stages is extremely limited, and side by side with it exists private or collective vengeance (*e.g.* the blood-feud). This is to some extent justice, since society recognizes the right to its execution. It has become a specific form of punishment because society has sanctioned it. Or public justice may, again, recognize private revenge by handing over the evil-doer to the injured person or his relatives, or by making him or them the executors of justice. Public justice, save in the case of a few crimes which more particularly menace the existence of society as a whole, has to content itself with regulating private revenge, or with suggesting a system of compensations. Finally, as it advances, often through the growing supremacy of chiefs, it eliminates private revenge more or less completely, though this can hardly be said to be true of any savage society.

The simplest form of regulated revenge is the duel—the right of the injured party to challenge the aggressor to single combat, or the case where the aggressor must stand up to the throwing of spears (as in some Australian instances), or must submit to the plundering of his house. Or, again, revenge is regulated by being limited to a certain period or to certain offences. The blood-feud is the best example of regulated revenge (see Post, *Grundriss der ethnol. Jurisprudenz*, ii. 236 ff.; Westermarck, *Moral Ideas*, i. 498 ff.; see § 6, ii. (1) below).

In the earliest times, if men, like some of the higher apes, lived in separate families, the family would, when necessary, assist any individual member of it in following up an act of revenge, because they were bound to be in sympathy with him for the wrong done. Thus individual revenge easily passed over into collective revenge. It is out of this feeling of sympathy that justice, strictly so called, arises. Actions by which any individual feels aggrieved are generally those by which all individuals feel aggrieved when they are done to themselves; and the condemnation of such actions tends to formulate itself as a custom or law which cannot be transgressed without risk of incurring the hostility of the society or of individuals composing it. Custom is, in fact, a strong expression of savage man's sense of right and wrong, and it is the test by which actions are judged, although, indeed, some of the actions, from a strictly ethical point of view, may be indifferent. Hence, both collective revenge and public justice are the expression of moral indignation, though the latter expresses it more strongly. For, the more men realize their solidarity, the more is any ill done to one regarded with indignation by all, as a result of

the working of sympathetic emotion. And, as the ill done has transgressed that customary law,—the expression of what is right and what is wrong,—the punishment inflicted is an expression of moral indignation at the wrongdoer. It may be out of all proportion to the offence committed, and in such a case is on a level with mere unthinking revenge, but, generally speaking, at lower levels of savage society, punishment has some proportion to the offence. It is at higher levels, in barbaric and despotic societies, that punishment is most cruel and disproportionate to the offence.

The tendency of punishment to supplant mere revenge (which is occasionally regarded as wrong) is aided by the fact that the latter often causes great inconvenience to the society, and tends to multiply the revengeful actions. The society, by itself or by its heads, steps in, therefore, between the avenger and the wrongdoer, and decides upon the punishment, or restrains the amount of vengeful action. Thus the judgments of a central tribunal are gradually preferred to revengeful acts. Casalis says of the Basutos that the chief has been given powers over all the community because of the fear of anarchy arising out of private revenge (*The Basutos*, 1861, p. 225). The injurious results of the blood-feud are well recognized by savages, among whom the head-men or the chief will often interfere to stop its excesses; or it sometimes gives place to an appeal to them, or to the payment of a compensation by the offender, as a matter of private arrangement, or one suggested by them. This compensation generally tends to pass into a regular practice, with a graduated scale of payments according to the magnitude of the offence (§ 5). With the growth of the power of the chief, he not only advises or suggests, but determines and orders the carrying out of justice over a wider field. Moreover, where the injured person or his representatives are too weak to take revenge against a powerful tribesman, or, on the other hand, where revenge is out of proportion to the offence, the sympathetic emotions of the society, being aroused in the one case for the victim and in the other for the aggressor, gradually contribute to the formation of a tribunal in some shape or form, and to the cessation of private revenge.

Yet private revenge often exists side by side with punishment by a tribunal or a chief. This is natural when we consider what savage character is. But, on the whole, there is a tendency to make such revenge the expression of judicial action. Thus it may be recognized as the right way of punishing certain wrongdoers, provided that it does not exceed certain limits. This is particularly true where the husband is allowed to avenge himself on the adulterer. Or it may be permitted that the criminal caught red-handed in certain crimes, *e.g.* theft, should be slain at once. Or, again, the blood-feud may be the approved method of punishing the murderer. Or the aggrieved person or his relatives may be chosen as executioners of the sentence passed by the tribunal. Thus, among many of the Bantu tribes, a murderer proved guilty is given over to the relatives of his victim to deal with him as they choose (Macdonald, *JAI* xxii. 108). Many other instances might be cited. Private revenge sometimes continues alongside or in spite of established judicial tribunals in the case of large societies scattered over wide areas, and in which there is little feeling of homogeneity, and hence little prospect of general sympathetic action in favour of an aggrieved person. Revenge may also be pursued in all societies in matters not usually taken cognizance of by the laws.

2. Crime, morality, and religion.—Even in the earliest stages of human history man may have dimly felt it ethically wrong to murder, commit adultery, or steal, apart from the fact that the instinctive act of revenge brought it home to him that in committing such actions he was trespassing against the rights of another. These crimes are so universally condemned that there can have been no time when they were not regarded as deeds which it was wrong to commit. The sense of wrongness with regard to these and other acts was largely increased with the growth of society, of the group in which men lived, because such actions tended to destroy the unity of the group. Custom laid down that there were certain things which must not be done, and it was, therefore, highly immoral to do them. Nor is it improbable that, even at the very earliest stages of the growth of the ideas of right and wrong, man may have thought vaguely that in doing wrong to another he was incurring the anger of whatever worshipful being or beings he was aware of. This thought also would become more definite with the growth of society. Where a group of men living together worship a being whom they believe to be interested in the group, any transgression of custom will be regarded as transgression against him, because the customs would certainly be regarded as having been instituted by him. Whatever constituted a menace to the group or any of the individuals composing it was also an offence against the divinity, who naturally favoured the community and not him who menaced its existence. The god is apt to punish the group for the breach of custom, and hence the offender is made to suffer speedily for his evil-doing, in order to avert this. Some crimes are punished by the group as a whole. Others are not so punished, but the group approves of the act of revenge by which the offence is requited. Revenge or punishment is thus supposed to satisfy the anger of the god. Some support for the view here taken is found in the fact that the divinities of very primitive tribes are also to some extent moral governors, who are thought to dislike particular crimes and to punish them. Among savages at a higher level there is a certain amount of evidence proving that their gods take account of crime and are guardians of morality. Whether or not it be true that all morality from the first is connected with religion, it is at least certain that religion soon strengthened and assisted morality by its insistence on the fact that the god or gods of the group desired its welfare, and that all offences against that welfare were thus more than offences against laws imposed by men.

3. The administration of justice.—A regular organization for enforcing justice or maintaining custom hardly exists at the lowest levels of society, though its beginnings may be seen. Justice is a matter of individual action; and yet, as among the Yahgans of Tierra del Fuego, where the feeling of the community gives support to the existing customs, some help in avenging wrongs may always be looked for from relatives or neighbours (Hobhouse, *Morals in Evolution*, i. 46, citing Hyades and Deniker, *Miss. scient. du Cap Horn*, Paris, 1891). This is an approach to collective revenge, and, as a rule, the greater the wrong, the more likelihood is there of the avenger being supported. But, wherever crime is regarded as a serious breach of tribal custom, the breaker of a custom is the breaker of a law, and his action arouses strong disapproval. Hence, society approves the action of the avenger, *e.g.*, in cases of murder or adultery; or it takes joint action against the wrongdoer. The latter course is most frequent in the case of crimes which are regarded as bringing the whole community into danger or subjecting it to Divine anger, *e.g.* sorcery and incest (breaches of exogamous custom). Or, again, a whole clan or tribe will put to death or banish a man who makes him-

self a nuisance to every one, as among the Eskimos, where a whole village has occasionally risen against and slain an atrocious murderer (Nansen, *Eskimo Life*, 1893, p. 163). Conjoint action by the community is found amongst the Mpongwe, who drown or burn the murderer (Burton, *Two Trips to Gorilla Land*, 1876, i. 105), and is common among Australian tribes, where the whole camp joins in punishing the ill-doer (Westermarck, *op. cit.* i. 171). But, even when such joint action occurs, individual revenge or blood-feud is commonly found, nor is it condemned by society. Indeed, it is usually the case that any one disregarding the duty of revenge is held in contempt, and this tends to show the general disapproval of crime by the whole group or tribe.

Where public justice is administered by certain individuals, it seldom ousts the practice of private revenge, and in general takes cognizance only of public offences (sorcery, incest), or of various petty crimes. But this 'court' may be effective in enforcing or in regulating private revenge, or in arranging compensation. A council of elder men is frequently found among Australian tribes, who try various offences and decide upon the punishment (Fraser, *Abor. of N.S. Wales*, Sydney, 1892, p. 39 ff.; Woods, *Native Tribes of S. Aust.*, Adelaide, 1879, p. 34 ff.). But it is probable that, as among the Central Australian tribes, these offences are breaches of the strict marriage laws (incest), and murder by sorcery. In such cases the elders arrange for an avenging party to go out and punish the offenders (Spencer-Gillen[a], pp. 15, 477; [b] 25, 556 ff.). In some instances the council has nothing to do with cases of murder, adultery, etc.; and only those relating to property or to litigation are brought before it (Nagas [Stewart, *JRASBe* xxiv., 1855, p. 609], Kandhs [Dalton, *Eth. of Bengal*, Calc., 1872, p. 294], and Formosans [Letourneau, *L'Evol. juridique*, p. 94]). Or, as among some N. American tribes (Ojibwas, Wyandots, etc.), the avenger appears before a council, and, having obtained judgment in his favour, demands compensation. If this is not given, he falls back on revenge (Kohler, *ZVRW* xii. [1897] 407). In many cases, too, the council (as in the case of the chief) delegates the execution of justice to the person who would otherwise be the avenger. Sometimes the leading men of a group will intervene to prevent disputes or to arrange composition. Less usual are the instances where the decision of a council is taken as final in all private cases (Todas and other aboriginal Indian tribes [Shortt, *TES*, new ser. vii., 1868, p. 241; Forsyth, *Highlands of Cent. India*, 1871, p. 361], Tagbanua [Worcester, *Philippine Islands*, New York, 1898, p. 107], and a few others). Thus, generally speaking, the savage council seldom constitutes a court in the strict sense of the word.

With the advancing power of the chief, the administration of public justice passes largely into his hands; yet even here private revenge—the blood-feud, or the right of the husband to punish in cases of adultery—is still used and permitted, and often the chief's prerogative is exercised only when appeal has been made to him. But there now comes into great prominence, especially among higher savage tribes, a regular system of compensation or fines for various crimes, payable to the aggrieved person or his representatives, or, in some cases, to the chief. We find also in many places regular codes of laws, with punishments appointed for different offences. Sometimes the chief merely intervenes to prevent excessive revenge and to suggest compensation, as among many American Indian and African tribes; sometimes his power of intervention is limited to certain crimes, generally those of a public kind; or, again, he merely acts as arbiter or adviser rather than as judge. But, the more his power is established, and the more autocratic he is, so much the more do his functions as judge increase. This is especially true of many of the chiefs and petty monarchs of Africa, and in general of all tribes whose social organization is high. Frequently the chief may associate with himself a council of elders; or, again, as among the Kafirs, village chiefs judge lesser matters, while chiefs of clans hear appeals against their judgments and try all more serious crimes, aided by the advice of a council (Letourneau, p. 87). With few exceptions, where justice is administered by a chief he is careful to act in strict accordance with the established customs. There is, however, a tendency among chiefs to regard every real or imaginary offence against themselves as a serious crime, while, where their power is autocratic and fines are paid to themselves, or where they are naturally cruel, there is great danger of injustice and of atrocious punishments being meted out. But, with the decay of private revenge, the administration of justice becomes more definite and strict, especially as we advance from savage to barbarous societies. The court or chief maintains order, upholds the rights of every member of society, and punishes all crime. Generally speaking, wherever a tribunal exists, it is seen to be a guarantee, not found in the exercise of mere revenge, that all offenders shall suffer, and suffer proportionately to their offence.

Where cases are brought before a council or a chief, a palaver usually takes place, at which both parties are fully heard. Sometimes the method of the oath or ordeal is resorted to in order to discover the truth and to point out the guilty person. The oath is frequently in the form of a curse, and accompanies the drinking of a poison or of some liquid, which is supposed to act fatally upon the perjurer or the guilty. The oath is thus a species of ordeal. But the ordeal may occur by itself in various forms: the ordeal by fire, by red-hot metal, or by boiling oil or water, in which cases the innocent person is not burned, or his wound heals within a certain time; the ordeal by water—remaining under water for a certain time without drowning, or passing safely through water in which crocodiles lurk; the ordeal by poison (see OATH; ORDEAL; Post, ii. 459 ff.). The person who is proved to be guilty, if he has not already succumbed to the ordeal, is then punished according to the nature of his crime. Among savages, secret societies, such as the Duk-Duk of New Britain, supplement the action of private revenge or public justice where these are imperfect, and punish any one who commits crime.

4. **Variety of crimes.**—The idea of what constitutes crime in savage society is largely akin to that entertained in civilized societies. But there are important exceptions to this, bound up with the nature of savage society and belief, *e.g.* breach of tabu or religious custom, sorcery, and the like. Again—perhaps as a natural outcome of uncontrolled revenge operating in later times—there is the idea that accidental woundings or homicides are equally punishable with those committed intentionally, though in many cases there is an approach to the modern view of accident, and a distinction is made in the punishment inflicted, or no punishment follows (cf. Westermarck, i. 217; Post, ii. 214). Sometimes killing in self-defence is punishable, though not to the same extent as murder; and, frequently, there is a distinction between meditated crime and that committed in the heat of the moment. More serious is the view entertained by most savage tribes that, while to kill or to steal from a fellow-tribesman is wrong, these actions when committed against strangers or members of another tribe are not crimes, and are

even praiseworthy. They are apt to be considered wrong, however, if they are likely to bring the vengeance of the other tribe upon the tribe of the offender. With the dawn of a higher morality and a wider sense of responsibility this view tends to disappear. Again, we generally meet with the idea that the weight of the crime varies both according to the rank (and often the age and sex) of the offender and according to that of the victim. Chiefs or men of rank may commit crimes with impunity or with slight punishment, but crime committed against them is generally punished more severely than that against lesser men. This is especially seen where the system of composition for crime prevails, the blood-price or the fine varying strictly according to the rank of the victim, and often also according to the rank of the offender. These views continue to prevail in higher societies. Approximating to the custom of more advanced civilization, there is frequently a distinction made between a first crime and its repetition. A first offence may be punished comparatively lightly; a second or third will receive the utmost penalty—death or banishment.

Thus among the Bambara, for a first theft a hand is amputated; for a second the penalty is death (Letourneau, p. 78). The Aleuts punish a first theft with corporal punishment, a second with amputation of some fingers, a third with amputation of a hand and lips, a fourth with death (Petroff, 'Report on . . . Alaska,' *Tenth Census of the United States*, Washington, 1884, p. 152). Among the Wakamba, a first murder is punished by a fine, but on a second conviction the murderer is killed at once (Decle, *Three Years in Savage Africa*, 1898, p. 487).

In general, those crimes which may be considered public, inasmuch as they are committed against the customs, or to the danger, of the whole community, are sorcery (involving, according to current belief, all natural death), breaches of the customary marriage laws (incest), sacrilege (breaking of tabu), and treason. Private crimes—those committed against private persons—include murder, adultery, unchastity, theft, perjury, and the like. Some of the latter may be regarded as public crimes if they are committed against the chief, because of the relation in which he stands to the community. There are, of course, many lesser crimes, while, especially where chiefs have the power of making laws, there is a tendency to multiply offences. With the greater development of savage society, and with the gradual formation of a central administrative body taking the place of mere public opinion and custom, these private crimes are regarded less and less as offences against an individual, and more and more as breaches of law and transgressions against social order. But it is rather at the next higher stage, in barbaric and semi-civilized societies, that a real approximation to this view is found.

5. Punishments.—Punishment administered by public justice in savage society has generally the intention of making the offender suffer pain, and is thus analogous to punishment inflicted as an act of private revenge. The *lex talionis*, or principle of equivalence in punishment, is perhaps originally connected with the reflex and instinctive movements of the person who is hurt, and who attempts to make the aggressor suffer a similar hurt by a natural process of imitation. There must be blow for blow. At the same time this movement is one of self-preservation, and this also is an element of all punishment. Such instinctive resentment is, however, indiscriminate in the amount of vengeance which it employs, and this primitive instinct of blow for blow, whilst suggesting the *lex talionis*, is not sufficient as an explanation of it. We may, therefore, with Westermarck (i. 179), look for a further explanation of it in the feeling of self-regarding pride which desires to bring the aggressor to the same level as the sufferer, and in the social feeling that members of the same society have equal rights, and hence, if one makes another suffer, he must suffer in a similar way and to the same extent.

The simplest form of the *lex talionis* is found in the idea of life for life, wound for wound, eye for eye, tooth for tooth. But it also assumes some curious forms; for example, especially in the case of the blood-feud, there is often the desire that the vengeance should fall on one of the same rank, or the same sex, or the same age, as the victim—the real aggressor thus escaping. Again, the vengeance is exacted with the same kind of weapon, and in the same manner. Or, where a system of compensations and fines exists, these are in due proportion to the amount of pain caused. Or it is seen working in still another way: the thief is deprived of sight, of an arm or hand; the perjurer loses his tongue; the adulterer or ravisher is castrated; or, again, the thief must not only restore the goods stolen, but must submit to be pillaged to the same extent (see Post, ii. 238 ff.; Hobhouse, i. 84, 91).

But, while the *lex talionis* is found as an underlying principle both in savage and in more advanced systems (cf. *e.g.* the OT and the Bab. *Code of Ḫammurabi*), there is often a disposition to exceed it, so that methods of private revenge as well as public punishments are often out of all proportion to the crime committed, especially in places where the people are naturally cruel, where a despotic chief rules, or where it is held that a Divine as well as a human law is transgressed. In the last case, as well as in cases where the chief is regarded as Divine or as having Divine authority, any transgression of law is apt to involve the whole society in Divine vengeance. Hence the punishment is swift and proportionately severe (cf. Durkheim, 'Deux lois de l'évolution pénale,' *ASoc* iv. 64 ff.). Savage acts of revenge, unregulated or regulated, as well as methods of punishment, are also often excessive, since they involve the punishment of an innocent person in place of the real offender (in many instances of the blood-feud or of the *lex talionis*), or that of innocent persons in addition to the real offender (his wife and children, especially in cases of sorcery, and these as well as fellow-clansmen in some instances of the blood-feud), as a result of the idea of solidarity and collective responsibility—a principle lingering on in more advanced societies.

In a few cases capital punishment seldom or never occurs. But, as a rule, it is meted out in most tribes for one or other of such crimes as sorcery, murder, incest, treason, sacrilege, adultery, and theft. Some tribes punish capitally only for sorcery and murder, or for sorcery and adultery (especially with the wives of chiefs); but not uncommonly all these offences are liable to the punishment of death. Further, in such despotic kingdoms as Ashanti or other regions of Africa, as well as sporadically elsewhere, even small offences are punishable with death, at the capricious will of the chief (Ellis, *Tshi-speaking Peoples*, 1887, p. 166; Kollmann, *Victoria Nyanza*, Berlin, 1899, p. 170 f.).

The methods of death vary; they include decapitation, strangulation, hanging, stabbing or spearing, cudgelling or flagellation, empalement, crucifixion, drowning, burning, flaying alive, burying alive, throwing from a height, stoning, sending the criminal to sea in a leaky canoe, cutting in two, lopping off the limbs. In some cases, where the crime is believed to be particularly offensive to the gods, the criminal is offered in sacrifice, while this is not an unusual way of obtaining victims where human sacrifice prevails (Melanesia [Codrington, *Melanesians*, 1891, p. 135], Sandwich Islands [von Kotzebue, *Voy. of Discov. into the S. Sea*, 1821, iii. 248], Tahiti [Ellis, *Polynes. Res.*, 1829, i. 346]; cf. Cæsar, vi. 16 [Gauls]; Grimm, *Teut. Myth.*, 1882, i. 45 [Teutons]). In certain regions where cannibalism prevails, criminals are killed and eaten, probably as an extreme form of gratifying revenge and showing contempt

(cf. CANNIBALISM, § ii. 15; Codrington, p. 344; von Martius, *Travels in Brazil*, 1824, i. 88).

Of all these methods the most cruel are found in Africa, where also mutilation before death, as well as other tortures, is practised (cf. Letourneau, pp. 71, 81, 82, 88; Post, ii. 274; Westermarck, i. 195).

Other punishments consist of various bodily mutilations—cutting off legs or arms, hands or feet (or parts of these), nose, ears, lips; castration; and plucking out the eyes. All these are found commonly in Africa, among Amer. Indian tribes, in the South Sea Islands, and occasionally elsewhere. Flogging or beating with various instruments on various parts of the body—back, hips, shoulders, legs, stomach—is also used (in S. America, among the Mongols, in Africa). Enslavement is found as an occasional punishment for crime or for debt (commonly in Africa and in the Malay Archipelago, and sporadically elsewhere); or, where the criminal has failed to pay the due compensation, he is often enslaved, or the usual punishment is inflicted upon him. He becomes the slave of his victim or of the latter's family, or of the chief, or he may be sold. Confiscation of goods, in whole or in part, is a frequent punishment in cases of theft. Banishment occurs here and there (New Zealand, Mongols, some African tribes) as a punishment for certain crimes, but it is often the result of general bad or unruly behaviour threatening the peace of the tribe (see Westermarck, i. 172; Steinmetz, *Ethnol. Stud. zur ersten Entwick. der Strafe*, vol. ii. ch. 5). Lack of filial duty among the Kafirs, and lying among the Bannavs of Cambodia, are punished with banishment (Lichtenstein, *Travels in S. Africa*, 1812–15, i. 265; Mouhot, *Trav. in Central Parts of Indo-China*, 1864, ii. 27). Other punishments are various forms of dishonour—cutting off the hair, insulting exhibition or parade of the culprit, dressing in women's clothes. Imprisonment as a punishment is rarely found among savages, but instances are noted in various parts of Africa (Krapf, *Travels . . . in E. Africa*, 1860, p. 58; Letourneau, pp. 80, 84; Post, *Afr. Jur.* ii. 51).

There is also a wide-spread system of compensation or fine for certain offences. This method of indemnifying the victim or his relatives is itself a species of punishment, though, where the aggressor is wealthy, it is easy for him to pay for his crimes. The system probably originated in the custom of paying blood-money to the relatives of a murdered man. The aggressor, to avoid a blood-feud, would offer presents to the relatives to appease their anger, while at the same time appealing to their love of gain. This, defective as it may be from the point of view of justice, was soon seen to have the good effect of staying the excesses of the blood-feud, and would be encouraged by the community or the chief. Similarly, compensation for theft may also have been suggested by the custom of subjecting the chief to pillage of his goods. The system of compensation was largely adopted, and passed over into the administration of public justice as a method of assessing criminal actions. But it was far from being universally accepted either in systems of private revenge or in public punishment, and, even where it prevails, certain crimes cannot be compensated for, *e.g.* sorcery and deliberate murder. It has a wide-spread vogue, however, as a regular custom, or as an alternative to punishment in cases of murder, adultery, seduction, theft, etc. (cf. Post, ii. 256 ff., for a list of peoples among whom it is found). Where it prevails, a regular system of payments is fixed according to the injury done, according to the rank or sex of the victim, and sometimes according to the rank of the aggressor.

In many instances—in such serious crimes as sorcery, murder, or crimes committed against a chief or his household—the wife and children of the aggressor suffer with him, or are sold as slaves. Or, where compensation has not been paid, wife and children may be taken with the defaulting criminal and enslaved; or he himself may sell them in order to obtain the wherewithal to pay the compensation. In the first two instances the savage doctrine of human solidarity is seen at work—a principle emphasized in the blood-feud, where the murderer's family or clan is often held responsible for his act and the members are liable to be slain for it.

As a further form of indignity and punishment, the body of a criminal is often left unburied, or is thrown into the forest to be devoured by wild beasts (African tribes [Post, *Afr. Jur.* i. 46]; Eskimos [Rink, *Tales and Trad. of the Eskimo*, 1875, p. 54]; Cent. America [Preuss, *Die Begräb. der Amer.*, Königsberg, 1894, p. 301]).

6. As has already been said, a distinction is drawn even by the most backward peoples between public and private crimes. Some examples of both will now be discussed, showing the attitude of the savage with regard to them and the punishments meted out to the aggressors.

i. *PUBLIC CRIMES.*—As examples of public crimes may be taken sorcery, incest, and sacrilege.

(1) *Sorcery.*—As distinct from *magic*, which is authorized for the public good, sorcery, though its methods may often be similar, is almost universally punished by the common action of a tribe or by the central authority acting in its name. The sorcerer is employing unlawful means for anti-social ends, especially to bring about the sickness or death of his neighbours, or to cause sterility in field or fold. Further, inasmuch as the crime is an anti-social one, it is for that very reason a crime against the divinity of the social group, its guardian or tutelary spirit. As among the Eskimos, it is adverse to the interests of the community and to the supreme rule of things in which the people believe (Rink, *op. cit.* p. 41). Further, where spirits invoked in magic are evil and maleficent, they are such as are opposed to the rule of the benevolent spirit or divinity, according to the usual dualism which prevails in savage religion. Thus, sorcery is condemned on religious as well as on social or moral grounds, and those who are most active in pursuing it are generally the approved fetish-men or priests. Moreover, the divinities are sometimes said to abhor witchcraft and to punish it in the future life (Rink, p. 41; Parker, *Euahlayi Tribe*, 1905, p. 79; Codrington, p. 274). As it is a wide-spread belief that all sickness or death is due to unnatural causes, one of which is sorcery, there is a wide field for the exercise of public justice against the sorcerer, who is generally regarded as a murderer of a particularly offensive type. Hence, not only in the lower culture, but at higher levels, law, and custom condemn him. He is a danger to society; he offends against its gods; and, because of the solidarity of the society, it may be visited by them for his offence. Therefore he is almost invariably punished with death. Sorcery is sometimes the only crime which is so punished, while the method of death is often very cruel. In most cases the authorized magician, medicine-man, fetish-man, priest, or witch-doctor, takes steps to discover the sorcerer. When he is found, he is often subjected to an ordeal, *e.g.* by poison. If this does not kill him but proves him guilty, he is then publicly put to death. The ordeal is thus equivalent to the trial of the suspected person.

Among Australian tribes, with whom all natural death is attributed to sorcery, death is the invariable punishment. The medicine-man identifies the guilty person, an avenging party

is arranged by the council of old men, and the culprit is followed up and slain (Spencer-Gillen[a], pp. 46 f., 477; [b] 25, 556). With the Eskimos, the *angekuts* are hostile to sorcerers and cause them to be put to death (Rink, pp. 34, 41; Petroff, *op. cit.* p. 152). The punishment of death was generally meted out to sorcerers, who were much feared among the American Indian tribes of all degrees of culture, from the lowest tribes up to the Aztecs, the method of death being often cruel—*e.g.* burning (Wyandots, Guatemalans) and cudgelling (Vera Paz). With the Aztecs the victim was sacrificed to the gods (*NR* ii. 462; cf. Post, ii. 395; Kohler, *ZVRW* xii. [1897] 412–416; Waitz, *Anthropologie*, Leipzig, 1859–1872, iii. 128). Among the Nufors of New Guinea sorcerers are stabbed and thrown into the sea (*ZE* viii. [1888] 193), and the punishment of death is usual in N. Guinea and among the peoples of the Malay peninsula (Wilken, 'Het stafr. bij de volken van het mal. ras,' in *Bijdragen tot de taal-, land-, en volkenkunde van Ned.-Indie*, The Hague, 1883, p. 21). In Fiji, where witchcraft exerted the strongest influence on the minds of the people, the person detected in using it was slain (Williams, *Fiji*, 1870, i. 248). In New Caledonia, old women are often put to death as sorceresses, and men who are suspected of causing death by sorcery are formally condemned and forced to jump over the rocks into the sea (Turner, *Samoa*, 1884, p. 342). In W. Africa, any one may kill the sorcerer; but generally after detection by the witch-doctor an ordeal is necessary, and the spirit of the ordeal sometimes kills the sorcerer. Otherwise he is put to death, and his private property is often confiscated (cf. Nassau, *Fetichism in W. Afr.*, 1904, p. 123; Kingsley, *W. Afr. Studies*[2], 1901, p. 159 ff.; Letourneau, p. 68; Post, *Afr. Jur.* ii. 66–67). Among the Lendu, a forest tribe of Uganda, the sorcerer is executed, and his body is thrown into the bush (Johnston, *Uganda Protectorate*, 1902, ii. 654 f.). In E. Cent. Africa, when the suspected sorcerer has been discovered before the assembled community by the witch-finder, he must drink a poisoned cup. If his stomach rejects it, he is acquitted; if it causes his death, this proves him guilty. In some cases he is burned alive (Macdonald, *Africana*, 1882, i. 43, 206 ff.; Letourneau, p. 69). In S. Africa, witch-doctors discover sorcerers, who are thought to be very numerous and powerful. When discovered, they are put to death (Casalis, *The Basutos*, p. 229; Decle, *op. cit.* p. 75; Maclean, *Kafir Laws and Customs*, 1858, p. 35 ff.).

Where the punishment of death is not inflicted, the sorcerer may be sold as a slave (some African tribes [Post, *Afr. Jur.* ii. 66–67]); and occasionally a fine is all that is demanded, but this is very rare (Bondei natives [*JAI* xxv. 227]).

Not infrequently the punishment is visited on the relatives of the sorcerer and upon his goods. Sometimes all these are destroyed (Decle, p. 153 [Matabele]; Post, *Afr. Jur.* ii. 66–67, 149 [Zulus and other African tribes]). In Bali, the parents, children, and grandchildren are put to death, and the property is confiscated (Crawfurd, *Ind. Archip.*, Edinb. 1820, iii. 138). In the Babar Archipelago, the sorcerer and all his adult blood-relations are slain, and the children given to the relatives of his victim to sell as slaves (Riedel, *De sluik- en kroeshar. Rassen*, The Hague, 1886, p. 346). Among many W. African tribes, while the sorcerer is executed, his family are sold as slaves (Post, ii. 67, 154).

(2) *Incest.*—While the civilized man's horror of incest is usually confined to cases of marriage or sexual relations between parents and children or brothers and sisters, among primitive and savage peoples the bars to marriage, while generally including these, usually extend much further. Where the classificatory system prevails, the society is divided into classes, from certain of which a man must not choose a wife. Or, again, he may not marry within his totem, his clan, his village, or even his tribe. Again, marriage may be prohibited within the kindred absolutely, or within the kindred on the mother's side, where mother-right prevails (generally a totemic prohibition). In the last case a man might marry his wife's daughter, or his brother's daughter; or a brother might marry a sister by a different mother, since they would be of different totems. But, as a rule, these unions are also looked upon with abhorrence. Thus, while in savage life consanguineous unions are, with certain exceptions, regarded as incestuous, the prohibitions have usually a much wider range, and all breaches of exogamous law are equally regarded as incestuous. While adultery is mainly punished as a private offence, incest is an offence against the whole group, and is often considered to bring ill-luck and Divine punishment upon the group, who are collectively responsible. It is, therefore, punished as a public offence. Usually it is looked upon with so much horror that it is unheard of; but, where it does occur, death to both offenders is the usual punishment, though lighter punishments are occasionally found. With rare exceptions, the prohibition extends also to all sexual relations outside marriage between persons belonging to exogamous groups. (For various theories of the prohibition of marriage, of exogamy, and of the horror of incest, see Westermarck, *Marriage*, 1894, p. 310 ff.; Lang, *Social Origins*, 1903; Durkheim, 'La Prohib. de l'inceste et ses origines,' *ASoc* i. [1898] 64.)

Some examples of the belief that incest brings ill-luck or is obnoxious to the gods may be cited. Ruin to the crops, continuous drought, continuous rains, are the result of incest, according to the Dayaks, the Battas, the Galelareese (who also attribute earthquakes and eruptions to the same crime), and other tribes (Frazer, *GB*[2], 1900, ii. 212–213; Post, ii. 388). They must be atoned for usually by a sacrifice, and the criminals are punished. Or, as in Kafir and Aleut belief, the offspring of incestuous unions are monsters, the Kafirs believing this to be brought about by an ancestral spirit (Shooter, *Kafirs of Natal*, 1857, p. 45; Petroff, *op. cit.* p. 155). The Samoans regard it as a crime abhorred by the gods (Turner, p. 92), and the Pasemah believe that those committing it are annihilated by the gods (Post, i. 41). As in many cases both adultery and unchastity are supposed to bring general misfortune, or to be abhorrent to the gods, it is possible that with such peoples the marriage-laws are believed to have been ordained by the deities.

Among the Australian tribes, the usual punishment for breaches of the exogamous customs was death, occasionally cutting and burning. As among the Central Australian tribes, the punishment is determined by the head-men, who organize a party to carry out the sentence (Westermarck, *Marr.* p. 299 f.; Spencer-Gillen[a], pp. 15, 100, 495; [b] 136, 140). The Veddas, often wrongfully accused of practising brother-sister unions, abhor incest, and punish it with death (Nevill, in *The Taprobanian*, Bombay, n.d., i. 178). The same punishment is usually inflicted throughout Melanesia (*JAI* xviii. 282; Macdonald, *Oceania*, 1889, p. 181). The Kandhs, Gonds, and other aboriginal tribes in India also punish incest (marriage within the same tribe, *gens*, etc.) with death (Percival, *Land of the Veda*, 1854, p. 345; Kohler, *ZVRW* viii. [1888] 145). Among the Bhils it is punished with banishment (Kohler, *ib.* x. [1892] 68). Throughout the Malay Archipelago the death punishment was often of a very cruel kind—committing to sea in a leaky vessel, drowning, or throwing into a volcano, burying alive, killing and eating (Wilken, *Globus*, lix. [1891] 22; Frazer, *GB*[2], ii. 213–214; Riedel, *op. cit.* pp. 195, 232, 460). Similarly, among the American Indians, death was the usual punishment (Kohler, *ZVRW* xii. [1897] 412–416; *NR* ii. 466, 659; Frazer, *Totemism*, 1887, p. 59).

Possibly in some of these cases the victims were regarded as expiatory sacrifices offered to the gods or spirits. In some instances of supposed incest, animal sacrifices are offered, or the blood is sprinkled on the ground to avert drought and sterility (Frazer, *GB*[2], ii. 212–213; Post, ii. 389). The death of the criminals or of the animal victims averts danger and a curse from the community.

As opposed to exogamy, most peoples have endogamous rules forbidding marriage outside a certain circle, narrower or wider as the case may be—the family, clan, caste, tribe, etc. Such a marriage is regarded as disgraceful, and in some cases as a crime which may be punished in various ways. But these rules have a different origin from those of exogamy, and result mainly from pride, antipathy, or prejudice (see Westermarck, *Marr.* p. 363 ff.; Post, i. 32 ff.).

(3) *Sacrilege.*—Of all forms of sacrilege in savage life, that which concerns breach of tabu is the most general. Tabu is an interdiction upon doing or saying some particular thing, an embargo placed on some thing or some person or persons, the infraction of which is frequently supposed to carry its own punishment automatically, preconceptions about tabu bringing about the fatal result through auto-suggestion. But, as the person who breaks the tabu is supposed to spread the danger by a species of contagion, and as breach of tabu frequently brings disaster to the tribe or its land, even where the automatic punishment may be looked for, he is often punished by society as a

whole, because he has sinned against the gods, or has committed a breach of social order involving supernatural results. He is put to death, for such a dangerous person is safer out of the way. Tabu need be considered here only in so far as it illustrates the savage view of public crime. Many irrational tabus have probably been imposed at one time by public opinion for some definite reason arising out of experience, real or imaginary. If something is conceived to be dangerous for any reason, *e.g.* on account of its connexion with spirits or gods, then it is wise to avoid it. The avoidance constitutes a tabu, and it becomes sacrilege to break it. Other tabus, those on food-stuffs or animals at certain seasons, have been imposed as a wise precaution, or in the interests of a class or sex. Many others are wilfully imposed by chiefs or priests. Generally all tabus have a supernatural sanction, and the automatic punishment is regarded as the working of the Divine anger. Tabus are sometimes of a private sort (tabus on property), but more often they have a public character—protective (as in the cases of food-supply, interdiction of places, etc.), political, sexual (as in the case of incest), or more purely religious. Tabu has to some extent subserved the growth of the idea that crime is wrong. Thus, where a tabu is placed on private property and the thief is believed to suffer automatically for his theft (cf. Turner, p. 185 f.), it is obvious that this belief would foster the idea that theft is wrong. On the other hand, many breaches of tabu, though crime in the eyes of the savage, have nothing inherently immoral in them.

Where society imposes a punishment for breach of tabu, that punishment is generally death. In Polynesia, where the institution was most fully developed, every infraction of tabu, or even the merest suspicion of it, was visited with death, the victim being usually sacrificed to appease the gods, since all diseases and calamities were public manifestations of their wrath at breach of tabu (Letourneau, p. 61). But in some other cases it is the violation of conspicuous tabus which is regarded as sacrilege meriting death.

Thus, with most savage tribes the fruits of the harvest cannot be partaken of until the firstfruits have been offered to a god or eaten sacramentally by selected individuals—chief or priest—or by all the people. In many cases to eat them before this solemn ceremony would be visited with Divine anger—madness (Fiji [*JAI* xiv. 27]), or death (Tahiti [Ellis, *op. cit.* i. 350]). But, even where death is thus held to follow automatically the act of sacrilege, detection carries with it a public punishment, as among the Zulus (death or confiscation of all the man's cattle [Frazer, *GB*[2] ii. 326]) and Polynesians (Moerenhout, *Voy. aux Îles du Grand Océan*, Paris, 1837, i. 531). An analogous crime is that of boiling milk among the pastoral Masai. This is believed to cause cows to go dry, and is punished as an insult to the sacred cattle, with death or a very heavy fine (Johnston, *Kilima-njaro Expedition*, 1886, p. 425).

A more obvious form of sacrilege is the viewing of various *sacra* by those to whom they are interdicted, *e.g.* women and children; or the communication of initiation secrets to the uninitiated; or intrusion upon sacred mysteries—those of men by women, those of women by men. Among the Australians, no woman may look upon the sacred mysteries of the men on pain of death, and the *tundun*, or bull-roarer, must never be shown to a woman or child. If it is, the woman and the man who shows it (and sometimes his mother and sisters) are put to death. Death is also the punishment to women who look upon the sacred totemic drawings, or (among the Arunta) intrude upon the place where the sacred objects are kept. Generally the danger of revealing these things is told to boys at initiation (see *JAI* ii. 271, xiii. 448, xxv. 311; Howitt and Fison, *Kamilaroi and Kurnai*, 1880, p. 268; Spencer-Gillen[a], pp. 11, 132, [b] 500; also above, vol. ii. p. 889). The same is true of the natives of the Papuan Gulf (*JAI* xxxii. 425). Among the Indians of Brazil, women are warned off the mysteries by the playing of the *jurupari* pipes, the mere chance sight of which is punished with death (Wallace, *Amazon*, 1895, p. 349). Death is also the penalty for infringing the initiation rules among the Torres Straits tribes (Haddon, *JAI* xix. 335). The initiation rites of girls are also tabu to men in most districts, generally under pain of death, inflicted by the women (Reade, *Savage Africa*, 1863, p. 246; Crawley, *Mystic Rose*, 1902, p. 297). Intruders on the mysteries of the Porro fraternity in the Timni district of W. Africa are put to death or sold as slaves, and this is generally true of all savage 'mysteries' practised by men; while, as in some African mysteries, any infraction of oaths and covenants by their members is believed to be punished by the god (Réville, *Rel. des peuples non civilisés*, Paris, 1883, i. 110; *CF*, p. 317). Similarly, as in the case of the female Njembe society in W. Africa, the mysteries of women must not be looked on by men under pain of death (Nassau, *op. cit.* p. 261; *CF*, p. 318). In some cases, religious rites as well as sacred places are tabu to women, as in the Marquesas Islands, where a woman is put to death if she touches the sacred ground where festivals are held (Melville, *Marquesas Islands*, 1846, p. 100).

Examples of the dangerous results of tabu-breaking by the automatic working of suggestion, even in cases where the breach has been unconscious, and has been made known to the breaker sometimes only after a long lapse of time, will be found in Dennett, *Folk-Lore of the Fjort*, 1898, pp. xxvi, xxix; *Old New Zealand*, by a Pakeha Maori, London, 1863, p. 96; *JAI* ix. 458. Suggestion also produces similar automatic results where magic, ghostly warnings, etc., are believed in, and where a man thinks that he is a victim of these (see Erskine, *W. Pacific*, 1853, p. 169; Howitt and Fison, *op. cit. passim*; Thomson, *Savage Island*, 1902, p. 98).

It should be observed that, where there are definite laws against the marriage of certain persons, the breach of which would be incest, these persons are generally tabu and must not speak to each other. Similarly, as a precaution against adultery, men's wives are tabu to other men, who must not even speak to or touch them (cf. Bastian, *Loango-Küste*, Jena, 1874–76, i. 168, 244).

ii. *PRIVATE CRIMES.*—Among private crimes, those of murder, adultery, unchastity, and theft may be examined here in detail. Some of these, *e.g.* adultery and unchastity, tend to become public crimes, since they are sometimes believed to produce evil results upon the whole tribe or upon its land—a visitation by the offended spirits.

(1) *Murder.*—Tylor has pointed out that 'no known tribe, however low and ferocious, has ever admitted that men may kill one another indiscriminately' (*CR* xxi. 714). This statement is supported by the express ideas of the horror of murder entertained by many even of the lowest savages. In many tribes, murders are extremely rare, and are felt to be wrong. But generally the feeling of abhorrence is restricted, and it is considered a harmless or even praiseworthy action to kill outside the limits of the clan or tribe. But the limits of the restriction vary considerably among different peoples. Blood-revenge for murder is a duty or a custom insisted upon by public opinion in most savage societies, and often legally permitted, while it is probably a survival of the time when no supreme authority existed for the execution of justice. Though in many cases the relatives of the murderer or any members of his clan or tribe are slain in revenge, because of savage man's idea of human solidarity and of the collective guilt of the murderer's family, clan, tribe, or more specifically because of the working of the *lex talionis* (son for son, daughter for daughter, etc.), and, though the custom often gives rise to tribal wars, yet the evidence shows that the revenge is directed in the first place most frequently upon the murderer himself. Often his death satisfies the desire for vengeance, and it is only where it has been found impossible to lay hands on him that the vengeance falls on another. In the insistence upon blood-revenge as a sacred and moral duty, which it is disgraceful and irreligious to avoid (sometimes because the dead man's ghost finds no rest till the vengeance falls), and in its falling first upon the murderer, we see exemplified the general savage view of justice.[1] Where a local tribunal exists, it may arrange the blood-feud and set the machinery in motion, or it may go further and, after hearing the respective sides, give judgment in favour of the avenger, and appoint execution to be done, sometimes by him; or it may try to arrange a compensation. But only where it is strong enough will its decisions be enforced or its suggestions be heeded. This action of the local tribunal may be regarded in the light of a compromise, where the custom of

[1] Other occasional causes of a blood-feud are wounding, adultery, seduction, rape, and kidnapping (cf. Post, i. 239).

blood-feud continues after the rise of such tribunals. It is thus a step towards justice being done in the case of private wrongs. The progress to true justice is further seen where the central authority steps in to forbid revenge, to decide guilt, and to award punishment. Frequently the practice of compensation, the *wergeld*, takes the place of the blood-feud or is even obligatory, the relatives being satisfied with the payment of a heavy fine, fixed according to rank, sex, age, etc. (cf. Post, i. 249 ff.). Where the acceptance of compensation was seen to lessen the protracted hostilities in the case of the blood-feud, it would be fostered by custom and authority; and in many cases, though not all, its existence may be traced to the intervention of the central authority, the elders of the tribe, or the chief (see BLOOD-FEUD).

It should be noted that, though there are marked exceptions to the rule, infanticide is very widespread and meets with little or no disapproval, while the killing of the sick and aged, not out of wantonness but for certain definite reasons, is not uncommon in many parts of the world. Similarly, though by no means generally, it is often the case that a master has the right to kill his slave (Post, i. 373). In a few cases infanticide is punished with death or in some other way, or is regarded as wrong and liable to bring misfortune; and, where the killing of aged parents for the specific reasons referred to is not customary, parricide, when it does occur, is regarded with abhorrence, and is at once punished (cf. Westermarck, i. 402 ff., 386; Steinmetz, *op. cit.* ii. 153 ff.).

Where blood-revenge does not exist, as well as in many cases where it does, the murderer is punished by the community, or by some special authority, though it is not always easy to distinguish, from the statements made, between true blood-revenge and the administration of justice. In most cases the punishment is death.

Among the Fuegians, the murderer is placed under a ban, and perishes of hunger, or death is inflicted by his fellows (Hyades-Deniker, *Mission scient. du Cap Horn*, viii. 374, 243). Among some Australian tribes, as has been seen, the council of elders arranges the avenging party in cases of murder by sorcery. But, as among the tribes of N.W. Central Queensland, the camp or a council of the camp punishes the murderer (Roth, *Ethnol. Studies among the N.W.C. Queensland Abor.*, 1897, pp. 139, 141). With some tribes a ceremony of spear-throwing at an offender appears to take the place of the blood-feud proper (Westermarck, i. 171). The Eskimos and Aleuts occasionally make common cause against a murderer and put him to death (Nansen, *op. cit.* p. 162; cf. Petroff, *op. cit.* p. 152). With many N. American Indian tribes the murderer had to appear before the chiefs for trial, but he was often handed over to the relatives of his victim for punishment (Cooper, *Mishmee Hills*, 1873, p. 238; Morgan, *League of the Iroquois*, Rochester, 1851, p. 330; Schoolcraft, *Ind. Tribes*, Philadelphia, 1851–60, i. 277; Adair, *Hist. of Amer. Ind.*, 1775, p. 150). Many African tribes also inflict capital punishment on the murderer, the chief frequently deciding his guilt and enforcing the sentence (Westermarck, i. 189; Letourneau, pp. 80, 83–84; Johnston, *op. cit.* ii. 882 [murderer executed by warriors among the Mutei]), or, as among the Mpongwe, the community burn or drown him (Burton, *Two Trips to Gorilla Land*, i. 105). Capital punishment for murder is also found in Polynesia and New Guinea (Turner, *Samoa*, pp. 178, 295, 334; Thomson, *JAI* xxxi. 143; Chalmers, *Pioneering in N.G.*, 1887, p. 179). In other cases, banishment, usually followed by death, is found, or, as among the Omahas, a species of boycotting and penitential expiation in the case of a murderer whose life has been spared (Dorsey, in *3 RBEW*, 1884, p. 369). Or, in some instances, as in the commutation of blood-revenge, a fine is all that is insisted on for murder (Shooter, *Kafirs of Natal*, p. 103; Casalis, *op. cit.* p. 228; Griffith, *JRASBe* vi. [1837] 332 [Mishmis, offender cut to pieces if fine is not paid]; Johnston, *op. cit.* ii. 882 [Kamasias, confiscation of goods of murderer and his relatives]). This fine is not seldom a real commutation of blood-revenge, and the composition is often recommended or expressly insisted on by the central authority. If it is not paid, the murderer is generally put to death (cf. Letourneau, pp. 72, 80, 89, 95; Elphinstone, *Kingdom of Caubul*, 1839, ii. 105; Von Martius, *Beit. zur Ethnog. Amer.*, Leipzig, 1867, i. 130).

The vengeance of the society upon the murderer is in part due to the belief that he is a source of danger to the group. He is infected with the uncleanness of death, or is surrounded by spirits, especially that of his victim, who will afflict not only him but others. Hence he is tabu, and, if he is not put to death, he must undergo ceremonies of purification, or be isolated from his fellows, as in the case of the Omahas (see above, and cf. Kohler, *ZVRW* xii. [1897] 408; Frazer, *GB*[2] i. 331 ff.). These ceremonies, or the period of isolation, are then a species of punishment.

In some cases it is expressly said that murder is punished because it is hated by a Divine being, or is a breach of his law. This is the case among the Omahas (Dorsey, *loc. cit.*), while in other instances murderers are believed to be punished after death (Australians by Baiame [Parker, *op. cit.* p. 79], Andaman Islanders [Man, *JAI* xii. 161–2], Melanesians [Codrington, p. 273 ff.], New Hebrides [Turner, *Samoa*, p. 326], Awemba [Sheane, *JAI*, xxxvi. 150 ff.], American Ind. [above, vol. ii. p. 685[a]]).

(2) *Adultery.*—Since in all savage societies the wife is regarded as the property of her husband, adultery is generally a serious crime. Before betrothal or marriage the woman may dispose of herself as she chooses, though here the father or guardian has sometimes the right of controlling her action, but after marriage her husband has entire right over her. Adultery is therefore regarded as an infringement of the husband's proprietary right, and is frequently a serious form of theft. Add to this the working of jealousy, and it is easy to understand why to the savage mind adultery is so serious an offence and often a capital crime. In many instances, even where there is a regular tribunal, the husband and those whose duty it is to help him have the right of dealing as he pleases with the culprits, especially if he catches them *in flagrante delicto*. The local tribunal and, in any case, custom and opinion justify his action, and often, indeed, expect him to avenge himself. He may, however, in such a case be liable to hostilities from the relatives of the wife or her paramour; and in a few cases, where the established tribunal is jealous of all such personal action, he may be punished by it, especially when he has put the woman to death instead of inflicting a lighter punishment. Or he may appeal to the tribunal, with confidence that due punishment will be visited upon the offenders, the execution of this punishment being occasionally allotted to him.

The punishment of death not only for adultery but, in some cases, for slight indiscretions or even for touching a wife, especially the wife of a chief (Bastian, *op. cit.* i. 244; Post, ii. 358; MacLennan, *Studies in Anc. Hist.*, 2nd ser., 1896, p. 412), is visited upon the offending wife or the paramour or both, either by the husband or by a legal tribunal, among a large number of peoples (see ADULTERY [Primitive and Savage]; Westermarck, i. 290; Post, ii. 362, 371); and in some cases adultery is the only crime which is capitally punished (Mishmis [*JRASBe* vi. [1837] 332]). Occasionally the punishment is meted out to the wife only after repeated offences (Macdonald, *Africana*, i. 140). In other cases the seducer has to suffer slavery, mutilation, emasculation, beating, or some other bodily indignity; he must submit to his wife's being outraged; or he must pay compensation, usually equal to the value of the woman, to the injured husband (Post, ii. 366–9, 373; Letourneau, pp. 20, 43, 65–66, 78, 83, 95). Similarly, where the unfaithful wife is not put to death, she is mutilated, disfigured, beaten and ill-treated, enslaved, repudiated, divorced, or prostituted (Post, ii. 364–5; Letourneau, pp. 37, 65, 66). In a few exceptional cases the wife is not punished (Westermarck, *Marr.* p. 122; Post, ii. 370). These various punishments are usually inflicted by the husband, but occasionally by a tribunal or by the chief. Adultery is occasionally the cause of a blood-feud or of a species of blood-revenge (du Chaillu, *Equat. Africa*, 1861, p. 51; Letourneau, p. 96).

The punishment of adultery is sometimes in proportion to the rank of the offenders or of the husband; or, where a system of fines is in use, the fine is similarly proportioned (Post, *Afr. Jur.* ii. 82–83; Letourneau, pp. 65–68; Johnston, *op. cit.* ii. 590, 689; Ellis, *Ewe-speaking Peoples*, 1890, p. 202). Generally, too, adultery with a chief wife is more severely punished than with a lesser wife or concubine (see CONCUBINAGE).

As a general rule, in savage societies the wife can obtain no redress for the husband's adultery; but there are occasionally exceptions to this even at low levels (*e.g.* with some Australian tribes), and the husband is punished more or less severely, or

his adultery (or even bringing a second wife or concubine to the house) is a ground for the wife's divorcing him (see ADULTERY [Primitive and Savage], § 6; Westermarck, ii. 432; Post, *Afr. Jur.* i. 465, ii. 72).

There is a certain amount of evidence that among savage tribes adultery is regarded as a grave moral offence, which may bring general calamity, or must be expiated, or which is offensive to the gods, or will be punished in the next world (see art. ADULTERY, § 8; Crawley, *op. cit.* p. 143 f.; Mason, *JRASBe* xxxvii. [1868] pt. 2, 147 ff. [Karens]; Westermarck, ii. 675; Perham, *JRAS* Straits branch, no. 8, p. 150 [Sea Dayaks]; Man, *JAI* xii. 157 [Andaman Islanders]; Sheane, *JAI* xxxvi. 150 ff. [Awemba]; Codrington, *Melanesians*, p. 273 ff.; Jones, *Ojebway Ind.*, 1861, p. 104).

(3) *Unchastity.*—Unchastity before marriage is variously regarded among savage peoples. In some instances a girl is allowed the utmost licence, but in many quarters unchastity is reprobated more or less severely. The difference in attitude doubtless involves differing moral conceptions, but there can be little doubt that much is due to the question of the girl's position. If she has been betrothed in early years to a prospective husband, she is expected to remain chaste, or she may be repudiated. Or, again, unchastity is held to lower her value in her father's or guardian's opinion, because a smaller bride-price will be obtainable for her. But, as the severity of the punishments shows, unchastity is frequently regarded as a moral offence even among some very low tribes (see Westermarck, *Marr.* p. 61 ff.), and it is sometimes thought to be offensive to the higher powers, or to bring misfortune on the tribe or the crops. Hence it must be expiated in one way or another, as well as punished (St. John, *Forests of Far East*, 1863, i. 63, 69 [Dayaks]; Mason, *JASB* xxxvii. 2 [1868], 147 [Karens]; Frazer, *GB*[2] ii. 212 [Battas]; Bastian, *Indonesien*, Berlin, 1884–99, i. 144 [Ceram]; Reclus, *Prim. Folk*, London, 1891, p. 52; Post, *Afr. Jur.* i. 460; Westermarck, *Marr.* p. 61 [Loango]; Casalis, *Basutos*, p. 267).

The punishments are various, and may be inflicted by the house-father, the tribunal, or the chief. Sometimes both seducer and seduced are put to death (Post, *Afr. Jur.* ii. 70 [Marea, Beni-Amer]; Cunningham, *Uganda*, 1905, p. 290 [Baziba]; Johnston, *op. cit.* ii. 747 [Kavirondo]; Dawson, *Aust. Abor.*, Melbourne, 1881, p. 23 [W. Victoria]; Post, ii. 375 [Nias]). In other cases the girl is put to death (Post, ii. 375 [some Igorrote tribes]), or she is banished or enslaved (Westermarck, *Marr.* p. 66 ff.; Post, *Afr. Jur.* ii. 72; Cunningham, *op. cit.* p. 102 [Bakoki]; Chanler, *Through Jungle and Desert*, 1896, p. 317 [Rendila of E. Africa]; Post, ii. 380 [some Malay tribes]), or she is scourged (Post, *Afr. Jur.* ii. 71-72), or has to pay a fine to the chief (Post, ii. 380). In some of these cases the seducer shares the punishment, but generally he has to pay compensation or a fine, usually equivalent to the value of the girl (her bride-price or blood-price), and sometimes much heavier (Post, ii. 375–6; Westermarck, ii. 425–6, 436). In some instances he must also marry the girl, and often, if the fine is not forthcoming, he is enslaved. Seduction may at one time have been a common cause of a blood-feud, later compensated for by fine, but occasionally it still leads to a feud (Post, *Afr. Jur.* i. 81).

(4) *Theft.*—Proprietary rights are recognized by all savage tribes, most of whom condemn or abhor theft, while all of them punish it in one way or another. The thief is frequently punished by the owner of the stolen property (more especially when he is taken red-handed); and in such cases the latter may even have the right to kill him or enslave him. Or he may force him to restore the stolen goods or their value, and sometimes two, three, or more times their value, or may subject his belongings to pillage. Here, generally, custom has arranged a system of regulated composition. In other cases the thief is punished by the tribunal, or the chief, with death, enslavement, banishment, mutilation, or beating; or he is forced to pay a fine, or to restore the goods or their value. In general, the higher the value of the goods stolen, the heavier the punishment. Stealing such things as any tribe sets much store by—cattle, products of the field, weapons, and the like—is usually severely punished. Sometimes the punishment depends upon the place from which the theft is made (field, garden, or house), the time at which it occurs (night or day), or whether the thief is taken in the act, and also upon the social position of the person robbed or of the thief. Usually, too, the punishment increases when acts of theft are repeated, a notorious thief being usually put to death. Where a system of fines exists, there is generally found a regular scale of values for different things. And, when a fine or composition is not paid, the thief is often killed, enslaved, or punished in some other way. But, before undergoing punishment, the prisoner's guilt or innocence may be attested by oath or ordeal. In many cases property is protected by tabus involving the thief in an automatic punishment or in the results of a curse. Or, again, when a thief cannot be found, resort is often had to cursing him, a god being invoked to punish him (see Westermarck, ii. 63 ff.). In some instances the gods are said to abhor and punish theft either in this world or the next (Andaman Islanders [Man, *JAI* xii. 161]; some Polynesian and Melanesian tribes [Turner, *Samoa*, pp. 301, 326; Codrington, *op. cit.* p. 274; Macdonald, *Oceania*, p. 208]; some American Indian tribes [above, vol. ii. p. 685[a]; Bossu, *Trav. through Louisiana*, 1771, i. 256]; Dayaks [Brooke, *Ten Years in Sarawak*, 1866, i. 55; Perham, *op. cit.* p. 149]).

The thief is killed when taken in the act, by the Fuegians (King and Fitzroy, *Voyages*, 1839, ii. 180), peoples of the Malay Archipelago (Westermarck, ii. 8), Maoris (Moerenhout, *op. cit.* ii. 181), some African tribes (Westermarck, i. 289, ii. 13; Johnston, ii. 591; Post, *Afr. Jur.* ii. 92–3); or he is enslaved (Post, *ib.* ii. 93). Among peoples with whom capital punishment for various kinds of theft exists are some Australian tribes (Letourneau, p. 28); tribes of the Malay Archipelago (Javanese, Alfura, Bataks, Achinese, etc. [Post, ii. 434; Westermarck, ii. 8]); the Shans (*JAI* xxvi. 21); American Indian tribes (Post, ii. 434; *NR* ii. 658; Petroff, *op. cit.* p. 152; Harmon, *Voyages*, Andover, 1820, p. 348; Von Martius, *op. cit.* i. 88); Polynesian and Melanesian tribes (Westermarck, ii. 9; Post, *Anfänge des Staats- und Rechtslebens*, Oldenburg, 1878, p. 224; Letourneau, p. 54 *f.*); African tribes (Letourneau, pp. 64, 67; Westermarck, ii. 12; Post, ii. 88 *f.*). Enslaving or banishment (especially in cases of repeated theft) is the punishment among the Fantis, Yolofs, Diagara, and other African tribes (Post, ii. 87; Letourneau, p. 64), the Karens (habitual thieves [Mason, *JASB* xxxvii. 2, 146]), tribes of the Malay Archipelago (Westermarck, ii. 8), Maoris (Post, *Anfänge*, p. 224), some Amer. Ind. tribes (*NR* ii. 658; Dodge, *Our Wild Indians*, Hartford, 1882, pp. 64, 79; Dall, *Alaska*, 1870, p. 382), Mongols (Post, *op. cit.* p. 224). Mutilations of various kinds as an application of the *lex talionis* (cutting off fingers, hands, arms, feet, or legs, plucking out the eyes, or even cutting off nose or ears, and castration) are found among several African tribes (Post, *Afr. Jur.* ii. 81, 88, 90-92; Westermarck, ii. 12), peoples of the Malay Archipelago (Westermarck, ii. 8; Post, *Anfänge*, p. 223; Riedel, *op. cit.* p. 232), Ainus (Batchelor, *Ainu and their Folklore*, 1901, p. 235), various Mongol tribes (Post, *op. cit.* 223), Kamchadales, some Amer. Ind. tribes (Letourneau, p. 19; Post, *op. cit.* p. 223), and in Fiji (Williams, *Fiji*, p. 23). Beating or flogging occurs among the Brazilian Indians (Post, *op. cit.* p. 222), Kalmuks (*ib.* p. 222), and some African tribes (Post, *Afr. Jur.* ii. 88, 91 f.).

Probably the earliest form of revenge for theft, apart from death, was retaliation in kind. The victim of the theft would either pillage the thief or seek to recover his property. Acts of pillage are found sporadically sanctioned by public opinion (Maoris [Ellis, iii. 126]; in Malaysia [Letourneau, p. 75]); but, where these occur, they may be in default of restitution. Sometimes simple restitution of goods suffices, but more frequently this accompanies another punishment or the enforcing of a twofold or manifold restitution (Indians of Brazil [Von Martius, i. 88]; Amer. Ind. tribes—Wyandots twofold [*I REEW*, 1881, p. 66]; Mayas [*NR* ii. 658]; Kirghiz ninefold [Georgi, *Russia*, 1780–83, iii. 337]; Malay Archipelago twofold or more, sometimes a fine [Westermarck, ii. 8; Post, *Anfänge*, p. 218]; African tribes, twice to ten times the value [Westermarck, ii. 12; Post, *Afr. Jur.* ii. 84, 86]). Sometimes confiscation of a thief's whole property occurs (Cunningham, *Uganda*, p. 304; Johnston, ii. 882; Post, ii. 439). Such forms of compensation may be regarded in the light of a fine, greater or less, according to the magnitude of the theft, or the general feeling with regard to its wickedness. Sometimes also severe punishments —death, mutilation, etc.—may be expiated by a fine. Among Australian tribes a not uncommon method is that the thief is challenged to single combat by his victim.

An especially vile form of theft, always severely punished when it occurred, and perhaps to be regarded as a form of sacrilege, is that of stealing offerings, etc., from a grave (Westermarck, ii. 518–9).

7. At those festivals which mark the beginning of a new year or the offering of firstfruits among savages, and which are usually accompanied by ceremonial confession of wrongdoing and by ritual purifications and riddance of the contagion of wrong, very frequently there is considerable licence, and such crimes as may be then committed are not afterwards punished. At such festivals there is great excitement, with much drinking, dancing, etc. Crimes would then be readily committed, but had not to be accounted for, because they occurred during a sacred season, while their contagion had already prospectively been got rid of, or would shortly be got rid of, by the ceremonial purifications usual at such periods.

Among most savage tribes the right of asylum or sanctuary for the criminal is clearly recognized, the sanctuary being generally a place sacred to gods or spirits, or the abode of sacred persons (priest or chief), in which it would be dangerous for the avenger or the executioner of justice to shed the blood even of a criminal (see art. ASYLUM; Post, ii. 252 ff.).

SUMMARY.—The execution of justice among savage tribes is, on the whole, an extremely rough and ready process. Where the practice of private revenge is common, it militates against the independent and impartial weighing of the evidence by a disinterested tribunal. And, even where there exists a recognized tribunal, it generally lacks the most elementary requirements for the discovery of truth as found in a civilized court of justice. Impartiality is seldom found, the weighing of evidence and the reliance upon it alone being practically unknown; the common resort to ordeals is an extremely defective method of arriving at the truth; in many cases not only does the guilty escape, but, where he is punished, the innocent often share his punishment. Punishments, too, are often extremely severe. On the other hand, the evidence seems to show that there is a general hatred of crime among savages, and that it is probably of comparatively rare occurrence among many tribes.

J. A. MACCULLOCH.

CRIMES AND PUNISHMENTS (Assyro-Babylonian).

—These are revealed to us mainly by the Bab. codes of laws, of which three have been found—the first and the last, fragments only; the second—that of Ḫammurabi—nearly complete.

1. The first (the earliest known) are the Sumerian laws, of which examples occur in the 7th tablet of the *Ulutināḫi-šu* ('punctually') series. This work contains specimen-phrases for students of Sumero-Akkadian, the laws being among the legal and other phrases which the student had to learn. Though the tablet dates from the time of Ashurbanipal (*c.* 650 B.C.), there is no doubt as to the period during which these laws and their penalties were in force; their reproduction in the contract-tablets of the time of the dynasty to which Ḫammurabi belonged indicates that the code of which they formed part originated previous to *c.* 2000 B.C. The language in which they are written (Sumerian) shows that they were drawn up during the Sumerian period, and they may, therefore, date from 3500 B.C., or even earlier. The crimes or misdemeanours referred to therein are not serious, and belong rather to the class of offences against morals than to really criminal acts. Nevertheless, they are exceedingly interesting, and are of considerable importance in that they contain the earliest ordinances in existence concerning punishment for wrongdoing:

'If a son say to his father, "Thou art not my father," they may shave him, put him in fetters, and sell him for silver.'

'If a son say to his mother, "Thou art not my mother," they may shave his forehead, lead him round the city, and drive him forth from the house.'

'If a wife hate her husband, and say to him, "Thou art not my husband," they may throw her into the river.'

'If a husband say to his wife, "Thou art not my wife," he shall pay her half a mana of silver.'

'If a man hire a slave, and he dies, is lost, runs away, gets locked up, falls ill, he shall pay as his hire every day half a measure of grain.'

Though the above laws refer only to adopted sons, the respect for foster-parents which the punishments for denial of them imply shows how strong the feeling of the Sumerians was in this matter. The adopted son might be sold as a slave, and it may be supposed that a real son would have been treated with even greater severity. The denial of a foster-mother brought upon the culprit all the disadvantages of slavery, as is implied by the shaving of his forehead. His being taken round in the city was probably for the purpose of making his misdemeanour known; and driving him forth from the house implied his being either left in utter destitution, or relegated to the position of a slave.

Inequality in the status of the husband and the wife is implied by the differing punishments for the same or similar offences. Divorcing a husband was punishable with death, but the divorcing of a wife only incurred the fine of half a mana of silver. There is no doubt that women had fewer rights than men in ancient Babylonia, but it must be admitted that they are not altogether their equals even now.

The last law of the five shows the respect paid to property. The penalties inflicted are rather hard upon the hirer, who is responsible for a slave whom he has hired, even if a misfortune befalling him is not due in any way to the fault of the hirer. Perhaps it was necessary—the Sumerians may have been (criminally) careless of other people's property delivered into their hands; in any case, if the hirer thought the conditions too severe, he could easily stipulate, on hiring, that he should not be visited with the full rigours of the law in the case of an accident happening.

2. The next laws in chronological order with which we come into contact are those drawn up by the great Babylonian legislator, Ḫammurabi, whose code is now preserved in the Louvre at Paris. Here we have a list of crimes and punishments far more complete than any which the ancient nations of the East preceding the Jews have ever handed down.

How far these laws were regarded as binding is doubtful—the conditions of life probably changed from time to time; and it is unlikely that the same ideas regarding penalties and punishments for breaches of the law prevailed in Assyria as in Babylonia, notwithstanding that the Assyrians studied those old Bab. laws. Perhaps the tablets of the *Ulutināḫi-šu* series, like many another ancient composition, and the laws of Ḫammurabi himself, were kept in the libraries at Nineveh, simply because they were ancient and venerable works, useful to the law-student. Upon this point, however, we shall be better able to judge later on.

In considering such a matter as that of crimes and punishments, it will probably be admitted that the Babylonian mind was not trained in so severe a school as that of the Roman or the modern legist. Moreover, the difference in the manners and customs of the East and the West, to say nothing of the question of period, must be taken into consideration. Thus, many offences against morality and decency were probably not thought worthy of punishment by the Babylonians, notwithstanding that they may have been regarded as most reprehensible. Bigamy was not a punishable offence, and the game-laws were probably merely rudimentary. Bribery was not punishable, except when it was intended thereby to pervert the ends of justice.

Nothing is said, moreover, concerning bestiality, blasphemy, breach of ritual, drunkenness (except, perhaps, in the case of priestesses and devotees), lying (though we know, from certain texts—see CONSCIENCE [Bab.], above, p. 33—that this was a thing unpleasing to the deity), malice, prophesying falsely, the desecration of holy days, speaking evil of rulers (*lèse majesté*), uncleanness, usury, and many other things which are not only regarded as crimes or misdemeanours among the European nations, but also appear as such with the ancient Hebrews. Idolatry, magic, sorcery, intercourse with demons and spirits, and prostitution were naturally not counted as crimes; though blasphemy, sacrilege, and similar offences against the gods were probably severely punished—certainly the latter (sacrilege). Whether blasphemy was a crime or not probably depended upon the place and the deity, for none would speak slightingly of a deity in the place where he was worshipped, except a fanatic.[1] It is to be noted, however, that nothing certain can be stated with regard to many acts which modern Europeans would consider as crimes in law, for the simple reason that we have only one code in any sense complete, namely, that of Ḫammurabi (*c.* 2000 B.C.), and even that has gaps.

The death penalty.—In the Code of Ḫammurabi, as is fitting, respect for what is just holds the first place, and the penalty for false accusation of killing is death (§ 1). In the case of a (false) accusation of sorcery, the accused person had to dive into the river, and, if the river refused to drown him, the accuser suffered the penalty of death, and the accused took the house of his dead defamer. Death, in fact, was the penalty of any false accusation in which a life was involved. In all other cases, a false witness bore the cost of the action (§§ 2-4)

Next to the safety and integrity of the person, that of the property of a man was held to be the most sacred. Theft was not generally punished with death, unless the property stolen belonged to a temple or to the palace (of the king), in which case the receiver suffered the same punishment (§ 6). In later times, the penalty for sacrilegious theft (with the damage inflicted upon the images of deities by stripping them) seems to have been death by fire (Pinches, *The OT in the Light*, etc.[3], p. 561).

Strange, however, is the severity of the law (§ 7) ordaining death for buying the property of a man, either from his own hands or from those of his slave, without witnesses or contracts; or for receiving such property on deposit. Probably possession of a man's property without justifying documents suggested receiving it on false pretences, which the laws of the Babylonians evidently wished to discourage, the more especially as it presupposed the neglect of those legal forms to which the people seem to have paid special attention.

Though theft did not entail the death-penalty, the neglect or failure to pay fines and make restitution transformed it into a capital offence (§ 8). There were probably two reasons for this—the sacredness of property-rights, and respect for the law. Theft, with the sale of the stolen object, was even more severely punished, as the penalty was not only death, but the restitution of the property, in addition, to both parties (the owner, and the person to whom the property had been sold), the purchase-money being returned in full (§ 9). It seems not improbable that a purchaser of property sometimes found himself in serious difficulty, for, if he could not produce the seller or witnesses, he was regarded as a thief, and was executed accordingly (§ 10). This law naturally presupposes that he had no documentary evidence of the purchase. A claimant of lost property had likewise to be careful, as absence of witnesses was regarded as proving him to be a rogue; and the penalty in that case, again, was death, because he had falsely accused the person claimed from (§ 11).

Housebreaking, too, entailed the death-penalty, probably because theft was regarded as being in contemplation, though the damage to the house was naturally taken into consideration. The housebreaker was killed and buried in front of the breach (§ 21)—an undesirable position in any country where the dead were regarded as returning to visit the living. Brigandage was also punished with death (§ 22). Theft at a house where a fire had broken out, under the pretence of entering to extinguish it, entailed being thrown into the flames (§ 25). One is left to surmise that the thief got out if he could.

Offences against the person were likewise punished severely. Kidnapping a freeborn child was a capital offence (§ 14). Negligence which proved fatal to any person was punished with death; and such would be the penalty if a badly built house fell on the occupier and killed him; the builder had constructed a defective dwelling, possibly from motives of cupidity. In the case of the dependants of the owner, the *lex talionis* seems to have been applied, for the death of the owner's son was punished by the death of the builder's son (§§ 229, 230).

The position of slaves as a man's property probably had greater importance than any respect that may have been regarded as due to their persons, and the death-penalty was therefore applied in the following cases: allowing a palace slave or serf to escape, or sheltering him (§§ 15, 16); or detaining an escaped slave (§ 19). Evidently it was regarded as the duty of a citizen to restore a slave to his owner, especially if that slave belonged to the palace. Getting a barber to mark a slave wrongfully was, it seems, equivalent to stealing him (§ 227), and was punished with death and burial in his (the wrongdoer's) own gate. It was likewise a serious offence if a soldier (*redû*) hired a substitute; and, besides the death-penalty being enforced, the substitute might take the soldier's house (§ 26)—apparently the dwelling allotted to him by the State. In the same manner, a highly-placed official could neither himself hire a substitute, nor accept a mercenary as substitute (for another), and incorporate him, the penalty being death in both cases.

The duties of a 'wine-woman' (meaning, evidently, a woman keeping a public-house) included assisting the government by capturing criminals; and, if she failed in this, she also met with the penalty of death (§ 109).

[1] In all probability the word *sillatu*, when applied to something spoken against a deity, corresponded with 'blasphemy,' as we understand it. The followers of Šamaš-šum-ukin (Saosduchinos), Ashurbanipal's brother, who uttered *sillatu* against the god Aššur, were put to death after their lips (*var.* tongues) had been torn away (Aššur-bani-âpli, cyl. A, col. iv. 66 ff.). In another passage, referring to chiefs of Gambulu, the culprits were flayed after the tearing out of their tongues (G Smith, *Assurbanipal*, London, 1871, pp. 137, 74 ff.).

The real nature of these wine-houses, which were kept by the wine-women, has yet to be discovered. That they were places of evil repute seems certain, and a devotee not dwelling in a cloister who opened a wine-house, or who entered a wine-house for drink, was burned to death[1] (§ 110). It seems to have been the duty of wine-women to accept payment for their drink in kind; and any such woman refusing to do this, or accepting a low tariff, might be thrown into the river (§ 108), she having thereby contravened the law.

Infidelity and incest were also under the pain of capital punishment. An adulterous woman and her paramour were to be tied together and thrown into the water, unless pardoned (apparently), the former by her husband, and the latter by the king (§ 129). Violation of a virgin-wife dwelling with her father entailed death to the man, but exile (?) to the woman (§ 130). A thriftless woman making her poverty an excuse for marrying again during her husband's absence, was condemned to be thrown into the water (§ 133)—the punishment meted out to a disreputable woman who repudiated her husband (§ 143). In the law reports (see Ungnad, *Hammurabi's Gesetz*, iii. nos. 1, 8; iv. 776), a rebellious or faithless wife was thrown down from the tower, or sold into slavery (no. 7); and slavery (as a milk-maid ?) in the palace was the punishment meted out in such a case, in a text from the Khabur (Johns, in *PSBA* xxix. 177; Ungnad, *op. cit.* no. 5). For incest with a son's bride the penalty was drowning (§ 155); and for incest with a mother,[2] death by fire for both (§ 157).

Mutilation.—This penalty was not uncommon, and in some cases roughly indicated the crime by destroying that which was regarded as the offending member. Thus, if the son of a chamberlain (palace-favourite) or of a public woman denied his foster-parents, his tongue, the organ with which the denial was made, was cut out (§ 192). In the case of an adopted son learning who his real father was, despising in consequence his foster-parents, who had brought him up, and returning to his father's house, the punishment was loss of an eye (§ 193).[3] A nurse substituting, without the knowledge of the father and mother, another child for one who had died whilst in her care, was punished by the cutting off of her breasts, thus ensuring, as in most punishments of this nature, that the offence should not occur again (§ 194). A son striking his father was punished by the loss of a hand—the limb with which the offence had been committed (§ 195). A slave striking a freeman's son received the same punishment as a slave denying his master,[4] namely, the loss of an ear—probably as a mark that he was a criminal, and a warning that he was untrustworthy (§§ 205, 282). As we have seen above (p. 258[a]), defamation, when it was a question of a life, was a capital offence, but in other cases a less severe punishment was decreed—thus, if a man 'raised the finger' against (accused of unchastity) a priestess or a married woman, the punishment was the shaving of the forehead—a proclamation to the world that a misdemeanour had been committed. Priests alone, in all probability, shaved the whole of the head, so that there was no danger of the obliteration of the distinguishing mark, whilst it lasted.

[1] The severity of the penalty would seem to imply that unchastity was presumed in such a case.

[2] 'After the father,' apparently = 'after the father's death.' But perhaps 'step-mother' is meant, in which case 'after the consummation of the marriage' may be intended.

[3] According to the tablets (Ungnad, *op. cit.* iv. nos. 14, 19), an adopted child who was rebellious was sent away, or, as in the Sumerian laws (see p. 257[b]), sold into slavery. Ill-treatment of an adopted child entailed loss of property to his benefit (*ib.* nos. 14, 16).

[4] A slave-wife denying her husband's mother was marked (by a tonsure) and sold.

Exceedingly interesting, and among the laws which have attracted the most attention, are those ordaining retaliation. Injury involving the loss of an eye entailed the loss of an eye to the person who had inflicted the injury, and it was the same for the other members of the body—bone for bone (*i.e.* broken limb for broken limb), teeth for teeth (§§ 196, 197, 200).

Fines, with alternatives (mutilations, etc.).—Whether these punishments could be compensated for by a money-payment, or in any other way, is not stated. In each case, however, they refer to a freeman injuring a person of his own rank; but a freeman committing the same offence against a man of inferior rank got off by paying a fine (1 mana for the limb or the eye of a serf; and ½ mana for the teeth, with lesser indemnities in the case of a slave). For striking a man of equal rank on the head, also, the *lex talionis* did not apply, but a fine of 1 mana of silver was inflicted. If the man struck was of superior rank, the striker received 60 lashes 'in the assembly' with an ox-hide whip (§ 202). A serf striking a serf paid 10 shekels of silver (§ 204), but a slave striking the head of a freeman lost his ear (§ 205). Thus were intentional injuries atoned for.

For unintentional injury, even in a quarrel, things were different. In such a case, a freeman hurting another had only to swear that he had not struck him knowingly, and was then responsible only for the physician's fees (§ 206); and, if death ensued, he made amends by paying ½ mana of silver, and for the son of a serf ⅓ only (§§ 207, 208). Striking a freeman's daughter, so that she lost her expected offspring, entailed a fine of only 10 shekels of silver (§ 209), and, if the woman died, they killed the smiter's daughter. The punishment of the culprit was in such a case a sore affliction, calculated to sadden him for the rest of his days, but here, as in other cases, the innocent suffered for the guilty simply because the Babylonians would not admit that a woman was the equal of a man, and said that, whatever the sex, the penalty must be 'a life for a life.' Striking a slave-woman with the same serious result entailed a fine of 2 shekels of silver, and, if she died, ¼ mana (§§ 213, 214). In this case it was not 'slave for slave,' probably because the expected offspring had to be allowed for, the fine, it appears, being more than the value of a slave.

Among the worst examples of the mutilation-penalty, however, are those quoted by Ungnad (*op. cit.* iv. 63, no. 1049), where, if certain people bring action against each other, their noses are to be pierced and their hands dislocated, and in this condition they are to go to the market-place at Sippar. In another case (*ib.* no. 1051) the hair of the forehead was to be shaved on account of bringing an action, the alternative being a fine (no. 1050). An attempt to rescind, by legal action, the gift of the king, entailed a fine of 10 shekels of silver, and covering the claimant's head with hot (?) bitumen (*ib.* vol. iii. no. 458). This last text comes from the independent State of Ḫana (Thurean-Dangin, *RA* iv. 17). The punishment for false witness was a fine of 2 shekels of silver (Ungnad, iii. no. 699), and shaving of the forehead (*ib.* 707).

The *lex talionis* also existed for injuries inflicted unintentionally in the course of professional (surgical) attendance. For death or loss of sight after an operation for a grave injury or for a cataract (?), the penalty was loss of the hands—the same as for a son striking his father, the object in both cases being the same, namely, to prevent a repetition of the misfortune (§ 218). A serf's slave having been treated for a grave injury, and dying under the operation, the penalty was restitution ('slave like slave') (§ 219). If the slave lost an eye

after an operation, the physician had to pay the owner half his value in silver. A veterinary surgeon who had operated upon an ox or an ass, which had died thereafter, paid to the owner a quarter of its value (§ 225). The 'crime,' in these cases, was want of skill or judgment, and the penalties were probably as near as the framers of the Code could get to the 'just mean' in each case, for the slave or the animal might have been of greater or less value, taking the injury into consideration, but the penalty was the same.[1] In the case of a man hiring an ox, and causing its death by negligence or by blows, the penalty was ox for ox (§ 245), and the same penalty was imposed if he had broken its foot or cut its nape, thus rendering the animal useless (§ 246). Destroying the eye of a hired ox entailed an indemnity of half its value in silver (§ 247); and breaking off its horn, cutting off its tail, or piercing its nostril was made good only by paying a quarter of the animal's value (§ 248). 'Act of God' left the hirer free from obligation (§ 249).

Though not a crime, an accident which brought an owner within the purview of the law arose from injury by a mad bull. On the first occasion, in which the bull's viciousness could not be known, there was no penalty (§ 250); but the death of a man by a known vicious bull, horned and at large, entailed a penalty of ½ mana of silver (§ 251), and ⅓ mana if the person killed was a slave (§ 152).

In certain cases (see above, p. 258[b]) the punishment for theft or dishonest dealing was death, but the case of an employé differed. Thus, if a man hired to do the work of a farm stole the wheat and the vegetables, and these things were found in his hands, his hands were cut off (§ 253). Here again, we seem to have an instance of vengeance against the offending members; for he who, instead of working for the benefit of his employer, used his hands to rob him, was accounted worthy of this mutilation. In one case not very clear in the Code, the person who took away necessary things and weakened the oxen had to make up the damage he had caused (§ 254); and in another, if he lent out the oxen or stole the grain, so that he was unable to cultivate it, he had to pay 60 *gur* for every *gan* of ground left uncultivated (§ 255). It seems strange that a thief, in such a case as this, should be let off so easily, but it was the same for other things—a man stealing a watering-machine paid 5 shekels of silver, and the theft of a shadouf or a plough entailed an indemnity of 3 shekels (§§ 259, 260). The question naturally arises whether, in this inscription, the verb *šarāqu* has always the meaning of 'to steal.' A herdsman was under the same liability as the farmer—if a man, duly in receipt of a salary, reduced the oxen or the sheep, or their natural increase, he had to make up the amount (§ 264); and, if he changed their natural increase, or sold it, the penalty was that he made up the amount to the owner tenfold (§ 265).

Deprivation of office.—Apparently only one kind of misdeed entailing this is referred to in Ḫammurabi's Code, and, as is fitting, it bears upon the administration of justice. If a judge changed a sentence, thus making it to be of no effect, he was punished with twelvefold restitution of the sum involved in the lawsuit.[2] In addition to this, he was dismissed from the justice-seat, never to return; nor was he to sit with other judges when trying a case (§ 5).

Imprisonment.—It is noteworthy that, in all the enactments of the Code of Ḫammurabi, there is no mention of imprisonment. The Babylonians, however, certainly had prisons, as the expressions *bît ṣibitti* and *bît kili*, and the fact that arrests were ordered by the king, show.[1] In all probability, however, they were not houses of detention as a punishment, but simply places where an accused person or a criminal could be confined until tried or punished. An interesting text referring to this is printed in *Cun. Texts*, vi. pl. 8 (Ungnad, *op cit.* iii. no. 743), in which a man speaks of being placed in *bît ârarri* by his judges, whose names he gives. He states that he was not to be released until he had fulfilled a certain order—probably the delivery of a document, but the details are not clear.

Possibly imprisonment was more common in later times than at the early period of Ḫammurabi's dynasty. A letter published in *Recueil des Travaux*, xix. 107–108 (82-3-23, 845), asks: 'Why takest thou my child and placest him in the prison-house (*bît kili*)? None shall take him, and thou must bring him forth (again). Send my son quickly.' Confinement was also effected in a man's own house: 'Shut up Arad-Bau (who sits in the city-gate of Hadad) in his own house with the men' (Pinches, *Outline of Assyr. Gram.*, 1910, p. ii). The reason of this order is not stated, but something of the nature of a revolt or conspiracy may be suggested.

Resistance to Assyrian dominion entailed all kinds of horrors, and, though the Assyrian king may have regarded such resistance as among the worst of misdeeds, and worthy of all the pains and tortures which he inflicted, it hardly comes within the scope of the present article. Nevertheless, there is one noteworthy instance of punishment for what might be described as a crime, though those who suffered for it were only obeying their king's orders. Certain Elamite magnates had been sent by Te-umman, the king, to Ashurbanipal, king of Assyria, asking for the delivery of certain fugitives. The message was an insolent[2] one (*šipir merihti*), and the Assyrian king had the ambassadors detained. It seems not improbable that Te-umman made preparations to invade Assyria before the return of his ambassadors on the occasion of their final visit to Assyria; so, after the defeat and decapitation of Te-umman, they were shown his cut-off head, the sight of which is said to have driven them mad. The success of the Assyrian arms had such an effect on Rusâ, king of Ararat, that he sent ambassadors to Arbela to greet Ashurbanipal, who showed them the bodies of the Elamite ambassadors with the 'insolent message' which they had brought.

CRIMES AND PUNISHMENTS (Buddhist).—Crimes are for the most part committed by irreligious people; and the punishments are determined upon and carried out (even under hierarchies like Rome and Tibet) from political

[1] Such are the disadvantages of the cut-and-dried legislation of a code.

[2] Twelvefold restitution is frequently referred to in contracts of late date, but this is for changing the record, and is not confined to the judges.

[1] The British Museum tablet D.T. 1, generally called 'Warnings to kings against injustice' (*WAI* iv.[2] pl. 48), which refers to certain penalties, is rather a tablet of rewards and punishments, mostly referring to the rulers of the land; but it is unfortunately not clear in every part. Among other maxims given it is stated that a king's ill-favour towards his princes or his burghers was likely to entail in the one case an untimely end, and in the other rebellion. It is interesting, however, on account of its references to imprisonment: 'The son of Nippur, Sippar, Babylon, committing wrong, is caused to enter the prison-house—where the wrong has been done, the town shall pour out (? supply provisions) to the fortress (?).' 'The sons of Sippar, Nippur, and Babylon, giving their provisions to the stallions, ate the stallions for their provisions—they were delivered into the custody of the foe,' etc.

[2] 'Treacherous' seems also to be a possible rendering.

or legal, rather than from religious, motives. It is, therefore, a complicated problem to decide how far a religion, dominant at any time in a country, is or is not an important factor either in deciding what acts shall be called crimes, or in determining the punishments for them. This is so even when the facts are known and classified; and no attempt has yet been made to write the history either of crime or of its punishment in any Buddhist country. The following remarks must, therefore, be tentative and imperfect. It will be convenient to discuss the subject (1) as regards the Order, and (2) as regards the laity.

1. **The Order.**—The standard text-book of Canon Law consists of the ancient Rules of the Order, as current in the time of the Buddha (see 'Pātimokkha,' in art. LITERATURE [Buddh.]), edited, about fifty years after his death, with notes and a commentary, and accompanied by twenty supplementary chapters. These additions by the editors show the development that had taken place, during that interval, in the interpretation of the Rules themselves as well as in the method of enforcing them. Of the 227 Rules, more than 200 relate to matters of deportment, to the common property of the Order and the proportion allowed to each member, to the time and manner of taking food, and so on. The penalty for any infraction of these minor regulations was repentance; that is, the offender had to confess his fault to a brother *bhikkhu*, and promise not to repeat it. This penalty involved forfeiture of any property held contrary to the regulations.

The major offences were divided into two classes —*pārājika* and *saṁghādisesa*. The former class comprised four crimes—the sexual act, theft, murder, and putting forward a false claim to religious insight. The penalty was expulsion from the Order, or, to use the words of the Rules, 'he has fallen into defeat, he is no longer in communion.'[1] The notes and supplements discuss cases raising the point whether some act does or does not amount to an infringement of one or other of these four Rules. The cases put are ingenious, and the decisions harmonize in a remarkable way with the equitable views of modern writers on criminal law.

The second of the above two classes comprises five offences depending on or inciting to sensual impurity; two connected with building a residence without obtaining the approval of the Order; two with slander; two with stirring up discord in the Order; one with intractability; and one with general evil life (being a disorderly person). The penalty for these offences was suspension for as many days as had elapsed between the offence and its confession. A suspended member of the Order is under disability in regard to 94 privileges of an ordinary member—he is to take the worst seat or sleeping-place, cannot sit on a Chapter, cannot travel without restriction, and so on.[2] When the fixed number of days has passed, the suspended *bhikkhu* may be rehabilitated. Both suspension and rehabilitation can be carried out only at a formal Chapter, where not fewer than twenty regular *bhikkhus* must be present. There are somewhat complicated rules to ensure the regularity of the proceedings, the equity of the decision, and opportunity for the putting forward of the defence. These are too long even to summarize. We must be content to note that, for instance, the rules as to the constitution of the court are given in *Vinaya Texts*, ii. 263 ff., iii. 46; those as to the accusation being invalid, unless brought forward under the right heading, in ii. 276 ff.; those as to both parties being present, in iii. 47. Every member of the Order resident in the locality had the right to attend such a Chapter; and, if the matter were too complicated to be adequately considered in so large a meeting, it could be referred to a committee of arbitrators chosen by the Chapter (*ib.* iii. 49 ff.).

The above are rules and practices evolved by the early Buddhists, for use among themselves only; they do not give, or pretend to give, any adequate treatment of the question of crimes, or of that of punishments, but they show that the early Buddhists had a very fair grasp of the general principles underlying the equitable administration of criminal law, and that in the matter of punishment they took, as might be expected, a lenient view. They show also that, at the time when Buddhism arose, such crimes as murder and theft were no longer looked upon as offences against individuals only, but had already come to be considered as offences against the community, as moral offences in themselves—in other words, that this step forward in the treatment of crime was not in any way due to Buddhism, but was the outcome of Indian civilization.

2. **Laity.**—The Buddhist scriptures frequently refer to their ideal of a perfect king, a righteous king who rules in righteousness, without punishment, and without a sword (*adaṇḍena asatthena*). In the *Kūṭadanta*,[1] King Wide-realm's country is harassed by dacoits, who pillage the villages and townships and make the roads unsafe. He thinks to suppress the evil by degradation, banishment, fines, bonds, and death, but his Buddhist adviser tells him that there is only one method of putting an end to the disorder, that is, by providing farmers with food and seed-corn, traders with capital, and government officials with good wages. If this method be adopted, 'the king's revenue will go up; the country will be quiet and at peace; and the people, pleased with one another and happy, dancing their children in their arms, will dwell with open doors.' In the legend the plan succeeds; and it represents, no doubt, fairly accurately, the Buddhist vague ideal of the right theory of crime and punishment. In the Buddhist historical chronicles we have no instance of its having been realized. Crime and its punishment have been dealt with according to the views current at each time and place, and it would be impossible, with our present evidences, to attempt any statement as to whether, and in what degree, those views have been modified by the Buddhist ideal.

T. W. RHYS DAVIDS.

CRIMES AND PUNISHMENTS (Celtic).—1. The treatment of crime and of criminals among the ancient Celts is wrapped in great obscurity. Cæsar (*de Bell. Gall.* vi. 13) informs us that the Druids of Gaul were judges in both public and private disputes, and that they awarded damages and penalties; and we are told (*ib.* vi. 16) that, when human sacrifices were offered, criminals were sacrificed in the first instance, before recourse was had to innocent victims. It is not improbable, therefore, that among the Celts, as among the Greeks, Romans, and other races, the idea prevailed that certain forms of conduct were displeasing to the gods, and that, in consequence, communion with deity could not be re-established without the purification of society by the death or expulsion of the persons who were guilty of such conduct (see COMMUNION WITH DEITY [Celtic], vol. iii. p. 749). In this treatment of its un-

[1] *Vinaya Texts*, i. 4 f.

[2] The whole of the 94 are given in *Vinaya Texts*, ii. 386 ff.

[1] *Dīgha*, i. 135; tr. in the present writer's *Dialogues of the Buddha*, i. 175 f.

desirable members by the community it is probable that attention was paid to the general type of character no less than to specific acts of wrong conduct, just as, in the process of compurgation by oath in Welsh law (see below), the witnesses who were called to testify on oath gave evidence quite as much to the general character of the accused as to his non-performance of a particular act. The types of character which are always abhorred by communities where custom rules, as it did among the Celts, are those which are indifferent to the observance of customary prohibitions (in Homeric language those of men lacking in *αἰδώς*), such being conspicuous by their want of scruple and by the quality of *ὕβρις*. One of the Celtic roots for 'good' (Ir. *dech*, Welsh *de* [now obsolete], cognate with Gr. *δέχομαι*), meant 'acceptable'; and the other Celtic terms relating to character show the prevalence among the Celts of the same moral conceptions as among other men of Indo-European speech. The idea of a defilement attaching to crime is found in a statement made in the *Ancient Laws of Ireland* (iii. 97), that body and soul are both defiled by committing crimes.

2. Side by side with the penalty of sacrifice, and probably connected with it, was that of exclusion from participation in religious rites. Cæsar (vi. 13) tells us that any contumacy with respect to the judgments of the Druids was punished by exclusion from the ritual of sacrifice; and this sentence, he says, was the severest among the Gauls, since the men so punished were treated as outlaws, and were cut off from all the rights and privileges of human society. In Gaul there appears to have been a measure of centralization in the administration of justice, since the assembly of the Druids, meeting, according to Cæsar, in the territory of the Carnutes, held a court for the trial of cases brought from every district around. In the case of the Druids it is clear that the decision was in the hands of the religious leaders of the community; and this suggests that among the Celts, as in other early communities, the ethical and the religious aspects of crimes and their punishments were not very clearly distinguished. The conception of outlawry, or the loss of civil status, was a marked feature of the Celtic treatment of wrongdoers in the historical period, but this form of punishment was resorted to only in extreme cases. In Irish law, and to a somewhat less extent in Welsh law, recourse appears to have been had with extreme reluctance to the punishments of death and outlawry.

3. In Irish law, also, it is remarkable that imprisonment and all forms of corporal punishment, whether by mutilation, beating, or torture, are conspicuous by their absence, and mutilation and imprisonment are rarely alluded to in the Welsh laws. It is not impossible that ordinary crime was almost as rare in Ireland and Wales in ancient times as it is to-day, and that the communities in question seldom found it necessary to have recourse to very extreme punishments.

4. Another feature of Celtic law, which links it to certain ancient forms of social organization, is the emphasis laid by it upon the responsibility of the family group for the conduct of its members, as is seen especially in the case of the crime of homicide (see, further, art. BLOOD-FEUD [Celtic]).[1] Both in Ireland and in Wales the family group of the slayer had to pay compensation to the family group of the slain for the loss of one of their number. This collective aspect of criminal jurisprudence is one of the chief differences between the older Celtic point of view and that of the more individualistic jurisprudence of the present day; but even in Ireland (*Anc. Laws of Ireland*, iii. 245) the penalties for all crimes except killing fell on the offender, provided he had the means of paying.

5. Sources of information.—In the case of Ireland there is a large body of knowledge relating to crimes and punishments, as well as to other branches of law, contained in the *Ancient Laws of Ireland* (Rolls Series, 1869–73). This work comprises various legal treatises, such as the *Senchus Mór*, the *Corus Bescna*, the *Book of Aicill*, etc. These treatises are the work of the Brehons (the hereditary lawyers of Ireland), who decided the cases that were brought to them. The body of law in question retained its authority among the Irish until the beginning of the 17th century. The law of England, which was introduced into Ireland by Henry II., was for a long time hardly followed except within the English pale, which consisted of Louth, Meath, Westmeath, Kildare, Dublin, and Wicklow. A statute of Henry VIII. (Stat. 13, c. 3), promulgated in 1522, mentions that English law was not observed beyond the counties named. The main body of Irish law is called the *Cáin*; local modifications of general laws were called *urradhus*, and inter-territorial regulations *cairde*.

6. In the case of Wales there is abundant information concerning criminal procedure in the *Ancient Laws of Wales*, published under the editorship of Aneurin Owen in the Rolls Series (London, 1841). There is also a very convenient edition of the so-called *Gwentian Code*, published by A. W. Wade-Evans, under the title *Welsh Medieval Law*, from a Harleian MS (Brit. Mus. 4353) of the 13th cent. (Oxford, Clarendon Press, 1909), to which references will be made in this article. The Welsh laws consist partly of a Code, issued under the royal sanction and authority of Hywel Dda, and partly of a collection of legal maxims arranged in groups of three, or triads. The Welsh laws are based on a recension of existing customs by the prince Hywel Dda ('Howel the Good') (*c.* 930), and vary somewhat for the different regions of the Principality. The oldest MS is the *Black Book of Chirk*, now in the National Library of Wales, Aberystwyth (12th cent.), which appears to have been a form of the code of Gwynedd (N.W. Wales); hence its usual name, the *Venedotian Code*. Another form of the Code is known as the *Dimetian*, or the Code of Dyfed (S.W. Wales), perhaps better regarded as that of the larger area known as Deheubarth (the Southern region), while another form is usually known as the *Gwentian*, from its supposed association with the district of Gwent (S.E. Wales). It is probable, however, that this Code, as Wade-Evans has shown, was that of Powys (Mid-Wales). The Code of Hywel is found in a Latin as well as a Welsh form, but the precise relation of these two forms is uncertain.

7. Attitude of the community to crime.—Among the Celts the community recognized the right of vengeance (Ir. *dígal*, Welsh *dial*), whereby the individual or his family might themselves obtain satisfaction or compensation for a wrong done to them. This right, however, was one that was greatly restricted in practice, and was not to be put into operation except when other remedies failed. Ancient Irish law, and probably at one time Welsh law, made no distinction between crimes and torts (though originally some offences may have been viewed as offences against religion), and dealt with them alike as cases for compensation through payment. Whereas in modern communities crime is regarded mainly as an offence against the State, though individuals may be

[1] In Ireland the family groups in question were known as the *geilfine*, *derbfine*, *iarfine*, and *indfine*.

wronged thereby, Irish legal practice, which was in the hands of a hereditary caste of arbitrators called Brehons, developed to an unusual degree the remedial aspect of compensation for wrong to the sufferers—an aspect which in the English law of crime has sunk largely into the background. In Welsh law there are abundant traces of an earlier state of things resembling that of Ireland, but there are also signs of the growth of a point of view resembling that of modern States.

8. In Ireland, if the guilty party did not pay the amount which the Brehons awarded, the party that was aggrieved was allowed to exercise his right of vengeance by means of reprisals or private war. In Wales, the latter process was called *myned ar herw* ('to go on a plundering expedition'), and the regular term in Welsh for plunder was *anrhaith* ('absence of law'). The aggressor, if his family cared to support him, might offer resistance, or might become an outlaw, and, in that case, the avengers, if they chose, might put him to death. There are indications, however, that this power was restricted in Irish law by making the right purely personal, to be exercised only by the person who had been specially wronged. The Welsh legal triads state (Wade-Evans, *Welsh Medieval Law*, p. 264) that there are three legal periods for avenging a dead body:

'Between two kindreds who do not originate from the same *gwlad* ("a district under one rule"), commencing a claim on the first day of the week following that wherein the dead was murdered; if there comes no answer by the end of a fortnight, the law makes vengeance free. The second is, if the two kindreds are in the same *cantrev* ("hundred"), commencing a claim on the third day after the dead is slain; if there comes no answer by the end of the ninth day, the law makes vengeance free. The third is, if the two kindreds are in the same *cymwd* ("commot"), commencing a claim on the third day after the dead is murdered; if there comes no answer by the end of the sixth day, the law makes vengeance free.'

In three MSS of the Welsh laws (X211b, W99b, and U55a; see *Anc. Laws of Wales*, i. 778, and Wade-Evans, *op. cit.* p. 306) there is found the following statement:

'There are three incitements to revenge; one of them, the shrieking of female relations. The second is, seeing the bier of the relative going to the graveyard. The third is, seeing the grave of their relative without enjoying satisfaction.'

The Welsh laws make the following exceptions as to the persons who could take part in a blood-feud (Wade-Evans, *op. cit.* p. 187):

'And if there be any one of the kindred of the murderer or the murdered who is an ecclesiastic in holy orders or a religious or leprous or dumb or an idiot, he neither pays nor receives any of the *galanas* ("blood-fine"). They are not to take vengeance for a person murdered, nor is vengeance to be taken on them; and it is impossible to compel such by any law to pay anything, nor are they to receive.'

9. **Family champion.**—In Ireland (see *Anc. Laws of Ireland*, iii. 83, note) there existed the institution of family champion, whose place it was to avenge family quarrels. The championship in question formed one of the seven grades of a territory. The Welsh laws contain no reference to this institution.

10. **Outlawry.**—In the *Book of Aicill*—the most important treatise on Irish criminal law (*Anc. Laws of Ireland*, iii. 381)—the question is asked, What is it that makes a stranger of a native freeman and a native freeman of a stranger? The answer is as follows:

'That is, an outlawed stranger: he is defined to be a person who frequently commits crimes, and his family cannot exonerate themselves from his crimes by suing him for them, until they pay a price for exonerating themselves from his crimes, *i.e.* seven *cumhals* (a *cumhal* = 3 cows) to the chief; and seven *cumhals* for his seven years of penance are paid to the Church, and his two *cumhals* for *cairde*-relations are paid to each of the four parties with whom he had mutual *cairde*-relations; and when they (the family) shall have given in this way, they shall be exempt from his crimes until one of them gives him the use of a knife, or a handful of grain; or until he unyokes his horses in the land of a kinsman out of family-friendship. And, if they give him these, they shall not be exempt from his crimes, until they pay the same amount again for exonerating themselves from his crimes' (*ib.* p. 385).

'The son whom he had begotten before he had been made an outlaw is to be like every other lawful man of the family. As to the son whom he may have begotten after he had been made an outlaw, his liabilities shall be on the family of his mother, *i.e.* they pay the full debt of a stranger out of their own rightful *séds* ("legal units of value") for his liabilities, and they obtain his body-fine. . . . The case in which a man may be killed with impunity—*i.e.* every man is exempt from liability for killing him—is when these things before mentioned were given for him, and the king has not neglected to restrain him, and he is not on the land of any particular person, and there is no particular person who feeds him. But, if the king has neglected to restrain him, and if he is not in the employment or hire of any particular person in the territory, he (the king) shall pay for his crime; and, if he be killed, the body-fine of a stranger who has a *bescna*- ("modus vivendi") compact shall be paid for him. Neglect of restraint on the part of the king means that he did not restrain him to the employment of a particular person, or did not have him living on a particular land, or fed by a particular person.'

This passage is of interest as being one of the few passages in the *Ancient Laws of Ireland* which refer to the royal power or responsibility. The reference is important, inasmuch as it shows that, even in Ireland, the king had a clear place in the legal system of the community, though the Brehons made little mention of it. In Wales the term *direit*, though not used in the Laws, meant originally a person who was outside the social order.

11. In the *Anc. Laws of Ireland* (iii. 463) the text of the *Book of Aicill* says, 'The life of every law-breaker is fully forfeited,' but this is explained in the commentary as follows:

'That is, it is lawful to kill the thief without name, who is not known, when there is no power at the time of committing the trespass; and he (the slayer) is exempt on account of every person killed in his (the thief's) guise.'

The various cases that might arise under this head are then considered, and it is said (*op. cit.* p. 469):

'The person who is exempt from liability for killing the thief is he from whom he came to thieve, or who is entitled to *éric*-fine for the theft. If he (the slayer) be the person to whom *éric*-fine is not due for the theft, full body-fine is due from him for killing him, whether there was or was not power to arrest him. Or, according to others, it may be lawful for any person to kill him, whether the person to whom he came to thieve, or the person to whom he did not come to thieve.' 'It is then there is no exemption for killing a person in the guise of the thief, when he is seen stealing the *séds* ("chattels"), or when the track of any particular thing stolen was found after him. If he was not seen stealing the *séds*, or if the track of the particular thing stolen was not found after him, there shall be paid full body-fine for killing him, whether there was or was not power to arrest him. The person who came to inflict a wound upon the body may be safely killed when unknown and without a name, and when there was not power to arrest him at the time of committing the trespass, and there is exemption for every one killed in his guise.'

12. **Administration of justice.**—In Ireland the picture presented by the Brehon legal treatises is that of a community without an official magistracy or police, where the remedy in the case of any wrong done (whether a crime or a tort) was in the form of damages assessed by an arbitrator possessing hereditary expert knowledge of Irish custom, the main problem for the arbitrator being in each case the accurate assessment of damages, which varied with the status of the person wronged, with the act committed, and with other circumstances. Allusions to the king's power or laws are very rare in these legal treatises. In *Anc. Laws of Ireland* (iii. 409) we are told that the crimes of the man who violated the king's laws were adjudged on the seven houses in which he got beds, that the penalty for violating the king's laws varied according to the nature of the tenancy and local laws, and that there was a penalty for supplying lodging to the violators of the king's laws, and similarly for the violation of a king's inter-territorial law; but it is clear that the idea of a crime in its relation to the community as a whole was in Ireland more implicit than explicit. In Wales the Laws refer to *brawdwyr* ('judges'), who had a recognized status in the community, but whose payment appears to have come mainly from the parties to the action.

13. Effect of intention.—The distinction between criminal and non-criminal injuries was recognized in Irish law, though without altering the type of compensation required. Whenever a wrong action was shown to be due to malice aforethought, the fines on account of it had to be doubled. Intention had always (see *Anc. Laws of Ireland*, iii. 469, 471) to be taken into account in the case of theft, wounding, and homicide. In *op. cit.* iii. 139 there is a minute discussion of the fine due for the intention to wound, when the attempt to wound was not successful. The Welsh process of *galanas* ('recovery of compensation for murder') was always combined with the recovery of the fine for *sarhad* ('insult')—a combination which shows that, in historic times at any rate, intention was clearly recognized. It is said, for example (Wade-Evans, *op. cit.* p. 255), that an unintentional blow is not *sarhad*.

14. Responsibility.—In Irish law (*Anc. Laws of Ireland*, ii. 45) it is recognized that certain persons could not be considered responsible for their actions, and the rule is laid down that

'a fool, a madman, a male idiot, a female idiot, and a dumb person shall not be distrained: their adult guardians who bear their crimes and get their wages shall be distrained.'

In *op. cit.* iii. 157, it is said:

'The man who incites a fool is he who pays for his crime, in which case the man who commits the crime, *i.e.* the fool, is exempt; for this is the instance in which fines of design are paid, another man who paid had not designs.'

In some cases (see *op. cit.* iii. 159) there was a difference of opinion, and we read:

'When a fool has committed a furious assault alone, of his own accord, without cause, without enmity, it is then lawful to give every fool up for his crime; or, according to others, compensation must be paid on his account by his family or the person with whom he is. If there be enmity, each of them pays compensation.'

In *op. cit.* iii. 501 it is stated that neglect on the part of the sane in not looking after the insane would have to be compensated for; and, according to *op. cit.* iii. 507, damages would have to be paid for leaving an epileptic lunatic unguarded. The same conception underlies *op. cit.* i. 157, 161, where it is stated that a person is liable to distress for the crimes of his messenger and of his hired woman, and a man is also liable to a fine for the crime of his jester.

In Welsh law (Wade-Evans, *op. cit.* p. 255) it is stated that

'a free man is to answer for his *alltud* ("foreign servant") in every claim for which he is not to lose the tongue, and life, and limbs; for no one is to lose tongue and life and limbs by the tongue of another person.' It is further stated (*ib.* p. 259), that no one is to make answer or satisfaction for an act of his bondman, except for theft.'

The extent to which children could be held responsible was carefully considered in Irish law, and the *Anc. Laws of Ireland* (ii. 66) discuss minutely the question of their responsibility at various ages, as well as that of their parents and foster-parents. In *op. cit.* v. 151, it is stated:

'Little boys are safe in all the rights of lawful sports, until they have come to the age of having to pay damage of *dire* ("restitution-fine") for violence.'

Women, in respect of their first and second crimes, were placed on the same footing as boys.

15. Advocacy.—The Irish treatises make no mention of advocacy, but the Welsh legal triads contain the following statement:

'Three persons who are entitled to an advocate for them in court: a woman, and one with a natural impediment in speech, and an alien of foreign speech.'

16. Crimes in Irish law.—The forms of what would now be called crimes, or serious wrongs, with which Irish law deals, are homicide, wounding and mutilation, criminal assault, theft, assault, perjury, insult, libel, slander, using charms, trespass, damage to property (both living and dead), gross negligence, absconding and harbouring a fugitive, abduction, stripping of the dead, and disturbance of the peace.

17. Crimes in Welsh law.—The above were crimes or serious wrongs also in Welsh law, with the omission of the using of charms, and the addition of arson, waylaying, indecent assault, and treason.

18. Penalties in Irish law.—The normal penalties of Irish law consisted in the payment of certain fines, which were assessed by the Brehons (see above). The principle underlying these fines was that they were viewed as the equivalents of the amount of vengeance which the person or persons aggrieved would be justified in exacting in a particular case. Hence an important consideration which entered into the assessment of every fine was the value and status of the person injured. Irish law (as well as that of Wales) was based upon the principle that each person and thing in the community had a definite legal worth. In the case of persons, various considerations entered into the calculation both of a person's *díre-fine* ('honour-price') and of his *éric-fine* ('body-price'). In the *Anc. Laws of Ireland* (v. 97) it is asked what it is that gives *díre* ('honour-price') to a person, and the reply is 'desert and worth and purity.' Of desert it is further explained that it refers to property, of worth that it refers to the person's word, and of purity that it refers to his deed. In the matter of rank as conferring status, there were in Ireland two chief grades: (1) the *saer-nemed*, and (2) the *daer-nemed*. In *op. cit.* v. 15, the former are said to consist of 'churches, chiefs, poets, and *féine*' (free tenants), while the latter consist of the practisers of every art in general. A passage from one of these grades into the other (with a consequent change in honour-price) was possible. A *saer* ('free')-man might become a *daer* ('unfree')-man by selling his land or his property or his body into servitude, while a *daer*-man might become a *saer*-man by purchasing land or law or freedom by his act or by his husbandry, or 'by his talent which God bestowed upon him.' A loss of 'honour-price' might result from a defect of character. In *op. cit.* i. 55 it is said:

'There are four dignitaries of a territory who may be degraded: a false-judging king, a stumbling bishop, a fraudulent poet, an unworthy chieftain who does not fulfil his duties.'

Again, in *op. cit.* p. 57:

'False judgment and false witness and false testimony and fraudulent security and fraudulent pledging and false proof and false information and false character-giving and bad word and bad story, and lying in general, whether in the case of the Church or the laity,—every one of these deprives the man who is guilty of such of half his honour-price up to the third time, but it does not deprive him with regard to every one of them until the third time.'

The Irish law-treatise referred to enters minutely into the question of the loss of full and half honour-price in the case of kings, bishops, chieftains, poets, and others; and it is of interest to note the importance attached in Irish law to character and right conduct.

It was not character alone, however, that determined honour-price, and Irish law reflects differences of opinion as to the extent to which it depended upon a man's profession, his separable property, or the rank of the chief under whom he served.

Apart from the cases already mentioned, where it is stated that under certain circumstances a wrongdoer might be put to death (see above), there is no reference to the death-penalty in Irish law, nor is there any reference to imprisonment. The king appears to have had power to assign a wrongdoer to the service of a particular person, but no mention is made of imprisonment as a form of punishment. The only reference to castigation as a form of punishment is in the case of a child under seven, who could be chastised only by its parent. In certain cases other fines called *airer* ('redemption') and *smacht* ('discipline') were ex-

acted, and there are occasional references to penance.

19. Penalties in Welsh law.—Welsh, like Irish, law was based upon a consideration of the status of the individual, and upon the determination of the legal worth of every person and object (living or dead). These ideas enter prominently into the questions of *sarhad* and *galanas*, the former being compensation for insult, and the latter compensation for homicide. Thus the same dominant conceptions govern Welsh and Irish law, and they clearly go back to a similar stratum of ideas. In Welsh law, however, the central power of the king in each territory had attained greater prominence than in Ireland, with the result that the fines called *dirwy* and *camlwrw* for various offences were not paid to the individuals wronged, but usually to the king; and the same rule governed a third of each *galanas* ('body-fine'), while *sarhad* was paid to the person or persons wronged. In certain cases a part of the *camlwrw* was payable to persons other than the king, and in the case of a religious community the whole of the *camlwrw* appears to have been paid over to the abbot and the lay impropriators. The *dirwy* was a larger fine, paid directly to the king (according to a Latin text of the Laws written about 1250), for fighting, theft, and criminal assault. The penalty of emasculation was imposed upon a ravisher who could not pay the fine, and a bondman striking a freeman was liable to have his right hand cut off.

Though there is no allusion in the Welsh laws to imprisonment as a penalty for any specific offence, yet the fact of imprisonment is implied in more than one passage. For example, in Wade-Evans (*op. cit.* p. 177) we read that the smith of the court was to receive four pence from every prisoner off whom he should remove irons. Again, of the court-porter it is said that he is to get four pence from every prisoner who shall be lawfully imprisoned in the court. One MS (U45a) gives imprisonment as one of the lawful excuses for neglecting a summons. The Welsh word *carchar* ('prison') is derived from the Latin *carcer*, and is a term used in Welsh for the fetter placed on an animal to prevent it from straying. It is therefore probable that liberty was impeded, whenever necessary, more by the use of chains and fetters than by confinement in a building.

Though Irish law contains no reference to a death penalty, Welsh law has a few allusions to the penalty of hanging. This was in Wales the recognized punishment for theft (as is stated in the *Mabinogi* of Manawyddan fab Llyr). In Wade-Evans (*op. cit.* p. 213) we read:

'One person escapes from an admitted theft with flesh and skin on his back [viz.] a necessitous *alltud* ("alien") who shall have been three nights and three days without alms, without relief, and who shall have traversed three *trevs* ("townships") daily, with nine houses in every *trev*; and then, owing to hunger, shall commit theft, and then shall be caught with flesh and skin on his back. He is to be let free without gallows and without payment.'

Similarly, if a thief was found burning a house stealthily, and was caught, his life would be forfeited. In the case of a thief the Welsh laws recognize the penalty of sale.

Among the fines mentioned in the Welsh laws is that of *dilysdod* ('acquittance'), which was enforced as a payment to a woman by her ravisher. This was probably meant as a payment to guarantee her status as a virgin in the eyes of the law. There was also a similar payment called *gwaddol*, payable by a man who failed to rebut a charge of criminal assault upon a woman walking alone.

20. Medium of payment of fines.—In Irish law the terms used in estimating fines are *cumhal* and *séd*. By a *cumhal* was originally meant 'a female bond-slave,' but, in course of time, the word came to mean the equivalent in value of three cows. The method of payment of fines was in a fixed proportion of certain goods. When half a *cumhal* had to be paid, it had to be in one species of goods; when one *cumhal* was required, it had to be in two species; and, when three or upwards of three *cumhals* were required, they had to be in three species. In that case one-third would have to be in cows, one-third in horses, and one-third in silver. Of the cattle one-third had to be male, one-third of the horses had to be mares, and one-third of the silver by weight might be copper alloy. A *séd* was defined as follows (*Anc. Laws of Ireland*, iii. 463):

'A common easily divisible *séd* means two live chattels or dead chattels, or one dead chattel the value of which is not lessened by its being divided.'

Of *séds* the most prized was a milch cow. In Welsh law the fine called *camlwrw* consisted of three kine, paid as a rule directly to the king, and sometimes doubled. The fine called *dirwy* consisted of twelve kine, paid directly to the king, and was also sometimes doubled. *Sarhad* and *galanas* were paid in various ways, as directed in the Laws. The coins mentioned in the Welsh laws are: (1) *keinhawc kyfreith*, 'a legal penny' (see Wade-Evans, *op. cit.* p. 330); (2) *keinhawc cota*, 'a curt penny' (*ib.*); (3) *dimei*, 'a half-penny'; and (4) *punt*, 'a pound.'

21. Initiation of legal process.—In Ireland the aggrieved party compelled the aggressor to submit the case to arbitrators, by levying distress (Ir. *athgabhail*) upon the latter. In its most solemn form the levying of distress required that the person aggrieved should 'fast against' the aggressor (see ASCETICISM [Celtic], vol. ii. p. 72[b]), that is, call Heaven to witness that he would starve to death if his opponent did not submit the case to a Brehon. The consideration of questions connected with distress is one of the most elaborate sections of Irish law. In Wales, in keeping with the greater development of the central power, a man could be called to appear in answer to a *gwys* ('summons'). The legal method of accusing for theft is described in Wade-Evans (*op. cit.* p. 245). Even in Ireland certain people (*Anc. Laws of Ireland*, i. 105, 107) might be arrested for their liabilities, instead of being distrained upon, and the circumstances under which this process might take place are fully considered.

In Irish law a pledge had to be given (*op. cit.* i. 277) to stop the process of fasting, especially in judgments of theft, robbery, and violation; and the contingencies arising from the giving of the pledge and its possible loss form an important section of the *Law of Distress*. In Wales, the term *mach* ('pledge') was used in the Laws only in connexion with civil matters. In criminal procedure the accused person had to obtain a *gorvodog*, i.e. a personal surety, for one who was charged with crime (see Wade-Evans, *op. cit.* pp. 258 f., 312). In the Irish legal treatises the question of evidence is not discussed to the same extent as it is in the Welsh laws, and it is noticeable that the latter assign considerable prominence to the oath, both of the accused and of his compurgators, as a means of clearing his character. The Welsh term for this process was to put a person upon his *rhaith* (a word cognate in formation with Lat. *rectus*), and, in this process, he had to bring forward a certain number of persons to swear on his behalf to the justice of his claim or defence as a whole.

22. Penalties for particular crimes.—(1) *Homicide.*—(*a*) In Ireland homicide was divided into intentional and unintentional. The fine for the former was double that of the latter. The account given in the *Senchus Mór* suggests that there was some difference of opinion as to whether homicide

should in all cases be treated as a matter for compensation through payment, but the customary law with its *éric* ('body-fine') appears to have prevailed. In the case of secret homicide the concealment was regarded as a separate act, and compensation had to be paid for it accordingly. When a freeman was slain by a freeman, the slayer had to pay the amount of his own honour-price, together with a fine of seven *cumhals*, as compensation for the death. For concealment the slayer paid honour-price, together with seven *cumhals*. If the body was found, the fine for concealment was remitted. Looking on at a murder was a wrong which was liable to a fine. Whenever a person found a dead body, he had to give information at once; otherwise, he was liable to the fine of a looker-on, or, according to others, of an accomplice. The *Anc. Laws of Ireland* (iii. 101, etc.) consider with great fullness the various cases that might arise in connexion with homicide.

As illustrating the growth of a different mental attitude from the preceding, it may be stated that the commentator to the *Corus Bescna* treats homicide, and all other wrongs done with malice aforethought, as being in the nature of exceptions to the ordinary law, and holds that the slayer should be given up, with all his property, to the family of the slain man.

(*b*) In Wales the term for a 'murder-fine' was *galanas*, and, along with the murder-fine, in every case of homicide *sarhad* ('compensation for insult') had to be paid. The amount of the murder-fine varied with the status of the person murdered. The murderer was helped to pay by his kinsmen, to the fifth cousin, and the liabilities of these were fixed by law. According to the Welsh law (Wade-Evans, *op. cit.* p. 193), a third of every *galanas* was paid to the king, and also whatever of the murderer's chattels was from time to time obtainable. The reason given is that it is for the king to enforce where it is not possible for a kindred to do so. The murder-fine of a king was three times the amount of his *sarhad* with three augmentations; the amount of his *sarhad* being as follows:

'a hundred kine for every *cantrev* ("hundred") in his kingdom, and a silver rod which shall reach from the ground to the king's pate, when he shall sit in his chair, as thick as his ring finger, with three knobs at the top and three at the bottom as thick as the rod; and a golden cup which shall hold the king's full draught, as thick as the nail of a ploughman who shall have ploughed for seven years, and a golden cover thereon as thick as the cup, as broad as the king's face.'

There was a similar murder-fine for the heir-apparent. The *galanas* of a chief of the household was a third of the king's, 'without privileged gold and silver.' A steward, a judge of a court, a falconer, a chief huntsman, a chief groom, and a page of the chamber all had the same *galanas*, consisting of 'nine kine and nine score kine with three augmentations.' For the *galanas* of the other officers, except the chief of the household and the priest of the household, six kine and six score kine 'with three augmentations' had to be paid. In the case of the priest of the household the murderer had to submit 'to the law of the Synod.' The laws fix the *galanas* of various other persons, but it is sufficient to mention that the *galanas* of a free Welshman of pure descent consisted of 'three kine and three score kine with three augmentations.' This was also the amount of the *galanas* of a king's serf, while the *galanas* of a nobleman's serf was half of this amount. For a thief there was no *galanas*. (For various questions connected with homicide, see Wade-Evans, *op. cit.* pp. 236, 248, 252 f., 264, 294, 299 f., 320.) In the case of a fratricide the kindred were not to pay *galanas* with the murderer.

(2) *Wounding and mutilating.*—(*a*) In the *Anc. Laws of Ireland* (iii. 349, etc.) there is a very full discussion of the penalties due for wounding and mutilating, and the various wounds and losses that might be inflicted are considered in great detail. For a foot, a hand, an eye, or a tongue, half the *éric*-fine of every person was to be paid, and in the opinion of some the full *éric*-fine should be paid for the mouth, the nose, and the tongue. According to *op. cit.* iii. 472, the sick maintenance of a wounded person had to be compensated for, and a substitute had also to be provided. Among the wrongs requiring compensation was that of shaving bare the beard or the whiskers.

(*b*) In Welsh law there is an assessment of the worth of each part of a person's body (see Wade-Evans, *op. cit.* p. 190 f.). The following quotation will suffice to illustrate the list of values:

'All a person's members when reckoned together are eight and four score pounds in value. A person's finger is a cow and a score of silver in value. The worth of the thumb is two kine and two score of silver. A person's nail is thirty pence in value.'

With reference to a serf's limbs there is a passage in MS U27a which reads as follows:

'The worth of the serf's limbs by law is as much as the worth of the king's limbs according to worth. The *galanas* and the *sarhad*, however, of every one are paid according to his status when a limb shall be broken.'

(3) *Arson.*—The Welsh laws alone deal with this offence, and refer to the necessity of compurgation to meet it:

'If an accusation of the crime of burning stealthily be brought against a person, the oaths of fifty men will be necessary for him. If he obtain his *rhaith* ("acquittance"), it will be sufficient for him; if he obtain it not, he becomes a saleable thief. A saleable thief is worth seven pounds.'

The case of attempted arson by a thief has been mentioned above.

(4) *Waylaying.*—This crime is also specifically mentioned only in Welsh law, as follows:

'Whoever shall waylay pays twofold, because it is a violence against a person to kill him, and a theft to conceal; and that is the one place in law where violence and theft become connected. And it is to be thus denied; the oaths of fifty men to deny wood and field, and three of them under vow to abstain from flesh and woman and horse-riding.'

This offence was punished by hanging and confiscation.

(5) *Criminal assault.*—(*a*) Irish law required the payment of a heavy fine for attempting to violate a person's wife, and a still heavier fine for actual violation (see *Anc. Laws of Ireland*, i. 163, 167, 177, 181). In *op. cit.* ii. 405, we read as follows:

'If the girl has been defiled within the age of seven years, full body-fine shall be paid for her, and honour-price in right of God; full body-fine also till she reaches the age of ten, and half the honour-price of her father; two-thirds of body-fine for her from the age of ten forth till she reaches fourteen, and half the honour-price of her father; and there is no division of the body-fine from that forth.'

(*b*) Welsh law punished criminal assault, according to one account, as follows:

'Whoever shall commit a rape on a woman, let him pay her *gobr* ("maiden fee") to her lord; and her *dirwy* ("fine") and her *dilysdod* ("acquittance") and her *agweddi* ("dowry") and her *sarhad* ("fine for insult") he pays to the woman; and, if she be a maid, let him pay her *cowyll* (a gift payable by the husband to the wife on the morning after the marriage).'

Some texts add: 'and a silver rod to the king in the manner he is entitled; and, if the man cannot pay, his testicles shall be taken.' (For the oath of the woman and the oaths of fifty men required for compurgation, see Wade-Evans, *op. cit.* p. 237 f.)

In Wade-Evans, *op. cit.* p. 240, the case of assault by two men upon two women is considered as follows:

'If two women shall be journeying through any place and there be no one with them, and two men meet them and violate them, they are not to be compensated. If, however, there be one person with them, although ever so little, unless he be a carried child, they lose none of their right.'

In MS U42a the following is added:

'A woman who shall be violated, if she know not who has violated her, is not to pay *amobr* ("maiden fee"); since the king preserved her not from violation, he loses her *amobr*; and, if the woman be doubted in that respect, let her give her oath that she knows not who violated her, and that she was violated as aforesaid.'

One legal triad speaks of the violation of a woman as 'one of the three disgraces of a kindred.'

(6) *Indecent assault.*—In the Welsh laws (Wade-

Evans, *op. cit.* p. 270) the following statement occurs:

'Three *sarhads* of a woman there are, one of which is augmented, and one diminished, and one is a complete *sarhad*. When a kiss is given her against her will, a third of her *sarhad* is wanting to her then. The second is feeling her with the hand, and that is a full *sarhad* to her. The third is being connected with her against her will, and that is augmented by the third.'

(7) *Theft.*—(*a*) Irish law deals very fully with the various fines which have to be paid in the case of theft, the amount of compensation varying chiefly with the nature of the object stolen. Among such objects are land, cattle, grass, rushes, turf, fruit, fish, boards, firewood, wattles, etc.; and among the special cases considered are that of stealing from a house and from a hunter's cooking-tent, and that of stealing a smith's tools. According to the *Anc. Laws of Ireland* (iii. 463), it was lawful to kill the unknown or nameless thief, but this right was personal only (*op. cit.* iii. 469). There was a further rule that no one was to trade with a thief.

(*b*) Welsh law dealt severely with thieving, and punished it (probably when habitual) with execution by hanging. In Wade-Evans (*op. cit.* p. 188) there is a list of *naw affeith lledrat* ('the nine accessaries of theft'), which are given as follows:

'The first of the nine accessaries of theft is devising deceit and seeking an accomplice. The second is agreeing concerning the theft. The third is giving provision. The fourth is carrying the food while accompanying him (the thief). The fifth is tearing down the cattle-yard, or breaking the house. The sixth is moving what is stolen from its place, and walking day or night with it. The seventh is knowing and informing as to the theft. The eighth is sharing with the thieves. The ninth is seeing the theft and concealing it for reward, or buying it for worth. Whoever shall deny one of these accessaries, let him give the oaths of fifty men without bondman and without alien.'

There is a reference to the death-penalty for stealing in the following statement, where it is said (*ib.* p. 189) that one of the nine persons who are to be believed in giving their testimony, each one of them separately on his oath, is

'a thief without hope of mercy concerning his fellow-thief, when brought to the gallows; because credible is his word concerning his companions and the chattels they thieved, without a relic; and his companion is not to be destroyed on his word, but is to be a thief for sale.'

In the case of the stealing of goods entrusted to a guardian, if the keys are safely in his custody and a breach has been made into the house,

'the *Book of Cynog* (a text of the Laws) says it is easier to believe him if there be chattels of his own taken together with the other chattels which were taken by stealth from him. He is, however, to swear conjointly with all the persons in the house as to his being clear as to those chattels. If the soil, however, be excavated under the house, after he has carried out the law that he is clear, the king owns the soil, and there is to be no guardian answerable for it. Every chattel which a guardian asserts to have been brought to him to be kept, let him make good, except the chattels conveyed through the soil.'

The case of theft by a necessitous alien has been already mentioned. The theft of a king's cat had to be made good as follows:

'Whoever shall kill a cat which guards a barn of a king, or shall take it stealthily, its head is to be held downwards on a clean level floor, and its tail is to be held upwards; and after that wheat is to be poured about it until the tip of the tail be hidden, and that is its worth. Another cat is four legal pence in value.'

A dog, on the other hand, might, according to some MSS, be stolen with impunity:

'There is no *dirwy* for a dog, although it be taken stealthily, nor *camlwrw*. The oath of one man is sufficient to disown a dog, for it is a back-burden of an unclean animal.'

The triads in the *Dimetian Code*, however, say that a dog-stealer should pay a *camlwrw*. Regulations as to the manner of bringing a charge of theft legally and of compurgation in the face of a charge are given in Wade-Evans, *op. cit.* p. 244 f.

A thief might be punished by being sold, and the value assigned to 'a saleable thief' is seven pounds. In Wade-Evans (*op. cit.* p. 259) are found the following further provisions as to theft:

'A thief who shall be placed upon sureties is not to be destroyed. No one is to make satisfaction or answer for an act of his bondman saving for theft.'

(8) *Assault.*—(*a*) Irish law dealt with assault under the same section as wounding and mutilating, and drew a distinction between a 'red wound' (with bloodshed) and a 'white wound' (without bloodshed). In the *Anc. Laws of Ireland* (iii. 352 n.) a 'lump-blow' is defined. For a clean lump-blow two cows were an adequate compensation, while for the foul lump-blow *airer*-line (one of the lesser fines of Irish law) was exacted.

(*b*) Welsh law (Wade-Evans, *op. cit.* p. 193) punishes assault as follows:

'Whoever shall strike a person, let him pay his *sarhad*, first because attack and onset constitute a *sarhad* to every person; and a penny for every hair pulled out from his head by the root; and a penny for every finger which shall touch the head; and twenty-four pence for the front hair.'

Again,

'If a person strike a bondman, let him pay him twelve pence; . . . if a bondman strike a free man, it is just to cut off his right hand, or let the bondman's lord pay the person's *sarhad*' (*ib.* p. 194).

It is clearly stated (*ib.* p. 259) that a blow received unintentionally is not *sarhad*, and the following three buffets did not need expiation:

'one by the lord on his man in ordering him in the day of battle and fighting; and one by a father on his son to punish him; and one by a chief of kindred on his relative in order to counsel him.'

(9) *Treason.*—Irish law, though severe upon lying, treachery, and all forms of deceit, does not deal specifically with treason, but in Welsh law the following passage occurs (*ib.* p. 202):

'Whoever shall commit treason against a lord or waylay, is to forfeit his father's *trev*; and, if he be caught, he is liable to be executed. If he be not caught and he will to be reconciled to his lord and kindred, a twofold payment of *dirwy* and *galanas* is to be levied on him; and, if he repair to the court of the Pope and return with the Pope's letter with him, and show that he is absolved by the Pope, he has his father's *trev* ("homestead").'

In Ireland, treachery deprived a person of his full honour-price.

(10) *Perjury.*—(*a*) Irish law dealt with false swearing, more especially in the case of contracts, and visited it with a fine (*Anc. Laws of Ireland*, iii. 397). False witness also lowered a man's honour-price.

(*b*) Welsh law deals chiefly with perjury (*anudon*) in relation to suspected testimony (see Wade-Evans, *op. cit.* p. 260 f.), but denial of suretyship and contract is also discussed (*ib.* p. 230).

(11) *Insult.*—(*a*) In Irish law the maintenance of a man's honour was a primary consideration, and certain fines in addition to the *dire-fine* ('honour-price') appear to have been specially instituted for the defence of personal honour. Among these are the *enech-gris* ('blush-fine'), the *enech-ruice* ('defamation'), and the *enech-lann* ('reparation of honour'). To ask a question with a view to exposing a blemish (*Anc. Laws of Ireland*, iii. 347), and to give a person a nickname, rendered the offender liable to a fine (*op. cit.* iii. 93), while one form of insult specifically mentioned (*op. cit.* iii. 409) was that of opposing a bishop on a 'hill of meeting.'

(*b*) Welsh law attached the utmost importance to the maintenance of a person's dignity, and compensation for *sarhad* ('insult') plays a prominent part therein. The violation of a person's protection constituted one specified form of insult.

(12) *Libel.*—(*a*) In Ireland the fort of a man who tolerated satire or satires (*Anc. Laws of Ireland*, v. 169) lost its *dire*, or honour-price, but in another passage (*op. cit.* i. 59) it is stated that satirizing, though done intentionally, did not cause loss of the full honour-price until a person evaded the law with respect to it. Satirizing a dead person was also liable to fine (*op. cit.* i. 185, 189).

(*b*) There is no specific mention of libel or satire

in Welsh law, and, in view of the practice of the Welsh poets, at any rate after 1300, it would appear that satirizing on their part was tolerated. At an earlier date, libel was probably counted under *sarhad*.

(13) *Slander.*—(*a*) In Ireland the *Ancient Laws* (i. 175, 177) specifically mention a fine for slander. A fine was also obtainable for circulating a calumnious story (*op. cit.* i. 195, 199), or for wrongfully questioning a person's legitimacy (i. 185, 193).

(*b*) The Welsh laws make no specific mention of slander (*enllib*) other than slander against women (Wade-Evans, *op. cit.* p. 238), or against an innocent man for murder, and probably included other slander, along with libel, under *sarhad*.

(14) *Using charms.*—There is no reference to this offence in the Welsh laws, but in Ireland the person committing it was liable to a fine, whether it was committed against a human being or against a dog (see *Anc. Laws of Ireland*, i. 177, 181).

(15) *Trespass.*—(*a*) Irish law in several passages defines the compensation required for various forms of trespass, such as 'dirtying a road' (*op. cit.* iii. 76 n.), bringing a horse into the narrow part of a road (*ib.*), the digging of a churchyard, and the removal of bones from a churchyard. The type of fine called the *smacht*-fine was levied chiefly in the case of trespass by men or animals (see *Anc. Laws of Ireland*, iv. 83, 87, 89, 93, 95, 107, 109, 111, 115, 117, 119, 121, 123, 141, 145, 153).

(*b*) The forms of trespass which are specifically mentioned in the Welsh laws are: excavating the land of another to hide anything therein, making a snare, digging a kiln-pit, or building a house on another person's land. The fine inflicted was four legal pence, with certain additions in particular cases.

(16) *Damage to property.*—(*a*) Irish law had much to say regarding offences arising under this head (*Anc. Laws of Ireland*, i. 167, 169, 171, 175, 185, 189, 233, 235, 237). The *Book of Aicill* (*op. cit.* iii. 357, 358) deals very fully and humanely with the maiming, mutilation, and over-working of animals.

(*b*) In Wales all damage to property, whether living or dead, had to be compensated for in accordance with a scale of legal worth laid down in the laws.

(17) *Gross negligence.*—(*a*) In Irish law cases of the kind are, for the most part, dealt with under other heads, such as trespass and damage to property; but the expression 'trespass of viciousness with neglect' is used for the offence of bringing a horse into the narrow part of a street. A fine was also inflicted for neglect of fencing. Attendants, too, were punishable for not guarding the houses of persons of dignity (*op. cit.* iii. 511), and a similar penalty was inflicted for neglect in not guarding a captive (iii. 499 f.). A judge who was negligent was liable to a fine (iii. 305), and so were sane adults for not guarding the insane. The Irish believed that blotches arose on the cheeks of judges who pronounced false judgment.

(*b*) The two instances of punishable neglect mentioned in Welsh law are the following (Wade-Evans, *op. cit.* 258, 268):

(1) If two persons shall be walking through a wood, and the one in front let a bough strike the one in the rear so that he loses an eye, he is to pay the worth of an eye to the other.

(2) If a spear were not so placed as to prevent its point from accidentally killing a person, its owner, in case of such a deatb, had to pay a third of the slain person's *galanas*.

(18) *Absconding and harbouring a fugitive.*—(*a*) It was an offence in Irish law to entertain a fugitive who was known, and there was also a penalty for supporting and advising the women and children of foreigners, as well as for feeding or sheltering a stranger generally (*Anc. Laws of Ireland*, iii. 385, 387, 389). In the same manner a person feeding a houseless person was liable to a fine, the intention in all these cases doubtless being to make it difficult for persons to escape from justice.

(*b*) In Wales the law (see above, p. 265[a]) appears to have been a little more sympathetic towards necessitous aliens, and Welsh law also provided that an alien of foreign speech should have an advocate.

(19) *Abduction.*—(*a*) Irish law (*op. cit.* iii. 403, 541, 543, 545) deals very fully with the question of abduction in its effects upon family life. The children of the abducted woman belonged to her mother's family, and might be sold by them, but the father was bound to buy them if they were sold, and if he got them gratis he was bound to educate them.

(*b*) Abduction was a punishable offence in Welsh law, and the various contingencies which arose in connexion therewith are fully dealt with in the Laws (see *Anc. Laws of Wales*, pp. 86, 88, 92, 204; and Wade-Evans, *op. cit.* pp. 237, 238, 239).

(20) *Stripping of the dead.*—In Ireland there was a fine for stripping the dead in general, and the slain in battle in particular (see *Anc. Laws of Ireland*, i. 175, 177); and a Welsh legal triad speaks of the 'three disgraces of a dead body'—when it is slain, when it is stripped, and when it is left lying.

(21) *Breach of the peace.*—The Welsh laws contain no explicit references to offences under this head; but Irish law (*op. cit.* i. 231, 235) required a fine for quarrelling in an ale-house, and also for disturbing a fair.

(22) *Adultery.*—It is probable that in Irish law adultery should be counted with the above offences, but the absence of a clear distinction in Irish law between crimes and torts makes it difficult to class adultery with crimes, as was done in some countries. In its effect upon the honour-price of a person, adultery, according to the *Anc. Laws of Ireland* (i. 57–61), was more disastrous for ecclesiastics than for laymen; but, in the case of all alike, adultery and cohabiting with a kinswoman had the same effect upon the honour-price as unfaithfulness in word (*op. cit.* i. 59). In the case of adultery by a married man the Welsh laws require (Wade-Evans, *op. cit.* p. 239) that he should pay six score pence to his lawful wife as her *wynebwerth* ('compensation for insult'). When a wife committed adultery, her husband was entitled to thrice the sum of his *sarhad* (*ib.* p. 242), and it is further stated (*ib.* p. 244) that she loses her *agweddi* ('dowry'), while her chattels are brought by her kindred to her husband. One of the three disgraces of a kindred, according to a Welsh legal triad, is to bring another woman to the house, supplanting the wife and driving her forth.

In the present article Celtic crimes and punishments have been considered chiefly with reference to Ireland and Wales, owing to the fact that it is only for these countries that legal treatises of the type here considered are obtainable. In Celtic Scotland the law was based upon a development of the same ideas as those which are embodied in the law of Ireland. The legal practice of Brittany and Cornwall, too, doubtless closely resembled that of Wales; but it would be highly interesting, if it were possible, to know what modifications of the Irish system were developed in Scotland, and, similarly, what local variations of the British system arose in Cornwall and Brittany. In the absence of legal treatises such an inquiry would have to be based mainly on historical and linguistic evidence.

LITERATURE.—*Ancient Laws and Institutes of Wales*, ed. Aneurin Owen (Rolls Series, London, 1841); Wade-Evans, *Welsh Medieval Law* (Oxford, 1909); *The Ancient Laws of Ireland* (Rolls Series, London, 1869–1873); W. F. Skene, *Celtic Scotland*[2] (Edinburgh, 1890). E. ANWYL.

CRIMES AND PUNISHMENTS (Chinese).—The Chinese character for 'crime' is significant of the attitude of the nation towards the infraction of law, being composed of the radical for 'failure,' under that for 'net,' representing the net of the law descending upon the offender; in other words, 'crime' or 'sin' (for the terms are used interchangeably) is regarded as consisting not so much in the commission of a condemnable act as in the discovery of the fact and the infliction of penal consequences. For this reason the term is an unfortunate one when applied by Christian missionaries to a Chinese audience, for the majority of those thus addressed would strongly object to be denominated 'criminals,' although the intention in the mind of the speaker is merely to bring home to them a sense of sin.

1. Early enactments.—The Chinese penal code is based upon enactments for which a remote antiquity is claimed, and the earliest system of punishments is ascribed to the 'Emperor' Shun (2255 B.C.), who is said to have established the 'Five Punishments' which were in vogue to the end of the Chow dynasty (255 B.C.), viz. (1) branding on the forehead, (2) cutting off the nose, (3) maiming, (4) castration, and (5) death.

The founder of the Han dynasty (202 B.C.) enacted the 'Three Penal Sentences,' viz. (1) life shall be given for life, (2) compensation for wounds, and (3) imprisonment for robbery.

The first regular code of penal laws is represented as being brought into operation in the Ts'in dynasty (249 B.C.), comprehended under six heads, the 5th of which, represented by 11 vols., is occupied with criminal laws concerning treason, robbery, theft, homicide, criminal intercourse, disturbing graves, quarrelling and fighting, and incendiarism; and, though each succeeding dynasty has contributed some modification or addition to the original enactments, the ultimate source of inspiration may still be traced even in the existing legislation.

The laws of the present Manchu dynasty, which in China bears the name of the *Ta Ts'ing*, or 'Great Pure Dynasty,' may be grouped as follows:—(1) The *Ta Ts'ing Lu Li*, or 'Penal Code of the Ta Ts'ing dynasty,' which is subject to revision every 5 years. The sections included under the first term, *Lu*, may be described as the original laws or statutes; and those under the second head, *Li*, as the supplementary clauses, or common law, established by precedent or usage. (2) The *Ta Ts'ing Hui Tien*, or 'Regulations of the Ta Ts'ing dynasty.' (3) The edicts and decrees issued by Emperors and high provincial officials. (4) Customary law.

The first of these, the *Lu Li*, is comprehended in 2906 octavo pages, the criminal laws being enumerated in the 6th division, arranged under the following heads: (1) robbery and theft, (2) homicide, (3) quarrelling and fighting, (4) abusive language, (5) indictments and informations, (6) bribery and corruption, (7) forgeries and frauds, (8) incest and adultery, (9) miscellaneous offences, (10) arrests and escapes, and (11) imprisonment, judgment, and execution.

2. Punishments.—The modes of punishment which are recognized by the code are five:

(1) Flogging on the thighs with a light bamboo cane, about 3 ft. 6 in. long by $\frac{3}{4}$ in. wide, and $\frac{1}{16}$ in. thick at the end. The punishment admits of 5 degrees of severity, nominally from 10 to 50 blows; but in actual practice only 4, 5, 10, 15, and 20 blows respectively are administered.

(2) Flogging with a heavier cane of bamboo, about 3 ft. 6 in. by $1\frac{1}{2}$ in. by $\frac{1}{4}$ in., in cases of greater gravity, the number of blows ranging from 60 to 100 nominally, but reduced in universal practice to 20, 25, 30, 35, and 40 respectively. Manchu subjects, or 'Bannermen,' are punished with a whip instead of the bamboo.

In administering the punishment the lictors are so expert that they can apply 1000 sounding blows to the bare flesh without raising a blister, or draw blood if required with three strokes, and actually make the flesh fly if they set themselves seriously to work. (This is done by the 'dragging' stroke, which is different from the usual up-and-down method; the cane when it reaches the flesh is drawn back along the surface, and in a short time the skin is literally torn off in strips.) This skill in applying the bamboo is said to be attained by long practice on a block of bean-curd, a substance resembling a stiff custard, the beaters kneeling face to face, and striking alternately on the bean-curd which is placed on the ground between them. When they have learned to strike the substance a great many times, producing an appreciable 'note' each time, without breaking the delicate surface of the 'custard,' they are supposed to be proficient, and are allowed to exercise their art on the unfortunate human beings who may be surrendered to them. Another power which they must cultivate is that of counting alternate numbers at a great rate whilst administering the strokes; the man kneeling on one knee at one side of the victim calls out the odd numbers, whilst the other counts the even numbers, and this requires long and frequent rehearsal; it also presents an opportunity for 'sharp practice,' for the number called does not necessarily correspond with the blows struck; and it is very easy for skilful performers to run up a very large total of figures without applying an equal number of strokes. Thus a man condemned to receive 1000 strokes may be let off with 700 or so if he has a proper understanding with the lictors, though the full number is reported by them *viva voce* at the time of imposition. The rod is steeped for some months in a saline bath before it is considered fit for use, as this is said to ensure that mortification will not set in when the flesh is lacerated; it no doubt also increases the sufferings of the victim.

(3) Banishment, for a limited period, to a distance not exceeding 500 *li* (= 170 miles). Here again 5 degrees are admitted, viz. 1 year and 60 blows, $1\frac{1}{2}$ years and 70 blows, 2 years and 80 blows, $2\frac{1}{2}$ years and 90 blows, 3 years and 100 blows.

(4) Transportation, for life, to any distance varying from 2000 to 3000 *li* (= 1000 miles), with 100 blows; in extraordinary cases the distance is increased to 4000 *li*, or the criminals are condemned to reside in malarious or savage districts. The exiles are nominally required to render military service, but are usually permitted to engage in humble occupations, such as the managing of inferior pawn-shops, etc. The wives of criminals are expected to accompany their husbands into exile, and their children and other relatives may do so if willing. Bannermen are subjected to the 'cangue' (see below) in lieu of banishment.

(5) Death by strangulation, decapitation, or the so-called 'lingering-process.' The death sentence is usually confirmed by the Emperor; but in cases of murder, piracy or highway robbery, rebellion, uttering false coin, forging official seals, arson, robbery with violence, criminal assault on girls under 12 years of age, fraudulent methods at public examinations, or smuggling salt, the local authority is empowered to put the sentence into execution at once, unless extenuating circumstances can be urged for delay. In cases of piracy,

highway robbery, etc., the criminals are decapitated, and their heads exposed over the city gates as a warning to all.

(*a*) *Strangulation.*—The penalty of strangulation is inflicted in the cases of murder of a stepson by a stepmother, abuse of parents or paternal grandparents, abuse of husbands' parents or grandparents; also in certain cases of homicide where premeditation is not alleged, or where death is brought about by indirect means; also in cases of opening coffins and rifling the dead, refusing to pay tribute, or inciting to riot. In extreme cases the process is aggravated by the method known as 'three strangulations and three recoveries,' which means that the victim is throttled into unconsciousness three times, and restored to animation before the final garrotting takes place. In some instances high officials who have offended are presented by the Emperor with a silken scarf, with which they are expected to strangle themselves in lieu of the heavier and more disgraceful punishment of decollation.

(*b*) *Decapitation.*—Decapitation is the penalty inflicted in the case of a large number of offences, especially those of a treasonable nature—a classification which includes: (1) rebellion, (2) disloyalty (as, *e.g.*, destroying or attacking the Imperial tombs, palaces, etc.), (3) desertion, (4) parricide, (5) massacre (*i.e.* where three or more persons are killed), (6) sacrilege, (7) impiety, (8) discord, and (9) insubordination. The treasonable character of these offences consists in their being hurtful to the Sovereign either in his person, his property, or his honour, or the persons and property of his subjects. The principal offenders are sometimes sentenced to the *ling ch'i*.

(*c*) *The ling ch'i.*—The third form of capital punishment, *i.e.* the *ling ch'i*, or 'lingering process,' which is popularly supposed to consist in an indefinite number of cuts inflicted on the victim's body, before the administration of the *coup de grâce*, does not amount, in ordinary cases, to more than a few slashes on the face and body before the final blow is struck. It is intended to make the death process more lingering and shameful, as the words *ling ch'i* mean; but the degree of aggravation of the penalty is left very much in the hands of the executioner. The lingering process is ordered in the case of treason against the Imperial person, palaces, or tombs, no distinction being made between principal and accessaries; also in the case of parricide, murder of a husband, etc.

(*d*) *The death cage.*—Another form of capital punishment is the 'standing cage,' which consists of a tall frame or coop, in which the victim is placed, the floor being a foot or so from the ground. His neck is enclosed by the bars which form the top or lid of the cage. In this position he is unable to touch the floor with his feet, but a number of bricks are inserted upon which he is permitted to stand, and these are gradually removed until at last he is practically suspended by the neck, unless death intervenes, as generally happens, the process being hastened by the administration of an opiate supplied by a relative or friend. Victims of this form of punishment have been known to survive four days of torture, even when exposed to the burning rays of the summer sun.

(6) The cangue. A minor form of punishment which is recognized by the *Li*, or 'supplementary laws,' is that of the 'great collar,' or 'wooden neck-tie,' as it is nicknamed, generally known amongst Europeans as the 'cangue' (from the Portuguese *canga* = yoke). It consists of a heavy wooden framework in two parts, through which the head of the victim is introduced by means of a scallop on the inner edges of each; the two parts are then brought together and fastened in position upon the wearer's shoulders, and an inscription is added stating the nature of the crime committed, etc. The weight of the cangue is generally from 20 to 30 lbs., but larger frames are sometimes used, in which as many as five men can be secured. In some cases the hands of the sufferer are also inserted in smaller holes as in a pillory. In either instance it is impossible to reach the mouth with the hands, and the prisoner has to be fed by others. The cangue is generally exhibited in the daytime at the spot where the offence was committed, and at night the bearer of it is removed to the prison, where, in the majority of cases, he is relieved of his burden until the next day. The imposition of the cangue may cover a period of a few days or may continue for three months, and is ordered in cases of stealing, gambling, damage, extortion, etc.

(7) Branding is also in vogue in cases of stealing, and the designation of the crime is indelibly stamped upon the forearm, *e.g.* 'Stealer of grain,' 'stores,' or 'silver,' as the case may be.

3. Methods of Chinese thieves.—Chinese thieves are divided into various classes, whose methods differ very considerably; for instance, in order to obtain entrance to a building, some elect to prise open the window or doors, or lift them off the hooks which do duty for hinges, while others prefer to throw a rope, with grapplers attached, to the balcony or roof, and climb up hand over hand; others drill holes in doors with the usual carpenters' instruments, or burn out a piece of the woodwork by means of a blow-pipe and a brazier of lighted charcoal, so as to insert the hand and withdraw bolts and fastenings; others, again, employ a bamboo pole for vaulting or scaling walls; anæsthetics are used by some thieves for rendering the occupants of a house unconscious; holes are also bored in walls, or subterranean tunnels are made by experts in these departments.

The 'swift-horse,' or constable (see below), being himself an ex-thief, is familiar with the methods of the several classes, and the individuals composing them; and can always diagnose with accuracy the cases which are submitted to him.

4. Punishment of women.—Special punishments are reserved for women, such as piercing the breast with a hot iron, in the case of attempts on the life of a husband, assaulting a mother-in-law, etc. When the bamboo is ordered, the blows are usually inflicted on the mouth or hands, in order to avoid exposure of the body.

5. Martial law.—Martial law is particularly severe, and summary punishment is meted out to offending soldiers by their officers. In ancient days the penalty of tearing asunder by five horses was exacted in certain cases; even now the death penalty is prescribed for such offences as circulating false rumours, attempted rape, etc.

6. Character of enactments.—The punishments above enumerated may seem to be exceedingly severe, but it must be remembered that, until quite recent years, there was no police force of any kind in China, the only substitute being the local beadle, or *tipao*, in each district or division, with his subordinates, including the 'swift-horse,' or thief-catcher; and the result of long experience was the conviction that severity, at all events in the promulgation of the law, was necessary, though its application might be tempered with mercy; and the Chinese penal code, though it may not satisfy the high ideals of 20th century Christianity on the score of justice and equity, 'for the repression of disorder, and the gentle coercion of a vast population, appears to be equally mild and efficacious' (G. T. Staunton, *The Ta Tsing Leu Lee*).

7. The conduct of law.—The almost total absence

of legal machinery is another feature which is worthy of notice. There is no such thing as the empanelling of a jury; no assistance of counsel for the prosecution or the defence; no association of judges on the bench; no demand for asseveration upon oath. The magistrate sits alone to try the case, unless he decides upon inviting another magistrate to assist him. The cases for and against are prepared by self-constituted lawyers, a somewhat degraded class of literary men, who do not appear in person before the court. The magistrate is furnished by his secretaries with whatever information he may require as to law or precedent, and decision is given, ordinarily, without long delay. The accused cannot be punished until he confesses his crime; and, should he hesitate to do so, the means are available by which such confession may be elicited. Some of these methods have the sanction of law, whilst others are enforced without such authority. The legal instruments of torture consist of wooden presses for squeezing the ankles or fingers, and the bastinado; in addition to these, however, there are many others which have been in force until quite recently, but which have now been nominally abolished—such as forcing the victim to kneel upon hot bricks, iron chains, powdered glass, sand, or salt; twisting the ears; suspending the body by the thumbs or fingers; tying the hands to a bar placed under the knees, so as to bend the body forward in a kneeling posture, etc.

8. Popular courts.—So great is the terror inspired by the law-courts and the 'pens' which do duty for prisons (the Chinese word for prison means originally a 'corral,' or stable for cattle), that many people prefer to settle their cases out of court, by resorting to the 'tea-houses,' which are the equivalents of our public-houses, and submitting the question to the arbitration of those present—the nearest approach to trial by jury; and the practice has become so well established that these tea-houses are often called 'Little Halls of Justice.'

9. Standard of guilt.—An interesting feature of the Chinese enactments is that the standard of punishment, in many cases, is not measured by the character of the offence, but by the amount of profit secured by the offender; the penalty, for instance, of stealing 120 oz. or more of silver is out of all proportion to that which is incurred by stealing 1 oz.; it is assessed on a scale indeed which would seem to place the act in an entirely different category of crime, for the latter is punished by 60 blows, the former by strangulation.

10. Treason.—The punishment of treason is particularly severe, and the list of crimes which are classified as treasonable is very comprehensive. The penalty of making even an attempt against the persons, palaces, or tombs of the Imperial house is execution by the lingering process, and no distinction is made between principals and accessaries (though in ordinary cases of crime a careful discrimination is made, and accessaries before the fact are punished one degree less severely than the principals). All male relatives of the condemned, in the first degree, *i.e.* father, grandfather, sons, grandsons, paternal uncles and their sons of the age of 15 or older, are sentenced to decapitation, together with all other male relatives, within the same limit of age, who may be living with the offender at the time. Male relatives of the first degree under the age of 15, and all females similarly related, are distributed as slaves amongst the great officials. The property of the condemned is confiscated by the State. All who renounce country and allegiance are liable to decapitation.

11. Homicide.—The definition of homicide is also very comprehensive, no fewer than 10 possible cases being included under the term, viz. (1) killing with deliberate intent, the penalty of which is decapitation; (2) killing in an affray, where perhaps no special individual is singled out for slaughter (the punishment in these cases is strangulation); (3) killing by depriving of food or clothing, by the removal of the ladder by which the victim has reached an inaccessible position and is unable to return, by taking the bridle from a rider's horse so that he cannot continue his journey and is stranded in the wilds, by the administration of noxious substances to the month, eyes, ears, etc. (in such cases strangulation is decreed); (4) killing by means of dangerous weapons, such as firearms, etc., though used only in play; by luring a person into danger by false representations, *e.g.* leading a man to walk into deep water, assuring him that it is shallow and fordable (strangulation is the penalty in these cases also); (5) killing a person by mistake when intending to kill some one else (the penalty for this offence is beheading); (6) killing accidentally when using legitimate instruments or weapons (compensation is deemed sufficient in such cases); (7) killing through carelessness (punished by beheading); (8) killing by the administration of improper medicines (punishable by beheading, but, if inadvertence can be urged in defence, compensation and retirement from medical practice are ordered); (9) killing by means of traps and snares (punishable by blows and banishment); (10) killing by the utterance of threats which lead to suicide on the part of the threatened person (punished by strangulation).

The removal of a body from the spot where the murder has been committed is treated as a capital offence. In cases of injury produced in fighting and quarrelling, a careful assessment is made of the amount of damage done; *e.g.*, the tearing away of one inch of the opponent's hair is punishable by 50 blows, the breaking of one tooth by 100 blows, of two teeth by 60 blows and a year's imprisonment. Causing a person to be incapable of becoming a parent is punished by 100 blows and banishment to a distance of 3000 *li*, and, in the case of male offenders, with forfeiture of estates.

12. Privileged classes.—There are no fewer than ten instances where privilege is claimed, as in the case of those enjoying hereditary rank, or high office, or relationship to the reigning dynasty. These classes are excepted from the ordinary processes of law, and the Imperial sanction must be obtained before the law can be put into operation against them. No privilege, however, of whatever kind can avail in a case of treason. The circumstances of the accused, in ordinary cases, are taken into account: as, *e.g.*, extreme youth, *i.e.* under the age of 15 years; or extreme age, *i.e.* 70 years and upwards; infirmity, too, is recognized as an occasion for the exercise of lenity and the relaxation of the heavier penalties, with exemption from torture. The condition of the parents of the accused is also taken into account, and an erring son is mercifully dealt with if it be shown that his parents depend upon him for support; even the death penalty may be remitted in the case of an only son, lest his parents should be deprived of the worship which is expected from him after their decease.

13. Favourable treatment of women.—Women are seldom imprisoned, except on capital charges, or for adultery, but are placed in the custody of their nearest relatives; and, if they are arrested when in a pregnant condition, the full penalty of the law is not exacted until 100 days have passed after parturition. Injured husbands are permitted to kill, out of hand, the guilty wife and her paramour, if discovered *in flagrante delicto*; but, if the parties have already left the apartment where the

act was committed, or surrender themselves to the husband, or some little time has elapsed since the event, the husband is not justified by law in exacting the extreme penalty. A master who is accused of killing a slave is not regarded as guilty of a capital offence, but a slave who murders his master is sentenced to *ling ch'i* as guilty of petty treason.

14. Patria potestas.—The *patria potestas* is still in force in China, and the slaughter of one's offspring is dealt with as a minor offence, or indeed as no offence at all, if, for instance, a parent has been struck by a son or daughter. The law decrees that the penalty for striking or cursing a parent is death, as was the case with the Hebrews.

15. Professional bullies.—The killing of a professional pugilist, or 'strong man,' is not regarded as murder, on the ground that such persons voluntarily subject themselves to danger and death, and must be prepared to take the consequences of their rashness.

16. The law of debt.—In cases of debt a stated period is allowed by law for repayment, viz. three months after the expiry of the time stipulated in the original arrangement between the parties. In the event of this period of grace being allowed to elapse, the debtor is liable to the bastinado. In some cases the creditor will take up his quarters at the house of the debtor, and continue to live at his expense until the debt is discharged. The fear of being unable to meet one's obligations before the Chinese New Year causes many suicides to take place at that season.

17. Bad company.—Amongst miscellaneous enactments it is worthy of notice that the sons of families enjoying hereditary rank, and officers of government, are prohibited from associating with prostitutes and actors, under penalty of 60 blows.

18. Treatment of domestic animals.—Special laws are enacted with a view to the proper treatment of domestic animals; *e.g.*, when draught animals are improperly harnessed, and sores are thus produced on the back or withers, the penalty of such carelessness is 20 to 50 blows. Similar penalties are imposed in cases of insufficient feeding, etc.

19. Care of the young.—Amongst the laws relating to the care of the young, it may be noted that the 'age of consent' in China is 12 years in the case of both boys and girls, and that a recent edict decreed that smoking on the part of boys under 18 was a punishable offence.

20. Improper conduct.—The comprehensiveness of the Chinese penal code is remarkable; there is hardly a circumstance connected with law and its infraction for which provision is not made; and a large liberty is extended to judges in the treatment of what is described as 'improper conduct'—an expression which is interpreted to mean offences against the spirit of the laws, though not necessarily involving an actual breach of the letter thereof.

21. Lynch law.—In addition to the ordinary legislation there are many unorthodox methods in practice amongst the people in country districts. Lynch law is very common, and the treatment of crime by the people themselves often induces cruelties which fully deserve the designation of 'savage.' Theft is severely punished, as are also fraudulent practices in connexion with marriage negotiations. A favourite method is the suspension of the culprit by his thumbs and great toes to a horizontal branch, so that the body is arched like a bow; sometimes a large stone is placed in the middle of his back to increase his sufferings. In extreme cases, where death is decreed by the village tribunal, a fiendish ingenuity is exhibited in the invention of new methods of torture. In the case of village feuds 'a life for a life' is the universal standard of justice; annual outbreaks of a kind of vendetta are common in some districts, and continue until the blood-feud is settled by the slaughter of an equal number of persons on both sides.

22. Reform.—The revision of the penal code, so as to bring it into conformity with Western models, is at present under consideration; and a number of Chinese commissioners visited Europe last year [1910] for the purpose of studying Western prison methods, with a view to a reform of the Chinese houses of detention.

W. GILBERT WALSHE.

CRIMES AND PUNISHMENTS (Egyptian).—There is no reliable record of the principles which guided the Egyptian judge in the punishment of crime. There may have been much that was arbitrary in the administration of justice, even in the best bureaucratic period of the New Empire, but that rules dating from a remote age, and attributed to the god Thoth, were appealed to is certain. A charge given by the king to his newly appointed vizier is preserved, but scarcely touches this question.

The Negative Confession in the Book of the Dead (see CONFESSION [Egyptian]) contains a long list of moral and religious obliquities, including adultery, falsification of measures and weights, and cursing the king. More to our purpose is a list of charges brought against a shipmaster at Elephantinê, preserved in a papyrus at Turin; amongst his offences are breaking into stores and stealing the grain, embezzling corn put in his charge, extorting corn from the people, burning a boat and concealing the fact, also adultery, and apparently the misuse of cattle bred by the sacred Mnevis sire. There is no record whether the charges were proved, or of the punishment. A decree of King Horemheb to repress military exactions and oppression in Egypt imposes a severe penalty on the unauthorized commandeering of boats; the offender loses his nose and ears, and is transported to the frontier city of Zaru (agreeing with Diodorus' account of the city of Rhinocolura); and soldiers who stole hides were to be beaten with 100 lashes so as to open five wounds, and to restore the property to its owners. Other documents indicate Ethiopia as the place of banishment, where perhaps convicts were forced to toil in the gold mines. The condition of suspected persons after examination 'by beating on their hands and feet' must have been miserable in the extreme, but probably the law contrived to make it still worse for the convicted criminal in the end. Accounts of several criminal trials are preserved—of robbers of the royal tombs (in Breasted, *Anc. Records*, London, 1906–1907, iv. 499–556), and of a conspiracy in the harem against the life of the king (*ib.* pp. 416–456). The punishment of the men and women condemned for participation in, or guilty knowledge of, the conspiracy is not specified, but it was evidently death in some form, and many seem to have been permitted to commit suicide. Two of the judges and two custodians who had misconducted themselves with female criminals during the time of the trial were condemned to lose their noses and ears; one of these committed suicide, while a fifth was perhaps let off with a severe reprimand.

From the end of the Middle Kingdom there is a decree of a King Antef deposing a nomarch (?) and high official of the temple of Coptos, apparently for harbouring the king's enemies. He and all his descendants were deprived for ever of the power

to hold the office. The consequences of desertion to another country are hinted at in the story of the fugitive Sinuhe, who was plainly in peril of death (Maspero, *Contes populaires*[3], Paris, 1906, p. 62). In the treaty between the Hittite king and Ramses II. restoration of deserters and free pardon for them are stipulated for on both sides.

F. Ll. GRIFFITH.

CRIMES AND PUNISHMENTS (Greek).—1. A crime may be considered as an act of disobedience to a Divine command, and, as such, punishable, if at all, by Divine retribution; or else, in its stricter sense, as an offence against the ethical sense of the community, for which a definite punishment is prescribed by law. But it is only gradually that the latter notion has been evolved. In the Greek States, none of which succeeded in working out a scientific system of jurisprudence comparable with that of Rome, many crimes continued to be treated, as in primitive communities, as wrongful acts done to an individual, for which he was entitled to claim compensation in a court of law (see Maine, *Ancient Law*[10], ed. Pollock, London, 1907, p. 379). Although the familiar distinction between a crime and a tort was increasingly recognized with the progress of time, acts definitely criminal in character (as being injurious to the community, such as homicide and theft under certain conditions) were technically made the subject of a civil action (*δίκη*) rather than of an indictment (*γραφή*). Even in the latter the State was only indirectly concerned; for a further distinction was made between a private and a public prosecution, and in private prosecutions, which formed by far the more numerous class, the prosecutor was regarded as acting for his own satisfaction rather than as fulfilling a public duty (see Demosthenes, xxi. 25).

It would be impossible, within the limits of an article like the present, even if the material existed, to describe in detail, or even satisfactorily to summarize, the progressive development in the establishment of legal penalties for crime by the various divisions of the Hellenic race, from the dawn of history down to the time when their independence was finally lost. All that we shall attempt is a short survey of the general ideas relating to the subject of crimes and punishments which prevailed from time to time according to the most important literary records, together with some account of the particular remedies provided by the Athenian law-courts, in the period for which our information is most abundant, namely, the 5th and 4th cents. B.C. For States other than Athens the necessary evidence is almost entirely wanting, and there is not much advantage in recording such scraps as have come down to us, when it is impossible to present them in their proper setting, or to make a trustworthy estimate of their value. There is the less inconvenience in taking this course, inasmuch as the pre-eminence of the Athenian judicial system is reflected in the remark that the Athenians invented the regular administration of justice (Ælian, *Var. Hist.* iii. 38). Still, it would be a mistake to suppose that the Athenian courts were a unique product of Hellenic civilization. Of the better-known Greek States it seems probable that Sparta was the most backward; and the existence of an elaborate judicial organization in remote and semi-barbarous communities such as Gortyn and Western Locris leads to the conclusion that great commercial cities like Ægina, Megara, and Corinth had a legal system as highly developed, if not as famous, as that of Athens herself (L. Whibley, *Greek Oligarchies*, London, 1896, p. 177).

2. With crime in the wider sense, as a breach of religious obligation, and the Divine punishment which it thereby merits, we do not propose here to deal, since they will be sufficiently discussed elsewhere (*e.g.* ERINYS, ESCHATOLOGY [Greek]). Nevertheless, the gradual growth of a system of jurisprudence was so largely conditioned by religious belief that we cannot entirely put out of view the religious as distinct from the legal aspect (see, generally, Maine, p. 381). Their connexion is most strongly marked in the case of the most important of all crimes, that of homicide. In the primitive age, for which our authority is to be found not only in the Homeric poems, but also in the writings of the Tragedians, so far as they reproduce the old legends, beliefs, and customs prevalent in the Epics now lost, it was universally believed that the shedder of blood was pursued and punished by the avengers (*Ἐρινύες*) of the slain man (Æsch. *Cho.* 401; Soph. *El.* 113). These supernatural visitants may be regarded as the embodiment of the curse pronounced by the injured victim against the wrongdoer (Æsch. *Theb.* 70), or even as the punishment itself (*Ποιναί*). In Homer, however, they never appear as punishing murder, but rather as protectors of parents against wrongs done to them by their children, and as guardians of the sanctities of family life. The mother of Meleager cursed her son for slaying her brother, and prayed for his death; her prayer was heard by the Erinys that walks in darkness (*Il.* ix. 571). Similarly, we find Œdipus visited by the curse of Iocasta (*Od.* xi. 280); the Erinyes were summoned to avenge the dishonour done by Phœnix to his father Amyntor (*Il.* ix. 454); and, so far as can be seen, they were ready to visit every crime committed against the ties of family or society (Ameis-Hentze on *Od.* ii. 135). There is nothing in Homer to show that the Erinyes did not punish homicide in a proper case; and, inasmuch as they avenged wrongs done to kindred, they might well have been found harassing Orestes for the murder of his mother, if Homer had narrated this version of the story (T. D. Seymour, *Life in the Homeric Age*, New York and London, 1907, p. 89). The subjects handled by the Tragic poets, being more nearly concerned with the ideas of crime and punishment, regularly present the Erinyes as the avengers of bloodshed, and more particularly of the murder of kinsfolk. Their victim, driven from place to place, in his vain effort to escape (Æsch. *Eum.* 210), was attacked by madness (Eur. *Iph. Taur.* 1481) or wasting sickness (*Or.* 398 ff.), until he either was released by death or effected a reconciliation with those whom he had wronged; such was the fate of the matricides Orestes and Alcmæon.

3. Again, in primitive times punishment was believed to be exacted in this life (*Il.* iii. 278 is exceptional), and the vigilance of the retributory power to be as unvarying as it was relentless. And, when experience seemed to show that the offender often escaped with impunity, it was easy to reply that vengeance was certain, even if it was slow to come (Æsch. *Ag.* 58, *ὑστερόποινον Ἐρινύν*; Soph. *Ant.* 1074; Jebb on *Œd. Col.* 1536); and that retribution would visit his descendants, even if the original offender was allowed to escape (*Il.* iv. 160; Solon, frag. 4. 27 ff.; Rohde, *Psyche*[4], ii. 228). Until a comparatively late date this was one of the excuses alleged by the Stoics, who were hard put to it to reconcile the existence of moral evil with their doctrine of Providence (Cic. *Nat. Deor.* iii. 90). But these crude notions failed to satisfy the curious inquirer or the ardent champion of Divine justice. Æschylus, a profound religious thinker, attempted to justify the gods by the assertion that the sin of the ancestor begets a tendency to sin in his descendants (*Ag.* 755–766), so that the actual sufferer is punished, not directly for his ancestor's guilt, but because he himself has yielded to temptation. But popular superstition required a less subtle solution. Even if the innocent must suffer for the guilty, it could not be supposed that the guilty themselves escape altogether. Hence came the belief in punishment after death, which may properly be called post-Homeric, though it appears in an isolated passage of the *Νεκυία* (*Od.* xi. 576–600; see Seymour, p. 468). It was a leading tenet in the creed of the devotees of Orphism (Plat. *Rep.* 364 E; Rohde, *Psyche*[4], ii. 128). The same doctrine took firm root in the convictions of the initiated, who had availed themselves of the reward offered to the partici-

pators in the Eleusinian mysteries, that they, and they alone, could look forward to a blessed existence after death (Soph. frag. 753); though how far it is correct to speak of the 'symbolism' of the mysteries themselves is a difficult and doubtful question (Rohde, i. 294 ff.). From such sources the doctrine spread even to philosophic circles, where it provided the material for several of the myths in the writings of Plato (*Phædo*, 110 B, *Rep.* 614 B, *Gorg.* 523 A), as well as for those of his imitator Plutarch (*Sera Num. Vind.* p. 563 ff.; *Gen. Socr.* p. 590), and was countenanced by the Stoics in their efforts to make common cause with the upholders of the popular religion (A. C. Pearson, *Fragments of Zeno and Cleanthes*, Cambridge, 1891, p. 146).

4. The belief in the power of the spirit of the murdered man to exact vengeance persisted throughout the historical age, but the practical consequences to the murderer in the attitude of his fellows were widely different in Homeric society from those which prevailed at a later time. The homicide in Homer was under no disability, so long as he kept outside the range of the influence exercised by the clan among whom the murder was committed; but within those limits his life was forfeit to the kinsmen of the murdered man (*Od.* xv. 271 ff.). So long as the murderer remained at home, the kinsmen were bound to exact the blood-penalty, if they themselves wished to avoid the wrath of the dead man's ghost; only by permanent exile, by renouncing for ever the ties of home and country, could even one who had accidentally caused the death of another escape from the vengeance of the blood-feud. Such is the inference to be drawn from the fate of Patroclus (*Il.* xi. 769 ff., xxiii. 85 ff.). But once he reached a new country, no moral disgrace and no religious tabu attached to the person of the fugitive murderer, although his act was deliberate. Even assassination seems to excite no moral disapprobation (*Od.* xiii. 267). Exile, however, was not always inevitable. If the relatives were willing to accept a fine, the murderer might by a payment acceptable to them compound for his life, and remain at home (*Il.* ix. 628–632). There is nothing here of ceremonial uncleanness, or of the propitiation of an offended deity (Rohde, i. 271); a murder is a wrong done to the family which has lost a member, and it is for them to exact a suitable expiation. The only reference to judicial proceedings in connexion with homicide is in the description of the shield of Achilles (*Il.* xviii. 497–508). Unfortunately, however, critics are not agreed on the nature of the trial scene; and the question is still open whether the issue to be tried before the elders was one of fact—had the blood-price been paid or not?—or whether the community had undertaken to decide the question of right, when a blood-price had been offered and refused. (See, on the one hand, Seymour, p. 89, and Lipsius, *Das attische Recht*, p. 4; and, on the other, Leaf, *in loc.*, and Maine, p. 406.)

5. When we pass to historical times, we find an entirely different state of affairs. The only adequate explanation of the change seems to be that in the interval a new religious influence had grown up, strong enough to modify completely the Greek conception of murder. This was the Delphic cult of Apollo, which at one and the same time emphasized the moral guilt of the shedder of blood, and by its ceremonies of purification opened the means of escape from the need for a blood-requital. But it is not easy to understand why the possibility of compounding by a money fine, which the Homeric poems attest, should have given way to a stricter estimate of guilt (Rohde, i. 267; Demosthenes, xxiii. 28, 33), which appears to be a reversion to the primitive rule that every murder must be expiated by blood (Æsch. *Cho.* 311). It has usually been inferred that the practice of Homeric society was a temporary deviation due to special conditions, which suspended the normal development of Greek ethics (T. Gomperz, *Greek Thinkers*, Eng. tr., 1901, ii. 4).

6. The Athenian criminal code.—However this may be, when we at length reach the system administered by the Athenian courts, we find that the punishment no longer depends upon the choice of the individual avenger, but is prescribed by the State (Demosth. xxiii. 69), although the kinsman is still required to appear as the instrument which sets the law in motion, unless the murderer has been forgiven by his victim before his death (*ib.* xxxvii. 59). The circumstances and motive of the homicide are no longer regarded as indifferent, but the various grades of guilt are distinguished with precision. Thus (1) the supreme court of the Areopagus, instituted, according to the legend, on the occasion of the trial of Orestes, had jurisdiction in cases of wilful homicide (*φόνος ἑκούσιος*). The judges were the Council of the Areopagus, a body recruited from those who had served the office of *archon* and had passed a subsequent scrutiny, under the presidency of the 'king' *archon*, who, as exercising the priestly functions of the old kings, testified by his presence to the religious character of a trial for blood-guiltiness. The penalties of death and confiscation of goods followed a conviction (Demosth. xxi. 43). The Areopagus also had jurisdiction over cases of wounding with malicious intent (*τραῦμα ἐκ προνοίας*), of arson (*πυρκαϊά*), and of poisoning (*φαρμάκων ἐάν τις ἀποκτείνῃ δούς*). The penalty for wounding and for poisoning, if death did not result, was banishment and confiscation of property; if the poisoning was followed by death, it was punished in the same manner as murder committed by violent methods.

(2) The second of the courts dealing with homicide sat at the Palladion, a sanctuary of Pallas, outside the walls, on the east side of Athens. Here were tried cases of involuntary homicide, and of conspiracy against the life of another (*βούλευσις*: Arist. *Resp. Ath.* 57. 3), as well as those relating to the killing of a slave, a resident alien, or a foreigner. The sentence on a person found guilty of involuntary homicide required him to remain in exile until he had appeased the relatives of the deceased, or, if he failed to do so, for a definite (but not ascertained) period. The death of a non-citizen seems also to have been punishable with banishment.

(3) Not far from the Palladion was the Delphinion, or Temple of Apollo Delphinios, where all were tried who alleged that the homicide committed was justifiable or excusable. The examples given are the slaying of an adulterer taken in the act, death on the battle-field in consequence of mistaken identity, and the fatal result of an athletic contest.

(4) Of minor importance was the court in the precinct of the hero Phreatus (Lipsius, p. 130), on the Piræus peninsula, where any person was tried who, while in exile for involuntary homicide, was accused of murder or malicious wounding committed before he went into exile. In such circumstances the accused pleaded his case from a boat moored off the coast.

The judges in the three courts last-mentioned were a body known as the *ἐφέται*, 51 in number, about whose qualifications and mode of appointment there is no information except the vague statement that they were chosen from among the well-born citizens. Their number may be explained by the 'king' *archon* being counted as one of them, or may be due to the same principle as prevailed in the jury-courts—the necessity of an odd number in

order to secure the decision of a majority (Lipsius, p. 18; otherwise Gilbert, *Handbuch d. gr. Staatsalterthümer*[2], p. 136). This system seems to have lasted from the time of Draco until about the year 400 B.C., when, in place of the *ephetæ*, a panel of ordinary jurymen (ἡλιασταί) was substituted (Lipsius, p. 41). The president in these courts was always the 'king' *archon*.

(5) Lastly, there is the court of the Prytaneum, composed of the four tribal 'kings' (φυλοβασιλεῖς) together with the 'king' *archon*, who, when the actual criminal could not be discovered, conducted a ceremonial trial of the weapon or of any other inanimate object, such as a stone or a piece of timber, by means of which a death had been caused. At the conclusion of the trial the inanimate instrument of death was cast beyond the boundaries of the State. A similar proceeding took place if the death was due to an animal (Arist. *Resp. Ath.* 57. 4). Here we have obviously the survival of a custom which went back to a remote antiquity.

In regard to trials for homicide, the following points of interest may be noted. (*a*) The connexion of the trial with the primitive blood-feud is preserved in the requirement that the prosecution must be undertaken by the nearest relatives of the deceased. (*b*) The trial always took place in the open air, in order to avoid any possible pollution to those present from being under the same roof with the accused. (*c*) The fact that the place of trial was always a temple is derived from the time when the slayer was protected by the right of asylum, until he had agreed with his adversaries on the amount of the blood-price. (*d*) The accused could withdraw himself from the trial not later than the conclusion of his opening speech (Demosth. xxiii. 69), and, so long as he remained abroad, his life was protected; but, if he returned to Athens, he could be put to death with impunity. (*e*) Ceremonial purification was required before even an involuntary homicide could be restored to his full rights. (*f*) The court of the Areopagus was closely associated with the cult of the Erinyes, who appear as the accusers of Orestes not only in Æschylus, but in the account preserved in Demosth. xxiii. 66 (Rohde, p. 269).

At Sparta, cases of homicide were tried before the council of elders (γερουσία), where other public proceedings also took place (Arist. *Pol.* iii. 1, 1275b, 10). From a case in which permanent exile was the penalty for an act of involuntary homicide committed in childhood (Xen. *Anab.* iv. viii. 25), it has been inferred that the rule of primitive society had received hardly any modification. For offences punishable with death the Spartans adopted the curious rule that, if a man was once acquitted, he remained still liable to stand a second trial (Gilbert, p. 89). The death penalty was carried out by night; and the condemned man was either strangled in prison or thrown from a height into a hollow called καιάδας (Plut. *Ages.* 19; Thuc. i. 134). We hear also of banishment, disfranchisement, and money fines being inflicted as punishments; but our information is so meagre that we can seldom distinguish the various crimes to which they were assigned; it appears, however, that cowardice in battle was punishable with exile (Thuc. v. 72), and παιδεραστία with permanent disfranchisement (Plut. *Mor.* p. 237 C). In Bœotia murder trials took place before the council (Xen. *Hell.* vii. iii. 5).

To return to Athens: it is desirable, before proceeding further, to mention certain salient characteristics of the administration of the Athenian criminal law which distinguish it from the system established in Great Britain. Every criminal proceeding was assigned to the office of a magistrate or board, who took charge of the necessary documents, heard all the preliminary applications, and presided at the actual trial. But these officials were very far from exercising the functions of a modern judge. They had no legal training or experience, but were simply laymen holding office for a year, a few being chosen by election, but the majority owing their position to the chance of the lot. Their duties were for the most part ministerial, and at the trial they exercised no control over the jury, who were supreme as representing the sovereign people. These latter—in criminal trials a panel, generally 501 in number and often far larger, chosen by an elaborate system from a body of 6000 dicasts annually enrolled—were little apt to stop an irrelevant argument, if it appealed to their fancy, or to require every statement of an advocate to be proved by strict evidence (Mahaffy, *Social Life in Greece*[3], London, 1877, p. 387 ff.). Their freedom from responsibility tempted them to decide according to the caprice of the moment, and their ignorance enabled advocates to misrepresent the law without any check but the speech of the other side. Moreover, they were often swayed by political prejudice and passion, and even, as we are credibly informed, were prepared to swell the State revenues by confiscation of the goods of the accused in order to improve the security for the jurymen's pay (Aristoph. *Eq.* 1359 f.; Lysias, xxvii. 1). They voted by ballot, and a simple majority prevailed. In many cases the sentence was fixed by law (ἀγὼν ἀτίμητος); but, where it was left to the discretion of the court (ἀγὼν τιμητός), the jurors had only a choice between two alternatives, as presented to them by the contending parties. It is obvious that any wider liberty would have been attended with serious practical difficulties.

If the crime of treason (προδοσία) was not precisely defined in their code, it was not because the Athenians cared little about the security of their constitutional liberty. On the contrary, the names of Harmodius and Aristogiton were always cherished, and special privileges granted to their descendants, in order that the Athenians might never forget the dangers from which their ancestors had been liberated. Charges against the oligarchical party of conspiring against the democracy (Aristoph. *Eq.* 236), or against some popular leader as aiming at a tyranny, were freely bandied to and fro during the troublous times of the Peloponnesian War: 'Aye "conspiracy" and "tyrant," these with you are all in all, | Whatsoe'er is brought before you, be the matter great or small' (Aristoph. *Vesp.* 488 f., tr. Rogers). The importance attached to the safety of the democracy is attested by the provision of a special process (εἰσαγγελία) for the impeachment of traitors. Historically, indeed, it may be regarded as a survival of the only form of criminal procedure known to the primitive State, in which there is no distinction between a criminal trial and an act of legislation (Maine, pp. 383, 393). But in practice this solemn proceeding was reserved for the trial and punishment of serious public offences which do not admit of delay (Harpocr. *s.v.* εἰσαγγελία). A law of Solon entrusted the Areopagus with the trial of those who conspired to overthrow the democracy (Arist. *Resp. Ath.* 8. 4); but it was at a later date—which has been fixed as either about the middle of the 4th century (Lipsius, p. 192), or soon after the fall of the Four Hundred (Thalheim, in *Hermes*, xxxvii. [1902] 342 ff.)—that a comprehensive enactment enumerating and defining various treasonable acts (νόμος εἰσαγγελτικός) was passed into law. The offences comprised in it may be divided roughly into four classes: (1) attempts to overthrow the constitution, either actual or constructive; (2) the treacherous surrender of a fortified place or of a military or naval force; (3) desertion to the enemy, or assistance given to,

or bribes received from, them ;[1] (4) corrupt advice given by a speech in the assembly (Hyperid. iii. 22). Either as included in the scope of this enactment or as authorized by earlier or separate legislation, we find provision made for proceeding by impeachment against those who made deceitful promises to the people, and against ambassadors who were false to their duty (Demosth. xix. 277, xx. 135). The procedure, as might have been expected, was entirely different from that of an ordinary criminal indictment. An impeachment might be either instituted before the Council of the Five Hundred or brought direct to the Assembly. In the former event, if the Council approved the prosecution, the accused was forthwith arrested (or held to bail in a case of lesser importance), and the *θεσμοθέται* were authorized to bring the matter before the Assembly. If the matter came in the first instance before the people, it was customary to direct a preliminary investigation by the Council; and from that point the procedure was the same as if it had been initiated before the Council. The trial was either held in the Assembly, or, according to the more usual practice, remitted to one of the ordinary law-courts. If the trial took place in a law-court, the number of dicasts was at least 1000, and we read of as many as 2500 being empanelled (Dinarch. i. 52). The penalty was usually death and confiscation of goods, and invariably so after about the middle of the 4th cent.; but there are grounds for thinking that before this time it was subject to assessment, or was sometimes fixed beforehand by the people, conditionally upon conviction. As an additional penalty, in order to mark the enormity of the crime, the body of a traitor was refused burial in Attica (Hyperid. ii. 20).[2] In early times, in order to encourage prosecutors to undertake proceedings, it was provided that any one who failed to obtain a fifth part of the votes should not be liable to the usual fine of 1000 drachmæ; but in the year 330, when the facilities thus given were abused, the privilege had been withdrawn (Demosth. xviii. 250).

The remedy of *εἰσαγγελία* was also prescribed for certain offences of a less serious character, such as official maladministration, particularly in the office of an arbitrator or in the dockyards; and also to rectify wrongs committed against those who were in a dependent position, or had special claims to protection, such as orphans or heiresses. In the latter case the process, though called by the same name, was altogether different, but was distinguished from the ordinary indictment in various respects, to the advantage of the prosecution. Thus the prosecutor (1) was not restricted in point of time, but was allowed to speak as long as he wished; (2) was subject to no penalty, if he failed to secure a fifth part of the votes; and (3) was not required to make use of a writ of summons (*πρόσκλησις*) when laying his plaint (Wyse on Isæus, iii. 46). But, instead of going to the Council or to the Assembly, the prosecutor made his 'denunciation' to the chief *archon* (*ἐπώνυμος*), who exercised a criminal jurisdiction in this matter corresponding to his official superintendence of inheritance cases. The chief *archon* was, in fact, in a position similar to that of an English Lord Chancellor, who, as represented nowadays by the judges of the Chancery Division, has full jurisdiction over the persons and properties of his wards, and can punish for contempt of Court those who offend against his decrees (cf. Demosth. xliii. 75). But, whereas the English judge exercises plenary powers, the Athenian *archon*, apart from a limited power of imposing a fine, only conducted the interlocutory proceedings and prepared the case for the decision of the dicasts. In this connexion we are informed that the analogous offence of injuring parents included, besides corporal injury, refusal of food and lodging, and neglect in performing the customary rites at the tomb. A son convicted of maltreatment of parents was punished with complete disfranchisement (*ἀτιμία*), but the procedure in his case was by way of an ordinary indictment before the *archon* (Lipsius, p. 351). Whether there was any other penalty is unknown; but, even apart from a prosecution, candidates for office were liable to be rejected on the scrutiny (*δοκιμασία*), and speakers in the Assembly ran a similar risk, if it could be shown that they were guilty of undutiful conduct. Proceedings for injury done to orphans and heiresses (*ἐπίκληροι*) might be taken against their guardians, and in the latter case also against their husbands, or their nearest male relatives, if these attempted to avoid the obligation imposed upon them either to marry the heiress or to furnish her with a suitable dowry. The penalty was assessable by the court; but, though Isæus (iii. 47) speaks of the extreme punishment as applicable to such cases, it is unlikely that the offence usually entailed more than a heavy fine together with disfranchisement. There was also the offence of injuring an orphan's estate (*οἴκου ὀρφανικοῦ κακώσεως*), which appears to include misappropriation or unlawful retention, as well as fraudulent or negligent mismanagement. As another parallel to the Lord Chancellor's powers, it may be mentioned that the chief *archon* had jurisdiction in lunacy; for to him was preferred an indictment by the relatives, when it was alleged that any one had become incapable of managing his private affairs (Arist. *Resp. Ath.* 56. 6).[1] The chief *archon* had also jurisdiction in the indictment for idleness (*ἀργίας γραφή*), generally supposed to have been capable of enforcement against a man who had no property and refused to exert himself in order to obtain an honest living. Unfortunately, the information respecting it is scanty, but it has recently been suggested (Lipsius, p. 340) that its real purpose was not so much educational as to vindicate the concern of the State for the due preservation of family property, and to punish the dissipation or improper alienation of an inheritance. Draco is said to have made death the penalty (Plut. *Sol.* 17), but Solon (or Pisistratus) substituted a fine of 100 drachmæ on the first and second conviction, and complete disfranchisement on the third (Poll. viii. 89).

The 'king' *archon*, whom we have already met in connexion with murder trials, was the presiding magistrate in prosecutions for impiety (*ἀσέβεια*). This offence had a wide ambit, ranging from acts of sacrilege to the expression of speculative opinions on the origin and government of the universe. It corresponds, therefore, in part to blasphemy, which is still an indictable offence in England, although prosecutions are nowadays practically unknown. A prosecution for impiety was a convenient weapon in the hands of the obscurantists, if they desired to check the growth of revolutionary opinion, or to interfere with the teaching of a successful opponent. Thus it was used against Diagoras of Melos and Theodorus the Cyrenaic, for publishing atheistic doctrine (schol. on Aristoph. *Ran.* 323; Diog. Laert. ii. 101); against Anaxagoras for calling the sun a fiery mass (Diels, *Fragmente der Vorsokratiker*, i.[2] [Berlin, 1906] 294); against Pro-

[1] A famous instance of a trial of this kind was the prosecution instituted by Lycurgus against Leocrates, who was alleged to have abandoned his country after the fatal battle of Chæronea.

[2] It is interesting to find that the last-named provision was a traditional usage of immemorial antiquity, since it is implied in the story of the burial of Polynices by his sister Antigone (see Eur. *Phœn.* 1630).

[1] The best-known instance is that of Sophocles, against whom proceedings of this kind are said to have been taken by his son Iophon (*Vit. Soph.*; Plut. *Mor.* p. 785 A)—although the story may well have arisen from the malicious gibe of a comic poet (Lipsius, p. 356).

tagoras for opening his treatise on the gods with a profession of inability to say whether they existed or not, or what they were (Diels, ii.[2] [1907] 525); and against Socrates, whose indictment charged him with corrupting the young men by introducing the worship of deities other than those recognized by the State (Plato, *Apol.* 24 B). On the other hand, Alcibiades was impeached (*εἰσηγγέλθη*) on the delation (*μήνυσις*) of an informer for holding a mock celebration of the Eleusinian mysteries in his own house (Plut. *Alcib.* 22); and an information (*ἔνδειξις*) was laid against Andocides for taking part in a sacrificial act, while under a disability previously imposed (Andoc. i. 71). The sacrilegious robbery of sacred property from a temple was treated as a distinct crime, and was punishable with death, deprivation of the right of burial, and confiscation of goods, on an indictment preferred before the *thesmothetæ* (*γραφὴ ἱεροσυλίας*). Thus various forms of procedure may have been open to the accuser, as Demosthenes (xxii. 27) takes occasion to remark; but, so far as our information goes, the trial always took place before a heliastic court. A single exception, known to us from the 7th speech of Lysias, relates to the charge of uprooting the stump (*σηκός*) of a sacred olive-tree. Here the cause was pleaded before the Council of the Areopagus, under whose supervision these olive-trees had been placed. In this case the punishment was fixed by law—death for destroying a tree, and banishment for removing a stump. For impiety in general, however, the penalty—death, banishment, confiscation of goods, or money fine—was left to the assessment of the jury, as is known from the celebrated trial of Socrates.

Adultery (*μοιχεία*) was treated at Athens as a criminal offence, and was punished with severity, as was natural in a society which tolerated concubinage. The adulterer might be prosecuted on an indictment laid before the *thesmothetæ* (Arist. *Resp. Ath.* 59. 3), and the sentence was probably left to the decision of the court (Lipsius, p. 432). But the injured husband could also take the law into his own hands. He might either kill the adulterer, and plead justifiable homicide in answer to any proceedings taken against him; or he might detain or exact sureties from him, until he was satisfied by a money payment. In the latter case, however, the alleged adulterer could maintain an action for false imprisonment (*ἀδίκως εἱρχθῆναι ὡς μοιχόν*) against the husband, and, if successful, was released from any undertaking he had given under duress. If the husband continued to live with a declared adulteress, he suffered disfranchisement; and the adulteress herself was forbidden to enter the temples or to wear the customary ornaments of free women. If she infringed these restrictions, she might be subjected with impunity to any injury short of death ([Dem.] lix. 87). Stringent penalties were in force against those who procured youths or girls for immoral purposes (*προαγωγείας*), and a total disability was imposed automatically upon those who had prostituted themselves, so that, if they exercised any civil right, they became liable to an indictment (*γραφὴ ἑταιρήσεως*), and, if convicted, to be sentenced to death. Cf. also art. ADULTERY (Greek).

In dealing with other crimes of violence against persons or property, we have to take into account a large variety of procedure. Thus Demosthenes (xxii. 25 ff.), having occasion to point out that Solon, in providing different remedies for single crimes, intended to ensure that no law-breaker should go free by reason of the poverty or incapacity of his accuser, illustrated his remarks by the example of theft, in which the injured party might proceed either by way of arrest (*ἀπαγωγή*), by leading the magistrates themselves to the spot where the culprit was to be found and requiring them to seize him (*ἐφήγησις*), by an ordinary indictment (*γραφή*), or, lastly, by a civil action (*δίκη*). Similarly, he thinks it difficult to imagine that any one who was proved to have committed assault and battery could escape punishment at Athens (liv. 17). For, in the first place, an action for slander (*κακηγορίας δίκη*) had been devised to prevent the commission of the offence at all, or at least to minimize its occurrence; and, if it was committed, in addition to the ordinary indictment for assault (*γραφὴ ὕβρεως*), there was an action for battery (*δίκη αἰκίας*), or, if the offence was so grave as to require it, a prosecution for unlawful wounding (*τραύματος*) before the Areopagus (see above). In certain circumstances there was still another remedy. When Demosthenes, acting as *choregus* at the Dionysia, was grossly assaulted by Midias, instead of contenting himself with a personal suit, he made a public complaint (*προβολή*) before the Assembly in order to obtain the authorization of the people for the institution of proceedings. The object, of course, was to make full use of the prejudice which would be excited against the defendant by a decree of the people; and perhaps, in the case of an aspiring politician, it might be more advantageous to obtain the advertisement of a public debate on his wrongs than to rest content with the satisfaction to be gained from a heliastic court alone. But the *προβολή* had only a limited range, being confined, according to our authorities, as now interpreted (Lipsius, p. 214 f.), to charges against sycophants, *i.e.* false accusers, or those who had made use of legal proceedings in order to extort money, or for some fraudulent purpose, but only when their false professions had misled the people; and against those who committed an outrage during the progress of certain religious festivals, such as the Dionysia or Eleusinia. If a vote was given against the accused (*καταχειροτονία*), the prosecutor proceeded to lay his complaint before the *thesmothetæ* (Arist. *Resp. Ath.* 59. 2), and the trial proceeded in the ordinary way. There was, however, one peculiarity which, according to a recent view, attached to the trial of a *προβολή* as distinguished from all other prosecutions in which the punishment was assessable by the court. In ordinary cases, as we have already seen, the judges were compelled to select one of two alternatives; but, in the speech against Midias, Demosthenes invites the jury to assess any penalty which they think adequate, and implies that this may range from death or confiscation of goods to a paltry fine (§§ 21, 151, 152). (See Goodwin's *Demosthenes against Midias*, Cambridge, 1906, p. 161; otherwise, Lipsius, p. 218.).

Of the other processes mentioned above, the most important was the *arrest*, which was applicable to certain classes of offenders, when openly detected in crime. These were known comprehensively as malefactors (*κακοῦργοι*), and specifically as thieves (*κλέπται*, a term not including every offender of this kind, but only such as stole by night or in a gymnasium, or, if the theft took place by day and under other conditions, stole property of the value of more than fifty drachmæ, or, if the crime was committed in the harbours, of more than ten drachmæ [Demosth. xxiv. 113]), kidnappers (*ἀνδραποδισταί*), highwaymen (*λωποδύται*), burglars (*τοιχωρύχοι*), and pickpockets (*βαλλαντιοτόμοι*). Such cases came under the jurisdiction of the police magistrates known as the Eleven, and the punishment was death. If the crime was admitted, punishment followed at once; but, if it was denied, the culprit was kept in durance until trial (Arist. *Resp. Ath.* 52. 1), unless he was bailed out by three citizens (Antiph. v. 17). The process of arrest

seems gradually to have been extended, so that it was sometimes employed against murderers, as in the speech of Antiphon, *de cæde Herodis*, and in that of Lysias against Agoratus. An entirely distinct application of the process must be recognized when it was directed against those who, while under disability (ἄτιμοι), had usurped the privileges which they had forfeited, and against exiles who had returned home. In the last-mentioned cases the penalty was assessable, except for those who were already under ban of death. If the intending prosecutor had not sufficient strength or courage to arrest the felon himself, he could fetch a magistrate to the spot and get him to act (ἐφήγησις). It is probable that this proceeding was the complement of arrest, and applicable to the same crimes; but the evidence is scanty, and touches only the cases of theft (Demosth. xxii. 26), the harbouring of fugitives, and the secret retention of State property (Suid. *s.v.*).

There is often mentioned, in conjunction with arrest, the process of *information* (ἔνδειξις). This answers to the second kind of arrest mentioned above, and was employed against State-debtors, returned exiles, murderers, and generally all who, being under disability, frequented places or performed acts from which they were excluded by law. In the case of State-debtors the presiding officers were the *thesmothetæ* (Demosth. xxiv. 22); in other cases the Eleven (Arist. *Resp. Ath.* 52. 1). The penalty naturally varied according to the gravity of the offence, and was often assessable, as in the case of a disqualified dicast assuming to act as such (Arist. *Resp. Ath.* 63. 3); but, if a State-debtor usurped the functions of a public official, he was liable to the death-penalty (Demosth. xx. 156).

If a man whose goods had been stolen was either unable or unwilling to use the process of arrest, he might proceed by way of indictment for theft (γραφὴ κλοπῆς) before the *thesmothetæ*, as an alternative to the civil action for the same delict. Draco's code had made death the sole penalty for theft (Plut. *Sol.* 17), but later legislation allowed the court to fix the penalty. Imprisonment might be inflicted in addition to the main penalty, and disfranchisement followed a conviction.

For personal injury resulting from an assault, or for acts of shameful and indecent insult to the person of child, woman, freeborn man, or slave, the appropriate remedy was an indictment for wanton assault (ὕβρεως γραφή), before the *thesmothetæ*. The essence of the offence, as distinguished from the battery which might be made the foundation of a civil action (αἰκίας δίκη), lay in the motive which prompted the outward act. A mere blow, according to Aristotle (*Rhet.* i. 13. 1374a, 13), is not necessarily a sign of wantonness, but only when the object to be attained is the disgrace of the sufferer or the pleasure of the striker. The penalty was assessable, and might amount to death in serious cases; but it was subject to the peculiar provision that the vote was taken immediately after the verdict on the main issue, without the usual opportunity being given to the parties to recommend their respective assessments (Lipsius, p. 428 f.).

We must next consider offences connected with the unlawful assumption or fraudulent exercise of civil privileges. Pericles had carried a law that an Athenian citizen must be the offspring of a father and mother who were both Athenians (Arist. *Resp. Ath.* 26. 4); and it was re-enacted in the archonship of Euclides, with a saving clause to guard existing rights. Any one who exercised the rights of a citizen without being entitled to them was liable to indictment by a common informer as an alien (ξενίας γραφή), and, if convicted, was sentenced to be sold as a slave. Further, if such a person procured his acquittal by bribery or collusion, he was amenable to the same penalty (δωροξενίας γραφή). Similarly, a resident alien (μέτοικος), who neglected to enroll himself under a patron, could be indicted (ἀπροστασίου γραφή) before the third *archon*, known as the 'polemarch,' who exercised over μέτοικοι the same jurisdiction which belonged to the chief *archon* in regard to full citizens.

It is obvious that the existence of such proceedings opened a favourable field for the crime of malicious prosecution, and helped to swell the class of persons who made their living by preying on the fears of their fellow-citizens. The plays of Aristophanes are full of references to the contemptible class of sycophants which flourished during the latter part of the 5th cent., and, in order to protect society against their depredations, the fullest opportunity was given to proceed against them by indictment or otherwise (Isocr. xv. 313 ff.), and the assessment of the penalty was in the discretion of the court.

It is remarkable that the offence of perjury—the only crime which Homer (*Il.* iii. 278) mentions as visited with punishment after death—was considered, if committed by a witness in the course of a trial, to demand nothing more than a civil remedy (ψευδομαρτυρίων δίκη); although disfranchisement was one of the consequences which might result if the defendant lost such an action (Isæus, v. 17); and it followed automatically if he was convicted three times. On the other hand, falsely to swear to the service of a summons rendered the perjurer liable to criminal proceedings (ψευδοκλητείας γραφή), in which he might even be punished with death (Demosth. liii. 18). A triple conviction led to the same result as the similar conviction of a perjured witness.

An indictment for bribery (δώρων) might be laid not only against officials, but against all others who received, or gave, or promised a bribe, with the object of conferring or procuring an advantage to the detriment of the State or of any individual citizen. Moreover, a magistrate who, at the expiration of his term of office, was convicted, at the scrutiny conducted by the λογισταί, of having embezzled or taken bribes, was fined ten times the amount in question (Arist. *Resp. Ath.* 54. 2). The penalty of tenfold compensation also attached to a conviction on the general indictment, and was exacted from any official convicted of the embezzlement of public funds, on an indictment before the *thesmothetæ* (κλοπὴ δημοσίων, or ἱερῶν, χρημάτων). A separate indictment (δεκασμοῦ) existed to meet the case of bribes given to, or received by, a member of the Assembly, the Council, or the jury-panel, or an advocate (συνήγορος), for the purpose of influencing a decision by any of the bodies concerned. The only penalty mentioned is that of death (Isocr. viii. 50).

The earliest recorded instance of the bribery of a jury is that of Anytus, afterwards notorious as the accuser of Socrates, who succeeded by this means in escaping an adverse verdict after the failure of the expedition to Pylos in 409 (Arist. *Resp. Ath.* 27). Demosthenes is said to have been ordered to pay a fine of fifty talents in connexion with the affair of Harpalus (Plut. *Dem.* 26); but neither from this not entirely credible statement, nor from the mention by Dinarchus of the death-penalty (i. 60), can any inference be drawn as to the penalties incident to an ordinary prosecution for bribery.

Debasing the coinage was a crime punishable with death (Demosth. xx. 167, xxiv. 212).

Military offences were tried before the generals, with a jury composed of the comrades of the offender. Our authorities distinguish refusal to join when summoned (ἀστρατείας), cowardice in the ranks (λιποταξίου), loss of the shield in flight, and corresponding delinquencies in the naval service (ἀναυμαχίου, λιποναυτίου). Conviction was followed by loss of civic rights, but not by confiscation of property.

If a State-debtor procured the erasure of his name from the register without liquidating the debt, both he and the official by whose neglect or fraud the State had been prejudiced were liable to

indictment before the *thesmothetæ* (ἀγραφίου); and any one whose name was wrongly inserted could take similar proceedings against the wrongdoer (ψευδεγγραφῆς), or if the proper officer did not erase his name after he had paid (βουλεύσεως).

The general formula defining grades of punishment distinguishes *bodily suffering* and *money payment* (ὅ,τι χρὴ παθεῖν ἢ ἀποτεῖσαι). Death, as we have seen, was not infrequently imposed by law; but, on the whole, the temper of the administration was lenient, and a death sentence was less frequent in practice than might have been expected from the place which it occupies in the code. A striking testimony to the humanity of the Athenians is the abhorrence excited by any punishment involving torture or mutilation; and penal acts of this kind are hardly ever mentioned in literature except as characterizing the excesses of tyrants or the savagery of barbarians (see esp. Æsch. *Eum.* 186 ff.). Imprisonment is rarely mentioned as a penalty (Lys. vi. 22; Plat. *Apol.* 37 C); and it might be said that, where we immure the criminal for the benefit of society, the Athenian code secured the same end by disfranchisement (ἀτιμία). This requires a few words of explanation. For the members of a modern State, who are more conscious of the burdens attaching to citizenship than of its privileges, an effort of imagination is needed in order to realize what complete disfranchisement meant to an Athenian. Athens was a comparatively small city, as measured by the standards of to-day, with a proletariat slave-class, and a considerable number of resident aliens; and yet at the same time an imperial city, proud of its past and with a world-wide reputation. An Athenian citizen valued his civic privileges as highly as his life. To be excluded from holding any office or exercising any public function in a community where all citizens aspired to share in the government, and to be forbidden to appear in the market-place or to take part in any public festival where every one lived in the open air, and where the frequently recurring festivals were the chief enjoyments of life, placed a ban upon the convicted man which made him an outcast from all his fellows. Thus we find disfranchisement, with or without confiscation of goods, as a normal punishment for all kinds of serious offences, such as sacrilege, treason, bribery, embezzlement, and injury to parents (Andoc. i. 74). In these cases the disability was permanent; but it was also adopted against State-debtors as a means of enforcing payment, and was removed as soon as the liability was discharged. There were also cases of partial disability, as when a man was forbidden to speak in the Assembly, or to become a member of the Council (Andoc. i. 75). So, if the prosecutor in a public indictment threw up his case, or failed to obtain a fifth part of the votes, he lost the right of again instituting another proceeding of the same kind (Demosth. xxi. 103). Cf. also art. ATIMIA.

Lastly, it remains to notice *the formalities attending the execution of the sentence.* If the sentence was one of death, or if imprisonment was involved in it, the convicted person passed under the charge of the Eleven, who had control over the State prisons. Common criminals, known as malefactors (κακοῦργοι), were fastened in a frame and cudgelled to death (ἀποτυμπανισμός) by the executioner (δήμιος). The same official undertook the duty of 'throwing into the pit' (εἰς τὸ βάραθρον ἐμβαλεῖν)—a form of execution which was at one time employed for traitors (Plut. *Aristid.* 3; Xen. *Hell.* i. vii. 20). The more familiar penalty, however, which is mentioned for the first time during the domination of the Thirty (Lipsius, p. 77), was to give to the condemned criminal a cup of hemlock-juice (κώνειον), which was administered by an official acting under the orders of the Eleven.[1] If the accused was condemned to be sold as a slave, he was handed over to the πωληταί, who sold him to the highest bidder. Confiscated goods were sold by the same hoard, and, in order to prevent concealment, a common informer was permitted to make a schedule (ἀπογραφή) of any property which he alleged to be liable to confiscation, and, if he succeeded on the trial of the issue, he was entitled to retain for himself three-quarters of the value (Demosth. liii. 2). Sometimes, in important cases, a special body of commissioners (ζητηταί) was appointed to make an investigation of the property liable to seizure. Fines imposed by the court were collected by the πράκτορες, who handed the money over to the treasury officials (ἀποδέκται). The enforcement of the negative penalty of disfranchisement was secured by the severe punishment provided for those who ventured to infringe the limitations imposed upon them by their sentence.

7. Such, in rough outline, was the criminal code which was administered in the Athenian law-courts at the height of their power. That a legal system so searching and comprehensive should have come into existence within so comparatively short a time is remarkable enough; but the spirit of humanity and enlightenment which it displays, the variety of procedure, the minuteness of subdivision designed to meet every possible manifestation of crime, and the securities taken against every form of personal violence, alike show that, in the province of law, Greek civilization did not fall far short of the eminence which it attained in art and literature. The defects of the system, as has already been indicated, were due to its faulty administration by the juries, to the absence of a trained legal profession, and to the non-existence of records to secure continuity of decision.

8. Views of Plato and Aristotle.—The laws of Athens were the expression of the best opinion of an unusually intelligent community, and even the most advanced thinkers, who were ready enough to criticize defects in the constitution, found but little to improve upon in the criminal code. When Plato set out, in the 9th book of the *Laws*, to provide the citizens of his pattern State with a revised series of statutes, the amendments which he advocated were made, not so much from dissatisfaction with the Athenian code, as from a desire to preserve intact the essential features of his reformed community. Thus, he objected to the punishment of disfranchisement, and to that of perpetual banishment, because they would interfere with the permanent occupation of the lots which were assigned to the citizens (855 B, C). For similar reasons, fines were to be inflicted more sparingly than was usual at Athens; and a more frequent resort to flogging and the pillory—forms of punishment odious to the Athenian mind, however familiar at Sparta (Grote, *Plato*, London, 1865, iii. 433)—was recommended. The motive which prompted these changes, and which informs the whole body of his legislation, is derived from his conception of the real nature of crime and the object which punishment should seek. It should, however, be remembered that, as his citizens were a carefully selected and highly educated body, he anticipated that crime would be a rare occurrence, and that legislation was needed only by way of precaution against the perversity of human nature (853 C–E). Now, Socrates had taught that virtue is fundamentally a matter of knowledge, and that

[1] There are occasional references in Greek literature to stoning as a traditional mode of execution for heinous offences; but it was rather a survival of the custom of human sacrifice than the enactment of a legal code. See J. G. Frazer, *Pausanias*. London, 1898, iii. 417; Verrall on Æsch. *Ag.* 1107.

wrongful action necessarily proceeds from ignorance. Hence the paradox that no one is willingly unjust; for, if a man knows the good, he will follow it. To this doctrine Plato consistently adhered in his latest work (860 D, E), and it is obvious that it cuts at the root of the common distinction of jurisprudence between voluntary and involuntary wrongs. But Plato did not deny the existence of injustice or of voluntary wrong (ἑκούσια ἁμαρτήματα); only he gave a new connotation to these terms, based upon the principles of his own psychology. Thus, injustice is due to the dominance in the soul of unreasoning emotion—either anger or desire, the stimulus of pain or of pleasure; but if, on the other hand, the emotions are controlled by the reason, it is no longer possible for a man to commit an unjust act, although his actions may be misguided and harmful to others. For, though the reason may be strong to master the lower impulses, yet its successful operation may be impeded by ignorance or prejudice; and in this manner voluntary error is possible (Grote, iii. 399). It follows that the chief aims of the law-giver will be at once by education to subdue the passions, by compensation to make amends to the sufferer, by prescribed penalties to deter, and by enforced penalties to chasten and reform.[1] Above all, the spirit of his laws must be such as to strengthen and guide the rational faculty by prescribing such beliefs as are agreeable to absolute reason. It is only when the evil is recognized as incurable that death is a suitable penalty, best for the criminal himself, and useful as an example to others.

Plato recognized two aspects of punishment, the corrective (Adam on *Rep.* 380 B) and the preventive, both of which are to be distinguished from a purely vindictive exercise of authority (*Gorg.* 525 A; *Prot.* 324 A; *Legg.* 854 B, 934 A). In the same way Aristotle distinguished vengeance, the object of which is the satisfaction of the inflicter, from chastisement directed to the good of the criminal (*Rhet.* i. 10, 1369b, 13; *Eth. Nic.* ii. 3, 1104b, 16); and, in entire agreement with Plato, he held that, whereas good men may be admonished, others, whose vice is incurable, must be cast out (*ib.* x. 9, 1180a, 9). Elsewhere he speaks of corrective justice (διορθωτικὸν δίκαιον) as proceeding by arithmetical proportion, indemnifying the injured party by subtracting from the gain of the wrongdoer an amount equivalent to the loss of his victim (*ib.* v. 4, 1132a, 10), as distinguished from distributive justice, which seeks to establish a geometrical proportion according to the respective merits of the individuals concerned; but in the *Politics*, where we might have looked for a reasoned treatment of punishments, nothing of the kind is to be found.

It is unnecessary to detail the provisions which Plato recommended for the punishment of sacrilege, homicide, and wounding; but it deserves to be remarked, as showing that he was alive to the defects of the Athenian jury-courts, that he refrained from drawing up precise enactments to fit every possible contingency, because he trusted largely to the discretion of his select and well-trained court, which was established to take the place of the Council of the Areopagus (876 B–E). It should further be noticed that, while generally adopting, with slight alterations, the provisions of the Athenian code, in dealing with the offence of battery he left the beaten person to defend himself as best he might, unless he happened to be twenty years older than his assailant (879 C). In thus training the young to endure blows, and in inculcating reverence for old age, Plato was showing his preference for the methods of Spartan discipline. But the most extraordinary of all Plato's legislative experiments was the intolerant enactment against religious heresy. He distinguished three classes of heretics: (1) those who do not believe in gods at all; (2) those who believe that gods exist, but do not concern themselves with human affairs; (3) those who believe that the gods may be propitiated by prayers or sacrifice (885 B). Of these classes the third is the most pernicious; but any one who was found guilty of impiety as falling under any of the three classes, even if his conduct was otherwise free from blame, was to be imprisoned for five years; and, if at the end of that time he was still unrepentant, he must be put to death (909 A). Further, if the offence of heresy was found aggravated by bad conduct, the offender must be kept in solitary confinement until he died, and, after death, refused the rites of burial.

[1] Similarly the Stoics, as reported by Seneca, *de Clem.* i. 22. 1. As practical reformers they were very far from carrying to its logical conclusion the doctrine that all crimes are equal, notwithstanding the banter of Horace (*Sat.* i. 3. 121) and Cicero (*pro Mur* 61).

LITERATURE.—The chief authority on Athenian jurisprudence is J. H. Lipsius, *Das attische Recht und Rechtsverfahren*, pt. i., Leipzig, 1905, pt. ii., 1908; but, as the work is not yet complete, it is still necessary to refer to the same writer's revised edition of Meier-Schömann, *Der attische Process*, Berlin, 1883–1887. See also C. F. Hermann, *Lehrbuch der griech. Rechtsalterthümer*, ed. Thalheim, Freiburg, 1884; G. F. Schömann, *Lehrbuch der griech. Alterthümer*[4], ed. Lipsius, Berlin, 1897, esp. vol. i. pp. 506–537; G. Gilbert, *Handbuch der griech. Staatsalterthümer*[2], Leipzig, 1893, esp. vol. i. pp. 421–467. There are also numerous articles bearing on the subject by T. Thalheim, in Pauly-Wissowa. For the primitive beliefs connected with the blood-feud, see E. Rohde, *Psyche*[4], Tübingen, 1907, i. 259–277.

A. C. PEARSON.

CRIMES AND PUNISHMENTS (Hebrew).

—Crime, strictly speaking, is an offence against the law of a State, which the State punishes, as distinguished from sin against God, and other wrongdoing of which the State takes no cognizance. This idea had not been formulated by the Israelites, and there is no Heb. word exactly equivalent to our 'crime.' A crime was a form of 'evil' (רַע, *ra'*). In the same way there was no one general term for 'punishment'; it might be denoted by גְּמוּל (*g'mûl*) and other words for 'recompense'; or by עָוֹן (*'âwôn*) and other words for 'sin' or 'iniquity' (punishment being regarded as an effect of sin), or by forms of the root פקד (*pqd*), 'visit.' The crimes and punishments recognized by the Israelites may be classified thus (only the more common Heb. words are given):

I. *CRIMES*: 1. Religious offences: *blasphemy* (derivatives of ברך *brk*, נרך *gdp*, נאץ *n'ṣ*, Lv 24^{10-16}); *breaches of ritual*, as to food (Lv 7^{25}), uncleanness (7^{20}), sacrifice and offerings (19^{8} etc.); *idolatry*, or the worship of false gods (Dt 13); *illegitimate assumption of the priestly or prophetic office* (Nu 16. 17, Dt 18^{20}); *magic, divination, sorcery, and witchcraft* (Dt 18^{9-14}); *Sabbath-breaking* (Nu $15^{32ff.}$); *perjury* (Ex 20^{16}); *war against Israel on the part of idolatrous nations*, which was regarded as an offence against Jahweh (cf. II. 1).—2. Offences against the State: *treason* (1 K 21^{13}, 2 K 14^{5}); *bribery and oppression* (Ex 23^{1-9}).—3. Sexual offences: *bestiality* (Ex 22^{19}, Lv 18^{23}); *prostitution* (Lv 19^{29}); *incest* (Lv $18^{6ff.}$); *sodomy* (Lv 18^{22}).—4. Offences against property: *adultery* (derivatives of נאף, *n'p*, Ex 20^{14}); *kidnapping* (Ex 21^{16}); *leaving pit uncovered, or otherwise causing damage through carelessness* (Ex 21^{28-36} 22^{6-15}); *theft* (Ex 22^{1-5}); *usury* (Ex 22^{25}); *seduction or rape of daughter* (Ex $22^{16f.}$, Dt 22^{23-28}).—5. Offences against the person: *murder* (Ex 20^{13}); *injuries* (Ex 21^{18-27}).—6. Offences against the family: *cursing parents* (Ex 21^{17}).

II. *PUNISHMENTS*: 1. Religious penalties.—Many ritual offences might be atoned for by *sacrifices, seclusion, washings, and other rites*: *e.g.* touching an unclean thing was atoned for by

sacrifice (Lv 5[1-18]); eating flesh of an animal not properly killed was atoned for by washing one's clothes and person, and remaining unclean until the evening (Lv 17[15]). Sacrifices seem to be required in connexion with all sins which could be forgiven. A person in a state of uncleanness could not be present at the Temple services, or partake of the Passover.

Excommunication was practised in later Judaism, but it is doubtful how far it had any equivalent in ancient Israel. The Priestly Code prescribes the penalty of 'cutting off from the people' for numerous offences, mostly against the ritual laws, but sometimes for gross forms of immorality. A comparison of parallel passages shows that in some cases offences punished in one chapter by 'cutting off' are punished in another by 'death' (cf. Lv 18. 20). On the other hand, some offences punished by 'cutting off' seem to us trivial, *e.g.* omitting, without valid excuse, to observe the Passover (Nu 9[13]), but such matters might not seem trivial to the Israelites. It is practically certain that death was never regularly inflicted for the various offences which were to be punished by 'cutting off.' The difficulty is explained by the history of the Priestly Code; it was compiled by Babylonian Jews; its authors had no experience in inflicting death penalties, and no immediate prospect of such experience. They indulged in a theoretical severity, untempered by practical necessities; they used the term 'cutting off,' because it would also serve to describe excommunication from social fellowship and religious privilege—a penalty within the power of the exiles to inflict.

Heathen nations stubbornly fighting against Israel were to be subjected to the *ban* (חֵרֶם, *ḥērem*), *i.e.* to be massacred in honour of Jahweh, according to certain texts (*e.g.* Dt 7[2]). The leading instance is Jericho (Jos 6[21]). In later Judaism, excommunication of varying degrees of severity was inflicted for ecclesiastical and other offences; and the ancient name *ḥērem* was used for the severest form.

Some laws and historical precedents show that God Himself was held to inflict punishment on certain occasions by direct intervention—*Divine visitation.* Thus (Lv 10[1f.]) Nadab and Abihu are struck dead by Jahweh for offering the wrong sort of incense; and the adulteress who has denied her guilt and submitted herself to the *trial by ordeal* by drinking 'the bitter water which causeth a curse' is smitten by God with disease—'her belly shall swell, and her thigh shall rot' (Nu 5[27]). No instance is recorded.

2. Secular penalties.—(*a*) *Death.*—This penalty is often prescribed without specifying how it is to be inflicted. In many instances the culprit was slain with sword, spear, or dagger, according to the convenience or choice of the executioner (*e.g.* Elijah and the prophets of Baal, 1 K 19[1]). There is no clear case of beheading in the OT, though the head was often severed from a dead body (*e.g.* Goliath, 1 S 17[51]). In the NT, John the Baptist (Mk 6[27]) was beheaded, and James (Ac 12[2]) 'slain with the sword.' 'Hanging' is referred to in Dt 21[22], but what is in view is probably exposure after execution (cf. Gn 40[22], Pharaoh's chief baker; Jos 8[29], the king of Ai). Stoning seems to have been the most usual mode of capital punishment, and burning to death was inflicted for some offences (see below).

The Bible and the Apocrypha refer to other forms of execution practised by heathen nations. Thus 2 Mac, in describing the Syrian persecution, mentions throwing down from the wall of a city (6[10]), beating to death on a wheel or drum (*τύμπανον*, 6[19. 28]), and torturing to death with fire (7[5]). Crucifixion, a common Roman punishment, was used in the case of our Lord; and He 11[37] speaks of martyrs being sawn asunder. Daniel and his accusers were thrown to the lions (Dn 6). The severity of the death penalty was sometimes enhanced by refusing to allow the relatives of the culprit to bury the corpse (2 S 21[10]).

The following is a list of the crimes for which death was inflicted; the mode of execution is given in square brackets; where nothing is stated on this point, we have no information:

Various forms of homicide: murder (Ex 21[12], Lv 24[17]); child-sacrifice (Lv 20[2] [stoning]); manslaughter, if the avenger of blood caught the slayer outside the city of refuge (Nu 35[27]); keeping an ox known to be dangerous, if the ox killed a human being (Ex 21[29]).

Bearing false witness on a capital charge (Dt 19[18-21]).

Kidnapping (Ex 21[16]).

Insult or injury to parents (Lv 20[9], Ex 21[15. 17], Dt 21[21] [stoning]).

Various forms of sexual immorality: incest (Lv 20[14] [burning]); unchastity (Dt 22[21. 24] [stoning]); adultery or unnatural vices (Lv 20[10-16]); fornication on the part of a priest's daughter (Lv 21[9] [burning]); fornication on the part of a betrothed woman (Dt 22[22f.] [stoning], Gn 38[24] [burning]).

Various religious and ritual offences: witchcraft, magic, etc. (Ex 22[18], Lv 20[6. 27] [stoning]); idolatry (Ex 22[20], Dt 13[10] [stoning]); blasphemy (Lv 24[10-23] [stoning]); false claim to be a prophet (Dt 13[5. 10] [stoning]); intrusion of alien into sacred place or office (Nu 1[51] 3[10. 38] 18[7]); Sabbath-breaking (Ex 31[14]).

According to Lv 27[28f.], human beings may be made *hērem* ('devoted') to Jahweh; and, if so devoted, must be put to death. Probably only criminals or heathen enemies (cf. above) were subject to such treatment.

(*b*) *Mutilation* is involved in the principle 'an eye for an eye,' etc. (Ex 21[24f.]). No instance is mentioned of the application of this law, but we may compare the cutting off of the thumbs and great toes of Adonibezek (Jg 1[6. 7]). Mutilation is mentioned in 2 Mac 7[4], and blinding in the cases of Samson (Jg 16[21]) and Zedekiah (2 K 25[7]).

(*c*) *Flogging*, limited to a maximum of forty stripes (Dt 25[3]), was inflicted on a betrothed slave-girl guilty of fornication, and on her partner in the offence (Lv 19[20]),[1] and for other minor offences. The references in Proverbs imply a large use of this punishment, especially for children; and in the NT it is spoken of as used in the synagogues for religious offences (2 Co 11[24]). The actual practice in ancient Israel was much more severe than the prescription of the Deuteronomic and Priestly laws. Ex 21[20f.] deals with cases in which a master flogs a male or female slave to death, and decides that he is not to be punished unless the victim actually dies under his hand (cf. Jg 8[7], 1 K 12[11]). The Roman scourging, the Egyptian bastinado, and the various forms of flogging amongst heathen peoples, were much more severe than the Jewish 'forty stripes save one.'

(*d*) *Exposure of the person.*—The figurative description of the punishment of Jerusalem in Ezk 16[39] may imply that this punishment was inflicted on adulteresses in Israel; but, as these chapters were written in Babylonia, the imagery may have been suggested by heathen practices.

(*e*) *Stocks* (*e.g.* Jer 20[2] מַהְפֶּכֶת, *mahpeketh*; Ac 16[24] *τὸ ξύλον*).

(*f*) *Slavery*, for theft (Ex 22[3]), or as a result of debt (2 K 4[1], Neh 5[5]).

(*g*) *Imprisonment* is not appointed in the Law as a punishment. It was used for the detention of offenders before trial, or pending execution, as well as in cases where it was desired to keep a dangerous or obnoxious person under restraint, or to secure the persons of slaves and captives. There is no evidence that terms of imprisonment were appointed expressly as a punishment, except in Ezr 7[26].

(*h*) *Exile* is not appointed in the Law; the fugitive from justice might exile himself (Absalom, 2 S 13[37]). Exile is mentioned as a penalty inflicted by the Persians (Ezr 7[26]).[2]

(*i*) *Childlessness* for immorality is probably a Divine visitation (Lv 20[20]).

(*j*) *Penalties in money and goods.*—Compensation is required for theft, and in cases where person or property has been injured through carelessness or malice. In cases of mere carelessness an equivalent

[1] The Hebrew (בִּקֹּרֶת תִּהְיֶה, *biqqōreth tihyeh*) means literally 'there shall be an examination' (RV 'they shall be punished'). The interpretation given in the text is commonly adopted, and is probably correct. Cf. the use of the term 'examine' for 'torture.'

[2] The Aram. שְׁרִשׁ, *shᵉróshû* (Kethîb), or עֲקַר, *shᵉróshî* (Qᵉrê; AVm and RVm 'rooting out'), is interpreted in this sense by RV, etc.

compensation was required (Ex 22[5]); but, where there was moral guilt, the compensation was heavier, *e.g.* for theft the thief must restore fourfold, fivefold (Ex 22[1]), or sevenfold (Pr 6[31]). Compensation for the killing of a slave by an ox known to be dangerous is fixed at thirty shekels (Ex 21[32]); for the seduction of a daughter at fifty shekels, the seducer to marry her (Dt 22[29]); for a false accusation of unchastity against a newly married wife, one hundred shekels, to be paid to her father (Dt 22[19]). In some cases fines might be accepted in place of capital punishment (cf. below, III. 5). See also Ezr 7[26].

(*k*) *Unspecified penalties.*—Numerous acts are enjoined or forbidden without any penalty being attached to the breach of the law; *e.g.* hybrids must not be bred (Lv 19[19]).

III. *MORAL AND RELIGIOUS SIGNIFICANCE.*—1. Progress.—We may distinguish, on the one hand, the practice of the Israelite monarchy, and, on the other, the system of law embodied in the Deuteronomic and Priestly Codes. The practice of the monarchy is shown in the Book of the Covenant (Ex 21[1]-23[19] [E]) and in the references in the narratives. This practice was a development from earlier times; changes must have come about as the Israelites passed from the nomad period to that of the Judges, and again to the monarchy; but our information is not sufficiently full to enable us to trace this development. Even for the monarchy our data are meagre; our extant narratives were intended to edify later generations, and references to objectionable features in early practice have probably been largely omitted, especially when they were connected with David and others who were regarded as representatives of true piety. Moreover, the Deuteronomic and Priestly Codes never had a fair trial as the working laws of an independent State; they always remained more or less religious ideals. Such theoretical codes may be both higher in some respects and lower in others than the actual practice of their own time. For instance, provisions that call for large sacrifices on the part of the powerful and wealthy in the interests of the poor are easy to prescribe on parchment, but difficult to enforce in real life. On the other hand, the cruel penalties by which enthusiasts seek to promote and safeguard religion are mitigated in their practical application by considerations of humanity. A Deuteronomic scribe in the quiet seclusion of his study, or whatever corresponded to a study in those days, might enjoin wholesale massacres without compunction; but he might have shrunk from putting into force his own laws on real living men, women, and children.

At the same time, the available evidence makes it probable that, if Judah had continued an independent State, the development of its legal system would have been in the direction of humanity and righteousness, under the influence of the prophets of the school of Isaiah, Jeremiah, and Ezekiel, and of the priests who shared their views. For instance, according to ancient law, if a man were guilty of a heinous offence, his family might share his punishment (*e.g.* Achan, Jos 7[24ff.], and the kinsfolk of Saul, 2 S 21[1-9]). But Dt 24[16] forbids the practice. Again, marriage with a half-sister was regarded as lawful for Abraham (Gn 20[12] [E]) and for Amnon (2 S 13[13]), but is forbidden by Lv 18[9].

On the other hand, the later legislation shows a tendency to religious fanaticism, and towards the subordination of public welfare to the material interests of the priesthood; and probably this tendency would not have been altogether defeated if Judah had remained an independent State.

The final redactors of the Torah combined the various earlier and later codes, without attempting to reconcile or co-ordinate them; equal sanction was given to inconsistent laws; crude, primitive customs were placed on the same level as the more humane enactments of later times. Obviously this happened because these Babylonian Jews were compiling a record, and not providing for practical needs.

2. Classification.—There is no formal classification, but certain principles are implied. The inclusion of secular laws in the Torah indicates that all crime was regarded as sin against God, and that the administration of justice rested on Divine authority. This is an axiom of all religions as to the ideal State; but it was more emphasized in ancient times than it is now, because religion and the State were more intimately associated. Ḥammurabi, for instance, receives his laws from the sun-god, Shamash. Ezk 20[25] is a striking illustration of the way in which the actual legal system of Israel was regarded as a Divine institution; even iniquitous laws are imposed by God as a punishment: 'Moreover also I gave them statutes that were not good, and judgments wherein they should not live.' On the other hand, the protests of the pre-exilic prophets against the corruptions of their times involve a distinction between secular and Divine law; the two might clash.

The modern recognition of purely religious offences, with which the State does not deal, is not found in the OT. As in mediæval Christendom, such offences might incur secular as well as religious penalties; the idolater was to be put to death. Again, the Law does not clearly distinguish between human punishment and Divine visitation; the penalties of similar offences may include both; *e.g.* in Lv 20 some forms of sexual immorality are to be punished with death; in other cases it is said that the culprits will die childless. The prominence given to Divine visitation suggests a distinction between crimes which can be detected and punished by men and those hidden from men, but known to God, and dealt with directly by Him. The imposition of a fine for such offences as homicide and seduction (II. 2. (*j*)) shows that these were regarded partly as offences against property.

There is a distinction drawn between wrongs done to a free Israelite, to a slave, and to foreigners respectively; *e.g.* the slaying of a free man is severely punished, but a slave may be beaten to death provided he does not actually die under the rod (Ex 21[20f.]); if an ox known to be dangerous kills a free man, the owner may be put to death (Ex 21[29]); but, if the victim is a slave, thirty shekels are paid to his master (v.[32]). 'The stranger within thy gates' (the *gêr*, or 'resident alien') enjoyed the protection of the law, and alliances were maintained with some neighbouring States; otherwise history suggests that might was mostly right along the borders; cf. David's doings in the Negeb (1 S 27[8f.]), the Danite conquest of Laish (Jg 18), and the exploits of Samson (Jg 14 f.).

3. Range of offences.—The list of omissions and commissions recognized as crimes indicates a high moral standard. The wrongfulness of ritual irregularities is, indeed, exaggerated by treating them as sins and crimes. On the other hand, the Pentateuch strives to promote social righteousness in many matters which modern law does not venture to deal with; *e.g.* Dt 24[15] enjoins the prompt payment of wages, and Lv 19[11] forbids lying. But the difference is only apparent; the Pentateuch combines moral admonition with legislation, and draws no hard and fast line between the two. Again, the comparatively low stage of social development reached by the Israelites excuses such blots as the toleration of polygamy and slavery, and the absence of any full recognition of international morality.

4. Subjects of punishment.—In some cases

animals were put to death; *e.g.* an ox that had gored a man or woman was to be stoned, and its flesh might not be eaten (Ex $21^{28.29.32}$, cf. Lv $20^{15f.}$). Animals and even goods which could be burnt might be destroyed in the *hērem*, or ban (Jos 7^{24}). In earlier times the family might be put to death for a crime committed by its head (cf. III. 1), but the practice is forbidden, as already noted, in Dt 24^{16}.

There is nothing to show at what age young persons became legally responsible for their actions. The census in Nu 1^3 included all males from twenty years old; and the age at which Levites began their service is variously given as twenty-five (Nu 8^{24}), or thirty (4^{35}), although responsibility must have begun earlier. Nothing is said as to exemption from punishment on account of mental weakness.

Naturally the legal codes did not recognize the principle that the powerful and wealthy might commit crimes with impunity; but they often enjoyed much licence in practice, as is shown by the narratives of Micah and the Danites; of David and Uriah; Amnon, Tamar, and Absalom; and the frequent protests of the prophets.

5. **Humanity: adjustment of severity of punishment to heinousness of crime.**—The legal codes were evidently anxious that the punishment should be justly proportioned to the offence, hence the obvious principle of equal retaliation, found in the codes of many peoples, of an 'eye for an eye, and a tooth for a tooth,' and the laws providing for compensation for injury to property or person.

The list of capital offences (II. 2. (*a*)) is a little long, and includes some which, according to modern ideas, do not permit so severe a punishment, *e.g.* insult to parents, Sabbath-breaking, etc. But, as we have said, it is doubtful whether death was ever regularly inflicted for ritual offences; and, at any rate, the laws are due to an exaggerated sense of the wickedness of such acts rather than to reckless severity. The use of barbarous punishments—burning alive, mutilation, and flogging—is strictly limited; and there is no trace, either in the Law or in the history, of the torturing of witnesses or accused persons in order to obtain evidence.

The principle of blood-money is recognized only to a very limited extent: Ex 21^{28-32} provides that, if an ox known to be dangerous kill any one, the owner shall be put to death, but that 'if there be laid upon him a ransom, then he shall give for the redemption of his life whatsoever is laid upon him'—in the case of a slave thirty shekels to the slave's owner. Similarly, any one flogging his slave to death, without the slave actually dying under the rod, is sufficiently punished by the loss of his slave (Ex $21^{20f.}$); and in the case of injury to slaves the *lex talionis* is not to be enforced, any mutilation of slaves being atoned for by emancipation (Ex $21^{26f.}$). So, too, Ex $21^{18.19}$ permits compensation for bodily injury to a free man. On the other hand, Nu $35^{31.32}$ (P) prohibits the acceptance of blood-money for intentional murder, or even the release of a man who has committed unintentional homicide from the obligation of remaining in a city of refuge till the death of the high priest.

6. **Connexion with methods of administration of justice in other nations.**—Israel was always part of the international system which comprised Western Asia and Egypt; and there was a constant action and reaction between the various members of this system. At the outset, Israel was a group of nomad tribes, and the original basis of its Law was the tribal custom of the Bedawīn. The position of the *gō'ēl*, the next-of-kin, the avenger of blood, goes back to this source. The settlement in Canaan must have led to the adoption of many Canaanite laws. Now, Canaan and all Western Asia were, from a very early period, dominated by Babylonia; the conquests of Sargon I. of Akkad (*c.* 2700 B.C.) extended to the Mediterranean, so that the institutions of Canaan were partly shaped by Babylonian influence. But, again, both the Canaanites and the Babylonians probably sprang originally from Arabia; so that Israel, Canaan, and Babylon all drew from an original common stock of tribal customs; and it is very difficult to determine whether a law is a purely Israelite survival from this common stock, or has been derived through Canaan or Babylon. Moreover, during long periods the Egyptian kings exercised a suzerainty over Syria; and Egypt had its share in moulding the life of Canaan (cf. the Amarna tablets, *c.* 1400 B.C.). Something, too, may perhaps be due to the 'bondage' in Egypt; but not much, for the Israelite tribes for the most part lived a nomad life in the border provinces.

The recently discovered Code of Ḫammurabi (king of Babylon, *c.* 2100 B.C.) shows how much the Israelite institutions had in common with those of Babylon. There are numerous parallels between this Code and the Pentateuch, especially the ancient Book of the Covenant, Ex 20^{22}–23. Both, for instance, lay down the principle of an 'eye for an eye,' etc.; both prescribe the punishment of death for kidnapping; and both direct that if a man is in charge of some one else's cattle he may clear himself by an oath and need not make compensation. As the Code of Ḫammurabi was certainly known in Babylonia and Assyria as late as the Exile, Israelite legislation may have been influenced by it at any time; but the parallels may be largely due to common dependence on the primitive tradition of Arabia.

In comparing the ethical and religious value of Israelite justice with that of other nations, we have to distinguish the practice of the monarchy and earlier times, as depicted in the history and Ex 20^{22}–23, from the ideal set forth in Deuteronomy and the Priestly laws. It will have been seen that our knowledge of the early practice is fragmentary. It is possible, too, that the redactors of the literature suppressed evidence that was discreditable to Israel, though it is not likely that this has been done to any great extent. But, as far as our information goes, it does not appear that the administration of justice in ancient Israel differed conspicuously from that of neighbouring Semitic nations in the same period, as illustrated, for instance, by the Code of Ḫammurabi. And in such matters Israel would compare favourably with Greece, or Rome, or China, or with most Christian nations before the close of the 18th cent. A.D.

The Deuteronomic and Priestly ideal aims at a level of social righteousness which has never been attained in practice, and ranks with the Utopias of modern social reformers. The Priestly legislation is, indeed, disfigured by an undue care for the material interests of the sacerdotal caste; but neither the practice nor the theory of the religious law of Israel includes anything like the Inquisition and similar systems instituted by the Christian Church.

CRIMES AND PUNISHMENTS (Hindu).—1. Most of the terms designating 'crime' or 'offence' in Sanskrit are essentially religious in their nature, and no strict line between sins and punishable offences has ever been drawn. The *Dharmaśāstras* (law-books) contain long lists of the

various degrees of crime or guilt—from mortal sins, such as sexual intercourse with one's mother, daughter, or daughter-in-law, down to crimes merely rendering the perpetrator unworthy to receive alms, such as receiving gifts from a despicable person, subsisting by money-lending, telling lies, serving a Śūdra, or to crimes causing defilement, such as killing birds, amphibious and aquatic animals, worms or insects, and eating nutmegs and the like. Analogous lists of sins may be found in the ancient religious literature of the Buddhists of India. Many of these sins recur among the offences mentioned in the secular laws of the Brahmans. Thus the killing of a cow, the sacred animal of the Hindus, is a punishable offence as well as a crime. The commission of a heavy sexual offence is to be visited with punishment by the king, and at the same time the stain caused by such sin is to be removed by religious atonement. Killing a Brahman, or depriving him of his gold, is a crime deserving capital punishment of an aggravated form, no doubt because the religious law affords special protection to the sacred person of a Brahman. Many eccentricities of the criminal law are due to the religious element entering largely into it. Thus the sacredness ascribed to the Vedas comes out in the following rules: a Śūdra listening intentionally to a recitation of the Veda shall have his ears filled with molten tin or lac; if he recites Vedic texts, his tongue shall be cut out; if he remembers them, his body shall be split in twain. The sanctity with which Brahmans are invested has led to establishing the principle that no corporal punishment shall ever be resorted to in the case of a criminal of the Brahman caste. Nor could the banishment of a Brahman be connected with the confiscation of his property, the ordinary consequence of banishment. The Śūdras, on the other hand, were treated very badly, because they were considered to have no share in the re-birth caused for the higher castes by their initiation with a sacred prayer from the Vedas. Thus, *e.g.*, a Brahman who abuses a Śūdra is condemned to pay no fine. A Śūdra, on the contrary, undergoes corporal punishment, if he only assumes a position equal to a member of a high caste, in sitting, in lying down, in conversation, or on a road. Money-lending is viewed as an unholy act; Brahmans are, therefore, forbidden to practise usury. Certain kinds of interest on loans are entirely prohibited. Among sexual crimes, intercourse with the wife of a spiritual teacher is looked upon as a very heavy offence, equal to incest, and so is intercourse with a Buddhist nun. Gambling is stigmatized as a sinful practice, though some legislators do not object to gambling in a public gaming-house, where the king may raise a certain percentage on the stakes. False witnesses are designated as thieves of words. Heaven is the reward of a witness who speaks truth; in the contrary case, hell will be his portion. Other crimes of the Brahmanical law savour of Oriental despotism, as, *e.g.*, when the forgery of a royal document is visited with capital punishment. The caste system becomes visible in the gradation of crimes and punishments according to the caste of the offender, as will be shown below.

2. 'Punishment' (*daṇḍa*) in the Code of Manu (vii. 14 ff.) is personified as a god with a black hue and red eyes, created by the Lord of the World as his son, and as an incarnation of Law, formed of Brahman's glory. Punishment is declared to keep the whole world in order, since without it the stronger would oppress the weaker and roast them, like fish on a spit; the crow would eat the consecrated rice; the dog would lick the burnt oblation; ownership would not remain with any one; and all barriers would be broken through. Punishment is declared to be in truth the king and ruler, although it has to be inflicted by the king on those who deserve it. The king in person should every day decide causes in the court when brought before him, or else he should send a Brahman acting as his deputy. A king when punishing the wicked is comparable to the god Varuṇa, who binds a sinner with ropes. If a king does not strike a thief who approaches him, holding a club in his hand and proclaiming his deed, the guilt falls on the king; the thief, whether he be slain or pardoned, is purified of his guilt. The king should first punish by admonition, afterwards by reproof, thirdly by a fine, after that by corporal chastisement (Manu, viii. 129). As a matter of fact, fines are by far the most common kind of punishment in the criminal code of the Sanskrit law-books, and they were equally common, shortly before the times of British rule, in the Hindu kingdoms of Rājputāna (Tod), Mysore (Dubois), and others. The fines might extend to confiscation of the entire property of a criminal; but in such cases, according to Nārada (xviii. 10 f.), the tools of workmen, the weapons of soldiers, and other necessary implements are to be exempt from confiscation. Capital punishment, in various aggravated forms, such as impaling on a stake, trampling to death by an elephant, burning, roasting, cutting to pieces, devouring by dogs, and mutilations, are also frequently inflicted, even for comparatively light offences. The *jus talionis*, which is so universally represented in archaic legislations, becomes especially conspicuous in these punishments. Thus a criminal is condemned to lose whatever limb he has used in insulting or attacking another. The thievish fingers of a cut-purse, and the evil tongue of a calumniator, are to be cut off. A Śūdra using insulting language is to have a red-hot iron thrust into his mouth, or boiling oil dropped into his mouth and ears. The breaker of a dike shall be drowned. The killer of a Brahman shall be branded with the figure of a headless corpse, a drunkard with the flag of a distillery shop. Banishment, public disgrace, imprisonment, fetters, forced labour, beating, and other forms of chastisement are also mentioned. Brahmans, however, are not to be subject to corporal punishment. Nor is this the only privilege enjoyed by Brahmans, who are allowed special indulgences in almost every case, the reduction of punishment in consideration of the rank of the person being one of the most salient features of the ancient legislation of India. Thus a Kṣatriya insulting a Brahman must be fined 100 paṇas; a Vaiśya doing the same, 150 or 200 paṇas; a Śūdra doing the same must receive corporal punishment. On the other hand, a Brahman shall pay only 50 paṇas for insulting a Kṣatriya, 25 paṇas for insulting a Vaiśya, and nothing at all for insulting a Śūdra. A similar gradation of fines may be observed in the punishment of adultery and many other crimes. If a man insults a Brahman by offering him forbidden food, he shall be amerced in a heavy fine; and, if he gives him spirituous liquor to drink, he shall be put to death. Another characteristic feature of the Indian criminal code is the infliction of worldly punishments for violations of the religious law, as, *e.g.*, when an apostate from religious mendicity is doomed to become the king's slave. King Aśoka, as early as the 3rd cent. B.C., appointed censors who were charged to enforce the regulations concerning the sanctity of animal life, and the observance of filial piety. King Harṣa, in the 7th cent. A.D., inflicted capital punishment on all who ventured to slay any living creature. King Kumārapāla of Gujarāt, in the 12th cent., is said to have confiscated the entire property of a merchant who had committed the atrocious crime of cracking a louse. A Hindu Rājā of Kolhapur, in

A.D. 1716, issued a rescript ordaining due punishment for all those who should be discovered to entertain heretical opinions in his kingdom. This union of Church and State was specially marked under the rule of the Marāthā kings; but even in 1875, when Dr. Bühler visited Kashmīr, he found the Mahārājā eagerly intent on looking after the due performance of the *prāyaśchittas*, or penances prescribed for breaches of the commandments of the *Smṛti*. The enforcement of these religious punishments otherwise rests with the caste, which levies fines for every breach of the caste rules, and, in serious cases, excludes the offender. (See EXPIATION AND ATONEMENT [Hindu].)

J. JOLLY.

CRIMES AND PUNISHMENTS (Japanese).—Long before the dawn of Japanese history, Chinese travellers to Japan brought back accounts of that country which contain our earliest information on this subject, dating from the later Han dynasty (A.D. 25–220). One of these notices says: 'There is no theft, and litigation is unfrequent. The wives and children of those who break the laws are confiscated [sold as slaves], and for grave crimes the offender's family is extirpated.' Another account says: 'The laws and customs are strict.' There is not much to be learned about crimes and punishments from the mixture of myth, legend, and chronicle which takes the place of history in Japan for a thousand years previous to the 7th cent. A.D., though we hear of a staff or gild of executioners, and of capital punishment by decapitation; and a punishment by fine had its origin at this time, but it was only for such offences—comparatively few in number—as involved ritual uncleanness according to Shinto. An ordinance, enacted in 801, regularized what was, no doubt, an old practice, by which neglect in connexion with the *ohonihe*, or coronation ceremony, the eating of flesh, visiting the sick, being concerned in any way with capital sentences, or touching anything impure during the month of special avoidance of impurity, subjected the culprit to an *ohoharahi* ('greater purification'), *i.e.* he was obliged to provide the materials for the ceremony of his own purgation. This eventually became simply a fine. Other ritual offences which required purgation were incest, wounds given or received, bestiality, and leprosy. Homicide had to be atoned for in the same way, but the ritual character of the offence appears from the circumstance that even justifiable homicide caused uncleanness.

Weipert thinks that in these fines for ceremonial purification wa have 'the first source of Japanese criminal law' (quoted by Florenz in *TASJ* xxvii. [1899] 57); but, in the opinion of the present writer, the evideoce hardly hears out this conclusion. Weipert's tbeory does not account for the gravest of all punishments, that of death, nor does it apply to robbery, rebellion, adultery, arson, and other grave offences. Moreover, the absolution ceremony was seldom performed for individual offences. The Mikado twice a year celebrated a 'great purification' of the offences of the nation, and similar minor celebrations were usual before all the great ceremonies of Shinto. In such cases, of course, the idea of a fine was out of the question. There is abundant evidence that a criminal law existed from very ancient times which had nothing to do with the purgation of ritual offences.

Eventually the fines for ceremonial offences fell into abeyance, owing to a strong current of Chinese influence which set in during the 6th and 7th cents., and which led in 702 to the enactment of the code of civil and criminal law known as the *Taihōriō*. It was based on the laws of the Tang dynasty of China, though modified somewhat in accordance with Japanese usages. The penalties prescribed were five, viz. capital punishment, exile, penal servitude, beating (with a stick), and scourging (with a whip). These are simply copied from the Chinese code. Of the older five punishments of China—branding on the forehead, cutting off the nose, maiming, castration, and death—only the first and last were ever practised in Japan. A *History of Japan*, published by order of the Japanese Government (1893), mentions 'treason, contumely (slander [?]), unfilial conduct, immorality, and so forth' [*sic*], as the eight great crimes of the *Taihōriō*. Perhaps the excuse for this very unsatisfactory enumeration is the circumstance that a very substantial part of this code has not come down to us. It is the basis of all subsequent legislation. When the Taikō Hideyoshi came into power, in the latter part of the 16th cent., he contemplated its re-enactment for the whole country, but he died before giving any practical effect to his intention.

At first the Tokugawa Shoguns (1600–1868) followed the old method of making the laws known to those only who were required to enforce them. But this rule was subsequently modified. New laws were read to the people, and inscribed on notice-boards set up in conspicuous places. Towards the end of the Tokugawa period, a reaction to the former policy took place. The authorities considered it expedient to keep the people in ignorance of all but the most general principles of criminal law, thinking that the unknown would inspire greater terror. Such meagre information as they vouchsafed to the people was contained in a few brief edicts inscribed on notice-boards at the *Nihonbashi* in Yedo and other conspicuous places throughout the Empire, prohibiting the evil sect called Christian, conspiracy, insurrection, plotting to leave the village to which one belonged, murder, arson, and robbery. That was all. This system left room for much that was arbitrary in the administration of the law, which varied considerably in different parts of the Empire. The judicial officials did very much as they pleased.

A Japanese servaot of a member of H.M.'s Legatioo stole a few dollars, and was handed over to justice. Three months later, a visit was received from an official, who gave his master the option of having him released—there was no room for him, it was explained, in the prisoo—or decapitated. Needless to say, the former alternative was accepted.

One of the worst features of the early Tokugawa legislation was the implication of the offender's family in the crimes of its head.

'If a man or woman, sentenced to he crucified or burned, had male children above 15 years of age, they were similarly executed, and younger children were placed in charge of a relative until they reached that age, when they were banished. Even when a parent suffered the ordinary capital punishmeot of beheading or hanging, it was within the discretion of the judge to execute or exile the male childreo. Wives and daughters were exempted from the rule of implication, though they might be reduced to the ranks of slaves' (Brinkley, *Japan*, iv. 56).

Thunberg (*Travels in Europe, Africa, Asia*, Eng. tr. 1795-96) says that, in the towns, a whole street was often made to suffer for the malpractices of a single individual, the master of a house for the faults of his domestics, and parents for those of their children. These cruel provisions were greatly modified in 1721, but the more lenient rules were not applicable to the *samurai* class. Theft was severely punished, usually with death, which was the penalty also for swindling or attempted extortion by force. Pickpockets, however, were let off with branding, or rather tatuing, though a repetition of the offence involved death. Not before the close of the 18th cent. was the execution of a pregnant woman deferred until after her delivery.

The law up to the close of the Tokugawa period required that an accused person must be induced to confess before his guilt was finally determined.

The result was that, in many cases, torture was freely applied. The commonest device was to bind a man with ropes in some constrained position, or to make him kneel upon a grating of wooden bars placed edge upwards, and then to pile weights on his knees. On the whole, the tortures employed judicially in Japan were not so cruel as those used in mediæval Europe. A *samurai* was not sent to prison. If his offence was not grave enough to call for immediate suicide, exile, or decapitation, he was ordered to go into confinement in his own house. There were different degrees of this kind of imprisonment, the most severe of which involved a complete cessation of egress and ingress for himself and his family.

Siebold, writing early in the 19th cent., gives a description of the penal code of Japan at that time, which was similar in all essential respects to the *Taihōriō*, introduced from China 1100 years before. He draws a broad distinction between the punishments of the *samurai* and those of the common people. In the latter case, the culprit might be simply cut down by the man of higher rank whom he might have insulted or injured, or if he had been caught in the act of committing a grave offence. Decapitation was more usual. Crucifixion, burning, and sawing off the head with a bamboo saw were also practised. There were two kinds of crucifixion. In one the criminal was lashed—not nailed—upside down to a cross which had two bars, one at the head and one at the feet, between the two being a small seat upon which the weight of the victim rested. At a given command an expert spearsman stood on each side, and the two drove their spears simultaneously so that they passed crosswise through the vital organs. Death was instantaneous. Burning was a matter of form. The culprit was tied to a stake and strangled before the fire was lit. Sawing off the head was of rare occurrence, and was limited to such heinous crimes as chief- or parent-murder. The name and offence of the criminal were usually inscribed on a board which was set up close to the place of execution. Sometimes the offender was mounted on a sorry nag and led round the city, with a similar placard fastened to his breast. The head might be set on a post, and allowed to remain from five to ten days. Sometimes the body was hacked to pieces, or made a subject on which the *samurai* might test their skill and the temper of their swords. In later times it might be handed over for dissection. Among minor punishments at this period were branding, the pillory, and degradation to the *hinin*, or pariah caste. For political offences by men of the *samurai* class, banishment to an island was the usual form of punishment; and there is an ancient instance of a Mikado being so punished. The term was commonly for life, though there was a minimum limit of five years. A milder form was an injunction to live under supervision at a distance from the capital. Whilst his case was under trial, the accused was confined to his own house, with the same forms as if he were in mourning. When the offence was committed unintentionally, a partial or complete confiscation of his property might be the consequence. Deprivation of office or incapacity for holding office was not unusual. Occasionally the offender was allowed to become a monk of a certain order, known as *komusō*, who wore a basket-hat with a small grating in front, completely concealing his face. .This was never removed, and practically he was a beggar who roamed the highways, playing on a flute in order to attract the attention of the charitably disposed.

Harakiri.—This well-known institution is of considerable antiquity. It is of purely Japanese origin, and consists in making a cruciform incision on the belly, whence its name, which means 'belly-cut.' The 'happy dispatch' of some writers is only a joke. Sometimes a determined man succeeded in ending his life in this way, or he might complete the act of suicide by stabbing himself in the throat with the same instrument—a short sword or dagger with a blade nine inches in length. *Harakiri* might be simply a form of suicide, or it might be the duty of a man of the *samurai* class under various circumstances, such as hopeless family troubles or loyalty to a dead superior, or as a protest against the wrongful conduct of a superior. For example, when the Japanese Government yielded to the demands of France, Russia, and Germany for the retrocession of Liaotung, forty military men emphasized their protest by committing suicide in the time-honoured fashion. A common motive was to free from punishment the family and relatives of the person involved, who would otherwise, under the old law, have shared his guilt. Very frequently, however, *harakiri* was no more than an honourable form of execution. It was carried out with great ceremony, the incision being only for form's sake, and the real execution consisting in decapitation by a friend. In 1869, a motion was brought forward in the Japanese Parliament in favour of the abolition of *harakiri*, and 200 members out of a house of 209 voted against this proposal. *Harakiri* is no longer recognized by law, though it cannot be said to be extinct.

Vendetta.—A Japanese *samurai* was permitted by law to avenge the murder of a parent or chief; but, before exercising this right, he was bound to give notice to the authorities, and, when cutting down his enemy, to repeat some such formula as this: 'I am A. B. You are X. Y., who murdered my father at such a time in such a place. Therefore do I now slay you.' In justification of this law, an ancient Chinese saying is often quoted to the effect that 'a man must not allow the same heaven to cover himself and his father's enemy.' It is now abrogated, but was in vogue up to the Restoration of 1868. A teacher of the present writer was a victim. It is to be observed that fines have no place in the pre-Restoration legislation—a circumstance which is adverse to Weipert's view that Japanese criminal law had its origin in the imposition of fines on offenders against the ritual law of the older Shinto. Kaempfer (*History of Japan*, Glasgow, 1906, ii. 114) notices this feature of the former Japanese law.

Extra-territoriality.—When the treaties were negotiated which opened Japan to foreign trade in 1859, the criminal code was in a very unsatisfactory condition. It was scarcely known to the people, and was administered in a most irregular, arbitrary, and often cruel fashion. It was quite out of the question to ask foreign Powers to make their subjects amenable to it, and, indeed, the Japanese were probably not sorry to be relieved of such responsibilities. Hence arose the so-called 'extra-territorial jurisdiction,' by which the Japanese Government transferred to foreign Powers the jurisdiction over their subjects when the latter were defendants in a civil case, or the accused under a criminal charge. When in 1868 the Mikado resumed the reins of authority, it was felt that such an arrangement was contrary to the dignity of the Japanese nation, and in any case a radical reform was a palpable necessity of the situation in the interests of humanity and good government. A code was, therefore, drawn up and promulgated in 1871. It was simply a selection from the codes of the two Chinese dynasties—Ming and Ts'ing—modifications being introduced into the amount and nature of the punishments prescribed for different offences. Barbarous modes of execution were eliminated, the death-penalty was greatly circumscribed, merciless and excessive

whippings were abolished, and the punishment of imprisonment with corrective labour was introduced for the first time. A second code was notified in 1873, by which many new and more humane provisions were added. By these codes, an offender who has been sentenced to a term of penal servitude is placed in the penitentiary of the district in which he has been tried and sentenced, and work suited to his age, physical condition, and acquirements is allotted to him, so that 'by toil and labour he may be gradually brought to repent of his past misdeeds and be restored to virtue.' The punishment of death was by hanging or decapitation, the latter form being considered more severe owing to the prejudice entertained by most Japanese against any mutilation of the body. In certain cases, the pillory in iron stocks within the prison yard was substituted for imprisonment, and fines might be permitted in the case of offences by officials, persons inadvertently implicated, aged people, infants, maimed or deformed persons, or females.

But these codes still preserved an essentially Chinese character, and they contained many provisions which unduly favoured officials and the *samurai* class. A husband was permitted to kill the lover of his wife or concubine along with the woman herself, if caught in the act; but, if a certain time had elapsed, the punishment was penal servitude for one year, while under the older law the husband could, in this case, only recover a penalty of no great amount. If a woman who had been guilty of adultery or incest was, on the discovery of her guilt, driven by shame to commit suicide, the punishment of the male offender was increased one degree, even though he might have had no knowledge of the woman's intention to do so. Masters and parents were punished with much less severity for offences against their servants and children than in the contrary case. Abusive language to an official entailed penal servitude for one year if the person insulted was of the highest rank; for ninety or sixty days if of lower grades. In Jan. 1879, the practice of using torture to compel confession—rendered necessary by the old principle that confession must precede condemnation—was abolished, and it was enacted that the evidence of witnesses, documents, or circumstances, or the admissions of accused persons, should alone be taken as bases for determining guilt.

It will be seen that, although these codes marked a considerable advance on the Tokugawa system, they still left much to be desired, when viewed from the more enlightened standpoint of Europe. New legislation was therefore initiated, after a thorough study of the various systems of European law, with the assistance mainly of French jurists. Distinguished service was rendered by G. Boissonade in framing the new codes, which, after arduous labour and repeated revision, came into operation from 1st Jan. 1882. They have an essentially French character. A further revision of the Code of Criminal Procedure was effected in 1890. B. H. Chamberlain, in his *Things Japanese*[2], gives the following account of the present system:

'Crimes are of three kinds: (1) against the State or the Imperial Family, and in violation of the public credit, peace, and health, etc.; (2) crimes against person and property; and (3) police offences. There is a sub-division of (1) and (2) into major and minor crimes. The punishments for major crimes are: (1) death by hanging; (2) deportation, with or without hard labour, for life or for a term of years; (3) imprisonment, with or without hard labour, for life or for a term of years. The punishments for minor crimes include confinement, with or without hard labour, and fines. The punishments for police offences are detention for from one to ten days without hard labour, and fines varying from 5 *sen* to 1·95 *yen*. The court which tries persons accused of major crimes consists of three judges; that for minor crimes, of one judge or three, according to the gravity of the charge; and that for police offences, of one *juge de paix*. Contrary to Western usage, an appeal is allowed, in the case of major crimes, for a trial of facts. Criminals condemned to deportation are generally sent to the island of Yezo, where they sometimes work in the mines. A person who has suffered injury by crime lodges his complaint at the police office, or with the procurator of any court having jurisdiction over the crime in question. Policemen can arrest an offender whose crime was committed in their presence, or which the complainant avers to have seen actually committed. In all other cases they can arrest by warrant only. Bail is allowed at the discretion of the judge. Accused persons are often kept in prison for a considerable time before trial, and no lawyer is allowed to be present at the preliminary examination. The conducting of criminal cases, from the very beginning down to the execution of the criminal, if he be condemned to suffer death, rests with the procurator, who unites in his own person the functions of public prosecutor and grand jury.'

The reforms of 1882 extended to the judiciary, which was now separated from the executive. Judges, procurators, barristers, notaries, and a new system of police, as well as law-schools, were established. Under the new régime there are far fewer capital punishments. In Tokugawa times the number of persons consigned to jail in Yedo was about 7000 annually, and of these over 3000 were executed. At present the yearly number of capital punishments for the whole Empire averages above eighty.

It is claimed that, on the whole, the new legislation has resulted in a body of law in unison with the most advanced principles and the most approved procedure of Western jurisprudence—all punishments not recognized as consonant with modern civilization being abolished, due provision being made for adapting penalties to degrees of crime (the previous legislation left the judge too little discretion), the rights of suspects and criminals being guarded, and the privilege of appeal guaranteed. This contention is substantially correct, though traces of old usage remain. All men are not equal before the law, the military retaining some special privileges. Robbery with violence is still punishable with death, and a man does not render himself liable to any penalty for beating his servant, unless death ensues. The preliminary examination of prisoners is secret, the assistance of counsel not being allowed. This last feature will soon be modified. Trial by jury is unknown.

In 1899, after protracted negotiations, treaties were concluded with foreign Powers, by which the extra-territorial jurisdiction was abolished, and all foreigners became subject to Japanese law.

Prisons.—Under the old régime, imprisonment was not one of the recognized forms of punishment, though it was necessary to provide some places of detention for prisoners who were awaiting their trial, sometimes for long periods. The inmates suffered very great hardship. The cells were wooden cages open to the four winds, and the arrangements for sanitation, food, and clothing were of the most wretched kind. The internal discipline was entrusted to the elder prisoners—generally hardened criminals—with results which may be imagined. Soon after the restoration of the Mikado's authority in 1868, a commission was sent to visit a number of foreign prisons and make a report, and ultimately a complete change was effected. Sir Henry Norman, who recently visited the convict prison of Tokio, says (*Real Japan*, 1892):

'The dormitories are enormous cages formed of bars as thick as one's arm. There is not a particle of furniture. Thick quilts, or *futon* (the Japanese bed), are provided. Each dormitory holds 96 prisoners. The sanitary arrangements could not well be improved. No vermin could harbour anywhere. It was almost an ideal prison structure. The punishment cells were hardly ever occupied. There was no flogging. Two hundred prisoners were employed making machinery and steam boilers, working nine hours a day. Wood-carving, weaving, pottery-making, and paper- and cloisonné-making are also among their occupations. Only a few are so clumsy or stupid as to be employed in pounding rice or breaking stones.'

CRIMES AND PUNISHMENTS (Jewish).—The transition from the Biblical to the Mishnic period is marked by external and internal limitations in the functions of the Jewish tribunals. Externally, the Jewish courts of justice lost the power of inflicting capital and other punishments,—a power exercised by the Roman procurators and officials,—and in the course of time the limits to the jurisdiction of the *Bêth Dîn* were still further narrowed. Internally, we note a growing tendency towards the restriction of certain forms of punishment, by making it a matter of difficulty to secure a conviction. In practice, capital punishment was obsolete long before the fall of the Jewish State, and, in all probability, long before the courts were deprived of the legal power of inflicting it. This is clearly shown by such NT passages as Jn 18[31], and the Talmud. Thus, in Jerus. *Sanh.* 18*a* (p. 228 of M. Schwab's tr., Paris, 1888) it is stated that this right was suspended some forty years before the fall of the Temple, and that the right of giving decisions in questions involving financial matters had been already abolished in the time of R. Simon b. Shetaḥ, that is to say, during the reign of Alexander Jannæus (d. 76 B.C.). Bab. *Sanh.* 41*a* brings out this fact even more emphatically. Nor may the trial and crucifixion of Jesus be cited as an instance to the contrary. It is now the generally accepted opinion, among both Jewish and Christian scholars, that the trial of Jesus was not carried out in accordance with Jewish law, and that His execution was an act in which Pharisaic Judaism had neither initiative nor share.

Thus Robertson Smith (*EBr*[9] xxii. 812, at end of art. 'Synhedrium') writes: 'The meeting in the palace of the high priest which condemned our Lord was exceptional. The proceedings also on this occasion were highly irregular, if measured by the rules of procedure which, according to Jewish tradition, were laid down to secure order and a fair trial for the accused.' So also Montefiore (*Synoptic Gospels*, i. [London, 1909] 345 f.): 'The trial of Jesus—if trial it can be called—. . . violates that [Rabbinic] law in almost every particular. . . . It does not follow because the trial of Jesus . . . violates Jewish law in many important points, that therefore the account given of it cannot be true. There have been illegal trials at all times, and even the flimsiest legal forms have sufficed to get rid of an enemy. . . . That there was any meeting of the full Sanhedrin is most doubtful; doubtful also is the part played by the "Scribes" and Pharisees; but that the Sadducean priesthood was at the bottom of the arrest and of the "trial" . . . cannot reasonably be doubted.'

In the passage from the Jerus. Talmud mentioned above, R. Simon b. Yoḥai, a *tanna* of the 2nd cent., expresses his gratitude for escaping the responsibility of condemning a human being to death. Other passages, of a similar character, in the Talmud and Rabbinic writings point to the same conclusion—that the Romans took away from the *Bêth Dîn* the right to inflict capital punishment.

In addition to these restrictions imposed from without, the sentences of Jewish tribunals were mitigated by various internal and voluntary limitations. It may perhaps be that, in proportion to the severity with which Rome exercised the power removed from the local courts, these felt themselves drawn to the side of leniency in other directions. But this tendency to leniency was originally spontaneous, however much it may have developed afterwards in consequence of external harshness; it began while the Sanhedrin still held the power of life and death. An exact date cannot be given; it is difficult to tell whether and when punishments enacted in the Pentateuchal legislation were carried out in all literalness, and to what extent and with what frequency. Does that legislation represent primitive practice, or did the mitigating force of the Mishnic recensions of these laws at all times modify their execution? The orthodox Jewish belief, which regards the Oral Law as a contemporary concomitant of the Written Law and of equal force, would take the latter view, namely, that the traditions embodied in the Mishna accompanied the practice of all Mosaic enactments. It is, however, held by many that the Tannaitic law was new and original; that in early Mishnic times it was felt that the Pentateuch demanded the death sentence too readily, and that the Rabbis took steps to prevent such sentences from being carried out. This subject need not be discussed here; it is sufficient to show that the death penalty was almost abandoned, without entering into the question of whether this was brought about by new prescriptions or not.

The infliction of death was surrounded by many preliminaries and obstacles. The law demanded not only the presence of two satisfactory eye-witnesses, whose testimony must support vigorous scrutiny (see Mishn. *Sanh.* iv. v., ed. Strack, from which all quotations are taken), but also, before committing the crime, the accused must have received formal warning from the bystanders as to the consequences of his act (הַתְרָאָה, *ib.* v. 1; Bab. *Sanh.* 8*b*, 80*b*; Tos. *Sanh.* xi. 1, ed. Zuckermandel, Pasewalk, 1880, p. 431). No circumstantial evidence whatever was admissible, nor could the accused be convicted on his own confession. The stringency in examining and in challenging witnesses, the necessity of proving *hathrā'ah*, the elaborate aids given to the accused—all tend to show that the infliction of capital punishment must have been practically impossible; and this seems to have been the precise aim which the Rabbis had in view. *Makkoth* 7*a* records the dictum that a Sanhedrin which condemned a prisoner to death once in seven years earned the reputation of 'destructive' (חַבְּלָנִית): according to R. Eliezer b. 'Azarya, once in seventy years sufficed; while R. Tryphon and R. 'Aqiba state that, had they been present, they would always have succeeded in advancing some plea to invalidate the proceedings in favour of the prisoner. Nor was this tendency limited to cases of capital punishment alone; it was extended to other branches of criminal law, *e.g.* to the *lex talionis*. The eighth chapter of *Baba Qamma* shows quite clearly that even in early days this command could not have been intended to receive literal interpretation, for a man who had lost his eye could receive no compensation through a similar injury being done to his assailant. Compensation could consist only in the worth of the eye being restored to the loser, and this was estimated by assessing the value of the injured party, if sold as a slave, before and after the accident, the difference representing the amount of the damages (incidentally, cf. Rashi on Ex 21[24]).

Even when a capital sentence had been pronounced and was about to be carried into execution, every chance of proving his innocence at the eleventh hour was accorded to the accused. The court remained sitting all day in order to receive appeals, and an elaborate system of signals was devised to stay the execution in the event of any unexpected piece of evidence becoming known (Mishn. *Sanh.* vi.). Punishment was to be so arranged as to prevent the repetition of the offence by other parties, in other words, to act as a deterrent, and to secure the extinction of the crime itself and of its consequences: 'Thou shalt put away the wrong from thy midst'; 'and all Israel shall hear and shall sin no more.' Care had to be taken that no additional suffering or humiliation was incurred

by the guilty party. Any dishonour to the body resulting from the punishment was to be avoided, in so far as it was not expressly provided by the sentence. In executions and in flagellations, particular caution had to be exercised in this respect.

Capital punishment as ordered by the *Bêth Dîn* could be effected by lapidation (סְקִילָה), burning (שְׂרֵפָה), decapitation (הֶרֶג), or strangling (חֶנֶק) (see Mishn. *Sanh.* vii. 1: אַרְבַּע מִיתוֹת נִמְסְרוּ לְבֵית דִּין; and Singer's *Prayer Book*, London, 1900, p. 262). Crucifixion, as a means of death, was a Roman form. The last two methods are not mentioned in the Pentateuch, where, in fact, stoning is most usual. There seems no reason to doubt that *s*eqîlā* and *s*erêphā* in the Pentateuch mean what is commonly known as stoning and burning; but the provisions of the Mishna show a great alteration in the manner of the execution. In the case of burning (Mishn. *Sanh.* vii. 2), the criminal was firmly fixed in pitch, up to his knees. A strong cloth, covered with a soft wrapping, was twisted round his neck, and its two ends were pulled by officials. The soft cloth was added to avoid unnecessary pain and in order to prevent death by strangulation. The criminal was thus forced to open his mouth, into which there was poured a stream of molten lead which instantly consumed his vitals, death being speedy and merciful. The Parthians treated the body of the Roman general Crassus in a similar manner after Carrhæ (53 B.C.). R. Eliezer b. Ṣadoq, a *tanna* of the 1st cent., relates that once he saw the daughter of a priest who had committed unchastity (Lv 21^9) bound in vine tendrils and burnt (*Sanh.* vii. 2; *Tos.* ix. 11, etc. Contrast the burning of R. 'Aqiba, in A.D. 135, after the Bar Cochba revolt, when 'sponges of wet wool' [סְפוֹגִין שֶׁל צֶמֶר] were placed round his heart to prolong the agony). In Bab. *Sanh.* 52*b*, R. Ḥama b. Tobia ordered Imarta, a priest's daughter who had lived unchastely, to be wrapped in vine tendrils and burnt. Both these cases are distinctly reprobated. In the former, the Sanhedrin which could have permitted such a method is said not to have been competent (*bâqî*). In the latter instance it is suggested that the *Bêth Dîn* may have been Sadducean, or that the narrator was too young to remember details. Any departure from the procedure described above is stated to be illegal.

In the case of stoning also, modifications were adopted with a view to hastening death. Mishn. *Sanh.* vi. 4 states:

'The height of the place of stoning was twice a man's length. One of the witnesses pushed (הוֹחֲפוֹ) the criminal on the loins so that he fell down (forward) on to his breast, and the witness immediately turned the body over on to its back. If the criminal was already dead, then the duty was accomplished, but, if he still lived, then the second witness took a stone and cast it on to his heart.'

If necessary, all the bystanders followed suit until death intervened. According to the Pentateuch, the witnesses had to cast the first stone, since it was through their testimony that the execution took place (Dt 17^7). With the hurling down of the criminal may be compared the procedure with the scape-goat in Mishn. *Yoma*, vi. 5. The official pushed (דּוֹחֵף) the goat backwards, so that it rolled down and immediately became dismembered. In some cases the body was hanged, or rather crucified, after execution, for a limited period (Mishn. *Sanh.* vi. 4).

Decapitation (Mishn. *Sanh.* vii. 3; Bab. *Sanh.* 52*b*) was practised with a sword, in the same way as with the Romans; but R. Judah b. Elai, a *tanna* of the 2nd cent., objected on the ground that it involved degradation. To strike off the head of a man who was standing caused the body to fall down, and for this additional humiliation there was no authorization, consequently R. Judah describes a different method, viz. beheading with an axe (קוֹפִים, *κοπίς*) on a block. The other Rabbis considered this method even more humiliating, and rejected it. It seems that the criminal was tied to a post, in order that the body should remain upright. Finally, strangulation (*ib.*) was carried out as in the preliminary process of burning, only that the two ends of the cloth were pulled so hard that they caused death.

The object of these modifications was, in the first place, to mitigate the horrors of death. On this account a cup of drugged wine and incense (קוֹרֶס שֶׁל לְבוֹנָה בְּכוֹס שֶׁל יַיִן) was given to the criminal in order to produce insensibility (*e.g.* Bab. *Sanh.* 43*a*, Mk 15^{23}, and other references). The second motive was to avoid desecrating the body beyond the necessities of the death penalty. The pursuit of both these aims caused a great internal restriction of the functions of the Jewish tribunal.

The various crimes for which the penalty was death are enumerated in Mishn. *Sanh.* vii.–xi. Lapidation is the punishment for eighteen offences —including incest, sodomy, bestiality, blasphemy, idolatry, the giving of one's children to Molech, necromancy, sorcery, Sabbath-breaking, the cursing of parents, criminal intercourse with a betrothed virgin, the inviting of others to idolatry, the perverting of a whole city, the practice of magic, and for the stubborn and rebellious son. Burning was reserved for a priest's daughter who violated her chastity, and for nine forms of incest —only, however, when committed during the life of the legal wife. Murderers and the inhabitants of an apostate city (Dt 13^{15}) were beheaded, and the following were strangled: one who beat a parent (cf. Vergil, *Aen.* vi. 609), one who kidnapped a Jew for slavery, a sage who opposed his superior authorities, a false prophet, one who prophesied in the name of false gods, the adulterer, and one who bore false witness against a priest's daughter.

The number of crimes for which stripes could be inflicted was very large (*Makkoth*, iii. etc.). This penalty could, with certain restrictions, be imposed by the judges at their discretion, unless the Scripture demanded a specified punishment for some particular sin. In no case could the stripes exceed thirty-nine, and, whenever possible, fewer were given. The presence of the judges was obligatory. (For full details, see Mishn. *Sanh.* xiv. =*Makkoth*, iii.; also Abrahams, *Jewish Life*.) The Mishna (*Makkoth*) enumerates fifty transgressions punishable by flagellation. Maimonides, in the *Yadh hā-Ḥazaqa*, gives a far longer and more comprehensive catalogue. A culprit who received stripes was *ipso facto* freed from excision (כָּרֵת), and recovered all those rights from which his crime might have debarred him (Mishn. *Sanh.* xiv. 15).

The principle of making the punishment as lenient as possible, *suaviter in re*, operated also in respect of those sins the punishment of which was reserved for the future life. The famous tenth chapter of *Sanhedrin* gives a list of those who have no share in the world to come, but every endeavour is made to make the list short. The principle is that all Israel are entitled to a share (כָּל יִשְׂרָאֵל יֵשׁ לָהֶם חֵלֶק לָעוֹלָם הַבָּא) unless they forfeit it.

'He who says that the doctrine of the resurrection is not contained in the Pentateuch (according to other readings, 'he who denies the doctrine of resurrection'); he who denies the inspiration of Scripture; the Epicurean; according to R. 'Aqiba, he who reads external (*i.e.* uncanonical) books; he who utters enchantment over a wound . . .; Abba Saul says, whoso pronounces the Tetragrammaton.' In all these cases reference should be made to the commentary of Maimonides (ed. Holzer).

Seven persons—three kings (Jeroboam, Ahab, and Manasseh) and four private individuals (Balaam, Doeg, Ahithophel, and Gehazi)—are deprived of their future life, but in each case the Rabbis sought for extenuating circumstances in order to find a

loophole from perpetual doom. Similarly, excuses are made for the generation of the Flood, and for the generation of the Wilderness.

Excommunication could, according to Bab. *Berakh.* 19*a*, be imposed for a variety of offences, all of a less heinous nature than those punishable by stripes. It consisted of three grades of separation: (1) *nᵉzîfā*, (2) *niddui*, and (3) *ḥērem*. The period of *nᵉzîfā* was one day, of *niddui* seven days, while *ḥērem* could be indefinite. One who died impenitent under *niddui* was not buried with the usual ceremonies, and the force of *ḥērem* was very severe. In the Middle Ages the power of *ḥērem* was great owing to the institution of the Ghetto, but it was always felt to be a terrible weapon, *e.g.* in the cases of Uriel Acosta and Spinoza. The very gravity of *ḥērem* caused great reluctance to inflict it, and it was very sparingly employed (see Abrahams, *Jewish Life*, pp. 52, 292). Cf. art. BLASPHEMY (Jewish).

The penalty of excision (כָּרֵת) prescribed by the Pentateuch was not carried out by human agency, except in so far as guilty parties were scourged; hence this mode of punishment scarcely calls for consideration in this article. But, just as in the case of exclusion from a share in the future life,—a fate which also could not be determined by human agency,—so, too, in the case of excision, the Rabbis attempted to find pleas for the wicked. In Mishn. *Sanh.* xiv. 15 it is stated that all those condemned to excision find immediate pardon after receiving their scourging, if they are penitent. This conclusion is illustrated by a play on the words of the text (Dt 25[3]), 'Lest thy brother be brought to dishonour in thy sight' (וְנִקְלָה). R. Ḥananya b. Gamaliel says: 'as soon as he is scourged (מְשֻׁלָּקֶה) he becomes thy brother in thy sight.' Fines were imposed by the Bible for breaches of moral conduct in sexual matters (Dt 22, Ex 22), and for allowing a dangerous ox so much freedom that it killed a slave. In other cases the Mishna knows nothing of this means of punishment. In the Middle Ages fines were sometimes paid to the general funds of the community by persons liable to be scourged for a breach of Pentateuchal legislation.

Imprisonment, though known in the Bible (*e.g.* Joseph and Jeremiah), was not frequently practised in Mishnic times. As a means of punishment, it was employed in what may be described as indirect crimes, that is to say, for the contumacious and for the suborner. It could be imposed if conclusive evidence was not forthcoming though there was a strong presumption of guilt, or if a person punished twice by flagellation had committed the offence a third time. These cases are dealt with in Mishn. *Sanh.* ix. 5, and Bab. *Sanh.* 81*b*.

'He who has been scourged, and has repeated the offence, is sent by the *Bêth Dîn* to a dungeon, and fed with barley bread until his belly bursts. One who slays another without witnesses is sent to a dungeon and fed on scanty prison fare (לָחַם צַר וּמַיִם לָחַץ).'

The Gemara explains that the scourging refers to the stripes which always accompanied the penalty of excision; the difference in the two expressions for food is also explained. According to R. Shesheth, the method is the same, only in each instance different stages are quoted: the prisoner was in each case first given very scanty fare until his belly contracted, then barley was given to him so that it caused him to burst. The impractical nature of the treatment is clear proof that no Rabbi had ever heard of a case of its application. Such a rare situation as the Mishna presupposes makes it plain that the penalty of imprisonment could scarcely ever have been inflicted.

It must be remembered that, in the time of which the Mishna speaks, most of the decisions were theoretical (see Strack's introduction to his edition of Mishn. *Sanhedrin-Makkoth*, p. 5*); consequently we have there recorded the practice of an earlier period. In the Middle Ages there was a great revival of Jewish jurisdiction (see Abrahams, *Jewish Life*, p. 49, etc.). In Spain (*ib.*), up to 1379, Jewish courts could impose punishments and even pronounce a death sentence, which was carried out by the civil courts. Imprisonment was a form of punishment adopted by Jews, though it seems probable that they made use of the ordinary prison—or some separate portion of it—for their own offenders. The institution of the Jewish Quarter gave the *Bêth Dîn* greater powers and fostered the growth of two principles: (1) that it was unpatriotic for a Jew to cite another Jew before the civil courts; and (2) that no mercy was to be shown to the informer. The activity of the Jewish tribunal in secular matters can scarcely be said to have survived the breakdown of the Ghetto, though in religious questions its authority remained unshaken. In many instances, plaintiff and defendant have, of their own accord, agreed voluntarily to submit their differences to the arbitration of the *Bêth Dîn* rather than to the civil judge—a system at present in great vogue in the East End of London. By this means many disputes are settled without taking up the time of the magistrate. But this does not belong to the domain of criminal cases. Here the jurisdiction of Jewish courts has long ceased.

LITERATURE.—The Mishna, Gemara (Pal. and Bab.), and Tosephta of *Sanhedrin-Makkoth* should be carefully studied. For the Mishna there are critical editions: (1) with vocab., notes, and trans., by H. L. Strack, Leipzig, 1910; (2) by Samuel Krauss, Leyden, 1909, with introduction, notes, and glossary; (3) for those who are ignorant of Hebrew, a tr., with notes, etc., has been prepared by Hölscher (Fiebig's Series), Tübingen, 1910, with special reference to NT questions; Maimonides' comm. is edited by J. Holzer, Berlin, 1901. The Jerus. Talm. is translated by M. Schwab, Paris, 1888. The best edition of the Tosephta is that of Zuckermandel, Pasewalk, 1880. See articles in *EBr*[9] on 'Synhedrium,' in *JE* on 'Capital Punishmeot,' 'Stripes,' 'Excommunication,' 'Crime,' 'Punishment,' 'Hatra'ah,' 'Admission in Evidence,' etc.; in the present work, see ADULTERY (Jewish), BLASPHEMY (Jewish); cf. I. Abrahams, *Jewish Life in Middle Ages*, London, 1896; A. Büchler, 'Das Synhedrion in Jerusalem und die Todesstrafen der Bibel und der jüd. nachbiblischen Zeit,' in *MGWJ*, 1906; see also bibliographies in *JE* iii. 558, iv. 359. HERBERT LOEWE.

CRIMES AND PUNISHMENTS (Muhammadan).

—1. Introduction.—In Ancient Arabia, crime was often regarded as impurity, and punishment as purification. In Muslim tradition also it is mentioned that a certain adulterer who desired to do penance for his sin said to the Prophet, *ṭahhirnī* ('purify me'), whereupon he was stoned to death.[1]

In the heathen period, manslaughter and other crimes often gave rise to bloody feuds among the Arab tribes. The revenge of the injured party or of the members of his family or tribe extended not only to the guilty person who had killed or injured any one, but also to all who belonged to the same family or tribe. It is true that by this solidarity of family and tribe the public safety was in some respects benefited; but, on the other hand, there was the disadvantage that many innocent persons had to suffer for the sins of their relatives, and that long-continued blood-feuds often arose from insignificant beginnings. Usually on both sides an attempt was made to put to death as great a number as possible of enemies of high rank in return for each fallen tribesman; for many regarded as insufficient mere retaliation (*qiṣāṣ*), by which no greater injury was done to the other party than had actually been suffered. Blood-guiltiness was sometimes bought off by means of a great number of camels, but the acceptance of such a price of

1 See I. Goldziher, 'Das Strafrecht im Islam' (*loc. cit. infra* pp. 100, 104 n. 2), and *Muhamm. Studien*, 1889–90, i. 27 n.

blood (*'aql* or *diya*) was often regarded as a humiliation. See, further, BLOOD-FEUD (Muslim).

The blood-feud was so deeply rooted in the customs of the Ancient Arabians that it was impossible for the Prophet completely to forbid it. In Islām, therefore, retaliation remained permissible, though with important restrictions. Not long after the Hijra, circumstances at Medīna compelled the Prophet to issue regulations as to this matter, in order to prevent the old blood-feud from continuing even among the Muslims; he therefore strictly forbade a Muslim to revenge himself on a fellow-believer for blood-guiltiness dating from the heathen period. If, however, a Muslim were attacked unjustly by a fellow-believer, he retained the right of retaliation; and, if he were killed, his heirs had also this right, but the question must henceforth be properly investigated, and only the guilty person himself might be punished after his guilt had been proved. It was, moreover, established that for Muslims only the *qiṣāṣ*, i.e. the *talio* in the most restricted sense of the word, was permissible; the attacked party must not do any greater injury to the attacking than he had himself suffered. Redemption of the blood-feud was permitted for Muslims, but the acceptance of the price of blood instead of retaliation was not expressly made a religious duty.

See Qur'ān, ii. 173–174: 'If any one gains forgiveness from his neighbour, [the one party] must conduct his case [concerning the price of blood] with moderation, and [the other party] must pay the price of blood willingly. That is a mitigation from your Lord.'

If the guilty person had acted deliberately, he must in future pay the price of blood himself, as a personal punishment; only if he had killed or wounded some one accidentally did his relatives remain obliged to support him in the payment of the price of blood.

For other crimes not consisting of killing or wounding, the Prophet did not in general issue express regulations. Only in consequence of special circumstances he prescribed a *ḥadd* ('fixed penalty') for some misdemeanours. The best-known instance is described in art. ADULTERY (Muslim). When Muhammad's wife 'Ā'isha was accused of adultery, it was prescribed in Qur'ān, xxiv. 1–5, that a person who was guilty of fornication (*zinā*) should be henceforth punished with 100 stripes of the whip, but that they who accused an honourable woman of that crime unjustly must be punished with 80 stripes (see, further, art. ADULTERY [Muslim]). Other instances of fixed penalties are the *ḥadd* for theft, which is prescribed in Qur'ān, v. 42–43, and the *ḥadd* for highway-robbery (*ib.* v. 37–38). In other cases, when no special punishment is prescribed, the judge is entitled to inflict such punishment on the culprit as seems to be the most suitable in view of the circumstances. This form of punishment is called *ta'zīr* ('correction').

Muslim canon law thus distinguishes three categories of crimes and punishments: (1) the so-called *jināyāt*, i.e. misdemeanours consisting of killing or wounding, which must be punished either with retaliation (*qiṣāṣ*) or with payment of the *diya* ('price of blood') or other damages; (2) adultery, robbery, and other crimes, which must be punished with a fixed penalty (*ḥadd*); and (3) all other kinds of transgressions, which must be punished with *ta'zīr* ('correction').

According to Muslim canon law, the punishment must be regarded in some cases as a *ḥaqq Allāh* ('right of Allāh'), in other cases as a *ḥaqq ādamī* ('human right'). When, for instance, a Muslim has the right to exact retaliation or the payment of the price of blood, such a case concerns *ḥaqq ādamī*, just as when he reclaims stolen or loaned property, or demands the payment of a sale price. In these cases the injured person (or his heir) may also give up his right and forgive the injurer.

In cases in which the judge has to decide as to a 'right of Allāh,' certain special principles apply. In many traditions it is expressly put in the foreground that God will base His relation to man, above everything else, on compassion and forgiveness; that He is, therefore, always ready so far as is possible to cover the sins of His servants with the cloak of love, but only on condition that they also act in this way and cover both their own sins and those of their fellow-men.

On the ground of these traditions, the judge, the witnesses, and the culprit must all do their best to prevent the infliction of punishment, if it is a *ḥaqq Allāh*. The culprit is then not bound to acknowledge his guilt if he is accused; he may even revoke his confession before the judge; for the witnesses it is not regarded as meritorious to give evidence against the culprit; the judge must expressly point out to the accused the means by which he may escape punishment; and he may not condemn him before his guilt has been proved, according to the demands of the canon law, even though he personally knows with complete certainty that the crime has actually been committed.

In practice, the crimes which must be punished with *ḥadd* can hardly ever be proved except by the voluntary confession of the culprit, because the legal proof is too difficult. To prove fornication, for instance, it must be possible to call four witnesses who have all observed the act (see ADULTERY [Muslim]). If the guilty person does not desire to do penance for his crime, and in this way to purify himself from his sin, it is therefore usually impossible to punish him. If, however, his guilt is formally certain, the judge is obliged to inflict the *ḥadd* precisely according to the regulations of the canon law.

2. Retaliation (*qiṣāṣ*).—According to the Muslim law-books, retaliation is still permitted in only two cases: (1) when any one has deliberately[1] and unjustly[2] killed another, the heirs of the latter have the right to kill the murderer; (2) if any one is deliberately and unjustly wounded or mutilated, he has the right to revenge himself on his injurer, if it is possible to make him suffer precisely the same wounding or mutilation. According to Muslim lawyers, this is in general possible only when a hand, foot, arm, leg, ear, finger, nose, toe, tongue, eye, or tooth, or other part of the body, has been cut off or destroyed. Moreover, retaliation is in both these cases permissible only (1) if the guilty person was of full age when his crime was committed, and in the full possession of his intellectual powers; (2) if the injured party is at the same time an equal of the guilty person According to the majority of Muslim lawyers, a slave is not the equal of a free man; only the Ḥanafites hold that the rules of retaliation are applicable also to a free man who has killed or wounded the slave of another. If an unbeliever is killed by a Muslim, it is not, as a rule, permissible to take vengeance for blood on the latter unless the deceased unbeliever had been expressly promised protection of his life by a Muslim. Also the father may not be put to death when he has killed his son.

Those who have the right to demand revenge for blood are the heirs belonging to the first and second classes, the *'aṣabāt* and the *dhawu'l farā'iḍ*

[1] According to Muslim canon law, the question whether the culprit acted deliberately or not depends on the sort of weapon with which his act was accomplished. The opinions of the various *fiqh*-schools differ as to the details.

[2] The *qiṣāṣ* is not applicable to one who has killed or wounded another if he had a right to do so. He, for instance, who finds a thief in his house, or any one outraging his wife, may immediately kill him without incurring penalty—not only in self-defence, but also in vengeance on the offender.

(see art. LAW [Muhammadan]); according to the Mālikites, however, wives cannot exercise any *qiṣāṣ*. If the heirs give up their right to *qiṣāṣ*, the guilty person is obliged to pay the price of blood (*diya*); according to the Ḥanafites, however, the *diya* cannot be demanded in this case, if the guilty person does not himself agree to it. If the deceased has left various heirs, and some of them are willing to spare the guilty, no vengeance for blood may be exacted, but only the *diya*.

Vengeance for blood is carried out personally, under the supervision of the judge, by those who have instituted the proceedings against the guilty person. If there are several who demand it, one of them is appointed to carry out the punishment.

3. The price of blood for manslaughter (*diya*). —The price of blood for manslaughter may be demanded: (1) when any one has been killed deliberately and unjustly, and his heirs give up their right to exact the *qiṣāṣ*; (2) when any one has been killed unintentionally.[1] In both cases the *diya* consists of 100 camels, or 1000 *dīnār* of gold, or 12,000 *dirhams* of silver (according to the Ḥanafites, however, 10,000 *dirhams* of silver). But in the first case the so-called 'heavy,' and in the second case the 'light,' price of blood is incurred. In the *fiqh* it is accurately decided what sorts of camels must be given in each of these cases. If gold or silver is paid in place of camels, according to some Muslim lawyers a greater sum may be demanded for the 'heavy' *diya* than for the 'light'; but according to others it is not so; and, according to the later opinion of Shāfi'ī, no fixed payment of gold or silver is due, but the worth of the 100 camels. The 'light' price of blood must be paid within a period of three years by the so-called *'āqila*, i.e. by those who pay the *'aql* ('price of blood'). To these *'āqila* belong, according to the Ḥanafites and Mālikites, all *'aṣabāt* (*i.e.* the male relations on the paternal side) of the culprit, and according to them he must also himself pay part of the sum incurred; according to the Shāfi'ites, on the other hand, neither the culprit himself nor his blood-relations in the direct line belong to the *'āqila*.

When the Muslims after the great conquests established themselves in Egypt, Syria, Persia, and other lands, the Old Arabian family-organization partially lost its importance, and there arose a new grouping of persons who had the same interests to defend. According to the Ḥanafites, the same rules concerning the payment of the price of blood are applicable to these new groups as to the blood-relations of the guilty person; according to them, therefore, all persons belong to the *'āqila* who are bound to give their mutual support to each other (among others, neighbours, those who practise the same profession, those who belong to the same army-corps). The 'heavy' price of blood, on the other hand, may be demanded only from the culprit himself; and, according to most *faqīhs*, he has no right to postpone payment. According to the Ḥanafites, however, he also is only obliged to pay the sum within a period of three years.

(3) Besides the cases in which any one is killed either intentionally or accidentally, Muslim lawyers distinguish yet a third case in which the culprit did, indeed, attack the deceased intentionally, but without meaning to kill him. In that case the *'āqila* must pay the so-called 'heavy' *diya*. They are also obliged to do this, according to some Muslim lawyers, if he has killed another accidentally, either in the sacred territory of Mecca or during one of the four sacred months (Muḥarram, Rajab, Dhu'l-qa'da, Dhu'l-ḥijja); further, if the deceased was a *maḥram* (*i.e.* a relation whom it is forbidden to marry) of the culprit; according to others, however, they are in this case liable only to the 'light' *diya*.

[1] It must be noticed that, according to Muslim lawyers, any one who has accidentally killed another is punishable even if no fault attached to him in so doing. The price of blood may even be demanded if, for instance, any one has fallen from the roof and in his fall has killed another.

For the death of a woman only half the price of blood can be demanded; for the death of a Christian or a Jew, according to the Mālikites, also only half the *diya*, according to the Shāfi'ites only one third, but, according to the Ḥanafites, the full price of blood. If any one kills the slave of another, according to most Muslim lawyers he must himself make good to the owner the full value, even though this cost more than the *diya* for a free man; according to the Ḥanafites, however, the owner has never a claim to more than the value of 100 camels decreased by one *dīnār*. If the culprit was under age or mad, the price of blood must be paid out of his property by the guardian or curator; if the culprit was a slave, his master is responsible, but he can free himself from all further obligation by giving up the slave.

In addition to the *qiṣāṣ* or the *diya*, manslaughter demands a *kaffāra* ('atoning sacrifice'); and, according to Qur'ān, iv. 94, this must consist in the setting free of a Muslim slave, or, if this cannot be done, in fasting for two months. The feeding of 60 poor persons, which in some other cases of *kaffāra* may take the place of fasting, is in this case, according to most *faqīhs*, insufficient. According to the Ḥanafites and Mālikites, this *kaffāra* is incurred only when any one has been put to death accidentally (on the ground of the words of Qur'ān, iv. 94); but, according to the Shāfi'ites, also if the culprit has acted intentionally.

4. The diya and other damages for wounding. —The wounded person, as has already been noted, if he gives up his right to *qiṣāṣ*, claims the *diya* in place of it (according to the Ḥanafites, only if the guilty person agrees). The full *diya* is incurred when, because of the wound, a part of the body is lost (*e.g.* the nose) of which a man has only one; he who loses a part of the body of which men have two (*e.g.* an eye, ear, hand, or foot) may claim the half of the *diya* as damages; in the same way $\frac{1}{4}$ of the full price of blood is incurred for an eyelid, $\frac{1}{10}$ for a finger, and for a joint of a finger $\frac{1}{30}$ of the *diya*. The rules and distinctions concerning the *diya* for manslaughter apply also to the *diya* for lost parts of the body.

Damages are incurred also for wounds for which no *qiṣāṣ* can be demanded, as, for instance, those which are caused by stabbing or cutting the body. In the Muslim law-books, regulations concerning the various sorts of these wounds are worked out in detail. Ten of them (all wounds caused by cutting on the head or the face) are known as the *shijāj*; the *mūḍiḥa* is a wound which has cut to the bone, etc. The damages which the culprit must pay depend in some cases on an express regulation of the law-books, and are then called *arsh*; in other cases they must be fixed by a legal sentence (*ḥukūma*), according to the loss suffered by the injured. An expert has then to estimate what value the body of the wounded person would have had before and after the wound, if he was a slave. If it appears that the value of his body was diminished by, for instance, $\frac{1}{10}$, the judge sentences the culprit to pay $\frac{1}{10}$ of the full *diya*. If any one has been wounded simultaneously in several places, he may claim damages for each wound separately, and therefore in some cases may receive even more than the *diya* for manslaughter.

5. Misdeeds which must be punished with a ḥadd.—For the *ḥadd* in consequence of *zinā*, see art. ADULTERY (Muslim). The punishment for apostasy from Islām, which is regarded by some Muslim jurists as a *ḥadd*, is treated in art.

APOSTASY (Muhammadan). We have therefore here to treat only of the other fixed penalties, viz. those for *qadhf*, wine-drinking, theft, and highway robbery.

(1) *Qadhf*.—By this the Muslim canon law understands only such slander as is meant in Qur'ān, xxiv. 4. Since only slander of 'honourable' women is mentioned there, the crime of *qadhf* consists, according to Muslim lawyers, of the accusation of fornication brought against a *muḥṣan* (i.e. an 'honourable' person, who is, moreover, a free Muslim of full age, in the full possession of intellectual power) without its being possible to adduce proof by four male witnesses. He who is guilty of this crime must be punished with 80 stripes if he is a free man, and with 40 if he is a slave. This *ḥadd* is not enforced if he is under age, or insane, or if he is the husband of the slandered woman and swears that she is guilty, invoking Allāh by means of the so-called *li'ān* (see art. LAW [Muhammadan]). According to some Muslim lawyers, the slandered person has the right of excusing the punishment of the guilty, but not according to others; there is also a difference of opinion as to whether the heirs of the slandered person have the right of exacting this *ḥadd*.

(2) The *ḥadd* for the drinking of wine and other strong drinks consists of a certain number of stripes, on the ground of the tradition as to the way in which the Prophet punished drunkards in Medīna. As to the number of stripes, there is a difference of opinion: according to the Shāfi'ites, the punishment consists of 40, according to the other *fiqh*-schools, of 80 stripes for a free man, and the half of that number for slaves. The guilt of him who is accused of this crime can, according to canon law, be proved only by two male witnesses, or by the confession of the guilty. Moreover, the punishment is not applicable to minors, insane persons, and unbelievers.

(3) The *ḥadd* for theft depends on the command given in Qur'ān, v. 42, 43, 'From the man thief and woman thief cut off the hands, as a warning example from God.' According to the Shāfi'ite and the Mālikite doctrine, a thief after his first theft must lose the right hand, after the second the left foot, after the third the left hand, after the fourth the right foot, and after the fifth and following thefts he must be punished by *ta'zīr*. According to the Ḥanafites, however, the thief must never lose more than the right hand and the left foot; if he continues to steal after his second offence, he must be kept in prison until he is reformed.

Theft is, however, punished with this *ḥadd* only when the stolen article had been put away in a proper manner, and, moreover, had a certain value (the so-called *niṣāb*). According to the Shāfi'ites, the *ḥadd* is applicable only if the value of that which is stolen is at least ¼ of a *dīnār* (about 3 shillings); according to the Ḥanafites, only if the worth was at least one *dīnār*, or 10 *dirhams*; according to the Mālikites, ¼ of a *dīnār*, or 3 *dirhams*.

The *ḥadd* for theft is also not applied if the thief was under age or insane, or if he could make good a certain claim to the stolen property. The last is the case if one of those who have taken part in a battle steals something from the booty before it has been divided among the troops, or if a Muslim steals from that which was intended for the general use of Muslims. If one of a married couple steals something to the injury of the other, according to some Muslim lawyers the culprit must be punished with *ḥadd*, but not according to the opinion of others.

The person whose property was stolen has the right to reclaim the stolen article; and, if this has been lost, the thief must pay damages in its place. According to the Ḥanafite doctrine, however, the thief is not obliged to make such payment of damages if the *ḥadd* for theft has been applied to him.

(4) The *ḥadd* for highway-robbery is deduced from Qur'ān, v. 37, 38:

'The punishment for those who fight against Allāh and his apostle, and pass through the land spreading disaster, shall be that they shall be slain or crucified, or have their hands and feet cut off cross-ways, or that they be banished from the land . . . unless they reform before they fall into your hands. God is forgiving and compassionate.'

Since, therefore, this *ḥadd* was not accurately defined, there arose much difference of opinion among Muslim lawyers as to the punishment of highway-robbers. The various opinions cannot all be mentioned here in detail. According to the Shāfi'ite doctrine, four cases must be distinguished: (1) if the culprit has only made the road unsafe, he must be banished; (2) if he has also practised robbery (namely, in the sense that he would incur the *ḥadd* for theft if he were not a highwayman), his right hand and left foot are cut off (in the case of a repetition of the offence, the left hand and right foot as well); (3) if he has deliberately murdered any one, he must be put to death, even though the heirs of the murdered person were willing to content themselves with the *diya*; (4) if he has as a highway-robber robbed and killed, not only is he punished with death, but his corpse is exhibited for a time on a cross. According to the other *madhhabs*, regulations obtain which are partially different.

When the robber repents before he has been captured, the special *ḥadd* for highway-robbery is no longer applicable to him, but he remains, for instance, obliged to restore that which has been stolen; and, if he has killed any one, the heirs of the latter have, just as in other cases, the right of exacting the *qiṣāṣ* or *diya*.

6. **Ta'zīr** ('correction').—When no special punishment is prescribed, the judge, as has already been noted, must condemn the culprit to the punishment which seems to him to be the most suitable in view of the circumstances. He may, for instance, send him to prison, exile him, or sentence him to be publicly put to shame or scourged, etc. According to the Mālikite doctrine, he is even entitled in this case to condemn him to as many stripes as are prescribed in the case of *ḥadd*, or even more; according to the other *fiqh*-schools, however, this is not permissible. According to them, the *ta'zīr* must always be less severe than a *ḥadd*. The *ta'zīr* is, among other things, applicable to a thief when the stolen property has not so much value that the culprit must be condemned to the *ḥadd*; furthermore, in general, to all kinds of transgressions for which no other kind of punishment or any special atoning sacrifice (*kaffāra*) is prescribed.

The judge is not always obliged to apply the *ta'zīr*; according to the Shāfi'ites, only when the injured person expressly requires him to punish the culprit; and, according to the Hanafites and Mālikites, also when he is convinced that the latter will not reform without punishment. A *ḥadd*, on the other hand, must always be inflicted when the guilt of the culprit has been proved, because this punishment is expressly prescribed in the canon law.

CRIMES AND PUNISHMENTS (Parsi).—From the list of the contents of the original twenty-one *nasks* of the Zoroastrian canon, the bulk of which is irretrievably lost, we find that seven of them consisted of the *dātīk*, or 'legal' literature (*Dīnkarṭ*, viii. 1, 11). Of these the *Vendīdād*, 'the Leviticus of the Iranians,' is preserved in its entirety, and this work, with some other portions of the extant Avesta and Pahlavi books, forms the chief source of our information on the criminal law of the ancient Persians.

Offenders against law are punished, first, in this world, according to the penalties laid down for various crimes; and, secondly, in the next world. The usual form of corporal punishment is the prescription of a certain number of stripes (*upāzana*) with the two implements *aspa-aštrā* ('horse-goad') and *sraošō-caranā* ('scourge'). The number of such stripes prescribed for different crimes ranges between five and ten thousand. The extravagant number of strokes and the physical impossibility of a human being enduring this torture have led scholars to think, with Spiegel, Geiger, and Darmesteter, that the stripes were not actually meant to be laid on the culprits, but that the number of strokes either meant that the sinner should kill so many noxious creatures, or that they were so many strokes inflicted upon the realm of darkness, or that they were only meant to impress on men the gravity of the crimes. For instance, it is prescribed that a woman who has been delivered of a still-born child shall refrain from drinking water for the good of her own health for some time (*Vend.* vii. 60–72). The violation of this precept is punishable with two hundred stripes. Now this would be brutal, and the later writer of the *Rivāyat* states that in such a case, if she should thus drink water to avert serious illness, it would be sufficient for her husband to atone for her fault before a Dastur by *patet*, or 'penitence' (*Old Rivāyat*, p. 98*b*, quoted by Darmesteter in *SBE* iv. 92, n. 5, *Le Zend-Avesta*, ii. 112, n. 88). In the later Pahlavi period, these stripes are converted into money value, and certain fines are laid down for the various number of stripes. Very often the word *margarzān*, 'worthy of death,' is loosely employed to denote the hideousness of a crime. Some offences are termed *anāperetha*, 'unatonable.' The chief among them are the burying, burning, and eating of dead matter, and sodomy.

The characteristic feature of the Mazdayasnian law is that it prescribes very rigorous punishment for the violation of the rules of sanitation and hygiene; for it is said that the man who violates these rules imports or furthers epidemic, and endangers human life. The punishment for the ill-treatment of the various classes of dogs is exorbitant, and is calculated to ensure good treatment of this faithful animal, who as a sentinel guards the flocks of the faithful, and protects them from the attacks of wolves and other wild beasts, as also from the depredations of thieves and bandits. Any wilful harm done to so useful an animal is believed to deprive the community of his services, and to expose life and property to danger.

Capital punishment is prescribed for the man who carries a dead body alone, and for the man who falsely undertakes to cleanse one defiled with dead matter. Strange as it may seem, only ninety stripes are prescribed for one who commits murder. Instances are found in Persian history in which capital punishment is meted out to manslayers When the Sasanian king Ardashir discovers the plot of his queen to poison him, he consults the Dastur as to what should be done in the matter. The high priest thereupon replies that one who attempts to take the life of another deserves death (*Kārnāmak-i Artakhshīr-Pāpakān*, ix. 16–17). The cruel punishment of cutting off the hands, ears, and other parts of the body, is not unknown. Darius orders the nose, ears, and tongue of his rebel victim to be cut off, and his eyes to be put out (*Old Pers. Inscriptions on Mount Behistan*, ii. 74, 89; see F. H. Weissbach and W. Bang, *Die altpersischen Keilinschriften*, Leipzig, 1893, i. 21).

1. Assaults.—There are seven kinds of outrages, which are called in Pahlavi *pāyak vināṣ*, and in Sanskrit *padāni pāpāni*, meaning 'chief crimes' (*Shāyast lā-Shāyast*, i. 1; *Patet Pashimānī*, iii.). These are (1) *āgerepta*, 'stroke': when a man lifts his hand and wields a weapon with the intention to strike a blow, he becomes guilty of this crime (*Vendīdād*, iv. 17). The punishment for the first offence is five stripes with the *aspa-aštrā* and five with the *sraošō-caranā*. The penalty increases proportionately with the repetition of the crime, until, on the eighth committal of the same, the man is termed a *pešōtanu*, 'of sinful body,' and is to be punished with two hundred stripes (*ib.* 18–21). (2) *avaoirišta*, 'blow.' This is the name of the assault wherein a man brandishes a weapon (*Vend.* iv. 17). He receives ten stripes for the first crime, and the maximum penalty of two hundred stripes is prescribed in his case if, without atoning for his previous crimes, he repeats it seven times (*ib.* 22–25). (3) *areduš*, 'wound.' The penalty for this crime begins with fifteen stripes, and makes the culprit liable to two hundred stripes on the repetition of the same for the sixth time (*ib.* 26–29). (4) *xvara*, 'sore wound.' This is punishable with thirty stripes for the first crime, and two hundred for the fifth repetition (*ib.* 30–33). (5) *tacaṭ-vohunī*, 'bloody wound.' The penalty is fifty stripes for the first offence, and the fourth committal of the same raises the punishment to two hundred stripes (*ib.* 34–36). (6) *astō-bid*, 'bone-breaking,' begins with the punishment of seventy stripes for the first offence, and closes with that of two hundred stripes for its third repetition (*ib.* 37–39). (7) *frazā-baodhah*, 'rendering unconscious or causing death.' The punishment for this crime is ninety stripes for the first offence, and two hundred for the second (*ib.* 40–42).

The Pahlavi *Shāyast lā-Shāyast* variously speaks of eight or nine classes of crimes (i. 1, xi. 1). The *farmān* and *sraošō-caranā* are the additional sins mentioned here. Certain degrees are assigned to the various crimes, and the bodily punishment is converted into fines. Thus the degree of the smallest crime, *farmān*, is estimated at four *stars* (a *star* being equivalent to four *dirhams*). The degrees of the crimes rise in proportion to the gravity of the offences, until the *tanāfur* sin is estimated at three hundred *stars* (i. 2, xi. 2, xvi. 2–5).

2. Theft.—The *tāyu*, 'thief,' and *hazanha*, 'robber,' 'bandit,' who rob the faithful of their cattle and property, are severely punished. According to the Mazdayasnian declaration of faith, a true Zoroastrian undertakes to put down these crimes (*Yasna*, xii. 2). Haoma is invoked to warn the faithful of the cunning movements of the thieves (*ib.* ix. 21), and Rashnu, the angel presiding over truth, is spoken of as the best killer, smiter, and destroyer of the thieves and bandits (*Yasht*, xii. 7 f.). The sacrifices offered to Khurshēd, asking him to help the pious to withstand these evil

forces, is said to be equivalent to offering the same to Ormazd (*Yt.* vi. 4; *Nyāish*, i. 14), and Ardvīsūra is invoked to pour down her waters as a source of torment to the brigands (*Ys.* lxv. 8). The routing of the thieves and robbers is eagerly prayed for (*Ys.* lxi. 3). The man who takes a loan from another, with the evil intention of not returning it, is a thief; and the commentator explains that, if he bluntly refuses to restore it, he becomes a robber (*Vend.* iv. 1).

The culprits had either to pay fines, or their ears and hands were cut off, or they were imprisoned. If a man stole a *dirham* (about 7d.), he had to pay two *dirhams*, one of his ears was cut off, ten blows with a stick were inflicted upon him, and he was imprisoned for some time (*Ṣad Dar*, lxiv. 2–3). If he stole another *dirham*, four *dirhams* formed his fine, he had to forfeit his other ear, to receive twenty blows, and to be imprisoned for a period twice the length of that inflicted at the time of his first crime (*ib.* lxiv. 4). The third repetition of the crime was punishable by cutting off his right hand (*ib.* 5), and if, persisting in his evil work, he finally stole five hundred *dirhams*, he was to be hanged (*ib.* 6). The bandit who had robbed a person of something by violence, had to restore to the owner four times as much as he had taken, or he was to be killed if public safety required it (*ib.* 11; cf., further, on theft, *Dīnkart*, viii. 20. 123, 21. 1–14).

3. **Breach of contract.**—The man who lies to Mithra is guilty of *Mithrō-druj*, and brings death to the whole country (*Yt.* x. 2). The faithful are exhorted not to violate contracts entered into with any one. The six important forms of contract are: (1) word-contract, (2) hand-contract, (3) the contract to the value of a sheep, (4) the contract to the value of an ox, (5) the contract to the value of a man, and (6) the contract amounting to the value of a field (*Vend.* iv. 2). The penalty for breaking these contracts begins with three hundred stripes with *aspa-aštrā* and an equal number with *sraošō-caranā*, for the violation of the first class of contract, and rises to the maximum punishment of a thousand stripes each in case of the breach of the final contract, namely, the field-contract (*ib.* 11–16).

4. **Crimes connected with the defilement caused by corpses and dead matter.**—The earth, being one of the sacred elements of nature, is to be kept pure from defilement. Ahriman created the sin of interring corpses in the earth, for which there is no atonement (*Vend.* i. 13, iii. 39), and it is therefore the sacred duty of the faithful to disinter the dead bodies, wherever possible. If a man lets a corpse remain buried, and neglects his duty to dig it out within six months, his punishment is five hundred stripes with each of the two punishing rods. The penalty is doubled in the case of a corpse remaining buried for a period of one year, and if it is not disinterred within a period of two years, it makes the man guilty of *anāperetha*, for which there is no atonement (*ib.* iii. 36–39).

Under no circumstances is a corpse to be carried by a single person, lest he should be defiled. Capital punishment is meted out to him who violates this precept. The culprit is to be removed to a barren place, and to be kept there until he grows old, after which his head is to be cut off (*ib.* 15–21). The man who does not properly observe the rules of removing the corpse to the top of a mountain, and fastening the body with brass or stones by the feet or hair, to prevent the dogs and birds from carrying the dead matter to water and trees, is to be punished with two hundred stripes (*ib.* vi. 47 f.). If a man, happening to touch a corpse in the wilderness, approaches water and trees without cleansing himself, he receives four hundred stripes with each of the two instruments (*ib.* viii. 104–106). Wilful carrying of the dead matter to water or fire makes one worthy of death (*Ṣad Dar*, lxxii. 1). Unnecessary waste of anything is deprecated, and a man who throws more cloth on the corpse than is essential has to suffer the punishment of four hundred stripes, rising to one thousand stripes with both the whips, in proportion to the quantity thus wasted (*Vend.* viii. 23–25).

Among the worst crimes created by Ahriman is that of cooking corpses, for which there is no atonement, and of which the penalty is death (*Vend.* i. 17, viii. 73 f.; Strabo, p. 732). The eating of the carcass of a dog or the corpse of a man makes one unclean for ever, and it is prescribed that the heart of the man guilty of this crime shall be torn out, and his eyes put out (*Vend.* vii. 23; *Ṣad Dar*, lxxi. 2; *Grand Rivāyat*, p. 123).

The ground on which a dog or man has died is not to be tilled for a period of one year. The man who does not observe this rule is punishable with two hundred stripes. The man who tills the ground without cleansing it of the bones, hair, urine, and blood lying on it becomes a *pešōtanu*, and receives two hundred stripes with the two instruments of punishment as a penalty (*Vend.* vi. 8 f.). It is sinful to throw bones of a dead dog or a dead man on the ground, as the marrow flowing from them pollutes the ground. The penalty of throwing a bone of the size of the top-joint of the little finger is thirty stripes, and rises proportionately, to the maximum penalty of one thousand stripes when the body of a dead dog or a dead man is thrown on the ground (*ib.* vi. 10–25). Bringing back fire into a house in which a man has died, within nine nights in winter and a month in summer, is punishable with two hundred stripes with the *aspa-aštrā*, and two hundred with the *sraošō-caranā* (*ib.* v. 43 f.).

5. **The crime of ill-treating the dog.**—The Iranians held the dog as the sacred animal created by Ormazd, and rigorous punishments are prescribed for his ill-treatment. The giving of bad food to various classes of dogs is punishable with fifty to two hundred stripes, in accordance with the importance of the class of dogs (*Vend.* xiii. 24–27). Seven hundred stripes with each of the two implements are prescribed for him who smites a bitch that is with young (*ib.* xv. 50). Five hundred to one thousand stripes are the lot of those who kill various kinds of dogs (*ib.* xiii. 4, 12–15). The murder of a water-dog is to be atoned for by ten thousand stripes, or by carrying ten thousand loads of sweet-scented wood to the fire, or an equal number of *barsom* twigs, or by carrying the same number of *zaothra* libations to the waters, or by killing as many snakes and other noxious creatures, or by helping to contract marriage between the faithful, and by doing various similar redeeming works (*ib.* xiv. 1–18).

6. **Crimes relating to women in menses.**—Elaborate rules are laid down for the period of menstruation, during which a woman remains in seclusion, the violation of which is generally punishable in the next world. Intercourse with a woman during this period amounts to wilful murder, burning of the life-giving seed, and is punished with thirty stripes for the first offence, and rises to a penalty of ninety stripes in case of its repetition (*Vend.* xvi. 14–16). The penalty rises to one thousand stripes when the offending parties wilfully and knowingly indulge in the crime, and the man has to atone for his sin by an additional performance of meritorious deeds, as those of killing about nine thousand noxious creatures such as snakes, frogs, and ants (*ib.* xviii. 67–74). If the woman who has brought forth a still-born child drinks water for the good of her own health, she

becomes a *peśōtanu*—her offence is punishable with two hundred stripes (*ib.* vii. 70–72).

7. Crimes regarding the purificatory rites.—Capital punishment is meted out to him who officiates as a cleanser without himself being well versed in the rites of cleansing. His hands are to be bound, his head is to be cut off, and his body is to be thrown to the vultures (*Vend.* ix. 47–49). A later work prescribes that he shall be nailed with four nails, his skin taken off, and his head cut off (*Fraser Rivāyat*, p. 398, as quoted by Darmesteter in *SBE* iv. 135, n. 1, *Le Zend-Avesta*, ii. 170, n. 55).

8. Unnatural crime.—Zoroaster denounces this deed as the worst crime against morality (*Ys.* li. 12). Ahriman is its creator (*Vend.* i. 12). There is no sin greater than this, and the man practising it becomes worthy of death (*Ṣad Dar*, ix. 2). This is the only crime which entitles any one to take the law into his own hands, and to cut off the heads of the sodomites and to rip up their bellies (*ib.* ix. 3 f.). The *Dāṭistān-ī Dēnīk* (lxxvi. 3) modifies this, and states that, before taking the law into one's own hands, one should try to impress the heinousness of the crime on the minds of the wicked sinners, but, if that is of no avail, one may kill them on the spot. The sodomite is called a demon, a worshipper of demons, a male paramour of demons, a female paramour of demons, a wife of demons, as wicked as a demon; he is a demon in his whole being while he lives, and remains so after death (*Vend.* viii. 32). The faithful should not have any intercourse with such a man, except by way of attempting to reclaim him from this inexpiable crime (*Dāṭistān-ī Dēnīk*, lxxii. 10). The crime puts one on a par with Ahriman, Afrāsiyāb, Zohak, and other wicked ones (*Ṣad Dar*, ix. 5), and greatly increases the joy of the Evil Spirit (*ib.* 6). Eight hundred stripes with each of the two rods is the penalty for him who has been forced by violence to this crime, but there is no atonement for him who voluntarily submits to it (*Vend.* viii. 26 f.). The same crime committed with a woman is equally heinous (*Ṣad Dar*, ix. 7).

9. Adultery and abortion.—See ADULTERY (Parsi) in vol. i. p. 133 f., and FETICIDE.

MANECKJI NUSSERVANJI DHALLA.

CRIMES AND PUNISHMENTS (Roman).—Roman law never acquired on its criminal side the clearness and precision which characterized its civil applications, in an ever increasing degree, until the collapse of the Empire came. Among the many causes for the imperfect development of criminal law, the most important is the comparatively large influence which political conditions exercised upon the definition and punishment of crime. Under the democratic system, when the assembled citizens were in theory sovereign, evolution was slow; with the advent of autocratic rulers—Sulla, Julius Cæsar, and the Emperors—change proceeded apace, and criminal administration was made more systematic. For the purposes of our brief exposition, three sections of the subject may be distinguished. The first comprises the notions attached to crime, the gradual abridgment of the gulf between criminal law and morality, and the widening jurisdiction of the State over offences. The second branch concerns the procedure leading up to punishment; the third, the nature of the punishments inflicted. Needless to say, the boundaries between these three divisions cannot be precisely drawn.

In the earliest days of the Roman community, most functions of the State were rudimentary, and there was little scope for the public punishment of actions committed by citizens, even when they shocked the moral sense. Much was left to the vengeance of heaven, and in some cases any citizen could make himself the champion of the offended gods. The close-knit organization of the family (*familia*) and the clan (*gens*) also greatly restricted the scope of criminal law; and, though the framework of the *gens* early fell to pieces, that of the *familia* retained many of its primitive elements until Roman civilization succumbed. Survivals in the historical period clearly show that the head of the family (*paterfamilias*) once possessed uncontrolled authority (*imperium*) over the lives of all who were in his power. The wife, the child (born in the family or brought into it by adoption from without), and the slave were in this respect all on the same level. Of course ancestral custom (*mos maiorum*), powerful in every age of Rome, restricted in practice the exercise of this authority, though in principle it was absolute, and required it to be used with a certain formality and reasonableness. The law stepped in later and protected to an increasing extent the freeborn members of the family. New forms of marriage enabled the wife to escape from the absolute *imperium* of her husband. Examples of the execution of women by family decree are found in the 2nd cent. B.C., and of men in the 1st; but the bare right of the head of the family to put to death those subjected to him was only removed by Constantine, and the cruel exposure of newly-born children was permitted long after his time. Even the slave was protected by the Imperial legislation. See art. CONSTANTINE, above, p. 80.

In so far as the State corrected crime, the supreme magistrate, whether known as *rex*, *dictator*, *consul*, or *prætor*, was, in the remoter age, in the same position as the *paterfamilias*, that is to say, his *imperium* was, within its own sphere, in principle unlimited, though he would often have to submit, in the case of citizens, to the *force majeure* of custom, and in the case of aliens to that of treaty obligations. The Republic introduced, as one of its few fundamental innovations, the right of appeal (*provocatio*), which entitled every citizen to a trial by his fellow-burgesses in all weightier matters. Only in special circumstances, which will be described later, was he subjected to arbitrary treatment during the Republican age. The protection afforded by the *provocatio* was at first valid only against magistrates who acted within the city and a thousand paces outside, but it was gradually extended to Italy and even to the provinces. The changes which were brought about by the Empire were profound. As in other departments of government, so in criminal administration, the Emperor became supreme. From the first his autocracy was practical, and in the end it was undisguised.

Apart from the traces of primitive practice preserved in later institutions, the first glimpse afforded to us of the criminal side of Roman law is given by the fragments of the Twelve Tables. Punishment of individuals by special enactment (*privilegium*), *i.e.* by an act of attainder, is forbidden. The State recognizes as offences against itself only a few acts—treason (*perduellio*), aggravated murder (*parricidium*), arson, theft of grain from the soil, lampooning, and possibly false witness.

The definition of crimes was vague, especially (as was natural) in the case of treason, but later legislation gave more precision to the legal view of crime, and extended the range of criminal inquiry. Sulla carried out a great codification of criminal law, and grouped crimes under eight or nine heads. To each group a separate court (*quæstio*) was assigned, each with a fundamental law, dealing carefully with the substance and the forms of its jurisdiction, and Sulla's regulations were further elaborated by Julius Cæsar and Augustus. The courts set up by Sulla dealt with the following crimes: (1) extortion by officials in the provinces (*repetundæ*); (2) theft to the detriment of the gods (*sacrilegium*), or of the State (*peculatus*); (3) murder and offences akin to it—brigandage, misuse of criminal procedure in capital cases, poison, magic, arson, and wrecking; (4) public bribery (*ambitus*); (5) treason (now termed *maiestas*); (6) forgery (*falsum*); (7) the infliction of bodily damage (*iniuria*); (8) public violence (*vis*); and (9) kidnapping (*plagium*). The crimes mentioned are only the principal ones which came before these courts, for they also dealt with many other outrages (such as sexual offences) by direction of particular statutes, under conditions which are difficult to determine. Augustus established separate courts to deal with (1) adultery, which had not been previously treated as a public crime; and (2) usury, against which many Republican statutes had been directed (mostly in vain), and the offence of artificially raising the price of corn. Later on, many forms of wrongdoing, *e.g.* *delatio* (the trade of the informer), received special attention from the government. Thus, by the time of the early Empire, a multitude of deeds, not formerly punishable, or punishable only by fine, came to be included in the category of crimes, while others that had been vaguely classed together as criminal were separated and precisely defined. As will be explained later, many acts which did not come before criminal courts properly so called were subject to punishment in other ways. The repression and prevention of crime were much more rigorously carried out by the Empire than by the Republic. For instance, Augustus first effectively suppressed brigandage in Italy and piracy on the high seas. The range of private vengeance, which was wide in the early age, was now narrowed almost to vanishing point, and only violent attacks against which there was no defence but violence excused homicide. The Twelve Tables permitted the nocturnal thief to be killed unconditionally, but later the killer had to prove urgent need for his action.

One department of crime needs special comment —that of treason, the treatment of which is vital in Roman history at every period. The old name *perduellio* indicates by its derivation that treachery in connexion with war was solely or chiefly viewed as treason in the early days; but soon the name was made to cover any act which the assembly of citizens could be induced to regard as a deadly injury done to the community at large. In the later age of the Republic, the offence was called *maiestas*, which is an abbreviation for *crimen maiestatis imminutæ*, a charge of impairing the greatness of the country. The range of acts which might come under this description was wide, so that many breaches of a citizen's or a magistrate's duty, besides those closely connected with war, belonged to this category. With the establishment of the Empire, treasonable actions came to be viewed as directed against the Emperor alone. This was the natural ultimate development of the Republican idea that insults to the higher magistrates were treasonable. One of the most interesting Roman applications of the doctrine of treason, and one somewhat remote from modern ideas, made it cover disrespect for, or attacks on, the recognized religion of the State. Regard for religion was a matter of civic duty, though the State did not force religious observances on the citizen as such until the conflict between Christianity and the Empire became acute in the 3rd century. Till then, a Christian's religion would rarely bring him into antagonism with the government, unless some public function, such as that of magistrate or soldier, required him to join in heathen ceremonies. The deification of the Emperors provided for the first time a cult which was common to the whole Empire, and rendered the position of the Christians more difficult. But the persecutions which they suffered were due mainly to local fanaticism, and were seldom enjoined or favoured by the central administration. When Christianity became the Imperial religion, both heathenism and heresy were treated as public offences.

As has been stated, the absolute control of the chief magistrate over punishment was abolished on the foundation of the Republic. The right of appeal (*provocatio*) entitled the citizen to a trial by his fellow-burgesses, and the magistrate who set the right at naught was himself subject to penalty. But limits were imposed on the *provocatio*, sometimes by law, sometimes by custom. At first the dictator was not bound to grant an appeal, but he was placed in the same position as other magistrates by a *lex Valeria*, enacted in 301 B.C. Military rule naturally excluded the *provocatio*. The idea that a *lex Porcia*, passed before 108 B.C., withdrew from the commander in the field the right to impose the death penalty, rests on a wrong inference from a passage in Sallust (*Jug.* 59). The statutes which conferred power on Sulla, and on the Triumvirs in 43 B.C., established naked autocracies, and legalized the proscriptions. The Senate from time to time claimed the right to authorize the magistrates to inquire into offences and to punish them without regard to the assembly. The earliest recorded example of this usurpation is afforded by the suppression of the so-called Bacchanalian conspiracy in 186 B.C., when, in a time of panic, many citizens, as well as members of allied communities, were arbitrarily executed. This was done in the interest of religion, over which the Senate exercised an unquestioned supervision, but later the special criminal commission was used as a political engine. After the deaths of the Gracchi many of their supporters suffered in this way, though the younger brother was the author of laws which were designed to put an end to such proceedings. The decree of the Senate, commonly known as *senatus consultum ultimum*, which empowered magistrates to attack by force and slay men whom the senators chose to regard as rebels, was a device which belonged to the decadence of the Republic. It was first put into force against the younger Gracchus and his followers; the slaughter of the elder with his partisans was not even covered by this form. The decree was repeatedly passed and acted on afterwards, though its legality was fiercely contested by the democrats. Apart from the special criminal commissions issued by the Senate, and the *senatus consultum ultimum*, some cases existed in which custom sanctioned the summary punishment of a wrongdoer. Thus erring Vestals were sentenced to death by the Pontifex Maximus, though in the later Republican age they were sometimes arraigned before the assembly. A citizen who transgressed against the rights of a foreign people could be surrendered to that people. One who did not appear when summoned to military service could be sold into slavery, and so might the burgess who disregarded the call of the censors at the periodical registration of

citizens and their property. In these instances the citizens were deemed to have passed judgment on themselves by their absence (Cic. *pro Cæc.* § 99). It may be added that, in the last century of the Republic, the tribunes of the plebs sometimes asserted, though they were not allowed to exercise, the privilege of putting to death summarily any one who insulted them. This was assumed to be in accordance with the provisions of the ancient *leges sacratæ*, which rendered the persons of the tribunes inviolable. These laws, like others of an early date, merely decreed against the offender the vague condemnation contained in the words *sacer esto* ('let him be accursed'). The scholars of the later Republic, and the tribunes along with them, held that the clause deprived the guilty man of all legal protection, gave every citizen the right to decide upon his criminality, and allowed his blood to be shed without blame, though, from the earliest days of Roman civilization, some public control must have existed over such executions.

The establishment of the plebeian tribunate (494 B.C.), the enactment of the code of the Decemvirs known as the 'Twelve Tables' (450 B.C.), and the laws which were adopted when the Decemvirs were overthrown (449 B.C.) had a profound effect upon the course of criminal justice. The right of appeal was strongly confirmed. Arbitrary punishments of individuals by the assemblies, apart from the provisions of general statutes, were forbidden. Such resolutions of the assemblies were called *privilegia*. Cicero rightly contended that his banishment in 58 B.C., by an act of the *comitia centuriata*, was unconstitutional. The Twelve Tables also prescribed that no citizen's *caput*, that is to say, his life or his status as a burgess, should be placed in peril except before the 'greatest assembly' (*comitatu maximo*), by which we must understand the *comitia centuriata*. As the principal State crime in the earliest days was *perduellio*, or treason connected with war, it was natural that the assembly which comprised the warriors, past and present, of the nation should constitute the highest criminal court. On the other hand, a man's property could be assailed in either of the two other assemblies, the *comitia tributa*, which met under the presidency of a magistrate invested with the *imperium*, or the *concilium plebis*, which was summoned by the plebeian tribunes, and was organized, like the *comitia tributa*, on the basis of the local tribes. An old statute permitted all magistrates to impose fines without appeal, up to a definite amount; beyond the limit, one of the two assemblies had to decide. No motion in a criminal trial was constitutional which invited the citizens to combine a personal punishment (*pœna*) with a fine (*multa*).

The inconvenience of using as courts of justice the legislative assemblies, at which hundreds of thousands of citizens had the right to be present, was very great. The criminal trial, for the more important offences, required four meetings at stated intervals before the final verdict could be given; but it may be inferred from a line in Plautus, which describes the burgesses as making a pastime of their duties as judges (*Captivi*, 475), that there was little ceremony about cases of less consequence. All acts of assemblies were in theory subject to the elaborate rules of veto on which the whole Republican government was based; but custom seems to have restricted within narrow bounds their application to criminal affairs. The tribunes of the plebs acquired a prominent position as prosecutors for high crimes and misdemeanours, though at Rome no burgess was ever in theory debarred from entering on a criminal prosecution, unless he had forfeited the right by some misconduct of his own. The difficulties attendant on the comitial system led to a new arrangement, and in 149 B.C. the epoch-making *lex Calpurnia repetundarum* established a special court (*quæstio*), with delegated authority to try governors who were charged with robbing the provincial subjects of Rome. As has been stated above, Sulla placed all recognized crimes under the sway of such standing courts, and, though recourse to the more cumbrous process before the *comitia* was still possible, it was rarely attempted. The *quæstiones* were exempted by law from the operation of the magistrates' veto (*intercessio*). Occasionally temporary courts were established to deal with particular offences. In this way the men who had trafficked with Jugurtha were punished, and Clodius was tried and acquitted by special judges. The jurors were originally drawn from the Senate, for which Gaius Gracchus substituted the equestrian order. Sulla reinstated the Senators, but after 70 B.C. the two bodies shared the privilege with men of a somewhat lower station. Both qualifications and procedure were varied from time to time by legislation. The *quæstiones* continued to exist till the 3rd cent. A.D., but the parallel jurisdictions which the Empire introduced continually impaired their authority until they were extinguished.

There were modes of punishment which did not depend on an arraignment before a criminal tribunal, properly so called. The censors in the time of the Republic could penalize the citizens in many ways, degrading their status, and even inflicting on them pecuniary loss. They were not bound by the criminal statutes, and took cognizance of moral and social offences which were outside the purview of the laws. But succeeding censors were not tied to the decisions of their predecessors. The forms of civil law were employed to vindicate some breaches of public order, and also to provide redress for certain forms of fraud which could not be adequately punished by exactions in money. Not only in Rome, but in every municipal community, there were fines which were recoverable by civil process, on the public behalf. In some private suits, the defendant, if condemned, incurred additional penalties which were not pecuniary. The judgment inflicted on him a stigma (*ignominia* or *infamia*) which impaired the value of his citizenship and left him under many disqualifications for public life. The circumstances were such that the losing litigant was held to have been specially bound to honourable action, as when one partner in business had cheated another, or a guardian defrauded his ward. Theft, when practised by one citizen against another, without violence, was technically not a crime, but condemnation in a suit for damages in pursuance of theft carried ignominy with it. The same stigma rested *ipso facto* upon men engaged in occupations regarded as degrading, that of an actor, for instance, or a public auctioneer (*præco*), or a gladiator.

Roman jurisdiction over offences was exercised at first only as far as the *Romanus ager* extended, that is to say, in the regions of Italy possessed of burgess rights. Outside this pale foreign law prevailed. After the Social War (90–89 B.C.), Italy was parcelled out among Roman municipalities, and there had to be a division between the local jurisdiction and the central courts in Rome. Little is known of the principles on which the discrimination was based, but we read with some surprise that the statute of Sulla relating to murder restricted the court at the capital to cases arising in Rome. Before the end of the Republican period, the rule was established that a Roman citizen outside Italy could claim to be tried in Italy for any serious offence, and in the provinces the authority of the provincial governor in matters

of jurisdiction tended perpetually to encroach upon the autonomy of the municipalities and peoples. As is well known, the Roman government granted special privileges to the Jewish communities.

The advent of the Empire brought about a great transformation in the criminal law of Rome, as in all other parts of Roman polity. The paramount authority of the Emperor, and, in particular, his power of pardoning, led ultimately to a complete recasting of criminal procedure both in Rome and outside it. At Rome new officials, especially the *præfectus urbi* and the *præfectus prætorio*, gradually acquired a large jurisdiction; and, in the end, practically all important charges came to be tried by officers who were Imperial nominees. As the world became Romanized, local diversities in privilege disappeared, until the celebrated decree of Caracalla was passed (A.D. 212), which conferred the franchise on the whole Empire, and led to uniform, or nearly uniform, legal practice all over the Roman dominions. In the early days of the Empire every citizen had a right of appeal to the Emperor, as is exemplified by the case of St. Paul (Ac 25[12]), but by the 3rd cent. each provincial governor received from the Emperor the 'right of the sword' (*ius gladii*), which enabled him to dispose of the lives of provincial citizens, except in the case of Roman senators and members of the municipal senates (*decuriones*). After the accession of Augustus to power, the Roman Senate became a high court of justice, trying for the most part senators who were charged with the more serious crimes. But, just as the *quæstiones* were ultimately destroyed by the dominance of the Emperor, so the jurisdiction of the Senate was reduced to municipal proportions under the monarchy established by Diocletian and Constantine.

As in Italy, so in the provinces, the extent of local autonomy possessed by the different cities and peoples who were subject to Rome varied greatly while the great process of assimilation was being carried out. The tendency, however, to increase the authority of the Roman governors was strong from the first, and in the end nothing but a limited control in matters of police, and in other minor affairs, was left to the municipal courts, Italy being placed in this respect on the same footing as the provinces. The history of police jurisdiction, at all periods of Roman history, is obscure. During the Republican period, citizens of the criminal class at Rome seem to have been dealt with severely, little regard being paid to their right of appeal. Indeed, the value of the *provocatio* greatly depended on the willingness of the magistrates—in the last resort, of the tribunes—to secure it to the burgess, while to the red-handed assassin or the thief taken in the act the *leges Valeriæ* and *Porciæ* were of little avail.

The nature of the punishments inflicted by the Roman State varied greatly in the course of its history. We can clearly discern a time when the community, if it interfered at all, inflicted the penalty of death and no other. Under the system of trial before the *comitia*, this was the only punishment which the chief assembly, the *comitia centuriata*, could assign. But the custom was early established whereby the culprit, before the final verdict was given, could shake the dust of his country from off his feet and go into exile. In this case, at the final hearing the plea was put in that 'he had changed his soil with a view to exile' (*solum vertisse exilii causa*), whereupon the assembly passed a resolution known as *interdictio aqua et igni* (in the full form *tecto* was added), refusing the offender (now no longer a Roman) the right to receive the chief necessaries of life—shelter, water, and fire—within Roman territory, as technically defined by the phrase *Romanus ager*, which for this purpose was never deemed to extend beyond Italy. The *quæstiones*, in the case of the more serious offences, followed the earlier practice of the centuries. Exile was such a common incident in the early civic community that many treaties made between Rome and other States included a clause binding the contracting parties to give harbourage to outlaws. Until the time of the Social War, which led to the enfranchisement of Italy, a Roman could find a refuge no further away than Tibur (Tivoli); but Milo, condemned for the murder of Clodius in 52 B.C., had to place himself beyond the bounds of the peninsula, at Massilia. Aliens within the *Romanus ager* could be warned to quit it by the magistrates, unless international agreement stood in the way. This form of removal was called *relegatio*. But after the Hannibalic War the government readily disregarded treaty obligation, and the repeated indiscriminate expulsion from Rome of Latins and other Italian allies did much to bring on the great Social War. This form of banishment was extended to Roman citizens in the Imperial period. The *relegatus* was merely ordered to live in a particular place during the Emperor's pleasure. This was the only restriction on the person's privileges as a citizen, and Ovid, banished to Tomi, was careful to insist that he was only *relegatus*, not *exul*.

Cicero laid it down in the year 66 B.C. (*pro Cæc.* § 101) that *exilium* was not a punishment known to Roman law, but a means of escape from punishment; yet he himself broke through this technical principle three years later, when, as consul, he passed a law to check public bribery. Thereafter *exilium* was freely used as a penalty, and new forms of it were devised in the Imperial age. The old *interdictio aqua et igni* tended to fall out of use, and for it was substituted the *deportatio in insulam*, rendered familiar to us by Tacitus and Juvenal, who describe the islets of the Ægean as crammed with exiles.

The death penalty, except in the military sphere, was, as we have seen, hardly ever exacted in the Republican age, but in the more important cases it could not be so escaped under the Empire. Probably nothing else so fostered the bitterness entertained by the nobles against the Imperial system on its first institution. Yet the infliction of death was exceptional in the first two centuries, and was confined chiefly to the more important crimes which came before the Senate and the Emperor. Both these authorities were, practically, law-making powers, and were not bound by statute, as were the regular courts. From the accession of the Severi (A.D. 193), capital punishment became more and more common, and the number of offences to which it was allotted was continually increased. In the end not only treason and murder, but arson, magic, coining, kidnapping, aggravated violence, and a number of other wrongful acts might be treated capitally. The forms of execution were also changed and extended. Originally, as a rule, the offender was tied to a stake and flogged, then released and beheaded. This was symbolized by the bundles of rods (*fasces*), each containing an axe (*securis*), which were carried by lictors in front of a magistrate invested with the unimpaired *imperium*. In the city the axe was laid aside. Beheading by the axe was common in the earlier Imperial age (cf. Rev 20[4]), but was forbidden later, when the sword was substituted. The old formulæ connected with the passing of a death sentence by the *comitia centuriata* show that, before the time when escape into exile was permitted, the condemned criminal was sometimes flogged and crucified. The practice was revived by the Empire, 'according to the custom of our ancestors' (*more maiorum*), as the saying

went. During the main part of the Republican period, crucifixion was restricted to slaves, except in rare instances, such as the case of men convicted of misconduct with Vestals. A quaint early method of disposing of one who had slain a near kinsman (*parricida*) was to sew him up in a sack with a cock, an ape, and a serpent, and then to drown him. The Vestal was walled up, and died of starvation. In both these cases the sentence had originally a domestic character, and we have in them strong evidence of the primitive objection to the shedding of blood within the domestic circle. The Vestals were the daughters of the great State family, and were condemned by the Pontifex Maximus, who stood to them in the relation of *paterfamilias*. Something of a religious character attached to the spilling of the criminal's blood by the community. But the gods of the family could receive no such offering. Later, when the *paterfamilias* executed a member of his family, he was regarded as the deputy of the magistrate. The cross was used against free men without scruple by the Imperial administrators, until its employment was abolished by Constantine on religious grounds. The equally cruel death by burning was also familiar to the Empire. It was applied, by a crude sort of homœopathic retaliation, in the age of the Twelve Tables, to the citizen guilty of arson, and, later, it was occasionally a form of vengeance for military crime. The killing by fire of the Christian martyrs was technically a consequence of treason. Before the establishment of the Empire, the exposure of offenders to death in the arena, by wild beasts, was rare, though we hear of it as inflicted on slaves, deserters, or prisoners of war. But later it became one of the commonest forms of execution, and it lasted into the Christian period, being still in use in the time of Justinian. Malefactors who were executed in prison, like the Catilinarian conspirators, were usually strangled by the *carnifex*, or public executioner, under orders from the city commissioners of police, the *tresviri capitales*. We hear also, in Republican Rome, of wrongdoers being hurled from the Tarpeian rock on the Capitoline hill; and the same thing happened occasionally later, by order of the Senate; while the Twelve Tables prescribed this form of punishment for bearing false witness. The application of it in the age of the Empire seems to have been restricted to no particular offences, and to have been irregular. Penal servitude was a novelty introduced by the Empire. Criminals were often condemned to work in the mines, which were mostly the property of the government, or to do other menial services, sometimes in chains, slaves and the lowest class of freemen chiefly being exposed to this kind of suffering. Another kind of penal slavery was enforced enlistment among the gladiators. While the Republic lasted, citizen rights were completely lost only as a secondary consequence of condemnation for serious wrongdoing, but such loss was later on bound up directly with *deportatio* and the more severe forms of penal servitude. In all ages, some particular privileges of the citizen might be taken away while others were left. Imprisonment was not regularly inflicted on criminals either by the early or by the later Roman law. Incarceration was temporary, for purposes of inquiry, or for safe custody, till a sentence was carried out, although, on the other hand, the condemned debtor could be held in bondage by his creditor. Bodily chastisements were seldom imposed in the Republican epoch, excepting in the camp, where mutilation and scourging occurred, until the latter was forbidden by a *lex Porcia*. In the 2nd cent. B.C. earlier *leges Porciæ* had protected citizens in their civil capacity against stripes. Yet we know that St. Paul suffered the punishment (2 Co 11^{25}) though he was 'born free' (Ac 22^{28}). The so-called *lex talionis*—'an eye for an eye, and a tooth for a tooth'—seems to have been sanctioned, probably with an order of a court, by the Twelve Tables. Under the absolute monarchy, after Diocletian came to the throne, mutilation of various kinds was permitted for a number of offences, and we often hear that Christian martyrs were subjected to it, and so, a little later, were heretics and worshippers of the old gods. The subjection of free men to torture during judicial inquiry crept in soon after the foundation of the Empire, and in the end became regular in certain cases.

As has been mentioned above, public fines were in early days partly inflicted by the magistrates without appeal, partly ordered by the *comitia* or *quæstio* after appeal, and partly recoverable by civil process. Although the legislation which ensued on the fall of the Decemvirs rendered it illegal for a prosecutor to propose a personal penalty along with a pecuniary fine, yet in cases of *perduellio* the condemned man's property was forfeited to the exchequer. When the *quæstio* was substituted for the comitial trial, this penalty ceased. The confiscation of Cicero's property was by special legislative act, and was irregular, but Cæsar introduced forfeiture for aggravated murder (*parricidium*), and Augustus for treason (*maiestas*); and, later, it usually followed upon *relegatio* and *deportatio*. In the case of other offences there was, under the Empire, as a rule, partial confiscation. The oppressive regulations connected with the Imperial *fiscus*, and the *lex Papia Poppœa*, which penalized celibacy, led to frequent and extensive deprivations of property.

It only remains to note that, while the Republic, in theory at least, treated all citizens as equal before the criminal law, the later Empire frankly respected persons. Subjects were divided into two classes, the 'more honourable' (*honestiores*), and the 'more humble' (*humiliores*) or plebeians (*plebeii*). The higher class consisted of national and provincial senators, knights (*equites*), veteran soldiers, and certain grades of Imperial officials. These were exempt from crucifixion, from death in the arena, from penal servitude, and from scourging and torture; and it was a privilege even of a local senator (*decurio*), after the 2nd cent., that the governor of the province could not put him to death without a confirmation of the sentence by the Emperor. The regular Imperial courts took a more extensive cognizance of crimes committed by slaves than was the case earlier.

LITERATURE.—The whole criminal law of Rome has been exhaustively treated by T. Mommsen in his *Röm. Strafrecht* (Leipzig, 1899), by which earlier works on the subject are, in the main, superseded. For the judicial system of the later Empire, with its complicated arrangements, the work of O. Karlowa, *Röm. Rechtsgesch.* (Leipzig, 1885) is most valuable. A brief summary will be found in the art. 'Judicium,' in Smith's *Dict. of Antiquities*[3], 1890–1891; more information in the artt. 'Judicium' and 'Præfectus,' in Daremberg-Saglio, *Dict. des antiquités*[3], 1886 ff.

J. S. REID.

CRIMES AND PUNISHMENTS (Teutonic and Slavic).—**1. General conceptions of crime and punishment.**—(1) *Teutonic.*—We learn from Tacitus that the practice of blood-revenge was an important element in the legislation of the Teutonic peoples of his time.[1] The word used to express the execution of such revenge appears in nearly all the Teutonic languages: thus, Goth. *wrikan, gawrikan*, A.S. *wrēcan* (Eng. 'wreak'), O.H.G. *rehhan* (Germ. *rächen*), 'avenge,' 'persecute,' 'punish.' The possibility of commuting blood-revenge to wergeld and fine is also mentioned by

[1] *Germ.* 21: 'Suscipere tam inimicitias seu patris seu propinqui quam amicitias necesse est.'

Tacitus,[1] and, as may be inferred from the affinity of A.S. *wēre*, M.H.G. *were*, 'wergeld,' with Skr. *vaira* (cf. BLOOD-FEUD [Aryan], vol. ii. p. 724[b]), it goes back to the primitive history of the Teutonic race. From that remote age come also the terms O.H.G. *buoza*, O.Sax. *bōta*, O.Norse *bót*, 'fine,' which are cognate with Goth. *batiza*, *batists*, 'better,' 'best,' and originally signified 'repair of damage'; likewise Goth. *skuldō*, *skula*, 'debt,' 'debtor,' O.H.G. *sculd*, *sculda*, A.S. *scyld*, which are all derived from Goth. *skal*, *skulum*, 'to be owing,' and mean literally 'the obligation to pay' (wergeld or fine), and then, figuratively, guilt in general, whether before God or man (cf. art. ARYAN RELIGION, vol. ii. p. 49[b]). For the Goth. *dulgs*, 'guilt,' etc., see below.

Even by the time of Tacitus, however, blood-revenge and its remission by wergeld and fine were treated as something more than the private affairs of the families concerned. The injured group, instead of exacting blood-revenge, might, as is implied in Tacitus,[2] refer its 'cause' (*Sache*; Goth. *sakjō*, O.H.G. *sahha*, A.S. *sacu* [Eng. 'sake'], O.Norse, *sok*) to the public assembly. The compensation fixed by this tribunal was regarded as in some sense a penalty, and the amount was shared between the injured party (or his relations) on the one hand, and the chief or (in republican States) the community on the other.[3]

If we regard the intervention of the public assembly as involving no more than an attempt on the part of the tribe to bring about a peaceful settlement of such feuds as were especially dangerous to the common weal,[4] then the germs of the procedure among the Teutons may be referred to a very remote age. In the main, however, the offences dealt with by the assembly (Goth. *maþl*, A.S. *mœðel*, O.H.G. *mahal*, O.Norse, *mál*) in its judicial capacity would be, alike in antiquity and in the time of Tacitus, those which are included under a term common to Greek and Sanskrit, viz. ἄγος=*āgas*, expressing an idea that must go back to the dawn of Aryan history (cf. art. ARYAN RELIGION, vol. ii. p. 50[a]).

Of the primitive Teutonic terms applied to crimes against the community or its tutelary deities, and punishable by the community, special account must be taken of the following three: (1) O.Sax. *sundea*, 'misdeed,' O.Fris. *sinne*, 'crime,' A.S. *synn*, 'transgression,' 'wrong,' 'enmity' (Eng. 'sin'), O.H.G. *suntea*, 'sin'; (2) Goth. *frawaúrhts*, A.S. *forwyrht*, O.Sax. *farwurht*, 'sin,' O.H.G. *farworaht*, 'sinful'; (3) Goth. *fáirina*, 'ground of accusation,' O.Norse *firn*, A.S. *firen*, O.H.G. *firina*, 'crime,' 'sin.' Of these the nearest equivalent to Gr. ἄγος=Skr. *āgas* are the first series (O.Sax. *sundea*, etc., probably related to Lat. *sons*, 'guilty'), and the second (Goth. *frawaúrhts* originally signifying 'being liable'; cf. Germ. *eine Strafe verwirken*, 'to incur a punishment'). In seeking to render the primitive connotation of these words, we must, of course, guard against introducing Christian ideas; yet the fact that the Church selected precisely these terms to express the conception of sin, *i.e.* transgression against God, shows that even in heathen antiquity they must have implied some notion of trespass against the gods. The third series (Goth. *fáirina*, etc.) has not as yet been satisfactorily explained. Some connect it with Lat. *per* in *periuro*, *perperam*, Gr. πέραν, and interpret it as 'a deed that goes beyond,' *i.e.* beyond the crimes usually entailing blood-revenge; others connect it with Goth. *fērja*, 'snarer,' O.H.G. *fāra*, A.S. *fær*, 'snaring,' and regard it as signifying an offence involving the element of secrecy. It is in any case certain, as appears also from the language of Tacitus,[1] that the Teutons had at an early period drawn relatively fine distinctions within the general idea of wrongdoing. Among the various groups of words thus employed are the forms with the prefixes *mein-* (esp. O.Norse *meineiðr*, A.S. *mán-áþ* [cf. O.Eng. '*manswear*'], O.H.G. *mein-eit* [Germ. *Meineid*, 'perjury']) and *missa-* (Goth. *missadēþs*, O.H.G. *missitāt*, 'misdeed'), implying respectively the attributes of *deceitfulness* and *perversity* in conduct. This deepened conception of wrongdoing is also indicated by the words Goth. *skanda*=O.H.G. *scanta*, 'disgrace'; O.H.G. *scama*, 'sense of shame,' and O.H.G. *lastar*, O.Norse *lostr*, 'error,' 'vice,' 'disgrace,' from *lahan*, 'to blame' (cf. also O.Irish *locht*, 'error').

The primitive Teutonic word for 'punishment' is found in the series: O.Norse *víti*, A.S. *wíte* (M. Eng. and Scots *wite*), O.H.G. *wīzzi*; it is related to Goth. *fraweitan*, 'avenge,' O.H.G. *wīzan*, 'punish,' and *far-wīzan*, 'punish,' 'banish,' and, as connected with the root *vid* (Lat. *video*), seems to be equivalent to the Lat. *animadvertere in aliquem*, 'to proceed against one.' A form peculiar to the Western Teutonic dialects is O.H.G. *haramscara*, A.S. *hearmsceare*, *i.e.* something imposed as a disgrace (O.H.G. *haram*, A.S. *hearm*=O.Slav. *sramŭ*, Russ. *soromŭ*, 'disgrace'). The O.H.G. *antōn*, *anadōn*, 'punish,' 'blame' (cf. O.H.G. *anto*, *anado*, 'indictable offence') is exclusively German, as are also the much later and still etymologically obscure words M.H.G. *strafe*, 'punishment,' and *veime*, 'vehme.'

(2) *Slavic.*—Turning next to the Slavs, we note that, apart from the treaties of Prince Oleg (A.D. 912; Jirecek, no. 1) and Prince Igor (A.D. 945; Jirecek, no. 2) with the Greeks, the earliest Russian document of a legal character is the collection of ancient prescriptive laws, decrees of princes, and Christian-Byzantine enactments, known as the *Russkaja Pravda*. This has been handed down in two forms, a shorter and a longer, and its original draft is attributed to Jaroslav (1019–54), by whose sons it was brought to completion (Jirecek, nos. 3 and 4). We have, accordingly, no direct information regarding the legislation of the earlier centuries, and must fall back upon *a posteriori* arguments and philological data. From the records of the ancient annalists we infer that in the period before the migration, *i.e.* in the early centuries of the Christian era, the social fabric of the Slavs was of a character which may be outlined as follows. The Slavic people were a congeries of clans and tribes, each group resting upon a basis of kinship.[2] At the head of each group stood the 'elders' (*starešina*), who are called *zupani* (from *župa*, 'domicile') by some foreign writers,[3] and ῥῆγες by others.[4] In the early centuries of our era the Slavs had borrowed their word *kŭnezĭ*, 'prince,' from the Teutons (O.H.G. *kuning*, 'king,' etc.). The form of government was purely democratic, and the decision of all questions rested with the public assembly.[5]

[1] *Germ.* 21: 'nec implacabiles durant [inimicitiae]; luitur enim etiam homicidium certo armentorum ac pecorum numero.'

[2] Germ. 12: 'Licet apud concilium accusare quoque et discrimen capitis intendere.'

[3] *Ib.*: 'equorum pecorumque numero convicti mulctantur: pars mulctae regi vel civitati, pars ipsi qui vindicatur, vel propinquis eius, exsolvitur.'

[4] Germ. 21: 'periculosiores sunt inimicitiae juxta libertatem.'

[1] *Germ.* 12: 'Distinctio poenarum ex delicto . . . Diversitas supplicii illuc respicit, tamquam *scelera* ostendi oporteat, dum puniuntur, *flagitia* abscondi.'

[2] Nestor, *Chronicle*, xii.: 'They lived each with his kindred (*rodŭ*), and upon his own territory, every one ruling over his own kindred.'

[3] Constantinus Porphyrogenitus, cap. 29: 'Principes hi populi habent nullos praeter zupanos, senes, seniores, maiores natu.'

[4] Maurikios, *Ars militaris*, xii. (ed. Scheffer, Upsala, 1664, p. 281): πολλοὶ ῥῆγες καὶ ἀσυμφώνως ἔχοντες πρὸς ἀλλήλους.

[5] Procopius, *de Bello Gothico*, iii. 14: τὰ γὰρ ἔθνη ταῦτα, Σκλαβηνοί τε καὶ Ἄνται, οὐκ ἄρχονται πρὸς ἀνδρὸς ἑνός, ἀλλ' ἐν

As among the Germans, the legal relation of the various clans to one another was based upon the laws of blood-revenge, of which the primitive Slavic designations are found in O.Slav. *mistĭ*, Russ. *mesti*, 'revenge,' and O.Russ. *vražĭda*, Pol. *wrożda*, etc., lit. 'enmity.' That the practice of blood-revenge persisted among the Slavic peoples until the dawn of historical tradition, and among the Southern Slavs, indeed, until recent times, has been shown in BLOOD-FEUD (Slavonic), vol. ii. p. 733 ff. There is no doubt, moreover, that in very ancient times the blood-revenge could be adjusted by means of the wergeld, and this holds good whether the Russ. term for wergeld, viz. *vira*, is of cognate origin with the above-mentioned Skr. *vaira* and A.S. *wĕre*, or was borrowed from one of the Teutonic dialects. If the latter alternative is the right one, the original Slavic term must be looked for in such words as Czech *hlava* (Russ. *golova*, 'head'), Pol. *wrożda*, or Serv. *krv* (Russ. *krovi*, 'blood'), all of which mean both 'homicide' and the 'compensation' paid therefor.

In process of time blood-revenge was gradually abolished, and superseded by ransom (Russ. *vykupŭ*). The *Russkaja Pravda*, which in its older form sanctions blood-revenge only in cases of murder or serious bodily injury, and confines it within certain degrees of kinship, brings us to this stage, as in other cases it substitutes for blood-revenge the *prodaža*, 'compensation,' 'money-payment for an offence,' lit. 'sale' (of vengeance?). The *prodaža* either fell to the chief alone, or was shared between him and the injured party. That for which compensation was paid was usually called *za obidu*, but it should be noted that *obida* is the common term for ἀδικία, and is not limited to its modern sense of 'insult.' The classical tongues were then drawn upon for words to express the idea of compensation; thus we find Gr. *epitimia*, originally 'penance imposed by the Church,' then 'compensation for any offence,' while from the sphere of Latin culture comes *penja* (Lat. *pœna*).

The question arises, however, whether in the case of the Slavs, as in that of the Teutons, the conceptions of crime and punishment in general did not spring from the narrower ground of transgression against the community and its tutelary deities. Of Slavic terms for 'crime' there is only one which is represented in all the various dialects, viz. O.Slav. *grĕchŭ*, 'sin,' a word etymologically obscure (cf. Berneker, *Slav. etym. Wörterb.*, Heidelberg, 1908 ff., p. 350 f.). It is certainly the case that this word, as used in a literary tradition under Christian influence from the first, is, in general, practically equivalent to 'sin against God,' precisely like the O.H.G. *suntea* and Goth. *frawaúrhts* (see above); it always signifies a transgression in the ecclesiastical sense, while a civil offence is called *prestuplénie*. It should be borne in mind, however, that, as *grĕchŭ* is found in all the Slavic dialects, it must go back to heathen times; and it is natural, therefore, to see in this word the Slavic (as in *suntea* or *frawaúrhts* the Teutonic) equivalent of the Gr. ἄγος = Skr. *āgas*. And since, as we saw above, all matters were referred for decision to the public assembly, and as there is also evidence for a primitive Slavic word signifying 'tribunal' (O.Slav. *sadŭ*), it will hardly be counted rash, the present writer thinks, to assume that here too, as among the Teutons (for the *concilium*, see above), and also the Macedonians,[1] the tribal assembly was a court which might deal *inter alia* with offences (*grĕchŭ*) against the community and its gods. That such infringements of the public interest are not mentioned in the *Russkaja Pravda* is explained by the fact that the latter is not, and does not purport to be, a complete legislative code.

In the Slavic languages there are two distinct groups of words signifying 'punish,' 'punishment': (1) the derivatives of a root *kar-* (O.Slav. and O.Russ. *karati*, Czech *kárati*, Pol. *karać*, 'punish'); and (2) those of a root *kaz-* (cf. Russ. *nakazátĭ*, 'punish,' *kaznĭ*, 'heavy civil penalty,' *káznitĭ*, 'punish,' Czech *kázati*, *kazniti*, etc.). The fundamental meaning of the latter seems to be something like 'banish,' perhaps in the sense of Gr. δίκη, δείκνυμι, 'law,' 'punish' (cf. Russ. *pokazátĭ*). The first-named group goes back to a primitive form **kara*, which is found, with or without derivatives, in many Aryan languages, and means 'army' and 'war' (O.Pers. *kāra*, 'army,' Lith. *kāras*, *karé*, 'war' and 'army,' Goth. *harjis*, O.Pruss. *karjis*, Irish *cuire*, 'army'). If this series be correctly interpreted as originally denoting 'the national army drawn up for war' (O. Schrader, *Reallexicon*, Strassburg, 1901, p. 349 f.), one is tempted to take the further step of connecting *karati*, 'punish,' with the *judicial* functions which we have conjecturally ascribed to the Slavic 'assembly' (cf. also κάρνη = ζημία in Hesychius).

2. Particular crimes and punishments.—As it cannot be expected that the present article should deal with the entire criminal law of the ancient Teutons and Slavs, the writer proposes simply to emphasize such aspects of the subject as may be judged of special importance for the readers of this work.

A. *CRIMES.*—Here it will be the writer's special object to determine which of these first developed a definite terminology. There is, unfortunately, a great lack of preparatory works in this field, particularly on the Slavic side,[1] so that only a few of the more important points can be referred to.

We saw above that the Teutonic and Slavic races from the very first drew a distinction between those offences which, as directed against the community, had to be punished by the community (*i.e.* the public assembly, and subsequently the State), and those which, bearing merely on the individual, were subject to the laws of blood-revenge or the private feud. Even at a very early period, however, we find that penal offences coming under the latter category, such as murder or flagrant theft, were really assigned to the former, so that it is impossible to make the distinction in question the principle of an exact classification of crimes. But we can hardly doubt that the species of crime referred to by Tacitus (*Germ.* 12), viz. cowardice in war and treason,[2] was always clearly discriminated from that which embraced personal assault, ordinary homicide, robbery, etc. The original Teutonic word for 'cowardice' would seem to be found in the O.Norse *argr*, A.S. *earh*, Lombard *arga* (a term of abuse), O H.G. *arag*, 'cowardly'; while an old term for 'treason' appears in O.H.G. *herisliz*, 'desertion from the army.' An O.Russ. term for a related crime was *perevětŭ* (cf. Russ. *otvětŭ*, 'answer,' O.Russ. *věce*, 'public assembly,' O.Pruss. *waitiāt*, 'speak'), 'secret treasonable communication of intelligence,' for which, of course, as for the crimes mentioned by Tacitus, the penalty was death (*Pskovskaja Gramota*, Jirecek, ix. 14).

We shall, therefore, treat of the various offences, apart from those against honour, under the follow-

δημοκρατίᾳ ἐκ παλαιοῦ βιοτεύουσι· καὶ διὰ τοῦτο αὐτοῖς τῶν πραγμάτων ἀεὶ τά τε ξύμφορα καὶ τὰ δύσκολα ἐς κοινὸν (public assembly) ἄγεται.

[1] Curtius, VI. viii. 25: 'De capitalibus rebus vetusto Macedonum modo inquirebat exercitus, in pace erat vulgi.' Cf., further, O. Hoffmann, *Die Makedonen* (Göttingen, 1906), p. 21.

[1] For the Teutons, Grimm, *Deutsche Rechtsaltertümer*, p. 623 ff., is still the best work available.

[2] 'Ignavi et imbelles, proditores et transfugae

ing heads: (1) crimes against the person, (2) crimes against property, and (3) crimes against morality.

(1) *Crimes against the person.*—It is creditable to the Teutons that they discriminated between killing in general and murder, *i.e.* (according to the ancient point of view) the wilful and secret (or, at least, stealthy) taking of human life—a crime denoted by the following series of words: Goth. *maúrþr*, O.Norse *morð*, O.H.G. *mord*, cognate with the Lat. *mors*, *mortis*, 'death,' though it should be observed that Ulfilas (Mk 15[7]) uses the term in connexion with Barabbas, who is said to have committed a *maúrþr* (*φόνος*) in the insurrection (*ἐν τῇ στάσει*), and, therefore, not in secret. The idea of secrecy receives its first distinct expression in the exclusively German forms compounded with *mūhh*, viz. *mūhhilswert*, *mūhhilāri*, *meuchelmord*; cf. O.Irish *formúigthe*, 'absconditus.' A somewhat different shade of meaning appears in the Slav. *razboj*, which is the usual word for 'murder' in several of the Slavic langnages, and which in Old Russian means both 'highway robbery' and 'ambuscade.' According to the *Russkaja Pravda* (Jirecek, iv. 4 and 5), one who kills another openly in a quarrel or at a feast may be absolved by money, but, 'if one sets out to commit *razboj* without any quarrel, the people shall not pay a fine for the *razbojnikŭ*, but shall surrender him absolutely, with wife and child, to the *potokŭ* and the *razgrablenie*' (for these punishments, see below). Of the numerous Teutonic terms for the infliction of bodily injury only the Frisian *dolch* need be referred to here. In the *Lex Frisionum* it is the most comprehensive term for wounding of all kinds. A familiar phrase is *dath und dolch*, 'killing and wounding'; cf. also the O.H.G. *noch tolk noch tôt*. *Dolch* comes from Goth. *dulgs*, 'debt,' related to O.Slav. *dlŭgŭ*, 'debt,' and O.Irish *dliged*, 'duty,' 'law,' 'right.' There was thus a term signifying 'debt,' 'obligation,' common to all the langnages of Northern Europe, and this acquired the special meaning of 'obligation to pay compensation for bodily injury,' and eventnally that of the 'injury' itself. Beyond this, however, no rigid distinction was made between homicide and wounding, and O.Norse words like *víg*, *sár*, and *drep* may signify either. In the *Russkaja Pravda* the only difference is that the fine for homicide is termed *vira*, while that for wounding is termed *prodaža* (see above): 'Should any one strike with the sword, but not cause death, he shall pay [to the prince] three *grivennicks*, and to the person injured one *grivennick*, and money for the doctor; but, if he does cause death, the *vira* must be paid' (Jirecek, iv. 24).

(2) *Crimes against property.*—Of all crimes the first to acquire a precise terminology was theft; this takes ns back to primitive Aryan times—cf. Skr. *stená-* and *tāyú-*, 'thief,' O.Iran. *tāya-*, 'theft,' O.Slav. *tatĭ*, O.Irish *táid*, 'thief,' and also Gr. *κλέπτω*, Lat. *clepere*, Goth. *hlifan*, and Gr. *φώρ*, Lat. *fur*. A form common to all the Teutonic dialects is represented by Goth. *stilan*, while all the Slavic languages have terms corresponding to O.Slav. *krada*, *krásti*, 'steal.' The fact that in all these languages the words connoting secrecy are related to the terms for 'thief,' 'theft,' 'steal' (*e.g.* Skr. *stāyát-*, 'secret,' to *stená-*; O.Slav. *taj* to *tatĭ*; O.Prnss. *aukliptas*, 'concealed,' to Goth. *hlifan*, etc.) clearly shows that it was the element of concealment which distinguished theft from open robbery (Goth. *biraubōn*, A.S. *réafian*, O.H.G. *roubōn*; and O.Slav. *grabla*, Russ. *gráblju*, Pol. *grabić*, etc.). As robbery, however, was not in primitive times connted dishonourable (cf. Schrader, *Reallex. s.v.* 'Raub'), and as, even in historic times, theft was often punished more severely than robbery, it is obvious that the ethical ideas of later ages must have nndergone a complete transformation. The horse-thief was punished with signal severity by Teutons and Slavs alike. It is recorded, *e.g.*, in the *Vita Ludgeri*, i. 26 (ed. Broner), that by order of Duke Wittekind of Saxony a horse-thief was put to death by stoning, while the above-cited passage of the *Pskovskaja Gramota* puts the horse-thief (*konevoy tatĭ*) and the incendiary (*zažigalnikŭ*, cf. O.Fris. *morthbrond*) on a level with the *perevětnikŭ* (see above): they are all liable to the penalty of death. In the ancient Teutonic codes the general term 'theft' comprises a large number of snbordinate species with distinct names, for which, so far as the present writer is aware, the Slavic codes furnish no eqnivalents. Thus we have O.H.G. *walaroupa*, A.S. *wælreáf*, 'stripping of corpses,' and O.H.G. *herireita*, etc., 'ravaging,' *i.e.* 'the perpetration of crime—especially robbery—in bands.' Closely allied to this is *Heimsuchung* (O.Fris. *hemseke*; in Scots Law, *hamesucken*), 'domus invasio in aliqnam familiam,' which, however, may be committed by a single person, and in that case resembles the modern *Hausfriedensbruch* (Lombard 'curtis ruptnra, quod est *oberos* facere').

(3) *Crimes against morality.*—In marked contrast to the class of crimes against property, the class embracing what would now be reckoned crimes against morality has a singularly meagre vocabulary. This is, of course, explained by the great change that has taken place in men's ideas regarding sexual morality (see also art. CHASTITY [Tent. and Balto-Slav.])—a change for which, alike in Teutonic and in Slavic countries, the way was prepared by the Christian Church. With reference, first of all, to *incest*, the Teutonic family of languages, so far as the present writer knows, has but one specific term applicable to this crime, viz. A.S. *sib-leger*, 'lying (*i.e.* cohabitation) within the family,' which points unmistakably to family exogamy. In Anglo-Saxon glosses the Lat. *incestum* is rendered *hæmed*, which, however, means *coitus* simply—lawful or unlawful, or even adulterous. No O.Russ. term for 'incest' (modern Russ. *krovomcśenie*, 'blood-mixing') is known to the writer. Any such term would, of course, bear the stamp of the Church. We find, for instance, that the metropolitan Johannes II. imposed penance upon marriages between persons as far apart as the fourth degree. In northern Europe, however, even in pre-Christian times, marriage within the family-group would doubtless be prohibited on economic grounds, although a moral repugnance to consanguineous unions would not then exist.

The crime of *adultery*, as was shown in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. pp. 499–503, could be committed only by a wife, a married man being held culpable only in case of intercourse with the wife of another. The terms applied to this offence are of very general connotation; *e.g.* O.H.G. *huor*, O.Norse and A.S. *hór*, signify any kind of illicit intercourse; similarly O.H.G. *ubarligida*, 'adulterium.' A higher degree of precision belongs to A.S. *forliges*, 'adulteress,' lit. 'she who lies amiss.' The oldest Russian designations are *smilĭnoje*, *zastavanie*, *liobodějanie*, etc.—all, of course, of ecclesiastical origin. The vernacular name is *izmena*, 'treason,' 'unfaithfulness.' The punishment of this offence among the Russian peasantry—the primitive *vyvodŭ*—is described in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. p. 501; it is identical with that inflicted by peasant criminal law upon the female thief.

Finally, *rape* was in all probability regarded originally as a species of robbery—of the abduction of women. In the glosses to the *Lex Salica* the phrase *per virtutem moechari*, 'to violate by force.'

is rendered by *thiuuerōfen*, *theorōfa*, 'women-stealing'; cf. also O.H.G. *nōtzogōn*, 'to abduct forcibly,' *nōtnumft*, *nōtnëman*, A.S. *nydnœme*, O.Norse *nothtekt* (*nōt* is lit. 'force'). In Old Russian the term *nasilie*, 'violence,' is also used for the crime of rape.

It would be interesting to know the Teutonic name for the *corpore infames*, who, according to Tac. (*Germ.* 12), were punished by being submerged in a marsh. It seems probable that the reference is to sodomy (O.Norse *sorðinn*, *stroðinn*, 'muliebria passus'). There seems to be no recorded evidence regarding the Slavic practice in this respect.

B. *PARTICULAR PUNISHMENTS.*—Here we distinguish (1) capital punishment and outlawry, (2) corporal punishment, and (3) abridgment of personal freedom.

(1) *Capital punishment and outlawry* (banishment).—That the penalty of death, as decreed by the public assembly, was known to the Teutons is shown by Tac. (*Germ.* 12).[1] The commonest form of execution was hanging, and the root-word denoting this penalty is common to all the Teutonic languages: Goth. *galga*, O.Norse *galge*, A.S. *gealga* (Eng. 'gallows'), O.H.G. *galgo*. In ancient Russia likewise, according to the passage already cited from the *Pskovskaja Gramota*, the perpetrators of more atrocious crimes were executed by order of the public assembly (*věče*) or of the chief, and in this case also resort was usually had to the gallows (Sreznevskij, *s.v.* 'Povešenije, Povešati se').

Among the Teutons, 'outlawry' (banishment, exile), *i.e.* expulsion from the tribe, was in its effects practically equivalent to capital punishment. The most ancient word applied to a person so proscribed is retained in the *Lex Salica* as *wargus*, 'hoc est *expulsus de eodem pago*' (cf. Goth. *gawargjan dáuþau*, 'to condemn to death,' O.Norse *vargr*, 'wolf' and 'outlaw,' A.S. *wearg*, 'the malefactor sentenced to the gallows or to outlawry,' etc.). He was altogether outside the law (O.Norse *útlagr*, A.S. *útlagh*), and any one who met him might kill him, and was, indeed, bound to do so. This penalty was often combined with 'laying waste' (O.H.G. *wuostan*); *i.e.* the members of the judicial community assembled together in order to burn or demolish the criminal's house and property. The term 'outlawry,' supplemented thus by the idea of ravage, corresponds with the *potoku* or *potokŭ* and *razgrablenie* of the oldest Russian legal documents. The latter word means 'plundering'; the former should possibly be translated 'expulsion,' 'banishment' (Russ. *tocitĭ*, lit. 'to cause to flow,' *tekù*, 'flow'). The penalty affected not only the criminal, but his wife and children also, and was inflicted for murder with robbery, horse-stealing, arson (see above, p. 303[b], and Sreznevskij, *s.v.* 'Potokŭ'), and similar grave crimes.

For the special objects of this article it is a question of great importance whether the execution of criminals among the Teutons was—as the foregoing observations regarding their conceptions of crime suggest—a religious ceremony, *i.e.* whether at bottom it was designed to operate like a sacrifice in appeasing the wrath of the gods. The affirmative has the support of such distinguished writers on the history of law as H. Brunner (*Deutsche Rechtsgeschichte*, i.[2]) and R. Schröder (*Lehrb. d. deutschen Rechtsgeschichte*[5]), though E. Mogk (*ASG* xxvii. [Leipzig, 1909] 17) has recently called in question the practice of human sacrifice among the Teutons. In any case there is the evidence of a passage in the *Vita Wulframi*[1] to show that among the Frisians executions were performed at the festivals of the gods (cf. Müllenhoff, *Deutsche Altertumskunde*, Berlin, 1870–1900, iv. 244). As regards the Slavic practice the present writer has no evidence to offer.

(2) *Corporal punishment.*—Punishments involving mutilation of the body—cutting off the nose or ears, severing the hands or feet, blinding the eyes, or even severe flogging—in so far as they were not simply preliminary to the death penalty, were in all likelihood introduced at a relatively late period. In primitive times, among Slavs and Teutons alike, even the infliction of bodily injuries was dealt with by private revenge, and the practice survived till the time of the *Russkaja Pravda* (cf. Jirecek, iii. 2: 'or if he has been beaten till blood comes or till he is blue, it is not necessary for him—this man—to seek an eye-witness. . . . If he cannot avenge himself [*mĭstiti*], he shall receive for the crime [*za obidu*; see above] three *grivennicks*, but the doctor [receives] the wages'). Such vengeance would, of course, be carried out according to the principles of the *lex talionis*, and cannot, therefore, be regarded as punishment in the technical sense. In course of time private revenge for wounding was superseded, both among the Teutons and among the Slavs, and partly in consequence of their mutual relations, by a regular system of fines.

A more difficult question to decide is when and how corporal punishment found its way into the ancient codes. On the one hand, such penalties were probably first of all inflicted upon slaves and serfs, who, of course, could not pay the regular fine. The *Lex Frisionum*,[2] for instance, recognizes corporal punishment only in two cases, viz. (*a*) as merely antecedent to the penalty of death, for those who had been taken in the act of robbing a temple (cutting off the ears and castration), and (*b*) as meted out to a delinquent serf whose master refused to pay the fine. Similarly the *Russkaja Pravda* (Jirecek, iii. 16): 'if a serf (*cholopŭ*) strikes a free man, but takes refuge in the house, and his master refuses to give him up, then let a[nother] serf be taken, and the master shall pay twelve *grivennicks* for him. But if afterwards the man who was struck finds him, he shall beat him' (*da bĭjutĭ ego*). So far as the present writer knows, this is the earliest record of beating as a legal penalty in Russia. On the other hand, the credit of introducing corporal punishment must be assigned to the clergy, as is proved with special clearness in regard to Russia. In point of fact, the clergy suffused the conception of punishment with new ideas, such as, *e.g.*, that it amends the evil will, deters others, and the like. For the attainment of these ends they believed—after the example of the Byzantine legislation, which had elaborated this system with great fullness—that such bodily penalties as blinding, severance of hands, etc. (many of them on the Mosaic principle of 'an eye for an eye'), and flogging formed the appropriate means. According to Jaroslav's *Ustavŭ*, —the ecclesiastical counterpart to the *Russkaja Pravda*,—a sorceress, *e.g.*, must be punished (*kazniti*) after conviction, and she must further pay a fine (*penja*) of six *grivennicks* to the metropolitan. The nature of the *kazniti* appears from a warrant of the Russian metropolitan Johannes II. (1080–89), according to which the officers shall 'smartly chastise' (*jaro kazniti*), *i.e.* flog her, 'but

[1] 'Proditores et transfugas arboribus suspendunt, ignavos et imbelles et corpore infames coeno ac palude, iniecta insuper crate, mergunt.'

[1] 'Mos erat . . . ut corpora hominum damnatorum in suorum solemniis deorum . . . saepissime diversis litaret modis: quosdam videlicet gladiatorum animadversionibus interimens, alios patibulis appendens, aliis laqueis acerbissime vitam extorquens, praeterea et alios marmorum sive aquarum fluctibus submergebat.'

[2] Cf. R. His, *Das Strafrecht d. Friesen im Mittelalter*, Leipzig, 1901, p. 199.

not to death, nor cut off her limbs.' It is a well-known fact that under the power of the clergy, the Czars, and the serf-holders, flogging became the recognized mode of punishment in Russia, and it is curious to note how a punishment so degrading, and, originally, quite unknown, should in time come to be practically a public requirement.

Less than a generation ago a Russian village would furnish a scene like this: a sedate and well-to-do peasant, the head of a house and the father of a grown-up family, unshrinkingly lays himself on the ground in order to receive his tale of lashes, and when the business is over, he trudges homewards, conversing upon trifles with his companions in punishment (of whom there might be thirty on a court day) and smoking cigarettes (cf. Glebŭ Uspenskij, *Vlasti zemli*, 1882, p. 50 ff.). It is also recorded that a Russian peasant actually asked for twenty-five strokes of the rod, and that, when he had got them, he said: 'Thank you, that did me good. I was drunk yesterday, fooled away fourteen roubles—all I had—in the *kabak*, and ill-used my wife. I have now got my deserts' (V. Hehn, *De moribus Ruthenorum*, 1892, p. 214). Another, who had just been beaten and was asked why, answered: 'For a good reason, *bátjuška*. A man is not punished for trifles in our place. No such thing occurs here—no, Heaven forbid! We have not a master of that kind. We have a *master*. Such another master is not to be found in all the district.' 'Old Russia!' comments Turgeniev, who relates the incident (*Zapiski*, 1898, xiii.).

(3) *Punishment by abridgment of personal freedom.*—The law-breaker might have his liberty restricted either by enslavement or by confinement. The former method was resorted to at an early date, but for the most part only as the concomitant or sequel of other penalties, and need not, therefore, be further considered here. Imprisonment, on the other hand, alike in the Teutonic and in the Slavic area, is of relatively late origin, as is evident from the fact that Goth. *karkara*, O.H.G. *charchări*, A.S. *carcern*, are derived from Lat. *carcer*, and the Russ. *tjurĭma*, 'prison,' from Germ. *Turm*. In Russia the introduction of penalties involving the abridgment of personal freedom was likewise due to the influence of the Church. The most ancient mode of restraint was 'putting in the stocks'; cf. the Russ. *kolódka*, denoting two boards with a hole for the foot; *kolódnikŭ*, 'convict,' and Pol., Russ., and Little Russ. *duby*, 'shackles for the feet,' from *dubŭ*, 'oak,' 'oak-log.'

Law); *Encyclopœdic Dictionary* [Russian], xxviii., St. Petersburg, 1899 (containing a treatise by M. Dijakonov on the historical development of the general conceptions of crime and punishment in ancient Russian law; and one by V. Necayev on the criminal law of the peasantry, with an ample bibliography); J. J. Sreznevskij, *Materials for a Dictionary of Old Russian* [Russian], St. Petersburg, 1893 ff.; L. K. Goetz, 'Das russische Recht,' *Zeitschr. f. vergleichende Rechtsgesch.* xxiv. [1910] 2, 3.

O. SCHRADER.

CRIMINOLOGY.—1. Penal codes.—The actual extent to which any penal code may be made to contribute to the repression of crime depends much more on the justice and equity of the principles on which it is founded, and the firmness with which it is administered, than on the severity of its provisions. Those who are familiar with the history of crime in Great Britain will remember that in the 18th cent., when capital punishment could be inflicted for a hundred offences other than murder, crime flourished exceedingly. Similarly, in the early part of the 19th cent. crime was rampant, and a further impetus was given to its growth by the uncertainty of the death penalty. Thousands of death sentences were passed, but only a small proportion of them were carried out, so that offenders came to regard the sentence with contemptuous indifference. Again, in the latter half of the century the long and severe sentences of penal servitude, which seemed to prisoners themselves, as well as to many others, vindictive in aim and effect, had no repressive influence on crime, the numbers of those in penal servitude at that time being more than three times as great as in 1910. No real and steady fall in crime took place till in 1879 the Summary Jurisdiction Act put an end to these long sentences. Almost simultaneously a uniform system of prison administration and treatment was inaugurated, and all local prisons were handed over to the State. The coincident fall in crime which began then, and has steadily gone on since, may fairly be ascribed, to a large extent, to these two reforms, which may be said to combine mitigation of penalties with uniformity and certainty of application. From time to time the penal treatment of offenders oscillated between extreme severity and extreme laxity; but, when both these principles were in force at the same time—denoting instability of administration—the very worst results ensued. About the year 1830, when capital sentences were freely passed and not inflicted, the convict population of Great Britain, with its population of 15 millions, consisted of no fewer than 50,000 persons, some in hulks and prisons at home, others in penal settlements and Colonies. The cost of maintenance, which was enormous, was surpassed only by the futility of the system of punishment. Subsequently the Penal Servitude Act of 1853, and the refusal on the part of our Colonies to receive convicts, put an end in Great Britain to transportation. The number of convicts meanwhile declined, till in 1852 it was 17,000; and in 1878, when the local prisons were handed over to the State, it amounted only to 10,000. At present (1910) the number is about 3000.

Recrudescence of severity in punishment occurred now and then, as, for instance, when flogging was freely resorted to in order to put down garrotting; but on the whole the tendency of our criminal law, since the Prison Act of 1865 at all events, has been in the direction of leniency in prison treatment; and the results have been satisfactory. To a large extent this spirit of leniency may be regarded as in itself a reflexion of the improvement in the character and conduct of our people, which, again, depends largely on the general advance in civilization, together with the spread of education, intelligence, temperance, and other influences designed to elevate the people. Such influences have a much larger share in *preventing* crime than any punitive measures can have in repressing it; nevertheless, a penal code of some kind is an unhappy necessity for every civilized State. Imprisonment in some form, therefore, appears to be the only means at our disposal, short of capital punishment, for the punishment or restraint of those persons whose conduct renders them a danger to society.

2. Foreign penal systems.—A glance at the penal systems in other countries—that of our own being reserved for consideration later on—is of interest in connexion with the subject. England, to her shame, too long neglected the warnings of the far-seeing John Howard. The overcrowding of her gaols, the indiscriminate herding together of criminals of both sexes, and of all ages and varieties, and the total neglect of the authorities to bring any religious or moral influences to bear on the unhappy inmates, produced an inevitable crop of profligacy, moral and physical corruption, wide-spread disease, and death. When at last she woke up, and found that proper sanitary buildings and separation of prisoners were essential to reform, and when Pentonville Prison was built in 1842, an impetus was at once given to sane administration. Since then England has been amongst the foremost of

the nations in the search for some equitable, moral, and scientific scheme of prison treatment calculated to reconcile the rights of society with the rehabilitation of the criminal so as to enable him to return to a law-abiding life. It is, however, to the United States that the palm must be given for progressive experiments in this direction. No methods of reform and no social experiments appear too costly or troublesome to the indefatigable philanthropists of America who take up this subject, if only they are reasonably likely to reclaim criminals. Starting with the root-idea, which may be over-sanguine, that no one is absolutely irreclaimable, they have established at Elmira, and other prisons, or 'State Reformatories,' a system based on *the indeterminate sentence*, combined with conditional liberation on parole when the prisoner gives satisfactory evidence of reform. A somewhat strict discipline, with drill of a military character; instruction in skilled industries; moral, religious, and secular education, united with various kinds of amusement, are expected to alter character, and turn the subjects into good citizens. Further, every one is enabled to profit pecuniarily by his own work, and is expected to demonstrate his fitness for discharge; but he must first find employment. Probation officers supervise and help those on parole, and misconduct leads to forfeiture of licence.

From this sketch of the system, which is a type of others, it will be seen that Elmira is practically a reformatory for adults, who are received up to the age of thirty. All are known as 'inmates,' not prisoners, though they are under sentences of from one to a possible twenty years. Considerable success is claimed for the Elmira system, but statistics are not convincing as to the number of reclaimed cases, originally alleged to be 80 per cent. According to a report of the New York Prison Association, which recently analyzed the cases on parole from Elmira, 'probably not over 70 per cent of men paroled can be classed as reformed,' while some other authorities put the percentage at 50. 'Society is best protected,' they say, 'by the reform of the criminal.' One point emerges, however — the actuality of the *incorrigible*, of whose too frequent appearance at Elmira they make complaint. The tracing and following up of the reclaimed is difficult in so vast a country, with unlimited facility for travel.

But, if the United States has some of the best and most progressive prisons, it has also many of the worst in Christendom. Race prejudice against the negro, who is held to be either irreclaimable or not worth reclaiming; Labour Laws which, in many of the States, either prohibit altogether or restrict the sale of prison-made goods, and so keep prisoners idle, or employed in unproductive work; constant changes of the wardens or governors as political parties come and go; public apathy and parsimony in regard to prisoners; and a general desire to make prisons pay their way— these are the conditions which make the state of most of the county and city gaols fall very far short of modern ideals. The late Secretary of the Howard Association, Mr. Edward Grubb, made a tour of some of these prisons in 1904, and found them very unsatisfactory, and in startling contrast to the State Prisons and Reformatories. He says:

'These institutions (county and city gaols), designed for the most part for prisoners awaiting trial, and for the serving of short sentences by misdemeanants, are, with little exception, far from satisfactory, even in the Northern States. The best I saw was at Boston. At Indianapolis, and at Cleveland and Mansfield (Ohio), to say nothing of the South, the gaols were, for the most part, far from clean, and the prisoners were shut up together, with full opportunity to corrupt each other. Either they had no occupation (at Mansfield they were engaged in playing at cards), or, if employed (as at the House of Correction at Cleveland), they were working in a very half-hearted manner.' He describes the state of the convict camps as teeming with abuses—indiscriminate association, negro women 'constantly having babies,' 'terrible cruelties and even murders,' and bad sanitary conditions (see the pamphlet published by the Howard Association).

Even in the better class prisons, many of the privileges extended to prisoners seem to breathe a freedom which would probably be unsuitable for our class of habitual. Buying and selling, the free use of tobacco for smoking and chewing, card-playing, cinematograph exhibitions of prize-fights, and so on, are too advanced expedients for moral improvement to appeal to British sentiment.

Like everything else in the United States, crime is on an immense scale. A country so huge in itself, containing such a varied population, black and white, and receiving every year hosts of immigrants from everywhere, is, in the nature of things, a hunting-ground for criminals. Further, it has almost as many penal systems as it has States, so that it is difficult to estimate the general effect on crime of any special penal measures. The Americans themselves, however, are drawing public attention to the appalling list of murders committed—not only to the large proportion that go unpunished, but also to the small percentage of cases in which the death penalty is inflicted after a conviction has been obtained. They are also holding an inquiry into their methods of administering the criminal law, which hitherto have been so slow and uncertain as to lead to the belief that crime is getting out of hand. They seem to be already on the way to find out that a firm administration of criminal law is essential to the repression of crime.

The penal systems in force in Continental countries differ very widely from one another. Several, like Russia, France, and Portugal, adhere to transportation as a punishment for the more serious kinds of crime, although Great Britain discarded this penalty as costly and ineffective more than half a century ago. The principle of cellular confinement on the separate system, which was established by law in England in 1865, finds favour with all European nations, as it does with all British Colonies, and with progressive Japan; but in practice it is by no means universally adopted. The magnificent modern prison built by France at Fresnes has been designed for *separation*, but there is considerable scope for association also, in order to prevent overcrowding. It may be said generally that all the European nations which have built prisons in recent years have designed them with a view to carrying out separation. In Belgium, where much public attention has been given to prison treatment and the repression of crime, cellular confinement has been carried to its utmost limits. Prisoners have been kept in solitude compulsorily for ten years, after which they have been offered a modified form of association, which many are said to have refused, so that instances are on record of over twenty years of this kind of seclusion. Of late there has been a revulsion of feeling on this question, and the new school of penologists are now working for drastic reform. Russia, too, carries out the Belgian system in several of her prisons. Austria-Hungary was said to have had only 15 per cent of her prisoners under the separate system a few years ago, although approving of that system in theory. Many of the new prisons are of a palatial character, but none of them surpasses our own in sanitation, and we possess an undoubted advantage in having the whole prison system of the country under the single control of the State—an advantage which has been found very difficult of attainment in the other countries of Europe, and practically impossible in America.

The results of the various systems are very difficult to disentangle from the official statistics

supplied by each country. For purposes of comparison with our own results it has been found impossible to arrive at any definite or valuable conclusions. If murders only were reckoned as a test of the amount of crime, Great Britain would certainly rank high ; but this would give a false idea of the extent to which other serious crime prevails. Offences against the person are much more common in some countries than in others, while offences against property form the bulk (as in our own country) of the crime in others. There is, however, one conclusion which can be drawn from the general survey. Recidivism is rampant everywhere. In France it has been specially prevalent, and the recrudescence of crime, particularly amongst the Apaches, or hooligan class of youths, who commit murderous assaults on police and others, is of sinister omen, and has already led to a revival of capital punishment. Whether or not these phenemena are to be regarded as only temporary manifestations of a prevailing state of general social unrest, of which we have had recent examples in the strike-riots in France, Germany, and Wales, it is certain that a heavy responsibility rests on those who preach anarchy. It is well they should remember that crime is a much worse social evil than discontent, and that they are probably stimulating the one by encouraging the other.

3. No universal system of punishment practicable.—Although the study of crime has already attained to the doubtful dignity of an 'ology,' and learned experts of most of the civilized nations have been laying their heads together in congress for several years with a view to investigating its causes and devising remedies for an evil from which they all suffer alike, it cannot be said that criminology is yet by any means to be reckoned amongst the exact sciences. Human nature with its faults and foibles may be the same all the world over, but the different phases of criminality, the different moral standards, and the different national temperaments which characterize various races, all tend to modify our pre-conceived ideas as to the possibility of repressing crime, as a general evil affecting the world at large, by any remedy, or by any set of remedies, whether preventive, reformatory, or punitive in intention, which can be held to be of universal application. It is well to understand that there is no royal road to the solution of complicated problems of this kind. We are in the habit, from time to time, of instituting more or less disparaging comparisons between our own methods and those of our neighbours in matters of social reform. Introspection of this kind is undoubtedly a national characteristic that is highly advantageous, tending, as it does, to check complacency and stimulate progress; but we must not lose sight of the fact that many features of the judicial procedure and the penal systems in force amongst Continental nations are utterly foreign to our ideals, and ill-adapted to our use. The well-known practice, for instance, of 'interrogating' accused persons which, in our eyes, amounts to heckling of a particularly cruel and vindictive type, is so foreign to the basic principle of our criminal law, which holds every man innocent until his guilt is proved, that we could not, if we would, fit so incongruous a practice into our scheme of things. In the same way, the life-long periods of solitude and seclusion in vogue with some Continental nations, by the side of which our brief terms of mitigated separate confinement seem unheroic and contemptible, are so repugnant to our national sentiments of justice and humanity that we decline even to look at them.

It has been said that every country has the government it deserves. The dictum applies with equal cogency to its laws, to its administrative machinery, and to the penal and disciplinary measures which it deems necessary for the guidance and control of its citizens. We may assume, in fact, that every country knows best the main lines on which its subjects can be kept in order ; and it will be found that national habits and customs, national sentiment, and national temperament are factors which have much more to do with the shaping of penal systems and codes of moral discipline for peoples than the degree of civilization to which these peoples have attained. We find, accordingly, that the civilized countries generally differ very widely from one another in the matter of criminal law administration, that the range of variation is almost as great as that which distinguishes civilized from uncivilized methods, and that each country seemingly adopts the practice which to a large extent may be said to reflect the genius and character of its people, just as it selects the guillotine, the electrocution chair, or the rope for the infliction of the death penalty. It is probably for these reasons that International Prison Congresses do not waste their time and energies in the fruitless search for an ideal and universal penal system ; but seek rather to improve existing systems, or to discover some general principles, or some details in working, that may be adapted to those which are already in force, and which are presumably suited, in their main outlines at all events, to the countries in which they have had their origin and development —all due weight being given, on the other hand, to the consideration that indigenous plants do not always thrive in foreign soil.

It would appear, then, that very little is to be gained by comparing or contrasting one penal system with another when they are not really parallel, and much less by trying to glorify one at the expense of another. We may feel convinced that our own system, which has been evolved from our experience by steps so deliberate that they never can be said to approach rashness, is fairly adapted to our present-day requirements ; but it is very doubtful whether it would meet the wants of different states of society in other countries, or even in our own under the social conditions that prevailed half a century ago. The criminals of that period would undoubtedly have been attracted, rather than repelled, by the comparative amenities of life in a modern prison. Hosts of them would have taken a long-wished-for rest in so comfortable a retreat, seeking compensation, in a restoration of their health and energies, for any inconvenience or boredom they might have had to put up with while undergoing moral repairs. It must seem strange to those who are unfamiliar with our British moods of self-depreciation and pessimism that the very confident theorists who are never tired of reminding us that we are on an entirely wrong track, and that our system is a fiasco, should practically all be found in our own camp. Outsiders take by no means so disparaging a view. Recognizing, as they do, the enormous reduction that has taken place in recent years in our number of criminals, they look somewhat askance at the rhetorical explanation, which is frequently resorted to in similar cases, that improvement has come 'in spite of the system' ; they regard the system, as a matter of fact, with a much more favouring eye. Further, it is a matter of some significance that, after due allowance has been made for the effects of family tradition, our progressive and up-to-date younger brothers in Australia, who are neither visionaries nor dreamers of dreams, follow very closely our procedure and practice. The fashionable outcry against modern penal treatment is really traceable to the fluent pens and forensic accomplishments of ex-criminals, who by their

ex parte allegations seem to have captured the greater part of the press and a considerable portion of the general public.

In *Crime and Criminals* (1910) the present writer made an effort to stem the tide of delusion and misrepresentation on the subject, but it still advances. The basis of this pessimistic outcry is a complete fallacy. Prison treatment, we are told, is a failure because 'it neither deters nor reforms the habitual criminal.' But all the authorities are agreed that the distinguishing characteristic of the habitual criminal is that he actually prefers his vocation to the humdrum alternative of a steady and active working life. The writer's own intimate and first-hand acquaintance with the living type enables him emphatically to confirm this discouraging conclusion. Whether the habitual criminal's vicious propensities are innate or acquired, it is certain that his habits, when he reaches maturity as we find him in prison, are practically ineradicable. The spirit of the road seems to be in him, and his predatory instincts have already developed into fixed habits, so that he is, to all intents and purposes, a hopeless incorrigible. Here lies the difficulty. No system yet invented can fairly be expected to alter a person of this type. To correct the incorrigible appears to be a feat analogous, both in sound and sense, to squaring the circle. We are not, however, without some means for dealing with him. If methods of cure are not feasible, prevention and restraint are still open to us. The *Borstal system* of treatment for the incipient habitual, and *preventive detention* for the veteran, typify these two modern prison expedients respectively. For the present, however, the writer is more concerned to point out the fallacious reasoning on which the theory of failure is based. No notice whatever is taken of the important fact that the number of habitual criminals at present *in business* has been brought within such manageable proportions that it may quite reasonably be said that we have them in a ring fence. The same set pass in and out of prison with apparently unvarying regularity, and, for the most part, for the same kinds of offences. Specialization in crime, indeed, has become so marked in our time that the police authorities of Scotland Yard claim that they can, in most instances, tell, from the manner in which a clever burglary or robbery has been planned, the name of the expert who committed it. One might fairly expect that the reduction of a standing convict population of 10,000 persons in 1880 to 3000 persons in 1910 would be considered a respectable achievement under any system, and would give rise to some doubt, if not disbelief, in the minds of thinking people, as to the truth of the failure theory. The current of general opinion, however, if we are to judge from the press, sets in quite the opposite direction; and we are led to believe that we are going from bad to worse because habituals and incorrigibles, although they decrease steadily enough in numbers, decline to amend their ways, or to vanish *en masse* into the obscurity of some honest calling. It is well we should cherish no illusions on this subject. Our repressive measures stand in constant need of tightening up for this intractable class of criminal, and our reformatory methods in like manner need constant widening in scope, if we are to arrive at *better* results; but no conceivable combination of them will ever succeed in totally eliminating those obnoxious persons from the community. In regard to the system itself, it is not claimed that the mere absence of failure denotes the presence of perfection. It is quite conceivable, and perhaps even probable, that more good might be accomplished in other countries by a different set of principles and machinery; but it *is* claimed that our own system has produced fair practical results, and that it is better suited to our national requirements than any exotic system with which we are acquainted.

4. Theories of punishment.—But, if public opinion is unsound in regard to the treatment of the criminal, public sentiment is maudlin and unhealthy on the theory of punishment. A general tendency to minimize almost to vanishing point individual and personal responsibility, and to set up in its stead the fantastic substitute of a collective and huge unlimited liability company, comprising the whole body politic, is a pernicious feature of our time. Surely a more demoralizing doctrine, destitute alike of the sanction of religion, morality, law, and common sense, has never been promulgated for the edification and guidance of a free and self-respecting people. Those who aspire to regenerate society by this egregious piece of social philosophy are hugging a very vain delusion. It abolishes at a stroke the exercise of free will, without which society could not hold together, and it is quite outside the realm of logic. If any sane individual in the community be permitted, even in the name of philosophy, to divest himself of his social and moral responsibility by the simple process of becoming a criminal, it is obviously open to any, or all, of the other individuals of whom society is composed to claim a similar privilege. A premium is thereby placed on evil-doing, and every man is tempted to become a law unto himself. The practical result of such a relaxation of our moral code would undoubtedly be that the maintenance of social order would be rendered difficult, if not impossible; we should find ourselves retracing our steps in the direction of barbarism; and, incidentally, we should find the world a distinctly unpleasant place to live in.

It is not to be supposed, however, that the theory of personal responsibility is to be applied ruthlessly to those who are, from mental deficiency, actually incapable of fully appreciating the significance of their offences, and who are, to this extent, not answerable for unsocial conduct. It should be the aim of any humane system to apply disciplinary methods very sparingly, if at all, to this unhappy class, who at present amount to 3 or 4 per cent of our prison population. Hitherto these hapless offenders—'weak-minded, but not insane,' in the language of the Courts—have been a source of much anxiety to the magistrates who have had to deal with them, as well as to prison authorities who are constantly receiving them on short and useless sentences. In prison they have been treated under a very modified form of discipline, and efforts have been made to improve their conduct and condition. Medical protection has shielded them from actual physical detriment, but the atmosphere of a penal institution is by no means conducive to their moral improvement, nor is it one in which they should be compelled to live even for short periods. The Royal Commission on the Care and Control of the Feeble-Minded has fully recognized this weak spot, and legislation is now urgently needed to carry out their recommendations.

It will be seen from the foregoing that the principle of vicarious responsibility, if applied in practice, would not tend to the repression of crime. Nevertheless, it is vehemently insisted on at street corners, in the pulpit, and in the press, while the dramatic possibilities of impulsive criminality and temporary irresponsibility are exploited in sensational drama. Many good and benevolently-minded people seem to get periodically conscience-stricken on behalf of the criminal as a victim of circumstances. Not only are they willing to bear the burden of their own small vices, but also, in their emotional fervour, to take up his larger ones.

and condone his crimes, however heinous. They almost apologize to him for his existence as being a victim of heredity, and palliate his misdeeds on the grounds of his bringing up, so that every vulgar felon comes to think he is in reality a very ill-used person. Criminals are consequently quite ready to adopt the extenuations and excuses which are urged in their behalf, not only by their legal advocates, but also by theorists in criminology. In the writer's recollection, twenty or thirty years ago, 'poverty' and 'drink' were the two main causes given by prisoners for their downfall; but now these pleas have gone out of fashion, in favour of unemployment, parental neglect, slum-life, and financial embarrassment. That such social evils exist to a deplorable extent at present—although twenty years ago they were much worse and much more common—no candid inquirer can deny; but that they have had any material influence on the manufacture of the *professional* criminal who selects his own calling, or, as he himself might put it, 'chooses his own pitch,' is a very doubtful proposition. A prolonged study of the actual living specimen has led the writer to the conclusion that the professional criminal is possessed of qualities which would enable him to emerge with ease and credit from any, or all, of these alleged social disadvantages, if only he had the will to make the attempt. The inexperienced, occasional offender is much more handicapped by those conditions, and he is not generally gifted with the staying or enterprising characteristics of the old hand. It is much more probable that the genesis and development of the latter type are traceable to a gambling spirit which characterizes his class. In his spells of freedom the race-course is the special scene of his recreation. Familiarity with risks breeds contempt, and he gambles with liberty much more light-heartedly than others do with stocks and shares. But the cure of social evils which are so wide-spread is of necessity a very slow process. Their total extinction, if such a thing were possible, would unquestionably tend to the *prevention* of much crime and human suffering; but there would still be left a substantial residue of crime unconnected with these social evils, and society would be compelled to protect itself from this by the infliction of some kind of punishment. Even in the ideal Socialist community of the future, when it gets into working order, this problem is not unlikely to crop up, and compel attention; but *meantime* what are we to do with the persistent offender?

Another strange theory which is promulgated by the apologists of the criminal, and which bears on the ethics of punishment, has a somewhat captivating effect on short-sighted reformers. There is, we are told, something immoral, or unfair, or at least pusillanimous, in inflicting punishment on a guilty person in order to deter others from crime. Except on the grounds that the guilty person is punished with excessive severity, or beyond his deserts, this specious theory cannot be sustained. If we beg this part of the question, as is generally done for the purposes of the argument, the immoral and unjustifiable nature of the proceeding is clear enough. Otherwise the practice is both rational and equitable. The actual criminal suffers no *wrong*, the strictly non-criminal person is totally unaffected, while the person with dormant criminal proclivities, who is tottering on the verge of criminality, is provided with a strong and valuable incentive to virtue. 'Encouraging the others' cannot be considered an immoral expedient in dealing with crime. The deterrent principle, which has always been recognized by law, is in reality a double-edged weapon of the highest value. Its effect on the actual offender may be, and often is, absolutely negative; but on others its force is incalculable, and invariably many times greater and more far-reaching than on the individual. This fact is too often ignored by those who criticize and under-rate the deterrent effects of penal measures and systems which do not absolutely disclose superficially the indirect effects which they really produce. Statistics show clearly enough that our penal system deters occasional and first offenders, though it has very little deterrent effect on habituals. Present-day conditions of imprisonment are not *real punishment* to this latter class at all, but merely a form of restraint which removes them from temptation for the time being. The most recent device, therefore, which has been adopted for dealing with them in the Prevention of Crime Act of 1908—that is to say, preventive detention for long periods—is really a measure of inhibition and restraint, adopted primarily in the interests of society, although the extension of time that will be at the disposal of the authorities for effecting moral improvement in the prisoners themselves is also expected to yield more encouraging results. In regard to the principle of determent, the only profitable use to which the habitual can be put, until he renders himself more amenable to reformatory influence, would appear to be to make him a warning to other people for whom prison has more terrors. This, after all, is a trifling reparation for him to make to a community on which he persistently preys for a living, whether he be in or out of prison.

But these various doctrines which tend to the extenuation, or, it might be said not unfairly, to the encouragement, of crime are quite overshadowed by the much wider and more comprehensive one that we have no right to punish, and no moral justification for punishing, our fellow-creatures at all. Count Tolstoi was the leading exponent in recent years of this impossible creed, and he gained many disciples, who have been attracted, apparently, by the magnetism of his genius. In his novel *Resurrection* he makes his hero Nehludof, who is really a replica of himself and his own theories, ask the question, 'By what right do some people punish others? Why, and by what right, do some people lock up, torment, exile, flog, and kill others, while they are themselves just like those whom they torment, flog, and kill?' It is obvious to plain people that the latter part of this question embodies the underlying fallacy of the whole theory. The greater part of society is law-abiding, or at all events non-criminal in conduct. If an individual member is permitted to torment, flog, or kill another individual member with impunity, why should society collectively be denied the same right? Every State or community has an inherent moral right to make laws and regulations for the maintenance of social order. If social laws are merely optional in character, and no penalties are attached to their violation, they cease to have any force outside Utopia, so that every man's hand is against his neighbour. The mind of this gifted philosopher in his latter years seems to reflect the state of chaos and anarchy to which his teaching led him, so that at the last he was utterly weary of the world and its problems. Theories denying the right of society to punish, which have no foundation whatever in the Moral Law (on which the regulations of all civilized States ultimately rest), have no more than an academic interest for practical rulers. However suitable they may be for the land of dreams in which Tolstoi's spirit seemed to dwell, they are quite unfit for a practical world, in which a mere touch of the actual suffices to shatter them to pieces.

It may be regarded, then, as axiomatic that punishment in some form is essential for the cor-

rection of persons who inflict wrong on society; that the right to punish is in no sense immoral; and that every system of correction should have in it a penal element. It is true that these principles are strenuously denied by theorists who hold that prison treatment should be purely reformatory; but no one pretends to have devised a working scheme for carrying out this beneficent intention with full-grown criminals. All prison treatment must be, in the nature of things, to some extent penal, since it deprives persons of their liberty. Even Elmira imposes this restraint. To a large number of criminals, moreover, deprivation of drink is penal, while others find regular work a kind of punishment. It cannot be contemplated that the ideal prison is to abolish these restrictions on liberty under any coming régime. It is already on record that a prison without work existed some years ago under a local authority, and the results were found to be neither reformatory nor deterrent. It came to be known as a 'Reading-Reading-Reading Gaol,' and one prisoner explained his return to it by saying he had come back to finish his book. Many sanguine persons are too ready to assume in this connexion that a kind of 'Free-Library' treatment, combined with musical entertainments, will alter the nature and habits of even hardened criminals; but those who live outside doctrinaire circles know that much deeper moral and spiritual influences are needed for those who persistently covet and desire other men's goods. At the present time it is the fashion to decry, or to ignore much of the silent work of prison chaplains. This work is very often carried on under the most disheartening of conditions, especially amongst the habituals. The writer knows, however, that prisoners themselves, who show any wish to do better, get an enormous amount of encouragement, guidance, and help from the chaplain; and that they appreciate the unadvertised work of his department much more highly than do the general public, or those who write on prison reform.

5. **Penalties a necessity.**—Although reformatory treatment is an essential element of every good prison system, it is nevertheless lacking in two important respects. It is inapplicable in practice to the prisoners with very short sentences, who constitute the bulk of the whole prison population; and it embodies none of that deterrent principle which is necessary not only for the repression, but also for the *prevention* of crime. It is obvious, therefore, that pains and penalties of some kind must be resorted to in order to check or restrain habits of crime; and it is very important that these penalties should bear some proper and adequate relation to the nature of the offence, the character of the offender, and the general sense of public justice as between injurer and injured. No longer is it necessary to brand, or mutilate, or inflict permanent injury on those whom it is our interest to cure. Society has, however, the right to seek *redress* (not revenge) at the hands of wrong-doers, and it is compelled to take this course if it would prevent the substitution of private vengeance for public justice. Now, the only medium through which this redress can be exacted at present is the purse or the person of the offender, so that in the last resort we are driven either to the infliction of capital punishment or to some form of imprisonment. The offender, in fact, is confronted with the footpad's usual alternative, 'Your money or your life,' or at least a part of it. If any one could invent a less objectionable form of punishment which would restrain the criminal, and at the same time reform him, and deter him and others from the committing of crime, he would merit public gratitude, and lay our penal code less open to even a suspicion of inhumanity. But, as this is merely a visionary possibility, we can only look meantime for such a mitigation of the conditions under which these two measures are ordered, or carried out, as will meet with the approval of a humane and just public. Much has already been done in this direction. Capital punishment is now practically reserved for the worst cases of wilful murder, though it is still on the code for a few other offences, such as treason, setting fire to public arsenals, etc.

6. **Capital punishment.**—Without entering into the merits or demerits of capital punishment, we shall note some facts in connexion with the subject which tend to justify us the in use of it. A return laid before the House of Commons in 1907 shows that most of the chief European States, and most of the States in America, retain the death penalty in their codes, though many of them use it sparingly. Baron Garofalo, the President of the Appeal Court at Naples, in his book on Criminology (see Lit. at end of art.) tells us that in Italy, where, since 1876, there have been no executions except under military law, homicides average 3814 a year, compared with about 300 in England. He notes similar results in Belgium and Prussia, where few executions take place. In Switzerland, when the death penalty was abolished, murders increased 75 per cent in five years, so that several Cantons re-introduced the penalty. In France, in 1824, juries were allowed by law to add 'extenuating circumstances' to their verdicts, with the result that the annual average of executions fell to 1·8 in 1901–1905. Homicide was meantime increasing, but in 1906 Government brought in a Bill for abolition. Soon after a brutal murder occurred—'l'affaire Soleilland'—and public feeling was so stirred that the Bill was dropped; so that, instead of the death penalty being abolished, it became much more common. In America, Mr. Hugh C. Weir tells us (in *The World To-Day*, in regard to a recent census of American crime) that 'in only 1·3 per cent of our homicides do we secure a conviction.' Further, he states that Chicago averages 118 murders a year. London, which has four times the population of Chicago, has only 20. It is notorious that the death penalty is seldom carried out in the United States by law, though lynching is often practised mercilessly. Since 1868, abolition has been discussed eight times in the House of Commons, and negatived on each occasion by large majorities. Several committees and commissions have decided in the same sense. The opinion of the Scottish Judges at one of the Inquiries was:

> 'It would not be for the interests of humanity that the well-conducted and useful members of the community should be more exposed to deprivation of life by murder in order that the lives of the murderers may be saved.'
>
> A French Professor of Law put the same idea pithily, when he said that if abolition were sanctioned it should be announced that—'henceforth the law in France will guarantee the lives of none but murderers.'

An incidental justification of the death penalty would seem to be that, under it, the newspaper hero of a sensational crime passes quickly into oblivion; whereas, if he is left in prison, his career furnishes endless opportunities for the dissemination of unauthentic, unwholesome, and demoralizing gossip in the press, which makes a direct appeal to the perverse imitative faculty of other criminals. Lastly, it is the opinion of Lacassagne, and many other observers, that the English statistics of crime are probably the most satisfactory in Europe.

With a view to securing a fair trial, and to preventing mistakes in capital cases, both law and custom in England provide elaborate safeguards. An accused person, after having the charge against

him investigated successively by coroner, magistrate, and Grand Jury, is tried by Judge and Jury, when he has the option of giving evidence in his own behalf. After conviction he can take his case to the Court of Criminal Appeal. If unsuccessful there, he can lay before the Home Secretary, either in petition or through his legal advisers, any additional evidence that may not have been forthcoming at his trial. Every scrap of evidence in his favour is most carefully examined, and, if there is the slightest suspicion of any mental deficiency, medical experts in criminal lunacy examine him, and report to the Secretary of State before a final decision is made to carry out the sentence of the law.

7. **Penal servitude.**—Criminal offenders, other than those who pay the penalty of death, are sentenced in this country either to 'penal servitude,' which is mainly served in convict prisons, the sentences ranging from three years to life; or to 'imprisonment,' which is carried out in local prisons only, the sentences ranging from three days to two years. Death sentences are carried out at local prisons. Convicts—that is to say, those sentenced to penal servitude—generally undergo the first part of their sentences in local prisons in *separate* confinement: the remainder is served in a convict prison, where they work in *association*, for the most part out of doors, though some work in shops. The length of the period of separation varies at present from three months to one, according to the antecedents of the convict. This part of the sentence is most criticized by reformers, as being inhumane and likely to lead to mental troubles, morbid introspection, irritation, and misconduct. As a matter of fact, results do not bear out this *a priori* reasoning, nor is the treatment as severe as is commonly supposed. The Stage is responsible for a good deal of misconception on the subject. Although 'separate' confinement is, for controversial purposes, called 'solitary,' the two are quite different. Solitary, or, as it is called legally, 'close confinement,' is never resorted to except as a punishment for offences committed in prison, and it is ordered solely by the Governor or superior authority. Under separate confinement a man works in his cell for the greater part of the day, but he gets many reliefs. He is allowed at least one hour's exercise daily, attendance at one chapel service on week days, and generally two on Sundays; he is also unlocked for various sanitary services, and sometimes for school; and he is frequently visited during the day by officials—governor, chief warder, officers serving him with work, meals, etc. Further, he is under careful medical supervision with a view to preventing mental or physical injury. The period of separate confinement, nevertheless, is one of the vexed questions of prison treatment at present. Its effect is penal, in so far as the average convict dislikes it; on the other hand, it does not seem to be without advantages in the direction of reformation of character for those who wish to profit by them. Introspection is not necessarily all morbid, and a period of seclusion gives time for reflexion and for a kind of moral readjustment, while it affords many opportunities to the chaplain for influencing the mind of the prisoner, away from the distractions of association with fellow-prisoners who too often urge him in wrong directions.

When this part of his sentence is over, a convict is drafted to a convict prison, where he works on the land—at reclaiming, tilling, gardening, quarrying, etc.; or at building, with allied industries; or in shops—at tailoring, shoemaking, carpentering, printing, book-binding, moulding, fitting, or other useful employments. He sleeps and takes his meals in a separate cell, which is well warmed, lighted, and ventilated. He is warmly clad, and has a very good and ample plain diet, without any canteen privileges. His working hours are much shorter than those of outside labourers, and the work, which is not laborious, is very carefully graduated to his physical capacity, while at the same time it is chosen, as far as possible, with a view to utilize any skill he may have, so as to fit him for honest employment on discharge. His education, both religious and secular, is carried on by the chaplains and schoolmasters, and he has an excellent supply of instructive and interesting books to read. By way of stimulating self-help, he is made to pass through successive grades or classes, by earning marks for industry and good conduct. Each step gained entitles him to additional prison privileges, as well as to a considerable money gratuity on discharge, and to a remission of sentence up to one fourth for men and one third for women. On release, he can avail himself of the help of a Discharged Prisoners' Aid Society to get work. He is, of course, kept under close supervision and strict discipline; but no bullying is allowed. Conversation is prohibited except as a special privilege at stated times for exemplary conduct; but under the conditions of associated out-door labour a good deal of talking is carried on, which, though not recognized, is inevitable. Misconduct of any kind renders him liable to forfeiture of the privileges which he may have already gained.

From this necessarily brief sketch it will be seen that the scheme is undoubtedly punitive in effect, but it is also reformatory in intention. Strict discipline conduces to self-control, steady and regular employment to the work-habit, the system of progressive privileges to industry, good conduct, and self-help; while the moral and educational training tends to strengthen character; and the whole scheme is designed to fit the prisoner for earning an honest living on his release.

The latest device of our penal system for dealing with the habitual criminal is *preventive detention*. The Prevention of Crime Act (1908) gives power to declare a man who has been leading a persistently criminal life to be an 'habitual criminal.' Such a person is to be sent in the first instance to penal servitude for not less than three years, and he may be kept for a further period of not less than five, or more than ten, years in a state of preventive detention by order of the Court. A special place of detention is to be provided, in which more indulgences and privileges can be granted than in a convict prison, so as to make the general conditions of life less onerous, and to foster habits of industry and self-control in the inmates, and fit them for *conditional licence*. This new plan for dealing with recidivism is, in fact, a modification of the indeterminate sentence. So much attention has been given in vain to the reclamation of the professional criminal that the step is taken mainly for the protection of society, though hopes are entertained that he, too, may benefit under the new conditions, with more time available for effecting cures. Preventive detention does not come actually into force till 1911, but responsible authorities expect good results from it, since they have advocated for years some means of imposing a more permanent kind of restraint on this intractable class of offender. In the United States the indeterminate sentence and the release on parole are worked on such liberal lines that many thoughtful Americans say serious crime is trifled with, under the guise of reclamation; while our Legislature hesitates to entrust the liberty of the subject, even though he be a confirmed criminal, to the discretion of prison authorities, who might keep him for life. Mr. Grubb tells us that the average term of actual detention at Elmira is about one and a half years.

It certainly seems strange to us that a dangerous burglar, or a coiner, or even a murderer of 30 years of age should be set free, cured in so short a time, when we require a year, or two years, to cure Borstal youths of 16 to 21 years of age under a system very similar to that of Elmira. If such things can be done in America, we must either have much to learn from them, or their reputed success must be doubtful, or the subject must be a very different one from the British specimen. Unfortunately, the statistics on the question are not capable of verification, although undoubtedly good results are obtained in many cases. Meantime we adopt such parts of the American system as seem suited to our national requirements.

8. Imprisonment.—In regard to punishment by 'imprisonment,' as distinguished from penal servitude, local prisoners now enjoy many more advantages in the matter of associated labour than they did when the 'separate' system was established by law in 1865. Associated work in shops or working parties, under strict supervision, is now carried out at all local prisons, but out-door employment, except in the grounds, or at officers' quarters, is limited, as the situation of the prisons in or near large towns does not give much scope for actual labour on the land. The term of separate confinement for local prisoners, which had been fixed at three months by the Prison Act of 1865, was limited by the Act of 1877 to one month, and is now commonly reduced to a still shorter period. Very large numbers of local prisoners are unskilled workers, and are under such short sentences that cell employment of some kind is necessary, unless they are to be kept in idleness, which is utterly demoralizing. The last Report of the Prison Commissioners shows that 61 per cent of males and 62 per cent of females were sentenced to two weeks or less; 93 per cent of males and 97 per cent of females to three months or less; and only 5·62 per cent of males and 1·91 per cent of females to six months and over. For prisoners with short sentences the effect of imprisonment is probably penal and deterrent rather than reformatory, since little in the way of training can be accomplished in short periods. The low diet of the short sentence has a like effect, the object being to make the lesson for a petty or occasional offender short and sharp, so that he may not come back. A spell of brief seclusion for this class is surely a salutary provision. Local prisoners are housed in comfortable and sanitary cells of 700 to 900 cubic feet, kept at a proper temperature, and well lighted and ventilated. Daily exercise and chapel service relieve the monotony of the cells. Diet, which is not on so liberal a scale as that of convicts, is graduated according to length of sentence, and is carefully adjusted to the physical requirements of the prisoners, while medical officers have a free hand in ordering extra food in special cases. Like the convict, the local prisoner works his way through the stages of a progressive system, earning privileges for industry and good conduct, and forfeiting any he may have already obtained if he is idle or breaks the rules. He can also earn remission of a part of his sentence if it is more than a month; but this, too, is liable to forfeiture. Secular instruction is given him under the direction of the chaplains; and religious ministration is provided for by them and by the clergy of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out generally on liberal lines, so as not to cause individual hardship. There is a gradual relaxation of conditions for the well-conducted as their sentences proceed. Those convicts who reach the Long Sentence Division at the end of ten years are allowed to purchase out of their gratuity some approved articles of extra diet, but not alcohol or tobacco.

9. Borstal treatment.—The tendency of recent legislation has been towards a lenient treatment, especially of the young and of first offenders. The Probation of Offenders Act gives power to the Courts to release the latter, and order them to come up for judgment if called upon. The Children Act prohibits *all* children under 14, and practically all young persons under 16, from being sent to prison at all; and the Prevention of Crime Act establishes a new form of sentence and a new type of Institution for offenders between the ages of 16 and 21. The sentence is detention under penal discipline in a Borstal Institution for not less than one and not more than three years. This is intended for those whom, by reason of criminal habit or tendency, it is expedient to detain for long periods under such instruction and discipline as appear most conducive to reformation and the repression of crime. The treatment adopted in these Borstal Institutions closely resembles that of Elmira, already described. It is based on a well-devised scheme of moral, mental, and physical training, combined with specific instruction in some trade or skilled industry designed to fit the inmates for honest living. Rewards are given for industry and good conduct; penalties are inflicted chiefly by forfeiture of privileges; conditional licence is extended to those who are deserving; and work is also found for them on discharge; while an After-Care Association of benevolent workers supervises them, and gives not only encouragement, but moral and material help, so as to enable them to lead useful lives. Over 500 youths are now under training; and the land, buildings, and training-ship of Feltham Industrial School have been purchased from the London County Council for their accommodation. A scheme on similar lines has also been established for girls; also a modified Borstal treatment for youths in prison whose sentences are too short to let them have a full course. Splendid results have already been obtained, and still better are expected when the Institutions become firmly established.

10. Habituals and vagrants.—From the outline given of our penal system, as bearing on the general subject of crime and its punishment, candid readers will see that it is not unjust or unmerciful, and that it does not sacrifice the interests of the criminal to those of the community. The general principles on which it is based would seem to be that it should be penal without being vindictive, reformatory without being demoralizing, and deterrent without being inhumane. Administrators who keep a watchful eye on statistics are quite alive to its weak points, in so far as it fails to reform or deter certain classes of prisoners. It is notorious that it does not reform *individual* professional criminals, who come back time after time to prison, though it reduces the numbers of this *class* very considerably by cutting off the recruits. It is idle to expect that they will ever be totally eliminated; but it is highly probable that the new remedy of preventive detention will considerably limit their depredations, and deter many from entering their ranks. The system, again, seems to be ineffective with vagrants, who have been increasing lately at the rate of 4000 a year. Prison life sits lightly on an idle class, and measures of indulgence in the nature of physical comfort, dictated by an exaggerated sentimentality, are not likely to check idle habits. Unfortunately, much of our social teaching at present tends to encourage this evil. 'To labour truly to get one's own living' has become for many persons a very disagreeable obligation; and State Aid, which is a popular panacea for social evils, is

too often invoked where energy and self-reliance would be the more manly remedy; while Society is too often called upon to saddle itself with the vices and follies of individuals. To a large extent these doctrines would seem to be responsible for an idle spirit in our lower ranks. According to the last official returns, no fewer than 33,766 persons found their way to prison in 1910 for offences against the Vagrancy Acts. When it is borne in mind that several more thousands of this idle class are in workhouses and at large, it will be obvious that the question of dealing with them is becoming very urgent. No economic remedy for mere unemployment will meet their case, since the work-habit in practically all of them has been lost. A Committee appointed in 1905 to investigate the subject made recommendations that such persons should be dealt with otherwise than under the Vagrancy Acts—that they should be treated, not as criminals, but as persons requiring detention on account of their mode of life. The object aimed at is to train and compel them to do some kind of work, so as to aid the solution of the problem which they themselves present. Legislation is now urgently wanted to carry these recommendations into effect.

11. **General results of our penal system.**—Recent enactments in reference to inebriates, first offenders, habituals, and youthful delinquents, together with the recommendations of committees for further legislation for weak-minded prisoners and vagrants, suffice to show that our penal system has by no means reached perfection or finality. But how far has it served its purpose in the repression of crime? Some general considerations have to be taken into account in deciding this question. We have no trustworthy data for estimating with any approach to accuracy the sum total of crime committed in the country. Undetected and unproved crime still flourishes, and we can judge the proportion it bears to detected crime only by general indications. We know, however, that our methods of detection and identification of criminals have improved, so that it is at least probable that less crime goes undetected now than in former years. Further, we know that life and property are as secure with us as elsewhere, and that respect for human life is certainly greater in this country than in most civilized countries. But, although we can base no conclusions on figures representing the total criminality of our population, we have, in the daily average population of our prisons, a statistical basis for estimating *comparative* progress or retrogression. The figures are simple; they have been arranged on the same lines since the local prisons were handed over to the State in 1878; and they include all the *proved* crime of the country, both minor and grave. If, then, we compare the daily average population of the prisons of England and Wales in 1880 with that in 1910, we get the following results:

[England and Wales.]

Year.	Daily Average Population.		Population of Country.
	Convicts.	Local Prisoners.	
1880 . .	10,299	19,835	25,708,666
1910 . .	3,189	18,521	35,756,615

The outstanding feature of these statistics is the very conspicuous decrease in *serious* crime indicated by the fall in the convict population, in the proportion of ten to three, during the last thirty years. The general shortening of sentences, which followed on the passing of the Summary Jurisdiction Act in 1879, accounts for a certain proportion of this decrease, but cannot altogether explain it away, since the missing convicts are not found in the local prison population, which has also declined considerably, despite the addition of many minor offences to the statute book since 1880. If we take the two sets of figures—those of convicts and local prisoners—together, and place beside them the increase of ten millions in the general population, it will be seen that the criminality of the country must have declined very substantially to show these results; and, although we look for still better things in the future, it must be admitted that our penal system has, on the whole, served us well. It would, however, be very erroneous to infer that the decrease of crime is due solely to our methods of punishment, although it is also very doubtful whether such marked decrease could take place under an inefficient penal system. Social progress, of course, accounts for much of it. The training and discipline of the schools are conducive to moral improvement, self-control, and law-abiding habits; while the steady progress of temperance is probably one of the most important factors of all. Bank holidays have long ceased to be carnivals of drunkenness, and the statistics of crime show a steady decline in this offence.

12. **Drink.**—The latest returns show that in 1910 the total number of prisoners, male and female, received in the prisons for drunkenness had been less than the total of 1909 by 5852 cases. These figures are satisfactory as showing progress, but there is still room for much improvement in a list which reaches the enormous total of 57,418. Without any desire to minimize these figures, which represent an appalling amount of human misery and degradation, we would point out that much misconception prevails as to the actual connexion between drink and crime. Exaggerated statements that 80 or 90 per cent of crime is caused by drink depend to a large extent on the statistics of minor crime, which do not justify such sweeping conclusions. Many thousands of offences tried summarily have no connexion with drink. It should be remembered that the relation of cause and effect existing between drink and the major kind of crime, which entails a long sentence, is by no means so direct or clear as it is in the case of minor crime, since drunkenness is in itself one of the minor crimes, and one which figures most prominently in the statistics, and is also the exciting cause of several such offences. The commission of serious crime, on the other hand, is very often inconsistent with drunken habits, which are by no means so constantly found amongst professional criminals as amongst minor offenders. None the less, drink is, without doubt, both a direct and an indirect cause of all kinds of crime, and the spread of temperance is the most hopeful means we can employ for limiting its perils. Although the drink evil is pre-eminently one which is best dealt with at its source, and before it attains large dimensions, supplementary measures, both curative and penal, are also necessary at the later stages. Here our system has been somewhat weak and ineffective. Abuse of alcohol is certainly the most potent factor known to us in the production of crime, and yet the steps we have hitherto taken to suppress this predominant cause of criminality have been slow, unscientific, and uncertain. Up till 1898, when the Inebriates Act was passed, our measures for dealing with drunkenness were for the most part penal, and the penalties were much the same as they had been for fifty years previously. Fines and short imprisonments were the stock remedies, although they had long been known to be practically useless. Occasional drunkards were regarded too

much in the light of social 'sports,' instead of anti-social offenders and public nuisances. An attempt was made by the Inebriates Act to stem the evil by applying curative treatment to cases of inebriety, and placing them under control and medical care for prolonged periods. The intention of the Act was good, and it was based on scientific teaching, but, unfortunately, it did not work well in practice. No legal obligation had been placed on the local authorities, who were expected to co-operate in the scheme, to provide accommodation and maintenance for patients, and the Courts were reluctant to deprive of liberty, for the long periods necessary for cure, any persons except the most confirmed inebriates. These, as might have been expected, quickly relapsed into their former habits on discharge, and the Act was thereby discredited. For those who were less confirmed in drinking habits, and who might have gained benefit from the Act, it became a dead letter. The liberty of the subject in their case amounted to liberty to ruin themselves, and to inflict trouble, anxiety, and expense on their friends. Further, disputes arose between the local authorities and the Treasury as to the cost of maintaining the Homes, which led to further deadlock. A Committee of Inquiry has already recommended that, in order to meet these difficulties, the State should take over the control of the Homes. Whether or not this proposal be carried out, the Act requires stiffening in some way, if it is to fulfil its object. The occasional drunkard also needs more attention. If he is to be restrained from drifting into the habitual class before his will-power disappears under continued indulgence, cumulative penalties must be dealt out to him more freely, and the risk of becoming an inebriate under the Act must be constantly kept before his eyes.

CRIOBOLIUM.—Like the *taurobolium* (wh. see) the *criobolium* was a sacrifice performed in connexion with the worship of the Great Mother of the Gods and Attis, with the difference that the victim was a ram instead of a bull, and was slain in honour of Attis. When the *criobolium* was given in conjunction with the *taurobolium*, the altar was, with rare exceptions, inscribed to both deities; whereas, when the *taurobolium* alone was given, the inscription was usually to the Mother only, though symbolic decorations on the altar even then often indicated the participation of Attis.

Unlike the *taurobolium*, which, if not an original feature of the worship of the Great Mother in Asia, was borrowed by her priesthood at Rome from the Cappadocian religions which were brought there in the early 2nd cent. A.D., the *criobolium* seems to have been a special sacrifice instituted after the rise, and on the analogy, of the *taurobolium*, for the purpose of giving fuller recognition to the duality of the Great Mother and Attis, which had recently become more prominent through the rise of Attis to greater importance. There is nothing to indicate its existence either in Asia or in Italy before its first celebration in honour of the Mother and Attis.

In the absence of direct evidence, we may suppose the *criobolium* to have been similar to the *taurobolium* both in details of ceremony and in spiritual effect. Its celebration was wide-spread, and its importance such that it could be an alternative to the *taurobolium* (*CIL* vi. 505, 506), though the latter was held in greater esteem. It was inevitable that the ancients should draw a comparison between the pagan doctrine of purification and regeneration through the *taurobolium* and *criobolium* and the Christian doctrine of redemption through the blood of the Lamb (Firmicus Maternus, *de Error.* 27–28).

GRANT SHOWERMAN.

CRITICISM (Old Test.).—Criticism is the art of estimating the qualities of literary or artistic work. M. Arnold defined it as 'a disinterested endeavour to learn and propagate the best that is known and thought in the world' (*Ess. Crit.* i. 38). It is not to be mistaken for censure or dispraise—the expression of hostile or unfavourable opinions. Realizing that the word verges on this adverse significance, Pater and others have preferred to speak of literary 'appreciations'; and certainly the true Bible critic desires chiefly to share his admiration with his reader. But 'criticism' and the allied terms should be used without prejudice, to signify the effort of the mind to see things as they are, to appraise literature at its true worth, to judge the records of men's thoughts and deeds impartially, without obtrusion of personal likes or dislikes. In distinction from 'lower' (a term seldom used), or textual, criticism, which aims at ascertaining the genuine text and meaning of an author, 'higher' (a term apparently first used by Eichhorn), or historical, criticism seeks to answer a series of questions affecting the composition, editing, and collection of the Sacred Books. The higher critic's task is to show how the ideas of any particular writing are related to the environment in which they grew, to the spirit of the age, to the life of the people, to the march of events, and to the kindred literary productions of other times or, it may be, of other lands. It is a scientific method of 'searching the Scriptures.' It substitutes the inductive for the *a priori* mode of inquiry, observation and experiment for tradition and dogma. It is a new application of the Socratic principle that an unexamined life—of man or book—is not worth living.

The critical movement, which has shed a flood of light on the OT, and given the Church a new and more human conception of the mode of revelation, did not begin till the middle of the 18th century. The traditional view of the composition of the Sacred Scriptures was a bequest from the Jewish to the Christian Church, which no one ever thought of closely examining. There were, indeed, a few sporadic attempts at literary criticism, which ran counter to the received opinion. **Theodore of Mopsuestia** relegated some of the 'Psalms of David'—such as the 51st, 65th, and 127th—to the period of the Exile. **Ibn Ezra**, the acutest Jewish scholar of the Middle Ages (1070–1138), detected a number of anachronisms in the Pentateuch, but advised the reader who understood these things to be discreet and hold his tongue. **Luther** was a fearless critic of both the OT and the NT. He asked what it would matter if Moses was not the author of the Pentateuch; he saw that the Book of Kings was more credible than that of Chronicles; he surmised that some of the Prophetic books received their final form from redactors; and he would have preferred if the First Book of Maccabees instead of Esther had been included in the Canon. **Spinoza's**

philosophical acumen anticipated not a few of the modern critical results. 'Ex his omnibus,' he says, 'luce meridiana clarius apparet, Pentateuchum non a Mose, sed ab alio et qui a Mose multis post saeculis vixit, scriptum fuisse' (*Tract. theol.-polit.* vii.). Richard Simon, the French Oratorian, observed some double accounts of events in the Pentateuch, and suggested a diversity of authorship. But the critical opinions of these and other individual writers were mere *obiter dicta*, which made little impression upon the mind of the Church, and never disturbed her dogmatic slumber. They inaugurated no critical movement.

It was reserved for one who was neither a scholar nor a theologian, but a man of science, the Frenchman and court-physician **Jean Astruc**, to discover the critical secret, and to forge the *novum organum* which was 'to destroy and to overthrow, to build and to plant.' His study of the Pentateuch was the *parergon* of a busy life chiefly devoted to the writing of books in his own special department, and his supreme merit was that he brought to the search of the Scriptures a mind thoroughly trained in the methods of science. In this pioneer work he left a perfect example for the imitation of all his followers. As a devout Catholic believer—he takes his readers into his confidence in a beautiful preface—he refrained for a while from publishing his book, fearing that he might, much against his will, put a weapon into the hands of the free-thinkers—*les esprits forts*—of his time. He could not doubt, however, that his discovery would serve to remove some serious difficulties from the pages of Scripture, and in his seventieth year he was constrained to give his book to the world (1753). The very title of the work at once gave expression to the characteristic modesty of a true seeker after truth. He merely offered *Conjectures sur les mémoires originaux dont il paroit que Moyse s'est servi pour composer le livre de la Genèse*. He did not know whether they would be accepted or rejected, but in either case nothing could ever alter his 'love of Truth and of Religion.' It is worth while to state his argument in his own words—here slightly abridged.

'In the Hebrew text of Genesis, God is designated by two different names. The first is Elohim, for, while this name has other meanings in Hebrew, it is especially applied to the Supreme Being. The other is Jehovah, יהוה, the great name of God, expressing his essence. Now one might suppose that the two names were used indiscriminately as synonymous terms, merely to lend variety to the style. This, however, would be an error. The names are never intermixed; there are whole chapters, or large parts of chapters, in which God is always called Elohim, and others, at least as numerous, in which he is always named Jehovah. If Moses were the author of Genesis, we should have to ascribe this strange and harsh variation to himself. But can we conceive such negligence in the composition of so short a book as Genesis? Shall we impute to Moses a fault such as no other writer has committed? Is it not more natural to explain this variation by supposing that Genesis was composed of two or three memoirs, the authors of which gave different names to God, one using that of Elohim, another that of Jehovah or Jehovah Elohim?'

That Astruc was conscious of leading the students of Scripture into untrodden paths is proved by the motto from Lucretius (i. 926 f.), which he put on his title-page:

'Avia Pieridum peragro loca, nullius ante
Trita solo.'

In the 500 pages of his book he carried his critical analysis through the whole of Genesis and the beginning of Exodus, as far as the point where the distinction of Divine names appears to cease (Ex 6). He discovered some passages which he could not attribute either to the Elohist or the Jahwist. He displayed his results by arranging the whole text in four parallel columns. His attempt had the inevitable defects of all pioneer work, and he was far from dogmatizing as to the details of his criticism. But, with a true scientist's confidence at once in the precision of his methods and in the general accuracy of his conclusions, he wrote at the end of his prefatory exposition:

'So we must either renounce all pretence of ever proving anything in any critical question, or else agree that the proof which the combination of these facts affords amounts to a complete demonstration of the theory of the composition of Genesis which I have propounded.'

Astruc's *Conjectures* received but a cold welcome in his own Catholic communion. No single compatriot of his inherited the critical mantle, and it was destined to be the work of a long succession of patient German scientific theologians to continue and complete the process of literary analysis which the brilliant Frenchman had begun. The great Hebraist Eichhorn came to know Astruc's theory at second-hand, and deliberately refrained from reading the book till he had independently, and still more thoroughly, gone over the same ground, with the same general results. He had no difficulty in finding a good many criteria besides the Divine names to differentiate the original documents, and, instead of pausing at the beginning of Exodus, he carried his investigations to the end of the Pentateuch, expressing the opinion—long since antiquated—that the last four books were compiled from separate writings of Moses and some of his contemporaries. Eichhorn's results were published in an *Einleit. in das AT* (1783), and, as he had some of his friend Herder's gift of style and love of the Bible as literature, his book made almost as profound an impression on his age as Wellhausen's *Prolegomena* has made on ours.

The only contribution which Britain offered to the solution of the critical problem in its earliest phase was the work of **Alexander Geddes**, a Scottish priest, educated in Paris, where he had had the privilege of studying Hebrew at the Sorbonne. His *Holy Bible faithfully translated from corrected Texts of the Originals, with Various Readings, Explanatory Notes, and Critical Remarks* (1792), followed by a separate work entitled *Critical Remarks on the Hebrew Scriptures* (1800), gives vigorous expression to his views. He was a remarkable man and no mean scholar, who certainly deserves to be remembered among the pioneers of criticism; but by excess of zeal—the *perfervidum ingenium Scotorum*—he led criticism astray, and tended on the whole to discredit the movement. Scorning the timid theory of Astruc and Eichhorn,—that Moses used only two fundamental documents in the composition of Genesis,—he launched the hypothesis that the whole Pentateuch was nothing but a collection of loose scraps, of various age and worth, probably compiled in the time of Solomon. He had no difficulty in pointing out an immense number of these originally independent fragments, in the conjunction of which he saw no orderly plan or leading motive. He thus became the author of the 'Fragment Hypothesis,' which was introduced into Germany by Vater, who translated or paraphrased a large part of Geddes's *Critical Remarks*. Vater thought the Book of Genesis was composed of thirty-nine fragments. The theory made much noise for a time, but received its death-blow at the hands of the greatest OT scholar of last century, Heinrich Ewald of Göttingen, in his *Die Composition der Genesis kritisch untersucht*, which he wrote when he was a youth of nineteen (1823). Geddes's opinions cost him his priestly office. Aberdeen consoled him with a doctorate of laws.

Meanwhile a real and important advance, from which there have been *nulla vestigia retrorsum*, was made by Ilgen, Eichhorn's successor at Jena. This fine scholar—who afterwards acquired a scholastic fame similar to that of Arnold of Rugby—detected the presence of *two* writers in Genesis, each with an unmistakable style of his own, who habitually use the Divine name *Elohim*. This discovery did not receive much attention at the

time of its publication (1798), and it was not till it was independently made again by Hupfeld, more than half a century afterwards, that its significance was recognized by the foremost scholars of Germany. It is now accepted as one of the assured results of criticism. As the second Elohist is devoted to the ideas and institutions of the Levitical system, he is usually known as the 'Priestly Writer,' while the name 'Elohist' is reserved for the earlier author, who, like the Jahwist, is more akin to the prophets.

Still another step in advance was taken at Jena, this time by one of Ilgen's most brilliant pupils. As a candidate for the doctor's degree (in 1805), de Wette presented a *Dissertatio Critica* on the Book of Deuteronomy, which proved to be epoch-making. He argued, from the individual qualities of style and the definite circle of ideas which he observed in this book, that it stands by itself, distinct in origin and purpose from the rest of the Pentateuch; and he identified it with the law-book which was at once the manifesto and the programme of the reforming party in the reign of Josiah (621 B.C.). This brilliant theory brought the critical movement for the first time into direct contact with Israel's national history. It shed an intense light upon the record of a great spiritual crisis. Criticism thus ceased to be merely literary, and became the handmaid of the history of religion. De Wette's hypothesis has now been tested by the scholarship of a century, and Deuteronomy is universally regarded as the key to the interpretation of the spiritual evolution of Israel.

Attention was next directed to the Book of Joshua, which the Jewish canon sharply separates from the Pentateuch and places at the head of the 'Former Prophets.' Already, in 1792, Geddes had joined it to the Pentateuch, regarding it as 'compiled by the same author.' Careful and minute investigation convinced de Wette and Bleek that this procedure was correct. The real affinities of Joshua are with the writings which precede, not with those which follow, it. Of the 'Five Books of Moses' it forms the necessary continuation and completion, taking up the various threads of the narrative and recording how the promises were fulfilled and the laws enforced. Subsequent criticism has confirmed this view, by proving that each of the Pentateuchal documents, with its favourite phrases and formulæ, reappears in the Book of Joshua. Hence it is now the established practice to speak and write of the *Hexateuch*, or 'Six Books' (τεῦχος, 'a weapon,' being post-Alexandrian Greek for a book), instead of the Pentateuch.

For the next half century there was one inspiring name which dominated the study of the OT. Wellhausen, who dedicated his *Prolegomena* 'to my unforgotten teacher, **Heinrich Ewald**, with gratitude and honour,' was one out of many who felt the spell of this scholar's genius. It must be admitted, however, that Ewald lent his authority to a hypothesis which for a considerable time retarded rather than furthered the progress of criticism. He began where Astruc and Eichhorn left off, and neglected Ilgen's discovery of the two Elohists. Regarding an undivided Elohist document, which he called the 'Book of Origins,' as the 'groundwork' of the Hexateuch, and finding its unmistakable ideals and formulæ giving order and unity to the whole structure, he maintained that the Jahwist sections were merely added to supplement the work of the Elohist. This was the famous 'Supplement Hypothesis.' Defended by Bleek, Schrader, and many other scholars, it was viewed for long as the citadel of criticism; but it could not permanently stand the cross-fire to which it was subjected, and it has now no more than a historical interest.

In 1834, **Eduard Reuss** was lecturing on OT theology at Strassburg, and applying his strong, keen intelligence to the critical problem, which he approached from the historical rather than from the literary side. He found it psychologically inconceivable that a nation should begin its history with a fully developed code of laws. He thought it inexplicable that a whole succession of prophets should ignore their country's laws, which they of all men ought to have reverenced. How was he to solve the enigma? The critical movement, at the point which it had then reached, did not help him much, for Deuteronomy was the only book of the OT, apart from the Prophets, which had yet been replaced in the historical environment out of which it grew. Reuss's problem was to determine the age and origin of the 'Law of Moses' and the 'Psalms of David.' The answer came to him, as he told long afterwards, rather as an intuition than as the result of a careful and exhaustive investigation. It was this—that in the true historical sequence the Prophets are earlier than the Law, and the Psalms later than both. In the following year (1835) practically the same theory was independently propounded by **Vatke** in his *Bibl. Theol. wissenschaftlich dargestellt*, and by **George** in his *Die älteren jüd. Feste*. If neither of these books commanded any great attention, the reason was that they were too theoretical. They did not present a thorough analysis of the language and ideas of the Books of Scripture. Vatke's work was, indeed, a very remarkable instance of the successful application of Hegelian principles to the study of a national and literary development. But it was intended only for the initiated, who were sealed of the tribe of Hegel. The author warned off the very threshold of his book all who did not understand the master's terminology. Reuss, who tried to read it and failed, deferred the publication of his own conclusions for nearly half a century. His *L'Histoire sainte et la loi* appeared only in 1879, and his *Geschichte der Schriften des AT* in 1881. One of his most brilliant pupils, **K. H. Graf**, professor at Leipzig, had forestalled him by a dozen years in his *Geschichtl. Bücher des AT* (1866), and consequently the theory is known to all the world as the 'Grafian Hypothesis.'

Hupfeld, one of the eminent Hebraists of Halle, where he was the successor of Gesenius, brought a fresh mind to the problem of the literary composition of Genesis, and was rewarded with more success than almost any previous scholar. Indeed, it was he who most nearly read the riddle of the sphinx, and it is a remarkable fact that his book, *Die Quellen der Genesis* (1853), was published exactly a century after the famous *Conjectures* of Astruc. Having shaken off the obsession of Ewald's 'Supplement Hypothesis,' he had the good fortune to repeat Ilgen's almost forgotten discovery of the two distinct Elohist writers in the Pentateuch. He laid bare the work of the Priestly Writer (the second Elohist). He demonstrated the close affinity of the first Elohist to the Jahwist, and the wide difference between both and the writer of the *Grundschrift*. Under his spell each of these ancient writers seemed to come forth a living personality, with a style which revealed the man. He showed that the additions by which J was alleged to have supplemented P were often entirely out of harmony with the latter's circle of ideas. His own theory was that the productions of three originally independent writers (now known as J, E, and P) were at length combined by an editor, who—fortunately for us—left his sources much as he found them, being content to establish a merely superficial unity.

The literary problem of the authorship of the Hexateuch was thus solved. But the vitally im-

portant *historical* question of the date of the several writers, and of their relations to the other authors of the OT, still left much work to do. Graf, as we have seen, was inspired by the teaching of Reuss, and developed his master's theory (*op. cit. supra*). Taking the date of the publication of Deuteronomy (621 B.C.) as his first starting-point, he worked backwards and forwards from it. By careful comparisons he proved that D is, on the one hand, much more fully developed than the law-book—small in size but great in value—known as the 'Book of the Covenant' (Ex 20^{22}-23), and, on the other hand, much less fully developed than the Priestly Code. The inference was inevitable that these three strata of legislation belong to three widely separated ages. The Priestly Code, however, is partly historical, partly legal, and Graf felt constrained to divorce these two elements, ascribing the historical to a pre-exilic, and the legal to a post-exilic date, with some centuries between them. But this part of his theory commended itself neither to the right nor to the left wing. As the Priestly Code is a compact and indivisible whole, and as the style of its narrative portions differs in no way from the style of its legal sections, it must as a whole be either pre-exilic or post-exilic. Now, this was one important question as to which the most eminent critics remained for a while divided among themselves. Nöldeke, Riehm, and Dillmann were on the one side; Reuss, Kayser, and ultimately Graf himself, on the other. Then came a new generation of scholars, with Duhm, Kuenen, and Wellhausen at their head, who vigorously attacked the problem once more, and almost unanimously declared in favour of the post-exilic theory, thereupon proceeding to adjust their conceptions of the whole OT literature and history to this revolutionary conclusion.

Duhm in his *Theol. der Propheten* (1875) chose a new point of view. The work of the prophets gave him the sure historical vantage-ground from which he could look both before and after, and a keen scrutiny of all the conditions of the problem convinced him that the phenomenon of prophecy is independent of every Mosaic law but the moral law written in the heart. To him the great prophets are not the children of the Law, but the inspired creators of the religion of Israel. Prophecy is the supreme initial fact which transcends explanation. The Levitical system, which gave the death-blow to prophecy in the post-exilic age, could never have been its nursing-mother in earlier times. The inner expansion of the prophetic spirit nowhere requires the Law for its explanation or illustration. The traditional succession — Mosaism, Prophecy, Judaism—cannot, therefore, be maintained. Judaism is not a mere revival of antiquity; it is a new fact. The post-exilic poems sung in fervent praise of the Law have a freshness of feeling which betokens something other than an artificial restoration. On the assumption that Ezra, working on the basis of Ezekiel, was the real creator of Judaism, everything becomes clear. While the whole previous history of Israel, internal and external, can be traced out independently of the Priestly legislation, the whole subsequent history is just the history of the Law. The study of the Prophets thus proves that the Grafian hypothesis is both psychologically and historically superior to the traditional one. For it is less likely, as Kuenen says, 'that the so-called "Grundschrift" dropped from the sky some few centuries before any one wanted it . . . than that it grew up in its own historical environment when its hour had come' (*Histor.-Crit. Inquiry*, etc., Eng. tr. 1886, p. xxxvii f.).

Wellhausen's *Gesch. Israels* appeared in 1878, and of its reception in Germany Pfleiderer says:

'The arguments for the new hypothesis, derived from the parallel development of law, ritual, and literature, were exhibited with such cogency that the impression produced on German theologians (especially of the younger generation) was almost irresistible. . . . It was a special merit in Wellhausen's book to have excited interest in these questions outside the narrow circle of specialists by its skilful handling of the materials and its almost perfect combination of wide historical considerations with the careful investigation of details, and to have thus removed OT criticism from the rank of a subordinate question to the centre of theological discussion' (*Development of Theology*, Eng. tr. 1890, p. 259).

Kuenen was perhaps justified in regarding the publication of Wellhausen's book 'as the "crowning fight" in the long campaign' (*op. cit.* p. xxxix). The work of criticism was not yet ended. But, at any rate, its methods were vindicated, and its main results assured. The subsequent history of the critical movement is, therefore, outward rather than inward, supplying matter for an interesting chapter of general Church History, a record of the spread of criticism to one country after another, of the opening of the doors of colleges and schools to critical teaching, and of the gradual leavening of the modern mind with a new conception of the Bible and of revelation. Of the direction of the current of educated opinion there cannot be any doubt.

'For, while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets making,
Comes silent, flooding in, the main' (A. H. Clough).

It would be strange if traditionalism did not make a brave fight for life, and the battle has often waxed hot. Critical freedom has sometimes been purchased at a great price. Those who are born free have a sacred heritage. The cause of the scientific study of the OT has been championed and won for England by Colenso and Stanley, Cheyne and Driver; for Scotland by Davidson, Robertson Smith, and G. A. Smith; for America by Briggs and Harper, Toy and Brown—to name in each instance but a few scholars out of many. Criticism is represented in modern Judaism by Montefiore, and the writers of the *JE*; in the Rom. Cath. Church by the Abbé Loisy, Baron von Hügel, Père Lagrange, and Salvatore Minocchi. It has become, as Sanday says, international and inter-confessional. And, since all light and truth are of God, Biblical science can bring to Churches and nations nothing but good. It is inevitable that the art of criticism should sometimes be practised by men of little faith, or of no faith, and that in their case the critical spirit should be captious rather than sympathetic, the critical weapon destructive rather than constructive. The fault is not in the instrument but in the user. Of two scientists who study the open book of Nature, one sees only a strange adjustment of the atoms of dead matter, while the other has a vision of the living garment of God. And of two critics of the Bible, which is 'literature and not dogma,' the one is merely conscious of the pathetic upward strivings of the human spirit, while the other bows in reverence before a revelation of the immanent God of truth and love.

Appeal is often made from criticism to archæology. Exploration is called to be the handmaid of revelation. The spade is taken to confirm the pen. Many confident statements have been circulated in the name of this romantic young science, which is bringing so many old things to light. 'Wherever archæology has been able to test the negative conclusions of criticism, they have dissolved like a bubble into the air' (Sayce, *Monument Facts and Higher Critical Fancies*, p. 25). Assyriology 'has for ever shattered the "critical" theory which would put the Prophets before the Law' (p. 87). From buried palaces, from monuments, from long-lost libraries, 'a voice has gone up rebuking the scorner' (J. Orr, *The Bible under Trial*, p 121). But is criticism really opposed by the facts of the monuments, or only by illegitimate inferences deduced from these facts? On many points archæology is certainly quite neutral, and on many others it is in perfect accord with the views of the critics. While it has to some extent confirmed the Bible statements regarding Shishak, Omri, Ahab, Jehu, Sargon, and Sennacherib; while it has proved that the art of writing was wide-spread in the East long before the Hebrew invasion of

Canaan; while it has found in Hammurabi a law-giver far older than Moses: it has not hitherto appreciably affected a single critical conclusion as to Israel's historical and literary development. 'Archæology has refuted only the argument which Prof. Sayce has imaginatively attributed to critics: the arguments which they really use, with, of course, the entire position which depends upon them, it has left absolutely untouched' (Driver, *LOT*[8], p. xx). Sayce, Hommel, and Winckler have rendered splendid service as archæological specialists, and every discovery they have made has been welcomed; but science would prefer to receive their facts neat, instead of having them diluted with cheap anti-criticism. Prof. Orr is the ablest opponent of criticism in this country, but he has personally accepted a good many of its results; and, when he still contrasts the traditional with the modern position by saying that 'the one scheme is naturalistic; the other is positively Christian: there must in the long run be a more decisive choice between them (*ExpT* xviii. [1907] 125), he is needlessly confusing the issue.

The progress of criticism has been slow. The labour has been spread over a century and a half. Every critical theory that had ever been advanced has been severely tested and strenuously contested. Criticism is bound to be self-critical, proving all things and holding fast that which is good. It is not to be imagined that finality has been reached on every minor detail of criticism. All along the line there are matters that still await adjustment. In the improvements which it is receiving at the hands of a new generation, the Grafian theory resembles the Darwinian.

Allusion can be made to only a very few points. (1) The Jahwist and Elohist have often been called 'prophetic' writers, as if they had come under the influence of Amos and Hosea; but Gunkel has made it appear very probable that the stories of J and E, which in his view represent the work of schools rather than of individuals, had taken shape in all essentials by 1200 B.C. While, on the one hand, 'we must assume their existence in order to account for the appearance of the Prophets,' they have, on the other hand, 'much that must needs have been exceedingly offensive to the Prophets' (H. Gunkel, *The Legends of Genesis*, Eng. tr. 1901, p. 140 f.). (2) While scholars like Baudissin and Kittel hold that the Law of Holiness (Lv 17–26) precedes Deut., and Driver and Ryle that it is later than Deut., but prior to Ezekiel, Addis has argued very ably for placing it after both these writings (*Heb. Rel.* p. 241 ff.). (3) The division of Isaiah into two parts at ch. 40 is indisputable, but in both parts there are sections that require to be removed into different historical settings, and in nearly all the Prophets some later additions and redactions have been discovered. (4) The Psalter as a whole is probably post-exilic, but it is in the nature of things scarcely possible to determine the precise environment into which each poem should be fitted, and the theory that many of the Psalms reflect Maccabæan and Ptolemaic conditions has not met with much acceptance. (5) The Wisdom literature and the relation of its later developments to Greek thought still need much attention. While Job is recognized as post-exilic, and Ecclesiastes may be little older than Daniel (which belongs to the great field of Apocalyptic literature), it still remains probable that the kernel of the Book of Proverbs represents the oral wisdom of Israel in the time of the monarchy.

Some gains obtained by the criticism of the Old Testament may be mentioned. It has established the broad principles that 'God never spoke a word to any soul that was not exactly fitted to the occasion and the man'; and that 'separate . . . from this context, . . . it is no longer the same perfect Word' (Robertson Smith, *OTJC*[2], 1892, p. 10 f.). It has reconstructed the history of Israel in the light of that other modern principle—'there is no history but critical history.' For the incredible dogmas of verbal inspiration and the equal divinity of all parts of Scripture, it has substituted a credible conception of the Bible as the sublime record of the Divine education of the human race. It has traced the development of the religious conceptions and institutions of Israel in a rational order. Moving the OT's centre of gravity from the Law to the Prophets, it has proved that the history of Israel is fundamentally and essentially the history of Prophecy. It has made a sharp and clear distinction between historical and imaginative writing in the OT, and so enhanced the real value of both. It has appreciated the simple idylls of Israel's folklore, pervaded and purified as they are by the spirit of the earliest prophets, and used by them to transfuse the devotion of a higher faith into the veins of the people. It has thrown light—as Astruc saw that it would—on the many duplicate, and even contradictory, accounts of the same events that are found in close juxtaposition. It has explained the moral and theological crudities of the Bible as the early phases of a gradual religious evolution. It has denuded the desert pilgrimage of literary glory, only in order to enrich the Exile. For the 'Psalms of David' it has substituted the 'Hymn-book of the Second Temple,' into which are garnered the fruits of the religious thought and feeling of centuries. To the legendary wisdom of one crowned head it has preferred the popular philosophy of many generations. For a religious history which looked like an inverted pyramid, it has given us one which is comparable to an ever-broadening stream—the record of a winding but unwavering progress in the moral and religious consciousness of a people. Instead of crowding the most complex institutions and ideals into the infancy of the nation, it has followed the order of nature—'first the blade, then the ear, then the full corn in the ear.'

Prof. B. D. Eerdmans, Kuenen's pupil and successor, is regarded as the leader of a reaction. He begins his *Alttest. Studien* (Giessen, 8 parts, 1908–10) by announcing that he has quitted the Graf-Wellhausen-Kuenen School. 'Astruc led her into false tracks' (p. iv). 'The theory which uses the Divine names as a guide through the labyrinth of the traditions is an error, and must be set aside' (p. 94). Instead of taking these names as literary criteria, let us have an historical-religious investigation of their meaning. In the 'Book of the Covenant' (Ex 20^{22}–23^{33}), 'Elohim' cannot refer to the God of Israel. It is a real plural. The 'judges' (Ex 21^{6} $22^{8.9}$) are gods. This is the key with which the new critical school opens the door. Polytheism is to be found not only in the 'Book of the Covenant,' but in the narratives of Genesis. 'For the knowledge of the history of Israel it is of great importance to see clearly that the legends which have been gradually collected in Genesis have received but a faint monotheistic colouring.' Round the figures of the patriarchs have gathered (1) stories in which the polytheism is undisturbed, (2) others which recognize Jahweh as one of the gods, and (3) others in which the polytheism has been adapted to monotheistic faith. Some parts of P—which to Eerdmans is 'a fiction'—are much older than the Exile, and round all the ancient legends there have gradually accumulated many additions and redactions, dating from the earliest to the latest times.

Eerdmans has failed to take account of the fact that for the recognition of J and E in the Hexateuch there are many other important criteria—language, style, point of view, religious tendency—besides the Divine names. It will be found that the difference between him and his master is after all not very great. His vigorous and suggestive criticism is a trumpet-call to all OT scholars to re-examine their position, and they are cheerfully responding; but it does not appear that the solid walls of P have been shaken.

J. STRACHAN.

CRITICISM (New Test.).—The criticism of the NT may he treated in two divisions—that of the Gospels and Acts, and that of the remaining books. In the Gospels and Acts we are dealing with narrative material, which may, therefore, be approached from the standpoints and methods of (*a*) literary, (*b*) historical, criticism. But in the Epistles and the Apocalypse we have to do with books where the historical element is subordinate and the literary predominant. Consequently, literary methods of criticism will find further scope than historical methods, and there is likely to be less divergence of opinion on the results obtained.

I. *CRITICISM OF THE GOSPELS AND ACTS.*—To the dispassionate inquirer the present state of this department of investigation must be strangely bewildering. This is not due to variation of opinion in the region of literary criticism, for there it has long been seen that the possibility of obtaining sure results is very limited in scope, and agreement has been largely reached on all points where agreement is possible. But, in the region of historical inquiry, results are surprisingly contradictory, and there seems at present to be no likelihood of agreement being reached.

1. **Literary criticism.**—So far as the Synoptic Gospels are concerned, important results have been reached by the methods of literary criticism. These may be briefly summarized as follows. (*a*) It has been shown that the Second Gospel was used in the compilation of the First and Third Gospels.[1] (*b*) It has been further shown that behind the First and Third Gospels lies a compilation of the Lord's Sayings (=Q) which directly, or after passing through intermediate stages, was used by the editors of these later Gospels.[2] (*c*) It has also been made probable that the editor of the Third Gospel used, in addition to Mark and Q, at least a third written source; but no agreement has been reached as to its scope.[3] (*d*) Some recent attempts to analyze the Second Gospel into two or more documents which were originally distinct rely more upon historical considerations than upon purely literary methods, and are too recent to have been fully considered.[4]

In the Fourth Gospel literary critical methods have recently found much play. Wellhausen[5] has attempted to find traces of composite authorship, and he has been followed by Spitta,[6] who endeavours to distinguish between a *Grundschrift*, to which he assigns a very high historical value, and a *Bearbeitung*. But it may be questioned whether the unity of the book is not too apparent to be lightly shaken.[7]

The attempt to analyze the Acts into its original sources finds ever new disciples. The latest is Harnack,[8] who finds in Ac 2–15 a compilation of three documents. But the grounds alleged do not seem adequate to support the conclusions.[9] On the other hand, the identity of the editor of the Acts with the writer of the 'We' sections and with the editor of the Third Gospel has received the weighty support of Harnack himself, and on purely literary grounds is hardly deniable.[1] Those who dislike this conclusion have to fall back upon historical considerations.

So far we have been dealing with literary criticism in its efforts to determine or to detect underlying sources in the narrative literature of the NT. It will be seen that the most important and assured results have been reached in those cases where the data are the fullest. The use of Mark in Matthew and Luke has been rather observed than discovered; and, if Mark did not exist, literary analysis certainly could not reconstruct it out of the later Gospels. For that very reason, attempts to reconstruct Q can be at the best but tentative. The attempted analysis of these books into sources which are not now extant is a matter of great difficulty, arising from the fact that the writers have so re-cast any sources which they may have used that reconstruction of them is now almost impossible. It is for that reason that attempts on purely literary grounds to re-discover sources used in the Acts are little likely to succeed.

2. **Historical criticism.**—It is, however, in the region of historical criticism that the variety of opinion spoken of above chiefly exists. And the reason of it is not far to seek. Inquirers into the Gospels and Acts are divided, broadly speaking, into two classes, guided by different conceptions as to the right method of approaching the narratives, and consequently employing different standards or criteria in estimating their value as historical material.

(1) Investigators of the first class start from the assumption that the facts of history which lie behind the narratives are purely natural facts, similar in nature to other facts known to us. In particular, they take it for granted that Jesus was a man, whose personality underwent the normal process of gradual development, so that the growth of His intellectual conceptions can be traced on psychological lines. Inquirers who are guided by principles like these are, of course, bound to apply to the material before them such criteria as the following. (*a*) Does a writer state as fact an event which lies outside the range of the known laws of Nature? Then, not only did the alleged event not happen, but some account must be given of the nature of the process which enabled the writer to state as fact what is incredible. Under this head the whole of the so-called miraculous element in the Gospels and Acts is removed from the sphere of history, and translated into the realm of myth, legend, popular exaggeration, symbolism, allegory, or transference of the miraculous from other departments of tradition into the life of Jesus. In the early days of criticism this generally led to the transference of the Gospels into the 2nd cent.,[2] in order to allow time for the growth of legend round the few traditional facts of the life of Jesus. More recently it has been argued that such growth may have been very rapid, and is consistent with a 1st cent. date for the Gospels.[3] (*b*) The mental development of Jesus must be similar to our own, and it

[2] The Second Gospel is now most generally assigned to A.D. 60–70, the Third to c. A.D. 80, and the First to varying dates between the publication of Mark and the end of the century. The tendency nowadays is to push the Synoptic Gospels and the Acts backwards rather than forwards. This is illustrated by Harnack's admission that the Acts may have been written 'so early as the beginning of the seventh decade of the first century' (*Acts*, p. 297).

[3] Harnack now (*Neue Untersuch. zur Apostelgeschichte*, Leipzig, 1911) places Acts before the death of St. Paul, St. Mark and St. Luke earlier, and St. Matthew shortly before or after A D 70. The present writer has argued for a date about A.D. 50 for St. Matthew (*ExpT*, July 1910).

is not possible that He could have taught doctrines which appear to us to be logically inconsistent. This has been applied in particular, in recent times, to the problem of the eschatological teaching in the Gospels as compared with the moral teaching of Christ. Christ, it is argued, cannot have been both the same unclouded thinker of the moral sayings and the apocalyptic fanatic of the eschatological passages. We must, therefore, give up one of the two as historical, and the teaching generally chosen as most conveniently to be got rid of is the eschatological,[1] which is then regarded as an intrusion into Christ's teaching of elements derived from Jewish Apocalyptic writings, remoulded in Christian circles. Of course, on lines like these the task of criticism is very largely one of explaining away the evidence which, at first sight, the Gospels set before us as to the facts of Christ's life.

It would be impossible to give here an exhaustive list of all the ways in which criticism attempts to do this, but the following are some of them :—

Adaptation of Christ's life to the narrative and prophecies of the OT. (This would account in part for the narrative of the Virginal conception, the stories of the Magi, and of the flight into Egypt, etc.) Adaptation to His life of heathen mythology (the Virgin birth). Adaptation to His life of the current Jewish doctrine of the Messiah. The attribution to Him of sayings prophetic of later events, *e.g.*, the manner of His death, or the fall of Jerusalem. The hardening into narratives of fact of words spoken by Him in allegory or metaphor.

The main difficulties which many will feel with criticism of this kind are these :—

(*a*) It starts from presuppositions with which the evidence of the narratives immediately conflicts. (*b*) Its methods of explaining the origin and genesis of much of the evidence are conjectural and fanciful—not the application of scientific principle, but an appeal to any or every supposed cause that might have given rise to the creation of the evidence. (*c*) Its results are hopelessly precarious. The Jesus who emerges from its labours is sometimes a simple-minded lover of God, who is crushed between the political and theological wheels of His day ; sometimes an ethical teacher of high value ; sometimes a dreamy enthusiast, who died because He deluded Himself into the belief that He was the Messianic King. The Gospels, as manipulated by the uncertain methods of this sort of criticism, seem capable of yielding a picture of any sort of Jesus that the critic desires.

(2) Investigators of the second class approach the subject from a very much wider and more liberal historical background. They argue that a cursory reading of the Gospels gives us at once a consistent picture of One whose personality, whilst truly human, yet transcends the limits of human personality as elsewhere known to us. They, further, argue that the same kind of evidence which is given to us in the Gospels is also given, without break of continuity, in the history of the Christian Church ; so that the Gospels are only a first stage in a continuous stream of evidence to a Person, dead yet living, human yet more than human. In view of this deepest and most profound fact of human experience, we cannot, they urge, apply to the Gospel evidence those rough and ready tests of the historical which critics of the first class are so eager to use. Christ is reported to have worked a miracle. The critics of the first class say at once: (*a*) 'The miracle did not happen'; therefore (*b*) 'the narrative is very late,' or (*c*) 'it is to be explained as due to one of the causes summarized above,' and (*d*) 'it is worthless as evidence of historical fact.' Christ is reported to have worked a miracle. The critic of the second class will say at once, 'Why not?' 'What does this mean save that from the inexhaustible treasure-house of the Personality of Jesus flowed some influence or power which so dazzled the minds of the witnesses that they recorded their impression in the simple words that have come down to us?' Or, again : Christ is reported as having taught moral principles which presuppose the continuance of human society, and as having spoken about the Kingdom of heaven as something which was to leaven human society. He is also reported as having announced the near approach of the Kingdom, and His own 'Coming' to inaugurate it, as the 'Son of Man' coming 'on the clouds of heaven.' Critics of the first class say at once: 'Christ cannot have spoken these two divergent lines of teaching. We must choose between them.' Critics of the second class will rather argue that we are dealing with two types of teaching which are ultimately harmonious; that difficulties arise if we unduly press, or too literally interpret, sayings of the one or the other type ; and, in particular, that underlying the apocalyptic utterances are statements of profound truth as to the future of the world, and of the relation of Christ to humanity, which are essential for a right understanding of His being.

So long as NT critics start from different assumptions, and employ different methods, it is obvious that they will arrive at different conclusions. It is clear that sooner or later some agreement must be reached, if possible, as to the truly scientific method of approaching the Gospels and Acts, and as to the principles or criteria by which we are to test their historical value. In other words, are we or are we not to look upon them as isolated records which can be examined in and for themselves, regardless of the continual corroboration in history of the more than human Personality to which they bear witness? Or, is the representation of Jesus as given in the Gospels as a whole one which the experience of the Christian Church in later history has proved to be substantially true? If the latter be the truer alternative, we shall be bound to approach the Gospel with some such canons of criticism as these:— (*a*) We are dealing with a record of One whose personality and force of character transcend, as is proved by the witness of history, all human knowledge. We cannot, therefore, rule out as evidence statements which ascribe to Him power and influence which are not found in normal experience of life. (*b*) There is, therefore, a general probability in favour of the credibility of the Gospel narratives. The area of uncertainty arises later in the attempt to reconstruct from them the original facts as they occurred. For instance, the narrative of the raising of Jairus' daughter will leave us with the certainty that an impression was made on the minds of the witnesses of that event that a dead person had been brought back again to life. What 'death' and 'life' here involve can never be known to us. The substantial fact is that the force and power of the Personality of Jesus effected this astonishing thing that the girl, who otherwise would have been numbered with the dead, took her place, through His influence, once more in the world of living men and women.

The question of the necessity of approaching the Gospels as historical witnesses, with some sort of presuppositions in favour of, or against, their testimony, has not yet been treated in a serious scientific manner. Yet nothing is more certain than the fact that historians approach all ancient documents with certain presuppositions. These are, in large part, inferences drawn from our experience of life treated as a whole. The question concerning the Gospels takes the form whether there is in our experience any element which should influence us in the case of these books which is absent when we are dealing with other ancient literature. The historian who answers No will necessarily approach the Gospels with a presupposition against their evidence. And this presupposition seems to be due to a denial on his part of an element in life which

[1] But see A. Schweitzer (*The Quest of the Historical Jesus*, Eng. tr., Lond. 1910), who rightly refuses to eliminate the eschatological element from the life of Christ, but over-emphasizes it.

others affirm, and which causes them to say Yes. This element is the sustained witness of the Christian consciousness to a Personality now acting upon human life, of which they find the first account in the Gospel history. It has always claimed to be not merely witness to the powerful influence exerted by the life of Jesus as recorded in the Gospels, but witness to the influence of Jesus Himself, exerted on individuals, not merely through the record of His life, as the memory of a dead friend may influence one living, but immediately as living Spirit upon living spirit. This sustained witness is a psychological fact which is deserving of more serious treatment than has hitherto been accorded to it. If it is in any sense true as a phenomenon of consciousness, then it necessarily becomes a presupposition with which the inquirer must approach the Gospel evidence. If the Personality of Jesus acts upon consciousness through the whole period of history since His death in a way in which no other personality known to us has ever acted, then it will be clearly unscientific to apply to the record of His life the same axiomatic rules, as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals. This does not make any investigation into the life of Jesus useless, or lead us to accept as literally true anything or everything that has been recorded about Him. The ordinary rules of historical investigation will apply in large part to the Gospels as to other ancient literature. But it will cause us to exercise caution in ruling out evidence which points to the presence in Him of resources of power over psychical and natural phenomena which we should reject in other cases.

What has been said above applies mainly to the Gospels, yet it also concerns the Acts. For there, too, the same question arises. When we read anything that is of a non-natural kind, are we on that ground to relegate it to a position of late date and historical valuelessness? This is what Harnack does, *e.g.*, with Ac 1. He speaks of the narrative of the Ascension which it contains as probably the latest tradition in the Book.[1] The only reason apparently for that judgment is the nature of the event recorded. But what if behind the narrative lies a historical fact, the precise nature of which can only be dimly surmised behind the strong colours in which it has been painted? Christ had left the disciples finally: that they knew. No more would He appear to them as at the Galilæan Lake. He was henceforth to be with them in another sense. And He was to come again. What if some strange experience of fact lies behind this narrative? Need it then be so late in date? What prevents it from being one of the earliest traditions of the Christian Church? St. Paul is witness to such a tradition.

Criticism of the Gospels and Acts which is based on quite unscientific presuppositions—that is the point—introduces hopeless confusion into NT criticism. It condemns offhand certain narratives as fictitious, and then invents the most improbable causes to account for their genesis and growth. This is not criticism based on principle, but arbitrary and captious rejection of evidence. We want, if possible, some sort of scientific method or principle, and this can be reached only by a preliminary investigation of all the facts. Christ as presented in the Gospels, Christ as experienced in history, Christ as experienced in modern life,—is this all of a piece, one long consecutive witness to a supernatural Christ? If so, whatever other method may be wrong, nothing can be more fundamentally unsound than the attempt to go to the Gospels and from the first to eliminate that element to which Gospels, history, modern consciousness, all alike bear testimony.

The above considerations apply also to the Fourth Gospel. But here the further question arises, Is the Christ here presented the same as the Jesus of the Synoptic Gospels? Is there, in other words, behind the Fourth Gospel a substantial basis of historical fact, due allowance being made for the translation of this into the language and thought of the period of the writer or writers who composed the book half a century or more after Christ's life? To that question different answers will probably always be given by people who approach the Gospel with different presuppositions. Interest has recently been directed in particular to the narrative of the raising of Lazarus. On the one hand, it is contended that, in view of the importance which attaches to it in the Fourth Gospel, it could not have been omitted in the Synoptic Gospels if it was a fact of history with which the writers of those Gospels were acquainted.[1] On the other hand, it is urged that the narrative does not receive the emphasis which some modern critics assign to it,[2] and that the argument from the silence of St. Mark and the other Synoptic writers is hopelessly precarious.[3] In the debate about the authorship of the Fourth Gospel interest has centred largely in the theory of Schwartz[4] (based upon an alleged statement of Papias that James and John were killed by the Jews) that John died too early to admit of his being the author of the Gospel.[5]

Quite recently the whole Johannine question has been raised into a new atmosphere by a new discovery. The old axiom of critical writers who denied the Johannine authorship of the Fourth Gospel was that the book is thoroughly Alexandrian in spirit and phraseology. Some writers have always urged that, in spite of apparent parallels with Alexandrian terminology, it is thoroughly Hebraic. This has recently received striking confirmation from an unexpected quarter. In 1909, Rendel Harris published from a Syriac MS a volume to which he gave the title *Odes and Psalms of Solomon*. He argued that these Odes were not Gnostic, but Christian, and that they date from the last quarter of the 1st century. Harnack[6] believes them to be of Jewish origin, edited by a Christian. If he is right, it follows that a large part of the supposed Alexandrian element in the Fourth Gospel is really Jewish. And Harnack draws the conclusion that 'in the Johannine theology, apart from the Prologue, there is nothing essentially Hellenic' (p. 119). If this is true, and if the date assigned to the Odes is right, a great many arguments for a 2nd cent. date for the Fourth Gospel, and a large number of objections to the Johannine authorship, cease to have any validity. It is possible that the 'Odes of Solomon' will prove as epoch-making for the Johannine question as was the publication of the Book of Enoch for the Synoptic Gospels.[7]

[1] Harnack actually makes the presence in the Acts of the narrative of the Ascension an argument against ascribing the book to a date before A.D. 78, though on other grounds he inclines to an earlier date (p. 291). But see now his more recent treatment of the date of Acts (cf. p. 319[b], note 3, above).

II. *CRITICISM OF THE EPISTLES AND APOCALYPSE.*—1. The Pauline Epistles.—The movement of criticism in recent years with regard to the Pauline Epistles has been in the direction of a return to tradition. With few exceptions, critical writers are disposed to admit as Pauline 1 and 2 Thess., Gal., 1 and 2 Cor., Romans, Philippians, and Philemon. Of these, 2 Thess. is the most doubted. It is argued that, viewed as literature, it reads like an imitation of the First Epistle, whilst from a theological point of view the second chapter presents us with an eschatology different from that found elsewhere in St. Paul. Harnack[1] has recently attempted to meet this second objection, and to preserve the letter for St. Paul by the novel argument that the First Epistle was written to the Gentile converts at Thessalonica, whilst the Second was written for the Jewish converts there.

The Epistle to the Galatians has been the subject of much controversy with respect to the date of writing and the people addressed. The theory revived and advocated by Ramsay, that the Churches addressed are to be found in the southern part of the Roman province of Galatia, would make it possible to date the letter at any time after St. Paul's visit to these Churches on his second journey. Thus Zahn[2] dates it from Corinth on the second journey. Ramsay[3] himself prefers a somewhat later date, from Antioch, between the second and third journeys. Against this it may be urged that St. Paul would probably have preferred to make a personal visit from a place so near to Southern Galatia as Antioch, instead of writing a letter. Others still prefer the older chronology, which placed the letter in close connexion with 1 and 2 Cor. and Romans. A comparison of Ac 16[6] with 18[23] favours the view that the editor of the Acts believed that St. Paul visited the old kingdom of Galatia; but that does not, of course, settle the question of the locality of the churches to which the letter was written. The strongest argument in favour of the later date is the close resemblance in tone between Galatians and Romans.

The return to a traditional position spoken of above is illustrated by the present state of critical opinion with regard to the Epistle to the Colossians. A generation ago it was assigned to the 2nd cent. by a majority of critical writers, the arguments alleged being that the Epistle contained a Christology too developed for the age of St. Paul, and that the false teaching was a 2nd cent. form of Gnosticism. But, although some of the more advanced critical writers still believe it to be post-Pauline, the view is gaining ground[4] that the Christology is not necessarily un-Pauline, and that the teaching, if in any sense Gnostic, is an early form of Gnosticism, which there is no reason to place outside the life of St. Paul.

Denial of the authenticity of Ephesians is more wide-spread. Its theology is said to be too advanced for St. Paul, especially in respect of the Person of Christ, and the doctrine of the Church; whilst the difficulty of reconciling the address to Ephesus with the entire lack of local colour has never been quite satisfactorily explained. But, if Colossians be admitted to be Pauline, these arguments lose their force. In view of the fact that all the elements of the Christology of these letters can be found in St. Paul's undoubted Epistles, it is quite arbitrary to argue that he would not have written them, if the circumstances necessary to the development of his thought on these lines had arisen. And to argue that they could not have arisen is mere dogmatism about the unknown.[1]

The Pastoral Epistles are regarded as post-Pauline by a number of critical writers, on the following grounds:

(1) The style and language are not those of St. Paul. This is true if stated in the form that style and language differ from those of the other Epistles. But, if genuine at all, the letters clearly date from a later period of St. Paul's life than any other of his extant writings. And it is not at all clear why changed circumstances should not have caused a corresponding change in the Apostle's expression of his thought.

(2) The nature of the false teaching combated is said to be that of a period which lies outside the probable limits of St. Paul's life. This is pure conjecture. There can be no evidence that teaching of the kind presupposed, whether it be an early form of Gnosticism or a debased Judaism, had not begun to affect the Churches at a very early date.

(3) The Church, as described in these letters, has a developed organization. The main point here is the status of the ἐπίσκοπος. If, as seems probable, this term is here synonymous with πρεσβύτερος, the Epistle must not be brought down too late —not, that is to say, into the 2nd cent.—and would suit a date at the end of St. Paul's life.

(4) There is a lack of other testimony to support the evidence of these letters that St. Paul was released from his imprisonment at Rome. There are, however, hints elsewhere in the NT that the Apostle was so released. Cf. Ph 2[24], Philem 22, and Ac 28[30], which, as Harnack[2] has recently urged, implies that St. Luke was acquainted with the fact that St. Paul was released. If the evidence of the Pastoral Epistles on that point be admitted as historical, the other objections to their authenticity lose much of their weight. For it is not difficult to suppose that the Apostle, feeling that his departure could not be long delayed, might well see the necessity of making provision for the future organization of the Churches, which were soon to be deprived of his guidance. In any case it is difficult to believe that any one but St. Paul could have written 2 Timothy.[3]

In the case of the last Epistle ascribed by tradition to St. Paul, the Epistle to the Hebrews, modern critics are almost unanimous in their verdict that the letter cannot be Pauline. But none of the ancient or modern conjectures as to the authorship is more than a shrewd guess. Tertullian thought of Barnabas;[4] Luther, of Apollos;[5] Harnack,[6] followed by Rendel Harris[7] and Peake,[8] favours Priscilla and Aquila; Ramsay[9] and Canon (now Bishop) Hicks[10] prefer Philip the Evangelist.

2. The Catholic Epistles.—Here, too, opinion is divided into two main classes. On the one hand are the writers who defend the traditional authorship of most of these documents, on the ground that they can find no reason for rejecting it. On the other are the critics who seem to be possessed at the outset by the feeling that it would be treasonable to admit that tradition can ever be right in its ascription of these writings to Apostolic authors. And yet, how little probable it is that none of the earliest Apostles except St. Paul should have left behind them any written record! How very probable it is that others besides St. Paul should have written letters! How improbable it

Hymns dating from the time of Justin Martyr]; Menzies, *Interpreter*, Oct. 1910 [the Odes regarded as written by Gentiles impressed with the truth of the Jewish religion]; Spitta, in *ZNTW* xi. (1910) 193 ff. and 259 ff. [holds strongly to Jewish character]; Gunkel, *ib.* p. 291 ff. [maintains Gnostic origin].

[10] *Interpreter*, Apr. 1909.

is that the Church should have failed to preserve some such writings, and should rather have let them slip into oblivion, and preserved instead 2nd cent. writings which went by false names! There is an *a priori* probability in favour of the traditional authorship, and something approaching to overwhelming proof of its impossibility is required before it can be set aside. From the perusal of the objections repeated, with as much certainty as though they were axioms of Euclid, by successive critics of the advanced type, the candid reader rises with the feeling that they are forced conclusions from evidence which is capable of more than one interpretation. 'If there were no tradition as to authorship,' he will say, 'I could only conclude that these writings were composed within the first 150 years of the existence of the Christian Church. But within that period I find no reason why some of these writings should not have been written by the men to whom tradition assigns them. On the other hand, I do see reason to suppose that the early Church would have preferred to preserve Apostolic rather than later documents.'

Apart from 2 Peter, where the argument from literary dependence on Jude seems fatal to the Petrine authorship, the arguments against the authenticity of the other members of this group seem insufficient to outweigh the tradition in their favour. They are of the following nature:

(*a*) *Against James.*[1]—The writer is arguing against St. Paul's teaching about Justification by Faith, or against a corrupt form of it; the Greek of the letter is too good for St. James; the writer does not refer to early controversies such as that about the admission of Gentiles into the Church; he makes no reference to, or use of, cardinal doctrines of the primitive Church, such as the Messiahship of Jesus, His death and resurrection; the reference to healing through the 'elders' is a mark of late date; the condition of the Christians addressed is that of a late and decayed Christianity.

(*b*) *Against Peter.*—The chief question here has turned on the nature of the persecution implied in the letter and the bearing of that upon the date of the authorship. Ramsay[2] has tried to show that the references to persecution imply a date about A.D. 80. Others prefer the reign of Trajan[3] (on the ground that the references to persecution in the Epistle accord well with the account given by Pliny to Trajan) or of Domitian.[4] But there is really no ground for so pressing the language of the letter as to make it impossible to suppose that it was written during the Neronian persecution.[5] Then, as afterwards, there may have been reason to urge Christian converts to let it be known that they were suffering as Christians, and not for moral offences which would have been inconsistent with their profession. The other main ground for rejecting the Petrine authorship of the letter is its alleged Paulinism. But we may admit a certain amount of Pauline influence upon the writer without necessarily denying that St. Peter can have been the author. Arguments against the authenticity on this and other grounds seem to be captious and arbitrary, such as 'This is unlikely,' or 'That is improbable in the case of St. Peter.' After all, how very little we know of the Apostle's life after A.D. 44! And how are we to determine what he may or may not have written, or how much or how little he may have seen of St. Paul in the later years of his life?

(*c*) *Against 2 Peter.*—The dependence of the writer upon Jude is really fatal to the authenticity of the letter. The case is parallel with that of the First Gospel. The composer of that book has carefully worked over the Second Gospel in such a way that it is little likely that Matthew or any other Apostle can have written it. So in the case of 2 Peter; if it is dependent on Jude, it is improbable that Peter or any Apostle can have penned it. (Attempts have been made to save the rest of the letter by supposing ch. 2 to be an interpolation dependent on Jude.) Further arguments against the authenticity of the Epistle are found in its late attestation, and in its reference to St. Paul's Epistles (3[16]).

(*d*) *Against Jude.*—The reference to the Apostles; the reference to 'the Faith'; the supposed similarity between the teaching combated and the teaching of the 2nd cent. Carpocratians.

(*e*) The question of the authorship of *the Johannine Epistles* is so closely connected with the complicated question of the authorship of the Fourth Gospel that it is best to pass them over in a cursory survey of NT criticism like the present. They are widely regarded as by the same writer as the Fourth Gospel, though some would separate the Second and Third Epistles from the First, and attribute them to a different author.

These arguments may be divided into two classes: (1) literary, and (2) those which rest upon the supposed background of ideas and of ecclesiastical development suggested by the writings in question. The arguments of the first class are the most likely to lead to positive conclusions, and in one case they do so, as is recognized by most critical writers, including some who in other respects come to conservative conclusions. It is generally admitted that the literary dependence of 2 Peter on Jude rules out the Apostolic authorship of the former. Here, then, we have one case where the Church has admitted into its Canon a writing of a later date, because it bore an Apostolic name. But how does it stand with the other writings? Here the literary argument leads to no such positive result. 1 Peter may depend on Romans and Ephesians, but St. Peter may have written it nevertheless. Jude shows acquaintance with St. Paul's Epistles, but why may not the Jude to whom the letter has generally been assigned have been so acquainted? When we turn to the arguments of the other class, they fail to carry conviction to minds which are not prepossessed with the conception that none of these writings can be Apostolic.

3. **The Apocalypse.**—Modern investigation has done much, and will do more, to rescue this book from the fetters of traditional lines of interpretation, and to reconstruct the atmosphere in which it was written, and in which therefore it ought to be read and interpreted. The following are the main points at issue:—

(1) *The authorship.* It is now very widely held that Apocalypse and Fourth Gospel cannot be by the same author. This is, of course, not a new, but an ancient critical inference (cf. Dionysius of Alexandria, *ap.* Eus. *HE* vii. 25. 15). (2) *The date.* Was the book written in the reign of Nero, or of Domitian? The majority of recent writers favour the later date.[1] (3) *Dependence upon earlier literature.* Attempts have been made to show that the book in its present form is a Jewish Apocalypse re-edited by a Christian, or a composite work into which fragments of Jewish Apocalypses have been loosely incorporated. These attempts at analysis of the structure of the book may be said to have failed. The unity of purpose and idea is too obvious. No doubt, the writer was deeply read in the OT, and very probably also in current Jewish Apocalyptic literature. But the book is no mere compilation of fragments of earlier writings.[2] In another form, however, attempts to prove dependence of the writer upon the past have met with success. Since the publication of Gunkel's *Schöpfung und Chaos* (1895) it has become increasingly clear that the writer has made very large use of ancient myth, and of language and symbol long current in Apocalyptic writings. Not, of course, that such borrowing is peculiar to him. The long stream of Prophetic and Apocalyptic speakers and writers from Isaiah downwards, not excluding our Lord Himself, have this in common, that they do not entirely create a new language as the vehicle of their teaching, but largely adopt and borrow the words and symbols of an earlier age. To take a simple example, the writer of the Apocalypse, like all the writers of the NT where they are dealing with the future, borrows very largely

1 The latest commentator, Oesterley (*Expositor's Gr. Test.* iv. [1910]), thinks that the arguments for and against an early date are equally balanced. He suggests that the Epistle may have been written by St. James, but that it was originally a great deal shorter than it now is.

2 *Church in the Roman Empire*[5], Lond. 1897, p. 282.

3 So Pfleiderer, Jülicher, Cone, and others.

4 So von Soden, Harnack, and recently Gunkel (*Die Schriften des NT*, 1909).

5 So the most recent commentator, Hart, in *Expositor's Gr. Test.* v. (1910).

1 So Swete, *The Apocalypse of St. John*[2], Lond. 1907; and the latest commentator, Moffatt, in *Expositor's Gr. Test.* v. (1910).

2 That the author may have employed and worked into the scheme of his book portions of earlier writings is, of course, quite probable, but difficult to prove.

from Daniel. That, of course, will be readily admitted. But modern investigation has penetrated behind this simple handing on of phrase and symbol from writer to writer, and has sought to show that much of the common symbolism so transmitted goes back to a primitive mythology, the origin of which is hidden in the speculation of peoples whose history lies on the border line where history fades into the obscurity of legend. This is, no doubt, largely true, and, if true, is of great importance for the right interpretation of the Apocalypse. If the author is making use of an ancient myth, which has passed through a long course of transmission, it is probable that much of the detail which forms part of it will be repeated by him because it is already there, and therefore it has no particular significance for him. We shall, therefore, look for the outstanding ideas behind his pictures, and not seek to press a historical allusion, or a forecast of some detail of future history, out of every phrase and symbol.

Summary.—If we turn now from this survey to a forecast of the future, there is reason to think that the NT criticism of the days to come will, if we may judge from the general tendency of the more recent writings, more and more emancipate itself from those prejudices which have made it a byword in the past. There is much that is hopeful. On the one hand, there is a readiness to admit that the larger part of the NT writings have quite correctly been assigned by tradition to the 1st century. On the other, there is not the same eagerness to maintain the correctness of tradition in all its details that once inspired writers of the conservative school. Such a popular *Introduction* as that of Peake (1909) may be taken as a good example of the newer spirit, which is anxious neither to affirm nor to deny traditional positions, but only to come to the conclusions to which the evidence points, and to keep an open mind where the evidence is inconclusive. Of course, prejudices die hard, and the determination to keep the Catholic Epistles out of the 1st cent. has still much life in it in Germany. But, speaking generally, there seems to be growing up a school of critical writers who are freeing themselves from the axiomatic dogmatism, whether theological or anti-traditional, of the past century. As this school increases, it may be hoped that, even with regard to the Gospels, something like a really scientific method of inquiry may be reached. At present it must sadly be confessed that the Prolegomena for such an inquiry have yet to be written.

LITERATURE.—This is given in the footnotes. J. Moffatt's *Introduction to the Literature of the New Testament* (Edinburgh, 1911), which appeared too late to be used in this article, should be specially referred to, as the most complete survey of the field of NT criticism. See also reviews of the book by the present writer in *ExpT*, May and June, 1911.

W. C. ALLEN.

CROMLECH.—See DEATH AND DISPOSAL OF THE DEAD (European).

CROSS.—The cross (Lat. *crux*) is the figure produced by two lines intersecting one another, usually at right angles. This figure gives rise to numerous varieties according to the direction of the limbs and the form of their extremities. W. Berry in his *Encyclopædia Heraldica* mentions no fewer than 385 different crosses, but the greater number have scarcely any interest except for decorative art and the science of heraldry. From the point of view of religious symbolism the only important types are the following: the equilateral cross, called also the Greek cross (*a* in illustration); the so-called Latin cross (*crux immissa* or *capitata*), in which the lower limb is longer than the three others (*b*); the Tau-shaped (*potencée* or *commissa*) cross (*c*); the *crux ansata* or handled cross (*d*); the *crux decussata* or St. Andrew's cross (*e*); the gammate cross (*f*); the Maltese or rayed cross (*g*); the Lorraine cross, with double or triple traverse (*h*); the cross *perronnée*, that is to say, mounted on steps (*i*).

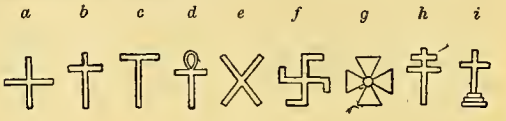

FIG. 1.

I. **Non-Christian crosses.**—1. *The equilateral cross.*—The equilateral cross, like the straight line, the curve, the circle, the crescent, the triangle, etc., forms so simple and natural a geometrical figure that in many instances it could not fail to present itself spontaneously to the imagination in quest of a sign to indicate anything that extends in the principal directions of space—the sky, the earth, rays of light, the wind-rose, etc.—and, by an extension of meaning, to stand for the abstract notion of space itself. It is easy to understand how, in the symbolism of some peoples, the cross may have served as a conventional representation of certain material objects whose contour it suggests—birds on the wing, men with outstretched arms, a double-headed hammer, the bow and drill apparatus for producing fire, etc. But, everywhere, it may be said to have been used, above all, to represent *radiation* or *space*.[1]

Thus we find that the equilateral cross was

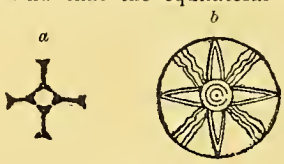

FIG. 2.[2]

adopted by the Chaldæo-Assyrians as the symbol of the sky and of its god Anu (see fig. 2, *a*). The

FIG. 3.[3]

same peoples represented the sun and its eight regions by a circle from which eight rays pro-

FIG. 4.[4]

ceeded (2, *b*). By coupling these rays in pairs there was produced the radiated cross which the king of

[1] At the same time it must not be forgotten that the cross, like the triangle and other geometric figures, is sometimes merely ornamental in origin, with no symbolic significance whatever.

[2] See Rawlinson, *WAI*, vol. ii. pl. 48.

[3] See Perrot-Chipiez, i. 308; cf. Layard, *Monuments of Nineveh*, 1849-53, pl. iv.

[4] See Schliemann, *Ilios*, Paris, 1885, No. 1959.

Assyria wore suspended round his neck, like the cross worn by a Commander in our orders of knighthood (see fig. 3).

Schliemann has noted the presence of the cross upon the pottery and the whorls of the Troad. The solar meaning of this symbol is attested by its alternating with the rayed disk. At times the two emblems appear in juxtaposition (see fig. 4, *a*).

Among the Greeks the sceptre of Apollo assumes at times the form of a cross (cf. coin of Gallienus reproduced in Victor Duruy's *Hist. des Romains*, Paris, 1885, vol. viii. p. 42), fig. 4, *b*. The cross is associated with the representation of Castor and Pollux, perhaps in order to emphasize their stellar character (so on coin of Caracalla).

In India likewise the equilateral cross alternates with the rayed disk. On an ancient coin reproduced by General Cunningham (*Bhilsa Topes*, 1854, pl. xxxi.) the branches of the cross terminate in arrow-heads (see fig. 5).

Fig. 5.

Among the Gauls, as well as among the peoples belonging to the Bronze period, the cross appears frequently on pottery, jewels, and coins (see G. de Mortillet, *Le Signe de la croix avant le christianisme*, Paris, 1866, p. 44 ff.). Here again the emblem is clearly solar (see fig. 6). On the

Fig. 6.[1]

statuette of a Gaulish deity, discovered in France in the department of Côte d'Or, we see the tunic covered all over with crosses. The god, who is Sucellus (on whom cf. Renel, *Religions de la Gaule avant le christianisme*, Paris, 1906, pp. 252–257), holds in one hand the mallet which symbolizes the thunderbolt, and in the other a jar or *olla* (see fig. 7).

Fig. 7.[2]

The cross is found in like manner in Mexico, in Peru, and above all in Central America, where its presence upon religious monuments did not fail to astonish the companions and the successors of Columbus, who saw in it a trace of a visit paid by St. Thomas, the apostle of the Indies (see *Congrès internat. des Americanistes*, vol. i., Brussels, 1879, p. 501 ff.). We know nowadays that these crosses are designed in allusion to the four quarters from which rain comes, and consequently to the winds that blow from the four cardinal points (see G. Mallery, in *10 RBEW*, 1893). The cross of pre-Columban America is a veritable 'wind-rose,' and we can perceive how it thus became, among the Toltecs, the symbol of the god who dispenses the celestial waters, Tlaloc (see A. Réville, *Religions du Mexique*, Paris, 1885, p. 91 [also in Eng. tr.]). According to Réville, the Mexican cross was called the 'tree of fecundity' or the 'tree of life.' There has been found in the ruins of Palenqué a bas-relief representing persons in the act of adoration before a cross, on which rests a fantastic bird, more or less resembling a parrot. Perhaps this was the symbol of the god Quetzalcoatl (the feathered serpent), who himself also, according to Réville, stands for a god of the wind (*op. cit.* p. 82; see also Thomas Wilson, *The Swastika*, 1896, p. 933 ff.). For a cross, representing the four winds, as thought of by the Dakotas, see fig. 8.

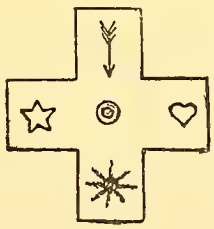

Fig. 8.[1]

The arrow at the top of this cross marks the piercing blast of the north wind. Once the north wind is located at the head of the cross, the east wind will be symbolized by the heart, which in the human body is placed under the left arm. The south wind is pictured by the sun, as it shines from the region of light and warmth, and the west wind by a star, as it blows from the region of the night.

But the American cross may have assumed also a solar or stellar character, if one may judge from

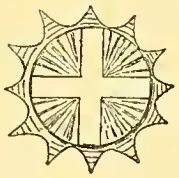

Fig. 9.[2]

the above figure (9), which has been met with on shells found in the mounds of New Mexico; and

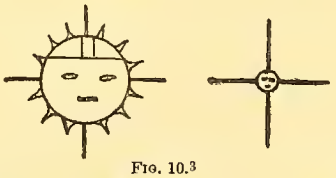

Fig. 10.[3]

from those, not less significant (10), which have been found among the Dakota pictographs. See, further, following article.

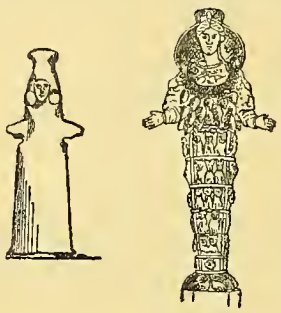
[1] See Flouest, *Deux stèles de laraire*, Paris, 1885, pl. xvii.
[2] See *Revue Celtique*, 1870, p. 2.
[1] See *10 RBEW*, fig. 1225.
[2] See Holmes, in *2 RBEW*, p. 282.
[3] See Garrick Mallery, in *10 RBEW*, figs. 1118–1126.

Among the Chinese, the equilateral cross inscribed within a square, ⊞, stands for the earth. According to Samuel Beal (*Indian Antiquary*, 1880, p. 67) there is found in China even the dictum 'God fashioned the earth in the form of a cross.' It is curious to meet with an analogous symbolism in a Church Father. 'The aspect of the cross,' writes Jerome (*Com. in Marcum*), 'what is it but the form of the world in its four directions? [*Ipsa species crucis, quid est nisi forma quadrata mundi?*]. The east is represented by the top, the north by the right limb (looking *from* the cross), the south by the left, the west by the lower portion.'

2. *The handled cross and the cross potencée.*—The *potencée* form ⊤, produced by suppressing the upper limb of the Latin cross, is called also the Tau cross, because it reproduces the form of the Greek letter *Tau*. The magical virtue which down to our own day has been attributed to this sign owes its origin unquestionably to the veneration paid by the Egyptians from their pre-historic days to the handled cross, or *key of life*, represented by a cross *potencée* surmounted by a handle (see fig. 11). This cross, which is met with on the

Fig. 11.

most ancient monuments of the Egyptian monarchy, is frequently to be seen in the hand of a god, a priest, or a king. Archæologists have maintained by turns that it represents a Nilometer (Plucke), the key of a canal-lock (Zoega), a jar upon an altar (Ungarelli), a degenerate form of the winged globe (Layard), a phallus (Jablonski), the loin-cloth worn by the Egyptians (Sayce). In the paintings on the tombs it appears to be employed by the divinities to awaken the dead to a new life. The following inscription may be read upon a bas-relief of the 12th dynasty, where the goddess Anukit is seen holding the extremity of the handled cross to the nostrils of the king Usertesen III.: 'I give thee life, stability, purity, like Ra, eternally.' Elsewhere the ideogram formed by the handled cross in the hieroglyphic script, ☥ (pronounced *ankh*), signifies 'life,' 'living' (E. M. Coemans, *Manuel de langue égyptienne*, Ghent, 1887, pt. 1, p. 46). Whatever may be the material object of which the handled cross is the representation, its abstract sense is not doubtful: it is a symbol of life, of the vital germ, and it is not without reason that it has been called the *key of life*.[1]



a[2] *b*[3] *c*[4] *c*[4]

Fig. 12.

From Egypt the *key of life*, now become a magical and propitiatory sign, spread to the Phœnicians and then to the whole Semitic world. Its presence has been noted on bas-reliefs, tombs, pottery, jewels, coins, from Sardinia to Susiana, along the shore of Africa, in Phrygia, Palestine, and Mesopotamia. Upon monuments of Phœnician or Hittite origin it is held in the hands of kings or priests, as with the Egyptians, and is associated with the tree of life and the lotus flower. Its extreme symbolical importance led the peoples who borrowed it from the Egyptians to combine it with such emblems of their own as presented an analogous form or suggested a cognate idea. Thus the Phœnicians derived from it a mixed emblem, in which the handled cross is grafted upon the cone representing the goddess Astarte or Tanit, 'she who gives life' (see fig. 12).

The Greeks anthropomorphosed it so as to reproduce the features of their goddesses of life—Aphrodite, Harmonia, Artemis of Ephesus, etc. (see fig. 13).

a[1] *b*[2]

Fig. 13.

With the Gauls the ⊤ comes to stand for the hammer of Thor, which was regarded not only as an engine of destruction, but also, after the manner of the storm, as an instrument of life and fecundity. Even with the Egyptians the two-headed mallet, ⚚, became in the hieroglyphs a Latin cross, ✝, with the meaning of 'crusher,' 'avenger' (de Harlez, 'Le Culte de la croix avant le christianisme' in *La Science catholique*, 15th Feb. 1890, p. 163).

In Egypt there have been found a whole series of signs which mark the transition from a handled cross, or cross *ansata*, to the *chi-rho*, or monogram of Christ (see fig. 14).

Fig. 14.[3]

The handled cross or a similar sign is met with also in India (see fig. 15), and in America, where

Fig. 15.[4]

it is found engraved on monuments in the ruins of Palenqué, as well as on the pieces of pottery recovered from the mounds.

[1] See, however, Wiedemann, *Religion der alten Ägypter*, Münster, 1890, p. 157 f., who maintains that the *ankh* connotes merely a band or fillet, and is only homonymous with *ankh*, 'life,' so that 'it has nothing to do with a cross.'

[2] From a coin of Paphos (*CIS*, vol. i. fasc. i. p. 6).

[3] From a coin of Carthage (Barclay V. Head, *Coins in the British Museum*, London, 1881, pl. xxxv., No. 38).

[4] From intaglios of Sardinia (J. Menant, *Pierres gravées de la Haute Asie*, Paris, 1883-85, vol. ii. pp. 256, 258).

[2] P. Decharme, *Mythologie de la Grèce antique*, 1879, fig. 145.

[3] Chi-rhos of Philæ (Letronne, 'La Croix ansée a-t-elle été employée pour exprimer le monogramme du Christ?' in *MAIBL*, vol. xvi. pl. i. figs. 47, 48, 49).

[4] On a silver ingot (Edw. B. Thomas, in the *Numismatic Chronicle*, vol. iv., new series, pl. xi.).

In a Maya manuscript two persons appear to be in the act of adoration before a tree which affects the form T, and where a parrot-like bird has taken the place of the upper arm of the cross (see fig. 16).

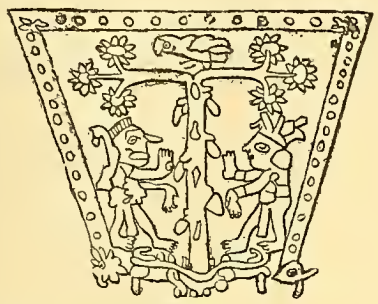

Fig. 16.[1]

3. *The gammate cross, or gammadion.* — This cross derives its name from the fact that it can be resolved into four *gammas* joined at right angles (see fig. 17). In spite of its apparently

a *b*

Fig. 17.

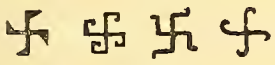

Fig. 18.

complicated structure, it is, next to the equilateral cross, the form most widely diffused throughout all antiquity. It has been met with on terra-cotta articles at Hissarlik, from the time of the second or burnt city. In Greece proper and the islands of the Archipelago it makes its appearance first upon articles of pottery with geometrical ornaments, which form the second period of Greek ceramics. It is frequent upon the ancient vases of Cyprus, Rhodes, and Athens. Upon an Athenian vase, in a burial scene, it appears thrice repeated before the funeral car. Upon a vase of Thera it accompanies the image of the Persian Artemis. Elsewhere it adorns the *vulva* of an Asiatic goddess. Upon a vase now at Vienna it appears as an ornament on the breast of an Apollo standing upon a *quadriga* (cf. Goblet d'Alviella, *The Migration of Symbols*, London, 1894, pl. i.). It became a favourite symbol on coins, and passed along with the other monetary symbols of the Greeks into the numismatic art of all the Mediterranean peoples.

This cross is also found engraved upon those hut-shaped funeral urns which have been dug up in the *terramares* of N. Italy. It likewise appears on the jewels and the weapons, not only of Gallic, but also of German and Scandinavian peoples.[2] In company with the wheel and the thunderbolt, it adorns the votive altars of the Gallico-Roman period, from Aquitaine to Great Britain. In the Caucasus it has been noted upon weapons and jewels which go back to the Bronze period. In Lycaonia, on a Hittite monument, it is introduced as an ornament on the border of the robe of a person engaged in offering sacrifice.

In India, where it bears the name of *swastika* (from *su*, 'well,' and *asti*, 'it is') when the limbs are bent towards the right (fig. 17, *a*), and *sauvastika* when they are turned to the left (fig. 17, *b*), it is already found upon the domino-shaped ingots of silver which preceded the use of coins, and then upon the coins themselves. The Buddhists employed it largely. A notable instance of its use, along with other symbols, is in the classical representation of the *Buddhapāda*, or footprint of Buddha (see fig. 19), among the bas-reliefs of the

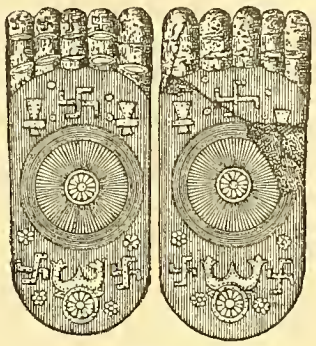

Fig. 19.

famous *stūpa* of Amarāvatī. It passed, no doubt, along with Buddhism, into the iconography of China and Japan, where it occupies a pre-eminent place on the pedestal of Buddhist statues, and even at times adorns the breast of Buddha and the Bodhisattvas.[1] In China, moreover, the *swastika* found a place among the written characters, where it conveys the notion of 'plurality,' and, by extension, of 'abundance,' 'prosperity,' 'long life' (Thomas Wilson, *The Swastika*, p. 799). The same is the case in Japan, where, according to de Milloué, it represents the number 10,000, and consequently the idea of abundance and prosperity [*BSAL*, 1881, p. 191]). The Empress Wu (684–704) of the Tang dynasty decreed that it should be used as a sign for the sun (Yang y Yu, in Wilson's *Swastika*, pl. 2).

Even at the present day the Hindus make frequent use of this figure, which they may trace in their account books and, on certain occasions, on the threshold of their houses. According to Sir George Birdwood,[2] they distinguish clearly between the *swastika* and the *sauvastika*, the first representing the male principle and the god Ganeśa, the second the female principle and the goddess Kālī. In an extended sense, the first stands for the sun in his diurnal course, or for light and life; the second for night and destruction. The sect of the Jains in India has chosen the *swastika* as the emblem of the seventh of their twenty-four saints, or Tīrthaṅkaras (Colebrooke, 'On the Jainas,' in *Asiatic Researches*, Calcutta, 1788–1836, p. 308).

The gammate cross has been met with sporadically also on bronze articles among the Ashantis of Africa; and also on native implements from Paraguay, Costa Rica, and Yucatan. In the ancient Maya city of Mayapan it adorned a stone slab which bore also the image of the solar disk, exactly as in Gaul, Italy, Asia Minor, East India. In N. America it is seen among the crosses engraved on shell and copper ornaments from the mounds, and the Pueblo Indians still use it to decorate their trinkets, head necklaces, baskets, and rugs.[3]

From the circumstances in which the gammate cross has been traced or employed, it follows that, in every instance in which a symbolical meaning has been attributed to it, it is a sign of good omen,

[1] See *3 RBEW*, 1884, p. 32.
[2] In the north it has received the name *fylfot* ('many-footed'), but the assimilation implied in this name is very uncertain. See, further, Renel, *op. cit.* pp. 217–220.

[1] The Buddha Amitābha (Musée Guimet); also in Wilson's *Swastika*, pl. i.
[2] *Old Records of the India Office*, London, 1891, p. x f.
[3] See d'Alviella, *A travers le Far West*, Brussels, 1906, p. 160.

of propitiation and benediction, an emblem of prosperity, of life, of safety [the *sauvastika*, where a distinction is drawn between the two forms of the gammate cross, is an exception which proves the rule]. But whence comes this general function of luck-bringer and talisman? There is scarcely a symbol which has given rise to such diverse interpretations. Men have seen in it, *e.g.*, running water (Waring), the air or the god of the air (R. P. Greg), fire or the bow and drill apparatus for producing fire (Emile Burnouf), the lightning (W. Schwartz), the female sex (George Birdwood), the union of the two sexes (J. Hoffman), a Pāli monogram (General Cunningham), the reunion of the four castes of India (Fred. Pincott), the nautilus [Gr. πολύπους, cf. the *fylfot*] (Frederick Houssay), cranes flying (Karl von den Steinen), the primitive god of the Indo-Europeans (de Zmigrodzki), the sun in his course round the heavens (Ludwig Müller, Percy Gardner, Edw. B. Thomas, Max Müller, Henri Gaidoz, Goblet d'Alviella).

It might even be maintained, on the strength of the monuments, that, after having served as a symbol of the sun in motion, the gammate cross came to symbolize astronomical motion in general, and thus to be applied to the moon, the stars, the sky itself, and to everything that appears to move of itself—water, wind, lightning, fire, etc. In this way it would readily become a symbol of prosperity, fertility, blessing, or the appurtenance of such deities as secured the development of man and of Nature (see figs. 20, 21).

Solar gammadion.[1]
FIG. 20.

Lunar gammadion.[2]
FIG. 21.

The question may be asked whether the gammate cross can be assigned to a single birthplace. Its two most ancient known *habitats* are: the one in the burnt city of the ruins at Hissarlik, the other among the *terramares* of N. Italy. It is possible that both of these districts borrowed it from the valley of the Danube during the Bronze age. From these two centres it may have spread—while retaining its double significance as a solar symbol and as a sign of life or of blessing—on the one hand, towards the west, to the extremities of the Celtic and German world; on the other, towards the east, by way of the Caucasus, India, China, and Japan.

Again, has the gammate cross of the New World an independent origin? The supposition is by no means inadmissible that it arose spontaneously. But the answer to this question depends in some measure upon whether infiltrations of Asiatic iconography did not make their way across the ocean during the era of pre-Columban civilization. And this is a problem which appears to be yet far from being solved.

II. **The Christian cross.**—The cross in the Christian sense is the σταυρός or *lignum infelix*, a wooden post surmounted by a cross-beam, to which the Romans, following the example of the Greeks and the Easterns, nailed or attached certain classes of condemned criminals till they died. The fact that Jesus suffered death on the cross has converted this infamous figure into a symbol of resurrection and salvation. 'I determined to know among you nothing save Jesus Christ and him crucified,' writes St. Paul (1 Co 2[2]). The early Christians saw the cross in all the intersecting lines which presented themselves to their view in ordinary life, in art, in Nature. The 'sign of the cross' was their favourite symbol. 'At every step, at every movement, at every coming in and going out,' wrote Tertullian at the beginning of the 3rd cent. (*de Corona*, 3), 'in putting on our clothes and our shoes, in the bath, at table in the evening, lying down or sitting, whatever attitude we assume, we mark our foreheads with a little sign of the cross.' Moreover, Christians had to defend themselves against the charge of pagans that they paid adoration to the cross like an idol. '*Cruces non colimus nec optamus*,' wrote Minucius Felix.[1] But it is plain that the great mass of Christians attached a magical value to this sign. At all events they used it as a form of exorcism, a means of warding off unclean spirits. One of the most ancient portable crosses, found in a Christian tomb at Rome, bears the inscription: '*Crux est vita mihi; mors, inimice, tibi*' ('The cross is life to me; death, O enemy [the devil], to thee'). Soon the cross came to work miracles of itself. People went the length of marking cattle with it to protect them from disease.[2]

The cross, according to a Roman Catholic archæologist, P. Didron, is more than a figure of Christ; it is in iconography Christ Himself or His symbol. 'Thus a legend has been created around it as if it were a living being; thus it has been made the hero of an epopee germinating in the Apocrypha; growing in the Golden Legend; unfolding and completing itself in the works of sculpture and painting from the 14th to the 16th century.'[3] This is an allusion to the celebrated mystical poem of Giacomo da Varaggio (13th century), where it is related how, after the death of Adam, Seth planted upon his tomb a branch taken from the tree of life. When the slip had grown into a tree, Moses obtained from it his magic rod. Solomon took from it the wood for his temple. Finally, the executioners of Jesus cut from it the materials for fashioning the cross. This cross, buried upon Golgotha, was disinterred in the time of the empress Helena; and the Church commemorated its discovery by appointing the 3rd of May (13th Sept. in the Eastern Church) as the annual festival of the *Inventio Crucis*. Carried off by Chosroës, it was miraculously recovered by Heraclius fourteen years later, in honour of which event the Church instituted another annual festival on the 14th of Sept., the *Exaltatio Crucis*. Lost once more after the Muslim invasion, it is to reappear finally in the sky at the end of the world.

The Holy Cross had its special churches as it had its festivals; not a few cities even were named in its honour. Thus Roman Catholic writers admit that the cross has become the object of a veritable cult. 'The cross,' writes Didron (*loc. cit.*), 'has received a worship similar, if not equal, to that of Christ; this sacred wood is adored almost equally with God Himself.' Many churches possess, amongst their miraculous relics, alleged fragments of the cross. A legend, intended to explain their abundance, relates that these fragments had the miraculous prerogative not only of healing diseases, but even of reproducing and multiplying themselves indefinitely.

Strangely enough, the early Christians, in spite of the importance they attached to the cross, refrained from reproducing it in their iconography.

[2] From a Cretan coin (*Numismatic Chronicle*, vol. xx. [No. 3] pl. ii. fig. 7).

[1] Migne, *PL* iii. 346.
[2] de Rossi, *Bulletino di Arch. Cristiana*, 1873, p. 138; see, further, art. CHARMS AND AMULETS (Chr.), vol. iii. p. 426.
[3] P. Didron, *Histoire de Dieu*, 1843, p. 351.

During the first three centuries (with possibly a single exception, that of the equilateral cross cut on a sepulchral inscription, which de Rossi believes may be assigned to the end of the 2nd or the beginning of the 3rd cent.) the cross of Christ is invariably dissimulated under the form of an object which recalls its image: a trident, an anchor (see figs. 22, 23), a ship with rigging; or under the forms of the cross already employed by other cults. the cross *potencée* and the gammate

Figs. 22, 23.[1]

cross. The cross *potencée*, according to certain archæologists, is, by the way, the form which most accurately recalls the instrument of crucifixion employed by the Romans.

At the close of the 3rd cent. the Christians designated Jesus Christ by a monogram composed of the first two letters of Ἰησοῦς Χριστός, ☧, or of ΧΡιστός, ☩. The addition of a transverse bar, ✳ or ✠, exhibits the cross or, better still, Christ upon the cross, especially when, by an after process of simplification, the *chi-rho* becomes ☦ or ✝. Further, the Latin cross already appears upon certain coins of Constantine, although this emperor, true to his policy of religious eclecticism, shows no scruple about introducing on the same coins representations of Mars or Apollo as gods. Julian, of course, suppressed both cross and *chi-rho*. But, after his time, the cross finally takes its place upon coins and even upon the Imperial diadem. At the same time it asserts itself under its proper form in funeral inscriptions, upon altars, reliquaries, lamps, jewels, and even upon the façades of houses and the tops of *basilicas*, where it takes the place of the monogram; and before long it may be seen furnishing the ground plan of churches. In the 5th cent. the employment of the cross *potencée* becomes rare except in Celtic countries, where it continues to show itself in inscriptions. In like manner the gammate cross now appears only sporadically, in the west and the north of Europe, upon tombstones and sacerdotal vestments.

The so-called Latin cross and the equilateral cross were at first employed without discrimination. Only gradually did the equilateral come to be the specialty of the East, and the form with unequal limbs that of the West.

As to the *crucifix*, i.e. a cross with the body of Jesus nailed to it, this representation does not make its appearance till the 7th century. The art of the Middle Ages was not slow to heighten its realism still more. But at the same time a distinction was drawn between the cross of the Passion, which is accompanied by all the implements of crucifixion, and the cross of the Resurrection, with which Jesus ascends to heaven. The first is painted sometimes green, because it was cut from a tree; sometimes red, because it was stained with the blood of Christ. The second is painted sometimes blue, the colour of the sky; sometimes white, as symbolizing the invisible Divinity. It is this last which is carried at the head of processions.

The cross became a hierarchical symbol in the Church. Thus the Pope has the privilege of having carried before him a cross with three bars, while cardinals and archbishops have to be content with two, and bishops with one.

Finally, the cross served also in the prime of the Middle Ages as a symbol of certain popular rights. Such were the market crosses in Germany, which implied the municipal jurisdiction; the *perrons*, or crosses mounted upon a column, which in certain towns of Belgium and Germany were regarded as an emblem of jurisdiction, and even as the palladium of local liberties. When Charles the Bold wished to punish the inhabitants of Liège, he carried away their *perron* and set it up for six years at Bruges.

For a number of centuries the phrase 'to take the cross' meant to devote oneself to fight the infidels. Hence the orders of knighthood and the crosses of honour, the bestowal of which has now nothing to do with religion.

After all that we have said, it is needless to stop to examine theories, ancient or modern, which seek to claim a pagan origin for the Christian cross, on the ground that earlier cults had cruciform signs among their symbolism, while others would discover in pre-Christian crosses prefigurations of the Crucifixion. We must content ourselves with referring the reader to the respective supporters of these theories (*e.g.* Emile Burnouf, Gabriel de Mortillet, Mourant Brock, Abbé Ansault, etc.).

Greg, 'The Fylfot and Swastika,' in *Archæologia*, 1885, p. 293 ff.; G. Dumontier, 'Le Swastika et la roue solaire en Chine,' in *Revue d'ethnographie*, Paris, 1885, vol. iv. p. 327 f.; Goblet d'Alviella, 'De la croix gammée ou swastika,' in *Bulletins de l'Académie royale de Belgique*, 1889; D. G. Brinton, 'The Ka-ti, the Swastika, and the Cross in America,' in *Proceedings of the Amer. Philosophical Society*, vol. xxvi., 1889, p. 177 ff. M. de Zmigrodzki has collected, in various publications, all the known instances of the gammadion (see his *Geschichte der Swastika*, Brunswick, 1890, and his *Przeglad archeoloji*, Krakow, 1902). As for the literature on the subject, Thomas Wilson mentions in the Appendix to his work *The Swastika* (Washington, 1896), 114 books and articles, besides his own, dealing with the gammate cross.

Goblet d'Alviella.

CROSS (American).—The appearance of the cross symbol among the semi-civilized and savage peoples of America in all probability admits of a genuine two-fold interpretation. It amalgamates in all likelihood two cognate ideas: (1) that of the cross as a symbol of the four winds belonging to or emanating from the four cardinal points; (2) that of the 'world tree,' 'tree of life,' or 'tree of our flesh' (Mexican *Tonacaquahuitl*), analogous in some ways to the Scandinavian *Yggdrasil*, or cosmic tree, whose roots surrounded the universe. The first, in its pictorial and mural form, was probably evolved from the second as an art convention. There can be no question of the genuine aboriginal character of the cross symbol as found in America. Its origin appears to have been analogous to that of the symbol in use in the Old World—evolution from a symbol of the four cardinal points; but any hypothesis of its importation from Europe

[1] See T. Roller, *Les Catacombes de Rome*, Paris, 1881, vol. i. pl. xix. nos. 8 and 11.

or Asia would require much weightier proof of European or Asiatic colonization than has yet been advanced, and is easily discounted by the unquestionable signs of its wide-spread aboriginal use throughout the American continent.

On the discovery of Yucatan, where the lieutenants of Cortes found crosses at Cozumel and elsewhere, the wildest theories were propounded to account for their appearance in the New World. These crosses were about 3 ft. in height, and were usually found in an enclosure called *teopan*, or the buildings surrounding a temple. The Spanish missionaries believed that they had been introduced by the apostle St. Thomas, or that early Spanish colonists, driven out by the Moors, had sought refuge in America, and had brought with them the sacred symbol. The missionaries then proceeded to inquire after representations of the Crucifixion itself, and it was discovered that one had existed in pictorial form on a manuscript which had been buried to prevent its destruction by the invaders, but which had subsequently rotted undergrounnd. This figure undoubtedly represented a human sacrifice to the Sun, always intended in Mexico when the word 'God' (*Teotl*) was employed, as in the present instance, without any indication of the particular deity which the figure was meant to represent.

1. **As a symbol of the four winds.**—As a symbol of the four cardinal points from which the winds, and therefore the rains, came, the cross was well entitled to the designation of 'tree of our life' in the arid climate of Yucatan. To each quarter of the heavens a quarter of the ritual year belonged. The Aztec goddess of rains, Chalchiuhtlicue, bore a cross in her hand, as most of the principal deities of Egyptian mythology carry a cognate symbol, the *ankh*, or 'key of life'; and, in the feast celebrated in her honour in the early spring, victims were nailed to a cross and shot with arrows. Quetzalcoatl, as god of the winds, is represented as carrying a species of cross, and his robes were decorated with cruciform symbols. The form which we find, for example, in the famous bas-relief of Palenqué, and which was also discovered npon the temple walls of Cozumel, Popayan, Cundinamarca, and elsewhere, was undoubtedly a conventional form evolved from that of a tree, consisting of the lower part of the trunk and two cross-branches. The Mayan designation of the cross was indeed *Vahom che*, 'the tree erected *or* set up.' In the Palenqué cross, at the ends of the branches knobs appear, which are probably intended to indicate leaves or fruit. On the summit is perched a bird, probably a turkey, decked out in the brilliant plumage of more brightly-feathered fowl. The cross in question was probably regarded as in some measure the pedestal of the living turkey-fetish. The flesh of the turkey was a staple of Mexican diet, and in this way, it may be, the bird had become associated with the idea of subsistence and the 'tree of life' itself. In any case the cross of Palenqué was known as *Quetzalhuexoloquahuitl*, or 'tree of the plumed turkey.' A priest stands on the proper right of the bas-relief, offering as a sacrifice a small human figure made from maize paste, and not a newly-born child, as some authorities state. On the proper left stands an acolyte, offering up a stalk of maize. At the roots of the cross a hideous head appears. It is that of *Cihuacohuatl* (female serpent), or *Tonantzin* (our Mother), to give her her Mexican designation—the earth-goddess, the most bloodthirsty of the Central American deities in her lust for human flesh, and the one from whom the 'tree of life' has its being and nourishment.

Many American peoples believe in the efficacy of the cross as a symbol whereby rain may be obtained. The rain-makers of the Lenni Lenape draw the figure of a cross upon the ground, with its extremities towards the cardinal points, and on this they place a gourd, some tobacco, and a piece of red material, afterwards invoking the rain-spirit. The Creeks, at the ceremony of 'the Busk,' celebrated to the four winds, dispose four logs in the shape of a cross, the ends of which are set to the cardinal points, and in the centre of these they kindle the New Year's fire. The Blackfeet used to arrange large boulders in the form of a cross, on the prairies, in honour of Natose, 'the old man who sends the winds.' The Muyscas of Bogota, in order to sacrifice to the goddess of waters, extended ropes across a lake, thus forming a gigantic cross, at the point of intersection of which they cast in offerings of precious stones, gold, and odoriferous oils. In the State of Wisconsin many low cruciform mounds are found, exactly orientated. These were probably altars to the four winds. In the mythology of the Dakotas the winds were always conceived as birds; and the name of the cross in the Dakotan language signifies 'the mosquito-hawk spread out.'

2. **As the 'world tree.'**—In those Mexican and Mayan pictures which deal with cosmology the world tree is depicted as standing in the centre of the universe, its roots deep in the waste of waters, its branches among the clouds, as if in search of rain. The Mexicans worshipped the tree as *Tota* (our Father), whom they further described as 'god of the waters and of vegetation,' although he also appears to have some connexion with fire. Among the Kiche (or Quiché) of Guatemala, women desirous of children sought out a tree overhanging a pool, to which they prayed as the emblem of fertility; and this indicates the possible phallic origin of the tree of life. The *vax che*, or ceiba tree, is still an object of veneration in many hamlets of Central America. The sacred pole of the Omahas typifies the cosmic tree, the centre of the four winds, and the dwelling of the thunder-bird; and tree-burial among the western tribes of North America probably bore some mythical relation to placing the dead in the tree of life. The Mbocobis of Paraguay believe in a tree by which the dead once climbed to Paradise, and the Yurucares of Bolivia in one whence mankind originally emerged. The sacred tree also appears symbolically throughout America in the form of the poles and stakes which surround the prayer-houses and *kivas* of many American tribes.

LEWIS SPENCE.

CROSS-ROADS.—Cross-roads are very generally regarded as the dwelling-place or resort of evil spirits, ghosts, etc., and hence are considered unlucky or even dangerous, while various expedients are resorted to in order to ward off their dangers. On the other hand, they are sometimes associated with a divinity—probably, in the first instance, because images of the divinity were placed there to counteract the powers of evil, and a cult of the divinity was observed at the cross-ways. Or they may be regarded as sacred in themselves. Thus in the Avesta a formula runs: 'We sacrifice . . . to the forkings of the highways and to the meeting of the roads' (*SBE* xxxi. [1887] 291). In ancient India they were not to be defiled or obstructed (*ib.* xxii. [1884] 182, xxxiii. [1889] 158). But the reverence for such a divinity of cross-roads was soon mingled with the fear of the demoniac in-

fluences, and we find the divinity often regarded as sharing in the characteristic evil and horrible traits of the very demoniac beings which he or she was supposed to hold at bay. The association of evil beings or of a divinity with cross-roads is an extension of their association with roads in general, and is already found among some lower tribes in connexion with the rough paths leading through forest or jungle, and with their intersections.

1. **Burial at cross-roads.**—(*a*) There is evidence that the dead were sometimes buried at cross-roads, and this would be one reason for their being regarded as particularly ghost-haunted places—a belief which is certainly very remote and widespread. Among the ancient Hindus there was a practice of erecting a *dāgoba* or *stūpa* (a mound in which the bones and ashes were placed) at cross-roads. These were to be erected there in honour of a king of kings or a *Tathāgata* (*Mahāparinibbāna Sutta*, v. 26, vi. 33 = *SBE* xi. [1881] 93, 125; cf. Oldenberg's remarks, *Rel. des Veda*, Berlin, 1894, p. 562). In Slavic lands, cairns and tumuli are often found at cross-roads, and the older literature sometimes refers to a cult of the dead there (Grimm, *Kleinere Schriften*, Berlin, 1865, ii. 288). Other instances are reported among the Greeks, Germans, etc. (Lippert, *Rel. der europ. Culturvölker*, Berlin, 1881, p. 310; Wuttke, *Deutsche Volksabergl. der Gegenwart*, Berlin, 1900, § 108; Winternitz, *Denkschr. der kais. Akad. der Wissensch.*, Vienna, xi. [1892] 68). In Hungary, persons believed to have succumbed to the malice of a witch or demon were sometimes buried at cross-roads, to deliver them from this influence, as witches had no power there—an unusual belief (*FLJ* ii. [1884] 101). This is an instance of the riddance of evil at cross-roads (see § 5). It is not impossible that one reason for honourable burial at cross-roads was the desire for re-incarnation. Among the Mongols, among many N. American tribes, and in W. Africa, children are often buried by the side of a path or road, in order that the ghost may have an opportunity of entering some woman passing that way, and so being re-born of her (Letourneau, *Sociology*, 1893, p. 239; Owen, *Folk-lore of the Musquakie Ind.*, 1902, pp. 22–23, 86; Dorman, *Prim. Superstitions*, Philadelphia, 1881, p. 35; Kingsley, *Travels in W. Africa*, 1897, p. 478). As more women are likely to pass a cross-way than on any single path, the chances of re-incarnation would be greater there.

(*b*) But in the case of persons whose ghosts are regarded as dangerous, another reason for burial at cross-roads must be sought. Among such persons are those who have committed suicide, and occasionally murder. Custom and law in England prescribed that the suicide should be buried at a cross-road, with a stake driven through his body. A stone was also placed over the face (Stephen, *Hist. of Crim. Law*, 1883, iii. 105; *FL* viii. [1897] 199. The custom was abolished in 1823). Criminals also were executed at cross-roads, *e.g.* Tyburn, the meeting-place of the London, Oxford, and Edgeware roads. Stake and stone were intended to prevent the restless ghost from wandering and troubling the neighbourhood. It has also been suggested that the constant traffic over the grave would help to keep the ghost down, or that the number of roads would confuse it, and so prevent its finding its way home, or that the cross would act as a disperser of the evil energy concentrated in the body or the ghost, or that sacrificial victims (these being frequently criminals) were formerly slain on the altars at cross-roads, which were therefore regarded as fitting places for the execution and burial of criminals, after the introduction of Christianity (*FL* viii. 264; Westermarck, *MI*, 1908, ii. 256; *EBr*[11] vii. 510). To this it should be added that suicides were generally buried in out-of-the-way places; and the cross-roads, being a place of evil repute, would naturally be selected for the grave. The underlying thought is that of riddance of the contagion of evil, and in no better place could this be effected than at the cross-roads (see § 5). A parallel custom of burying at the cross-roads the bodies of children still-born or born feet-foremost (a mode considered unlucky) is found in Uganda, where also the bodies of suicides, with the tree on which they hanged themselves or the hut in which they took their lives, were burned at cross-roads. And it is noticeable that women who pass that way throw a few blades of grass, or sticks, or stones, on the grave to prevent the spirits from entering them and being re-born (Roscoe, 'Manners and Customs of the Baganda,' *JAI* xxxii. [1902] 30, and Frazer, *Totemism and Exogamy*, 1910, ii. 507, iii. 152). In Greece, persons who murdered father, mother, brother, or child were slain at a place outside the walls where three roads met, and their bodies were exposed naked (Plato, *Leg.* ix. 873).

2. **Ghosts, spirits, and demons at cross-roads.**—Cross-roads are universally believed to be the common resort of evil spirits. As places of burial, cross-roads would naturally be haunted by the ghosts of the dead; but also, as ghosts would be often passing along the roads from other places of burial to their former homes, they would be more numerous at cross-roads. The ghostly train is often seen on roads, but more particularly at their intersections; hence, to see them one would naturally go there, as in the Abruzzi, where, at the festival of the dead, the throngs ghosts can be seen at the cross-ways by any one standing there with his chin resting on a forked stick (Finamore, *Credenze, usi, e costumi abruzzesi*, Palermo, 1890, pp. 180–2). But, besides ghosts, all kinds of evil powers frequent the cross-ways. This is a wide-spread belief in India, one particular class of demoniac beings—*bhuts*—being usually found at cross-roads, while other 'waylayers' lurk there also (Oldenberg, 267; Crooke, *PR* i. 290; *FL* viii. 330; *SBE* xxx. [1892] 49). Among the Muhammadan peoples, cross-roads are one of the numerous resorts of the *jinn* (Lane, *Arabian Society*, 1883, p. 37). In Russia, vampires are thought to lurk by night at cross-roads, ready to attack the belated traveller (Ralston, *Russ. Folk-Tales*, 1873, p. 311). In Europe generally, witches were associated with the cross-ways. There they gathered up money scattered by the devil; there, too, they met, and, in some cases, the Sabbat was held at the junction of roads, especially on Walpurgis night, when they might be seen by him who put on his clothes inside out and crept backwards to the place; while the ringing of consecrated bells on that night hindered their dancing with the devil at cross-roads (Grimm, *Teut. Myth.* [Eng. tr. 1880–8], 1074, 1115, 1799, 1803, 1824; Stewart, *Superstitions of Witchcraft*, 1865, p. 128). On the other hand, witches are occasionally regarded as having no power at cross-roads. In Naples it is held that they must go round them on their way to a meeting, as they cannot pass them; and in Hungary cross-roads are believed to neutralize their evil powers (*FL* viii. 3; *FLJ* ii. 101). Here, probably, the form of the cross acts as a prophylactic. Sprites, kobolds, and fairies are also sporadically associated with cross-roads (Grimm, 838, 1115; Goethe, *Faust*, III. i. 40). In mediæval superstition there was no better place than a cross-road for the purpose of evoking evil spirits, especially the devil, and making a compact with them. The magical treatises then current explicitly set this forth; thus the *Clavicula Solomonis* says: 'For magical operations a secret, remote, deserted, and uninhabited place is necessary, but best of all are the cross-ways.'

This notion is found in the 6th cent. story of Theophilus, and in the old tradition it was at a cross-road near Wittenberg that Faust sold himself to the devil. The custom was to go to the cross-way by night, and there make a magic circle in which cabalistic signs were inscribed, and then to call up the devil. Similarly, witches made their compact with Satan at cross-ways. In the case of the Swedish witches in the 17th cent., they first put on a garment over their heads and danced near a cross-road. Then, going to the cross-road, they thrice called on the devil to come and carry them to the meeting-ground. When he appeared they promised to serve him body and soul, and he then conveyed them to the Sabbat (Grimm, 1074; Baring-Gould, *Curious Myths*, 1888, p. 630; *Hist. . . . de Jean Fauste*, Amsterdam, 1674; Görres, *Die christl. Mystik*, Regensburg, 1842, bk. vi. ch. 16; Wright, *Narratives of Sorcery and Magic*, 1851, i. 134, ii. 249 f.).

For these reasons, wayfarers took precautions at the cross-ways. In India, *mantras* must be said; *e.g.* at a bridal procession the bridegroom had to say, 'May no waylayers meet us!' They should not be stopped at, and the traveller should pass with his right hand turned to them (*SBE* ii. 226, vii. 200, xxv. 135, 150, xxx. 49). Similarly, in Sweden, no bridegroom will stand near a cross-road on his wedding-day—a precaution against 'envy and malice' (Chambers, *Book of Days*, 1863, i. 45). See also § 5.

The origin of the belief in the presence of evil agencies at cross-roads may be found in the simple fact that, as people were more numerous at cross-roads, so naturally would all evil powers be, such at least as were so often associated with roads or paths. Men always fear demons and spirits which they believe lurk on the edge of the forest path or rude roadway, ready to pounce upon the belated traveller, and in many cases roads are believed to be infested by them (Monier-Williams, *Rel. Thought and Life in India*, 1883, p. 216; Maspero, *Dawn of Civilization*, 1894, pp. 632, 636). Hence they would be regarded as lurking at the intersections of roads, especially by night, when wayfarers were uncertain of the direction in which they ought to go (cf. Ovid, *Fasti*, v. 3). A further reason may be sought in the fact that paths and roads often form boundaries, as is shown by the fact that images and altars of boundary-gods often stood on roadways (MacPherson, *Khonds*, 1865, p. 67; cf. § 3). Rites of riddance and aversion intended to drive evil powers off the fields or tribal lands would, in common belief, have the tendency to force them on to the boundaries—a kind of neutral ground (for such rites, see Frazer, *GB*², 1900, iii. ch. 3, §§ 13, 14, 15, *passim*; Ralston, *Songs of the Russian People*, 1872, pp. 211, 396). And, as boundary so frequently signified road, or was marked by a pathway (as in Samoa [Brown, *Melanesians and Polynesians*, 1910, p. 339]; see other examples in this art.), there would here be another reason for evil spirits haunting roads. Hence the cross-ways, where boundaries or paths met, for the reason given above, would again be more open to their presence and influence. Evil powers associated with cross-roads are, in fact, often stated to be also found on roads and boundaries, or a boundary-stone is found at cross-ways (cf. Grimm, 1051, 1113, 1804, 1821; Crooke, *PR* i. 290). Hence magical rites which are effective on roads are still more effective at cross-roads, as many instances of their use in both cases show.

3. Divinities at cross-roads.—Divinities are frequently associated with cross-roads. This is sometimes with the intention of repelling those evil powers which otherwise would throng them, though, as examples show, there is a tendency for the protective divinity to take on some of the aspects of those evil powers, as in the case of Hecate. Or again, since evil powers are connected with cross-roads, divinities whose character is evil rather than good are often worshipped or propitiated there.

In India, from early times, the cross-ways were the abode of sinister gods, especially of Rudra, lord of ghosts and of evil powers generally, who was propitiated at the yearly festival of the dead by a sacrifice of cakes—the offering to Rudra Tryambaka, for the deliverance of descendants from his power, and for the securing of his beneficent action. This was offered at cross-roads, because Rudra roves on the roads, and 'the cross-road is known to be his favourite haunt' (*Satapatha-Brāhmaṇa*, *SBE* xii. [1882] 408, 438 f.). The cross-road is also the halting-place of the Agnis (*ib.* 439, n. 1). Travellers addressed both paths and cross-roads with *mantras*: 'Adoration to Rudra, who dwells on paths; adoration to R., who dwells at cross-roads' (*ib.* xxix. 366, xxx. 180). In the yearly ritual the connexion of ghosts with the cross-ways is also apparent. Lesser evil divinities also had their cult at cross-ways, but usually for specific purposes—the repelling of disease or demoniac influence, or the contagion of evil. To get rid of disease, one should go by night, naked, to a cross-way, and there make an offering of rice with a *mantra*, returning in silence without looking back. This must be repeated until the evil spirit (Piśāca) appears and says, 'I will end your ailment' (*Kathā-sarit-sāgara*, Tawney's ed., 1895, i. 256). The sacred writings also ordain that a student who has broken a vow of chastity must offer an ass to Nirriti, goddess of destruction, at a cross-way, then put on the skin and proclaim his sin (*SBE* ii. [1897] 289; cf. xxix. 361). Elsewhere he is directed to light a fire at the cross-ways, and to offer an ass to the Rākṣasas and an oblation of rice to Nirriti (*ib.* xiv. [1882] 117 ff.).

In Japan, phallic symbols, *chimata-no-kami*, or 'road-fork gods,' were set up on roads, and worshipped at cross-roads and waysides, as protectors of travellers. They were said to have been produced from the articles thrown down by Izanagi in his flight from Hades, or at his purification (see vol. ii. p. 700[b]). Their festivals were held at cross-roads outside the capital, or at the frontier, at the end of the 6th and 12th months, or in time of pestilence, while offerings took place at other times. Other phallic symbols, *sahi-no-kami*, or 'preventive deities,' were also worshipped at roads and cross-roads, and hence came to be regarded as guides and friends of wayfarers. Their cult was popular, they were inquired of in divination, or prayed to before a journey; or an offering was made to them by travellers on their journey. Accidents on a journey were the result of neglecting them. But the primitive function of all these deities seems to have been that for which they are still addressed in the liturgies, viz. protection against the unfriendly beings and evil spirits of pestilence from Hades.

'Whenever from the Root-country, the Bottom-country [= Hades], there may come savage and unfriendly beings, consort not and parley not with them, but, if they go below, keep watch below; if they go above, keep watch above, protecting us against pollution with a night guarding and with a day guarding.'

Three of these are mentioned in one *norito*—Yachimata-hiko, the Eight-road-fork prince, Yachimata-hime, the Eight-road-fork princess, and Kunado, whose name, 'Come-not place,' is suggestive of his functions as a repeller of evil beings. The first two are represented as male and female figures with sexual organs, the last as a simple phallus. Another phallic god, Saruta-hiko, dwells at the eight cross-ways of Heaven, and is said to have acted as guide to Ninighi on his coming to earth. He is also called Dosojin, or 'Road-ancestor deity,' and is found at cross-ways in the form of a phallic boulder, over which is stretched a rope supported by bamboos. Jizo, the Buddhist children's god, now occupies his place at cross-ways (Aston, *Shinto*, 1905, pp. 306, 187, 189, 191, 197, 340).

The phallic origin of these gods, in accordance with the well-known property ascribed to the sexual organs as warders off of evil spirits, their protective powers against demoniac and pestilential influences, and their ultimate position as gods of travellers recall the position of the Greek Hermes and the Hermæ (cf. p. 333[b]).

Among the Teutonic peoples occurred a yearly procession of the image of a god or goddess (Frey,

Nerthus, Holda, Berchta, etc.) round each district, for the purpose of promoting fertility (Tac. *Germ.* 40; Grimm, 213, 251, 268, 275). In later tradition the remembrance of this procession was mingled with the myth of the Furious Host or the witches' jannt, headed by one of those divinities—a myth which in pagan times told of an aerial course of the god or goddess with their subordinates, corresponding to the course of their images followed by the jubilant crowd on earth. It was connected with the latter, and perhaps in part originated from it, as an ætiological myth (cf. Grimm, 1055–56). These processions, doubtless, went round the boundaries, and the divinity would then be associated with boundaries, and so with roads and cross-ways. In some of the later traditions, cross-roads appear to be unlucky to these wandering hosts, now become demoniac and associated with sorcery, with the devil and witches. Berchta's waggon breaks down at the cross-roads, so also does that of Frau Gauden, and the help of a mortal is necessary to repair it (see the traditional tales in Grimm, 275, 926). Perhaps there is here a distorted reminiscence of a halting of the procession of the image and waggon at cross-roads, either for a sacrifice to the divinity, or for the performance of some rite by which his or her protection would be secured against the evil powers of the cross-roads. Later, when the divinity became a more or less demoniac being, the folk-memory of the halting of the waggon produced the story that the waggon broke down. The divinity no longer repelled evil influences at cross-roads, but was now subject to these influences, cross-roads being unlucky to him or her, as in the case of witches (cf. § 2). On the other hand, it is not impossible that offerings were laid at cross-roads for the divinities to partake of in their aerial wanderings, as in the case of Hecate. As her images stood there, so probably images of some of these Teutonic divinities may have been set up at cross-roads. This is suggested by traces of a cult to gods or ghosts of the dead at cross-roads (the haunt of souls), anathematized by the Church. Prayers, offerings, and the consumption of such offerings, votive offerings (*vota; pedum similitudines quas per bivia ponunt*), and the ritual lighting of candles and torches at cross-ways (*bivia, trivia*) are all forbidden, and the prohibitions probably apply to Celtic as well as to Teutonic custom (S. Eligius and Burchard, in Grimm, 1738, 1744; de la Saussaye, *Religion of the Teutons*, Boston, 1902, p. 290; Grimm, *Kleinere Schr.* ii. 288). Sitting on a bull's hide at cross-ways in order to consult the future is also forbidden. The hide was probably that of an animal sacrificed there (Grimm, 1744, and cf. his comment, 1115, and the common ritual use of the skins of sacrificial victims elsewhere). Divinities were also sometimes seen at cross-roads by their worshippers (Grimm, 1202). The cult of divinities, Teutonic and Celtic, at cross-roads is further borne witness to in the occasional references in witch-trials to ghastly offerings made to demoniac powers (their successors) at cross-roads, as in the trial of Alice Kyteler and her accomplices at Ossory in the 14th cent., in which there is reference to a sacrifice of living animals torn limb from limb and scattered at cross-roads, or of nine red cocks and nine peacocks' eyes (Wright, i. 28, 30).

Among the Greeks, Hecate, a goddess whose cult was probably introduced from the north, and who had several varying aspects, was associated with cross-roads as Hecate τριοδῖτις. Her primitive connexion with these and also with roads and doorways was probably that of an averter of ill. Her images or symbolic figures stood before doors and at cross-ways, to keep out ghosts and to counteract the gloomy influences prevailing at cross-ways. In both cases the chief evil influence to be averted was that of the ghosts of the dead. These images were called ἑκάταια, and frequently represented her in triple form. Through her connexion with roads and cross-roads, she, as Hecate ἐνοδία, was the helper and guide of travellers who sought her aid (schol. ad Theocr. ii. 12). But she was also regarded in a more sinister light. As an infernal goddess, she was ruler of ghosts, phantoms, and demons, causing them to appear on earth to frighten travellers, associated with sorcery, and seen often on moonlight nights with her ghostly train and baying hounds, like the Teutonic Holda. In this character she was more particularly Hecate τρίμορφος, of a malicious and dangerous nature. Hence she had to be invoked and propitiated, lest she should send harm on men. The triple form of the goddess has been variously explained, but, in all probability, it arose from the fact that her images at cross-ways had faces looking down the converging roads, so as to watch over each. In her we see a goddess who, at first regarded as an averter of ills, is later associated with those very ills which she averts. She can keep them at bay, or she can cause them to appear, and she herself is imaged in their sinister forms. Offerings were made to Hecate at cross-roads, and her images there were consulted for divination. Monthly offerings were made to her at cross-roads by rich people, in order to get rid of evil influences and to render her favourable. These were called Ἑκάτης δεῖπνα, or 'suppers of Hecate,' and included cakes set round with candles, fish, eggs, cheese, honey, etc. These dishes of food were often consumed by the poor. They were connected with the rites of riddance performed in her name. Houses were swept and fumigated, and the sweepings taken away in a potsherd to a cross-road, and there thrown down, the bearer going away without looking back. It would be natural also to get rid of the food remaining in the house before the purification. Thus the evils, or the ghosts which had infested the house, were sent away, and the ceremony may only accidentally have been connected with the goddess of cross-roads. It resembles other rites of riddance at cross-roads, primitive in character, and usually unconnected with a divinity (see § 5). These purifications were called ὀξυθύμια (see Harpocrat. and Suidas, *s.v.*; schol. on Æsch. *Choeph.* v. 96; Plut. *Quæst. Rom.* iii., *Quæst. Conv.* 708 F; schol. on Arist. *Plut.* 594; Lucian, *Dial. Mort.* i. 1; Athenæus, vii. 125, 127, viii. 57, xiv. 53; Porph. *de Abstin.* ii. 28). Travellers also deposited offerings at cross-roads. An ætiological myth told how Hecate, as a newly born infant, was exposed at a cross-way, but rescued and brought up by shepherds (schol. on Lycophron, 1180). This probably points to an actual custom of exposure at cross-roads (found also in Chaldæa), made use of to explain Hecate's connexion with them.

Hermes, as god of roads and boundaries, and of travellers, was also associated with the cross-ways as an averter of ills. On roads and boundaries, but especially at cross-roads, stood a heap of stones with a pillar, later rudely shaped in human form. The passer-by added a stone to the heap, as a rite of riddance and in order to avert the evil influences associated with the place. These became the more shapely Hermæ of later times, used as boundary and mile and direction posts, and placed at cross-roads as well as on streets, roads, and at doors. The phallus was a prominent object upon them (Herod. ii. 51), in accordance with the belief in phallic emblems as averters of ill. As in the case of the Hekataia, these Hermæ had often several heads, and for the same reason. Offerings were made to them, and were sometimes eaten by hungry wayfarers. Theophrastus in his *Characters* describes the pious man pouring oil on the sacred stones (Hermæ) at cross-roads, falling on

his knees and saying a prayer before passing on his way. Cf. ARYAN RELIGION, vol. ii. p. 36 f.

Christianity replaced the divine images at cross-ways by crucifixes or images and shrines of the Madonna. At the latter, especially, flowers and candles are offered and prayers said, exactly as in the case of the Hermæ and Hekataia (Trede, *Das Heidenthum in der röm. Kirche*, Gotha, 1891, iv. 205, 208).

An example of a cult of a divinity at cross-roads from a lower level of civilization is found among the Yaos of the Shire Highlands who, when on a journey, offer a little flour to the god Mulungu at a place where two ways meet, exactly as in the case of Greek and Roman travellers, to Hecate, Hermes, or the Lares (see vol. ii. p. 358[a]).

4. Omens at cross-roads.—The connexion of supernatural beings, divine or demoniac, with cross-roads caused these to be regarded as places where omens might be sought. In East Central Africa a traveller who comes to a cross-way lays two roots, carried for the purpose of divination, against the blade of a knife laid horizontally. He points to one road saying, 'Shall I take this one?' If the roots remain still, he takes it. If they fall, he takes the other (Macdonald, *Africana*, 1882, i. 215). This resembles the rite used by the king of Babylon, probably to discover whether he should proceed on the way to Jerusalem to attack it. He 'stood at the parting of the way, at the head of the two ways, to use divination: he shook the arrows to and fro, he consulted the teraphim, he looked in the liver' (Ezk 21^{21}). In Germany it was a custom to listen at a cross-way on Christmas or New-Year at midnight. In this way the seeker heard or saw what would befall him during the year. Or, if he heard horses neigh or swords rattle, there would be war (Grimm, 1113, 1812, 1819). The listening was intended to catch what the spirits were saying as to coming events. In Japan a method of cross-road divination (*tsuji-ura*), used by women and lovers, is to place a stick representing the god Kunado at a cross-way at dusk, and to interpret the words spoken by passers-by as an answer to the question put by the inquirer. Another method is to sound a comb three times at a cross-road by drawing the finger along it, then, worshipping the *sahi-no-kami*, to say thrice, 'O thou god of the cross-roads-divination, grant me a true response.' The answer is found in the words spoken by the next or the third passer-by (Aston, 340). With this may be compared a Persian custom of sitting at cross-ways by night and applying to oneself as an omen of good or evil all that is said by passers (J. Atkinson, *Women of Persia*, 1832, p. 11). In Germany a girl went to a cross-road to discover whether she would be married during the year, or she shook out a table-cloth there. Then a man appeared and saluted her. The future husband would be of the same height and appearance (Grimm, 1115, 1797). An old Hindu custom for a man to discover whether a girl will make a good wife is to let her choose one of several clods taken from lucky and unlucky places, one of the latter being a cross-road (Oldenberg, 510). In India the balance for ordeals was erected at a temple or in a cross-road—a favourite abode of Dharmarāja, the god of justice, when he appears on earth (*SBE* xxxiii. [1889] 104).

5. Magical rites at cross-roads.—The sinister character of cross-roads made them particularly efficacious as places to perform charms and magical rites, especially of aversion or riddance of demoniac influences (cf. p. 331[b], bottom: 'best of all are the cross-ways').[1] Evil powers, or perhaps the divinities whose images stood there, lent their influence to the success of the rite. A few examples of general magical rites may be cited first. Sitting out or working spells at cross-ways was used among the Teutons as an evil kind of magic, for raising tempests, etc. The details are not known (Vigfusson-Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 413). In the Hindu *Gṛhya Sūtra*, visiting a cross-road at twilight, lighting a fire there, offering rice and repeating charms, together with other ritual observances, is recommended to those who desire gold, or companions, or a long life, or who wish to be rulers, etc. (*SBE* xxix. 431, xxx. 119, 124, 125). A charm for recovering lost property is addressed to Pūshan, the sun, who watches over the ways, and the rite includes placing 21 pebbles at a cross-way. They are symbolic of the lost property, and counteract its lost condition (Atharva-Veda [*SBE* xlii. 159, 542]). In Kumaon, to cause rain to cease, a harrow is fixed perpendicularly at a cross-way. The god of rain, seeing it in this unusual condition at such a place, learns that injustice is being done, and makes the rain cease. Or sugar, rice, and other objects used in ritual are placed at a cross-way and defiled, till the rain is ashamed to fall on them (*PR* i. 76–77). At Naples, to detach a husband from his mistress, a wife goes barefoot and with unbound hair to a cross-way. There she takes a pebble, places it under her left armpit, and repeats an incantation. This is done at a second cross-way, with the pebble under the right arm, and at a third, having it between the chin and breast. Returning home, she throws it into a cesspool (Andrews, *FL* viii. 7). This is an example of the belief that all things at cross-ways are charged with the magic or evil energy concentrated there, or are unlucky. Plants growing on boundaries or on cross-ways are believed to possess magical power (see Reiss, 'Aberglaube,' in Pauly-Wissowa, i. 47). In Bombay a charm against the evil eye is to carry seven pebbles picked up at the meeting of three ways (Campbell, *Spirit Basis of Belief and Custom*, Bombay, 1885, p. 208).

In the case of rites of riddance and aversion the underlying idea is that the evil powers lurking at the cross-ways are compelled to take over the evil (disease, ill-luck, etc.) which is of demoniac origin, or is impure and a source of danger. In some of these cases the powers of the cross-way are propitiated by an offering. Or the rite takes place there, because the place is one where the contagion of evil is more likely to be got rid of or transferred to another, while Oldenberg suggests (p. 287) that the cross-way was used because, after the rite, the performer would go one way, the evil or unlucky influence the other. A simple example of riddance of fatigue is found among the Guatemalan Indians, who, on passing the usual pile of stones at a cross-way, gather grass, rub their legs with it, spit on it, and then lay it with a stone on the pile, thus recovering their strength (Frazer, *GB*[2] iii. 4). Rites for riddance of disease at cross-ways are wide-spread. To rid themselves of any disease of demoniac origin, hill-natives of N. India plant a stake in the ground at a cross-way and bury some rice below it. The rice (prob. the vehicle of transference) is disinterred and eaten by crows (*PR* i. 290). In Bihār, during sickness, certain articles are placed in a saucer and set at a cross-road (Grierson, *Bihār Peasant Life*, Calcutta, 1885, p. 407). Similarly, in ancient India, such rites were commonly performed at cross-ways, as specific instances in the sacred books show. A patient possessed by demons was to be anointed with the

[1] Kozma is of the opinion that the use of the sign of the cross in charms has no reference to Christianity, but to the form of the cross-ways (*FLJ* ii. 101). It would thus be used as an act of imitative magic, producing the effect obtained by the cross way itself.

remains of a sacrifice of ghī and fragrant substances (probably because the latter are obnoxious to demons[1]) and placed on a cross-road. A wicker basket with a coal-pan was set on his head, and some of the sacrifice was sprinkled on the coals (Ath.-Veda [*SBE* xlii. 32, 519]). In another charm for riddance from hereditary disease, the patient is set on a cross-road, and there washed and sprinkled. The charm includes the words, 'May the four quarters of heaven be auspicious to thee!' (*ib.* 292). In other cases not only riddance but the transference of disease to another person is effected. Thus an ancient Hindu charm to avert evil runs: 'If, O evil, thou dost not abandon us, then do we abandon thee at the fork of the road. May evil follow after another (man)!' The commentary explains this as a charm to remove all diseases, and the rite includes the throwing of three rice-puddings at the cross-road (*ib.* 163, 473). In modern India, to get rid of smallpox, some of the scales from the patient's body are placed in a pile of earth decked with flowers at a cross-way. The disease may then be transferred to some passer, the original patient recovering (*PR* i. 165). Or, at an outbreak of smallpox, a pot of wine, bangles, money, cakes, incense, and a cloth with the image of the goddess of smallpox, are offered to her, and then left outside the village at a cross-road. Any one touching these or meeting the priest who carries them out will take the disease and die at once. The goddess receiving the offering passes on to the next village. Here offering and vehicle of aversion are combined, and the articles are called *nikasi*, 'averters.' Probably the poor, in eating Ἑκάτης δεῖπνον,—at once an offering and a vehicle of aversion,—ran the risk of transference of evil to themselves rather than starve. In Bohemia, to get rid of fever, an empty pot was carried by the patient to a cross-road, and thrown down. He then fled. The first passer who kicked it would get the fever, and the patient would be cured (*GB*² iii. 22). In Suffolk a cure for ague is to go by night to a cross-way, turn round thrice as the clock strikes twelve, drive a tenpenny nail up to the head in the ground, and then retire backwards before the clock is done striking. The next person passing over the nail will get the ague (*County Folk-lore of Suffolk*, 1895, p. 14). For other European instances, see Wuttke, *op. cit. passim.*

Lustral rites of riddance at cross-ways are also common. In India one who had committed a crime had, after other rites, to go to a cross-way and repeat the formula, *Simhe me manyuḥ.* Then he was free from all crime (*SBE* xiv. 330). In E. Africa, when a child is able to speak, it is taken to a cross-way, washed and rubbed with oil, and given to the father, who may then, but not till then, cohabit with his wife, else the child will die (*FLR* [1882] v. 168). Riddance of the contagion of death is also effected at cross-roads, by carrying there the thing or things which have suffered impurity. In India, at a death, the fire became impure, and with the receptacle was carried out and placed on a cross-way with the words, 'I send far away the flesh-devouring Agni.' The bearer then walked round it three times, keeping his left side towards it, beating his left thigh with his left hand, and returning home without looking back (*SBE* xxix. 247). In the orthodox death-rites of modern Brahmans, lamps are set at cross-ways (Colebrooke, *Life and Essays*, 1873, iii. 180). All over E. Africa, at a death, the water used in washing the body, the ashes of the fire, the thatch of the hut, and the remains of the dead man's food, are buried at a cross-way (*malekano*), or deposited there with broken pots, egg-shells, etc. (Macdonald, *Africana*, i. 109; *FLR* v. 168). Other rites of riddance or aversion also occur at cross-ways. In Nijegorod, the Siberian plague is kept off by stakes driven into the ground at a cross-way (Ralston, *Songs*, 395). In Bali, at the periodical expulsion of devils, offerings of food are placed at a cross-road for the demons, who are summoned to partake of them and then go out of the houses to this feast (*GB*² iii. 80). In Bohemia, in order to get rid of witches, youths meet on Walpurgis night at a cross-way and crack whips in unison. The witches are thus driven off (*ib.* iii. 92). With the monthly purifications in Greece (§ 3) may be compared a custom in Gujarāt of sweeping houses and laying the refuse at a cross-road as a rite of riddance of evil (Campbell, 329). For other rites at birth among the Chams, see vol. iii. 347ᵃ, 350ᵃ.

The custom of burying suicides at a cross-way has thus in all probability some connexion with rites of riddance at cross-roads. The danger brought about to the community was in this way got rid of. Images of diseased limbs hung at cross-ways were perhaps less votive offerings than magical means of ridding the limb of the disease by transferring it to the spirits of the cross-way or to a passer-by.

6. Cross-roads and the four quarters.—Not improbably the sacredness of cross-roads may be connected in some cases with that of the four winds, coming from the four quarters of the heavens or the four corners of the earth, which were worshipped as gods and creators, and gave a sanctity to the cross (*q.v.*) among pre-Christian races, especially in North America (see art. AIR). Hence ceremonies for scaring evil spirits were efficacious at cross-ways, because they looked approximately to the four sacred quarters. Thus, in the Gujarāt marriage-ritual of the Bharvāds, balls of flour are flung to the four quarters as a charm to frighten off evil spirits (*BG* ix. [1901] 1. 280). In Peru a yearly rite of riddance in connexion with the four quarters took place at the square of each town, out of which ran four roads leading to the four cardinal points. Four Incas of the blood royal, with lance and girded mantle, stood in the great square, till another ran down from the temple of the Sun, carrying a message that the Sun bade them as his messengers drive all evils from the city. They separated and ran down the four roads to the four quarters of the world. Relays of runners received the lances from them, and finally set them up at a boundary, which the evils might not pass (Garc. de la Vega, *Royal Comment.*, 1869–71, ii. 228; *Rites and Laws of the Yncas*, Hakluyt Soc., 1873, p. 20ff.; cf. vol. iii. p. 308ᵇ). The Yorubas have a cult of the four winds, and a figure with four heads called Olori merin is usually found on a mound near the centre of the town, so that each head faces one of the four points. Thus he protects the town, and no pestilence brought by the four winds or hostile force arriving by the four roads can attack it. Formerly these roads passed out of the city by the four chief gates on each side (Dennett, *Nigerian Studies*, 1910, pp. 70, 85). This connexion of cross-ways with the four quarters does not universally hold good, more especially in the case of the meeting of three roads, and only forms one of many reasons for the superstitions connexion with cross-roads.

LITERATURE.—This is mentioned throughout the article. There is no special work on the subject.

J. A. MACCULLOCH.

CROSS-ROADS (Roman).—It was a custom of the Roman peasant, in order to ensure the prosperity of his crops, to make a procession round the marches of his land, praying the while to Mars for protection against visible and invisible disease, ravage, and storm (Cato, *de Agricult.* 141). In ancient times these various evils were regarded as

[1] Cf. D. W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 301 f.

demons who gloated over suffering, and this explains why Fever (*Febris*) was worshipped in Rome as a goddess (G. Wissowa, *Rel. u. Kult. der Römer*, Munich, 1902, p. 197). But, if such noxious spirits were prevented by the invocation of Mars from intruding upon the tilled land, they would tend to haunt the boundaries; and, as the latter were often formed by roads, it came to be believed that the roads were traversed by demons as well as by human beings. Now, the place where several roads converged—whether by the bifurcation of one thoroughfare (*ambivium*, *bivium*), or by the intersection of two (*quadrivium* or *trivium*, according as the way by which the traveller approaches is counted or not; see H. Usener, 'Dreiheit,' in *Rhein. Mus.* lviii. [1903] 339)—was naturally a focus of human intercourse; as every one must pass the *trivium*, *trivialis* came to mean 'common,' 'known to all.' For corresponding reasons, cross-roads were regarded as the special resorts of demons. The Romans believed that things connected with the cross-ways had magical powers, and this superstition doubtless rests upon the idea that demons haunted the spot, and infected the surroundings with their supernatural influence. Thus, for instance, frogs boiled at the cross-way were a cure for fever (Pliny, *HN* xxxii. 113); a person who by night sets his foot upon filth at the cross-way is thereby bewitched (Petronius, 134); while the perplexity and anxiety which fall upon the traveller in a strange district as he comes to the cross-roads, and hesitates as to the way he should take (Ovid, *Fasti*, v. 3; Minucius Felix, *Octavius*, xvi. 3), would be ascribed to the haunting demons, as would also the actual choice of the wrong way (Roscher, vol. i. p. 1890). Again, the cross-way was occasionally the site of the special object revered by the fetish-worshipper (Tibullus, I. i. 11 f.: 'habet . . . vetus in trivio florida serta lapis'). The fetish was decorated with wreaths; and by such homage, as also by prayers and votive offerings, it was hoped that the demonic powers would be induced to refrain from injuring their devotees, and to act as the dispensers of grace and sure guidance.

Anthropomorphic deities of this character had likewise a place in the Roman religion, but the cult was not indigenous. Some of the deities were simply taken over from foreign religions; others, while of native origin, became the tutelary spirits of cross-roads only at a later period. To the former group belongs the goddess Trivia, who, from the time of Ennius (*Scen.* 121 [Vahlen]), is often mentioned in Latin poetry, and sometimes, though more rarely, in inscriptions (*CIL* x. 3795 [Capua]: 'Dianae Tifatinae Triviae sacrum'). She was in reality the Hecate Trioditis of Greek mythology, and, like the *trivium*, was of triple form (Usener, *loc. cit.* pp. 167 f., 338 f.). Hecate was a gloomy and malicious goddess, and, in order to propitiate her, recourse was had *Græco ritu* to every possible expedient, such as loud nocturnal invocations (Virgil, *Æn.* iv. 609: 'nocturnisque Hecate triviis ululata') and offerings of food at the cross-roads. The latter fact explains why the *trivium* was a resort of dogs (Ovid, *Fasti*, v. 140) and famished people (Tibullus, I. v. 56, with the comments of Dissen). In the Imperial period we find quite a system of goddesses of the cross-way, all of non-Roman origin, and for the most part linked together in groups as Biviæ, Triviæ, or Quadriviæ, especially in Upper Germany. They were apparently indigenous to that region, and their cult forced its way thence into Lower Germany and the countries about the Danube (M. Ihm, in Roscher, iv. 1 ff.). In some districts we find also male deities of the cross-way (*CIL* xii. 5621 [Gaul]: '(de)is dea(bus) Bivis Trivis Quadrivis'; vii. 163 [Britain]: 'Deo Trivii Bellicus donavit aram').

Our knowledge of these deities is derived from votive offerings, principally small altars with inscriptions, which throw no light, however, upon the character of the associated cult. In many cases the dedication was made in fulfilment of a vow, and the donors were mostly soldiers. The vow would, no doubt, be made for the purpose of winning the protection of the deity during a journey or throughout a campaign, and so ensuring a safe return therefrom; for by this time such deities were regarded, not merely as local guardians of particular cross-ways, but as divine patrons of all roads.

Similar ideas were current regarding the genuinely Roman deities to whom was latterly assigned the tutelage of the cross-roads. These were known as the 'Lares compitales,' and were worshipped mainly at the place 'ubi viae competunt' (Varro, *de Ling. Lat.* vi. 25; G. Wissowa, in Pauly-Wissowa, iv. 792 ff.), *i.e.* the cross-way. But the word *compitum* must have had a further meaning, for Cicero (*de Lege Agr.* i. 7) explicitly distinguishes between it and *trivium*; as is rightly observed by Wissowa (*Rel. u. Kult. d. Römer*, p. 148 f.), it also signified the point at which the boundaries of the fields converged. The worship offered to the Lares at the *compita* was an expression of the belief that they were the guardians of the soil (Tibullus, I. i. 19 f.: 'agri custodes'). Originally, therefore, the Lares were invoked as patrons of field-boundaries, while their association with cross-roads was a later development, due to the circumstance that boundary and path frequently coincided. In this acquired character they are known to us from such dedications as are found in *CIL* xi. 3079 (Falerii): 'Laribus compitalibus vialibus semitalibus,' and xiii. 6731 (Mainz): 'Laribus compitalibus sive quadrivialibus sacrum.' The next stage was that the Lares became the gods of roads in general, as likewise of travellers, who therefore made to them the same kind of dedications as were offered *Deabus Quadriviis*. The dedicated objects were placed in shrines, and, as these shrines of the Lares were set up at the cross-roads, they too bore the name *Compita* (Persius, iv. 28).

We must not confound such erections *at* the cross-way with fabrics reared *over* the cross-way. The rectangular towers which we find surmounting two passages intersecting at right angles suggest the thought that they were originally built over cross-ways. Of such towers, nine in all are known (Baumeister, *Denkmäler d. klass. Altertums*, iii. [Munich, 1889] 1867). The most famous of them is the Janus Quadrifrons in the Forum Boarium, dating from the 4th cent. A.D. (H. Jordan, *Topographie der Stadt Rom im Altertum*, I. ii. [Berlin, 1885] 471); but its original purpose was that of a monument of honour, and it is impossible to say whether the ancient Roman ideas regarding cross-roads were present to the minds of its builders. In any case, these ideas were by no means extinct at that time, for, even as late as the Middle Ages, it was still frequently necessary for the preacher to castigate the practice of lighting candles and offering sacrifices at the cross-roads (see, *e.g.*, C. P. Caspari, *Kirchenhist. Anecdota*, Christiania, 1883, i. 172, 175, 199)—a practice which is undoubtedly a vestige of heathen, in some cases perhaps of Roman, ritual. Even at the present day, in Italy, the cross-way is the favourite site for the chapels of patron saints (Th. Trede, *Das Heidenthum in der römischen Kirche*, Gotha, 1891, iv. 205).

LITERATURE.—This has been given throughout the article.

R. WÜNSCH.

CROWN.—As a preliminary to this article it may be advisable to cite Selden's words distinguishing between 'diadem' and 'crown':

'However those names have been from antient times confounded, yet the diadem strictly was a very different thing from

what a crown now is or was; and it was no other than only a fillet of silk, linen, or some such thing. Nor appears it that any other kind of crown was used as a royal ensign, except only in some kingdoms of Asia, but this kind of fillet, until the beginning of Christianity in the Roman Empire' (*Titles of Honor*[3], 1672, c. 8, § 2).

The Gr. *διάδημα*, Lat. *diadema*, was a fillet of linen or silk, sometimes adorned with precious stones, or occasionally a flexible band of gold. This was the true emblem of royalty, the *βασιλείας γνώρισμα* (Lucian, *Pisc.* 35), or *insigne regium* (Tac. *Ann.* xv. 29). On the other hand, the Gr. *στέφανος*, Lat. *corona*, a wreath or garland of real or artificial (usually gold) leaves, was not a distinctive royal emblem, and was applied to the victor's, the bridal, the festal 'crown' (see also Trench, *Synonyms of the NT*, s.v. *στέφανος*, *διάδημα*). The same distinction occurs in other languages, *e.g.* German *Krone*, the royal crown, *Kranz*, a garland. The English word 'crown' comprehends all kinds of coronal head-dresses, royal and other.

1. Coronal head-dresses.—A distinctive head-dress of persons of high degree, but especially of kings and princes, originated from the custom of wearing various kinds of head-dresses, coronal, etc., on festal or other occasions, or by particular classes of people—men as contrasted with women, or, *vice versa*, rich as contrasted with poor, chiefs, medicine-men, members of a mystery society, and the like—or at festival dances such as are found among savages and European peasants (cf. Abbott, *Macedonian Folklore*, Camb. 1903, p. 31), or, again, from royal personages wearing a more ornate and valuable form of the customary head-dress. The crown, as a distinctive head-dress, may thus be traced back to very early times. Following upon elaborate methods of dressing the hair, such as are found among Polynesian and African tribes, the next step is to decorate the hair with bones, teeth, shells, feathers, leaves, flowers (see § 2), or other ornaments. Or a band or fillet of fibre, skin, leather, ivory, or metal serves to prevent the hair from falling over the face. This is found among the lowest tribes (Andamanese, Australians, Bushmen, Fuegians, etc.), but, from being merely useful, it soon becomes also ornamental or has ornaments of various kinds affixed to it—tufts of feathers, fur, or wood shavings, teeth, shells, etc.; or it may be worn only on special occasions, like the coils of wire bound round the forehead and nape of the neck by Mukamba youths at dances (*JAI* xxxiv. [1904] 139). The fillet, thus widely worn, would have a distinctive character, or would be more decorative or formed of more precious material, when worn by persons of higher rank; and it is a direct forerunner of the royal fillet or diadem worn by kings as an emblem of sovereignty, either with or without some other distinctive head-dress. The gold *lunulæ* with the characteristic chevron decoration of the Bronze Age, found in the Celtic area, may be classed with ornaments of this kind, and were perhaps worn by chiefs (Déchelette, *Man. d'arch. pré-hist. celt.*, Paris, 1910, p. 353; Romilly Allen, *Celtic Art*, Lond. 1904, p. 39 f.). More elaborate crowns are derived from the simple fillet or diadem by the addition of decorations around its circumference, as, *e.g.*, by fixing upright feathers in it (Fuegians, American Indians). Other elaborate head-dresses, combining the fillet and crown, or evolved from the former, are often worn by special classes or at special times.

Thus a Tibetan female head-dress (chief's wife) consists of a crown of large amber disks, in each of which is a coral bead, with similar ornaments on satin bands, holding the hair plaits together (Rockhill, *Land of the Lamas*, 1891, p. 184). Among the Kabyles rich women wear a coronal head-dress of highly ornamental open metal work, with numerous pendent ornaments and chains; and a female head-dress in Java consists of a richly adorned head-band with star-like ornaments stuck round the upper edge (Hutchinson, *Living Races of Mankind*, n.d. i. 78, ii. 393–4, 399). A circle of jewelled gold, the upper edge heightened to four or more points, surrounding a jewelled cap, was formerly worn by Arab ladies of high rank (Lane, *Arab. Society*, 1883, p. 218). A Samoan head-dress worn by chiefs, and by girls at certain dances, consists of a triple band of teeth or shells on the forehead surmounted by an imposing head-dress (*ib.* i. 12; Brown, *Melanesians and Polynesians*, 1910, p. 58). Among the natives of Torres Straits are found head-dresses of feathers, of fish teeth, or dog's teeth coronets, or the *dri*, a fan-shaped arrangement of white feathers of the egret (*JAI* xix. [1890] 369). Among the tribes of Brazil the men at feasts wear a coronet of bright red and yellow toucan's feathers, disposed in regular rows and attached to a circlet of plaited straw. These feathers, being specially prepared, are very rare, and the coronets are never parted with (Wallace, *Amazon*, 1895, pp. 194, 202). Chiefs in Haiti wore a gold circlet similarly decorated (Stoll, *Geschlechtsleben in der Völkerpsych.*, Leipzig, 1908, p. 457; and, for a similar head-dress worn by chiefs among the Lacandones, *NR* i. 702).

As an emblem of royalty such a crown was worn by the Incas of Peru. It consisted of a turban with a tasselled fringe, in which were set upright two feathers of a very rare bird, the peculiar emblems of the Inca, which no one else might wear. This head-dress was buried with him, and two new feathers had to be procured for each coronation. The heir-apparent wore a similar fillet or fringe of a yellow colour as his insignia (Prescott, *Peru*, 1890, p. 11 f.; Stoll, 457). Among the Mayas the king's crown was a golden diadem wider in front, surmounted by a plume of feathers which no one else might wear under pain of death (*NR* ii. 635). Mexican kings were crowned by the kings of Tezcuco with a diadem higher in front and running up there to a point, and adorned with beautiful feathers. The diadem was made of thin gold plates or woven of gold thread, and it hung down behind over the neck. Noble Aztec warriors wore head-dresses of feathers set in gold fillets (*ib.* ii. 148, 375–6, 405, 441). All such crowns have followed the line of development which has produced the European crown from the diadem (§ 8). For savage head-dresses, see Spencer-Gillen[b], 687; E. Grosse, *Anfänge der Kunst*, Freiburg, 1894, ch. 5; Stoll, 119; Johnston, *Uganda Protectorate*, 1902, pp. 729, 787, 843, 868, 880; Deniker, *Races of Man*, 1900, pp. 178, 371, 502, 522; Mary Kingsley, *Travels in W. Africa*, 1897, p. 224; and for the head-dresses peculiar to the higher classes in Bab., Assyria, and Persia, see Rawlinson, *Anc. Monarchies*, 1862, i. 133, ii. 199, iv. 191, 333.

The huge or elaborate masks and head-dresses worn at the performance of totemic or tribal ceremonies or in mystery-dances by Australians, Melanesians, Africans, etc., sometimes assuming a form more or less coronal, need only be referred to here as decorations reserved for certain persons, and worn only on specific occasions and at no other time. They are insignia of office, or form part of the necessary costume, sometimes symbolic or representative (see Spencer-Gillen[a, b] *passim*; Kingsley, 483; Deniker, 179; Brown, 60 ff.; *JAI* xix. [1889–90] 364).

2. Chaplets.—From the custom of decorating the hair with flowers on festal occasions as a method of betokening joy, arose the use of chaplets or wreaths (*στέφανοι*, *coronæ*), though these may be also connected with the simple fillet or hair-band into which flowers are sometimes stuck. Among savages, it is with the Polynesians and occasionally the Melanesians that the general wearing of flowers or regular chaplets is found most extensively. Among the former, women at dances wore wreaths interwoven with their hair, and garlands and wreaths on forehead and breast. This custom has been largely given up since the introduction of Christianity (Ellis, *Polynes. Researches*, 1831, i. 134, 216; cf. also Brown, 317; Hutchinson, i. 6, 9, 11, 17, 18; and, for a similar practice of wearing wreaths of grass and leaves among the Sakais, *ib.* i. 90). The custom was sporadic in America; thus the Nahuas wore garlands at banquets and dances (*NR* ii. 284, 290). Among peoples of antiquity the wearing of wreaths on festive occasions was wide-spread. From an early time in Egypt chaplets (*meh*) of lotus, myrtle, etc., were worn by the guests at banquets (Wilkinson, ii. 38, 330), and the custom was also in use among the Greeks and Romans. Perhaps under the influence of Greek usage it spread to the Hebrews, and is often referred to as a common practice at times of rejoicing, especially in the Apocryphal books (Wis 2^{8} 'Let us crown ourselves with rosebuds'; Ezk 23^{42}, Ca 3^{11}, Jth 15^{13}, Sir 32^{2}, 2 Mac 6^{7}, 3 Mac 4^{8} 7^{16}; cf. *Acts of Thomas*, crowns of myrtle and other flowers at a banquet, in W. Wright, *Apoc. Acts*, Lond. 1871, ii. 149).

Wreaths and crowns were also worn ritually at festivals of the gods and at sacrifices (see next art.; cf. Ac 14^{13}, 2 Mac 6^{7}). Tertullian writes that, besides the wreaths offered to the gods or their

images, 'the very doors, victims, altars, servants, and priests are crowned' (*de Cor.* 10). The sacrificer wore them (cf. the wreaths worn by Persians over their tiaras at sacrifices [Herod. i. 132]), and they were placed on the heads of the victims (Teutons [de la Saussaye, *Rel. of the Teutons*, Boston, 1902, pp. 368, 377], Hindus [Monier-Williams, *Rel. Thought and Life*, 1883, p. 247], Mexicans [*NR* iii. 359]; for other instances, see Tert. *de Cor.*, Pausan. ed. Frazer, v. 7. 7, vii. 20. 1, viii. 48. 2, x. 7. 8, and notes; Granger, *Worship of the Romans*, 1895, pp. 287, 306). Animals were adorned with them on festal occasions (Celts [Arrian, *Cyneg.* 34. 1], Persians [the crown royal on the horse's head, Est 6^{8}]). Garlands and crowns are also worn at sacred dances (Mexico [*NR* iii. 392], Melanesia [Haddon, *Head-Hunters*, 1901, pp. 113, 187]; see also above). They were placed on city gates (Jos. *BJ* iv. iv. 4), on temples (crowns of gold on the Jewish temple, 1 Mac 4^{57}), or were worn by conquering armies (Jth 3^{7} 15^{13}), or given as much coveted prizes at the games. In the last instance, from the myths associated with the origin of the custom and from the ritual used in the making of the wreaths, their religious aspect is evident. Crowns were also worn by the pilgrims to the temple of the Syrian goddess at Hierapolis (Lucian, *de Dea Syria*). In the Taurobolium the candidate was crowned with gold and wreathed with fillets before undergoing the baptism of blood (Frazer, *Adonis*^{2}, 1907, p. 229); and in the Mithraic initiations one of the rites was the presenting of a crown on the point of a sword to the candidate, who put it on his head and then transferred it to his shoulder with the words, 'Mithras is my crown' (Tert. *de Cor.* 15, *de Præsc. Hær.* 40). Wreaths were also worn by those initiated into the mysteries of Isis (Apul. *Metam.* xi. 24). In the baptismal ceremonies of the Mandæans a crown was used (W. Brandt, *Die mandäische Religion*, Leipzig, 1889, pp. 108, 113).

Wreaths are also worn at the end of harvest in European folk-custom. They are made of the last ears of corn, sometimes with the addition of flowers and tinsel, and are worn often by the person who has cut them. He or she represents the corn-divinity, and is drenched with water as a fertility charm. In this case the wreath is the direct link between the corn and the human representative of the divinity of the corn (Frazer, *Adonis*^{2}, 195 f.; Ralston, *Songs of the Russ. People*, 1872, p. 250). At the Jewish feast of Tabernacles—a festival of ingathering of fruits—it was customary for the Jews to sit in booths with wreaths on their heads (Jub. 14^{30}). Booths and wreaths suggest a former cult of vegetation. Hence also divinities associated with fertility or with the crops wore wreaths of corn: *e.g.* Isis, who was said to have discovered corn (Tert. *de Cor.* 7; Aug. *de Civ. Dei*, viii. 27; cf. also the wreaths of corn worn by the children sacrificed to Artemis [Pausan. vii. 20. 1]). In European May-day customs, besides the hoops covered with garlands and carried in procession, girls wear chaplets, as do also the May or Whitsuntide queen, and the May king or Jack-in-the-Green, besides being dressed in or adorned with leaves. These chaplets are an important part of the symbolic dress of a former anthropomorphic representative of the vegetation spirit (*FL* xi. [1900] 210; Wilde, *Anc. Cures, Charms*, etc., 1890, p. 101 f.; Frazer, *GB*^{2} i. 196 ff., 213 ff., *Early Hist. of the Kingship*, 1905, p. 166 f.).

3. **Bridal chaplets and crowns.**—These are already found in antiquity worn by the bride or bridegroom, or by both (Tert. *de Cor.* 13). They marked an occasion of joy, but may in some cases have had a magical purpose, in warding off evils from the head. Being used by pagans, they were at first rejected by the Church, as it rejected generally all wearing of flowers on the head. But the custom was already found among the Jews, the bridegroom wearing a garland or crown (Is 61^{10}, Ca 3^{11}), the bride a 'beautiful crown' (Ezk 16^{12}). The custom was in abeyance from the time of Vespasian, but was resumed later. Among Christians also it became usual, the bridegroom wearing a garland of myrtle, the bride of verbena (Sid. Apoll. *Carm. 2*, 'ad Anthem.'); and it was regarded as improper for the unchaste to wear them (Chrysos. *Hom. 9 in 1 Tim.*). The wearing of bridal garlands and crowns is still customary over a great part of Europe—Switzerland, Germany, Rumania, and in the north.

In the Greek Church ritual of marriage the bridegroom crowns the bride *in Nomine*, and the bride the bridegroom, while the priest blesses them and says, 'O Lord, crown them with glory and honour.' The service is hence called ἀκολουθία τοῦ στεφανώματος. In Macedonia the bridal wreaths are made of real or artificial flowers, or are silver garlands belonging to the church (τὰ στέφανα). They are exchanged in church at the crowning ceremony στεφάνωμα—applied to the whole wedding rite (Abbott, *op. cit.* pp. 168, 173). Ralston (*op. cit.* p. 279) describes a local ceremony in Russia. In church, over the heads of the bridal pair the groomsmen hold crowns, and must press them on the heads, but not hurriedly, else ill-luck and misfortune would follow. The rite is called *vyenchanie*, 'crowning.' In Servia, when a youth dies, a girl representing a bride comes to the grave carrying two crowns. One is thrown to the corpse, the other she keeps for some time. This is part of the old ritual of the 'death-wedding' (Ralston, 310; see O. Schrader, *Totenhochzeit*, Jena, 1904, and ARYAN RELIGION, vol. ii. p. 22 f.). In Germany and Switzerland the bridal wreath of myrtle is made by the bridesmaids, but occasionally elsewhere more elaborate crowns are worn, formed, *e.g.*, of a series of diminishing circlets, one above the other, to which are fixed flowers, heads, figures in metal, some of which are probably intended as amulets. They are not worn by girls known to be already *enceinte* (see Stoll, 455 f., 459; Kossmann-Weiss, *Mann und Weib*, Stuttgart, 1890, ii. 184, 188). Among the Letts the bride wears a crown of gold paper and silk, on a framework of wire and pasteboard. She receives it from an honourable matron, who keeps it for the use of the brides of the district (*ib.* ii 190). The elaborate Norwegian bridal crown is handed down as an heirloom in well-to-do families, but in each village it, as well as a set of bridal ornaments, is kept for the poor bride's temporary use (Chambers, *Book of Days*, 1863, i. 720–721; Hutchinson, ii. 427).

Among the Hindus, from Vedic times, the custom of wearing garlands or crowns of precious metal or tinsel at marriage has been common, and they are believed to have a protective efficacy against evil spirits which might enter by the head. They are worn both by Hindus and Muhammadans (Crooke, *PR* i. 239; Kossmann-Weiss, ii. 164, 167; *ERE* iii. 443^{b}). Among the Muhammadans of Egypt the bride wears a pasteboard cap or crown under the veil which covers the head and face, and to which ornaments of value are attached externally (Lane, *Mod. Egyptians*, 1846, i. 220, *Arab. Soc.* 234). Among the Nahuas, bride and bridegroom were crowned with garlands (*NR* ii. 257). For Chinese bridal crowns, see Hutchinson, i. 140; and for Polynesian and Fijian bridal wreaths, *ib.* i. 19, and Letourneau, *Evol. of Marr.*, 1907, p. 124.

4. **Funeral chaplets and crowns.**—Among the Greeks and Romans the dead were crowned with chaplets, or these were placed as offerings on tombs (Lucian, *de Luctu*, 11; Tert. *de Cor.* 10; see next art. § 2). In Egypt it was customary to place chaplets of flowers or leaves on the head of the mummy at the funeral ceremony, and these sometimes remained on the head in the coffin. They were called 'the crown of the true voice,' and assured to the deceased, through the power of Thoth, the right intonation, without which the magic formulæ were useless, or perhaps signified that he would be crowned triumphant and justified in the other world. Special gardens were set apart for the flowers used in making these wreaths. The statue which represented the mummy was also crowned with flowers, and the funeral ritual concluded with a prayer in which it was said of the deceased, 'Thou wearest the crown among the gods.' Part of the ritual also consisted of brandishing the *oirhikau* over the statue, and repeating a formula, part of which ran: 'Nut has raised thy head, Horus has taken his diadem and his powers, Set has taken his diadem and his powers, then the diadem has come out of thy head and has brought

the gods to thee.' This referred to the myth of Nut raising the head of Osiris, and the gods Horus and Set placing the crowns of the north and the south upon it. This would be done to the dead, and the magic virtue in these crowns, or in the *uræus* which adorned them, would bring the gods into his power. Garlands and wreaths decked the tombs, just as the tomb of Osiris was said to have been crowned with flowers; and wreaths were also worn by guests at feasts in honour of the dead before the final burial (Maspero, *Études de myth. et d'arch. ég.*, Paris, 1893, i. 218, 306, 316, 318, 358 f.; Pleyte, 'La Couronne de Justification,' *Actes du 6me Cong. intern. des Orient.*, Leyden, 1884, pt. vi. 1–30; Wilkinson, i. 403, iii. 396, 430, 432; Plut. *de Isid.* 21; see CHARMS AND AMULETS [Egyp.], vol. iii. p. 431b, on models of diadems of Osiris buried with the dead, who, assimilated to the god, would wear those crowns in the other world). Flowers and garlands are also carried to the graves in modern Egypt.

In the Brāhmanic funeral ritual the bodies of the dead are decked with wreaths and flowers. Wreaths are also offered in the funeral rites and given to Brāhmans (Colebrooke, *Life and Essays*, 1873, ii. 173, 175, 178, 193; cf. *SBE* i. [1900] 137, xi. [1900] 93, 122–3). Among the Nahuas, a statue was placed beside the body of a dead king, with a garland of heron's feathers on its head (*NR* ii. 606). Wreaths and garlands were also used in Polynesia and Melanesia to decorate the dead, or the altars in the houses used as depositories of their bodies (Brown, 387; Ellis, i. 404). The early Christians refused to make any use of funeral chaplets (Tert. *de Cor.* 10; Min. Felix, 12, 37; Clem. Alex. *Pæd.* ii. 8), but it was not long before the prejudice against them was overcome. As a symbol of the martyr's death a crown is found among the emblems on tombs, and chaplets or wreaths became a common adjunct of Christian funerals. In modern Greece dead maidens and children even are crowned with flowers (Abbott, 193).

5. **Crowns and chaplets as offerings.**—Crowns and garlands being so intimately associated with cult, they are a common species of sacrificial offering, besides being placed on the heads of victims (see next art.; Pausan. ii. 17. 6, v. 12. 8; Lucian, *de Dea Syria*). At the feast of Ceres women presented corn-wreaths as an offering of firstfruits to her (Ovid, *Met.* x. 431 ff.). In India, wreaths, garlands, and flowers are frequent objects in most sacrifices. The Egyptians offered chaplets and wreaths to the gods and laid them on the altars, and presented golden diadems with the *uræus* at the shrine of the statue of a king (Wilkinson, iii. 356, 417). Of great interest are the votive crowns of early mediæval times. These were offered by monarchs to shrines or churches, and dedicated by them to God on some particular occasion. There is no doubt that, besides imitation crowns, the actual crowns were often dedicated in this way and occasionally used for coronations. They were suspended by chains over the altar, and from the inner side usually hung a richly-jewelled cross. Other ornaments were suspended from the lower edge, or the dedicatory inscription was sometimes formed of separate letters depending from it, *e.g.* in the crowns of Svintilla and Reccesvinthus the pensile letters form the inscriptions, 'Svintilla Rex offert' and 'Reccesvinthus Rex offeret.' Besides the cross a lamp often depended from these crowns, and from them the pensile *coronæ lucis* of churches have originated.

Examples of such votive crowns are numerous. The iron crown of Lombardy is a band of iron (said to have been hammered out of a nail of the cross) enshrined in a circlet made of six gold plates, richly enamelled and jewelled, and hinged together. This crown is known to have been used at the coronation of Agilulfus in 591, and it was in all probability a votive crown (Fontanini, *de Cor. ferrea*, 1717; Labarte, *Arts indust. au moyen âge*, Paris, 1872–5, ii. 56 f.; Chambers, *Book of Days*, i. 673). Eight magnificent votive crowns of Reccesvinthus, king of the Spanish Visigoths, his queen, and family, dating from the 7th cent., were found in 1858 at La Fuente de Guarraz near Toledo (Labarte, i. 499; F. Lasteyrie, *Descr. du trésor de Guarrazar*, Paris, 1860; Chambers, ii. 659). Another beautiful specimen is that of Svintilla, king of the Visigoths (621–631), now at Madrid. On the whole subject, see the works cited, and Way, *Arch. Journ.* xvi. 253 ff.; *DCA* i. 460, 506.

Crowns or wreaths of gold formed a species of tribute presented by subject peoples to kings, an example being found in the tribute of crowns commuted to a money payment, the crown-tax paid by the Jews to Demetrius and Antiochus (1 Mac 10^{29} 11^{35} $13^{37\text{-}39}$, 2 Mac 14^{4}; Josephus, *Ant.* XII. iii. 3).

6. **Priestly crowns.**—The practice of special head-dresses being used to mark off certain classes led to the use of these by medicine-men or priests, and not infrequently they took a coronal form, or, as in Greek and Roman ritual, chaplets were worn by priests.

Among the Buriats the shaman formerly wore a crown consisting of an iron ring with two iron convex arches crossing it at right angles—an elaboration of the simple fillet or band (*ERE* iii. 16b). In Mexico the chief priest of the great temple wore a crown of green and yellow feathers, his assistants merely having their hair plaited and bound with leathern thongs. The priest of Tlaloc at the festival of the god wore a crown of basket-work closely fitting below and spreading out above, with many plumes rising from the middle of it. The Toci priest, in offering sacrifice to the Mother-goddess, had a square crown, wide above, with banners at the corners and in the middle (*NR* ii. 307, iii. 341, 356). In Japan part of the distinctive dress of the Shinto priest is a black cap (*eboshi*) bound round the head with a broad white fillet (Aston, *Shinto*, 1905, p. 204). Among the Teutons the Gothic priests belonged to the nobility, the *pileati*, those wearing a cap, as compared with the common people, the *capillati*, with flowing hair; garlands were also worn (de la Saussaye, 366; Grimm, *Teut. Myth.*, 1880–81, pp. 91, 909). Tibetan priests at their ceremonies wear a species of helmet mitre, fitting over the back and crown of the head, and of a red or yellow colour, according as the wearer belongs to the one or the other great Buddhist sect (Rockhill, *op. cit.* p. 85 f.). Sculptures in Cappadocia show the ancient priest or priest-king of that region wearing a high round head-dress encircled with fillets and ornamented in front with a rosette or bunch of jewels; the god beside him wears a high pointed head-dress (Frazer, *Adonis*2, 101 ff.). The priests of Sandan (Heracles) at Tarsus were called 'crown-wearers,' and elected to that office. One of them, Lysias, wore a golden laurel wreath (Athen. v. 54; Frazer, 111). The high-priest of the Syrian goddess at Hierapolis wore a golden tiara, the lesser priests a hat (πίλος, Lucian, *de Dea Syria*, 42). The ancient Parsi priests wore high conical head-dresses (Stoll, 463), and Assyrian priests a kind of high truncated cone or mitre of imposing appearance, or sometimes a richly ornamented fillet (Rawlinson, ii. 199, 275, 278). Babylonian priests wore an elaborate mitre, assigned also to the gods, or a second kind of mitre, or occasionally a horned cap. The head is usually represented covered in sacrifices and other rites (*ib.* iii. 434). Among the Hebrews the priests' mitre or head-dress, מִגְבָּעוֹת plur. (κίδαρις, AV 'bonnet,' RV 'head-tire,' Ex 28^{40} 29^{9} 39^{28}, Lv 8^{13}), was made of swathes of linen covered with a piece of fine linen hiding the seams of the swathes and reaching to the forehead. Possibly it resembled the Assyr. and Bab. conical cap, truncated (cf. Jos. *Ant.* III. vii. 3, 'not brought to a conical form'). Josephus says it resembled a crown. The high-priest's mitre or turban (Ex $28^{4.39}$), מִצְנֶפֶת (a word applied by Jos. *Ant.* III. vii. 3 to the priests' mitre also), probably differed in shape from the former. In addition a plate of gold, צִיץ (πέταλον), was fastened on blue lace and affixed to the front of the mitre or on the forehead. It bore the words 'Holy to Jahweh.' The plate is also called נֵזֶר, 'diadem' or 'mark of separation' (Ex 29^{6}, cf. $39^{30\text{-}31}$ 'the plate of the holy crown of pure gold'), and is on the mitre. This suggests a fillet rather than a plate, worn round the mitre (cf. Sir 45^{12} 'gold crowns,' and 1 Mac 10^{20}, where Alexander sends to Jonathan 'a crown [στέφανος] of gold.' In Is 28^{1} the צִיץ is parallel to עֲטֶרֶת, 'diadem'). If the צִיץ was a fillet of gold, there would then be a close correspondence to what Josephus (*BJ* v. v. 7) says of the golden crown or fillet (στέφανες) with the sacred characters, which surrounded the mitre of fine linen, encompassed by a blue ribbon. The descriptions suggest a head-dress like the royal Persian *khshatram*, a cap swelling out to the top, and surrounded by a fillet or diadem (see § 8).

Josephus gives a different description of the high-priest's mitre in *Ant.* v. vii. 6, which is not reconcilable with the description in the other passage, and which is far from clear (see *HDB* and *EBi*, s.v. 'Mitre').

Occasional references are made in early ecclesiastical writings to a head-dress worn by the clergy during service. The mitre of a bishop, a head-dress cloven above into two erect tongue-shaped parts,

was at first an Eastern head-dress, especially characteristic of Phrygia, and hence formerly called 'Phrygium.' It is rarely alluded to before A.D. 1000, but in 1049 Leo IX. placed a mitre on the head of Eberhard, Abp. of Trèves (*PL* cxliii. 595). From this time the references become much more common, showing that the use was spreading. The mitre is usually made of fine or rich material, embroidered, and often studded with gems. From the back depend two fringed bands hanging over the nape of the neck. It is unknown in the Eastern Church, but is worn by all Roman Catholic bishops and by abbots exempt from Episcopal jurisdiction and others privileged to wear it. Its use was discontinued after the Reformation in the Anglican Church, but it is now commonly worn by bishops, and has always been a symbol of their office (see W. H. Marriott, *Vestiarium Christianum*, Lond. 1868, p. 220 ff.; Hefele, 'Inful, Mitra, und Tiara,' *Beitr. z. Kirchengesch.*, Tüb. 1864, ii. 223 f.; *DCA*, s.v. 'Mitre'). In the earlier centuries, virgins assuming the veil wore a head-dress called a mitre (Bingham, *Ant.* VII. iv. 6; Isidore, *de Eccl. offic.* II. xviii. 11). The Papal tiara (a word of Persian origin, signifying a high head-dress) is a swelling pointed and closed head-dress, which has varied much in shape (in the 14th cent. it was dome-shaped and oval). To this was added, at some date unknown, a single crown (symbolizing the temporal sovereignty of the Popes) encircling the lower part, and, probably in the 12th cent., a second crown was set above this. The third crown was added by Urban V. (1362-70). At the top is fixed a small ball and cross of gold, and, as in the case of a mitre, two bands hang down behind (Hefele, *op. cit.*).

7. **Divine crowns and chaplets.**—As various plants were sacred to the gods, chaplets of such plants were often associated with them. Tertullian (*de Cor.* 7) cites a work on crowns by Claudius Saturninus, which described how every flower, branch, or shoot was dedicated to the head of some divinity. Hence the custom of offering chaplets to the gods, of crowning their images with them, or of representing them wearing chaplets. They also wear crowns (Pausan. ii. 17. 4, 6, v. 11. 1; Granger, 251, 305; see next art.). In many cases the crowns with which images are represented are replicas of the kingly crown, or, where a king was held to be divine, he often wore the head-dress peculiar to the god with whom he was identified. The god was naturally regarded as a heavenly king who wore the royal insignia; and, contrariwise, the divine king wore the insignia of the god.

In Mexico, at the festival of Huitzilopochtli his image was crowned with a paper crown, wide at the top and set with plumes. Many other Mexican images wore crowns, or were adorned with them at festivals, and crowns were also worn by their human representatives (*NR* ii. 322, 337, iii. 344, 352, 369, 385, etc.). The images of the snake-goddess found in the Ægean area wear a high tiara, over which a snake rears its head (see fig. in vol. I. p. 143). On the head of the god sculptured on the rocks at Ibreez is a high pointed cap adorned with a fillet and several pairs of horns, and the goddess of the Hittite sculptures at Boghaz-Keui wears a flat-topped head-dress with ribbed sides; this is also worn by her female worshippers (Frazer, *Adonis*[2], 100, 105). The goddess Cybele wore a turreted crown, and so also did the Syrian goddess, Atargatis (Lucr. ii. 606; Lucian, *de Dea Syr.* 31). Persian divinities wear a tiara like that of the kings or that worn by court officials (Rawlinson, iv. 333), and on the monuments of the Mithraic cult the god is frequently represented wearing an Oriental tiara (Toutain, 'La Légende de M.,' *Etudes de la myth.*, 1909, p. 231,ff.). The crown of gold and precious stones which David captured and placed on his head belonged to an image of the Ammonites (2 S 12[30]). Bab. and Assyr. divinities are usually represented wearing the characteristic head-dress of the monarchs—a rounded cap with parallel horns encircling it from behind, and curving upward towards the front without meeting. This head-dress sometimes symbolizes the divinity on the astrological tablets (Rawlinson, ii. 244, iv. 334; Maspero, *Dawn of Civilization*, 1894, p. 655). Bab. divinities are also said to have been crowned with golden crowns (Ep. Jer.[9]). In the *Descent of Istar*, at the first gate of Hades the keeper deprives Ištar of 'the mighty crown of her head.' In Egypt the statues of the gods were often crowned with chaplets and wreaths, but, besides this, they are usually represented with some symbolic head-dress—the sun, and horns, or plumes, or the *urœus* and disk, etc. But they frequently wear the crowns characteristic of the kings—the high white crown of the south, or the red crown of the north, or both together, enclosed or side by side, just as the kings wore their emblems; *e.g.* the king as Ammon wore the tall hat, with long plumes, of the god. Osiris is frequently represented, *e.g.* in the small golden images of the god as a mummy used in the festival of the month Choiak, or in the judgment scenes, wearing the white crown flanked by two plumes, or with the *urœus*, worn also on the crown of the sun-god. The *atef* crown is also worn by some gods (Wilkinson, iii. ch. 13; Budge, *Gods of the Egyptians*, 1903, *passim*; *Book of the Dead*, cvii.-cxxii.). Images and pictures of Hindu divinities usually show them wearing simple or elaborate crowns or tiaras, sometimes with a nimbus. Or separate crowns form part of the decoration and dress of an image. These are often of great value, and are encrusted with precious gems—diamonds, pearls, rubies, etc. The myths and sacred books occasionally refer to the crowns of the gods (Wilkins, *Hindu Myth.*[2], Calcutta, 1882; Monier-Williams, 219, 449). In Buddhism the figures of Buddha, of Bodhisattvas, and (in Tibet) of the divinities of the Buddhist pantheon are frequently represented with crowns or coronal head-dresses or tiara-like structures (Wilkins, 225; Rockhill, 103, 131, 293; Grünwedel, *Buddh. Kunst*, Berlin, 1900; Stoll, 692).

In later Christian art, God the Father is represented with the current regal or imperial crowns, or with the Papal tiara encircled, according to the period, with one, two, or three crowns, but also sometimes, as if to show His superiority to the Pope, with five crowns. In earlier art, Christ is sometimes represented with the brow encircled by a diadem, and later with the regal or imperial crown or the Papal tiara; to this is sometimes added the crown of thorns, which, by itself, is figured in many other representations, especially of the Crucifixion. Where the Trinity is represented as one Person with three faces, the head is often adorned with a single crown or tiara (A. N. Didron, *Chr. Iconography*, Lond. 1886, *passim*). The Virgin is also represented with a crown, or is depicted in the act of being crowned by the Father or the Son or the Trinity with the crown of a queen or empress, reference being made to the texts Ps 21[3] 8[5], as in the case of the crowning of the Son by the Father after the Ascension. This was in accordance with the legend of the Virgin's coronation in heaven after her Assumption. Angels and Christian virtues, and even the figure of Death, are often represented with a crown (Didron, *passim*). Some of the Gnostics crowned their sacred images (the Carpocratians [Iren. *adv. Hær.* i. 25. 6]), and from this or from the similar pagan practice the custom passed into the Christian Church, and images or pictures were crowned with special ceremonies when they were dedicated (Trede, *Das Heidenthum in der röm. Kirche*, Gotha, 1891, i. 104, 283, ii. 343 ff., iv. 245-48, etc.; for the modern Roman usage, see *Cath. Encyc.* vii. 670). Images of the Madonna on waysides are also crowned with chaplets (Trede, iv. 208).

8. **Royal crowns.**—We have seen (§ 1) that the royal crown originated from the wearing of a special head-dress by special classes, or it is a specialized form of the ordinary head-dress. Among the higher savages, some such head-dress is worn by chiefs, like the band of cloth worn round the temples as a kind of crown by some chiefs in E. Africa, or the frontlet or crown with a wig of woman's hair worn by chiefs in Samoa (Macdonald, *Africana*, i. 16; Brown, 316; cf. also the other instances in § 1). We turn now to the higher nations of antiquity.

In Assyria the royal crown consisted of a head-dress of felt or cloth, shaped as a cone rising in a gracefully curved line, and truncated at the apex. The upper part receded into the lower, so that the top alone was visible and projected above the former. It was ornamented with red and white bands with embroidery or plates of gold. Round the lower edge was a band or diadem rising in front with a large rosette, with the ends hanging down behind the ears to the shoulders. Sometimes such

a fillet, higher in front or uniform in width, is worn alone, and in the earlier sculptures the tiara is lower than in the later. The queen wore a diadem with turrets like the crown of Cybele (Rawlinson, ii. 100, 108; Stoll, 210, 459, 463). In Babylon the kings wore the horned cap, the symbol of divinity—a kind of rounded cone with a double pair of horns surrounding the sides and front, or a tower-shaped head-dress with or without these horns, terminating in a coronet of feathers. The lower space was decorated with rosettes, etc. It was made of richly coloured felt or cloth. The higher classes, both in Assyria and in Babylonia, wore a distinctive head-dress (Rawlinson, i. 133, iii. 433; Maspero, 719; Stoll, 459). The royal crown of Persia, the *khshatram*, was a high cap of bright coloured felt or cloth, swelling out slightly towards the flat top, and terminating in a projecting ring. Round the bottom ran a fillet or 'band of blue' spotted with white—the diadem strictly so called. It was adopted by Alexander and his successors. In some cases the kings are represented wearing more or less ornamental diadems or radiated crowns, or a head-dress resembling that of the Medes—a high-crowned hat, with ribbed sides, called *tiara* or *kidaris* (= *khshatram*), the latter word being applied to the royal tiara (Rawlinson, iii. 86, iv. 155). In Egypt, diadems were worn by princely personages, but that peculiarly symbolic of royal authority was the *uræus*-serpent, of metal or gilded wood, the coiled body forming the diadem, and the head poised above the forehead of the monarch. It was also affixed to other head-dresses worn by the king in common with the gods.

Of these the most important were the white crown of Upper Egypt, a tall conical head-dress swelling out slightly in front and terminating in a rounded knob; and the red crown of Lower Egypt, cylindrical in form but widening out upwards, and with the back part carried higher than the front. The combination of the two crowns, the white worn within the red, was called *pshent*. They were put on at the coronation; and on bas-reliefs, female figures symbolic of the two Egypts, each crowned with the respective crown of her district, stand on either side of a king wearing the *pshent*. In other cases, Nubti or Set and Horus crown the king, and goddesses invest the qusen with her insignia—two long feathers and the globe and horns of Hathor. These crowns were also worn in battle and on other occasions, and they, with other forms, were common to gods and kings. Thus the king is described as 'son of the Sun, decked with the solar crowns' (Wilkinson, ii. 327, iii. 361; Maspero, 265; M. Brimmer, *Egypt*, Camb. U.S.A., 1892, p. 12; A. Moret, *Du Caractère rel. de la royauté pharaonique*, Paris, 1902, p. 310).

In religious ceremonies the king wore a striped linen head-dress, descending in front over the breast, and terminating in a queue fastened by a ribbon. Fillets of gold and, occasionally, radiated crowns were worn by the Ptolemys. Among the Hebrews a common word for crown is נֵזֶר, which signifies 'consecration' or 'mark of separation,' and is applied both to the gold plate or fillet of the high priest's mitre (Ex 29^{6} 39^{30}), and to the royal diadem or fillet, which may have been of gold or of embroidered silk decorated with jewels (2 S 1^{10}, 2 K 11^{12}—the only reference to coronation; cf. Zec 9^{16} 'the stones of a crown'). Another word, עֲטָרָה, is also used, both for the royal crown and for the crown in a symbolic sense (2 S 12^{30}, Ezk 21^{26}, Is 28^{1}, Job 19^{9}, Pr 4^{9} etc.). This word may signify a diadem, since in Ca 3^{11} it is applied to the bridegroom's garland, but in Job 31^{36} the עֲטָרָה can be bound to the head. This may refer to a head-dress of a turban form. Possibly the diadem proper surrounded another head-dress of a turban shape, or like the Persian or Assyrian examples.

The crown of a conquered monarch was sometimes set on the head along with the conqueror's own diadem. In 1 Mac 11^{13}, Ptolemy set the crowns of Egypt and Asia on his head when entering Antioch in triumph (cf. Diod. Sic. i. 47; Rev 19^{12}).

The early Christian emperors wore fillets or diadems of gold adorned with jewels, or of rich silk (the latter finally disappearing in the time of Justinian [Labarte, ii. 39]). The diadem is sometimes worn alone, or it surrounds a cupola or jewelled cap, the combination of cap or tiara and diadem resembling that of the Persian kings. In antiquity the fillet or diadem easily passed over into a crown by the addition of a row of ornaments or symbols to the upper edge of the circumference of a metal diadem. This is already seen in the *corona muralis*, *navalis*, *vallaris*, etc., or in the radiate crowns of the Persian kings, the Ptolemys, and Nero and later Roman emperors. The form of these radiate crowns is also connected probably with the radiate nimbus with which kings were often represented, and which was the adornment of the sun-god as well as of other divinities in art. Such crowns were thus a symbol of the monarch's divinity (Dieterich, *Nekyia*, Leipzig, 1893, p. 419; Didron, i. 34 ff.). Crowns, as distinct from diadems, appear in early mediæval Europe. In England the diadem soon gave place to the crown. William the Conqueror and other Norman kings wore diadems ornamented on the upper edge with trefoil uprights, and the crown form soon became more elaborate. The first English example of an arched crown dates from the reign of Henry IV. The coronets of English peers are circlets of gold, variously ornamented according to rank (like the crowns of Continental nobles), and enclosing a crimson velvet cap edged with ermine. The earliest is the ducal coronet, 1362; the latest that of barons, 1660 (see Legge, *English Coronation Records*, 1901).

9. **Sacred and magical aspects of the crown.**—We find, sporadically, medical or magical virtues ascribed to wreaths and chaplets (Athen. xv. 16, and cf. the magical efficacy attributed to bridal and to funeral wreaths in Egypt, §§ 3, 4). This would be a natural result where garlands were made of the flowers or leaves of sacred plants or trees. Wherever the king is honoured as divine, the crown, as the peculiar symbol of royalty, will have a magical character, more particularly as it is so frequently worn also by the gods.

The golden wreaths and chaplets of oak leaves worn by early Greek and Italian kings, as well as by other persons in later times, are supposed to have originally marked the wearer as vicegerent of a god of whom the oak was the sacred tree, and in which as well as in the wearer of the wreath he was supposed to be incarnate (Cook, *FL* xvii. [1906] 315; Frazer, *Kingship*, 198 ff.). While this is not impossible, and while, generally speaking, wreaths of leaves or flowers may denote a connexion with divinities, it is probable that the diadem of a monarch did not necessarily denote his divinity, though, as representing the highest sovereignty, it was natural that gods should also be represented with it. The god was represented under the highest forms known to men, and these were generally royal.

The regalia of kings tend always to be regarded as peculiarly sacred. In some quarters possession of them 'carries with it the right to the throne,' and they have wonder-working properties, as among the Malays (Frazer, *Kingship*, 121, 124; Skeat, *Malay Magic*, 1900, pp. 23, 59). Generally speaking, the word 'crown' comes to be used figuratively for all that the monarchy implies. In Egypt the *uræus* diadem, emblem of sovereignty, had a magical power, and could execute the king's secret purposes or inflict vengeance. It is said to 'burn his enemies with its flames'; it threw itself upon those who approached it, and choked them in its coils. The supernatural virtues thus communicated to the crown gave it an irresistible force, and the royal crown was also regarded as having divine power (Erman, *Die ägyptische Rel.*, Berlin, 1905, p. 40; Maspero, 265, *Études*, i. 78–79; cf. also *Études*, ii. 134, for other magical crowns; and for the magical powers of the crowns of the dead, see § 4). Crowns may have been occasionally used as instruments of divination, *e.g.* in the choice of a king. In a Transylvanian folk-tale the crown is

laid before the assembly on a hillock. It rises, floats in the air, and lights on the head of the destined king (J. Haltrich, *Deutsche Volksmärchen*[4], Vienna, 1885, p. 195). The Yorubas of W. Africa look upon the royal crown as possessing magical powers, and sheep are occasionally sacrificed to it by the king himself (MacGregor, *Jour. Afr. Soc.*, no. 12 [1904], p. 472). Crowns are sometimes mythically said to have descended from heaven upon the king's head (Bousset, *Gnosis*, Göttingen, 1907, p. 147). There may also have been current an idea that the life of a king depended on the safety of his crown. In the Mandæan myths of the conquest of the dark powers Ur and Ruhâ by Mandâ d'Hajjê and by Hibil Ziwâ, Ur is deprived by both heroes of his crown 'of living fire,' in which his strength lies, and in this way he loses all his might (W. Brandt, *Mandäische Schriften*, Göttingen, 1893, pp. 131, 175, 178). These myths are certainly based on some current belief in the magical virtue of the crown.

10. **The crown in early Christian thought.**—In the NT the victor's crown at the games (*στέφανος*) is used symbolically of the reward of a faithful Christian course, the incorruptible *στέφανος* being contrasted with the corruptible (1 Co 9^{25}; cf. 2 Ti 2^{5}). It is a 'crown of righteousness' (2 Ti 4^{8}), the 'immortal crown of glory' (*ὁ ἀμαράντινος τῆς δόξης στέφανος*, 1 P 5^{4}), the 'crown of life' (Ja 1^{12}, Rev 2^{10}; cf. 3^{11}). Hence in visions of heaven the crowns are prominent. The elders in Rev 4^{4} wear crowns (*στέφανοι*) of gold; in the *Ascension of Isaiah* the prophet sees crowns laid up in the highest heaven for the saints; in *Barlaam and Josaphat*, Josaphat sees the people of the heavenly city with crowns in their hands (J. F. Boissonade, *Anec. Græca*, Paris, 1829–31, iv. 360). Christ has on His head 'many diadems' (*διαδήματα πολλά*, Rev 19^{12}), one fillet bound above the other, signifying different sovereignties (cf. 13^{1}, where the dragon has ten diadems). This conception is already found in later Judaism; the faithful receive crowns and palms (2 Es $2^{43.45}$). The wearing of garlands and crowns on earth being obnoxious to the early Christians on account of pagan associations, stress was therefore laid on the worth of the symbolic heavenly garland (*στέφανος*), and especially the immortal crown of martyrdom (*Mart. of S. Polycarp*, 17; Tert. *de Cor.* 15, 'Why do you condemn to a little chaplet, or a twined head-band, the brow destined for a diadem?'). Lactantius (*de Mort. Pers.* 16) describes the martyr's garland of victory as 'an unfading crown laid up in the kingdom of the Lord.' In Hermas (*Sim.* viii. 2) the angel commands garlands of palms to be brought out for those in whose rods he found branches with fruit (cf. also Euseb. *HE* v. 1 [Letter of the Churches of Vienne and Lyons]). Such references to the crown of immortality or joy or to the martyr's crown are copious in early Christian literature, and the symbol of the crown also appears in Christian archæology. Hands stretched from heaven present crowns to the martyrs, or angels descend and crown them (Didron, i. 95). The crown by itself, or with a palm branch or other symbols, is also symbolic of the eternal reward in heaven offered to the victor.

LITERATURE.—L. F. Day, 'The Crown, its Growth and Development,' *Magazine of Art*, vol. xi. (1888); W. Jones, *Crowns and Coronations*, 1883; J. Labarte, *Histoire des arts industriels au moyen âge*, Paris, 1872–5; O. Stoll, *Das Geschlechtsleben in der Völkerpsychologie*, Leipzig, 1908, p. 452 ff., and other works cited throughout the article.

J. A. MACCULLOCH.

CROWN (Greek and Roman).—The words *στέφανος*, *corona*, and their variants are used by Greeks and Romans of circular ornaments that could be placed on the head, carried in the hand, or hung on a support as offering or decoration, either made of, or artificially representing, or by their decoration more or less remotely suggesting, flowers, leaves, or fruits of the field. The origin of the custom of wearing such ornaments lay probably in the mere instinct of decoration rather than in any notion of a symbolical significance in the plants used. Such decorations are a natural expression of *a joyful state of mind*, and, as the primitive worshipper attributes to his deity feelings like his own, they would be considered acceptable to the gods. As expressing joyfulness, they would in time become customary or *de rigueur* on all festal occasions, whether sacred or profane.

1. The use of crowns for religious purposes is not mentioned in Homer; nevertheless the use of sprays of foliage for *dedicatory purposes* seems to have prevailed very early in the Ægean; at Cnossus was found a spray of foliage made of thin gold plate and wire in a flat bowl (*BSA* viii. [1901–02] 25), and the employment of natural sprays probably preceded that of metal imitations by long ages. Now the most convenient and decorative way of carrying such sprays, or of attaching them to cultus-figures, was to twine them into wreaths, which could be worn on the head of the worshipper or placed on the figure of the deity.

As early as the 7th cent. such garlands were essential in practically all sacrifices (Sappho, quoted by Athen. xv. 674*e*). In Aristophanes (*Thesm.* 446 ff.) a widow who had supported her five children by making wreaths complains that more than half her business has gone since Euripides persuaded people that there are no gods.

Being part of the furniture of cultus, the wreath imparted sacredness to the wearer for the time being; the slave in Aristophanes considers that, while wearing a wreath, he cannot be beaten by his master (*Plut.* 20 f.).

2. The essentially joyful associations of the wreath are proved by the fact that *mourners did not wear them at funerals*. Xenophon, while sacrificing, heard of the death of his son; in sign of mourning he took off the crown that he was wearing. But when he heard that his son had died like a brave man, he resumed his crown and proceeded with the sacrifice (Val. Max. v. 10). At mournful ceremonies, such as the Spartan Hyacinthia (Athen. iv. 139), the crown was not worn; the Sicyonians used flowers only, instead of wreaths, in sacrificing to the Eumenides at Titane (Paus. II. xi. 4). Where we see wreaths, fillets, etc., deposited at a tomb, these are brought as offerings to the spirit of the deceased, not as tokens of mourning. Such wreaths the Christians regarded as essentially offerings to a deity, and therefore to be condemned (cf. Justin Mart. *Apol.* i. 24: 'The Christians do not worship the same gods as the heathen, or offer up libations or incense, or bring them crowns or sacrifices'; so, too, Minucius Felix, p. 43, ed. Ouzel, 1652, 'nec mortuos coronamus'). Typical of the Greek custom is the beautiful Attic *lekythos* (*JHS* xix. [1899] pl. 2), showing a *tænia* tied round the tombstone, oil-flasks and wine-jugs, some with wreaths laid over them, ranged on the steps, and a woman bringing a tray full of wreaths and *tæniæ*. Sometimes tombstones were made with a receptacle suited for holding a crown of leaves (*Arch. Zeit.* 1871, pl. 42). The dead body itself was crowned (*καταστέφειν τὸν νεκρόν*, Enr. *Phœn.* 1632), as part of the last honours, in keeping with the washing and anointing of it, and dressing it for its last journey (Lucian, *de Luctu*, 11). Members of some associations, such as the Iobacchi, were entitled to a crown at their death, provided out of the common funds (E. S. Roberts, *Introd. to Gr. Epigr.* ii. Cambridge, 1905, pp. 91, 160). Inscriptions of the Phrygian Hierapolis often mention the *στεφανωτικόν*, a sum left by the deceased, the interest on which was devoted to the annual renewal of wreaths on his tomb (Humann, etc., *Altertümer v. Hierapolis*, Berlin, 1898, p. 129). At a Roman funeral there

were carried not merely crowns offered by the mourners, but such as the dead might have won by his own deeds. In later times, the idea of the propitiation of the dead gradually dying out, the wreath came to be laid on the tomb merely as a mark of honour; but it would be hard to say where the primitive significance of the usage merged into the modern. By far the greater number of the crowns actually preserved come from tombs; but this is only because the conditions in tombs are more favourable than elsewhere for the preservation of them, as of other antiquities.

3. In ritual the use of wreaths was manifold. They might be used, as *tæniæ* were used, to decorate the image of the god (see Schreiber-Anderson, *Atlas of Classical Antiquities*, London, 1894, xiv. 3). They could be worn by those who performed the sacrifice. They could be offered up (Daremberg-Saglio, fig. 1984). They could be used to decorate the victims (Lucian, *de Sacr.* 12); thus was Iphigenia decorated (Eur. *Iph. in Aul.* 1477). The garlands brought by the priest of Zeus at Lystra to Barnabas and Paul (Ac 14^{13}) were either offerings to them or decorations for the oxen which he proposed to sacrifice. Garlands were used to decorate the shrine, the altar, sacred trees, and all sorts of instruments and vessels employed. The whole scene was thus made at once cheerful and solemn, the objects so adorned being brought into intimate relation with the god. Woollen fillets served the same purpose, whether made up into circular form, or merely hung on the victim or object, or used to attach it to the figure of the deity.

The lover's practice of hanging garlands on the door of the object of his affections is explained by Athenæus (xv. 670*d*) as inspired by his desire either to honour the beloved one (just as the doors of temples were garlanded), or to honour Eros (the beloved being regarded as his image, and the house therefore as his temple), or, having been robbed of the ornament of his soul, to give to the robber his body's ornament in addition. In speculations such as these we see the idea that these garlands were, at any rate, a semi-religious kind of offering.

Probably the most important crowns from a ritual point of view were the 'priestly coronets' (cf. above, p. 339[b]) worn by the officiating persons, whether professional priests or not. When the crowns were made of flowers or leaves, these were usually of the kind sacred to the deity served, although in a very great number of cases the plant used seems to have been laurel. This may have been owing to its purifying property, although in many monuments the appearance of laurel may be due to defective representation. The wreaths worn by priests were sometimes, especially in later days, decorated with medallions appropriate to the cult. A priest of Cybele (relief in Capitoline Museum [Baumeister, *Denkm.*, Munich, 1885–88, p. 801]) wears on a laurel wreath three medallions representing the Idæan Zeus, Attis, and another deity. Domitian, when presiding at the Capitoline Games, wore a crown decorated with images of the Capitoline triad—Juppiter, Juno, and Minerva; the *flamen dialis* and the high priest of the Flavian dynasty, who supported him, had crowns also containing the image of the Emperor himself (Sueton. *Domit.* 4). Recent discoveries have further illustrated this practice. The crowns worn by high priests of the Imperial cultus were not merely of bronze but of even more precious metal, elaborately decorated with busts of the Emperors. In Epictetus (i. 19) the prospective priest of the Augustan cult says, 'I shall wear a golden crown'; and Tertullian speaks of the golden crowns of the provincial priests (*de Idol.* 18, with Oehler's note). Busts of such priests, and an actual bronze crown from Ephesus, as well as representations of such crowns on coins of Tarsus, make this clear, and throw light on such a title as *ἱερεὺς τῶν Σεβαστῶν καὶ στεφανηφόρος τοῦ σύμπαντος αὐτῶν οἴκου* (*Jahreshefte d. Oest. Arch. Inst.* ii. 245 f.). Another peculiar form of ritual crown is the 'archieratic' crown shown on certain coins of Syrian Antioch (*Brit. Mus. Catal. Coins*, 'Galatia,' etc., p. 167).

So essential was the crown in the cult that *λαβεῖν* (*ἀναδέξασθαι*, etc.) *τὸν τοῦ θεοῦ στέφανον* is equivalent to assuming the priesthood (Dittenberger, *Orientis Græci Inscriptiones Selectæ*, vol. ii., Leipzig, 1905, no. 767, note 14), and *στεφανηφόροι* include all professional priests and all magistrates who in virtue of their office take part in public rites (*ib.* 332, note 24). The right to wear a crown at all public festivals is expressly included in the privileges of the priest of Poseidon Heliconius at Sinope (*στέφανος ἐν ἁπᾶσι τοῖς ἀγῶσιν* [Michel, *Recueil*, Brussels, 1896–1900, p. 734]). Such official crowns are to be distinguished from those awarded to priestly officials by their grateful fellow-citizens on their retirement from office or even after their death (Dittenberger, *op. cit.* 470). These are analogous to the crowns awarded to other officials.

4. The *wearing of crowns by deities* is closely connected, as we have seen, with the custom of offering crowns to them at sacrifices. When special plants were associated with certain deities, a wreath of such a plant was a natural attribute and a convenient means of identification, although the latter feature would appeal less to the ancient worshipper than to the modern archæologist. The associations of vegetable crowns are in many cases quite clear. Demeter and Persephone wear barley; the Dodonæan Zeus wears oak; Apollo has laurel; Athene, olive (which she wears as a rule round her helmet); Aphrodite, myrtle; Heracles, poplar or styrax; Dionysus and his train wear ivy (seldom, if ever, vine-leaves); Poseidon on coins struck by Antigonus Gonatas or Doson, and on a rare coin of Aradus of 174 B.C. (*Brit. Mus. Catal. Coins*, 'Phœnicia,' pl. iii. 18), has a curious marine plant (*Fucus vesiculosus?*); a bust from Puteoli representing a local water-deity is crowned with grapes and vine-leaves (Roscher, *Lex.* i. 1686). But these appropriations are not exclusive: Zeus, for instance, is usually laureate; as we have already seen, the laurel seems to have been the plant most commonly used for wreaths. Various deities are represented in Greek art wearing crowns of a more elaborate kind. That of the Hera of Polycleitus at Argos was decorated with figures of the Graces and Seasons, probably in high relief; and on coins (of Argos, Elis, Croton, etc.) and other works of art Hera is usually shown wearing a somewhat elaborate crown with floral designs in relief. On coins of Mallus, Cronus wears a metal diadem; and Cybele is commonly represented as City-goddess wearing a walled crown (see CITY). The Cyprian Aphrodite, in statues, terra-cottas, and coins of Cyprus, wears a richly decorated crown, obviously meant to be of metal; on some coins of Salamis and on a stone head from Dali she has a peculiar crown made of semicircular plates (*Brit. Mus. Catal. Coins*, 'Cyprus,' p. cxi). Often she seems to be identified with the City (*ib.*). At Paphos she wears a combination of the Oriental *polos*, decorated with palmettes, and the walled crown (*ib.* pl. xxii. 10). On some Cypriote terra-cottas we also find a decoration of palmettes or sphinxes (*Brit. Mus. Catal.*, 'Terra-cottas,' A 275). These rich crowns are characteristic of the Oriental element in her cult; nevertheless the ordinary Greek Aphrodite often wears an elaborate metal crown, and sometimes, 'though descended from the early *polos* of the queen-goddesses, it is in form curiously like a modern royal crown' (*JHS* xxv. [1905] 78). A variety of the metal *στέφανος* worn by various goddesses is known as the *στεφάνη*; it rises to a point in front, and narrows as it passes to the back of the head, which it does not completely

surround. One of the most widely distributed forms of crown in art is the crown of rays, which, like the nimbus, represents the divine light emanating from the persons of deities or heroes. But such a halo was probably not represented by a concrete crown until comparatively late times.

5. The giving of crowns as *prizes* probably had a religious origin. The material rewards offered in heroic times seem to have been replaced at a fairly early date—in the 6th cent. at latest—by crowns of leaves, etc. (Paus. x. vii. 3, of the Pythia; *Marm. Par.* 38=588 B.C.; note that the palm, being unsuitable for a crown, was carried as a branch). The festivals at which crowns were given were under the special patronage of the local deity, and the material for the crown would be gathered from the local sacred enclosure, although in the case of the Pythia the laurel was brought all the way from Tempe (Frazer on Paus. x. vii. 8). It was only in later days that the crown of foliage—olive, laurel, pine, etc.—was replaced by a metal crown, so that in the 2nd and 3rd cents. of our era the decoration carried by the victorious athlete was an elaborate structure more like an urn without a bottom than anything else (Dressel in *CIL* xv. 2, no. 7045). The crowns thus won were often dedicated in the temple; in the case of a tie, which was for this reason called *ἱερά*, the crown remained the property of the god (*JHS* xxv. 17 f.). But the rewards might also be carried away by the winners, and the entry of such a winner into his native city was a solemn function, as when Pausimachus brought home to the Carian Antioch the crown of the Delphic Soteria (Dittenberger, *Or. Gr. Inscr.* 234. 31). At Elæa in Asia Minor, when Attalus III. (138–133 B.C.) was received in state by the citizens, he was met by all the state officials and by the winners in sacred festivals carrying their crowns with them (*ib.* 332. 34).

6. From the use of crowns as rewards in actual athletic and other contests, such as musical or literary (an ordinary term for being victorious with a tragedy is *στεφανοῦσθαι*, cf. Bacchylides, frag. 33, Jebb), is probably derived their use as *marks of honour generally*. They could be given as rewards for good service to the community; and decrees of Greek communities rewarding their officials or private members are among the commonest of extant official documents.

Thus the Athenian council and people in 151 B.C. vote a laurel crown to Protagoras the priest of Asklepios for his services to the shrine (Michel, 689); at Lissa in Asia Minor in the 3rd cent. B.C. a similar crown is voted to Menekrates for his general good services to the community (Dittenberger, 57); at Ptolemais in Egypt the artists of the gild of Dionysus and the Brother Gods grant a crown of ivy, to be given at the *Dionysia*, to their life-president Dionysius, son of Musæus (*ib.* 50). At Delphi services to the shrine and State are rewarded with 'a crown of laurel from the god's grove, according to the traditional Delphic custom' (*ib.* 345; *Syllogę*[2], Leipz. 1898, p. 215). An Athenian decree of 100 B.C. records the crowns conferred on the *ephebi* and their *kosmetes* by the Council and Assembly, and by the Salaminian *demos*, and on their *kosmetes* by the *ephebi* (Roberts, *Epigr.* ii. 65). A list of the eighteen crowns (of gold or laurel) conferred on Cassander, son of Menestheus, was inscribed on a marble slab in the temple of Apollo Smintheus in the Troad (Michel, *Rec.* 1312).

Such honorific crowns were presented not merely to individuals or associations, but to a whole people or their official representatives; thus the Athenian people received crowns from various States, such as Paros, Andros, Cnossus, etc. (*IG* ii. 700, 701). The mural, rostral, and civic crowns of the Romans were special developments of the crown as reward for services to the State.

7. From employing the crown as a reward, it was but a step to presenting it as *tribute*, often with a sense of favours to come.

Strato, son of Gerostratus, king of the Phœnician Arvad, went to meet Alexander the Great and crowned him with a golden crown, at the same time laying his father's dominions at the conqueror's feet (Arr. *Anab.* ii. 13. 8). Machares, son of Mithradates, offered a crown to Lucullus worth 1000 gold pieces, begging for an alliance with Rome (Plut. *Lucull.* 24). Simon the Hasmonæan sent a golden crown and palm as tribute to Demetrius of Syria (1 Mac 13[37]). Plutarch (*Æm. Paul.* 34) says that at the triumph of Æmilius Paullus were carried 400 golden crowns which the conquered States had sent to him as the prize of his victory.

Thus the crown became the symbol of victory, even more than the palm-branch. It is the most common attribute of Victory in art; and Christianity, in spite of certain protests (cf. Tert. *de Cor.*), adopted it whole-heartedly as a symbol of spiritual victory.

8. The crowns received as civic rewards or honours were, like athletic decorations, frequently dedicated at shrines (Rouse, *Gr. Vot. Offerings*, Camb. 1902, p. 266). At Athens those conferred by a foreign State had to be dedicated in the Parthenon, perhaps to prevent *ὕβρις* (Æschin. *in Ctes.* 46). Crowns of less importance were usually kept by the recipients. When the semi-barbarian princes Spartocus and Pærisades of Bosporus were voted golden crowns by the Athenians, the decree laid down the very form of words which was to be inscribed on the crown when dedicated (Hicks, *Gr. Hist. Inscr.*[2], Oxf. 1901, p. 140). To judge by the lists in inscriptions, vast quantities of such crowns must have been in the temples. Sometimes the lists record the terms of the dedication; *e.g.* from the Delian treasure-list (Dittenberger, *Syll.*[2] 588. 102) a golden laurel-crown bearing the inscription 'Publius son of Publius Cornelius consul of the Romans' (*i.e.* Scipio Africanus, who probably made the dedication in 194 B.C.).

9. The crown, being part of the apparatus of religious service, was worn not only at sacrifices, but also at other ceremonies, such as musical or literary contests, which were under the patronage of a deity. Such were the sacred contests at which Pliny says it was originally the custom to wear crowns of natural leaves (*HN* xxi. 4), the use of crowns variegated with flowers being later, and the use of artificial crowns later still. Demosthenes (*in Mid.* 16) describes golden crowns among the 'sacred vestments' worn by the chorus which he provided at the *Dionysia*. Musicians are often represented wearing crowns (Schreiber-Anderson, *Atlas*, vii. 9, lxxviii. 7; Baumeister, *Denkm.*, fig. 591). The use of crowns at bridals was undoubtedly religious, and therefore condemned by Tertullian (*de Cor.* 13). It is the bridal crown that is carried or worn by Eros and Hymenæus. Religious also must have been the origin of the decoration hung outside the house-door at Athens after the birth of a child: an olive-wreath for a boy, a woollen fillet for a girl. On the other hand, we may well hesitate to see any direct religious significance in the use of crowns at banquets. They were connected especially with drinking, and were probably first used to promote cheerfulness. It may be doubted whether the theory that they mitigated headache (an ancient theory mentioned by Aristotle *ap.* Athen. xv. 674) was more than make-believe. Whatever may have been the original significance of the use of crowns on such occasions, it was doubtless included in the general condemnation of the custom of wearing crowns on the head which was uttered by more than one Christian apologist (Minucius Felix, Tertullian). The Christians used flowers both loose and in garlands, but not on their heads, doubtless because the wearing of them was so intimately associated with pagan cultus.

10. The diadem worn by monarchs, though possibly its resemblance to the *tænia* with which the heads of deities were often adorned may have given it a suggestion of Divine significance, was probably not religious in origin. In any case it was adopted by Alexander the Great from the Persian king, so that its original significance must

be sought in the East. The plain round decoration seen, *e.g.*, on the portrait-head in the Louvre called Antiochus the Great (Bevan, *House of Seleucus*, Lond. 1902, frontisp.), or on heads of Seleucus and Philetærus on early Pergamene coins, is probably not a diadem, but a sacred fillet. The laurel crown is rarely, if ever, represented on the portraits of living Greek kings. It is worn by the dead and divinized Philetærus, sometimes intertwined with a diadem, on coins of Pergamum. It was worn by Julius Cæsar and by practically all the Emperors from Augustus onwards, while, until the time of Constantine, they eschewed the royal diadem. It was a symbol, despite its origin, of honour, but not of divinity. Even the crown that is being placed on the head of Augustus by a female figure, herself wearing a walled crown and veil, on the famous Vienna cameo (A. Furtwängler, *Ant. Gemmen*, 1900, pl. 56) representing the Emperor's apotheosis, is a sign of honour merely, not of divinization. This crown is of oak leaves. When the early Emperors wished to express divinity by a crown, it took the radiate form. The same thing could be expressed by placing a star over the Emperor's head. On coins struck after his death, Divus Augustus is frequently represented wear' a crown of rays. The use by a king of this radiate crown, properly the head-dress of the sun-god, is found on coins representing Ptolemy III. of Egypt (247–222 B.C.). In Syria it appears first on coins struck by Antiochus Epiphanes (175–164 B.C.), who expressed his godhead thus, as well as by placing a star over his head. It may be doubted whether this radiation, so far, represents any concrete crown, and not merely an imaginary halo. Nero was the first living Roman Emperor to wear it, so far as the evidence of coins goes. But it was not until the time of Caracalla, who introduced a silver coin called the *antoninianus*, on which the Emperor's head is radiate, that the radiate crown became common in representations of monarchs. It was apparently not worn by the Emperors after Constantine the Great, obviously because of its religious significance.

CRUELTY.—See HUMANITARIANISM.

CRUSADES.—I. *CAUSES OF THE CRUSADES.*—The Crusades may be defined as the technical name given to certain special events in the long struggle between the Muslim and the Christian. For the immediate or special causes of any particular Crusade, see below. Of general causes, whether political or religious and ethical, the following may be noted.

1. **The decay of the Eastern Empire.**—The reader even of liberal culture is often ignorant of the fortunes of the great Empire that continued at Constantinople the name and authority of Rome. He fails, therefore, to recognize the debt which the common civilization and Christianity of Europe owe to it (cf. F. Harrison, *Meaning of History*, 1894, chs. 11 and 12). Charles Martel saved the West at Tours (Oct. 732) from the Saracen invaders, but his efforts would have been fruitless had not Constantinople for centuries presented a secure barrier against all attacks from the side of Asia. The first shock of Muslim conquest had found her unprepared (first Saracen siege of Constantinople, 674–6; 2nd siege, 716–8; deliverance chiefly through 'Greek fire'); but under the great Emperor Leo the Syrian (718, often mistakenly called the Isaurian) and his son Constantine V. (740), the Eastern Empire recovered her strength (J. B. Bury, *Later Roman Empire*, London, 1889, vol. ii. bk. 6). As part of his general programme for driving back the Saracens, Leo endeavoured to abolish the 'eikons,' and tried to develop a strong yeomanry by reforming the land laws and emancipating the serfs. As a result, the Basilian dynasty (867–1057) regained much lost territory in both Asia and Europe, through the conquests especially of John Zimisces (963–75; Antioch recovered, 969).

But, with the close of the 11th cent., the powers of resistance of the Eastern Empire were becoming exhausted. The Iconoclastic controversy and, above all, centuries of pernicious land laws had sapped her vitality. The provinces of Asia Minor consisted of vast domains cultivated by serfs under absentee landlords at Constantinople, or belonging to ecclesiastical corporations exempt from military burdens. The result was inevitable. One by one the provinces which had hitherto stood out against the Muslim succumbed. The respite which Constantinople had provided had been invaluable. The Greek Empire had saved Europe in her hour of weakness. But now missionaries had subdued the barbarians, and under Charles the Great had welded Europe, in idea at least, into one great Christian commonwealth, under one leader of the faithful at Rome (Xmas Day, 800). Whatever its internal weakness, the idea of the Holy Roman Empire was of tremendous power for dealing with a non-Christian foe. The conflict between Crescent and Cross was bound to be renewed under a new form, with a new champion of Christendom, and in a wider arena, no longer as a frontier war, but one of inter-continental character. Thus the Crusades (upon the seven or nine divisions of which stress should not be laid) must be regarded as a new form of the old struggle. A clear recognition of this fact, and not the belief once fashionable that the Crusades were a sort of 12th cent. outbreak of madness or chivalry, lies at the root of a right understanding of history.

2. **The rise of the Seljūḳ Turks.**—In the 9th and 10th cents. the powers of resistance of Constantinople had been assisted by the disunion of the Muslim. There were rival Khalifates of East and West (Western Khalifate inaugurated by 'Abd al-Raḥmān III. in 929); the struggles of Sunnites and Shi'ites (*qq.v.*), and of the dynasties and sub-dynasties of Umayyads, 'Abbāsids, Fāṭimids, Idrīsids, etc. (see, for complete lists, S. Lane-Poole, *Mahommedan Dynasties*, 1894); and the revolt of the 'Carmaṭians' (*q.v.*) at Kūfa under Ḥamdān ibn Ashaṭ or Qarmaṭ, and the pillage of Mecca by these Mahdists in 929. But, with the rapid rise of the Seljūḳ Turks, all this was changed, and Constantinople was separated from the Muslim merely by the Dardanelles, and threatened by a Turkish fleet constructed by Greek captives. So, in the spring of 1088, Alexius Comnenus in a letter (*Recucil*, iv. 131 ff.; or, better, Hagenmeyer, *Kreuzzugsbriefe*, Innsbruck, 1901, p. 12) to Robert of Flanders besought the aid of the Latins.[1]

In 1039 the Turkomans defeated Mas'ūd, the Ghaznavid, at Damghan, subdued Persia, and elected as their head Abū-Ṭālib-Ṭughril Beg, the grandson of Seljūḳ b. Yakāk of Samarqand

[1] For the controversies over the genuineness of this letter, see Bury's Gibbon, vi. 251 n., or, more fully, Hagenmeyer, *op. cit.* pp. 10–44. The date is from Hagenmeyer, whose defence of its genuineness (against P. E. D. Riant, *Alex. Com. Ep. Spuria* Geneva, 1879) may be accepted.

(a pervert, possibly, from Christianity to Islām). In 1055, through his deliverance of Baghdad from the Buyids, Ṭughril was constituted 'sultan' or captain of the bodyguard of the 'Abbāsid Khalīfs. His son Alp Arslān (1063–72) conquered and ruined the Nestorian kingdom of Armenia (1064) and Georgia, and after three campaigns defeated and captured the Greek Emperor Romanus Diogenes, at Manzikert near Lake Van (26th Aug. 1071);[1] and, as a result of the consequent weakness and dissensions, the Seljūḳ Sulaimān won Anatolia and Antioch, the seat of the Seljukian dynasty of Rūm being established at Nicæa (1077–1300). Moreover, in 1070–1, Jerusalem had been taken by a lieutenant of Malik Shah, Atsiz ibn Auk the Khwārizmian, from the mild rule of the Fāṭimid Khalīfs of Egypt, and its Government handed over to the exactions of the Turkoman Ortuk b. Aksab (see below).[2] The Ortukids were expelled 26th Aug. 1098 by the Fāṭimids, and retired to Edessa.[3]

3. The pilgrims and the Holy Places.—The influence of the Holy Places upon the Middle Ages was not due to historic—the historic sense was not yet born—but to religious and psychological sentiment. The Middle Ages were powerless to realize an idea without turning it into the concrete. Of Christ and His saints men must have visible images. By a sort of logical inversion they went one step further. Where the image was, there was the spirit. Thus the image, or material realization, became the vehicle of grace, possessing not only sanctity but life, while the spiritual was constantly assuming form and colour. Hence, to the mediæval mind the Holy Places were far more than religious or historical memorials. They were themselves sacramental—an essential part of the spiritual provision of the age. The early origin of pilgrimages to Jerusalem is seen in the journey of Helena in 326, the foundation by her son Constantine of the Church of the Holy Sepulchre (Socrates, *HE* i. 17; Euseb. *Vit. Const.* iii. 30, 34–40), and the record in 333 of the Bordeaux pilgrim (see *Itin. Anon. Burdigalense*, in *CSEL* xxxix. 1 ff.; Eng. tr., A. Stewart [London, 1887]). On the conquest of Jerusalem by Omar (638), the Christians had been assured of their religion; a quarter was assigned to the patriarch and his people; and the Holy Places were left in their hands. The 'Abbāsid Khalīf Hārūn al-Rashid even presented Charles the Great (23rd Dec. 800) with the keys of the Sepulchre (Eginhard, *de Vita Carol. Mag.* ch. 16). On Jerusalem lapsing to the Fāṭimid Khalīfs of Egypt (969–1076), special concessions were granted to the republic of Amalfi for the transport of pilgrims. But the era of tolerance was changed when the famous Ḥākim (al-Ḥākim Abū-'Alī al-Manṣūr), the Fāṭimid Khalīf (996–1020), burnt the Church of the Resurrection and destroyed the Holy Sepulchre (27th Sept. 1010; for date, see Röhricht, *op. cit.* 9 n.). On his assumption of divinity (1017), in his new hatred of the Muslim, al-Ḥākim once more granted toleration, and the pilgrimages recommenced, greatly stimulated by the new outburst of piety in Europe which marked the 11th cent., and by the re-opening (see Röhricht, in *Hist. Taschenbuch*, Leipzig, 1875, v. 5), through the conversion of Stephen of Hungary (997–1038), of the old land-route which was followed as early as 333 by the Bordeaux pilgrim. But under the rule of Ortuk the cruelties inflicted upon, and the exactions from, pilgrims, hitherto fixed at two gold pieces a head, became excessive (William of Tyre, *Hist.* i. ch. 10; Urban II. at Clermont in Guibert, *Gesta Dei per Francos*, ii. 4 [*Recueil*, iv. 140]). Either a way of redress must be found, or the pilgrimages must cease.[4]

4. The new Europe.—The wrongs of previous ages, including the desecration by al-Ḥākim, had appealed to a distracted Europe in vain. But, by the close of the 11th cent., a new Europe had arisen, instinct with religious chivalry, conscious of its spiritual unity, no longer distracted by heathen Huns and Northmen. By the recital of the wrongs of the pilgrims 'a nerve was touched of exquisite feeling; and the sensation vibrated to the heart of Europe' (Gibbon, vi. 258). Politically Europe was ready. Gregory VII., as part of his immense plans, first conceived (Dec. 1074) the idea of arming Europe against Asia (*Epp.* ii. 31),[1] and the two expeditions of his Norman ally and protector, Robert Wiscard—who had already conquered Sicily from the Saracens—into Greece (1081–2, 1084) might have established as a preliminary step the Normans at Constantinople, and the Papal supremacy over the Eastern Church, but for the death of Robert at Bundicia in Epirus (17th July 1085), leaving his Eastern dreams to his son Bohemond. The diversion of these into the Crusade was easy and natural, while in the Fourth Crusade we see the reversion to Robert's original plan. Nor must we forget that, in addition to the religious motives—to the strength of which the utmost importance should be attached—the East was to the 11th and 12th cents. what the New World was to the Elizabethan sailors. Motives of commerce, wealth, adventure, and religion were united (cf. the six camel-loads of Tancred's spoils [Alb. Aq. vi. 23; *Recueil*, iv. 479], or the letter of Hugh de Reitaste [*i.e.* Rethel] boasting of the 1500 marks rental he had won [in Guibert, *Gesta Dei per Francos*, vii. 38; *Recueil*, iv. 254]).

The drift of the times is clearly seen in the popularity of the romance *Vita Caroli Magni et Rolandi* (ed. Ciampi, Florence, 1822), assigned to John Tilpinus or Turpinus, Archbishop of Rheims, 773. In this romance, which was accepted everywhere as history, Charles achieves the conquest of the Holy Land. Gaston Paris, *s.v.* 'De Pseudo-Turpino' (in *Hist. Poet. de Charl.*, Paris, 1865; or enlarged, 1905), shows that the first part was composed in the 11th cent. by a Spaniard; the second part c. 1110 by a monk of Vienne. There is an Eng. metrical tr. by T. Rodd, 2 vols., 1812.

5. The system of Penance.—A powerful motive both to the pilgrimages to the Holy Places and to the consequent Crusades may be traced in the current Penitential system of Europe. In the 11th and 12th cents. this system was in full operation. We see the effect when Urban II. at Clermont proclaimed a plenary indulgence to all who enlisted for the Crusade (Mansi, xx. 827; cf. Girald. Camb. *de Princip. Instruct.* 238 [ed. G. F. Warner, in Rolls Series, 1891]; see also Röhricht, *Erst. Kreuz.* 21, n. 5). To this should be added the temporal advantages. The *cruce signati* were freed from arrest for debt, and from usury; they were guaranteed justice; the Pope was the guardian of their wives, families, etc. In consequence the crusaders were a mixed company, debtors and criminals abounding.

II. *HISTORY OF THE SEVEN CRUSADES.*[2]—1. First Crusade.—To the general causes already detailed no special cause need be added save—though very doubtfully—the preaching of Peter the Hermit.

Peter (b. 1053) of Amiens (Guibert, *Gesta Dei per Francos*, ii. 8), stirred by the wrongs he witnessed in 1090 and 1094 at Jerusalem (Alb. Aq. *Hist.* i. 2–4), on his return to Europe is said, according to the well-known story, to have addressed the Council of Bari and aroused Urban II. to a sense of the need of a Crusade. The last part of this story, to the doubtful character of which von Sybel first drew attention, appears in Albert of Aachen (*Hist.* i. 5; cf. Anna Comnena, *Alex.* x. 284), and is otherwise unknown (cf. Bernard's contemptuous reference, *Ep.* 363. 8). Thence it was copied into the *Chanson d'Antioche* of the pilgrim Richard (a romance without historical value, written *c.* 1145; first ed. by A. P. Paris, 2 vols., 1848, tr.

[1] For the battle, see Finlay, *Hist. Greece*, iii. 32-4; Oman, *Hist. of the Art of War*, 217-9.

[2] For date, see Röhricht, *Erst. Kreuz.*, 233 n., from Mujīr-al-Dīn's *Hist. de Jérusalem*, tr. Suvaire, 1876, p. 69 f.

[3] For date, see Röhricht, *l.c.*

[4] There is a comprehensive study of the German pilgrims in R. Röhricht, *Beiträge z. Gesch. d. Kreuz.* vol. ii.; cf. also P. E. D. Riant, *Expéditions et pèlerinages des Scandinaves en Terre Sainte*, Paris, 1865-9, and H. Raynaud, *Itinéraires à Jerusalem*, Paris, 1877.

[1] Cf. the letter of Sylvester II., May 984 (*Epistolæ Gerberti* [ed. J. Havet, Paris, 1889], p. 22), which is, however, of very doubtful value and authenticity.

[2] Divisions into seven or nine of what was in reality a continuous struggle are arbitrary but useful.

1802). Peter is not mentioned by Guibert or others as present at Clermont. Of Peter's preaching in Picardy and Berry after Clermont there is, however, little doubt (see Guibert, *op. cit.* ii. 8; Anna Comn. *l.c.*), but Urban II., a disciple of Gregory VII., would use rather than follow his preaching. For Peter, see the critical monograph of Hagenmeyer, *Peter der Eremite* (Leipzig, 1879), which traces the genesis of the myth.

At the Council of Placentia (7th March 1095) the ambassador of Alexius Comnenus pleaded the peril of Constantinople (Mansi, xx. 802; Guibert, *op. cit.* ii. 1), but Urban II. postponed the decision until after a second Council at Clermont (18th–27th Nov. 1095; Mansi, xx. 821 ff.). There, amid cries of 'Deus vult,' the undertaking was commenced, a red cross (hence the title 'Crusade') being sewn on the breast or shoulders.[1] So far as the Muslim world was concerned, the times were opportune, the great Seljūḳ Empire of Malik Shāh having broken up, at his death (1092), into four warring portions. Egypt had recovered its possessions, and in 1096 the Fāṭimid vizier Aphdal conquered Jerusalem from Ortuk. While the main expedition was preparing, a vast mob, chiefly from the Rhine districts, under Peter, Walter the Penniless, and Walter de Poissy, with a goose at their head (Alb. Aq. i. 30; Guibert, *op. cit.*; *Recueil*, iv. 251), after massacring (May 1096) the Jews in Spires and Worms (Salomo bar Simeon, in Neubauer and Stern's *Quellen zur Gesch. der Juden in Deutsch.*, Berlin, 1892), crossed Hungary, and, with thinned numbers, arrived at Constantinople (30th July 1096). On crossing into Asia, they were overwhelmed (21st Oct. 1096), near the river Dracon and at Civitot, by Kilij Arslān, the son and successor (1092–1106) of Sulaimān (Anna Comn. *Alex.* x. 274; there is an excellent account of this Crusade in Röhricht, *Erst. Kreuz.* chs. 2, 3, or in Hagenmeyer, *Peter d. Eremite*, chs. 4–6).

The main Crusade was under Godfrey of Bouillon, Hugh of Vermandois, Robert of Normandy, Robert of Flanders, Raymond of St. Gilles and Toulouse, Bohemond, and his nephew Tancred (see lists in Alb. Aq. ii. 22. 3), with a vast host of barons, etc. Marching through Hungary, the various forces converged on Constantinople (Godfrey, 23rd Dec. 1097; Bohemond, *c.* 10th April 1097), and were carried over the Bosporus by the anxious Greeks. After Alexius had secured their homage (Alb. Aq. ii. 16–18, 28) and reviewed the hosts (of whom Fulcher of Chartres enumerates nineteen nations, or about 60,000 armed horsemen [see Alb. Aq. ii. 41] plus a vast mob of pilgrims and camp followers), they captured Nicæa, the capital of Rūm (19th June 1097), defeated the Turks at Dorylæum (Eski-Shehr, 1st July 1097), crossed the desert in a burning summer, captured Antioch after an exhausting siege of nine months (21st Oct. 1097–3rd June 1098), during the dire famine of which many deserted for home (Alb. Aq. iii. 50–52, iv. 34) until stopped by the discovery of a Holy Lance,[2] and defeated the vast relief forces of Kerbugha of Mosul (28th June). After ten months' delay, the remnant of the crusaders, reduced now to less than 40,000 all told (Röhricht, *op. cit.* 183 n.), disdaining the proffered terms of the Egyptians, marched on Jerusalem (13th May–6th June 1099), the capture of which (15th July 1099) was followed by the massacre of 70,000 Muslims and Jews, women and children included (Alb. Aq. vi. 20–23). Eight days later Godfrey was elected king (real title, 'advocate of the Holy Sepulchre') of Jerusalem (22nd July 1099; William of Tyre, *op. cit.* ix. chs. 1–12). His overthrow of the Egyptians at Ascalon (12th Aug. 1099) was followed by the disaster of his death (18th July 1100). The two Baldwins, his brother and cousin, who succeeded him, slowly extended the limits of the kingdom (Tripoli, 1109; Tyre, 1124), which began to decline after 1143.

At its widest extent, the four fiefs of the kingdom of Jerusalem were: (1) the principality of Jerusalem; (2) the county of Edessa, which fell to Baldwin the brother of Godfrey, who had detached himself from the main host for the purpose in 1097; (3) the principality of Antioch claimed by Bohemond, and always inclined to independence;[1] (4) the county of Tripoli.[2] The settlement of the kingdom on a feudal basis was marked by the gradual compilation (see Bury's Gibbon, vi. App. 16; Stubbs, *Itin. Reg. Ricard.*, Introd. p. xc) of that most interesting code of feudal customs, etc., the 'Assize of Jerusalem,'[3] as also by the foundation, for its defence, of the various orders of military knights (see below, p. 351).

LITERATURE.—The original sources for the First Crusade are to be found for the most part in the ponderous though incomplete *Recueil des historiens des croisades* [*Hist. occident.*], 5 vols. (Paris, 1844–95)—a collection which supersedes that of J. Bongars, *Gesta Dei per Francos* (Hanover, 1611), used by Gibbon. In vol. i. (1) there is a good Itinerary of the various Crusades, by S. Jacobs. Of the sources the following are the most important: (1) *Gesta Francorum*, by an unknown S. Italian knight who took part in the First Crusade. He deposited his book at Jerusalem, possibly in the Holy Sepulchre, where it was frequently consulted by other writers, of several of whom it forms the basis.[4] (2) Guibert of Nogent (b. 1053), *Gesta Dei per Francos*; almost entirely dependent on (1). Guibert was present at Clermont, and writes down to 1104.[5] (3) Raymund of Agiles, *Hist. Francorum qui ceperunt Jerusalem*; also dependent on (1): a narrative by a Provençal eye-witness.[6] (4) Fulcher of Chartres, *Hist. Hierosolymitana*; the only eye-witness of the events in Edessa; continues down to 1127; also depends on (1).[7] (5) Baldric, Archbishop of Dol, *Hist. Hierosolymitana*, written in 1108; entirely founded on (1).[8] (6) Albert of Aachen, *Hist. Hierosolymitana*—a vivid narrative of the First Crusade, written after 1120; really copied from an unknown crusader from Lorraine, together with use of (1).[9] (7) Ralph of Caen, *Gesta Tancredi*; a friend of Tancred, for whose exploits he is of great value.[10] (8) Ekkehard of Aura, near Kissingen (d. 1125), *Hierosolymita*. He went to Palestine in 1101, and was there about six weeks.[11] (9) Cafaro di Caschifelone, *de Liberatione civitatum Orientis*. The writer (b. 1080) went out in Aug. 1100, returning in July 1101 (see *Recueil*, v., Introd. p. xvii). It is of special value for Genoese matters up to 1109.[12] Other minor sources of no great historical value, including the poem of Gilo of Toucy and Foulk, *Vie Jerosolymitanæ* (written *c.* 1125 [see *Recueil*, v., Introd. cxlv]) are ed. in *Recueil*, vol. v. (10) Of Greek writers, Anna Comnena (b. 1083), owing to her position as daughter of the Emperor Alexius, cannot be neglected, due account being paid to her bias.[13]

Of modern works dealing with the First Crusade (see also below) the first critical study was H. v. Sybel, *Gesch. des ersten Kreuzzugs*[2], Düsseldorf, 1881. Two German historians have since spent a lifetime in the preparation of a series of important monographs: H. Hagenmeyer, *Peter der Eremite*, Leipzig, 1879 (for First Crusade, see chs. 5 and 6), with a good 'Chronology' (1094–1100) in Appendix, and his *Die Kreuzzugs-*

[1] For critical examination of this Council, see Röhricht, *Erst. Kreuz.* 235–9. For Urban's other Councils after Clermont, at which also he preached the Crusade, see *ib.* 22.

[2] On this incident, see Raymund of Agiles, 'Hist. Francorum,' in *Recueil*, iii

[1] For its history, see E. G. Rey, 'Résumé chron. de la hist. d'Antioche,' in *Revue de l'orient latin*, iv. 321 ff., 1896.

[2] On the limits of these fiefs, see Jacobs, in *Recueil*, i. [1] Introd. ch. 2; or Lane-Poole, *Saladin*, New York, 1898, p. 26 f. For tables of kings, dynasties, rulers, etc., see Lane-Poole, *op. cit.*

[3] Best ed. by de Beugnot, 2 vols., 1841 and 1843; for a critique, see Gaston Dodu, *Hist. des institutions monarchiques dans le royaume latin de Jérusalem*, Paris, 1894.

[4] Best ed. by H. Hagenmeyer, Heidelberg, 1890, with introduction and notes; also in *Recueil*, iii. 121 ff.

[5] In *Recueil*, iv. 113–263.

[6] See C. Klein, *Raimund v. Aguilers* (Berlin, 1892), and v. Sybel, *Erst. Kreuz.* 15 ff. In *Recueil*, iii. 231–310; Migne, *PL* clv. 591–666.

[7] See v. Sybel, *op. cit.* 46 ff.; Hagenmeyer, *Gesta Franc.* p. 58 ff.; *Recueil*, iii. 311 ff., or Migne, *PL* clv. 826–942.

[8] See v. Sybel, *op. cit.* 35 ff.; *Recueil*, iv. 1–111.

[9] See Hagenmeyer, *op. cit.* 62–68, or B. Kugler, *Albert v. Aachen*, Stuttgart, 1885, who maintains his value as against v. Sybel's doubts; *Recueil*, iv. 265–713.

[10] *Recueil*, iii. 587–716; Migne, *PL* clv. 489–590, or Muratori, *Script. rer. Ital.* v. 285–333. On Ralph, see v. Sybel, *op. cit.* 54; Hagenmeyer, *op. cit.* 69.

[11] Best ed. by P. E. D. Riant, in *Recueil*, v. [1895] 1–40, or, separately, by H. Hagenmeyer (Tübingen, 1877), with valuable introduction. The ed. in Martène (*Ampliss. Collect.*, 1729, vol. v. coll. 513–35) is very defective, and that in Pertz by Waitz (*MGH* vi. 265 ff.) is scarcely complete. For many events Ekkehard is our only source (see *Recueil*, v., Pref. p. vii).

[12] *Recueil*, v. 48–73; or Pertz, *MGH* xviii. 40–8; or, separately, ed. by L. T. Belgrano, Rome, 1890.

[13] Of her *Alexias* (complete ed. in Migne, *PG* cxxxi.; or 2 vols. in *Corpus script. hist. Byz.* [Bonn, 1828–97]; or ed. Reifferscheid [Teubner], 1884), the books dealing with the First Crusade (x.–xiv.) are in the *Recueil des historiens des croisades* [*Historiens grecs*], i. 1–204 (2 vols., Paris, 1875, 1881, with Lat. paraphrase the 2nd vol. contains annotations only).

briefe (1088–1100), Innsbruck, 1901, with complete bibliography of all minor sources, magazines, etc.; R. Röhricht, *Gesch. des erst. Kreuz.*, Innsbruck, 1901 (perhaps the best single work), and *Beiträge z. Gesch. d. Kreuz.*, 2 vols., Berlin, 1874, 1878. P. E. D. Riant must not be overlooked among those who have done good work (cf. *Recueil*, v.). His *Invent. crit. des lettres (763–1100)*, Paris, 1880, is of value for advanced work.

2. Second Crusade.—For many years the Latin kingdom had been threatened by the growing power of the Atabeg amir of Mosul, 'Imād-al-Dīn Zengi, or Zanghis, twisted by the Latins into *Sanguineus* (1127–14th Sept. 1146),[1] to whom must be attributed the first stemming of the tide of Latin conquest. His capture and massacre of Edessa (25th Dec. 1144)[2] was followed by the successes of his great son, Nūr-al-Dīn Maḥmūd. The fall of Edessa aroused the West, chiefly through the preaching of St. Bernard (see art. BERNARD, vol. ii. p. 530), first at Vézelay before Louis VII. (31st March 1146), then later in the Rhine valley,[3] where the persecution of the Jews which usually attended a Crusade had broken out. As a result of his meeting with Bernard at Spires (27th Dec. 1146), the Emperor Conrad III., with reluctance, took the cross (E. Vacandard, *S. Bernard*, Paris, 1895, ii. 288 ff.). Conrad started from Bamberg (May 1147) by the overland route, with about 100,000 followers, including many women, and, after a disorderly journey, reached Constantinople, followed closely by Louis, who set out from Metz (11th June 1147). An attempt of Conrad to push on was followed by the loss of 30,000 Germans, and he was forced back upon Nicæa to await Louis. From there the armies marched, though in two divisions, to Ephesus, whence the wounded Conrad returned, after Christmas, to winter at Constantinople. Louis, however, and a part of the Germans under Otto of Freising, continued their march. Otto's force was cut to pieces near Laodicea, and Louis was disastrously defeated in the defiles of Phrygia (Odo, *op. cit.* vi.: a remarkable story), but managed with diminished forces to reach Antioch (19th March 1148). Meanwhile Conrad set sail from Constantinople (10th March 1148), and reached Acre in April. The two armies mustered at Palma, near Acre (24th June 1148). But the attack on Damascus failed (Bernhardi, *op. cit.* 563–78), and Conrad sailed home (8th Sept. 1148), followed by Louis (Easter, 1149). Bernard and Suger thereupon planned a second expedition, and at a Council at Chartres (7th May 1150)[4] Bernard was actually elected commander-in-chief —an office which he refused (Bernard, *Ep.* 256). The miserable termination of the crusade led to a reaction of anger against St. Bernard (*de Consid.* ii. 1). As an important episode in the Crusade we may note the undesigned conquest, by an English fleet, of Lisbon from the Moors (Bernhardi, *op. cit.* 579–90).

LITERATURE.—For the Second Crusade the chief sources, in addition to William of Tyre (see below), are Odo de Diogilo (Deuil), *de Profectione Lud. VII.* (in Migne, *PL* clxxxv. 1205 ff.), and two anonymous writers, *Gesta Lud. VII.* and the *Hist. gloriosi Lud.*[5] For Conrad, see Otto of Freising, *de Gest. Frid.* i. 34–39, 43–45, 58–59 [in Pertz, *MGH* xx.]. Of Greek writers, Nicetas Acominatos continues the work of Anna Comnena from 1118–1206 with more fairness (see *Recueil* [*Hist. grecs*], Paris, 1875). Of modern works, B. Kugler, *Analekten z. Gesch. des zweit. Kreuz.*, Tübingen, 1878, 1885, and *Neue Analekten*, Tübingen, 1885; W. Bernhardi, *Conrad III.*, 2 vols., Leipzig, 1883 (esp. pp. 591–684).

3. Third Crusade.—In 1164 and 1167 the Turkish amir Shiracouah (Asad al-Dīn Abū-l-Ḥārith Shīrkūh) attacked the Fāṭimids of Egypt and their Frank allies. But the treacherous designs of the advisers of Amalric of Jerusalem (1162–73) to seize Egypt led the Fāṭimids to turn to the Turks for help. After the burning of Cairo (*i.e.* Fustat, 12th Nov. 1168), Amalric was forced to return; but Saladin, at the command of Nūr-al-Dīn, destroyed the Fāṭimid dynasty (Sept. 1171), restoring Egypt to the allegiance of the 'Abbāsid Khalīfs of Baghdad (William of Tyre, xix. 5–7, 12–31, xx. 5–12). On the death of Shiracouah (23rd March 1169), his nephew the Kurd Saladin (Salāh-al-Dīn: b. 1137) without delay (26th March) was recognized as his successor as vizier of Egypt. The disunion due to the death of the Sultan Nūr-al-Dīn (15th May 1174) was not taken advantage of by the Latins, who allowed Saladin to extend and consolidate his dominions (Syria, 1174–6). The inglorious expedition of Philip of Flanders (Aug. 1177–Easter 1178), and the great defeat of Saladin at Ramleh by 375 knights under Reginald of Châtillon (25th Nov. 1177), led in 1180 to a truce for two years. The violation of the truce by Reginald of Châtillon's seizure of Karak, and subsequent plunder of Arab caravans (1179, 1182, 1186), and the rapid decay of the kingdom of Jerusalem through dissensions, finally issued in a determined attack by Saladin, whose soldiers were now trained in Frank methods. His great victory at Tiberias or Hattîn (4th July 1187) was followed by the siege (20th Sept.) and capitulation of Jerusalem on 2nd Oct. 1187.[1] Saladin's siege of Tyre (Nov. and Dec. 1187) was thwarted by Conrad of Montferrat, but the rest of the country was overrun, and a conditional promise was made of the surrender of Antioch if not relieved within seven months.

Meanwhile Europe once more armed, being terrified by the tidings which reached it (end of Oct. 1187 [Girald. Camb. *de Princ. Instr.* 239]) of the loss of Jerusalem. The first to move was the great Emperor, Frederick Barbarossa, who as a young man had taken part in the Second Crusade. Starting from Regensburg (11th May 1189), Frederick crossed Hungary and Bulgaria, and wintered at Adrianople, sore harassed, as usual, by the treachery of the Greeks. Soon after Easter 1190 he crossed the Bosporus, avoiding Constantinople, and struggled through the deserts of Cilicia. On the death, by drowning, of the great Emperor (10th June 1190) in the Saleph (Geuk Su or Calycadnus, *Itin. Ric.* 55), the Germans made their way, in part, to Antioch (June 21st), in part to Tripoli.

LITERATURE.—For this expedition we have the narrative of two spectators: Tageno of Passau, *Descript. Expedit. Frid. I.* (in M. Freher, *Germ. Rer. Script.* i. 406–16, ed. Struv, Strassburg, 1717), and the anonymous *Exped. Asiatica Frid. I.* (in Canisius, *Lect. Antig.* iii. (2) pp. 498–526, ed. J. Basnage [Amsterdam, 1725]). For modern works, see A. Chroust, *Tageno, Ansbert, und d. Hist. Peregrinorum*, Graz, 1892.

Richard of England (Nov. 1187) and Philip Augustus of France (Jan. 1188) had been the first to take the cross. But, owing to their quarrels, they did not start from Vézelay until June 1190. They journeyed together to Marseilles, and by separate fleets (Genoese and English) to Messina (23rd Sept.), where they wintered. Sailing in the spring, and on the way conquering Cyprus in a fortnight (*Itin. Ric.* 183 ff.), Richard arrived at Acre (8th June 1191), which Guy de Lusignan had sat down to besiege (28th Aug. 1189) and Saladin to defend, both sides passing through the extremes of pestilence and famine. Richard had been preceded by Philip (20th Apr.), and on 3rd July a united assault was made on the town, which surrendered on the 12th of the same month. The quarrels of Philip and Richard were, however,

[1] For life, see Lane-Poole, *Saladin*, chs. 3 and 4, and J. F. Michaud, *Bib. des croisades* (Paris, 1829), iv. 78 ff.

[2] For date, see Beruhardi, *Conrad III.* 513 n.; William of Tyre, *op. cit.* xvi. 4.

[3] Odo of Deuil, *op. cit.* i. 1; Bouquet, *Recueil*, xii. 91.

[4] For this Council, which Mabillon, Baronius, and others put in 1146, thus leading to grave error, repeated in most writers, see E. Vacandard, *S. Bernard*, ii. 430 ff.

[5] A. Ducheene, *Hist. Franc. Script.*, Paris, 1641, iv. 390 ff.; or, better, ed. by A. Molinier, under the title *Vie de Louis le Gros*, Paris, 1887 (written 1153 and 1172).

[1] See Ernoul, in *L'Estoire de Eracles*, xxiii. 55 ff. (*Recueil*, ii. 82 ff.), for interesting narration. For the events of the years 1187–9, see R. Röhricht, *Beiträge z. Gesch. d. Kreuz.* i. 115–208

disastrous, and, on 31st July, Philip set sail home. Richard with 100,000 men marched down the coast to Jaffa, protected by his fleet, and on 7th Sept. inflicted at Arsuf a great defeat upon Saladin (good narrative in *Itin. Ric.* p. 259). After six weeks' delay in re-fortifying Jaffa, Richard twice marched within sight of Jerusalem (Jan. and June 1192), but was forced to fall back on Ascalon. Dissensions, treason, luxury, and immorality (cf. *Itin. Ric.* pp. 284–5) among the crusaders, and trouble at home (*ib.* p. 334), led Richard to come to terms with Saladin (2nd Sept.). The Christians were to retain the coast from Tyre to Jaffa, and to have free access to the Holy Sepulchre. On 9th Oct. 1192, Richard left Palestine. Such small successes as this Crusade had accomplished were wholly due to his marvellous skill and daring (of the latter the most remarkable illustration is in Ralph Coggeshall, *Chron.*, Rolls Ser. 1875, pp. 41–51). On the death of Saladin at Damascus (4th March 1193) his dominions were divided, and the Christians obtained a respite, a great victory being won by German crusaders in 1197, which led to the recovery of the coast towns.

LITERATURE.—For Richard's Crusade the following are the chief sources. (1) The anonymous *Itin. Regis Ricardi* (ed. by W. Stubbs, with valuable Introd. in Rolls Ser. 1864). The old ascription (due to Gale's ed. 1687) to Geoffrey Vinsauf is incorrect. Stubbs (Introd. *op. cit.* xli ff.) advocates the authorship of Richard, a canon of the Holy Trinity in Aldgate, by whom it was published 1200–20 (*ib.* p. lxx). It is now generally agreed (in spite of Stubbs, *l.c.* p. lviii) that it is a free Latin translation of a French poem of a Norman knight called Ambroise, the minstrel of Richard (ed. by F. Liebermann and R. Pauli in Pertz, *MGH* xxvii. [1885] 532 ff., also ed. Gaston Paris, *L'Estoire de la guerre sainte*, 1897; the poem was discovered in 1873). (2) Sundry references in the *Chronicles* of Roger Hoveden (ed. Stubbs, in Rolls Ser., 4 vols. 1868–71);[1] Matthew of Paris (ed. H. R. Luard in Rolls Ser., 7 vols. 1872–83); and Ralph de Diceto (ed. Stubbs in Rolls Ser., 2 vols. 1876).[1] (3) Two contemporary narratives: the anonymous *Libellus de expugnatione Terræ Sanctæ* (printed, with the *Chronicle* of Ralph Coggeshall, in Rolls Ser., ed. J. Stevenson, 1875, p. 209 ff.; also in Martène (*Ampliss. Coll.* v. 544, 1729),[1] and the crusader's journal (Stubbs, *Itin. Ric.*, Introd. p. xxxviii) in Benedict of Peterborough's *Gesta Henrici II. et Ric. I.*[1] (ed. Stubbs, in Rolls Ser. 1867).[2] (4) The great Arabic work of Bohadin (Bahā-al-Dīn, b. 1145, d. 1234), the friend of Saladin (ed. with French tr. under title 'La Vie du Sultan Youssof' (*i.e.* Saladin), in *Recueil des hist. des croisades* [*Hist. orient.*] iii. [Paris, 1884]; also ed. Schultens, Leyden, 1732). The tr. of C. W. Wilson, published by the Palestine Pilgrims Text Society (London, 1897), is said by Lane-Poole to be unscholarly.[3] Of modern works, S. Lane-Poole, *Saladin*, New York, 1898, is of special value. Lane-Poole speaks in high terms of F. L. C. Marin's *Hist. de Saladin*, 2 vols., Paris, 1758. G. L. Schlumberger, *Renaud de Châtillon*, Paris, 1898, may also be consulted.

4. Fourth Crusade.—As the so-called Fourth Crusade, in spite of Innocent III.'s intention, never became a Crusade at all, but simply a successful attempt by the Latins to seize Constantinople and the Eastern Empire, for our present purpose it may be dismissed. Note should, however, be taken of the ancient hatred thus accentuated between Greek and Latin; of the evidence the Crusade affords of the fatal dissension between the Eastern and Western Churches, the existence of which was one great cause of the failure of the Crusades (cf. below, p. 350[b]); of the indifference of the great trading towns of Italy, especially Venice, to all motives except gain; and of the terrible weakening in powers of defence of Constantinople which the Latin conquest and pillage (12th–13th Apr. 1204) and subsequent Latin rule (1204–61) produced.

From the first, the Crusade, which Innocent III. had preached immediately on his accession, was betrayed by Venice, which had agreed to provide sea-power (March 1201). The ostensible object was Egypt, the centre of Muslim power; but, while the crusaders were assembling at Venice, the Republic concluded a treaty with the Sultan of Egypt (13th May 1202)[1] to divert the Crusade, in return for valuable commercial privileges in Alexandria and Jerusalem (see Bury's Gibbon, vi. 385 n., 528). The price the Republic wrung out of the crusaders was four marks a horse, two per man, or £180,000 (Pears, *Fall of Constantinople*, p. 234). As they had nothing wherewith to pay, the crusaders were then disgracefully used by the doge Henry Dandolo, and Boniface of Montferrat, for their own purposes. Until recent investigations, historians, including Gibbon, were successfully misled by the official narrative of Villehardouin, who seems himself to have been in the plot.

LITERATURE.—Of G. de Villehardouin, *Conquête de Constant.*, the best editions are by N. de Wailly, 3rd ed. (1882), who still maintains V.'s candour, and E. Bouchet, 2 vols., Paris, 1891. Other sources are (1) Gunther's *Historia* (ed. P. E. D. Riant, 1875; also in Canisius, *Antiq. Lect.* iv.); (2) the eye-witness Robert de Clary, *Li estoires de chiaus qui conq. Const.* (MS privately published by P. E. D. Riant in 1868; ed. by Ch. Hopf, *Chron. gréco-rom.*, Berlin, 1873, p. 1 ff.); (3) the anonymous *Devastatio Constant.* (another recent discovery; ed. in Pertz, *MGH* xvi., and, better, in Hopf, *op. cit.* p. 86 ff.). Of modern writers, E. Pears, *Fall of Constantinople*, London, 1885, should be specially studied for its clear survey; see also G. Finlay, *History of Greece from its Conquest by the Crusaders*, etc., Edinburgh, 1851.

5. Fifth Crusade.—At the Lateran Council (Nov. 1215), Innocent III. unfolded his plans for a new Crusade. The cross was taken, among others, by Andrew II. of Hungary, who arrived at Acre (1217), but accomplished nothing. In May 1218 some Northern crusaders under John de Brienne sailed from Acre to Damietta. After a siege of seventeen months, Damietta was captured (5th Nov. 1219); but, owing to discord, was lost again (8th Sept. 1221).

At his coronation in Rome (Dec. 1220), and on his marriage with Yolande of Jerusalem (Nov. 1225), Frederick II., 'the wonder of the world,' had taken the crusaders' oath. Finally, after excommunication for delay by Gregory IX., Frederick landed at Acre with only 600 knights (7th Sept. 1228); but, owing to his excommunication, the Military Orders refused to serve under him. By treaty, however, with the Sultan al-Kāmil Muhammad (1218–38), but chiefly through the dissensions of the Turks, Frederick obtained (24th Feb. 1229) the cession of Jerusalem (save the Temple), Bethlehem, and Nazareth; and on 18th March 1229 crowned himself in Jerusalem. Hearing that in his absence Gregory IX. had instituted a Crusade against him, Frederick returned from Acre and landed at Brindisi (10th June 1229).

In August 1239, on the appeal of Gregory IX., an abortive French Crusade, under Theobald, king of Navarre, set sail from Marseilles; followed (June 1240) by Richard, earl of Cornwall, who had taken the cross at Winchester (June 1236), and Simon de Montfort. Richard reached Acre on 11th Oct. (Matt. Paris, iv. 71), and by purchase secured the release of many captives (*ib.* iv. 141–3). Nothing, however, was accomplished, and on 3rd May 1241 he returned home (*ib.* iv. 144). In 1243, by negotiation, Jerusalem was once more restored. But the calling in of the Charismians (an Eastern tribe driven from their homes by Genghis Khan) as allies by the Sultan of Egypt led to the annihilation of the Templars and Hospitallers at Gaza (14th Oct. 1244), the sack of Jerusalem, and the massacre of 30,000 of its inhabitants.

LITERATURE.—For the Fifth Crusade, in addition to Ernoul, we have as special sources: (1) James of Vitry, *Hist. Hierosolymitana* (in Bongars, *Gesta Dei*, i. 1047 ff.),[2] who was an eye-witness of the siege of Damietta (see his *Epistola de capta Damiata* [ed. J. Gretser in his *Hortus S. Crucis*, Ingolstadt,

[1] For the Crusades these works can also be read in the convenient ed. by F. Liebermann and R. Pauli, in Pertz, *MGH* xxvii. (1885).

[2] The above have been extracted and translated by T. A. Archer, *Crusade of Richard I.*, London, 1888 (in 'Eng. Hist. by Contemp. Writers' series).

[3] Bohadin's panegyric can be corrected by the works of Ibn-al-Athir (1160–1233), *History of the Atabegs* (the enemies of Saladin) and *Al-Kāmil, or the Perfection of History* (both in *Recueil* [*Hist. orient.*], vols. i. ii., Paris, 1872–87).

[1] The treaty is hinted at by Ernoul (*Recueil*, ii. 250).

[2] There is an Eng. tr. by A. Stewart, London, 1896.

1610, or in his *Op. Omn.*, vol. 3, Regensburg, 1734]); and the continuation of William of Tyre by Bernard the Treasurer (see below, p. 351[b]). (2) *The Gesta obsidionis Damiatæ* (Muratori, *Rerum Ital. Script.* viii. 1084 f.). (3) *de Quinto bello Sacro Testimonia Minora* (ed. R. Röhricht, Geneva, 1882, for Soc. de l'orient lat.). This work contains a most useful collection of all the smaller Belgian, English, French (including Ernoul), German, Italian, Scandinavian, and Spanish sources; also *Quinti belli Sacri Script. Min.* (ed. R. Röhricht, Geneva, 1879–82, for the same Society). (4) For Frederick II. we have Richard de S. Germano, *Chron.* (1189–1243), in Muratori, *op. cit.* vii. 1002–13; Pertz, *MGH* xix. 323 ff. Of modern writers, for the Crusade of Andrew and the capture of Damietta, see R. Röhricht, *Studien zur Gesch. d. fünften Kreuz.*, Innsbruck, 1891, ch. 2. For Frederick II., Röhricht, *Die Kreuzfahrt Fr. II.*, Berlin, 1872 (printed also in his *Beiträge z. Gesch. d. Kreuz.*, 1874).

6. Sixth Crusade.—The fall of Jerusalem before the Charismians led St. Louis IX. to take the cross. He sailed from Aigues-Mortes (25th Aug. 1248) with 1800 ships and at least 50,000 men, wintered in Cyprus, and reached (5th June) Damietta, which the Saracens abandoned. After six months' delay the French pushed on towards Cairo, but were almost annihilated (8th Feb. 1250) at Mansurah (see Oman, *op. cit.* 338–50). Compelled to retreat, Louis was captured (15th Apr.–6th May 1250), but secured his freedom from the Mamluks by a ransom of 400,000 livres and the surrender of Damietta. After four years in Palestine, spent in the fortification of the seaports, Louis departed without having reached Jerusalem, arriving home 11th July 1154.

Literature.—For this Crusade, see the narrative of the eye-witness J. de Joinville, *Hist. de S. Louys IX.* (most convenient ed. is that of Natalis de Wailly with Fr. tr. [1868, 1874], or the Paris ed. of 1761); E. J. Davis, *Invasion of Egypt in 1217* (1897), is a good modern account.

7. Seventh Crusade.—In 1263 the sultan Bibars (Baybars al-Bundukdārī) of Egypt began the systematic conquest of Palestine (Arsuf [1265], Safed [1266], Jaffa [1268], and Antioch [12th June 1268]). In July 1270, Louis IX., provoked by the loss of Antioch, set off from Aigues-Mortes with 36,000 troops, but was induced to turn aside to Tunis, in the siege of which he died (25th Aug. 1270). Edward of England (afterwards Edward I.) reached Tunis (9th Oct.), and, after wintering there, reached Acre (9th May 1271) just in time to save the city from the Muslims. Owing to his father's failing health, Edward was driven to patch up a ten years' truce, and return (14th Sept. 1272). Throughout his life he, however, cherished the hope of further Crusades. Meanwhile the growing quarrels of the Military Orders, and the rivalry of Genoese, Venetians, and Pisans, led to renewed disasters, in the strip of the Latin kingdom still left—by the capture of Tripoli (1289), and finally of Acre (18th May 1291), when the massacre of 60,000 Christians closed 'the World's Debate.'

In a sense the Crusades, as the struggle of Muslim and Christian, may be said to have been continued by the slow conquest of Spain from the Moors, by the war of Sigismund with the Turks (1390), by Muhammad II.'s capture of Constantinople (1453), by the great naval victory of Don John at Lepanto (1571), and that of John Sobieski at Vienna (Sept. 1683). But all motive of rescue of the Holy Sepulchre, etc., was now lost, and the sole idea was political—to roll back the invasion of the Turks from Europe.

Literature.—For the Seventh Crusade, the expedition of St. Louis is in William de Nangis (ed. H. Géraud, 2 vols., Paris, 1843). For Edward we have T. Wykes in *Annales Monastici* ([Rolls Ser.] ed. Luard, vol. iv., 1869); and the *Chronicon* of Walter Gisburn or Hemingburgh (ed. H. C. Hamilton, 1848, vol. i. pp. 329–37). For the final siege of Acre the anonymous *de Excidio urbis Acconis*, in Martène, *Ampliss. Collect.* v. 757–84; and Abū-l-Fidā's account in *Recueil* [*Hist. or.*] vol. i.

III. *Causes of failure of the Crusades.*—1. Lack of sea-power.—This applied especially to the early Crusades. The long march overland from Germany or France through Hungary, the Eastern Empire, then across the deserts and mountains of Asia Minor, would have tried the ability of Alexander or Napoleon at the head of their seasoned legions. It was fatal to Godfrey of Bouillon and Louis VII. and, of course, to the undisciplined thousands who followed Walter the Penniless.[1] With sea-power, Barbarossa might have won. On the field of battle the crusaders were irresistible. But entangled among mountains and deserts their numbers became their ruin. The lack of sea-power, the possession of which would have led to success, was the effect of a still deeper cause. Sea-power in the Mediterranean was in the hands of the Greeks, or of the cities of Italy—Venice, Genoa, and Pisa. Of these, Venice, once the subject, was now the ally of Constantinople (see Bury's note, Gibbon, vi. 381), and Genoa was chiefly intent on guarding its trade with the Crimea. The sea-power of England and North Europe was used advantageously at Jaffa in 1102 and 1107, but was not available for the transport of the Continental crusaders. After the First Crusade the West woke up to the advantage of a sea-power. But the Greek Empire had now become bitterly antagonistic to all Crusades (see below, § 2), and so sea-power was denied by the Greeks and Venetians, except on exorbitant terms (cf. above, 'Fourth Crusade').

2. The division of Christendom.—But the chief cause of failure was undoubtedly the disunion of the crusaders, and the deep hatred between the Greek and Latin Churches. A united Christendom would have been invincible: it recoiled broken and dispirited by its own divisions. The disunion was of a double nature—national and religious. Of the national dissensions the Third Crusade will serve as an example; or, better, the fact that at Acre, when it fell, there were no fewer than seventeen independent commands. From the first the Crusades were a French rather than a German movement; and the Germans—the Empire, in fact—in consequence did little. Of the religious dissensions—largely also national—the antagonism between the Greek and Latin Churches and Empires was even more fatal. The Greeks after the First Crusade rarely did anything to assist the Crusaders, and often secretly thwarted them.

3. The bad organization of the Latin kingdom.—The conquests achieved by the First Crusade were organized on a feudal basis. Latin in character, by over-taxation and intolerance it hopelessly estranged the natives (H. G. Prutz, *Kulturgesch. d. Kreuzzüge*, p. 167), especially the native Churches (Nestorians, etc.). There is some evidence that Jerusalem was betrayed to Saladin by Christian Melchites (*Recueil*, ii. 85 n.). One result of the feudal system, when worked in connexion with a country of enervating climate and constant warfare, was the number of heiresses, and, in consequence, of disputed and changing successions.[2] The only sound element in the country in this matter was the organization of the Military Orders, with their constant succession of new blood from Europe.

IV. *Results of the Crusades.*—1. Political.—The immediate political effects have been dealt with under the several Crusades. Other consequences were:

(1) *Increased importance of the Papacy*, as the embodiment of the unity of Christendom, and the leader in the call to war, in spite of the fact that Urban II. in his summons left out those great ideas of military method and politico-ecclesiastical conquest upon which Gregory had impressed the stamp of his character. But the crusaders were the soldiers of the Pope, who alone could remit their vows. By the 'Saladin tax' a tenth of the revenues of the clergy were poured into the Papal coffers. The increased importance attached to

[1] Oman (*op. cit.* 233) points out the geographical ignorance shown in these land routes.

[2] See Stubbs, *Itin. Reg. Ric.*, Introd. pp. lxxxix–cxi, for a brilliant analysis of the causes of the fall of the Latin kingdom, and consequent failure of the Crusades.

indulgences through the Crusades, and the effect on the Papacy, must not be overlooked. How completely the Papacy was identified with the conception of Crusades is seen in the disastrous extension of the idea to all the wars engineered or encouraged by the Papacy against its enemies, *e.g.* the Albigenses; against Frederick II. and Manfred; or against the Hussites. In the long run this power of inaugurating a Crusade told by its misuse against the Papacy, and was one cause of its fall.

(2) *Weakness of the Eastern Empire.*—Unfortunately, one result of the Crusades, especially of the Third Crusade, was the weakening of Constantinople,—this altogether apart from the fatal Fourth Crusade,—and thus of the barrier of Europe against the Muslim (see Pears, *op. cit.* ch. 5). This result—the exact opposite of the intention—was the direct outcome of the religious feud between the Greek and Roman Churches.

(3) *Rise of the Military Orders.*—An important consequence was the foundation of the various Orders of military monks, whose influence and history overleap the narrow limits of the Crusades (see also HOSPITALITY [Christian], MONASTICISM). (*a*) Of these the oldest, the *Hospital of St. John of Jerusalem*, was in existence as a hospital for pilgrims at an early but unknown date.[1] On the institution of the Templars the hospital was turned into a Military Order. (*b*) The famous *Order of the Temple* was instituted about 1118. But its real start was not until Bernard at the Synod of Troyes (Jan. 1128) lent it his advocacy. To Bernard was assigned the composition of its Rule, the greater part of which, however, is by a later hand.[2] (*c*) The *Teutonic Order of Knights* was founded in 1190 at the siege of Acre. Its vast importance for European history by its conquest of Prussia from the heathen must not be forgotten. (*d*) There was a fourth Order, *Knights of St. Thomas of Acre*, of interest as almost purely English.[3]

2. **Commercial and social.**—(1) *Growth of liberty.*—The expenses of the crusaders led to the sale of estates, advowsons, town-rights, manorial rights, etc., to merchants, burgesses, and others; and so, to the growth of liberty. The sales to the Jews led by reaction to an outbreak against them (W. Cunningham, *Growth of Eng. Industry and Commerce*, vol. i. [5th ed., Cambridge, 1910] p. 205). In commerce we see the opening up of the East to the West (H. G. Prutz, *Kulturgesch. d. Kreuz.*), especially to Venice and Genoa (Cunningham, *op. cit.* 147, 198). As the monks did not go on crusade, the sales of estates ministered much to their wealth, and to that of the Church generally.

(2) *Introduction of Aristotle to Europe.*—The contact of East and West led James of Venice to bring back and translate (1124) the books of Aristotle, including the Physical Works, previously known only in imperfect translations. The effect of this was one of the causes of the rise of Scholasticism (see H. B. Workman, *Christian Thought to the Reformation*, London, 1911, ch. 9).[4]

3. **Theological.**—Through the realization of the sufferings of the Saviour—powerfully aided by the Crusades (cf. the Crusaders' Hymn, 'Salve, caput cruentatum')—the idea of the historical but dying Jesus was formed side by side with the growing mediæval conception of the sacramental and eternal Christ. 'The primitive Christian intuitions were restored. The sacred places stirred the imagination, and led it to the Christ of the Gospels' (Harnack, *Hist. Dogma*, Eng. tr. vi. [1899] 9).

LITERATURE.—*ORIGINAL SOURCES.*—The particular sources for the several Crusades have already been noted under each. It remains to add the more general works. The best work covering the whole period is William of Tyre (b. 1127), whose intimate acquaintance with Palestine was supplemented by a knowledge of Arabic. His *Hist. rerum in partibus transmarinis gestarum* (*Recueil* [*Hist. occid.*], i. [1844]) is one of the great works of mediæval history, and should be studied even by those who cannot afford time for research. Until recent years it was the basis of all histories dealing with the Crusades. Books i.–xv. (to 1144) are indebted to earlier writers, esp. Albert of Aachen; xvi.–xxiii. (to 1184) to his own observation. It was continued in French by Ernoul, who was present at the battle of Hattin and the capitulation of Jerusalem, down to 1229; by Bernard the Treasurer, down to 1231; and by anonymous writers, down to 1277 (see J. M. de Mas Latrie, *Chronique d'Ernoul et de Bernard le Trésorier* [Paris, 1871]; or A. P. Paris, *G. de Tyre et ses continuateurs*, 2 vols. [Paris, 1879–80]). The whole was translated into French before the publication of the continuation (de Beugnot, *Recueil* [*Hist. occid.*], i. pref. p. xxv) under the absurd title of *L'Estoire de Eracles Empereur* (*i.e.* Heraclius), the opening words of the *Historia*; in *Recueil*, vols. i. and ii. For the charters, etc., of the kingdom of Jerusalem, see R. Röhricht, *Regesta regni Hierosolymitani*, Innsbruck, 1893, 1904. Of the general Oriental sources, 'Ali-Ibn-al-Athīr's (b. 1160) history from 1098–1190 will be found in *Recueil* [*Hist. or.*], i. 189 ff.

MODERN AUTHORITIES.—Special monographs, including the valuable works of Hagenmeyer and Röhricht, have been indicated under the several Crusades. Of general Histories the following may be noted: E. Gibbon (ed. Bury [new ed. in prep. 1911], with appendixes, corrections, and notes by S. Lane-Poole) is valuable for the First Crusade, poor for the others, and misleading for the Fourth, on which, however, when the main idea is corrected, he is full and good. The best summary for the general reader is T. A. Archer and C. L. Kingsford, *The Crusades*, London, 1894, but without notes. Complete surveys are found in Bernard Kugler, *Gesch. der Kreuzzüge*, Berlin, 1880, and L. Bréhier, *L'Eglise et l'orient au moyen âge*, Paris, 1907. The older F. Wilken, *Gesch. d. Kreuzzüge*, 7 vols., Leipzig, 1807–32, and J. F. Michaud, *Hist. des croisades*, 5 or 6 vols. (Paris, 1812–17, 1825–9: also new ed. Brussels, 1857, Eng. tr. in 3 vols. by W. Robson [1852]), may be neglected without much loss. For the kingdom of Jerusalem the most accurate account is in R. Röhricht, *Gesch. d. Königreichs Jerus.*, Innsbruck, 1898. The reader may also consult C. R. Conder, *The Latin Kingdom of Jerusalem*, London, 1897; E. G. Rey, *Les Colonies franques de Syrie*, Paris, 1883 (social history, etc.). Military matters are dealt with in C. W. Oman, *Hist. of the Art of War*, London, 1898, bks. iv. and v.; the Greek view in G. Finlay, *Hist. of Greece*, 7 vols., ed. H. F. Tozer, Oxford, 1877, vols. ii.–iv. Guy le Strange, *Palestine under the Moslems*, London, 1890; S. Lane-Poole, *Moors in Spain*, London, 1897; H. G. Prutz, *Kulturgesch. d. Kreuzzüge*, Berlin, 1883 (in many points exaggerated), deal with important side-matters. For the Children's Crusade of 1212, reference may be made to G. Z. Gray, *Children's Crusade*, New York, 1898.

H. B. WORKMAN.

CRYSTAL-GAZING.—'Crystal-gazing' is the current name for the attempt to provoke the appearance of visions by concentrating the gaze on any clear depth—a crystal, a glass ball, water in a vessel, water in a pond, a mirror, a piece of polished basalt, or anything of the kind. With certain subjects it suffices to stare into the darkness of a funnel; in fact, granting the faculty for being hallucinated in the course of gazing fixedly, —say at ink in the palm of the hand, or at ink in an ordinary inkstand—the details are unimportant. In practice the easiest method is to look steadily, for perhaps five minutes, at a glass or crystal ball laid on any dark surface, at the distance from the eyes of a book which the experimenter might be reading. If the gazer has the faculty, he usually sees a kind of mist or a milky obscurity cover the ball, which then seems to become clear and black; pictures then emerge. Sometimes the ball ceases to be present to the consciousness of the gazer, who feels as if he were beholding an actual scene. An Arabian author of the 14th cent., Ibn Khaldūn, describes the experience in similar terms.[1]

Any one who is fortunate enough to have the command of leisure and solitude for ten minutes on four or five occasions can discover whether or

[1] See Röhricht, *Erst. Kreuz.* 11 n. *Recueil*, v., Pref. cix., dates about 1060, from William of Tyre, xviii. 4 and 5. W. Heyd, *Gesch. d. Levantehandels im Mittelalter* (2 vols., Stuttgart, 1879, French tr. by F. M. Raynaud, Paris, 1885, i. 103–6), argues against the accepted view that it was founded by merchants of Amalfi (*Recueil*, v. 401).

[2] See Bouquet, *Recueil*, xiv. 232; Labbe, *Conc.* xxi. 360; *Op. Bernard.* ii. 543, in *PL* clxxxii. 919.

[3] For its history, see Stubbs, *Itin. Ric.*, Introd. p. cxii n.

[4] The influence of the Arab philosophers upon Western thought must not be put down to the Crusades, as it came through Spain.

not he or she has the faculty of seeing 'crystal visions.' The gaze should not be prolonged when the eyes begin to feel fatigued, or if a sense of somnolence appears to be approaching. Solitude is here recommended, because the mind, though it may follow any train of thought, is not the better, in the experiment, for the irresponsible chatter of the frivolous and talkative. In actual life, in the present writer's experience, it is very rare to find any person who has the leisure and the resolution to make *solitary* experiments of the duration of ten minutes on four or five occasions. None the less, in spite of the scarcity of time and the insistent demands of society, it is now admitted, even by a number of orthodox students of experimental psychology, that hallucinations of sight really are provoked in some sane and honourable and educated persons, by gazing into a clear depth. These people see 'crystal visions' representing persons, events, and places, known or unknown, familiar or unfamiliar, to the gazer, and not summoned up by any conscious attempt to 'visualize.'

This set of facts is quite as certainly authentic as the coloured visions of arithmetical figures, which, as Sir F. Galton has convinced science, arise before the 'mind's eye' of many persons on the mention of numbers. In both cases, so far, the 'visions' are attested only by the numbers and personal character of the 'seers.'

A third kind of visionary experience is perhaps less common than we might suppose. Many persons are unacquainted with *illusions hypnagogiques* —the bright and distinct views of faces, places, persons, and landscapes, usually unfamiliar, which flit before the closed eyes in moments between sleeping and waking. These pictures, like those of crystal vision, come unsummoned, and often represent persons or places which we do not remember ever to have seen. People who have no experience of those illusions are apt to disbelieve that other people have it. In short, all kinds of experiences—visions of numerals in the mind's eye, *illusions hypnagogiques*, and crystal visions—are 'automatisms,' and are not produced by the action of the conscious intelligence.

Before the experiments of the Society for Psychical Research, in the matter of crystal-gazing, were made (1890–1910), most persons of sense believed that the faculty for seeing such hallucinations was a mere fable of romance-writers, or a delusion of peasants. But, when many experiments had made it certain that the faculty is far from being very rare among members of both sexes, young or old, in all ranks and all degrees of education, attention was drawn to the use of crystal-gazing in many ages and lands as a form of divination. It was found that the pictures seen by the 'scryer,' or gazer, were supposed to be sent by spirits, and to indicate events distant in space or destined to occur in the future; or they revealed persons guilty of theft or other crimes. Thus crystal-gazing got a bad name, and was associated with invocation of evil spirits, and even now the average man or woman thinks crystal-gazing synonymous with divination. 'Tell me what horse will win the Derby,' says the average man, 'and if you succeed I'll believe that there is something in it.' Another criticism is, 'What is the use of it?' Savage peoples, almost everywhere, and the people of Greece, Rome, Egypt, the subjects of the Incas in South America, and the magicians of the Middle Ages and later thought they found 'the use of it' to be the gaining of knowledge not accessible by any normal means.

Thus, in Polynesia, when any object has been stolen, the priest, after praying, has a hole dug in the floor of the house and filled with water. Then he gazes into the water, over which the god is supposed to place the spirit of the thief. 'The image of the spirit . . . was, according to their account, reflected in the water, and being perceived by the priest, he named the individual, or the parties, who had committed the theft.'[1] Père Lejeune, S.J., found that among the American Indians of his flock (about 1660), the medicine-men made their patients gaze into deep water, and, if they saw in it visions of anything edible or medicinal, it was 'exhibited' and was supposed to do them good. Captain Bourke of the U.S. cavalry discovered that among the Apache Indians the medicine-men used quartz crystals, by looking into which they could see everything they wanted to see.[2] Among the Iroquois the phantasm of the person who has bewitched another is looked for in a gourd full of water, in which a crystal is placed.[3] The Huilleche of South America gaze 'into a smooth slab of black stone.'[4] In the 17th cent. the people of Madagascar divined by gazing on crystals, and according to de Flacourt divined successfully.[5] The Zulus and the shamans of Siberia gaze into vessels full of water.[6] The Inca king Yupanqui used a crystal.[7] Australian savages use crystals or polished stones.[8] The Romans used water in a vessel of glass.[9] In Egypt and in India ink is used, whether in a black spot on a piece of paper or in a drop in the palm of the hand. Examples of mediæval and modern practice are collected by 'Miss X.' (Miss Goodrich Freer) in *Proc. of Soc. for Psychical Research*, v. 486.

It is manifest, then, that the production of visnal hallucinations by various modes of crystal-gazing is of world-wide diffusion and unknown antiquity; and that the 'use' of the practice has been the discovery of knowledge not otherwise accessible, though knowledge of the future has not perhaps been much sought in this fashion, except in modern Europe, and in a well-known anecdote of the Régent d'Orléans told by Saint Simon.

Miss Goodrich Freer, in her essay already cited, was (after W. Gregory [*Animal Magnetism*, London, 1851], and H. Mayo [*Truths in Popular Superstitions*, Frankfort, 1849]) the first author to examine seriously the question of crystal-gazing. She herself possesses the faculty, and she analyzed the phenomena in her own experience. She found that the visions represented (1) lost memories which thus arose into her upper consciousness; (2) ideas or images which might or might not be present to her normal consciousness; (3) visions, possibly telepathic or clairvoyant, implying acquisition of knowledge 'by supernatural means.' The examples of this last class which the author gave were not very striking; but the present writer has known her to be much more successful.

It has been the writer's fortune to meet a large number of very normal persons of both sexes, and often of high intelligence and education, who, on making experiments in a subject entirely new to them, exhibited the faculty in various degrees. In its lowest form figures of persons and objects were seen in black and white; not in the colours of nature. Letters in the printed Roman alphabet were also seen. A higher form of the faculty is the beholding of figures in the costumes of various nations, engaged in various ways, some of them romantic; in other cases they appear to represent some unknown incident in history. Personages known or unknown to the gazer very frequently occur. The figures, wearing the colours of nature, move about in a free natural way, and often remain long in view, even when the crystal, after being laid down, has been taken up again. In some well-attested cases two persons see the same crystal vision simultaneously, or one after the other. But, in the second category, the writer has only once known the vision—novel to the gazer—to be fitted later with a real objective counterpart, discovered

accidentally. What he saw actually existed in all its details, unknown to him and to the writer, who was looking on at the experiment, made in his smoking-room. In 1897, the writer met at St. Andrews a young lady who was visiting the place for the first time and who had never heard of crystal-gazing. Being presented with a glass ball, she made a number of experiments. The method was that any one who pleased (and all were but very recent acquaintances of the gazer) thought of anything or anybody that he or she chose. The lady then looked into the glass ball and described what she saw. A dozen cases of her success (which included seeing persons unheard of by her, in places unknown to her, persons dressed and occupied as inquiry proved that they had been clad and engaged at, or shortly before, the hour of the experiments) are published in the writer's *The Making of Religion*, pp. 90–112, from signed and attested records. Many other successful cases are known to the writer, and, during the course of the experiments already mentioned, it very rarely occurred that the gazer saw nothing, or something not consciously present either to the sitter's mind, or—what is more curious—to the mind of a sceptical looker-on, not the sitter. If telepathy be the cause of such occurrences, they illustrate the casual and incalculable quality of that agency. For example, in some experiments a lady in the south of England was to try to send impressions to a gazer, who had never heard of her, in the north of Scotland. The message, of a very simple kind, did not arrive; what arrived was a vivid picture of certain singular incidents of a private nature which had much impressed the distant communicator, but which she had no intention of transmitting. As fortuitous coincidence could not explain so many successes in the experiments of 1897—the crystal pictures being full of minute details—the writer was reduced to supposing that some unascertained cause, going sometimes beyond telepathy as usually defined, was at work. Many other curious examples of the possession of the faculty, apparently accompanied by telepathy, have occurred in experiments by friends and kinsfolk of the writer—healthy, normal men and women. The gazers have never shown any traces of drowsiness or dissociation, or even any tendency to form theories about their experiences, except in one instance, when experiment destroyed the theory.

In the writer's opinion experiments of the kind described are more trustworthy than investigations into the hallucinations of professional and trained female hysterical patients in French hospitals. Pierre Janet has published such experiments with professional neurotics at the Salpêtrière in his *Névroses et idées fixes* (Paris, 1898). His account of the experiences of Miss Goodrich Freer in her paper, already cited, is of the most fantastic character, as becomes manifest when her narrative is compared with the document which, in addition to his own imagination, is his source. In affairs of this sort few people who have not personal experience of unaccountable successes can be expected to believe in them; while few who have been present at such successes, and have had their own thoughts read (of course without physical contact —'muscle-reading'—between the sitter and the crystal-gazer), can persist in scepticism. It is plain that in most countries and ages crystal-gazing in one form or another has been practised, and successes would greatly increase the hold of priest, or witch, or medicine-man, over his patrons. Fraud would doubtless be used wherever it was possible; knowledge normally acquired would be presented as of supernatural origin. When fraud is excluded, successful crystal-gazing offers a problem even more difficult than success with other automatisms such as the so-called 'divining-rod' and the tilting table. These automatisms appear to present to the normal consciousness knowledge within the range of the sub-conscious mind, though we cannot tell how the sub-conscious mind in many cases obtains its information.

LITERATURE.—As this subject has attracted attention only in recent years, the literature of it is very scanty, and most of it has been cited by Miss Goodrich Freer (as 'Miss X.') in *Proceedings of the Society for Psychical Research*, vol. v. pp. 486, 521, vol. viii. pp. 468–535, 259, 276; reference should also be made to A. Lang, *The Making of Religion*, London, 1908, and later editions, pp. 90–113; N. W. Thomas, *Crystal Gazing, its History and Practice*, London, 1905; E. W. Lane, *Modern Egyptians*[5], London, 1860; *Quarterly Review*, vol. lix.; L. de Laborde, *Commentaire*, Paris, 1841; F. W. H. Myers, *Human Personality*, London, 1903.

ANDREW LANG.

CÚCHULAINN CYCLE.—1. Cúchulainn, the chief hero of the Ulster cycle of romance, is regarded as a re-incarnation, or *avatār*, of Lug Lamhfada, 'the long-handed,' the solar deity of the ancient Irish; he is considered in his birth-stories sometimes as son of Lug, sometimes as Lug himself re-born. His mother was Dechtire, sister of king Conor (Conchobhar) of Ulster; she and fifty young maidens, her companions, were transformed into a flock of birds who disappeared for three years from the king's court, and were found in the neighbourhood of Brugh on the Boyne, where are tumuli traditionally believed to be the burial-places of the Tuatha Dé Danann deities. Here Dechtire gave birth to a babe; in one version of the tale it is revealed to Dechtire by Lug that he himself is her little child (*i.e.* that the child is a re-incarnation of himself); in another, Lug is the noble young warrior whom she has espoused.

The idea of re-incarnation is not unfamiliar in Irish literature. In the tale called 'The Wooing of Emer' it is stated that the men of Ulster wished to provide a wife for Cúchulainn, 'knowing that his re-birth would be of himself,' *i.e.* that only from himself could another such as he have origin; and in the tale of 'The Generation of the Swineherds,' which explains the origin of the Bulls who take part in the great mythological warfare of the *Táin Bó Cúalnge*, we find that these prodigious kine have gone through a series of incarnations before their final appearance as bulls.

Throughout his career, Cúchulainn is watched over by his divine kinsman, Lug, and he points proudly to his connexion with Lug when questioned as to his origin. He has also a father, Sualtach or Sualtam (variously spelt Soaltainn, Soalta, etc.), to whom, according to one of the birth-stories, Dechtire is married by king Conor after her connexion with Lug. The stories are much confused, and there are suggestions in one of them of an incestuous connexion between Dechtire and her brother the king himself. The child is named Setanta by Lug's command. Little is known of Sualtach; though usually regarded as a human being, he is more than once called in Old Irish literature Sualtach *sídhe* or Sualtach *sídhech*, i.e. 'Sualtach of the fairy haunts'; and he is spoken of as possessing through his mother, who was an elf woman, 'the magical might of an elf' (cf. *Book of Leinster* [*LL*], 58*a*, 24; Cóir Anmann, *Ir. Texte*, iii. sect. 282). Like all the personages of the cycle, he is clearly regarded as a mythological being. His name has become curiously mixed up with the genealogies of Fionn mac Cumhall (cf. Brit. Mus. MS Egerton, 1782, in which he appears as Fionn's grandfather). In the *Táin Bó Cúalnge* he comes to his son's aid when he is exhausted by the labours of the war, and arouses the hosts of Ulster to his assistance. He is there called 'Sualtach *or* Sualtam, son of Becaltach (Becfoltach) mac Moraltach, father of Cúchulainn mac Sualtach' (*LL* 93*a*). He was killed by falling accidentally upon the rim of his own shield.

Although Cúchulainn is the prime hero of Ulster, and his feats of heroism are performed and his wars undertaken in defence of that province, he is

nevertheless said (in MS Harl. 5280, fol. 53 B, Brit. Mus.) not to 'belong to Ulster'; and, when the whole of the male inhabitants of that province were overtaken by the physical weakness which recurred among them at intervals, and which seems to have been the result of some sort of *geis*, or 'tabu,' Cúchulainn and his father Sualtach were exempt and able to fight. Though usually and officially described as of splendid appearance and with ruddy and golden hair, Cúchulainn is sometimes spoken of as 'a dark sad man' ('Wooing of Emer' [*Arch. Rev.* i. 72]), or a 'little black-browed man' (*Mesca Ulad*, p. 29), which would not suggest descent from the Ultonians; in connexion with Cúchulainn's original name, Setanta, Rhys points out that there was a district between the Mersey and Morecambe Bay once inhabited by a people called Setantii, and refers to Ptolemy's mention (II. iii. 2) of a harbour of the Setantii, the position of which corresponds with the mouth of the Ribble (*Celt. Heath.* 455 and note). An obscure Irish poem relating to Cúchulainn alludes to a Setantian stream (*curoch fri sruth Setinti*, 'a coracle against the stream of Setanta') (*Leabhar na hUidhre* [*LU*] 125*b*).

2. Cúchulainn's precocity is abnormal; already at the age of seven years he performs his first feats, and can fight with and destroy warriors of renown; his lengthened war of the Táin Bó Cúalnge, sustained single-handed in defence of Ulster against the combined forces of Munster, Leinster, and Connaught, and continued during an entire winter, from before *Samhain*, or Hallowe'en (Oct. 31st), till after St. Bridget's Festival (Feb. 1), is represented as having taken place when the hero was only seventeen and still a beardless youth; and he is said to have died at the age of twenty-seven (*Ann. Tighernach*). Among his feats performed when he was a mere child is that from which he received his heroic title of Cúchulainn. *Cú* (gen. *Con*), 'hound,' was a title often bestowed to denote a hero of renown, in reference to the use of large hounds in battle and the bravery shown by them. Cúchulainn says of himself:

> 'I was a hound strong for combat,
> I was a hound who visited the troops,
> I was a hound to guard Emania.'

He received this name from his combat with a fierce dog, said to have been brought from Spain (gloss in *LU*), which guarded the fort of Culann, a smith of Ulster, and which was slain by the boy when he was scarcely six years old. The child himself took the office of the watch-dog until one of the dog's whelps was sufficiently grown to replace him. Henceforth the name *Cú Chulainn*, 'Hound of Culann,' clung to him.

It is said in *Mesca Ulad* that a district extending from Usnech in Meath northward along the coast to Dún Dalgan (Dundalk), and called Cnnaille Muirthemne and Cúalnge, belonged personally to Cúchulainn (Todd Lecture Series, 1889, i. 2). It embraced the present county of Louth and parts of Meath and Westmeath. At that time the province of Meath, with its overkingship of Tara, had not come into existence, and Ulster extended southward to the Boyne, touching the provinces of Leinster and Munster at the Hill of Usnech in Westmeath. This district seems to have been bestowed on the hero by king Conor, and was nnt his by inheritance. Cúchulainn's own fort was Dún Dalgan (now Dundalk).

His wife was Emer, daughter to Forgall the Wily, a landowner near Lusk, in the present county nf Dublin. A special tale relates his wooing of Emer. Though she appears to have been his only real wife, she had numerous rivals, of whom the most formidable was Fand, wife of Manánnan mac Ler, a goddess who enticed him away for a time into fairy-land.

3. The Red Branch.—Cúchulainn is the central figure of a group of champions commonly known as 'the Champions of the Red Branch,' so called from one of the three halls in the kingly palace of Emain Macha or Emania (now Navan Fort, S.W. of Armagh, where raths remain to the present day). The history and feats of these heroes are described in a series of over a hundred distinct tales. There are, besides these longer tales, numerous detached episodes which fill up gaps, so that the career of each hero of importance can be traced from birth to death in a very complete manner. They form a connected whole in the mind of the story-teller and reader, much as the originally isolated tales referring to Arthurian knights ultimately came to be formed into a complete cycle of stories. The three most prominent champions, who are frequently exposed to tests of strength or prowess against each other, are Conall *cernach*, 'the Victorious,' Læghaire *búadach*, 'the Triumphant,' and Cúchulainn; but Cúchulainn invariably proves himself to be the greatest hero of the three.

These tales seem to have originated in, and deal largely with, that eastern portion of Ulster which lies between the R. Bann and Lough Neagh on the west and the sea on the east. The capital was Emain Macha, and within this area lay the forts and dwelling-places of most of the chief heroes of the Ulster cycle. The king, who appears in the tales as ruling from Emain Macha, is named Conor (Conchobhar), and his death is synchronized with that of our Lord in Jerusalem. The reign of Conor and the exploits of the heroes are thus traditionally laid in the first century. Though king Conor and all the champions are accepted by R. O'Flaherty (*Ogygia*, Dublin, 1793, pt. iii. c. xlvi.–xlviii.) as historical personages, there is no place found for them in the Annals, though Conor is said, in some versions, to be the son of Fachtna *fathach*, 'the Wise,' who, according to the Annals of the Four Masters, ascended the throne of Ulster in the year of the world 5042 (152 B.C.).

The entry runs:—'A.M. 5042. The first year of Fachtna *fathach* in the sovereignty of Ireland'; and fifteen years later we have the entry of his death: 'A.M. 5057. Fachtna *fathach*, son nf Rossa, snn nf Rudhraigh, after having been sixteen years in the sovereignty nf Ireland, was slain by Eochaid *feidhleach* (*i.e.* the constant sighing).'

But this attempt to connect king Conor with a king of all Ireland was evidently a late one, and is the less to be taken into account as there is no sign in these tales that the central province of Meath, with its capital at Tara, had at this time been erected into a separate division, or that any over-king (called in Ireland *Ard-Rí*, or 'High King') as yet reigned over Ireland. Ulster is represented as haughtily independent, and each of the other provinces had its own king, who acted with perfect freedom independently of any central authority. The provinces, or 'Four Great Fifths,' of Ireland were, at the time of which we speak, Ulster, Leinster, Connaught, and East and West Munster. Meath, the future central royal province, created for the support of the High Kings of Ireland who ruled from Tara, did not then exist. Nor, considering that Fachtna died 137 B.C., could he have been father to Conor, who reigned in the beginning of the 1st century. Another and probably older version makes king Conor son to the druid and poet Cathbad, by Nessa his wife, a woman warrior.

Though Conor's death is synchronized with the moment of our Lord's crucifixion, the Annals of Tighernach date his death at 48 B.C. O'Flaherty, probably observing some of these inconsistencies, says that 'the king came near committing suicide, but lived fifteen years after.'

We may regard these attempts to fit the career of king Conor and of the Champions of the Red Branch cycle into the actual history of Ireland in much the same light as the connexion of the heroes of the *Nibelungen* with the early history of the Teutonic peoples or of king Arthur's knights with the history of Britain. The tales sprang up at a time when the power of eastern Ulster was still a living tradition among the literary class in Ireland. The raths at many of the sites of the traditional forts, such as Emain Macha (Navan Fort), the king's dwelling in Ulster, and Rath Cruachan or Rathcrogan (Co. Roscommon), the fortress of Queen

Meave of Connaught, show that the legends were connected with known historical sites, but it is unnecessary on that account to consider the actual personages of the cycle or their careers as historical. They are plainly regarded as mythological, and the chief events and wars in which they were engaged bear a mythological interpretation.

The tales have a close relationship to the legends of the race of gods known as the Tuatha Dé Danann; a few of them, indeed, both in style and subject, belong equally to both cycles. Such are 'The Wooing of Etain' and 'The Dispute of the Swineherds.' The pedigrees of the heroes of the Red Branch are all traced up to the Tuatha Dé Danann, although, according to the Annals, there is a lapse of 1500 years between the two epochs. Rudhraigh, or Rury, is the head of the house, and from him and from the goddess Maga, daughter of Angus na Brugh, by her marriages with Ross *ruadh*, 'the Red,' and Cathbad the druid, all the chief heroes are descended (see genealogies in E. Hull's *Cuchullin Saga*, Introd. p. lv). The extraordinary feats and prowess of the champions are supposed to be accounted for by their divine origin. According to this descent, Cúchulainn is grandson of Maga, who is mother to Dechtire, which brings him within the kingly line of Ulster, and denies the statement that he 'was not of Ulster' (see above). Probably that statement was merely an effort of the story-tellers to explain what they could not otherwise understand, viz. why Cúchulainn and his mortal father Sualtach or Sualtam were exempt from the curse which prostrated the whole male population of Ulster in sickness at a critical moment in the history of their province.

4. Cúchulainn as a sun-hero.—Cúchulainn was therefore, on the one side, directly connected with Lug, the sun-god, and, on the maternal side, with Maga, a Tuatha Dé Danann goddess. King Conor also is called a *dia talmaide*, or terrestrial god, in *LU* 101*b*; and Dechtire, his sister, the mother of Cúchulainn, is called a goddess: Cúchulainn *mac dea Dechtire*, 'the son of the goddess Dechtire' (*LL* 123*b*).

The two marvellous Bulls for the possession of which the great war of the Táin Bó Cúalnge was undertaken were of supernatural origin, and had existed under many different forms before they were re-born as bulls; they had been first swineherds of the gods of the under world, then ravens, warriors, sea-monsters, and insects. Under each of these forms they had lived through vast periods of time; out of them they had come after a terrific struggle which shook the borders of Ireland, only to pass again through some new transformation (*Irische Texte*, III. i. 230–278). These struggles proved to be preludes to the war of the Táin, in which all Ireland was destined to engage, and to the gigantic struggle at its close between the two Bulls themselves, in which both were torn to pieces. The mythological warfare of these Bulls, the *Finn bennach*, or 'White horned,' and the *Donn*, or 'Dark' or 'Brown' Bull, belonging respectively to the East and West of Ireland (Cúalnge in Co. Down, and Rath Cruachan in Connaught), seems to symbolize the struggle between summer and winter or the struggle between day and night. The *Donn* is a terrific creature in strength and in size. On his back fifty little boys could play their games. He moves about accompanied by fifteen (or fifty) heifers. His ferocity and violence are so great that, when he is driven into a narrow pass, he revenges himself by trampling his keeper to death and treading his body thirty feet into the earth. His bellowings strike terror into all who hear him, and those who meet him after his final conflict with the *Finn bennach* are trampled and gored to death. This conflict, which lasted a day and a night, and during which the Bulls traversed the whole of Ireland, was ended by the *Donn* tearing his adversary to pieces and returning, head in air, to his native home in Cúalnge, where, in the madness of his frenzy, he placed his back to a hillock and 'vomited his heart up through his mouth with black mountains of dark-red gore,' and so expired. In like manner Cúchulainn is in every way abnormal. His rapid development and his prodigious strength and powers are everywhere insisted upon. When he is about to perform any special prodigy of valour, his whole person expands and undergoes an extraordinary change; he grows monstrous, terrific, so that his own friends cannot recognize him; he is known as 'The Distorted' (*riastartha*), or 'The Madman' from Emain Macha. When he puts forth his strength, his appearance is so terrific that none can stand before him; his very look destroys his foes, not by twos or threes but by hundreds; a stream like dusky blood, representing his energy, rises upward from his forehead, and over his head his 'bird of valour' hovers (cf. the light over the head of Achilles caused by Athene, *Il.* xviii. 205 [Butcher-Lang's tr. p. 372 f.]). His body gives off a heat which melts the snow around him, or raises to boiling-point three vats of water in which he is successively immersed. Yet this formidable personage is frequently derided by his enemies for the boyishness and insignificance of his usual appearance. Prime heroes, until they experience his hidden powers, refuse to fight with him; Queen Meave is visibly disappointed when she first comes face to face with the champion who has been holding her forces at bay through weeks of combat, and killing them by the hundred merely by his look; on one occasion he has to blacken a moustache with blackberry juice in order to present a more manly appearance.

If we regard Cúchulainn as the sun-hero, these indications of his unimposing appearance at ordinary times, succeeded on occasions by strange distortions and manifestations, seem aptly to represent the impression which might be produced on the savage mind by the contrast between the orb of the sun on ordinary occasions and its appearance in eclipse. Again, the fine poetic simile of the threefold hues of his hair, and the account of his splendour when he appears before the forces of Meave to display his person in its natural beauty, seem designed to illustrate the glory of the full sunshine of summer; so, too, do the heat generated in his person, the energy of his movements, his wandering habits, and the destructive power of his look. We may also note that 'blindness befell all women who loved him'—which may possibly have reference to the difficulty of gazing directly on the sun. It is possible that Cúchulainn's fight, from which he so hardly escaped, with the twenty-seven sons of Calatín, hideous and crooked beings, who formed armies out of puff-balls and out of the foliage of the oak, and came furiously riding on the 'wind's swift clouds,' may symbolize the hiding of the sun's face before the 'armies of the storm,' *i.e.* the massive clouds, formed, as it might seem, almost out of nothing. (Cf. a similar sort of incantation in 'The Death of Muirchertach mac Erca,' *RCel* xxiii. [1902]; the 'Battle of Kat Godeu,' Skene, *Four Anc. Books of Wales*, i. 277 f., ii. 138; and 'The Mabinogion of Math, son of Mathonwy,' Lady C. Guest's *Mab.*, Lond. 1877, p. 416.) A remarkable 'tabu,' or *geis*, of Cúchulainn' was to 'see the horses of Manánnan mac Ler' (*i.e.* the billows of the ocean-god), which might be a reference to the apparent extinction of the sun's rays when he sinks down at night beneath the ocean waves.

Cúchulainn possesses two magic steeds which rise out of the Grey Loch of Slieve Fuaid and Loch Dubh Sainglenn respectively, and which he tames by springing unawares upon their backs and wrestling with them. For a whole day they career around the circuit of Ireland, the horses endeavouring in vain to throw their rider. Henceforth they are his obedient chariot-horses, a grey and a black, possibly symbolizing day and night. After his death they return into their respective lakes again (G. Henderson, *Feast of Bricriu*, London, 1899, sec. 31, p. 39 f.).

5. The stories relating to Cúchulainn are of different ages, and often vary in different versions, the long tale of the Táin Bó Cúalnge, in particular, having come down to us in two (some critics would say three) main recensions, with considerable variations in arrangement, detail, and literary style. *Táins*, or 'cattle-raids,' form the subject of a number of romances, which arose naturally out of conditions of life in which wealth consisted in the possession, not of land or money, but of flocks and herds, the acquisition of which, by fair means or foul, formed one of the chief objects of every chief or person of position. The long central tale of the *Táin Bó Cúalnge*, or Cattle Spoil of Cúalnge (pron. Cooley), *i.e.* of Cúchulainn's country in Co. Louth and Down, is preceded by a number of lesser *táins* and short stories describing the efforts of Queen Meave of Connaught to collect cattle and other provisions for her army, or otherwise elucidating special points in the main epic. A brief outline of this composite tale is as follows:

The war was undertaken by the united provinces of Ireland, under the leadership of the Amazonian Queen Meave (Medb) of Connaught, and the guidance of Fergus mac Roy (or Roich), a former king of Ulster, who had been deposed in favour of king Conor, and had gone into exile into Connaught. He consented, out of revenge, to lead the foe against his own people.

The main object of the war was the capture of the *Donn*, or Brown Bull of Cúalnge, which Meave desired to possess, but which had been refused her. The romance takes the form of a number of separate episodes—usually combats undertaken by warriors from Meave's army contending with Cúchulainn, who, alone and single-handed, guards the borders of Ulster during the entire winter. The warriors and men of Ulster are all disabled from fight through a mysterious sickness brought upon them by the curse of Macha, one of the goddesses of war; and it is not until the close of the *Táin* that they arise from their lethargy and come down in force to fight the final battle. Meave is finally defeated and forced to fly in rout across the Shaonon at Athlone; but the Bull, though captured by her and driven westward, ends its career by fighting with and killing Meave's own Bull, the *Finn bennach*, and finally returns to its own country, where it dies by its own ferocious energy.

The combat of Cúchulainn and Ferdiad at the ford of Ath Ferdiad (Ardee) forms a long episode in the story, and is probably in its expanded (*LL*) form a late introduction.

There are a large number of poems in this episode; others are found occasionally in the remaining portions of the *Táin*. Some of the Ulster prose romances contain poems; others do not.

6. Among the more important of the stories relating especially to the career and deeds of the hero Cúchulainn are the following:

(1) *Cúchulainn's Birth Stories.*—Two chief variants exist, contained in *LU* (1100 A.D.) and in Egerton, 1782 B.M. (15th cent.). Considerable differences appear not only in the details of these stories, but in their general meaning. In *LU* a wonderful troop of birds comes one day to devastate the plains of Emain Macha. King Conor (Conchobhar) mounts his chariot with his sister Dechtire to hunt them. They pursue them till nightfall in a storm of snow, and arrive at an isolated house, inhabited by a man and woman. The woman gives birth to a son, who is carried by Dechtire to Emain Macha. The child dies, and in a vision by night Lug mac Ethlenn appears to Dechtire and tells her the child who had died was himself, that it was he who had arranged all that had happened to her, that she will bear a child by him, and that he will be himself her son. Conor bids her marry Sualtam; she becomes whole and well again, and obeys his behest. She then bears a child, Setanta, afterwards called Cúchulainn. In a discussion which follows, the babe is formally handed over to the charge of the chief bard and warriors of Ulster to rear, and to Finnchoem, Dechtire's sister, to foster.

In the other chief version, Dechtire has disappeared for three years with fifty maidens; they return as birds to devastate the plain of Emain Macha. Conor and his warriors follow them. They reach a hut, which expands into a noble house, inhabited by a princely young man and woman. They learn that it is the house of Dechtire, whom they do not recognize. (The young man is evidently Lug.) In the night Dechtire gives birth to a boy resembling Conor. He is called Setanta. The house seems to represent one of the tumuli on the Boyne, thought of by the people as fairy haunts or dwellings of the gods. It is in this direction that the birds take flight (Windisch, *Ir. Texte*, i. 134–145, text only; Summary in Nutt, *Voyage of Bran*, ii. 72–74)

(2) *The Courtship of Emer* describes Cúchulainn's wooing of his future wife, and his long apprenticeship to arms under Scathach, the Amazon of Alba or Britain (other versions say 'Scythia, east of the Alps'; Kuno Meyer, *RCel* xi. 442–453, and *Arch. Rev.* i. [1888], revised for E. Hull's *Cuchullin Saga*, pp. 56–84). There exist separate versions of Cúchulainn's education with Scathach (cf. Whitley Stokes, *RCel* xxix. 1908).

(3) *The Tragical Death of Conlaech* relates Cúchulainn's mortal combat with his own son Conlaech, or Conla, born of Aiffé in Alba after Cúchulainn's return to Ireland. He had left a ring with Aiffé for the boy, with a proviso that he was never to reveal his name to any stranger. He learns only when the youth is dying that it is his own son whom he has killed. The story has a strong resemblance to the Persian tale of Suhrāb and Rustam (*Eriu*, vol. i. pt. i. p. 113; C. Brooke, *Reliques of Irish Poetry*, Dublin, 1816, p. 363, metrical version).

(4) *The Sickbed or Wasting Away of Cúchulainn.*—Cúchulainn deserts Emer for Fand, wife of Manánnan, who in a series of beautiful poems describes the glories of Magh Mell, 'Plain of Happiness,' the invisible Irish Elysium, and woos him thither. A dramatic episode at the close of the tale describes Emer's attempted revenge and the contest between the two women for his affection. The tone is lofty (Windisch, *Ir. Texte*, i. 197–234 [text only]; O'Curry in *Atlantis*, vols. i. and ii.; Leahy, *Old Irish Romances*, i. 51 [Eng. tr.]; Thurneysen, *Sagen aus dem alten Irland*, 81).

(5) *Bricriu's Feast.*—This is a long rambling tale founded on the *motif* of a contest for priority and for the carving of the 'Champion's Bit' (ed. George Henderson, for Irish Texts Soc., vol. ii., 1899; Windisch, *Ir. Texte*, i. 254–303).

Tales connected with the death of Cúchulainn and the events immediately preceding and succeeding it are: the Great Rout of Magh Muirthemne (S. H. O'Grady in E. Hull's *Cuchullin Saga*), Cúchulainn's Death (Whitley Stokes, *RCel* iii. 175–185), the Red Rout of Conall Cernach, the Lay of the Heads, and Emer's Death. The events leading to his death form the subject of the long tale entitled the 'Battle of Rossnaree' (Edmund Hogan, *Roy. Ir. Acad.*, Todd Lectures, vol. iv., 1892).

All accounts agree in making Cúchulainn die young. The *Ann. Tigh.* place his age at 17,—the usual account,—but MS H. 3,17, in the Library of Trin. Coll. Dubl., says: 'The year of the Táin was the 59th of Cúchulainn's age from the night of his birth to the night of his death.' The actual beheading of Cúchulainn is variously ascribed to Lugaid, son of Cúroi, whose father Cúchulainn had slain by treachery, with the aid of Cúroi's adulterous wife Blathnait, and to Erc, son of Cairpre, or Cairbre *niafer*, who had been slain in the battle of Rossnaree. In a poem by Cinaeth O'Hartigan (ob. 975), in the Book of Ballymote, we read: 'Erc's mount, whence is its name?—Erc was son of Cairpre *niafer*, son of Ros *ruadh*, king of Laighen (Leinster). It was Erc who cut his head off Cúchulainn.' In reveuge for this deed, Conall *cernach* killed Erc, and brought his head to Tara. It is said that his sister Acaill, who came out of Ulster to lament her brother, grieved so sorely for his death that her heart burst within her. A pathetic lament for her is cited by O'Curry (*MS Mat.*, Appendix, p. 514). The battle of Muirthemne, in which Cúchulainn fell, was inspired by revenge for the deaths of Calatin, Cúroi mac Daire, king of Munster, and Cairpre. It was led by the sons of the slaughtered men.

The Phantom Chariot of Cúchulainn.—This is a curious piece, in which the old hero is summoned from the dead to testify to the truth of St. Patrick's teaching before Leary, king of Ireland. He appears before the king in his old form and splendour, performing his 'champion feats,' and beseeching the king to receive Christianity (O'Beirne Crowe, *Journ. of the Kilkenny Arch. Soc.*, 4th series, 1870–71).

Among other tales relating directly to Cúchulainn are the following:

(1) *Táin Bó Regamna*, or appearance of the Morrigu, the Irish goddess of war, to the hero before the war of the Táin, to foretell her own intention to take part against him (ed. Windisch, *Ir. Texte*, ii. ii. 241–254 [with tr.]).

(2) *Siege of Howth*, relating the extortions and cruelties practised by Athairne, chief bard of Ulster, on the Leinster men, and the revenge taken by Leinster in shutting up the defeated remnant of the Ulster warriors on the hill of Howth (ed. Whitley Stokes, in *RCel* viii. 49–63).

(3) *The Intoxication of the Ultonians*, describing a night-raid made by the warriors of Ulster when in a state of intoxication, right across Ireland, into the territory of their enemy Cúroi mac Daire of Tara-Luachra in Kerry, and the efforts of Cúroi to

destroy them by persuading them to enter an iron house encased in wood, which had beneath it a subterranean chamber fitted with inflammable materials (cf. Branwen, daughter of Llyr, in the *Mabinogion*, and 'the Destruction of Dind Righ' (ed. Whitley Stokes in *ZCP* iii.)). The warriors escape by Cúchulainn's immense strength; he breaks through the walls and lets them out (*Mesca Ulad*, ed. W. M. Hennessy, *Roy. Ir. Acad.*, Todd Lecture Series, i., London, 1889).

See, further, artt. CELTS and ETHICS (Celtic).

LITERATURE.—A large number of the tales will be found with text and Eng. or Germ. tr. in Windisch-Stokes, *Irische Texte*, Leipzig, 1880 ff.; the numbers of the *RCel*; *Atlantis* (ed. by O'Curry), and *Kilkenny Archæol. Journ.* (which contains some tales edited by O'Beirne Crowe); *Proc. Royal Ir. Acad.*, Irish MSS Series, and Todd Lecture Series; the *ZCP*; *Ériu*, the Journal of the Irish School of Learning; Irish Texts Soc. vol. ii.; *Archæological Review*, vol. i.; Ossianic Soc. vol. v.; *Anec. Oxon.*, Mediæval and Mod. Series, etc. The *Táin Bó Cúalnge* has been published from the Book of Leinster version by E. Windisch, with Germ. tr., Leipzig, 1905; text (only) of version from the *Yellow Bk. of Lecan* and *Leabhar na hUidhre*, in *Ériu*, vol. i. pts. 2 and 3, ed. by Strachan and O'Keeffe, Dublin, 1904, etc.; tr. (only) from same MSS by L. Winifred Faraday, *The Cattle Raid of Cualgne*, London, 1904; Eng. trs. from Add. MS 18748, Brit. Mus., by S. H. O'Grady in Eleanor Hull's *The Cuchullin Saga*, London, 1898, pp. 110–227.

English trs. of a large number of complete romances will be found in E. Hull's *Cuchullin Saga*, with chart of the tales and references; also A. H. Leahy, *Heroic Romances of Ireland*, 2 vols., 1905, and *The Courtship of Ferb*, London, 1902; German trs. in R. Thurneysen, *Sagen aus dem alten Irland*, Berlin, 1901; French trs. in H. d'Arbois de Jubainville, *Epopée celtique en Irlande*, Paris, 1892. Portions of tales in E. O'Curry, *MS Mat. of anc. Irish History*, Dublin, 1861, and *Manners and Customs of the Ancient Irish*, 3 vols., London, 1873; J. Rhys, *Celtic Heathendom* (Hib. Lect.), London, 1886; Nutt-Meyer, *Voyage of Bran*, 2 vols., London, 1895–97. Lady Gregory gives a free rendering of the stories in her *Cuchulain of Muirthemne*; see also D. Hyde, *The Story of Early Gaelic Lit.*, London, 1895, and *Lit. Hist. of Ireland*, London, 1899; E. Hull, *Text-book of Irish Literature*, 2 vols., Dublin and London, 1906–1908. For manners and custome, see P. W. Joyce, *Social History of Ancient Ireland*, 2 vols., London, 1903, and O'Curry, *Manners and Customs* (as above).

ELEANOR HULL.

CULDEES.—The Culdees belong to the later history of the ancient British Church (see art. CHURCH [British], vol. iii. p. 631), more especially in Ireland and Scotland. The mystery in which they were enveloped has been to a great degree removed through the researches of Dr. William Reeves, published as an essay 'On the Céle dé, commonly called Culdees' (*Trans. Roy. Ir. Acad.* xxiv. [1873]). The term 'Culdee' has grown out of the form *Culdeus*, first coined by Hector Boece in his *Scotorum Historiæ*, 1526 (for word 'Culdee,' see *OED*, *s.v.*). The Irish name *céle dé* (mod. Ir. *céile dé*) corresponds with the probably Irish origin of the Culdees. The primary meaning of the common word *céle* is 'companion,' from which secondary meanings are derived, such as 'husband,' 'servant.' *Céle Conchobair*, *céle Conculaind*, found in the texts of the old heroic tales of Ireland, mean 'faithful follower *or* personal attendant of Conchobhar, *or* Cúchulainn' (see H. Zimmer, *Celtic Church*, Eng. tr., London, 1902, p. 98 ff.). *Céle dé*, therefore, will mean 'companion *or* faithful servant of God.' The special difficulty is to account for the restriction of a term having this meaning, and obviously applicable to all monks and anchorites as servants of God, to the comparatively few cases in which it is found.[1]

There is no mention of the *céle dé* in the historians Adamnan, Cumin, Eddi, or Bede; and the inference is that the use of the term was unknown to them. Reeves says we may safely regard *céle dé* as the Irish translation of *servus Dei*, which came to be an ordinary term in Church writers for monks, and became known to the Irish through the writings of Gregory the Great, who was a favourite author in Ireland. Skene (*Celtic Scotland*[2], 1887, ii. 226 ff.) endeavours to prove that *Deicola* had the express meaning of 'anchorite,' that the *céle dé* were anchorites, and consequently that the Irish name was the direct derivation of *Deicolae* or *Colidei*. The objection to both of these theories is the specialized use of the term *céle dé*; had it been applicable to monks and anchorites in general, why is it not found in the pages of the 8th cent. historians, whose concern was with a monastic Church?

There is no contemporary account preserved of the rise of the Culdees; our sources are incidental and of late date.[1] According to the Books of Leinster and Lismore, St. Moling, who founded the monastery of Tech Moling in County Carlow, entered a society of Culdees. He died *c.* A.D. 700; and, if he was a Culdee, he is, along with St. Mochuda, among the earliest whose names are on record. In the manner of the Iro-Scottish Church, the Culdee societies were often composed of thirteen members—the Prior, or Head (*Cenn*), or Abbot, with twelve others, on the analogy of Christ and His disciples. In very late times we find in Armagh a Prior and *five*[2] brethren (probably a diminution in number, due to hostile pressure).

The Culdees, throughout their history, are connected with a few definite localities, although in some cases the evidence is the mere mention of the name in the chartulary of a monastery. At first having the marks of anchorites, they gradually take on the appearance of secular canons. The Rule of Maelruan (died *c.* 791) bears the description 'Here begins the Rule of the Céle dé.' It is preserved in the *Leabhar Breac*. As it stands, its orthography and grammar prove it to be centuries later than the 8th cent., but its original may go back to Maelruan. During Maelruan's lifetime (in A.D. 747), Chrodegang composed at Metz the Rule which formed his clergy into canons; and this Rule may have been brought into Ireland from Irish establishments on the Continent, such as Honau in Elsass. The Culdees certainly develop the appearance of secular canons; we find them filling a subordinate 'Levitical' position in cathedral establishments, chiefly engaged in the choral parts of the worship; they became especially associated also with charitable care of the sick and poor, and the distribution of alms. The latter seems to have been one of their earliest and most characteristic traits.[3] The endowments for these purposes may have proved a means of their later corruption. Their affinity with the regular canons enabled the latter, with the support of powerful patrons, to oust them from their positions. Finally, they disappeared; in St. Andrews, *e.g.*, they are named for the last time in 1332.

The only mention of the Culdees in England is in connexion with Athelstan's visit to York in A.D. 936 (*Colidei*); there is also a possible reference in the *cultores clerici* of a Privilege by King Ethelred granted to Canterbury (Cotton MSS). In Wales they, presumably, appear once in a reference by Giraldus Cambrensis to the 'Coelihes vel Colideos' of the Isle of Bardsey in the 12th cent. (Gir. Camb. vol. vi. p. 124, Rolls Series).

Reeves sees in the Culdees the disappearing Celtic Church; the Culdees are the drooping remnant in which that ancient Church finally succumbs. The present writer prefers to see in them not an inert residue, but a recrudescence, a burst into flame of the old Celtic religion, stimu-

[1] A striking parallel in Welsh to *céle dé* is the common word for 'hermit'—*meudwy*. *Meu* is from the root *mag*, which appears in Cornish as *maw*, 'boy'; *-dwy* is for the older *duiu*, genitive of *diu*, modern Welsh *duw*, 'God.'

[1] The earliest known instance of the combination *céle dé* (though not in its technical sense of 'Culdee') is in the gloss to the commentary on the Psalms ascribed to Columba of Bobbio, preserved in the Old Irish Cod. Mediolanensis (about 850 A.D.; ed. Ascoli, *Codice irlandese dell' Ambrosiana*, Rome, 1878, fol. 30 c, 3). Here the Vulg. *cuius* (*Dei*) *iste est* is first explained as equivalent to 'iste ad illum pertinet,' and is then glossed: *amal asmberar is cele dé infer hisin*, 'as it is said, "This man is a servant of God."'

[2] Von Pflugk-Hartung ('Die Kuldeer' in *Ztschr. f. Kirchengesch.* xiv. [1894]) erroneously says *fifteen*.

[3] As to this point, see especially Grant, 'The Culdees,' *Scottish Review*, 1888, p. 217 ff.

lated perhaps by conflict with the rival Roman institution. The honourable title *céle dé* comes from the people, as its native form shows; and it must have been elicited at the sight of special devotion and piety. A revival of religion at some given period, and not decay, is implied.

LITERATURE.—This is sufficiently indicated throughout the article. T. JONES PARRY.

CULT, CULTUS.—See RELIGION, WORSHIP.

CULTURE.—To Bacon the world is indebted for the term, as well as for the philosophy of, culture (*Adv. of Learning*, 1605, II. xix. 2). While of itself the notion of culture may be broad enough to express all forms of spiritual life in man,—intellectual, religious, ethical,—it is best understood intensively as humanity's effort to assert its inner and independent being. This effort is observed in a series of contrasts, due to the division of man's functions into intellectual and activistic. The most general contrast is that between nature and spirit, with its dualism of animality and humanity. With the ideal of culture, man is led to live a life of contemplation rather than one of conquest, while his attention is directed towards the remote rather than towards the immediate. Viewed socially, culture is contrasted with industrial occupation, the two differing in their valuation of work. From the social standpoint, again, the culturist inclines towards egoism, as in a 'culte du moi' (Maurice Barrès), instead of towards altruism. In estimating the value of culture, the standard is usually the eudæmonistic one: it is asked whether the life of thinking or the life of doing is better calculated to give man happiness, or to satisfy the desires of the soul. The treatment of the culture-problem is to be conducted in connexion with the culture-consciousness of an individual or a nation, rather than by means of any objective memorial, like an order of architecture, a type of sculpture, or a school of poetry or painting. Such an introverting method is qualified to express the essence of Classicism and Romanticism,—the two types of Western culture-activity,—just as it is sufficient to discern the culture-motive in a man of genius, like Michelangelo or Goethe. That which culture seeks is an acquaintance with the strivings and ideals of a favoured nation and a gifted soul.

I. *HISTORY OF CULTURE-CONSCIOUSNESS.*—Not until the dawn of modern times was the supremacy of intellectualism called in question, or the problem of culture raised. Brāhmanism postulated enlightenment as the means of salvation; Paganism looked to the intellect to give man happiness; Scholasticism pledged its belief in conceptual doctrines. It is true that the Preacher of the Old Testament bewailed much study and the endless making of books, in the fear that the increase of knowledge was the increase of sorrow (Ec 1^{18}), while Stoicism sought to turn from dialectics to ethics; nevertheless, humanity waited until the coming of modern times before it directly repudiated its intellectual life. Although the term *modernus* was introduced in the 6th cent. by Cassiodorus (*Variarum*, iv. 51), and used effectively by Roger Bacon (Eucken, *Gesch. der philosoph. Terminologie*, Leipzig, 1879, p. 169), modernness in the form of culture-consciousness was not expressed until Francis Bacon inquired concerning the nature and advantages of letters. His professed aim in the *Advancement of Learning* being to fashion a perfect 'globe of knowledge' (II. xxv.), he prepared the way for this by arguments drawn from sources sacred and secular.

Biblical tradition informs us that the day on which God rested and 'contemplated his own works' was blessed above the six days of labour, while the primary work of man in the Garden of Eden was intellectual, in that it consisted in viewing and naming God's creatures. Moses was praised for his Egyptian learning; Solomon for his wisdom; while the advent of the Saviour witnessed the subduing of ignorance among the doctors of the law; and the descent of the Spirit was expressed by the gift of tongues, 'which are but *vehicula scientiae*.' With Apostles and Fathers the same intellectualism prevailed (*ib.* I. vi.). As to human proofs, mythology shows how founders of States were but demi-gods, while inventors of new arts were among the gods themselves; moreover, ancient history reveals the superiority of such thinkers as Socrates, Aristotle, Cicero, over their contemporaries Xenophon, Alexander, Cæsar (*ib.* vii.).

Bacon's own estimate of culture, while often expressed so as to show the greater 'dignity' of thought, seems to consist of eudæmonism, inasmuch as it extols learning for its power to please—to promote, indeed, the interests of the *suavissima vita* (*ib.* viii. 2, etc.). The *Novum Organum* (1620) asserts, not 'Knowledge is pleasure,' but 'Scientia est potentia'; its aim was to indicate man's ability to rule by means of knowledge, so that, instead of emphasizing the æsthetical in culture, it tended to surrender the latter to industrialism. With such a presentation of the culture-problem, and the accompanying emphasis upon the 'work of contemplation,' Bacon, who was a Renaissance thinker, made possible the three-fold development of modern intellectual life in the ages of *Enlightenment* (1625–1789), of *Romanticism* (1781–1857), of *Realism* (1857–present day).

1. **The Enlightenment.**—On the æsthetic side, the Enlightenment fostered Classicism, although its own rationalistic spirit, political earnestness, and relentless criticism of religion removed it from the influences of the Graces. In its own way, the Enlightenment developed a static system of natural religion (Herbert), of natural rights (Grotius), as also a naturalistic system of ethics (Hobbes) and of knowledge (Locke). Spinoza expressed the spirit of the age when he declared the highest motive in man to be rational and disinterested love of God ('amor Dei intellectualis' [*Ethica*, 1677, V. xxxii.]).

This blind rationalism, however, was destined to undergo repudiation, and in the Counter-Enlightenment of Rousseau, Vico, Lessing, and Herder the culture-problem was rehabilitated. Where Bacon had had behind him the free æstheticism of the Renaissance, Rousseau was confronted by the formal culture of Classicism, whose *raffinements* he felt called upon to denounce. Taking a stand at once eudæmonistic and socialistic, he declared that unhappiness and injustice were attributable to man's departure from nature. This was the theme of his *Discours sur les sciences et les arts* (1750), where he discussed the question whether the establishment of culture had been for man's well-being—only to conclude negatively, on the ground that art and science weaken the original virtues of humanity. In his *Discours sur l'origine et les fondements de l'inégalité parmi les hommes* (1753), his view is social rather than eudæmonistic, inasmuch as he attributes injustice to the intellectualistic programme, which, involving the more rapid advance of some beyond others, had brought about inequality even where it had furthered the progress of impersonal science and art. Hence the maxim, 'Retournons à la nature.' *La nouvelle Héloïse* (1761) breathes a yearning for the idyllic condition of man's nature-life, while *Émile* (1762) deduces a system of education which, recognizing that man cannot return to nature and abide there, advises a natural method of mental development, a restoration of nature to man rather than a return of man to nature.

Where Bacon and Rousseau had considered the practical worth of culture for individual happiness and social well-being, Vico and Herder sought to show how essential to humanity is an ever-enlarging mental life which, if based upon nature,

advances beyond it. Vico's *Scienza nuova* (1725)—a work at least half a century in advance of its age—postulated the ideal of a unified humanity, whose organic nature, as conceived by Vico, contrasted strikingly and pleasantly with the mechanical views of society peculiar to the Enlightenment. Vico, who discovered that primitive language and literature are poetical, describes the developing culture-consciousness of the race by distinguishing three periods—mythological, heroic, human—wherein are found three kinds of language, as also three ideals of social life.

Lessing, who barely escaped the rationalism of the Enlightenment, relaxed sufficiently to produce his booklet, *Erziehung des Menschengeschlechts* (1780, tr. Robertson[4], 1896), wherein the religious consciousness is conceived of as a Divine revelation, unfolding its intellectual nature in such a way as to evince the ideas of God as a unity, and the soul as immortal. While Lessing carries on his discussion in a humanistic fashion, he does not fail to emphasize the rationalistic element embodied in the revelation of God and the soul as *ideas*. Herder's *Ideen zur Philos. der Gesch. der Menschheit* (1790–1792) involves Lessing's ideas of progress and Vico's ideal of humanity as one, while itself isolating the idea of *Humanitäts-Bildung*. The peculiarity of Herder's work is that in it the culture-concept operates in a naturalistic manner, involving the notion of a continuity of, rather than a conflict between, the natural below and the spiritual above, whereby the inner life of humanity is developed from the outer order of things. Herder introduces certain stages of development from nature-peoples to culture-peoples, and thus tends to make his plan more plausible.

The rationalism that had marked the early Enlightenment was reproduced in the ideals of Classicism, although the organization of æsthetical science by Burke and Baumgarten tended to soften its conceptualism. The significance of Classicism was apprehended by Winckelmann, who found in it the exaltation of reason and the idealization of beauty; and, in his mind, classic consciousness expressed the free rather than the characteristic, the static rather than the dynamic. In this spirit, he frames his memorable definition of beauty: 'According to this notion, beauty should be like the purest water, which, the less taste it has, is regarded as the most healthful because it is free from foreign elements' (*Werke*, Dresden, 1808–25, bk. iv. ch. ii. § 23). Winckelmann thus seeks to express the classic ideal as a purely intellectual and formal one, which will appear in connexion with two other utterances almost as famous as the above appreciation of the classic. In the one he praises the simplicity of classic beauty as a rare wine drunk from a transparent glass (*ib.* § 19); in the other he likens the antique ideal of beauty to a spirit drawn from the material order as by fire (*ib.* § 22). Lessing's *Laokoon* (1766)—its very title pledging it to Classicism—exalts the ideal of Apollo by limiting art and culture to the beautiful. This æsthetic reason is given to explain why Laokoon does not scream, although Lessing, in styling his work 'an essay on the limits of poetry and painting,' was aware that in plastic the idea of the temporal and changing is out of place. With the appearance of Kant's *Critique of Pure Reason* (1781) and the French Revolution (1789), the Enlightenment was virtually ended, although its effect did not at once pass away.

2. **Romanticism.**—The age of culture began as Kant emerged from rationalism, and by means of philosophic criticism transcended the conceptual views of the Enlightenment. In the *Critique*, Kant used the term 'culture' when he said: 'Metaphysics is the completion of the whole *culture* of reason' (Müller's tr.[2], New York, 1896, p. 730); yet it was the *Critique of Judgment* (1790) which, by means of its new æsthetic norms, was destined to take its place in the history of culture. Kant's theory of beauty and taste, as 'that which pleases universally without requiring a concept' (Bernard's tr. 1892, p. 67), expresses the nature of culture as the intellectual life of man apprehended intuitively. Kant's intellectualism, far more original and valuable than his moralism, is thus expressed in a system of transcendentalism; and it was this transcendental element that affected the romantic school of philosophy and poetry.

Schiller, alive to the intellectualistic in Kant, was not unaffected by his heroic and relentless moralism, which he glorified in his essay *Ueber Anmuth u. Würde* (1793), although here he seeks to transcend both Goethean grace of sense and Kantian dignity of ethics, by means of the ideal of humanity as the 'Zusammenstimmung zwischen dem Sittlichen und Sinnlichen' (*Werke*, ed. Hempel, 1868–74, xv. 213). Schiller's use of the term 'Kultur' is confined almost exclusively to the *Briefe über die aesthet. Erziehung des Menschen* (1795), where he comments on the harmonious culture of the Greeks (Let. vi.), distinguishes theoretical, practical, and æsthetical forms (Lett. ix.–x.), and discusses the practical value of culture (Let. xxi.). Believing that the end of human existence is to be conceived ethically, and yet realizing that man is by nature a creature of sense, Schiller seeks to account for the culture, or æsthetic education, of mankind by distinguishing three stages—physical, æsthetical, and moral (Let. xxiv.). Thus, in achieving his moral destiny, man uses the æsthetical as the mean and mediator between the extremes of the physical and the ethical, urges Schiller, just as Lessing had sought to account for the rational education of man by means of religion. Schiller's confidence in culture, as expressed in the *Aesthet. Bildung*, seems to abate somewhat in his Essay *Über naive und sentimentalische Dichtung* (1796), where, like Rousseau, whom he mentions approvingly (*Werke*, xv. 506), he signalizes a return to nature, or the naive—a term of special significance with the French (*ib.* 487). 'Sentimental' is borrowed from the English of Sterne, whom also Schiller does not fail to mention (*ib.* 480). The evils, rather than the benefits, of culture are discussed in this study of culture-types (*ib.* 483), and the whole essay, praising antiquity for its objective *naïveté*, values the sentimental only as it sincerely seeks nature. The distinction between naive and sentimental forms of culture is based upon nature; hence Schiller says: 'The poet either *is* nature or he *seeks* her. One makes a naive poet, the other a sentimental one' (*ib.* 492). Genius consists in *naïveté*, and only as the genius is naive can he exist (*ib.* 479). Homer among the ancients and Shakespeare among moderns are esteemed naive poets, because they apprehended nature immediately (*ib.* 488). Upon the cultural basis of naive and sentimental, Schiller distinguishes three forms of poetry—idyllic, satirical, and elegiac. Idyllic poetry is of the naive order, because it expresses the immediate sense of nature in the feeling of joy. 'The poet is satirical when he takes as his subject the alienation of man from nature, and the contradiction between the real and ideal' (*ib.* 497). Where satire is sharp, elegiac poetry is sad, being the poet's lament over the loss of nature in an age of culture. While Schiller seems to condemn culture and modernness, while he appears to postulate paganism as the true life of humanity, he is careful to express the thought that above both naive and sentimental there is a third form of intellectual life to be viewed as ideal culture, which

shall have power to restore to humanity its lost unity (*ib.* 492 f.).

As prophet of the Romantic School, Friedrich Schlegel felt the force of Kant's transcendentalism, but was more inclined to base his culture upon the Ego of Fichte, and, while he appreciated Schiller's æsthetics of the naive, he himself showed a disposition to adopt the sentimental, or romantic, culture of the infinite. In Schlegel's mind, Goethe's *Wilhelm Meister*, the French Revolution, and Fichte's *Wissenschaftslehre* were the three greatest tendencies of the age (*Jugendschriften*, ed. J. Minor, 1882; *Athenæum*, § 216); from them may be traced a triple *Romantik*—poetical, political, philosophical, in form. Fichte himself was an ardent believer in culture; coming after the French Revolution and postulating constructive material culture, he contrasts strikingly with Rousseau. In his *Beiträge zur Berichtigung über die französ. Revolution*, 1793, the term 'Cultur' is of frequent occurrence; it is identified with the inner freedom and rationality of Kantianism. No human sensation or impulse, no action or passion, is esteemed of value unless it makes for culture, or the exercise of all man's powers towards complete freedom as a goal (*Werke*, Leipzig, 1846–47, vi. 86). In the State, the culture of freedom should be the aim, declares Fichte (*ib.* 101), while the true fatherland is that State which is the most highly cultured (*ib.* vii. 212). Such was Fichte's own culture-philosophy. Yet the Fichtean element that appealed to the Romanticist was the Ego, whose free activity was for Fichte the leading principle of all culture. Schlegel, however, develops romantic culture by emphasizing the æsthetical activity of the Ego, whence he derives his doctrine of *Ironie*, the watchword of Romanticism. In essence, *Ironie* consists in a work of self-creation and self-destruction, due to the Ego's striving after an impossible ideal (*Athenæum*, § 51). In poetry, this subjectivism is called transcendental where it begins as satire with its contrast between ideal and real, changes to the sadness of elegy, and ends as an idyll which identifies the two (*ib.* § 228). Where Schiller used 'sentimental,' Schlegel employs 'transcendental,' of which style he considers Dante the prophet, Shakespeare the centre, and Goethe the climax—'der grosse Dreiklang der modernen Poesie' (*ib.* § 247). In thus styling Shakespeare transcendental, Schlegel invests Schiller's 'naive' and 'sentimental' with the historical sense of ancient and modern—an idea carried out systematically in *Die Griechen und Römer* (1797). Grecian poetry, declares Schlegel, begins with nature and aims to reach beauty through culture (p. 10); modern poetry aims at subjective æsthetical power rather than objective beauty (p. 79), whence arises a striving after the poetical as something transcendental, a 'Sehnsucht' which is destined to remain unsatisfied (p. 103). This type of poetry contrasts strikingly with the compact culture-consciousness of Classicism, wherein 'Kunstpoesie' and 'Naturpoesie' are in complete harmony (*Athenæum*, § 252). Thus, as the culture-consciousness of the Enlightenment had arisen in England, that of Romanticism has been seen to have originated in Germany. There was, of course, a French Classicism and a French Romanticism, but perhaps the most direct contribution to culture that France was to make is found in the third period—that of Realism.

3. Realism.—The inception of the Realistic, or Naturalistic, movement may be noted as early as 1831, when Henri Beyle (de Stendhal) produced his *Le Rouge et le noir*. This Naturalism, or 'Beylisme,' as its author styled it, involved a direct egoism and an indirect nihilism, destined to open the modern mind to new views and values in the intellectual world. Beyle was analyzed and classified by the aid of Taine in 1857, Zola in 1880, and Paul Bourget in 1883 (Huneker, *Egoists*, 1909, p. 4 f.). Another root of this realism is found in Flaubert, whose *Madame Bovary* (1857) resulted in a culture-philosophy called 'Bovaryisme,' or Illusionism, hardly in keeping with the acknowledged realism of Flaubert. Another frank attempt to be realistic appeared with Baudelaire's *Fleurs du mal* (1857) under the head of 'Satanisme.' These three tendencies re-appear in the rhapsodies of the German 'superman,' Nietzsche, who was probably affected no less thoroughly by Max Stirner's *The Ego and his Own* (1845), which delivers its author from both pagan Classicism and Christian Romanticism, while it rivals the early Christians' 'contemptus mundi' by its contempt for spirit and truth (see pp. 464, 478, 484). This egoistic nihilism and activism, involving the transmutation of individualistic and social standards of value, was originally pursued by Nietzsche in the milder form of Romanticism, due to the influence of Wagner's music, which Nietzsche employs to explain the origin of Greek tragedy. Where both Classicism and Romanticism had agreed in regarding Grecian culture in the form of Apollonian calmness, Nietzsche, who was guided by the dynamic ideal of musical art, and who had profited by Schopenhauer's distinction between intellect and will, introduced the idea of a Dionysiac element, in accordance with which the intellectual realm of culture and refinement was set off against the voluntaristic one of barbarism and passion. Nietzsche had carefully noted Schiller's use of 'naive,' and had also appreciated its significance in the psychology of Classicism; nevertheless, he was anxious to show that the Greeks had achieved the naive of Apollo only by a mighty conquest over the barbaric and titanic of Dionysus (*Die Geburt der Tragödie*, 1886, § 3). To Schiller's naive poets, Homer and Shakespeare, he adds the name of the artist Raphael, whose 'Transfiguration' reveals, in art-symbolism, the eternal sorrow and contradiction of the world, expressed as it is on the lower and darker half of the canvas, which portrays the struggles of the possessed, and the vision of peace and intelligence shining in the transfiguration above (*ib.* § 4). But, with his desire to conceive of culture in the activistic fashion peculiar to the art of music, he seems to have approved of the Dionysiac and to have welcomed its entrance into modern culture (*ib.* § 19). Following Nietzsche, Sudermann has elaborated a kind of culture-philosophy which, while attracted by the Grecian sense of harmony, agrees with Schiller in its Apollonian view (see, *e.g.*, *The Joy of Living*, tr. Wharton, 1907, Act i.), but which is perhaps more ready to assert that, after all, the will is so superior to the intellect that the passions are destined to triumph over the spirit in man. This supremacy of the Dionysiac seems to explain the sensuality and irrationalism of man, who accounts for his viciousness by saying, 'Es ist das Heidenthum in uns' (cf. Axelrod, *H. Sudermann, eine Studie*, 1907, p. 63).

The realistic culture that signified a kind of Dionysiac revolt against conventionality was accompanied by the criticism of various nationalities by cultured patriots. In Russia, Turgenieff made ideal war upon society under the romantic banner of 'Nihilism' (*Fathers and Children*, 1861, tr. Hapgood, 1907, ch. v.), and repudiated his country for its lack of ideas:

> 'Our dear mother,' says he, 'Orthodox Russia, might sink down to the nethermost hell, and not a single tack, not a single pin would be disturbed, . . . because even the samovar, lindenbast slippers, shaft-arch, and the knout—these renowned products of ours—were not invented by us' (*Smoke*, tr. Hapgood, 1907, ch. xiv.).

In Norway, Ibsen used egoism and nihilism to

arouse his country to a sense of intellectual self-respect. In *Brand* (1865) he idealizes the Norwegian; in *Peer Gynt* (1867) he satirizes him; while in *Emperor and Galilean* (1873) he seeks to indicate the coming of a 'third empire' of selfhood, destined to supersede the 'Christian empire of the spirit,' as that had overcome the 'pagan empire of the flesh' (Pt. ii. Act iii. Sc. iv.). In America, where the national consciousness was absorbed by activity and weighed down by Puritanism and Philistinism, the call to culture was sounded long ago by the free spirit of Emerson. His address, *The American Scholar* (1837), contains an ideal programme for the promotion of national culture; and in a spirit at once Athenian and American, he discusses the influences of nature, literature, and activity, which promote the culture of 'Man Thinking,' while he also emphasizes the scholar's duty toward his age, which, in Emerson's mind, was no longer the classic or romantic, but the philosophical one. In far different manner from the Apollonian and Socratic serenity of Emerson, Poe emphasized the Dionysiac in the form of the morbid and mysterious with their inherent sense of contradiction. The significance of Poe was really that of the decadence that later was to repudiate Realism. This was to come about through Baudelaire, but was not to become effectual until the end of the 19th century, with Verlaine, Mallarmé, Villiersde l'Isle-Adam, Huysmans, and Maeterlinck, as well as Swinburne. The culture-consciousness of the decadence, dissatisfied with the limitations of Realism, made use of the morbid, the vicious, and the mysterious in order to sound anew the depths of the soul. By means of symbolism, it sought to find something objective to express the psychological profundity that it affected. In the north, this symbolism was developed systematically by Ibsen.

But by far the most systematic culturist critique of national life was carried on by Matthew Arnold, who was sufficiently nihilistic and egoistic in spirit to entitle his work *Culture and Anarchy* (1869), and who was sufficiently radical to direct it against Protestantism and 'Hebraism.' Arnold's method was that of a free Socratism, in the course of whose application he finds it expedient to praise Plato and St. Paul for their intellectualism (ch. iv.), and Lessing and Herder for their spirit of national culture. Calling himself a 'man without a philosophy,' Arnold was possessed of sufficient conceptualism to treat culture to an analysis of its four-fold root, whence he regards it: (1) as an internal condition of humanity rather than animality; (2) as a growing and becoming rather than a resting and a having; (3) while it was so general as to advance mankind rather than the mere individual, within whom (4) it consisted of an expansion of all his powers, instead of some one in particular, as the religious (ch. i.). This broad humanistic culture Arnold identifies with something suggestive of Schiller's 'grace and dignity,' by calling it 'sweetness and light'—an expression which he borrows from Swift, as Schiller had borrowed from Sterne. In contrast with his nation's 'faith in machinery,' Arnold exercises a faith in culture, by means of which he is led to say that the England of his own day was little in comparison with the England of Elizabeth (*ib.*). This æsthetical reflexion upon the industrial age of coal was accompanied by a critique of the moralistic, or Puritanical, carried on in connexion with the distinction between Hellenism, with its 'spontaneity of consciousness,' and Hebraism, with its 'strictness of conscience'—one the principle of thinking, the other of doing (ch. iv.). Arnold's philosophy of history, observing that Europe has been subjected to a double treatment of culture and civilization, places Hellenism at the head of spiritual development in the West, while it accounts for its failure to rule by calling it 'premature,' whence Hebraism was enabled to govern the world. With the supremacy of Hebraism, which Arnold treats more kindly than Nietzsche treated Christianity when he saw its 'transvaluation of pagan values,' there comes a Renaissance revival of Hellenism, which, like original Hellenism, so suffered from lax morals that Hebraism, in the form of Puritanism, was again called upon to rule by means of strict obedience (*ib.*). Believing that Hellenic sweetness and light is the one thing needful, Arnold believes also that it may further the cause of Hebraism, which can only gain from an infusion of Socrates' 'disinterested play of consciousness' (ch. v.). Indeed, Hebraism seems never to have relinquished its hold upon Arnold, who, in *Literature and Dogma* (1875), esteemed 'conduct as three-fourths of human life'; hence we may speak of his Hellenizing culture as 'morality touched with sweetness and light.' Without appreciating the strength of Arnold's sentiments, popular culture is now busy with the more entertaining features of science, art, and philosophy, its devotees being organized into groups not without resemblance to the *Précieuses Ridicules* and the *Femmes Savantes* of three hundred years ago.

II. *THE PROBLEM OF CULTURE.*—As the definition of culture has implied, the contrast between nature and spirit, animality and humanity, activity and contemplation, inner and outer, immediate and remote, contains a problem for the human species which belongs to nature, but which, nevertheless, contemplates a trans-natural or spiritual goal for humanity. The most essential element in the psychology of culture is that which relates to the intellect and the will, with the accompanying contrast between the life of culture and that of activity. With the question presented upon the intellectualistico-voluntaristic basis, the two remaining problems of humanity and happiness will follow in a natural order.

1. **Culture and activity.**—When contrasted with the outer life of activism, the interior and contemplative character of culture assumes the form of an intense problem of values, especially in an age where naturalism is exalted by science and where industrialism deafens the ear to the 'Know thyself' of intellectualism. Hence society has scruples against culture, which, it is urged, unfits man for life in the outer world among men and things. The antinomy between intellect and will has long afflicted the Indo-Germanic consciousness, and as far back as the days of Vedānta philosophy it had sought to reconcile the conflicting claims of the Sāṅkhya of thought and the Yoga of action by declaring that the pursuit of knowledge and the performance of work were both necessary to bring man to the highest spiritual state of workless contemplation (*Bhagavad-Gītā*, ch. v.). With the Greeks, who were both Apollonian and Dionysiac, the ascendant principle was the intellectualistic one; for, while Aristotle based life upon ἐνέργεια, he found εὐδαιμονία to consist in an energy tempered by moderation and perfected by contemplation (*Nic. Eth.* x. 7). It was in this spirit that Bacon exalted the 'work of contemplation.' Voltaire's attack upon culture was carried on in the same eudæmonistic manner; accordingly his pessimistic *Candide* (1758) urges man to work without thinking, as the only means of rendering life bearable, whence follows, at the conclusion, the familiar maxim, 'Il faut cultiver notre jardin.' In the history of French scepticism, the same advice had been given by Montaigne, who also counsels one to assume the consciousness of a dumb animal in order to find wisdom—'Il nous faut abestir pour

nous assagir' ('Apologie de Raymond Sebond,' *Essais*, Lyons, 1595, bk. ii. ch. xii.).

But the classic example of the genius who sought peace by harmonizing inner with outer life is Goethe, with his *Torquato Tasso* (1789) and *Faust*. Developed in Italy, where Goethe came into living contact with Hellenism, *Tasso* was submitted to the classic form of treatment, which was hardly fitted for the strivings of the unhappy hero with his Werther temperament. The display of soul-stuff, with its conflict between intellectualism and activism, is carried on in the comparison between Tasso and Antonio, the man of affairs; for, even when crowned with the wreath taken from the bust of Virgil, as a sign of his success in completing his *Jerusalem Delivered*, the poet is envious of the practical man, who has just returned from an important mission. In the course of this drama of the inner culture-consciousness, Goethe takes the opportunity of introducing certain maxims which have become famous. Thus in his jealousy of Antonio, Tasso exclaims, 'I feel myself more than ever of double soul' (Act ii. Sc. i.), referring to the duality of soul embodied in *Faust* (i. 759). The poet's incompleteness is celebrated in the words, 'Talent is formed in solitude, character in the stream of the world' (Act i. Sc. ii.); while it is declared that self-knowledge comes not from within, but rather out in the world among men (Act ii. Sc. iii.). Where the Princess celebrates the poet's sorrow by calling it 'charming' (Act i. Sc. i.), Tasso at last confesses the profundity of his inner contemplative consciousness, in the memorable Goetheanism, 'Some god gave me power to tell how I suffer' (Act v. Sc. v.). This Goethean nostalgia for activity has recently received brilliant recognition in Paul Bourget's *Le Disciple* (1889). Faust's sense of two souls within expresses the conflict more profoundly, while it solves the problem more decisively as the victory of the active altruist over the thinking egoist, or the merging of the two in the unity of life, the consciousness of which leads Faust to bid the holy moment stay: 'Verweile doch, du bist so schön' (ii. 6953).

The culturist, however, will object to this activistic treatment of the problem, and persist in his contemplation, however painful it may be for him. Moreover, intellectualism claims that action stands in need of the thought-principle, inasmuch as the will comes to consciousness only in ideation, as was confessed by the arch-voluntarist, Schopenhauer, when he made the will-to-live objectify itself as Platonic ideas (*World as Will and Idea*, tr. Haldane and Kemp, 1883–6, § 25). Apart from thought, activity defeats its own humanistic aims, for, 'where there is no vision, the people perish' (Pr 29[18]). The recent egoistic movement in literature reacts favourably upon culture, which is so interior in its nature as to make most difficult any social interpretation of the contemplative. Thus Maurice Barrès stands for a 'culte du moi' in the 'tour d'ivoire' of self-hood (cf. Huneker, *Egoists, in loc.*). In the same spirit, Anatole France, although apparently a believer in collectivism, is not without egoistic and intellectualistic traits. These appear brilliantly in *The Red Lily*, where Paul Vence's opinion of Napoleon seems to express the author's view of activists in general:

'A poet, he knew no poetry but that of action. His great dream of life was earth-bound. . . . His youth, or rather his sublime adolescence, endured to the end, because all the days of his life were powerless to form in him a conscious maturity. Such is the abnormal condition of all men of action. They live entirely for the moment, and their genius is concentrated on one single point. They do not grow. The hours of their lives are not bound together by any chain of grave disinterested reflexion. They do not develop; one condition merely succeeds another in a series of deeds. Thus they have no inner life. The absence of any inner life is particularly noticeable in Napoleon. . . . He lived outside himself' (Stephen's tr., 1908, ch. iii. p. 46 f.).

Where the culturist grants the validity of activism, he yet sees its limits, if not its dangers; or, as Bergson, a pronounced activist, has expressed it: 'It is presumable that, without language, intelligence would have been riveted to material objects that its interests led it to consider. It would have lived in a state of somnambulism, exterior to itself, hypnotized by its work' (*L'Evolution créatrice*[6], 1910, p. 172). Such a condition of exteriority, observed by both France and Bergson, would seem to be the unhappy state of mankind, apart from the intellectual deliverance that comes through culture; the man of genius, raised above nature, is enabled to transform the energy of action into the work of contemplation, as Flaubert's principle of violence in art resulted in rhetoric.

2. **Culture and humanity.**—While it goes without saying that man was meant for humanity, or for the perfection that belongs to the species, it does not follow that this perfection must be intellectualistic. For Bacon it was easy to identify *veritas* with *bonitas* (*Adv. of Learn.* I. viii. 2); but the modern notion of humanity's realization of the good is often elaborated in defiance of the intellectually true. In ancient thought, Plato's *Republic* banished poetry and the drama from the State; but this drastic measure was in the interest of truth as man's chief good (bk. x. 595–605). In modern times, Tolstoi has opposed decadent culture, because, like Rousseau, he thinks that progress in intellectualism has brought about inequality, as also for Plato's reason that art does not yield truth. Tolstoi opposes the notion that art belongs to superior souls alone (*What is Art?* tr. Maude, 1889, ch. viii.). 'Art,' says Tolstoi, 'should unite men with God and with one another'; whence he arraigns, as inimical to this religion of humanity, all art that is superstitious, patriotic, and sensual (*ib.* ch. xvii.). With a condemnation of modern art almost universal, Tolstoi surrenders to the *genre* and sympathistic, as represented by Dickens, Hugo, Dostoievsky, Millet, Breton, etc. His attack upon Shakespeare was provoked by the perception that the poet slighted the labouring classes. Ernest Crosby having made such a socialistic criticism of Shakespeare, Tolstoi proceeded to criticize his dramas, upon æsthetic and philosophic grounds (*A Critical Essay on Shakespeare*, tr. Tchertkoff, 1906, pt. ii., Crosby's article). In addition to this social scruple against culture, there is also an ethical detent, based upon the thought that intellectual superiority in a nation seems to involve a pyramidal arrangement of the social order, where the enlightened few are supported by the mass of labouring people, whereby injustice arises. The failure of the æsthetical to redeem mankind urged Schopenhauer to put ethics in its place, with the idea that, since not all can be artists, they should all be moralists, and that even in the cultured person the æsthetic moment is so transitory that it necessitates the permanent moral treatment of life in the complete denial of the will-to-live (*World as Will and Idea*, tr. Haldane and Kemp, 1896, §§ 27, 52; also bks. iii. iv.); culture, however desirable, does not seem to be imperative like morality, activity, and the like; but the argument involved is not really one of physical necessity, but of spiritual value; for, inasmuch as 'the earth is the planet of hunger, or the planet where one eats' (A. France), it might be argued that through necessity food is as important as virtue, and the economic the equal of the ethical. The question is one of values, as also one of psychological fitness; whence the culturist concludes that morality and social life stand in need of the enlightenment and evaluation that can come only when truth and beauty are pursued for their own sake. The most perfect conception of social life seems to have found ex-

pression in ancient times, when it was said, 'Many shall run to and fro, and knowledge shall be increased' (Dn 12^4). In the endeavour to promote the interests of an enlightened State, it is not out of place to commend culture and foster genius, for it must not be forgotten that humanity is in part to be conceived in humanistic fashion, which involves the exaltation of letters and arts, or the 'humanities.'

3. Culture and happiness.—Where culture is challenged by activism and socialism, it is finally criticized by eudæmonism, on the ground that it fails to satisfy the soul. Here re-appears the contention of activist and socialist, who will assert that the disinterestedness demanded by culture can result only in diverting man's attention from immediate necessities, which, like eating, drinking, clothing, shelter, are imperative for the 'Sons of Martha' to consider. Both nature and natural society point to the place man is supposed to occupy in the actual world; hence the interior life of culture can only unfit him for his vocation as a living being, so great is the preoccupation which culture demands. Hence, with the physical and social struggle for existence, the contemplator is likely to be left stranded in the onward flux of events, so that all that makes for culture threatens the well-being of man. Modern educational systems have long been realizing this utilitarian principle, with the result that 'humanity' now, instead of connoting culture, stands for social efficiency; while 'culture courses' in the curriculum are included among the non-essentials. To this argument against disinterested enlightenment, the culturist may reply by noting that these practical interests will take care of themselves in connexion with man's instinctive life, just as they will ever assert themselves in human education as demands made by the inquiring interested mind. But the cultural interest in remote ideals may safely be furthered in the life and education of man, who is necessarily predisposed in favour of the immediately useful.

With regard to culture as a means of promoting happiness, the central question is one of the possession or pursuit of knowledge. Classicism, which had culture without the culture-problem, upheld the possession of knowledge as affording the highest enjoyment; hence Aristotle said: 'It is reasonable to suppose that the employment (of wisdom) is more pleasant to those who have mastered it than to those who are yet seeking' (*Nic. Eth.* x. vi.). Mediæval Romanticism relaxed somewhat from this identification of knower and knowledge, as when the Troubadour, or Trouvère (finder), suggested that the search after that which could be found constituted our true happiness. The culture of Modernism is not wanting in instances of representative individuals who have protested that the search after truth is more satisfying than the securing of knowledge itself. Thus it was that the Cartesian, Père Malebranche, said: 'If I held truth captive in the hand, I would open it in order to pursue it again' (Mazure, *Cours de la philosophie*, ii. 20); while Butler declared: 'Knowledge is not our proper happiness . . . it is the gaining, not the having, of it, which is the entertainment of the mind' (*Sermons*, xv.). More brilliantly and more forcefully Lessing said:

> 'If God were to hold in His right hand all truth, and in His left the single, ever-living impulse to seek for truth, though coupled with the condition of eternal error, and should say to me, "Choose!" I would humbly fall before His left hand, and say, "Father, give! Pure truth is, after all, for Thee alone!"' (Rolleston, *Life of Lessing*, 1889, ch. xvii.).

While significant of the remoteness inherent in the culture-ideal, such utterances are not normal expressions of the culture-motive, which is more like the Troubadour, or finding, instinct in the human mind. Finally, our modern psychology, like that of Wundt, by showing how similar are intellect and volition, tends to do away with the conflict between the idealistic and activistic methods of promoting human happiness, and to postulate a unity of thinking and doing, of inner life and outer existence.

CUP- AND RING-MARKINGS.—1. Description.—The name 'cup- and ring-markings' is given to certain signs—they cannot be called drawings or sculptures—which are found on rock-surfaces and articles of use in all parts of the world, from pre-historic times down to the primitive peoples of the present day. Wherever found, they are distinguished by the same characteristics with great variety in details. In all cases there is the central cup, hollow, or depression, surrounded by one or more concentric circles or rings. These rings take many varying forms. Sometimes they are complete circles; sometimes they are only semi-circles at the top or bottom of the cup; sometimes they take the form of spirals. At times—and this is very usual when they are found in any number—sets of cup- and ring-markings are united by lines or ducts making a variety of figures; and again, at times, the outermost circle has a number of rays issuing from it and converging towards the central depression or cup. Wherever they have been observed, they are the work of peoples in the Neolithic stage of culture, whether in the actual Neolithic Age of the pre-historic past, or among peoples who at the present time exist at that stage of culture.

The localities where archaic cup- and ring-markings are now known to exist are world-wide. Some of the finest examples are in the British Islands. It was in the year 1859 that Sir J. Gardner Wilkinson first called attention to them in a paper in the *Journal of the British Archæological Association*, in the course of which he refers to cup- and ring-markings on the rocks in Northumberland, and claims to have been the first to note such markings as far back as 1835. In 1867, Sir James Simpson published his book entitled *Archaic Sculpturings of Cups, Circles, etc., on Rocks*, in which he described all those that were then known in Scotland, Northumberland, Cumberland, and Yorkshire, and in a series of beautiful plates he illustrated every variety of form which they exhibit.

It is now known that archaic cup- and ring-markings exist in all parts of our own country, not only on scarps of rock, but on the stones of so-called 'Druid' circles, from Inverness-shire to Lancashire, Cumberland, and the Isle of Man; on great stones forming avenues; on cromlechs; on the stones of chambered *tumuli* in Yorkshire; on stone cists or coffins in Scotland, Ireland, and Dorset; on pre-historic obelisks, or solitary 'standing-stones' in Argyll; on walls in subterranean 'Picts' houses' in the Orkneys and Forfarshire; in pre-historic Scottish forts; near old camps; and

on isolated rocks, scarps, and stones. They are found in the Cheviot Hills, on the moor near Chatton Park in Northumberland; there engraved on the boulders may be seen central cup-like depressions surrounded by incised concentric circles. Some of the finest examples in the British Islands are at or near Ilkley in Yorkshire. In Ireland precisely analogous markings, or 'rock-scribings,' as Wakeman calls them, are found at Mevagh, Co. Donegal, on the sides of Knockmore Cave, near Derrygonnelly, Co. Fermanagh, as well as the magnificent series of double spirals at Newgrange, Dowth, and Lough Crew, Co. Meath, which belong to a somewhat later stage of culture.

Outside the British Islands, other archaic examples, besides those in the Morbihan, may be noted at Malta, where, in the spring of 1910, the writer saw the very fine series—painted, not incised—in the hypogeum at Hal-Saflieni. They also occur incised at Hagiar Kim and Mnaidra, in Malta, and in the Giganteja at Gozo; on the rock on which the great Cathedral of Seville is built; on the steps of the Forum at Rome; on the pedestal of a statue from Athens; in Scandinavia, in China, in India, and in North and South America.

Present-day instances in which a precisely similar scheme of ornamentation may be observed are found among the natives of Central Australia (which will be more particularly described when we come to discuss the meaning to be assigned to them), in Fiji, in Easter Island, and other parts of the Pacific Ocean, as well as in certain parts of Africa. Further, among races who tatu, particularly the Maoris of New Zealand, a very similar set of designs may be observed.

2. **Theories as to significance.**—It is an axiom of Anthropology that primitive man never gave, nor does he give, himself trouble merely for an æsthetic purpose, but always had some practical object in view. Hence the theories proposed in explanation of cup- and ring-markings fall into two groups. The first would explain them by (*a*) religion, or (*b*) magic; the second, as (*a*) primitive star-maps, or (*b*) rude maps of the neighbourhood, showing the position of hut-circles, or (*c*) a primitive method of writing, or at least of communicating ideas.

i. (*a*) *Religion.*—Sir James Simpson, after mentioning, only to reject, the Swedish archæologist Nilsson's conjecture that these markings were Phœnician in their origin, came to the conclusion that 'they are archæological enigmata,' but he went on to suggest that they were 'probably ornamental and possibly religious,' adding that, 'though in the first instance probably decorative,' they were also 'emblems or symbols, connected in some way with the religious thought and doctrines of those who carved them' (*op. cit.* pp. 92, 115, 117).

In 1872, Phené, in a paper read before the British Archæological Association, argued that the purpose of cup- and ring-markings was a religious one, and that it was connected with sun-worship.

In 1878, Romilly Allen, an acknowledged authority in all that pertains to early Christian art, read before the British Archæological Association an exhaustive paper on the remarkable series of 'Pre-historic Rock-sculptures at Ilkley.' After giving a list of all the localities in which pre-historic rock-sculptures were then known to exist, followed by a detailed account of those at Ilkley, he proceeded to notice various theories as to their origin and meaning. It may be observed that among the markings at Ilkley there is one set of cups and lines arranged in the form of the *swastika*, a pattern of universal prevalence from the Mycenæan age onwards, which is noted by Schliemann to have been found on a very large number of spindle-whorls discovered at Troy, and is found in India as a religious symbol, and survives among ourselves as the arms of the Isle of Man. Its occurrence here would seem to carry back its use as a symbol of some sort to pre-historic times. Allen's own theory is that cup- and ring-markings were most probably used as religious symbols, and were connected, as Nilsson suggested, with sun- and Baal-worship. He also thinks, with Nilsson, that the pre-historic sculptures belong to the Bronze Age.

In the following year C. W. Dymond read an interesting paper before the same Association on some rock-markings in the same neighbourhood, with copious reference to Schliemann's discoveries at Troy and Mycenæ. In this he makes a special point of that discoverer's theory that the cups surrounded by complete circles represent the sun, and those surrounded by incomplete or semi-circles, with or without rays, *i.e.* ducts, represent the rising or setting sun. In this connexion it may be noted that among the rock-paintings of the native Australians described by R. H. Mathews (in *JAI* xxv. [1896] 145) is one which almost certainly represents, along with a figure of two hands joined at the wrist, the sun rising or setting. The significance of this will appear later (see below, p. 366[a]). Dymond also notes one stone containing a most remarkable arrangement of markings, which he says he at first took for a rude representation of the planetary system, but which he afterwards thought might be an allegorical or symbolical representation of a goose (*Journ. Brit. Arch. Assoc.* xxxvii. 86).

As recently as 1900, H. G. M. Murray-Aynsley, in her book on *Symbolism of the East and West*, describes the cup- and ring-markings which she had observed in the course of her travels in India, and compares them with those known in Europe; and as to their significance she assigns all alike to sun- and star-worship.

In his recent book *Ancient Britain and the Invasions of Julius Cæsar* (London, 1907), Rice Holmes ranges himself with those who would see in these markings some religious significance, though he is hopelessly wrong in assigning them, as he does, to the Bronze Age.

Still keeping to the theory of their religious significance, it may be noted that Col. Rivett-Carnac, who has made a special study of the archaic rock-markings of India, particularly as they occur among the Kumaun Hills, suggested that they are connected with *liṅgam*-worship; the central mark or cup representing the *liṅgam*, the circle the *yoni*. The rich, he supposed, put up a monument, the poor merely carved a symbol.

In his *Pre-historic Times*[6], 1900, Lord Avebury comes to the conclusion that 'we have as yet no satisfactory clue to the meaning of these engravings' (p. 158), and he assigns the ruder, and therefore evidently more primitive, engravings, *i.e.* the simple cup- and ring-marks in all their variety, to the Neolithic Age, or, as we prefer to say, at any rate to the Neolithic stage of culture. As regards the meaning to be attached to the symbols, R. Munro says:

'Although much has been written on the subject, none of the theories advanced to explain their meaning has met with general acceptance. That they had a symbolic meaning in the religious conceptions of the people is evident from the frequency with which they are found on sepulchral monuments, but any interpretation hitherto advanced on the subject, beyond the general religious idea, seems to be pure conjecture' (*Prehistoric Scotland*, p. 217 f.).

(*b*) *Magic.*—In 1892, and again in 1896, Miss Russell propounded, with a wealth of argument and illustration, before the same Association, the theory that simple cups and circles are intended to represent *eyes*, and that those having a line or duct through them represent eyes transfixed with a

javelin, and that accordingly the solution of the problem as to the meaning of these signs is to be found in regarding them as charms against the Evil Eye. The prevalence of this superstition among primitive races the world over is unquestionable, and it survives to-day, with more intensity than anywhere else among civilized peoples, in Italy, as Elworthy has conclusively shown in his books, *The Evil Eye* (London, 1895), and *Horns of Honour* (London, 1900), so that, had it not been for later discoveries, this might have stood as a good working hypothesis; and it may even be held to have some share in the meaning which we shall assign to them. Magic is not only the science, but it lies at the very root of the religion and social arrangements, of primitive folk, and it may well have its part in the explanation to be advanced for the universal prevalence of these mysterious signs.

ii. (*a*) It has been held that cup- and ring-markings were connected with astrology and intended for rude *maps or plans of the stellar and planetary heavens*. This theory need not detain us, as it could not by any possibility apply except to a very few cases, in which the designs may seem to be arranged in some sort of definite order having some resemblance to the position of the constellations in the sky, or some appearance of being intended to represent the sun, moon, and planets.

(*b*) There is the view that they were intended for *maps of the locality*, marking the position of the neighbouring raths, or *oppida*, for the benefit of wayfarers, whether the inhabitants themselves or strangers. This theory is associated with the names of Greenwell and Wilkinson in England, and of Graves in Ireland, and was definitely applied by the latter to the Irish examples.

(*c*) There is also the view that they were *a primitive mode of writing, or at least of communicating ideas*. This theory was propounded by Rivett-Carnac as an appendage or alternative to his theory that they were connected with *liṅgam*-worship. In 1903 he read a paper before the Royal Asiatic Society entitled 'Cup-marks as an archaic Form of Inscription,' in which he suggested that they were 'a very ancient form of writing.'

In discussing our own theory we shall see how these two ideas may be combined, by a reference not only to the evidence from Australia, but also to the 'painted pebbles,' with alphabetiform signs, which Piette discovered in the cave of Mas d'Azil in the Pyrenees, and which belong to the Palæolithic Age, and to the similar signs found on and in dolmens in Portugal in the same year, down to the signs which distinguish the work turned out by modern potteries in civilized lands. It may be noted here that Wood-Martin also had already suggested that cup- and ring-markings 'might be the first step made by primitive man towards writing' (*Pagan Ireland*, p. 571). E. Cartailhac had made the same suggestion in 1889 in his *La France préhistorique d'après les sépultures et les monuments* (p. 247).

3. **Cup- and ring-markings, in the light thrown upon them by recent research and discoveries among the native races of Northern and Central Australia.**—In the year 1899, Spencer-Gillen's epoch-making book on *The Native Tribes of Central Australia* was published. It was followed in 1904 by the same authors' *Northern Tribes of Central Australia*, and in the same year A. W. Howitt's *Native Tribes of South-East Australia* was published. These, with K. Langloh Parker's *The Euahlayi Tribe* (London, 1905), and the researches of R. H. Mathews and other travellers and observers, are our authorities on the tribal and social arrangements and customs of the Australian aborigines.

The characteristic feature of all these tribes is that society is organized on a basis of totemism (*q.v.*), in relation to which cup- and ring-markings are found to have a living and definite significance.

Some few years ago the theory now under consideration might have been included under those which would give a *religious* significance to cup- and ring-markings, but recent research has made that impossible.

J. G. Frazer, in his great work on *Totemism and Exogamy* (4 vols., London, 1910), has proved that totemism does not belong to the category of religion, but is altogether of social significance, and this was the opinion of many students before the publication of his book settled the matter for all time. Totemism is not religion, because religion implies reverence and worship, and the totem is never worshipped, though it is treated with respect. It is the brother, never the god, of its human relations.

Before we can exhibit the relationship between cup- and ring-marking and totemism, however, we must first deal, as briefly as possible, with totemism as it exists in Australia, especially among the Arunta.

The Arunta reckon by male descent, but their totemism is special and peculiar in that it is reckoned by locality and not by parentage at all, *i.e.* every child, no matter what the totem of its parents may be, belongs to the totem of the district in which it may happen to be born. The Arunta system is based on the following beliefs. They hold that each living Arunta is descended from, or rather is the re-incarnation of, an ancestor who lived in what are known as the 'Alcheringa' (*q.v.*) times. Each of these Alcheringa ancestors is represented as carrying about with him or her one of the sacred stones or sticks, which are called by the Arunta *churinga*. Each of these *churinga* is closely associated with the spirit part of some individual. In the place where they originated or stayed, as in the case of some of the Witchetty Grub people, or where they camped in their wanderings, there were found what the natives call *oknanikilla*, *i.e.* local totem centres. At each of these spots a certain number of the Alcheringa ancestors went into the ground, each carrying his *churinga* with him. His body died, but some natural feature, such as a tree or rock, rose to mark the spot, while his spirit part remained in the *churinga*. Thus the country is dotted over with these *oknanikilla*, each one connected with one totem. The rock or the tree marking the spirit's abode is known as the spirit's *nanja*, and it is this idea of spirit individuals associated with the *churinga*, and resident in certain definite spots, which is at the root of the totemic system of the Arunta tribe. These spirits are ever waiting to be re-born, and consequently they are ever on the look-out for likely women through whom they may receive re-incarnation. Hence arises the most curious feature of Arunta beliefs, and the most marked characteristic of their life. They are entirely ignorant of the meaning and effect of sexual intercourse. According to their belief, it has nothing to do with the actual production of offspring; at best it only prepares the woman for the entry of the spirit-child. Consequently a woman never knows when a spirit-child may enter her womb, and, as a result, wherever she may become aware that she has conceived a child it belongs to the totem of that locality irrespective of the totem to which she or her husband may belong. Hence, among the Arunta the exogamous classes are totally distinct from the totemic clans. The child inherits the *churinga nanja* of his ancestral spirit, and consequently belongs to his own ancestral totem. In some localities the spirits are particularly active, in others they are more otiose, but the result is the same in all cases—when the spirit-child enters a woman, the *churinga* is dropped. When the child is born, the mother tells the father the position of the tree or rock near to which she supposes the child to have entered her, and he and his friends then search for the dropped *churinga*. This is usually, but not always, supposed to be a stone one marked with the device peculiar to the totem of the spot, and therefore of the new-born child. If it should not be found, as is sometimes the case, a wooden one is made from the tree nearest to the *nanja*, and the device peculiar to the totem is carved upon it.

In each *oknanikilla*, or local totem centre, there is a spot known as the *ertnatulunga*. This is the sacred storehouse, usually some cave or crevice in some unfrequented spot among the hills carefully concealed. In it are numbers of the *churinga*, often carefully tied up in bundles. (With this custom and the ideas connected with it, Frazer ['Folklore in the Old Testament,' in *Anthropological Essays presented to E. B. Tylor*, Oxf. 1907] compares the phrase used in 1 S 25^{29}.) The name *churinga*, it should be noted, means a sacred and secret emblem. No woman, under pain of death, may ever pry into the secrets of the *ertnatulunga*; boys on initiation at puberty are allowed to see and handle their *churinga nanja*; it is part of the ceremony of admission to the mysteries of the tribe—but only a part. Another and very important part is the painting on face and body of the youth who has successfully passed through the ceremonies of initiation, and is considered worthy of the honour, with the device peculiar to his totem, and he is then taken to the *ertnatulunga*. The old women know that he has been there, though they know nothing of the ceremonies. To the younger women it is a matter of the deepest mystery, for no woman dare approach the gap in which is *the sacred rock-painting*, and near to which lies the *ertnatulunga*.

The above description of the beliefs and ceremonies of the Arunta was necessary to the full

understanding of our subject, and it has brought us at last to rock-paintings. These are not peculiar to the Arunta; they have been noted all over Australia. But those previously described are not of the special type which concerns our purpose, which are found among the Arunta. These rock-paintings fall into two groups: (*a*) ordinary rock-drawings similar to those already known, and corresponding with the drawings of the Palæolithic cave-people, the primitive Egyptians, Italians, and others, in many parts of the world, and the Bushmen among modern savages; and (*b*) certain other drawings which belong to a class of designs called *churinga ilkinia*, and regarded as sacred, or secret, mysteries, because they are associated with the totems. Each local totemic group has certain of these belonging to the group, and preserved on rock surfaces which are strictly tabu to the women, children, and uninitiated men. The designs on these *churinga ilkinia*, as on the *churinga nanja*, are each distinctive of some special totem, and are so understood by the initiated natives. Now these special totemic designs of the Arunta consist of precisely the same patterns as the rock-sculpturings or paintings which are the subject of this article. They may all be classed as cup- and ring-markings. There is the central dot corresponding to the cup, surrounded by concentric circles or semi-circles, and arranged in varying patterns, sometimes joined by lines which run through and connect them, exactly as the ducts do in the sculpturings,[1] and each varying pattern has its own distinctive meaning which the native at once recognizes. One pattern belongs to the Witchetty Grub totem, while others belong to the Emu, Kangaroo, Plum-tree, Snake, Sun, Moon, etc., totems, as the case may be.

Considering, then, that primitive man may be held to have everywhere, though with local modifications, passed through the same or similar stages in his evolution from the lower to the higher plane of social organization, we may hold that we are justified in assuming that in these Arunta drawings and designs, with their well-known and recognized significance, we have, as Wood-Martin suggested (*Pagan Ireland*, p. 47, note), the solution of our problem, and may with confidence assert that the basal meaning of cup- and ring-markings, wherever found, whether belonging to pre-historic primitive man in Europe or Asia, or to modern primitive man in Australia, is not religious, but social; that, wherever found, they were totemic in their origin, and are connected with magic but not with religion.

Thus these mysterious signs may with justice be said to constitute the 'heraldry of primitive man,' and they would be known and understood by all whom it might concern, even as the Arunta understand them to-day, just as the followers of a mediæval knight, his squires and men-at-arms, recognized the blazon on the shield of their lord, or the crest on his helmet in battle or joust, or the pennon fluttering from his castle keep, and as the flag is recognized among civilized nations at the present day.

It would take us too far to trace the possible connexion between the now discovered totemic significance of cup- and ring-markings and the *lingam*-cult or Nature-worship of a later stage of culture, but we may note the primitive phase of this idea in the Arunta theory of the spirit-child conceived beside some sacred rock or tree. A similar notion meets us, as Rivett-Carnac points out, in Switzerland and Italy, and probably further research would find it elsewhere also. The spirit-child belongs to the totem of the locality in which it is conceived, and the *churinga*—both the *nanja*, the portable stone or stick, and the *ilkinia*, the rock-drawing, each sacred and secret—is the totem-badge, bearing the special design peculiar to that totem. Here we have its living and present significance. Ancient rocks and stones inscribed with cup- and ring-markings are in many parts of Europe associated with ideas belonging to the worship of the generative powers. Menhirs and monoliths not only have those marks, but are themselves symbolic of the mystery of the reproduction of life. In Switzerland they are still known as 'the babies' stone,' and, bearing this primitive notion in mind, we may see a justification for describing simple cup-markings on standing stones as representing inverted female breasts, as is done in art. CANAANITES (vol. iii. p. 178[a]). With the same association of ideas in Brittany and other Celtic districts, childless women bring offerings to the menhir, and more than one standing-stone has been christianized by the placing of a cross upon its summit.

Finally, it is quite possible that in cup- and ring-markings we also behold one of the earliest efforts of mankind to convey ideas by means of signs, and that in this sense therefore they are a form of writing. The Arunta read their meaning both in the rock-paintings, the *churinga ilkinia*, and upon the sacred sticks or stones, the *churinga nanja*, and indeed have been known on occasion to employ the latter as 'message-sticks or stones,' although in their case the *churinga* is more in the nature of a safe-conduct, rendering the bearer tabu, than an actual means of conveying ideas. Other tribes, as the Itchimundi, employ real message-sticks, but they are merely a kind of tally to mark the heads of the message, and the markings have no special meaning as conventional signs to convey a definite announcement. Still these signs, and such as the Palæolithic folk inscribed on the pebbles at Mas d'Azil, or such as are found on Neolithic dolmens in Portugal and in certain parts of Scotland, may lie at the root of the alphabets of the Ægean, and form the germ of our European alphabets. But, if cup- and ring-markings are to be taken at all as a method of conveying ideas, *i.e.* as a method of writing, it can only be of the very rudest, compared with which oghams and runes are finished alphabets. It is better to take them simply as totemic signs, having regard to their Arunta affinity, and to relate them to heraldic tokens and modern potters' marks as being tribal and family badges and marks of ownership.

[1] Munro (*op. cit.* p. 219) says, 'The cup-and-ring with gutter channels has not been found outside the British Isles,' but in Australia the line represents the 'gutter channel.'

LITERATURE.—There is a succession of articles in *Journ. Brit. Archæol. Assoc.*, in the following order: vol. xvi. (1860), Sir J. Gardner Wilkinson, 'On the Rock-basins of Dartmoor'; xxix. (1873); J. S. Phené, 'On the Uniformity of Design and Purpose in the Works and Custome of the earliest Settlers in Britain'; xxxv. (1879), J. Romilly Allen, 'Pre-historic Rock-sculptures at Ilkley'; xxxvi. (1879), C. W. Dymond, 'Cup-Markings on Burley Moor'; xlviii. (1892), Helen J. M. Russell, 'A recent Discovery at Rome in Connection with Mythology and Symbolism in Britain,' also lii. (1896), 'Some Rock-cuttings in Northumberland'; lvi. (1900), lvii. (1901), lix. (1903), and lx. (1904), a series of articles by the preseot writer leading up to the conclusions arrived at in this article. The classical hook on the subject, for its date, is, of course, Sir J. Y. Simpson, *Archaic Sculpturings of Cups, Circles, etc., upon Stones and Rocks*, Edinburgh, 1867. As regards the Arunta and other Australian natives, Spencer-Gillen[a] (1899), [b] (1904), and Howitt (1904) are the authorities. See also E. S. Rivett-Carnac, 'Cup-marks as an archaic Form of Inscription,' *Journ. R. Asiatic Soc.* 1903; Andrew Lang, *Magic and Religion*, London, 1901, with a chapter on '"Cup and Ring": An old Problem solved,' suggesting a very similar solution to that here put forward, and *The Secret of the Totem*, London, 1905, by the same author Lord Avebury, *Pre-historic Times*[6], London, 1900; R. Munro, *Prehistoric Scotland*, Edinburgh, 1899; W. Crooke, *PR*[2], Westminster, 1896; M. Hoernes, *Urgesch. der bildenden Kunst in Europa*, Vienna, 1898, also *Der diluviale Mensch in Europa*, Brunswick, 1903; E. B. Tylor, *Prim. Cult.*[4], London, 1903; J. Cooke, *Wakeman's Handbook of Ir. Ant.*, London, 1903 W. G. Wood-Martin, *Pagan Ireland*, London, 1895; S. R

Driver, *Modern Research as illustrating the Bible* (Schweich Lect.), London, 1909; R. A. S. Macalister, *Bible Side-lights from Gezer*, London, 1906; G. Schumacher, *Tell el-Mutesellim*, Leipzig, 1908. References to many additional sources of information are given in Lord Avebury's *Pre-historic Times*, and R. Munro's *Prehistoric Scotland*.

H. J. DUKINFIELD ASTLEY.

CURSING AND BLESSING.—1. Introductory.—Cursing and blessing are perfect opposites, and are therefore appropriately taken together for analysis and description. The preponderance of evil-wishing over good-wishing is obvious, but deserves consideration. Like the preponderance of evil spirits over good spirits in early religions, it points to absence of harmony or failure of adaptation in the relations of man to Nature and of man to man. But this very defect may be a condition of progress, a mark of the struggle.

The habit, in its twofold or polar aspect, is universal both in ordinary social life and in religion, organized and unorganized. It transcends all distinctions of race, and is, in fact, a permanent outcome of the working together of language and thought; for by this double mechanism are expressed wish and will, desire and determination, in that form which is, as it were, midway between psychosis and action. This does not imply that verbal utterance is a stage preceding action; we describe it as intermediate, just because cursing and blessing in their earlier forms have the appearance of being based on an unconscious theory that the word is nearer the end than is the wish, and that the act alone reaches, or rather is, the end. It follows that, in the fluid state of categorical thought which we assume for early culture, it would be both easy and natural to *assimilate* the spoken wish to the realized fact, by any appropriate means. Such artificial actualizing of the blessing or the curse is typical of all except the higher stages of the evolution. It will be illustrated later on. In passing, we may note that to describe such assimilation as a 'material' or 'concrete' tendency, or to describe the primitive mind as being essentially 'materialistic,' is to draw a false distinction. In view of the very rudimentary analysis of natural laws and of mental categories arrived at by early man, it is better to describe his mental operations by some such term as *holopsychosis*, or 'whole-thinking,' just as his language has been described as *holophrastic*. All the components are there, but they have not yet been resolved. The examples cited below will illustrate this also, besides serving to indicate that some of the earliest cases of human 'expression' are actually less material and less concrete than the latest.

The curse and the blessing are an excellent example of a product of the two powers—thought and word (or *logos*)—and of the inhibition of such a product from becoming fact. The reasons for the inhibition need no description; they are, however, the defining conditions of the curse or blessing as such, though these conditions are always, as it were, about to be transcended. This result is most conspicuous at the highest point of the curve traced by the general habit, and corresponding to a stage when words, as such, possess more *moment* than they do either before or after. As distinguished from desire on the one hand and from actualization (in artificial embodiment) on the other, the curse or the blessing *is* the spoken word. We may well suppose that the ascription to words of such super-verbal potency as a typical curse involves coincides with a period of mental evolution, and of linguistic evolution, when man became at last completely *conscious* of the 'power of speech,' of the faculty which he had so laboriously acquired. Then the word was *res*, not *nomen*. The arrival at such a point of realization amounts to a crystallizing out of at least one important category from the primal fluid of nervous life. It will be noticed that, if terms like 'concrete' and 'material' are employed, we must admit that the half-civilized and highly organized Moor is more 'primitive' than the lowest savage.

It also seems to the writer an unnecessary and illegitimate proceeding to draw a sharp division between the magical and the religious blessing or curse, or to assign priority to the former type. A savage Australian may curse his fellow mentally or verbally, in a form as far removed from magic as profane swearing among civilized men is from religion. Or, again, if he has a god, he may invoke him to execute his spoken wish. On the other hand, we find the higher religions frequently adopting a magical form; and we can sometimes trace the religious form passing into the magical. The distinction, in fact, between magic and religion, as the *form* of man's relation to his environment, seems to be a matter of temperament rather than of time. Two types certainly exist for cursing and blessing, and they will be fully discussed below; here it is premised that we have no right to assume the priority of the magical type, or even its exclusion, simultaneously, of the religious. There are, moreover, many neutral cases.

2. General character.—A curse or blessing is a wish, expressed in words, that evil or good may befall a certain person. The wish may be expressed by a god or spirit, in which case it is a *fiat*, and is wish, will, and fact in one. It may be expressed for the speaker's own good or ill. It may be, again, a mere wish or will; or an appeal to another (usually a supernatural) person to execute it; or accompanied by, or embodied in, a material object. This may be an image of the result desired; a vehicle of transmission; an object representing the curse or the blessing; or a physical action by the speaker to or towards the intended person.

For the uttered wish without condition, reference, or assimilative action, we may compare the case vividly described by Turner. The Samoan has a system of organized cursing, but at times he resorts to the natural method, and curses on his own responsibility. Discovering a theft from his garden, he shouts in a loud voice, 'May fire blast the eyes of the person who has stolen my bananas!' The cry 'rang throughout the adjacent plantations, and made the thief tremble. They dreaded such uttered imprecations.'[1] In Luang-Sermata, usual curses are: 'Evil shall devour you! Lightning shall strike you!' and so on.[2] Such is the type of the simple curse or blessing found in all races, and surviving belief in magic and in supernatural sanctions among the unthinking members of the highest civilization.

When accompanied by a material vehicle or embodiment or action, assimilative or assisting or symbolic, the adhesions of the wish become innumerable, for it links itself to the phenomena of every form of tabu, magic, and symbolism. At the back of all these there is the primary connexion with neuro-muscular discharge. Here the wish may be simultaneous with, or subsequent to, the impulsive action, just as will may be not prior to, but accompanying or following, an action of which it is the cerebral echo.

In Melanesia the act of blessing involves the bestowal of *mana* by physical contact. A man will give a boy a start in the world by placing his hand on the boy's head, thus imparting to him a portion of his own mysterious power.[3] In the Solomon Islands, inland people are supposed to have more *mana* than coast people. When they go down to the coast, they considerately avoid spreading out their fingers, for to point the fingers at a man is to shoot him with a 'charm.'[4] Blessing among the Masai consisted of spitting upon the recipient.[5] Far more common is the use of this vehicle for the curse, or as a symbol of contempt or insult.[6] So the Masai spat while cursing. 'If a man while cursing spits in his enemy's eyes, blindness is supposed to follow.'[7] The Sakai are believed to be able to do

injury by 'sendings' and 'pointings.'[1] Among the Fiort of West Africa, a sale of property becomes complete when the seller has 'blessed' the article sold. He raises his hands to his arm-pits, and throws them out towards the buyer. Then he breathes or blows over the article. This ceremony is called *ku vana mula*, 'giving the breath,' and is equivalent, says Dennett, to a 'God bless thee.'[2] It seems rather to be a personal imposition of the speaker's good-will upon both buyer and thing bought, without any supernatural reference. There is here as yet no symbolism; the intention is immediate. Examples of symbolism might be multiplied indefinitely. The shaking off of the dust of the feet is a familiar case. In Morocco a suppliant at the *siyid* of a saint will call down misfortune upon an enemy by sweeping the floor with his cloak, praying that the enemy may be swept likewise.[3] It is hardly necessary to point out that mere impulsive action, deliberate magic, and symbolism shade into each other continually.

Among the Hebrews, a blessing was imparted by the imposition of hands.[4] In blessing a multitude, the hands were uplifted.[5] Refinements are inevitable: thus, in the Greek Church the gesture of benediction is made with the right hand, the thumb touching the tip of the ring-finger, the other fingers being erected. In the Latin use, the thumb, fore, and middle fingers are erected, the others being doubled on the palm of the hand. In the Rabbinical blessing, the priest places the fingers of both hands in pairs—the forefinger with the middle, the ring with the little finger, the tips of the thumbs, and the tips of the forefingers, respectively touching one another: thus the ten fingers are in six divisions.

Other components of the wish, as it becomes a rite, may also undergo differentiation. Thus the Talmud holds that the mere power of the spoken word is efficacious.[6] The priest pronounces the blessing in a loud voice. So, in Islâm, an important detail is the audibleness of the benediction. The Talmud also speaks of cursing by an angry look. This needs to be fixed. Such a curse has been described as a 'mental curse.'[7] The *Yasts* have a remarkable dualistic personification—'the cursing Thought' of the Law of Mazda; the 'strong cursing thought of the wise man, opposing foes in the shape of a boar, a sharp-toothed he-boar, a sharp-jawed boar, that kills at one stroke, pursuing, wrathful, with a dripping face, strong and swift to run, and rushing all around.' On the other hand is the personification of 'the pious and good Blessing.' This Blessing (*âfriti*) is two-fold—by thought and by words. It is notable that the blessing by words is the more powerful; but the curse (*upamana*) by thought is more powerful than that by words.[8]

The indeterminate character of primitive thought makes interchange easy between thought, idea, word, and act, and also between mechanical, psychical, and verbal force. Thus a curse or blessing may be regarded now as a spirit, now as a thing, now as a word, but in each case it is charged with energy. Or, again, it may be regarded as travelling along a material or psychical conductor, or as embodied in a material object, its energy then being potential, ready to become kinetic when discharged. It is important to note that these early views are held in comparatively late culture, especially in religion, and there show every sign of being living beliefs, not survivals.

When we remember the emphasis laid in all but the latest culture on words and names, we can appreciate the confusion, or rather the shifting, between the material and the verbal notion of a curse or blessing. Thus, in whatever form it is expressed, the curse or blessing, like all expressions of an idea enforced by strong emotion, has a dynamical certainty. Irish folklore has it that a curse once uttered must alight on something; it will float in the air seven years, and may descend any moment on the party it was aimed at; if his guardian angel but forsake him, it takes forthwith the shape of some misfortune, sickness, or temptation, and strikes his devoted head.[9]

'Curses' in old Teutonic proverbs 'operate quickly'; they are 'not to be turned aside.'[10] What Grimm describes as the 'savage heartiness' of the curses which he records is the emotional force which has so much to do with making an impression, whether in the direction of 'suggestion' to the victim or, generally, of the ascription of 'power' to the word or act. Emotional force as a factor in the making both of magic and of religion deserves recognition. It is well illustrated by blessings and cursings in their growth; when their forms are fixed, naturally the form is everything, and a curse uttered casually and without heat may still be efficacious. To the priestly blessing in the synagogue magical powers were ascribed, and the OT states that the word once pronounced is irrevocable.[1] The Talmud warns against looking at the priest while he is pronouncing the blessing, for 'the glory of God is on him.' It is a natural process of suggestion working through strength of emotion, fear of ill-will and enmity, and reinforced by a complex of associated ideas relating to the essence of words and the energy of souls, that gives to the curse or blessing its independent 'power.' As it is put by Westermarck, this

> 'purely magical power, independent of any superhuman will . . . is rooted in the close association between the wish, more particularly the spoken wish, and the idea of its fulfilment. The wish is looked upon in the light of energy which may be transferred—by material contact, or by the eye, or by means of speech—to the person concerned, and then becomes a fact. This process, however, is not taken quite as a matter of course; there is always some mystery about it.'[2]

Just as sin 'is looked upon as a substance charged with injurious energy,' so the curse is 'a baneful substance,'[3] like the materially conceived *badi* of the Malays, and the *l-bas* of the Moors. Good and evil in all but the higher stages of thought are constantly 'embodied,' either by analogy, personification, or the much more normal and prevalent mode of mere mental objectification. To illustrate this last we may compare the precisely identical method, used in science, of *conceiving* of a force as a graphic straight line.

This conception is characteristic of the curse and blessing in their social and religious history.

Arabs when being cursed will lie on the ground that the curse may fly over them.[4] Among the Nandi, 'if a son refuses to obey his father in any serious matter, the father solemnly strikes the son with his fur mantle. This is equivalent to a most serious curse, and is supposed to be fatal to the son unless he obtains forgiveness, which he can only do by sacrificing a goat before his father.'[5] Berbers strip before taking an oath, to prevent it from clinging to their clothes.[6] Plato speaks of being 'tainted by a curse.'[7] Arabs fear 'the magical nature' of an oath.[8] The 'water of jealousy' was believed by the Hebrews, as causing a curse, to go into the bowels, to make the belly to swell, and the thigh to rot.[9] The Kachinzes 'bless' their huts by sprinkling them with milk.[10] The Nubians, before eating the tongue of an animal, cut off the tip, believing that 'here is the seat of all curses and evil wishes.'[11] Among the islanders of Leti, Moa, and Lakor, a man who has quarrelled with a woman is afraid to go to war lest her curses may bring death.[12]

Hence the recipient of a curse is anxious to neutralize or divert it. In the last case cited the man is at pains to secure forgiveness by making presents to the woman. In Melanesia the curse is an engine of authority. A chief will curse a man by way of a legal 'injunction'; the matter is put right by the method of *toto*, the offering of a gift. On receiving this, the chief sacrifices to the spirit, *lio'a*, on whose power his curse rested.[13] In Samoa there is the same system, particularly for the enforcement of the rights of property. In a case of theft, the injured party gives the priest a fee of mats. The priest curses the thief; the latter, to avoid the otherwise inevitable result of sickness or death, deposits at the door of the priest an equivalent for the stolen property. Then the priest prays over 'the death bowl' that the curse may be 'reversed.'[14] The Maoris employed an elaborate ritual for cursing and its reversal. The latter was *whakahokitu*; the *tohunga* employed to counteract the curse chanted a *karakia* containing such words as these:

> 'Great curse, long curse,
> Great curse, binding curse,
> Come hither, sacred spell!
> Cause the curser to lie low
> In gloomy night!'[15]

The Todas have a curious ceremony for anticipating mischief to the sacred cattle. The point of the rite is that the assistant in the dairy, the *kaltmokh*, is cursed and then the curse is at once removed. The dairy-priest, the *palol*, pours milk and clarified butter into the outstretched hands of the *kaltmokh*, who rubs it over his head and whole body. The *palol* chants a curse: 'Die may he; tiger catch him; snake bite him; steep hill fall down on him; river fall on him; wild boar bite him!' etc. Rivers infers 'that the *kaltmokh* is being made responsible for any offence which may have been committed against the dairies. . . . The *kaltmokh* having been cursed, and so made responsible, the curse is then removed in order to avoid the evil consequences which would befall the boy if this were not done.'[1] Toda sorcerers impose diseases by cursing-spells, and remove them with some such formula as, 'May this be well; disease leave!'[2] Thus a blessing may neutralize a curse. Micah's mother cursed her son for his theft; when he confessed, she rendered the curse ineffective by a blessing.[3]

Blessings and curses are capable both of descent and of ascent, genealogically. Thus, we find it stated in Sir 23[11] that 'the scourge shall not depart from his house'; and in Pr 20[7] 'a just man that walketh in his integrity, blessed are his children after him.'

The Basutos appear to have the belief in the descent of the curse; Casalis compares it with the case of Noah and Ham.[4] The Greek conception of the Erinyes laid stress on this; a curse might work down to the grandchildren, and even utterly extirpate a race.[5] Among the Maoris, 'to bid you go and cook your father would be a great curse, but to tell a person to go and cook his great-grandfather would be far worse, because it included every individual who has sprung from him.'[6]

The energy of a curse may spread. As Irish folklore puts it, it 'must alight on something.' Plato speaks of it tainting everything with which it comes in contact.

The Bedawîn will not take an oath within or near the camp, 'because the magical nature of the oath might prove pernicious to the general body of Arabs, were it to take place in their vicinity.[7] The Moors hold that it is 'bad even to be present when an oath is taken.'[8]

A remarkable detail is very commonly found, namely, that a curse may return to the man who uttered it. 'Curses, like chickens, come home to roost'; 'they turn home as birds to their nest.'[9] The Karens have a story to the following effect:

'There was a man who had ten children, and he cursed one of his brethren, who had done him no injury; but the curse did the man no harm, and he did not die. Then the curse returned to the man who sent it, and all his ten children died.'[10]

Here there is a moral valuation, but the earlier non-moral conception of the intrinsic energy of the curse constitutes the point of the story. With it may be compared the Roman notion that certain imprecations were so awful that even the utterer suffered as well as his victim.[11]

As with the force of tabu and similar conceptions, physical contact is the most efficacious means of 'transmission.' If we regard the curse or blessing as being the mental idea of a desired material result, then, like all ideas in an impulsive brain, it produces motor energy in the form both of words and of action. Thus, besides the uttered form, we have, by association, paths of realization by means of sympathetic or symbolic action. Examples have been cited of such 'assisting' of the wish, by gestures, direct or indirect. We have also, by association, the more highly differentiated method of sympathetic or symbolic creation. A material model or symbol of the result is desiderated as a pre-embodiment of it; later this becomes a cause and a guarantee of the result. The simplest form of this method is the use of the 'wax image.' In this, model and symbol shade into one another. The image represents the recipient, and the utterer of the wish either utters it over the image, or works upon the image the material result wished for.

So far, we have cases in which the curse or blessing preserves its mental or verbal character, 'mental' being taken to include artistic materialization, as in sympathetic magic. For the curse or blessing, as such, is distinguished from physical injury or physical benefit precisely because it stops short of physical action by the subject upon the object. But the two were bound to be combined; the mixed type of curse and blessing is as common as the pure, and in certain stages of culture is considered to be the more efficacious. The bestowal of a blessing is more efficacious when the man who confers it touches the man who receives it. When dealing with 'vehicles' and 'media' of curses and blessings, we are not entitled to suppose that even in their highest development the mind is conscious of a process of 'conduction.' To us it appears obvious that, when a suppliant holds one end of a string to the other end of which is attached his protector, each should regard the string as a bridge or a wire for transmission. But it would be more logical to credit them with a correct, than an incorrect, application of a physical law, and to argue that they consider will to be conducted by any part of the ether rather than by the wire. It seems more consistent with the evidence to regard these 'conductors' as being merely the nearest thing to physical contact. The sense of touch is bound up with all direct physical action upon an object, well-doing and ill-doing, and colours all ideas of it. Similarly, when we read of curses acting at a distance—in the case of the Australian sorcerer at a hundred miles—we are not entitled to credit the belief with a reasoned or even unconscious substratum of a quasi-scientific theory of the velocity and displacement of an imprecatory particle. It is quite possible that in the case of 'conductors' of various magical 'forces,' such as food and drink, we have to deal as much with the associational idea of *property* as with that of kinship, or of contagion. With this proviso, such metaphors may be employed. Westermarck writes:

'The efficacy of a wish or a curse depends not only upon the potency which it possesses from the beginning, owing to certain qualities in the person from whom it originates, but also on the vehicle by which it is conducted—just as the strength of an electric shock depends both on the original intensity of the current and on the condition of the conductor. As particularly efficient conductors are regarded blood, bodily contact, food, and drink.'[1]

As early types of the ideas, referred to above, which are connected with that of the fulfilment of a wish, we may cite the following:

A Maori would say to a stone: 'If this were your (his enemy's) brain, how very sweet would be my eating of it. Or he might call any object by the name of his enemy, and then proceed to strike or insult it. This process was a 'curse,' *tapa tapa*, or *tuku tuku*.[2] Here is the material for the development of the image-method and the symbol-method. In the Toda curse the recipient apparently has it rubbed into his body with milk and butter. It is quite legitimate to regard this as a case where the sound and the breath 'touch' the food, and hence the recipient. The Moor transmits his 'conditional curse' to the man appealed to for protection by grasping him with his hands, or by touching him with his turban or a fold of his dress, even by grasping his child or his horse. 'In short, he establishes some kind of contact with the other person.'[3] Psychologically it is a case of prolepsis rather than the conduction of a curse whose fulfilment is only contingent. Similarly the Moorish suppliant may slay an animal at the door of the man. If the latter steps over the blood, or merely sees it, he incurs a conditional curse. Such a curse may be involved in the food eaten at a meal to seal a compact. The phrase runs that 'the food will repay' him who breaks it. The eaten food 'embodies a conditional curse.'[4] Conversely, for, as Westermarck puts it, 'the magic wire may conduct imprecations in either direction,' if a Moor gives food or drink to another, 'it is considered dangerous, not only for the recipient to receive it without saying "In the name of God," but also for the giver to give it without uttering the same formula by way of precaution.'[5] In the case of a stranger receiving milk, it is held that, should he misbehave, 'the drink would cause his knees to swell.'[6]

[1] *MI* i. 586. [2] Taylor, 94.
[3] Westermarck, i. 586. [4] *Ib.* 587.
[5] *Ib.* i. 590. [6] *Ib.*

On similar principles a curse may be applied to something that has belonged to the recipient, or to something that may come in his way.

The aborigines of Victoria 'believe that if an enemy gets possession of anything that has belonged to them, even such things as bones of animals which they have eaten, broken weapons, feathers, portions of dress, pieces of skin, or refuse of any kind, he can employ it as a charm to produce illness in the person to whom it belonged. They are, therefore, very careful to burn up all rubbish or uncleanness before leaving a camping-place. Should anything belonging to an unfriendly tribe be found at any time, it is given to the chief, who preserves it as a means of injuring the enemy. This *wuulon* is lent to any one of the tribe who wishes to vent his spite against anyone belonging to the unfriendly tribe. When used as a charm, the *wuulon* is rubbed over with emu fat, mixed with red clay, and tied to the point of a spear-thrower, which is stuck upright in the ground before the camp-fire. The company sit round watching it, but at such a distance that their shadows cannot fall on it. They keep chanting imprecations on the enemy till the spear-thrower turns round and falls in his direction.'[1]

This example contains in solution a good many of the principles connected with cursing. There is also the buried curse.

In Tenimber one can make a man ill by burying in his path such objects as sharp stones or thorns, uttering a curse during the burial. These articles are extracted later from the victim's body by the surgeon.[2] In the neighbouring islands of Leti, Moa, and Lakor, the buried articles are pieces of *sirih* from the victim's own box, or a scrap of his hair. The cursing accompanies the burial, but there is no need to place the embodied curse' in the man's path. Burial is enough, for here the object buried is a part of the man.[3]

Thus we come back to the symbolized result. Again, in connexion with *tabu* upon property, Codrington observes that in Melanesia

'a *tambu* approaches to a curse, when it is a prohibition resting on the invocation of an unseen power,' that, namely, of the *tindalo*.[4] In Ceram a trespasser incurs the sickness wished or determined by the owner who embodied it in a tahu-mark.[5] In Samoa the 'silent hieroglyphic taboo,' or *tapui*, contains a curse; thus, the white shark tabu, a coco-palm leaf cut to represent a shark, contains the wish, 'May the thief be eaten by a white shark!'[6]

Even before the ethical stage of the curse or blessing is reached, their force varies, chiefly according to the character of the wisher. There is, of course, to begin with, the mere 'power of the word' or of the wish; and the curse of any one, 'however ignorant' he may be, is not to be disregarded.[7] But, as a rule, superiority of personal power or position increases the power of the blessing or the curse.

Among the Tongans the curses of a superior possessed great efficacy; 'if the party who curses is considerably lower in rank than the party cursed,' the curse had no effect.[8] 'Without any dispute the less is blessed of the better.'[9] The principle of the *whakahokitu* ceremony of the Maoris is that a curse will yield to the *mana* of a man who can summon a more powerful *atua* than that of the original curser.[10]

The importance and influence of parents, especially of the father, have an enormous effect.

The Nandi regard a father's curse as being 'most serious.'[11] Among the Mpongwe 'there is nothing which a young person so much deprecates as the curse of an aged person, and especially that of a revered father.'[12] The Moorish proverb has it that 'if the saints curse you the parents will cure you, but if the parents curse you the saints will not cure you.'[13] The Hebrew belief in the inevitable efficacy of a father's blessing or curse was remarkable. The blessing was regarded as an invaluable heritage. 'In deed and word honour thy father, that a blessing may come upon thee from him. For the blessing of the father establisheth the houses of children; but the curse of the mother rooteth out the foundations.'[14] From this passage it has been suggested that 'the reward which in the Fifth Commandment is held out to respectful children was originally a result of parental blessings.'[15] The Scots proverb is similar:

'A faither's blessin' higs the toun;
A mither's curse can ding it doun.'[16]

In Greece such beliefs were no less strong. Plato puts it that 'the curses of parents are, as they ought to be, mighty against their children, as no others are.' And he instances the cursing of their sons by Œdipus, Amyntor, and Theseus. The man who assaulted his parent was polluted by a curse.[1] According to the Koreans, 'curses and disgrace in this life and the hottest hell in the world hereafter are the penalties of the disobedient or neglectful child.'[2]

The last two cases show the automatic production of a curse by the sin itself—a notion distinctly tending towards the ethical development of these relations.

The Bares and Kunáma believe that the blessing of the old people is necessary for the success of any undertaking, and that their curse is inevitably efficacious.[3] Even elder brothers and sisters among the Greeks had the preponderance in this respect over the younger; 'the Erinyes always follow the elder-born.'[4]

The curse or blessing of the dying is particularly strong.[5]

The Ova-Herero chief, when about to die, 'gives them his benediction,' a wish for 'an abundance of the good things of this world.'[6] Similarly among the Hebrews and the Arabs.[7] Among the Bogos the blessing of a father or a master is essential before taking up an employment or relinquishing it, engaging in a business, or contracting a marriage.[8] The Moors say that 'the curse of a husband is as potent as that of a father.'[9] Westermarck points out that 'where the father was invested with sacerdotal functions—as was the case among the ancient nations of culture—his blessings and curses would for that reason also be efficacious in an exceptional degree.'[10]

Obviously the wishes of one who is professionally in touch with the magical or the supernatural are more efficacious than those of ordinary men.

'The anathems of a priest,' say the Maoris, is 'a thunderbolt that an enemy cannot escape.'[11] A Brāhman 'may punish his foes by his own power alone,' viz. by his words.[12] A Rājput rāja, being cursed by Brāhmans, was 'under a ban of excommunication' even among his friends.[13] There is a story that the curse of a Brāhman girl brought a series of disasters on a rāja and his kindred.[14] According to the Talmud, the curse of a scholar never fails.[15] The Gallas dread the dying curse of a priest or wizard.[16] In Muhammadan countries the curses of saints or sharifs are particularly feared.[17]

The belief in the power of curses and blessings has a striking and widely extended application in the relations of the well-to-do with the poor and needy, and of the host with the guest. In the former case the idea that the blessing of those who have nothing else to give, or the curse of those who have no other remedy, is therefore efficacious, may have some connexion with the belief and practice. In the latter case may perhaps be seen a naturally regardful attitude towards the unknown and therefore mysterious.

'He that giveth unto the poor shall not lack; but he that hideth his eyes shall have many a curse.'[18] 'Turn not away thine eyes from one that asketh of thee, and give none occasion to a man to curse thee; for if he curse thee in the bitterness of his soul, he that made him will hear his supplication.'[19] The Greek beggar had his Erinys.[20] The Damaras 'would not think of eating in the presence of any of their tribe without sharing their meal with all comers, for fear of being visited by a curse from their *Omu-kuru* (or deity) and becoming impoverished.'[21] In Morocco, itinerant scribes go from house to house, 'receiving presents and invoking blessings' upon the donors. For the latter it is 'a profitable bargain, since they would be tenfold repaid for their gifts through the blessings of the scribes.' A Moor starting on a journey gives a coin to a beggar at the gate 'so as to receive his blessings.'[22] The Nayādis of Malabar invoke, in their prayers, blessings upon the higher castes who give them alms.[23] Among the Ova-Herero 'no curse is regarded as heavier than that which one who has been inhospitably treated would hurl at those who have driven him from the hearth.'[24] An offended guest 'might burn the house with the flames of his anger.'[25] Guests and supplants had their Erinyes.[26] To

the case of hospitality Westermarck applies the principle of the 'conditional curse,'[1] which will be discussed below.

Parallel with the case of the poor and needy is that of the servant and the wife.

In West Africa 'the authority which a master exercises over a slave is very much modified by his constitutional dread of witchcraft.'[2] 'Slander not a servant unto his master, lest he curse thee.'[3] 'Thou shalt not command [thy man-servant or thy maid-servant] with bitterness of spirit; lest they groan against thee, and wrath be upon thee from God.'[4] 'In Morocco it is considered even a greater calamity to be cursed by a Shereefa, or female descendant of the Prophet, than to be cursed by a Shereef.'[5] 'The houses,' says Manu, 'on which female relations, not being duly honoured, pronounce a curse, perish completely, as if destroyed by magic.'[6]

3. Special applications.—The circumstances in which blessings or curses are uttered, and the persons upon whom they are directed, are obviously both numerous and varied. A few special cases may be cited, which have a bearing upon the nature of the uttered wish. Children, in particular, are the recipients of the blessings of parents.[7]

The blessing of Ephraim and Manasseh by Jacob became among the Jews the regular formula by which parents blessed their children. Among the Malagasy, at a circumcision, the guests present honey and water to the children, and pronounce blessings upon them, such as 'May they prosper!'[8] Among the Maoris, when a child was a month old, the ceremony of *tua* was celebrated, in which the *tohunga* pronounced a *karakia* of blessing: 'Breathe quick, thy lung,' etc.[9] Jewish teachers to-day bless their pupils. In Fiji all prayer was concluded with malignant requests against the enemy: 'Let us live, and let our enemies perish!'[10]

The curse is particularly the weapon of the wronged and oppressed against their more powerful enemies, and of zealots against their bigoted opponents. In the Bible it is especially forbidden to curse God, parents, authorities, and the helpless deaf.[11] To bless God is to praise Him. Yet Orientals have a tendency to curse God, even on the slightest provocation in daily life.[12] Blessing the king is implied or explicit in ceremonies of coronation, and on solemn occasions.

The gods of Egypt bestowed a blessing on the Pharaoh, when they presented him with the symbol of life.[13] The *abhiṣeka* of the rāja included a blessing, embodied in the consecrated water: 'O water, thou art naturally a giver of kingdoms, grant a kingdom to my Yajamāna'; 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajamāna.'[14] The ceremonies of anointing and the like often involve a blessing.[15] In the last example, the vehicle is personified. A Jewish author records a Roman custom of gagging prisoners, when condemned to death, to prevent them from cursing the king.[16]

The connexion of food with the practice is remarkable. The blessing of food came in later Judaism to be a giving of thanks, and the idea was that food received gratefully acts as a blessing.[17] The *bismillah* of Islām has a similar principle behind its use in this connexion. At an earlier stage, no doubt, the blessing, if used, was either positive or negative, removing injurious properties, but in either case simply magical.[18]

In the Banks Islands an 'invocation of the dead,' the *tataro*, is celebrated. Food is thrown for the souls of the dead with such words as these: 'They who have charmed your food, have clubbed you . . . drag them away to hell, let them be dead.' In connexion with this is a practice of cursing a man's 'eating'; if an accident befalls the recipient of such a curse, the utterer says: 'My curse in eating has worked upon him, he is dead.'[19] Among the Maoris, what was almost a sense of modesty and a principle of honour grew up about the ideas of food and its preparation. A typical formula for the counter-curse is:

> 'Let the head of the curser
> Be baked in the oven,
> Served up for food for me,
> Dead, and gone to Night!'[20]

To curse, *kanga*, was in effect to apply to another man any word which 'had reference to food.' It is recorded that a young man, seeing a chief in a copious perspiration, remarked that 'the vapour rose from his head like steam from an oven,' and that this remark caused a tribal war.[1] The regular term for food, *kai*, was discontinued at Rotorua, because it happened to be the name of a chief. To use the term *kai* would in that case have been equivalent to a serious curse against the chief.[2]

Down to a late period in the history of Christianity, marriage was a personal 'arrangement'; the Church only stepped in to pronounce its blessing upon the union. The Hebrews had a benediction both for betrothal and for marriage.[3] The old Roman marriage by *confarreatio* included a *benedictio*, formulæ for which are extant. When St. Ambrose says that 'marriage is sanctified by the benediction,' he refers to one case only of a general practice, lasting through the Middle Ages, of concluding all private arrangements with a blessing. Thus all sales of goods and property were blessed.

The application of the curse as a protection of property and as a method of punishing theft has been incidentally noted. The early Arabs cursed the thief in order to recover the stolen goods.[4] The method is conspicuous in Samoa. Tabu is 'a prohibition with a curse expressed or implied.'[5] The embodiment of the wish in leaf or wooden images is termed in Polynesia *rahui* or *raui*, but we cannot always infer even the implied wish in prohibitory *tabu*.[6] Allied principles inevitably shade into each other. The ancient Babylonian landmarks appear to have been inscribed with curses, such as: 'Upon this man may the great gods Anu, Bêl, Ea, and Nusku look wrathfully, uproot his foundation, and destroy his offspring.'[7] The same practice was followed by the Greeks.[8] Deuteronomy refers to the Semitic practice: 'Cursed be he that removeth his neighbour's landmark.'[9] Taken over by Christianity, the practice survived, for example, in the English custom of 'beating the bounds,' in which the priest invoked curses on him who transgressed, and blessings on him who regarded the landmarks.[10]

Some details may be put together which illustrate adhesions and developments. In Melanesia cursing by way of asseveration is common: a man will deny an accusation 'by' his forbidden food, or 'by' a *tindalo*.[11] The self-invoked curse, which we shall discuss below, passes in civilization into a conditional blessing, as in the English oath, 'So help me, God.' In practical ethics 'profane swearing' is originally sinful, because of the irresponsible and unofficial use of the Divine name; later its sinfulness is limited to the spirit of resentment with which it is charged. In Melanesia, the practice of *vivnag*, or 'sending off,' is instructive for comparison with that found in civilization. A man will say, with a gesture towards a tree, *vavo aru!*—which is equivalent to telling his enemy to be hanged thereon.[12]

The limits of the blessing are well preserved in the Catholic distinctions between *panis benedictus* and *panis consecratus*, and between *benedictio vocativa* and *benedictio constitutiva*. The earlier principle, as we have seen, was to connect blessing and consecration, cursing and execration. It is in accordance with the extension of this principle that the curse is embodied in the 'accursed thing,' and that the transgressor of the

prohibition himself becomes the 'accursed thing' or the curse. This was the case with Achan, and with enemies 'devoted' to destruction.[1] On the same principle a blessed man is a 'blessing.'[2]

In the OT 'accursed' (AV), *hērem*, should be 'devoted' (RV)—devoted to God, not accursed from God.[3] Similarly with the Greek translation *ἀνάθεμα*. Such a thing is withdrawn from common use, either as 'vowed' to God, or as put under a ban, in which case it has a species of 'holiness.'[4] As a rule, a thing devoted to destruction is under a curse. In Canon Law the development of *anathema* into excommunication is complete.

Here we arrive at the cursings and blessings of the community. In early culture a headman or body of 'old men' may represent the community in this function.

The State officials of Athens prayed for 'the health and safety of the people.' Greek State-liturgies included a 'commination service,' in which curses were invoked upon offenders.[5] Mediæval and modern Christianity combine a service of commination with the Lenten penance. This has historical connexion with the early Hebrew rite, celebrated on Ebal and Gerizim. Six tribes stood on Mount Ebal to curse those who disobeyed the Law, and six stood on Mount Gerizim to pronounce the corresponding blessings upon those who kept it. The priests and Levites stood in the valley between, and on turning their faces to Gerizim pronounced a blessing, and on turning them to Ebal pronounced a curse.[6] The Talmudic idea that a curse has especial efficacy when pronounced three hours after sunrise is noteworthy in connexion with such formulated conditions as 'in the sight of God and of this congregation.'[7]

Throughout their history, private cursing and blessing preponderate over public, and unofficial over official. As the moralized stage in religion supersedes the magical, the 'mere power of the word' is confined to private practice, and perhaps becomes more sinister with secrecy. The enormous collections of private *diræ* and *imprecationes* which have survived from Greek and Roman times, chiefly in the form of leaden tablets or symbolic nails, inscribed with curses consigning an enemy to the infernal powers, testify to the hold retained by the primitive theory of the curse, just as the prevalence of profane swearing in modern civilization shows the convenience of the mere form, emptied of all content except vague resentment, for the satisfaction of a particular emotion. The hold exerted by the simple mystery of magic upon the popular imagination is echoed in literature, and the motive of the efficacious curse is still employed in narrative fiction.

Nothing perhaps more strikingly illustrates the extent of Divine resentment than the cursing of the ground for the sins of man (Gn $3^{17f.}$), or the extent of human resentment than the action of a curse beyond the grave.

The Maoris took precautions to prevent enemies from getting possession of their dead relatives' bones, lest they should 'dreadfully desecrate and ill-use them, with many bitter jeers and curses.'[8] The Banks Islanders watch the grave 'lest some man wronged by him [the dead man] should come at night and beat with a stone upon the grave, cursing him.' Also, 'when a great man died, his friends would not make it known, lest those whom he had oppressed should come and spit at him after his death, or *govgov* him, stand bickering at him with crooked fingers and drawing in the lips, by way of curse.'[9] The Greek Erinyes complete in the world beyond the grave the punishment which they began on earth.[10] The Arabs of Southern Morocco 'maintain that there are three classes of persons who are infallibly doomed to hell, namely, those who have been cursed by their parents, those who have been guilty of unlawful homicide, and those who have burned corn. They say that every grain curses him who burns it.'[11]

The connexion between curses and the belief in punishments after death has been drawn out by Westermarck.[12]

In what may be called the lighter side of cursing, there is a curious set of customs connected with ideas of luck, and perhaps based on the notion that material injury may be discounted or diverted by a verbal or make-believe injury; in other cases, on a notion that the spirits may be stimulated by scolding and abuse; in others, again, it is perhaps evil and obstructive spirits that are being driven away.

Thus the Greek farmer, when sowing cummin, would curse and swear all the time, else the crop would not prosper.[1] Esthonian fishermen believe that good luck will attend their fishing if beforehand they are cursed. A fisherman will accordingly play some practical joke on a friend in order to receive his resentment in words. The more he storms and curses, the better the other is pleased; every curse brings at least three fish into his net.[2] To obviate punishment for ritual sin, or to 'procure absolution,' a Behari man will throw stones into a neighbour's house. The result is the reception of abuse, or even of personal violence.[3]

4. **Conditional cursing and blessing.**—What Westermarck terms the 'conditional curse,' which he was the first student to remark, is an important development of the principle of cursing and blessing, and has had considerable influence in the making of morality, especially in the sphere of good faith, honesty, and truthfulness. Put in its lowest terms, the energy of a conditional curse is the supernatural energy of an ordinary curse or of its embodiment, in a latent state. This is discharged by the act, if or when it takes place, against which the curse is directed. The principle applies also to blessings, but this application is less frequent.[4]

'The term *l-'ârr*,' Westermarck writes, 'is applied by the Moors to a compulsory relation of a peculiar kind in which one person stands to another. The common expression, *Ana f'âr allâh u 'ârak*, "I am in God's *'âr* and your *'âr*," implies that a man is bound to help me, or, generally, to grant my request, whatever it may be, as also that if he does not do so his own welfare is at stake. The phrase "In God's *'âr*" only serves to give solemnity to the appeal: "I am under the protection of God, and for his sake you are obliged to help me." But the word *l-'âr* is also used to denote the act by means of which a person places himself in the said relationship to another. *Hâd l-'âr 'âlik*, "This is *'âr* on you," is the phrase in common use when an act of this kind is performed. If the person so appealed to is unwilling to grant the request, he answers, *Hâd l-'âr yiḫrûż fik*, 'May this *'âr* recoil upon you." The constraining character of *l-'âr* is due to the fact that it implies the transference of a conditional curse:—If you do not do what I wish you to do, then may you die, or may your children die, or may some other evil happen to you. That *l-'âr* implicitly contains a conditional curse is expressly stated by the people themselves, although in some cases this notion may be somewhat vague, or possibly have almost faded away.'[5]

The various acts which establish *l-'âr* all serve as 'outward conductors of conditional curses.' *'Âr* may be made by taking the son and giving him to the father, saying, 'This is *'âr* for you.' Another method is to present food. If the man accepts, he is bound to do what is asked of him. Refugees enter a tent or merely grasp the tent-pole, saying, 'I am in God's *'âr* and your *'âr*.'[6] An injured husband may put *'âr* upon the governor, to get redress, by going to him with a piece of his tent-cloth over his head; or he may leave seven tufts of hair on his head, and appeal to another tribe. 'The conditional curse is obviously supposed to be seated in' the tent-cloth or tufts of hair, and 'from there to be transferred to the person' invoked. *'Âr* may be made by piling stones. Two men making an appointment, and one failing to appear, the other makes a cairn at the spot, and takes the breaker of faith to it. The latter is then obliged to 'give him a nice entertainment.' Similarly, with ordinary curses the cairn may be used. If a muleteer buys a new mule, his comrades ask him to treat them. If he refuses, they

make a cairn, asking God to send misfortune on the mule. By way of revenge upon a niggardly man, scribes make a cairn, and each takes a stone therefrom, and, as he throws it away, says: 'As we dispersed this heap of stones, so may God disperse for him that which makes him happy.' The sacrifice of an animal on the threshold is the most powerful method of making *'ârr*. To see the blood is sufficient. Over such an animal the *bismillâh*, 'In the name of God,' is not pronounced; and it cannot be eaten by the sacrificer or the person invoked, but only by the poor.[1] The practice

'is resorted to for a variety of purposes: to obtain pardon from the government; or to induce the relatives of a person who has been killed to abstain from taking revenge; or to secure assistance against an enemy or mediation in the case of trouble.' It 'plays a very important part in the social life of the people.'[2]

It is also employed to put pressure upon *jinn* and dead saints—usually to restrain the former, and compel the assistance of the latter. Making cairns, or tying rags, near a *sîyid* is *'ârr* upon the saint. The rag is knotted, and the man says: 'I promised thee an offering, and I will not release thee until thou attendest to my business.'[3] Here we approach the conditional 'blessing.' Again, a man, invoking revenge, strews burnt corn on the floor of the *sîyid*, saying: 'I threw, O saint, So-and-so as I threw this corn.' 'This is *'ârr* on the saint,' as Westermarck points out, 'but at the same time it is an act of symbolic magic.'[4]

Forms of ordeal, and the whole theory of the oath, as well as its practice up to the latest stages of civilization, depend on the principle of the conditional curse, often embodied in symbolic action.

The curse as an engine of law is well exemplified in Samoa. A theft has taken place; the injured party pays the 'priest' to curse the thief and make him sick. If the thief falls ill, he restores the stolen property, and the 'priest' prays for a reversal of the curse. Again, suspected parties are summoned by the chief. Grass is laid on the sacred stone, the village-god, and each person places his hand thereon, saying: 'I lay hand on the stone. If I stole the thing, may I speedily die!' The use of grass is said to refer to the implied curse: 'May grass grow over my house and family!' So, in ordinary disputes, a man will say: 'Touch your eyes if what you say is true.'[5] In the same way, European boys 'touch wood' as a guarantee of truth.

An oath may be regarded as 'essentially a conditional self-imprecation, a curse by which a person calls down upon himself some evil in the event of what he says not being true.'[6] All the resources of symbolic magic are drawn upon in the multitudinous examples of this principle.

In Teoimber the swearer prays for his own death if what he says is false, and then drinks his own blood, in which a sword has been dipped.[7] The Malay drinks water in which daggers, spears, or bullets have been dipped, saying: 'If I turn traitor, may I be eaten up by this dagger or spear!'[8] The Sumatran oath is still more explicit: 'If what I now declare is truly and really so, may I be freed and cleared from my oath; if what I assert is wittingly false, may my oath be the cause of my destruction!'[9] The Greek ὅρκος was, at an early period, the object sworn 'by.' The Ostyaks swear on the nose of a bear, which animal is held to have supernatural power.[10] Hindus swear on the Sanskrit *Harivaṁśa*, or on water of the Ganges, or touch the legs of a Brâhman; Muhammadans, on the Qur'an; Christians, on the Bible.[11]

The accused person in Calabar drinks a ju-ju drink called *mbiam*, and repeats these words: 'If I have been guilty of this crime . . . then, Mbiam, *Thou* deal with me!'[12] 'Eating the fetish' and 'drinking the water of cursing' are prominent forms of the ordeal in Africa and elsewhere. The Hindu *śapatha* denotes both oath and ordeal. The mediæval 'trial by combat' was preceded by an oath, and thus defeat was tantamount to perjury.[13] The formula of the ordeal of the Eucharist ran: 'Et si aliter est quam dixi et juravi, tunc hoc Domini nostri Jesu Christi corpus non pertranseat guttur meum, sed haereat in faucibus meis, strangulet me suffocet me ac interficiat me statim in momento.'[1]

In the contract and covenant a mutual conditional curse is largely used.

Thus the *'âhêd* of the Moors is the mutual form of *'ârr*. Chiefs exchange cloaks or turbans; and 'it is believed that, if any of them should break the covenant, he would be punished with some grave misfortune.'[2] Reconciliation is effected, among the same people, by joining right hands; the holy man who superintends wraps the hands in his cloak, saying: 'This is *'âhêd* between you.'[3] A common meal also ratifies a covenant. If one party breaks faith, it is said: 'God and the food will repay him.'[4] In the *pela* rite of Ceram, celebrated to settle a quarrel or to make peace, both parties attend a feast, and eat food into which drops of their blood are let fall and swords dipped. This they alternately eat.[5] Reconciliation of two men in the islands of Leti, Moa, and Lakor, one man having cursed the other, is effected by the men eating together.[6] To ratify a bond of fraternity in Madagascar between two parties, a fowl has its head cut off, and is left bleeding during the rite. The parties pronounce a long mutual imprecation over the blood: 'O this miserable fowl weltering in its blood! Thy liver do we eat. . . . Should either of us retract from the terms of this oath, let him instantly become a fool, let him instantly become blind, let this covenant prove a curse to him.'[7]

The mutual conditional curse, it must be noticed, allows the curse proper to be more or less lost in the material symbolism of union. Since, moreover, all these analogous principles pass into one another so inevitably and gradually, we do not seem entitled to press the principle of the curse too far. In reconciliatory ceremonies, for instance, it is possible that the idea of union is sufficient; the idea of the curse may adhere to it, but not essentially.

The oath carries with it the punishment for perjury. According to Roman legal theory, the *sanctio* of a statute is the penalty attached for breaking it. But in ancient States all laws were accompanied by a curse upon the transgressor.[8] True to its mission of serving where other methods fail, the curse receded as police efficiency increased. In the earliest culture, however, as that of the Australians, the personal efforts of the rulers work together with the impersonal energy of the supernatural engines they employ.

5. The blessing and the curse as invocations. —The distinction between the 'magical' and the 'religious' curse or blessing is not to be overemphasized. The two forms merge into one another, and either is as 'magical' or 'religious' as the other, while neither is the more efficacious. A god draws together in his own person the various threads of supernatural force. Among these are cursings and blessings. Their inherent mystery of power still depends on the will of the utterer. His invocation of the god to execute for him his heart's expressed desire is rather a long circuiting than a guarantee of the result. The independent force of the wish, in fact, tends to remain even when the wish is merged in prayer. The personal quality of the utterer is still the characteristic of his wish. Psychologically, it is difficult to limit a desire by making it an invocation; to divide the attention between the object of the desire and the expression of the desire on the one hand, and an intervening divinity on the other, is a matter of training. Thus it is rarely the case that, when a man says 'God bless you!' he is conscious of the reference to God, any more than when he says 'Bless you!'

Further, there is the tendency for the principle of the curse, if not of the blessing, to become itself personified. This result is found as far back as the stage of culture represented by the Maoris. The 'cursing thought' is personified in the Avesta; so is the 'pious and good blessing.' The Greeks personified the curse as Erinys. Behind this there may be the notion 'of a persecuting ghost, whose

anger or curses in later times were personified as an independent spirit.'[1] Allegorical figures of curses were included by painters in pictures of the wicked in hell.[2] Subsequently the Erinyes became the ministers of Zeus.[3] The steps by which a curse or blessing becomes an appeal to a god, a prayer that he will injure or benefit the person intended, are not indistinct. The Melanesian curses in the name of a *lio'a*, a powerful spirit. His connexion with the *lio'a* gives or adds efficacy to his curse.[4] The efficacy of the mere word naturally is increased, not by the will of the spirit invoked, but by the use of his power. The Talmud and the OT supply examples of 'the ancient idea that the name of the Lord might be used with advantage in any curse.'[5] Among the Hebrews the 'Name' had peculiar importance. In the next place, the appeal may take the form of a conditional blessing upon the god. In the Yajur Veda we read the formula, addressed to Sūrya: 'Smite such a one, and I will give you an offering.'[6] This method is clearly more efficacious. *Vagona* in the Banks Islands is the most serious of curses. It consists in procuring the *intervention* of a supernatural power.[7] The story of Balaam (Nu 22–24) includes a belief that the Divine power can be moved to effect the injury desired. A further step is taken when the moving is in the form of compulsion. As curses may develop into prayers, so prayers may develop into spells or curses. *Brahma* is the energy of the gods, but it is also the prayer, and 'governs them.'[8] ἀρά is both 'prayer' and 'curse'; so is the Manx word *gwee*.[9] Prayer is often possessed of magical power, just as a Toda spell is in the form of a prayer.[10] Even in Greek religion the deity is constrained to effect a curse or a blessing;[11] even the personified curse, the Erinys, works by a spell-song which binds the victim.[12] Thus the phrases, 'by,' 'for the sake of,' and the like, are but vague expressions of the actual relation between the invoker and the invoked.

In the Banks Islands, cursing by way of asseveration is described in English terms as swearing 'by' a forbidden food, or 'by' some powerful *tindalo*.[13] The Toda *palol* prays with a gurgling utterance in the throat: 'May it be well!' or 'May it be blessed . . . with the buffaloes and calves; may there be no disease; . . . may clouds rise, may grass flourish, may water spring . . . for the sake of' certain 'objects of reverence.' This term, *idith*, is used in special connexion with the name of a god, and involves the idea of supplication; it is also employed in sorcery.[14]

A modern Christian prayer for a blessing 'for Christ's sake' is thus widely different, in the condition appended, from the Toda or Melanesian type. Magic, so to say, has given place to emotion, though itself originating in emotion, of another kind.

6. Connexion with morality.—Law gradually takes over the function of the curse, as a form of retribution; while prayer may still retain its use in cases where human intervention fails, or even as a spiritual replica of human intervention. The moralizing of the curse and the blessing within these limits follows the course of ethical evolution. In the OT the undeserved curse has no effect, or may be turned by God into a blessing.[15] The justice of the wish is left to the decision of God; while it follows that an unjust curse or blessing is a sin against the All-Just. The Greeks modified their theory of the hereditary transmission of a curse by arguing that each generation commits new sins.[1] At one end of the process we have an invocation to the gods, as in the *Šurpu* of the Chaldæans, asking for relief from the effects of a curse, not for forgiveness;[2] or 'the thief invokes God while he breaks into the house,' the bandit the Virgin.[3] At the other, the god rewards or punishes independently of human invocation, and with absolute justice. According to Aquinas,[4] a *maledictio* is efficacious only when made by God. In the mouth of man, however uttered or however deserved, it is *per se* inefficacious. But, when this stage is reached, cursing or blessing has become a contradiction in terms.

A. E. CRAWLEY.

CUSTOM.—In the course of his discussion on 'Custom and the Moral Life,' Wundt writes as follows (*Ethics*, Eng. tr., i. 131 f., 151: for an unfavourable criticism, see Ladd, *Philosophy of Conduct*, New York, 1902, p. 27 f.):

'A custom is any norm of *voluntary* action that has been developed in a national or tribal community. However rigorously individual conduct may be prescribed by custom, one is still left free to obey or disobey, as one chooses. . . . And it is custom, too, that transfers the principle of freedom, which in the animal consciousness does not extend beyond the realm of habit, to the general consciousness of society. . . . In custom the settled habits of the human race and of its subdivisions still retain the character of consciously operative motives. Instinct is habitual conduct that has become *mechanical*; custom, habitual conduct that has become *generic*. . . . It is true that custom finds its own means of compulsion. But these, like custom itself, are never of the *obligatory* kind. They consist neither in subjective commandments like the moral laws, nor in objective menaces like the laws of the state.'

Custom is closely connected both with habit and with usage, the distinction of each from the other being thus well set forth by Wundt (*op. cit.* p. 156 f.):

'Habit covers all and every form of voluntary action that, for whatever reason, we have made our own. . . . Habit is an *individual* rule of conduct.[5] If the acts of the individual accord with the habitual action of the community to which he belongs, habit becomes *usage*. . . . Custom forms a smaller circle within this general field of usage. Custom is habit: it is marked by the regular recurrence of voluntary actions. Custom is usage: it is always the custom of some community. But it has, further, what usage lacks—a *normative* character. Conformity to custom is not, like conformity to usage, a matter of individual choice; custom has the sanction of a *moral* constraint, which the individual cannot disregard without personal disadvantage. . . . While, therefore, individual habit is left absolutely and entirely to choice, provided only that it does not conflict with the more comprehensive rules of social conduct, usage exercises a *practical* compulsion through the example that it sets, and custom raises this compulsion to the dignity of a constraining norm.'

On the other hand, custom, with its social basis, tends to become habit in the individual, producing, it may be, an impression of oddity when he moves in a circle where the custom is different, so that in countless cases custom and habit may stand in sharp antithesis. But if custom, in the main, produces habit, habit in its turn, if the individual possessing it, whether as a result of previous environment or in virtue of personal idiosyncrasy, be strong enough to impress his own particular habit on his fellows, may influence custom, or even give rise to a new custom of greater or less extent (for some interesting specific instances, see *JE* iv. 396; *e.g.* 'it was the custom of R. Judah b. 'Illai to bathe his face, hands, and feet in warm water before Sabbath began. This also was adopted by the Jewish community'). This, by the very nature of every social organism, is comparatively rare, and, if custom is thus to arise, it must meet a real, even though perhaps hitherto unfelt, need of society, either in whole or in part. Otherwise we have, not custom in its true sense, but the more

5 If, then, 'custom' is used of individual habit, as in EV of Lk 4^{16} (where Gr. has τὸ εἰωθὸς αὐτῷ), it is, strictly speaking inaccurate.

evanescent 'fashion' or 'vogue.' For custom is concerned with the constant needs of society, and is

'subject to change only with change in conditions of life or theories of living; and, as this change is reflected in the forms of custom, custom is as truly a picture of the moral consciousness of the community as a man's habits are the expression of his individual character. Habits can constantly be formed anew, because new individuals, whose habits they are, are constantly coming into existence. But custom, national habit, endures while the nation endures' (Wundt, *op. cit.* p. 164).

We have seen that custom and habit are mutually interactive. Under conditions now prevailing, even amongst primitive peoples, custom is by far the more potent factor, and yet it would seem that this was not always the case. There must have been a time when no form of organized society existed, and when men were so widely scattered because of the fewness of their numbers that individualism must have prevailed far more than it now does. Then it was that habit, not custom, was the dominant factor; and it would seem that, as individual habit met individual habit, each modifying and being modified by the other, the composite resultant was crystallized as custom; while custom meeting with custom—perhaps even affected now and again by the individual habit of some specially strong individuality—was in its turn blended into an amalgam of custom of wider scope and influence, until at last there was evolved one of the great determinants of society as a whole.[1] At the same time it must be borne in mind that such a reconstruction is entirely hypothetical and incapable of historical proof. Custom is already existent at the earliest historical time and in the most primitive modern social conditions of which we have any knowledge, and, in view of the fact that all members of any primitive society are, and doubtless always were, on approximately the same mental scale, it would seem that, as Wundt says (*op. cit.* p. 161),

'one man may contribute one thing to a custom, and another another; but the custom as a whole is a common creation, which cannot be analyzed into individual elements, for the simple reason that the various individual factors are all operative at one and the same time, and that it is consequently impossible for the individual to separate his own particular contribution from the contributions made by others' (cf. Wundt's criticism of this entire scheme of reconstruction, p. 159 ff., summarized thus [p. 164]: 'Custom has, so far as we know, but one course of development, and that is from preceding customs of kindred contents. Usage, fashion, and habits, on the other hand, constitute a mixed medley of new forms and relics of a long dead past. Transformation and new formation are here often enough difficult of discrimination; but there is no such thing as an entirely new custom').

To primitive man, however, the problem of the origin of custom seldom arises. For him it is enough that such and such a custom exists; and his sole explanation, if one be sought from him, is that, as the Kafirs say (Leslie, *Among the Zulus and Amatongas*, Edin. 1875, p. 146), 'it was so done by my fathers,' or, as the Narrinyeri have it, that it was so commanded by Narrundere, the 'All-father' (Taplin, in Woods, *Nat. Tribes of S. Australia*, Adelaide, 1879, p. 55). In this connexion it must not be forgotten that a custom may persist after its original cause has ceased to be operative, and that in such a case it may have an entirely different reason and motive assigned it (cf. Wundt, *op. cit.* p. 139 ff.). At the same time, for specially important or striking customs, or for particularly remarkable natural phenomena, ætiological myths may be invented with the most honest intentions imaginable, so that custom comes to be one of the factors, as Lang well points out in his *Custom and Myth*, in the genesis of the myth.

In view of the homogeneity and lack of sharp distinction which characterize the more primitive stages of the human race, custom may be said there to permeate and to control well-nigh every phase of man's mental and moral activity; and, although impaired in part by the rise (or is it rather the recrudescence?) of individualism, it still exercises this potent power to a very great extent over the most highly civilized peoples. In the domain of religion it is custom which has largely influenced ritual and been in part responsible for the rise of myth; it is custom, in the last resort, that is the chief factor in the evolution of law, which, to primitive man, is inextricably interwoven with, and inseparable from, religion; custom conditions the entire existence of almost every individual, even in the most highly civilized communities, from the hour of his birth to that of his death. Indeed, the most daring radicalism and the most pronounced individualism have their own customs; for without custom there can be no type of human thought or of human activity.

Such being the case, it is but natural that in the earlier stages of civilization custom should be held to be Divinely sanctioned, and that any breach of it should of itself constitute a serious crime, so that the Khonds of India, the Kamchatkans, and the pagan Greenlanders hold the breaking of an old custom to be one of the greatest of sins (Hopkins, *Religions of India*, London, 1895, p. 531; Steller, *Beschreibung von dem Lande Kamtschatka*, Frankfort, 1774, p. 274; Rink, *Tales and Traditions of the Eskimo*, London, 1875, p. 201 f.); while violation of custom provokes the wrath of the deified ancestors amongst the Basuto (Casalis, *Basutos*, London, 1861, p. 254); disaster and harm follow such infringement amongst the Ewe and Aleuts (Ellis, *Ewe-speaking Peoples*, London, 1890, p. 263; Elliot, *Alaska and the Seal Islands*, New York, 1886, p. 170); and the Ainu, in such an event, fear the wrath of the gods (Batchelor, *Ainu of Japan*, London, 1892, p. 243 f.). Whether, however, Wundt is right in saying (*op. cit.* p. 134) that 'custom was at first an act of *worship*' seems open to question.

With the evolution of a specific concept of law, a distinction may be drawn between law and custom, as when Plautus (*Trin.* 1033, 1037) makes Stasimus say:

'Ambitio iam more sanctast, libsrast a legibus, . . .
Mores leges perduxerunt iam in potestatem suam';

and a few lines further on he utters the profound truth, valid even when taken in the cynical spirit of its speaker:

'Leges mori serviunt'[1]—

a phrase which, like the Talmudic maxim, 'Custom always precedes law' (*Soferim*, xiv. 18), might well serve as the motto for almost any treatise on the origin of law; while in like manner Justinian expressly says that 'long prevailing customs, being sanctioned by the consent of those who use them, assume the nature of laws' (*Instit.* i. ii. 9).

When it becomes possible to draw such a distinction between custom and law, infringement of the former, unless distinctly coincident with and protected by law, no longer constitutes an offence of which legal cognizance must be taken, although even so advanced a code as the Jerusalem Talmud (*Pesaḥim*, iv. 3) authorized the courts to punish transgressors of custom equally with transgressors of law—a survival of some such stage as that of the African Wanika, amongst whom, 'if a man dares to improve the style of his hut, to make a larger doorway than is customary; if he should wear a finer or different style of dress to that of his

[1] The theory of Herbert Spencer (*Principles of Sociology*[3], 1893, §§ 529, 693), that custom originated in ancestor-worship, is too biased and one-sided to deserve serious consideration.

[1] The strictly legal distinction between *lex*, *mos*, and *consuetudo* is thus summarized by Isidore of Seville (*Etymol.* v. iii. 2 f.): 'Lex est constitutio scripta. Mos est vetustate probata consuetudo, sive lex non scripta. . . . Consuetudo autem est ius quoddam moribus institutum, quod pro lege suscipitur, cum deficit lex; nec differt scriptura an ratione consistat quando et legem ratio commendat.'

fellows, he is instantly fined' (C. New, *Life, Wanderings, and Labours in E. Africa*, London, 1873, p. 110). Yet this failure of modern law normally to give legal protection to custom does not mean that non-observance of custom, whether such infringement be careless, indifferent, unwitting, compulsory, or deliberately intentional, goes scot-free. Any such violation may, and often does, lead to social ostracism of greater or less extent, even when the infringed custom in question may be ethically indifferent.

And yet, the separation between custom and law is by no means complete, even from the legal point of view; for it is custom, as is well known, that forms the basis of the vast body of common law in England, whence it was adopted in N. America.[1] Into the details of the common law distinctions between general and particular customs—the latter category applying only to particular districts or to those engaged in particular occupations, and not recognized, except in a few States, by the common law of the United States—it is unnecessary to enter here. Suffice it to say that a custom, to be enforceable at common law, must be both definite and reasonable, and that it must have been used uninterruptedly and undisputedly 'so long that the memory of man runneth not to the contrary,' this latter phrase being understood to mean from the accession of Richard I. in 1189 (whence the rejection of particular customs in the United States, since none such could there possibly date from such 'time immemorial').

Law, being normally derived from custom, is for the most part in harmony with it; so that in practically every affair of everyday life one avoids all conflict with law if one simply follows custom. At the same time, just as custom may be in sharp contrast with habit, such may be its relation to law. In this case the law in question—whether as being due to the caprice of the ruler or to the more advanced ideas of the governing classes—is not, as is usually the state of affairs, derived from custom, but from the weaker source of individual, class, or other minority requirements. Under these conditions law usually succumbs to custom and remains a dead letter, so that, for instance, 'under the Hindu system of law, clear proof of usage will outweigh the written text of the law' (Mayne, *Treatise on Hindu Law and Usage*, Madras, 1878, p. 41); while the Roman jurists (*Instit.* I. ii. 11; *Digesta*, I. iii. 32) laid down the maxim that a law may be abrogated by desuetude or by contrary usage. Nay, law being even more conservative than custom, the change of custom may be such that a law—even one which initially may have been far in advance of custom—may come to be so much behind and below the altered custom that it is resolved, for this very reason, into a mere dead letter, and must either fall into oblivion or be amended to meet the changed conditions of the social organism. In general it may be postulated that no law can be enforced against the prevailing custom; even chiefs and kings, with the apparently despotic powers that attach to them in primitive society, prove unequal to the task (cf. the examples quoted by Westermarck, *MI* i. 162); and the lamentable failure of many laws designed for the highest benefit to society and drafted by men of unimpeachable ethical character proves — were proof necessary—that custom is really supreme over law in the highest as well as in the lowest stages of civilization.

As has already been noted, custom is subject to the most complete transformations, both in motive and in manifestation. Before the average man has read many pages of a book dealing, say, with the peoples of Africa or of Polynesia, he will find mention of customs that seem to him ridiculous, disgusting, or immoral—all of which judgments, from the point of view of his own civilization, may be perfectly true. And yet, in the words of Wundt (*op. cit.* p. 264),

'the moral value of the personality is relative; it varies with the stage of development to which moral ideas have attained. . . . Judgment of the moral value, whether of the individual or of society, depends not upon the absolute value of their disposition and action, but upon the relation of these to the stage of moral evolution already achieved.

It is doubtful whether any custom whatever, no matter how repugnant to our present æsthetic or moral sense it may be, can ever have arisen without some reason which—immoral or foolish though such reason may seem to us—commended itself to the people adopting it as subserving some highly desirable social end. Thus, the killing of an aged parent is rightly a crime of unmitigated turpitude to us, yet from the point of view of many primitive peoples (see artt. ABANDONMENT AND EXPOSURE and OLD AGE; cf. also Westermarck, *op. cit.* p. 386 ff.) there is much to be said in its favour; and in many other cases what seems to us a most immoral act is really due to sentiments which we can only regard as praiseworthy and, in the best sense of the term, as moral. On the other hand, there are to be found amongst every people, side by side with customs regarded as moral (*i.e.* commending themselves to the best ethical judgment of the highest thinkers of the people in question), customs deemed immoral—in other words, detrimental to the best interests of the society under consideration. All this merely means that, as society develops to a higher and higher ethical stage, customs once justified by specific conditions then existing have no longer such justification, so that they survive only by force of inertia or as pandering to the baser side and the lower strata of a society which, as a whole, has taken a marked step in advance.

Midway between the moral and the immoral custom stands what we may call the *un*moral or indifferent custom—one whose observance or non-observance is a matter of ethical unconcern and indifference; but it must be noted that the unmoral custom is likely, in course of time, to be regarded as immoral or wrong (although, of course, the reverse frequently happens, so that the custom once held to be unmoral and indifferent evolves into a custom deemed moral and ethically imperative). In point of fact, most unmoral customs have doubtless passed through the moral stage; but custom *qua* custom is, like law, neither moral, immoral, nor unmoral. Nor should it be forgotten that a custom once held to be moral may come to be viewed as unmoral or even immoral, and that still later, with further changes in the status of society, such a custom may again develop, usually through the unmoral stage, into a moral rule. But, though the ultimate basis of every custom is moral and religious, a custom once firmly established tends to become more and more divorced from true ethical and religious considerations and questions, until at last even those most strenuously adhering to a custom may be, as has already been noted, entirely unaware of its real provenance.

A custom almost universally regarded as moral by a given society may be held by some of its members to be immoral, or at best indifferent. Here, as in the case of law, there emerges a marked characteristic of all custom, when once it has gained sway. This characteristic is thus summarized by Westermarck (*op. cit.* p. 160):

'Custom regulates external conduct only. It tolerates all kinds of volitions and opinions if not openly expressed. It does not condemn the heretical mind, but the heretical act. It demands that under certain circumstances certain actions

[1] A similar system of common law formerly prevailed in France, as in the custom of Normandy, of Paris, etc., and the same was true of Germany almost until the close of the Middle Ages.

shall be either performed or omitted, and, provided that this demand is fulfilled, it takes no notice of the motive of the agent or omitter. Again, in case the course of conduct prescribed by custom is not observed, the mental facts connected with the transgression, if regarded at all, are dealt with in a rough and ready manner, according to general rules which hardly admit of individualisation.'

This brings up the difficult problem of how far one ought to conform to a custom which he deems not merely unmoral and indifferent, but immoral and wrong. To an indifferent custom no one, unless he be finically hyper-ethical or—as is here more usually the case—wantonly iconoclastic (*i.e.* delighting in flouting custom as custom), should object to accord obedience, at least externally, if for no other reason than merely to avoid disturbing social amenities or to avert unfavourable comment on the score of oddity and 'crankiness.' 'If,' writes the great Apostle of the Gentiles, 'meat maketh my brother to stumble, I will eat no flesh for evermore, that I make not my brother to stumble' (1 Co 8^{13}; cf. St. Paul's admirable discussion of the entire question of the unmoral custom in Ro 14). The case is far different, of course, with regard to customs that are felt to be positively immoral and wrong. This question is more fully discussed in art. CONFORMITY. Here it may be sufficient to point out that the presumption is always that any custom is felt to be moral by the community or social organism within which it prevails. The 'burden of proof' must rest on him who ignores or wilfully violates the custom in question. In any final judgment as to obedience or disobedience to a custom, account must be taken of the history and meaning of the particular custom under consideration, and there must be full appreciation of the ethical implications of compliance with or violation of the custom as regards the moral effect of such action both upon self and upon others. Above all, the individual, if he is to be sane in his judgment, must be constantly on his guard against personal idiosyncrasies and the excessive individualism of modern times—the 'right of private judgment' run mad.

Law*, ii.–iii., London, 1909; Bauduin, *De consuetudine in iure canonico*, Louvain, 1888; Fauning, 'Custom,' in *Cath. Encyc.* iv. 576 f.

LOUIS H. GRAY.

CUSTOM (Hindu).—The Sanskrit word is *āchāra*, 'religious custom,' 'established usage.' The binding force of custom is fully recognized in the Sanskrit lawbooks. Thus it is stated in the Code of Manu (i. 108) that *āchāra* is transcendent law, and that, therefore, a twice-born (*i.e.* high-caste) man should always be careful to follow it. The whole body of the sacred law (*dharma*), according to a favourite scheme, is divided into the three parts—*āchāra* (rules of conduct), *vyavahāra* (rules of government and judicature), and *prāyaśchhitta* (penance and expiation). The well-known Code of Yājñavalkya comprises the following subjects under the head of *āchāra*: purificatory rites (*saṃskāra*); rules of conduct for young students of the Veda; marriage and duties of women; the four principal classes and the mixed castes; duties of a Brāhman householder; miscellaneous rules for one who has completed his period of studentship; rules of lawful and forbidden diet; religious purification of things; *śrāddhas*, or oblations to the manes; worship of the deity Ganapati; propitiatory rites for planets; duties of a king. See DHARMA and LAW (Hindu).

J. JOLLY.

CUSTOM (Muslim).—See LAW (Muslim).

CUTTING.—See MUTILATION.

CYBELE (Κυβέλη).—The great Mother Deity of the Phrygians, known also, and especially in the cult language of the Romans, as the Great Mother of the Gods, or the Great Idæan Mother of the Gods (*Magna Deum Mater, Mater Deum Magna Idaea*). Her worship had its origin in Asia Minor in pre-historic times, possibly prior to the advent of the Phrygians, which is placed at about 900 B.C.; became prominent in early historic times in Galatia, Lydia, and Phrygia, where the various forms of the Cybele legend agree in localizing the origin of her cult; and was most strongly centralized in Phrygia. Its most sacred seat in the East was at Pessinus, a Galatian city near the borders of Phrygia, but once a part of the great Phrygian Empire, where the symbol of the goddess, a small meteoric stone, was preserved. From Asia Minor the cult spread to Thrace and the islands, and finally to Greece, though it never became popular there owing to its un-Hellenic nature. In 204 B.C., in response to an oracle to the effect that Hannibal could be driven from Italy if the Idæan Mother were brought from Pessinus, the sacred stone was transferred to Rome, and the cult was adopted by the State and located on the Palatine (Livy, xxix. 10–14). It first became of great importance in the Roman world under the Empire, when it spread from Rome as a centre to all the provinces. Like the cults of Mithra and Isis, it was one of the most obstinate antagonists of Christianity, and disappeared only after the long struggle between the two religions which culminated in the victory of Theodosius over Eugenius in A.D. 394.

As the cult of Cybele probably suffered little modification in Greece and Italy, the original character of the goddess may be inferred from what is known of her in Greek and Roman times. She was identified by the Greeks with Rhea, Ge, and Demeter, and by the Romans with Tellus, Ceres, Ops, and Maia. She was known as the universal mother—of gods and men, as well as of the lower creation—though her character as the mother of wild Nature was especially prominent, as was manifested by the orgiastic wildness of her worship, her sanctuaries on the wooded mountains, and her fondness for lions, which are frequently associated with her in art and literature. Her early attendants in legend, the *Korybantes*, Idæan *Daktyloi*, and sometimes *Kuretes*, were wild demonic beings, probably ithyphallic (Georg Kaibel, *GGN*, 1901, p. 488 ff.).

The priests of Cybele in historic times were eunuchs called *Galloi*, who first appear in Alexandrian literature about the 3rd cent. B.C. Clad in female garb, they wore their hair long and fragrant with ointment, and celebrated rites to the accompaniment of flutes, cymbals, tambourines, and castanets, yelling and dancing themselves into a frenzy until their excitement culminated in self-scourging, self-laceration, and exhaustion. Their consecration to the service of the goddess sometimes consisted in self-emasculation. Priestesses also took part in the cult.

Like Venus and Adonis, Isis and Osiris, etc., Cybele and Attis were usually associated in worship, and formed a duality symbolizing the relations of Mother Earth to her fruitage. The birth, growth, self-castration, and death of Attis, the son and lover of Cybele, signified the springing, growth, and death of plant life (see ATTIS). A celebration corresponding to the annual spring festival at Rome, which extended over the period March 15–27, thus including the equinox, consisted in a kind of sacred drama of Cybele and Attis, and no doubt existed in Phrygia also.

Cybele usually appears in art seated on a throne, draped, with mural crown and veil, accompanied by lions. The tympanum, cymbals, patera, sceptre, garlands, and fruits, and Attis with his attributes, the Phrygian cap, pedum, syrinx, and the pine, also appear with her. The so-called Niobe on Mount Sipylus is a Cybele, and the Cybele of Formiæ, now in Copenhagen, is one of the best sculptural representations of her. She inspired no piece of art of the first class. In literature no important work except *Catullus* lxiii. is devoted to her, though she is frequently mentioned in the literature of the Empire. Her religious importance lay in her mysticism and in the closeness of her contact with the common people, and was very great in spite of the gross practices which grew up around her cult.

CYCLOPS.—See GIANTS (Greek and Roman).

CYNICS.—The name is derived from *κύων*, 'dog,' with which it was connected in several ways. (*a*) To the east of Athens, beyond the Diomean gate, on a spur of Lycabettus, was a gymnasium known as the *Cynosarges*. Unlike the Academy and Lyceum (schools for youth of free Athenian parentage), it was provided for children of mixed blood. Antisthenes, son of an Athenian of this name by a Thracian slave woman, taught his disciples here after the death of Socrates, his second master. Κυνόσαργες is compounded of *κύων* and *ἀργός*, lit. 'white dog.' The story ran that the gymnasium stood on or near the site of an ancient sanctuary of Hercules (the Cynic tutelary, cf. Wilamowitz-Möllendorff, *Euripides' Herakles*[2], Berlin, 1885, i. 102 f., 130), and that, on the first occasion of sacrifice to the hero, a dog rushed in and seized a portion of the offering. The designation refers, possibly, not to the colour of the dog, but to the flash-like effect of its speed upon the spectator. (*b*) The epithet 'dog' was soon adopted by Cynic teachers—Antisthenes, the 'downright dog,' Diogenes, the 'royal dog'—doubtless as a symbol of their return to the 'simplicity' of animal nature and habits, or of endurance and hardihood (cf. Plato, *Rep.* ii. 375 f., v. 415 f.); it was also applied to them by their opponents for less flattering reasons, connected with displays of audacity, coarseness, and immodesty (cf. Winckelmann, *Antisth. Frag.*, 1842, p. 8 f.). (*c*) Eventually the epithet became so associated with the sect in the popular mind that the Corinthians placed a marble dog upon the pillar erected by them over the grave of Diogenes.

1. History.—(*a*) *Personal.*—The Cynics flourished prosperously for about a century after the death of Socrates (399–299 B.C.). As their teaching contemplated a way of life rather than a philosophical system, and as their works are lost, or known only in fragments and by late reports at second-hand, we are not informed in detail about the history of the sect. Indeed, Antisthenes, Diogenes, and Crates excepted, many representatives are little more than names to us.

Antisthenes of Athens (*c.* 444–374 B.C.), at first a pupil of Gorgias the Sophist, and a 'late learner' (cf. Plato, *Soph.* 251) with Socrates,—Plato implies one too old to learn,—founded the movement. Diogenes of Sinope (*c.* 412–323) was his most notable, notorious, and popular follower. He appears to have won many disciples, probably at Corinth principally, where he was sold as a slave to Xeniades, whose sons he taught. Among them were Monimus, a slave from Syracuse, an admirer of Crates; Onesicritus of Ægina (fl. *c.* 327), an officer who went to Hindustan with Alexander the Great, and interested himself in a comparative study of the Indian Gymnosophists and the Cynics (cf. G. Grote, *Plato and the Other Companions of Sokrates*[2], 1885, i. 158 f.); his sons, Philiscus and Androsthenes; Menander Drymus, and Hegesæus Clocus of Sinope. More distinguished associates, eminent for other reasons than their mere connexion with Cynicism, were, possibly, Phocion the 'Good' (*c.* 402–317), the Athenian statesman whom Demosthenes feared, Anaximenes the rhetorician, and, certainly, Stilpo (fl. *c.* 310), the influential Megarian (see MEGARIANS), whose combination of Cynic moralism with genuine devotion to metaphysics paved the way for Stoicism (*q.v.*). Finally, we have Crates of Thebes (fl. *c.* 320), the third leader of the Cynics, who, unlike his predecessors, was a man of some position and wealth. Perhaps Bryson, the Achæan, taught him (cf. Diog. Laert. vi. 85). Crates counted among his followers his wife Hipparchia of Maronea, a woman of good family, whose incurable infatuation for the wandering philosopher overcame the opposition of her parents to the unpropitious union; her brother, Metrocles, whose social standing seems to have lent him weight; and his initiates, Theomentus, Cleomenes, Demetrius of Alexandria, Timarchus of Alexandria, Menippus of Sinope (fl. *c.* 273), a satirist who influenced Varro (82–37), the Roman poet (see NEO-CYNICS); and Meleager of Gadara (cf. Diog. Laert. vi. 99), who may be classed with Menippus. The Ephesian Echecles was also of the Crates-Metrocles circle, and he taught Menedemus, a furious ranter, once the pupil of the Epicurean Colotes of Lampsacus; Menedemus seems to have been the last of the regular Cynic succession. Thrasylus (*c.* 306) is reported as a Cynic acquaintance of Antigonus Cyclops (cf. Plutarch, *de Vitios. Pud.* 531 [ed. Bernardakis, vol. iii. p. 376]; *Reg. et imp. apoph.*; *Ant.* 182 (15) [ed. Bernardakis, vol. ii. p. 29]). Diodorus of Aspendus (fl. *c.* 300), a belated Pythagorean, who adopted Cynic asceticism, may be placed on the fringes of the sect; he is said to have conventionalized the garb of the mendicant Cynic. Theodorus of Cyrene (fl. *c.* 300), called the 'atheist,' emphasized the 'theological' radicalism of the later Cynics, while Sodates may have represented the movement under one of the earlier Ptolemys (322–247 ?). Later we find his pupil, the facile witty exhorter, Bion of Borysthenes in Pamphylia (fl. *c.* 250), who boxed the compass of the rival schools, and furnished ammunition to Horace (cf. R. Heinze, *de Horatio Bionis imitatore*, Bonn, 1889); and Teles (fl. *c.* 250), the Cynic-Stoic contemporary of Chrysippus, a spouter of hortatory harangues on *ἀδιάφορα* (cf. Wilamowitz-Möllendorff, *Philol. Untersuch.* iv. [1882] 292 f.).

Running over the names, one is compelled to notice the large proportion of Cynics who came from the outskirts of Hellenic culture—Pontus, Thrace, Syria, Pamphylia, Egypt, for example; they were not nurtured in the pure Greek tradition. By the time of Menippus, the Syrian satirist (*c.* 280–65 B.C.), Cynicism had gone to seed in mere antinomianism and quixotry; not seldom, perhaps, in even less reputable manifestations. Its significant doctrines passed over into Stoicism through Zeno of Citium (336–264), the pupil of Crates; even the attempt of Aristo of Chios (fl. *c.* 260), Zeno's disciple, to revive the Cynic contempt for science and liberal culture within Stoicism failed, although he taught his famous pupil, Eratosthenes of Cyrene and Alexandria (276–196), the cosmopolitan humanitarianism of Diogenes. No doubt, Cynicism survived sporadically, almost as a 'mendicant order' in all likelihood,—often of sorry scoundrels,—till its re-appearance, in Roman Imperial times (cf. J. Bernays, *Lukian u. d. Kyniker*, Berlin, 1879), with Demetrius, the contemporary of Seneca, and others (see NEO-CYNICS). But its essential contribution had been absorbed into Stoicism, which always retained traces of Cynic tendencies, as may be noted even so late as Epictetus (cf. *Diss.* iii. 19–22; R. D. Hicks, *Stoic and Epicurean*, London, 1910, p. 95 f.).

(*b*) *Socio-philosophical origins.*—Greek reflexion originated in the desire to know for the sake of knowledge; and, in this sense, philosophy became a life. Thus, the problems of knowledge and of conduct never lay far apart. But, as aspects of one whole, they struggled for mastery, with varying fortune. The Cynics represent an extreme phase, in which science and culture had ceased to be held as of any value that was not pragmatic, and 'philosophy' had been reduced to the most beggarly elements of paradoxical utilitarian practice. This issue was one natural result of the historical antecedents of the Greek municipal societies, and of the reaction upon their conventions after the displacements due to the Persian war

(490–45 B.C.). The difficulty was to adjust the πολιτεία to empire, the particularism of the Greek citizen to the universalism of mankind; and it took shape in the lengthy controversy about νόμος and φύσις (see CASUISTRY), in which the Cynics played the most partisan rôle (cf. Dewey-Tufts, *Ethics*, 1908, pt. i. ch. vii.). Very briefly, the development of the Hellenic municipal societies had been as follows. The corporate family was an outgrowth of ancient religion, and appealed to religious sanctions (cf. Solon, frag. 12). Thus, domestic law and the rule of the family-group were integral parts of the 'Divine favouring fate' within a man (cf. Pindar, *Ol.* ii. 94, ix. 28, 100, 110, xiii. 13; *Nem.* vii. 30, viii. 35). The wider civic law and municipal government were evolved gradually on this basis (cf. Fustel de Coulanges, *La Cité antique*[14], Paris, 1895, bk. iii. ch. xviii.; bk. v. ch. i.). Local customs, conventions, and laws thus acquired great authority, and overflowed private life to such an extent that it hardly existed in the modern sense. The State claimed the citizen's time, intelligence, service,—his whole life even,—in return for the inestimable advantages bestowed, inestimable because only when endowed with them could a man enjoy a worthy human career (cf. S. H. Butcher, *Some Aspects of the Greek Genius*[3], 1904, p. 47 f.). Accordingly, individual independence did not flourish—the man had not emerged from the citizen. So the opposition between old norms and new experiences remained latent, more or less, till the Sophists (*q.v.*) broached it with their pupils, and Aristophanes and Euripides, each in his characteristic way, ventilated it before the public at large. The theoretical side of the controversy most probably reached the Cynics through the influence of Gorgias upon Antisthenes; the practical or social deductions through Socrates, to whom, in his last years, Antisthenes resorted. But the Cynics were 'imperfect' Socratics, who interpreted the Athenian sage in a fashion of their own, and it must be confessed that Socratic 'irony' and contemporary socio-political changes gave colour to their anarchism.

The social conditions are perplexing, because they oscillated in a twofold movement. On the one hand, and *negatively*, the decay of age-old beliefs (cf. Aristophanes, *Nub.* 396 f., 1060 f., 1420 f.; Plato, *Rep.* ii. 358–65) sapped confidence in the adequacy of national institutions. Could the State justify its pervasive interference with the individual, by rendering sufficient return? This question—its terms becoming clearer gradually—provoked inquiry; the sequel was reflective ethics. And, as reflexion bodes search for a stable principle, the possibility that this had not been found was implied. Hence a critical movement in theory. The Peloponnesian War (431–405) forced similar issues upon the average man in daily life (cf. Thucyd. iii. 40–44, 82, v. 89). The generous assurance of high vocation that nurtured Pindar, Themistocles, Æschylus, Sophocles, Pericles, and, as a glorious consummation, Plato, beat feebler and feebler. On the other hand, and *positively*, new men broke into the ancient State, bringing new associations. Traditional civic usages bore less meaning for them, because they did not share the compensation to the full. Necessarily, they felt other aspirations, and gravitated towards other standards. The straits of war drove the rural population upon Athens, just as, during prosperous peace, strangers had flocked to her gates. Inaction and demoralization bred a proletariat, neither citizen nor slave, which strained the ordinary resources of government. In addition, the marvellous instances of individual development, the glory of the Periclean epoch, set a potent example. And the energies and personalized aims here manifested had to find fresh channels. Pericles could say: 'We [Athenians] alone regard a man who takes no interest in public affairs, not as a harmless, but as a useless, member of society' (Thucyd. ii. 40). But, political autonomy shrunk or gone, this socialized unity lost its power to charm. Accordingly, what more natural than that 'social reform' should attract many? What more natural than that they should concentrate upon the personal ideal, αὐτάρκεια (cf. Gomperz, *Gr. Denker*, 1903 [Eng. tr. 1905], vol. ii. bk. iv. chs. i.–iii.)? 'The honest man is Nature's noble' (Eurip. frag. 336). But, what may 'honest' mean? The Cynics were to extract their answer from Socrates (*q.v.*).

Plato makes Socrates speak as follows, in his famous speech of defence:

'If you say to me, "Socrates, this time . . . we will let you off, but upon one condition, that you are not to inquire and speculate in this way any more." . . . I should reply: "Men of Athens, I honour and love you; but I shall obey God rather than you, and, while I have life and strength, I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet after my manner, and convincing him, saying: "O my friend, why do you, who are a citizen of the great and mighty and wise city of Athens, care so much about laying up the greatest amount of money and honour and reputation, and so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? Are you not ashamed of this?"' (*Apol.* 29).

This represents the Socratic spirit admirably. But Socrates left no methodical system, nor did he prescribe specifics for social ills. Devotion to the Athenian State, and respect for the higher personal life, were the poles of his character and teaching. He could say of the State:

'Our country is . . . higher and holier far than mother or father. . . . When we are punished by her . . . the punishment is to be endured in silence. . . . Whether in battle or in a court of law, or in any other place, he [the citizen] must do what his city and his country order him. . . . This is the voice which I seem to hear murmuring in my ears, like the sound of the flute in the ears of the mystic' (Plato, *Crito*, 51, 54; cf. J. Adam, *Crito*, 1888, Introd. p. xiv f.).

That is, Socrates preserved intact the old Greek consecration to the ἦθος of the City-State, with its subordination of the individual to the community as the will of the gods, and as the most valuable (useful) relation for the citizen. In practice, he identified himself completely with Athens, whose vicinity he seldom left (cf. Plato, *Crito*, 52). But, at the same time, touched by the ampler experience of the new age, he strove to universalize the individual. 'Whether the individual is a part of a wider teleological system or no, becomes thus for Socrates a secondary question; and what he is mainly interested to maintain is that each man for himself should work out such a system in his own life' (E. Caird, *Evolution of Theology in the Gr. Philosophers*, 1904, i. 70). Socrates could, therefore, declare to Antiphon: 'To have no wants at all is, to my mind, an attribute of godhead; to have as few wants as possible, the nearest approach to godhead' (Xenoph. *Mem.* i. 6). That is, his asceticism was no end in itself, but accessary to the desire to secure due scope for the higher activities of manhood. The positive purpose thus involved a negative element. Now Socrates lived all this, but left no authoritative exposition of it. Accordingly, his 'imperfect' followers seized upon one or other aspect of his personality, and pushed it, to the exclusion of the compensating factors. 'The Cynics so enforced this negative moment that they placed freedom in actual renunciation of so-called superfluities' (Hegel, *Werke*, 1842, xiv. 139, Eng. tr. *Hist. of Phil.*, 1892, i. 480–81). Historical circumstances occasioned their revolt from the communal ideas of the City-State. The 'wise man' will not govern himself according to enacted laws, but by the law of virtue (Antisthenes, *ap.* Diog. Laert. vi. 11). The sole authentic citizenship is citizenship of the world (Diogenes, *ib.* vi

63). In short, under stress of social exigency, the Cynics abstracted Socratic independence from the conditions whence it drew its strength and relevance, and identified virtue with unbridled protest against social relations. 'Bury me on my face,' said Diogenes to Xeniades, 'for, ere long, everything will be turned upside down' (Diog. Laert. vi. 31–32). The Cynics lost recollection that the Socratic dialectic was an incidental means to disclosure of the fundamental principles of morality. They could 'think only of the barefooted old man, indefatigably disputing in the open streets, and setting himself against society' (Grant, *Ethics of Aristotle*[3], 1874, i. 171). Thus minded, they turned upon contemporary norms and, holding nothing holy, flouted human ties scornfully, violently, and coarsely.

2. Teaching.—(*a*) *Theoretical.*—Avowedly, the Cynics were bent upon a practical end. Indeed, it is often asserted that they repudiated scientific training and mental culture, with no little ostentation. This is probably an over-statement. It would be nearer the mark to say that they subordinated scientific inquiries to the attainment of virtue, regarding intellectual discipline as indifferent in itself. Thus, while they combated men of the Plato type, and held aloof from the constructive schools, they could not, and did not, escape the theoretical problems of their age. Logic and epistemology, it is true, had not reached clear definition; this had to await Aristotle. Nevertheless, with the Sophists, if not earlier, the question of the relation between language and thought had asserted itself, sometimes in logomachies that seem trifling to us. And, in this connexion, a distinct negative or critical movement became manifest. The contemporary Megarians, for example (cf. K. Prantl, *Gesch. d. Logik*, Leipzig, 1855, i. 33 f.; G. Grote, *op. cit.* i. 122 f.), with whom the Cynics had some affiliations, revelled in 'eristic' gymnastics. The Cynic leaders, Antisthenes and, probably, Diogenes, evinced kindred tendencies, as their fragmentary remains, scattered references in Plato and Aristotle, and the reports of later writers indicate. Possibly the same was true of Crates, Monimus, and their followers. In other words, ere the ethico-political doctrines of the sect had sunk to the level of a social mannerism,

> 'Whose dog-like carriage and effrontery,
> Despising infamy, outfac'd disgrace,'

the Cynics partook in theoretical discussions of the day, occupying a position akin, apparently, to that of the Megarians (*q.v.*), and one not far removed, in ultimate principle, at least, from the Cyrenaics (*q.v.*).

Thus, Epictetus (*Diss.* i. 17, 12) attributes to Antisthenes the saying, 'The examination of terms is the beginning of education.' Similarly, Plato (*Euthyd.* 277 E, cf. *Crat.* 384) records that, according to Prodicus, 'a right use of terms is the beginning of knowledge' (cf. *Protag.* 337). Unfortunately, owing to the loss of Antisthenes' treatise *On Words*, we are unaware how these statements should be interpreted. Conceivably, they imply no more than Plato (*Theæt.* 201 E) and Aristotle (*Met.* viii. 3) assert. On the other hand, it is certain that, through the peculiar notions about evidence entertained in their law-courts, committees of the popular assembly (cf. R. J. Bonner, *Evidence in Athenian Courts*, Chicago, 1905), the Athenians had long been familiar with forensic dialectic, as Æschylus' *Orestes* (458 B.C.) suffices to show. Furthermore, at the time when the other Greek arts reached their zenith (*c.* 440 B.C.), rhetoric, the τέχνη of words, had flourished for a generation in Sicily, under Corax of Syracuse (*c.* 465 B.C.); and Gorgias, accompanied by one of its chief exponents, Tisias, had impressed the Athenians with it, on the occasion of the Leontine embassy (427 B.C.), when Antisthenes was a lad of seventeen. The future Cynic leader became a pupil of Gorgias, and then taught rhetoric before joining the Socratic circle. And, while it is likely that the epideictic 'display,' entitled the *Controversy between Ajax and Odysseus for the Arms of Achilles*, belongs to a later period, the list of the writings of Antisthenes preserved by Diog. Laert. (vi. 15 f.) proves that he was a practitioner, not only of rhetoric, but also of dialectic, with its more or less subtle and verbal treatment of terms. In addition, one must recall that Greek oratory as a practical art, employing both rhetoric and dialectic, dates from Gorgias (cf. F. Blass, *Die attische Beredsamkeit v. Gorgias bis zu Lysias*, Leipzig, 1868, p. 1 f.), and that, as a result of the development of their polity, which made him who 'is master of the stone on the Pnyx' master of Athens (cf. E. A. Freeman, *Historical Essays*, 2nd series, 1873, p. 128 f.), rhetoric and dialectic came to be of extreme utilitarian consequence to the Athenians (cf. Isocrates' review of his life-work, *Or.* xv. 295 f.). Language was now a potent weapon, and the study of terms indispensable. Accordingly, we are forced to conclude that, whatever slight Antisthenes and his fellows may have put upon 'science,' 'learning,' and 'culture' at a later time, when engaged upon their ethical 'mission,' the founder of the Cynic movement was educated in a 'scientific' atmosphere, and knew the necessity for *technical* discipline in the 'art of words.' No doubt, the studies of Protagoras, Prodicus, and Hippias, in etymology, synonymy, and the like, were little more than beginnings in the abstractions of grammar; and, obviously, the science of Logic was even less advanced, the nature of negative propositions especially offering insoluble problems, whence the vogue of the Sophistic *elenchus*. Yet the Sophistic influence upon the 'imperfect' Socratics is so pervasive that, before be repaired to Socrates at last, Antisthenes must have been carried away by it. The jibes of Plato (*Phædo*, 101 D f. (?); *Rep.* ii. 372 D, v. 454 A (?); *Thæt.* 155 E; *Soph.* 251 B, 230 D; *Phileb.* 14 D (?)), Aristotle (*Met.* iii. 2 (?), iv. 29, vii. 3; *Top.* i. 11), and others (*e.g.* Cicero, *ad Attic.* xii. 38) would seem to indicate that Antisthenes and the rest either relapsed into 'sophistical' quibbling in theory, or failed to keep step with the contemporary advance of scientific inquiry. For, even if Xenophon's testimony to the acquirements of Antisthenes (*Symp.* iv. 41 f.) be suspect on account of his evident Cynic leanings, the references of Plato (*Cratyl.* 389 f. (?); *Phileb.* 44 C; cf. K. Barlen, *Antisthenes u. Platon*, 1881; K. Urban, *Ueber d. Erwähnungen d. Philos. d. Antisthenes in d. platon. Schriften*, 1882; F. Dümmler, *Akademika*, Giessen, 1889, p. 148 f.), the partial admission of Aristotle (*Met.* v. 29), his serious refutations (*de Soph. El.* xx.; *Rhet.* ii. 24), and the remark of Cicero (*de Nat. Deor.* i. 13) warrant the probable inference that, while Antisthenes had once known better, and still posed as a disciple of Socrates (this would be Plato's view), he had reverted to the empiricism of Gorgias, and had fallen thence into theoretical scepticism, regarding 'science' as negligible except for purposes of direct utility, as with Hippias—had become, in short, a 'barbarian.' In a word, although they started from the Socratic insistence upon definition, the Cynics never reached theoretical solutions; in fact, they regarded them as impossible, perhaps even as worthless.

Remembering, then, that Logic had no independent existence, the little that we know of Cynic logic may be traced to Socrates for its primary impulse, and to the Sophists, especially Gorgias and Hippias, for its content. The effort of Socrates

to define the ideal Good, to replace a physical or cosmological by a logical φύσις, had not reached complete success (cf. Xenoph. *Mem.* iii. 9. 14, iii. 8. 3, i. 3. 2). It was an aspiration rather than a final achievement. The problems therefore were: (1) to formulate a definition carrying universal validity; (2) to state its content; (3) to explain how man might realize it in life. Such fragments of Cynic logic as we have are remnants of a theoretical effort connected with the *first* problem; Cynic ethics, a practical reply to the *second* and *third*. The former represents a reversion to the Sophists; the latter follows mainly from undue emphasis upon, and isolation of, one aspect of the person of Socrates, filled out probably, as regards its inconsistent universalism (cosmopolitanism), by elements drawn chiefly from the teaching of Hippias.

Turning to the logical side, then, we find that for Antisthenes a satisfactory definition must be the statement of the essence of a thing. But, seeing that things consist of parts, the only definition practicable would be a description of these parts as actual components of a whole (cf. Plato, *Soph.* 251 f.). Accordingly, the thing itself, being simple, is indefinable; it may be named, but the name tells nothing of the essential reality (cf. Aristotle, *Met.* i. 3). Diogenes is reported to have said, when Plato was talking to him about 'ideas' and using the terms 'tableness' and 'cupness,' 'I see *a* table and *a* cup, but I see no "tableness" or "cupness"' (Diog. Laert. vi. 55; cf. Plato, *Parmen.* 132 B). That is, according to Cynic epistemology, general ideas exist solely in the mind, individual things alone are real. This is the earliest distinct expression of Nominalism. Logically, it results in the conclusion that no judgments are permissible except judgments of identity. 'Man' and 'good' are different from one another. You cannot predicate 'good' of 'man'; you can say merely, 'man is man,' 'good is good' (cf. Plato [?], *Hipp. Maj.* 304 A; Grote, *op. cit.* ii. 47). This led immediately to the assertion, put into the mouth of Dionysodorus by Plato (*Euthyd.* 286 B), that contradiction (or error) cannot occur. If so, the paradox issues that false and contradictory propositions are impossible, which implies, in turn, that all propositions are equally true. As the question of logical 'form,' to which such reasoning might apply, in the sense that 'form' does not guarantee truth, had not yet been considered independently, the Cynics meant, probably, that predicates, because applicable to many subjects, could not be attached more exclusively to one than to another. But we are able only to conjecture as to this (cf. Plutarch, *adv. Colot.* 1119 C f. [ed. Bernardakis, vol. v. p. 45 f.]; Plato, *Parmen.* 130 f.). In any event, however, it is evident that the conclusion of the matter is in the Sophistic vein. Objects, when 'composed' of single factors, may be defined. Simple objects ('ultimates'), being perceptible only to sense, are susceptible of nomenclature, but are unknowable as such. The distinction here raised—really between percepts and concepts—is valid enough. But the inference of Verbalism, instead of carrying out a logical and epistemological analysis, leads back to Sophistic scepticism which, once more, is hardly distinguishable from Sensationalism (cf. Aristotle, *Met.* iii. 5). The Cynics thus seize the negative element in the Socratic dialectic process towards definition, but omit the positive. As a consequence, they entangle themselves in a paradoxical inquiry such as that typified by Alfred de Musset's question—'Le cœur humain de qui, le cœur humain de quoi?' (cf. A. Ed. Chaignet, *Hist. de la psych. des Grecs*, i., Paris, 1887, p. 189 f., note 4; Grote, *op. cit.* i. 168 f., note 1).

(*b*) *Practical.*—The ethical doctrines of the Cynics may be traced to the coalescence of several elements; and very probably this is more evident now than it was to the Cynics themselves in their period of transition. But the numerous stories related about their leaders (for the sake of the story), and the scantiness of the documentary evidence, render a dispassionate account very difficult. Still the following constituent factors, at least, can be traced with some certainty: (1) Socrates, the plain, 'common' man, sturdy and independent; (2) the Eleaticism of Antisthenes' teacher, Gorgias; (3) the 'return to nature' of Hippias and Euripides; and (4) the momentary exigencies of daily life in Athens and in Hellas.

(1) The Cynics descend from the Xenophontic, not the Platonic, Socrates (cf. S. Ribbing, *Ueber d. Verhältnis zwischen d. Xenoph. u. Platon. Berichten üb. d. Persönlichkeit u. d. Lehre d. Sokrates*, Upsala, 1870; F. Dümmler, *loc. cit.*, and *Antisthenica*, Halle, 1882). This is the Socrates who, as we saw above, made independence an attribute of godhead (cf. Xenoph. *Mem.* i. 6). Yet, for him, asceticism was a means to an end (cf. Xenoph. *Cyn.* xiii.), not an end in itself, as it became with the Cynics. The endurance which he praised was no unusual or new thing; it related to ordinary life, and, naturally, had been accentuated by the early 'proverbial' moralists (*e.g.* Hesiod, *Opp. Di.* 287 f., 411 f.). Quickened by moral sincerity, Socrates protested against the indignity put on labour; as a 'friend of the common folk' (Xenoph. *Mem.* i. 2), he held work to be more honourable than idleness (*ib.* iii. 8. 9, 10). It was this side of his character that attracted Antisthenes, and produced in the disciple a parody of the master's temperate protest against the enervating habits of the luxurious city.

(2) But, alongside of this moralized 'common sense,' a distinct theoretical element operated, of which the Cynics were, in a way, unconscious. Socrates had taught that virtue is a 'science' (Aristotle, *Eth. Nic.* iii. 8. 6), meaning thereby that virtue was communicable. Now, although Gorgias dismissed metaphysical speculations about Being, and thus showed that the 'science' could not be concerned with 'nature,' he hinted, by implication, at an internal (rational) One. That is, his *argumenta ad hominem* emphasized the *homo*. Accordingly, although he denied what he held to be an unconditional object out of relation to self, he still left self as the One, even the unexplored One. This survival of Eleatic doctrine reappeared in the Cynic interpretation of the *positive* side of Socratic teaching: courage, justice, wisdom are identical—they are knowledge; or, as Antisthenes put it theologically, the gods are many κατὰ νόμον, they are One κατὰ φύσιν. Reason, the organ of this knowledge, is the prerogative, not of *men*, but of *mankind* (cf. Diog. Laert. vi. 105; Xenoph. *Mem.* i. 2. 19; Plato, *Meno*, 71; Aristotle, *Pol.* I. xiii. 10). Reason bestows the power ἑαυτῷ ὁμιλεῖν. If incommunicable theoretically, at all events by means of the current education, it can be recognized and liberated in practical activity. In short, Will becomes the content of the 'science' of the sole Good—virtue. As against Platonic absolutism, with its aristocratic tendencies, which separate men from each other, the Cynics assert a democratic unity. They admit a pragmatic universal in the shape of a plan of life. Thus οἰκεῖος λόγος came by essential content, despite nominalistic logic (cf. Diog. Laert. vi. 12, 103). No matter what the theory, essence could be exhibited—in overt conduct.

(3) The Cynics preached a 'return to nature' as an escape from social convention with its ills. Here they stood in line with Hippias and Euripides. Man ought to be self-sufficient. They meant by

this that there is a human 'nature,' beyond the accidents of citizenship, language, and even race (Eurip. frag. 1050), and that civil institutions are unjustifiable because they interfere with the cultivation of this common possession. As Hippias said: 'All of you who are here present I reckon to be kinsmen and friends and fellow-citizens by nature, and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature' (Plato, *Protag.* 337); or, as Isocrates put it: 'Athens . . . has brought it to pass that the name "Greek" should be thought no longer a matter of race but a matter of intelligence' (*Or.* iv. 50). Hence Cynic cosmopolitanism. The Cynics proposed to realize this unitary 'nature' by denuding themselves of wants, by eschewing obligation to the 'resources of civilization.' Simplicity, temperance, ability to fend for self, were to be the means to this end. Hence their anarchism.

(4) Even before the Peloponnesian War, the Hellenic world had grown conscious of new displacements, and the course of the struggle accentuated this condition. The *πολιτεία* lacked the flexibility needed to meet the transition. Consequently, men became aware increasingly of a separation between the organized State and transient society (cf. G. A. and W. H. Simcox, *Demosthenes and Æschines 'On the Crown,'* 1872, p. lxvii f.). As has been said above, the citizen no longer found absorbing vocation in his citizenship: loyalty was on the wane. Besides, the war produced special effects of its own. The unity of Hellas and the independence of the rival cities proved to be incompatible ideals; the gulf between rich and poor yawned wider; the itch for personal recognition brought disregard of social responsibility; and numerous men 'without a country' roamed over all Greece (cf. Isocrates, *Ep.* ix. 10). The system of education had forfeited the confidence of many (cf. Isocrates, *Or.* xiii. 292 f., xi. 230 f., x. 208 f., xv. 84 f., 259 f.), while, on the other hand, the people were untouched by the things of the spirit (cf. Isocrates, *Or.* xi. 230, ii. 23 f., viii. 161 f., xv. 168 f.), as, indeed, Aristotle asserted later (*Eth. Nic.* i. 5. 3). Every one was finding fault with his neighbour; the efficiency of democratic government was in doubt. These grave matters were at once the incentives to, and the immediate objects of, the Cynic 'mission.' Unfortunately, hindered doubtless by the temper of the time, the Cynics, who surpassed all in fearlessness, appear to have employed no weapon more potent than contentious abuse, and to have prescribed no remedy more practicable than an impossible renunciation. Better known to the masses than any other teachers, their extravagance and licence rendered them easy marks for ridicule and resentment, so that the seriousness of the evils which they attacked legitimately was overshadowed by the bizarre conduct of the critics. Few, if any, constructive results were accomplished in the 4th cent., as the state of affairs under Eubulus (354–338 B.C.) serves to show (cf. Isocrates [*c.* 353 B.C.], *Or.* xv. 270 f.; J. Beloch, *Die attische Politik seit Perikles*, Leipzig, 1884, p. 173 f.). These influences, then, probably along with others, now irrecoverable, moulded the Cynic ethics.

Although the Sophist was a *τεχνογράφος*, the teacher of a practical 'art'—and Gorgias belonged very distinctly to this type—a man of Antisthenes' quality, when deflected by Socrates, could easily pick holes in Sophistic practice (cf. Plato, *Soph.* 250 A); he and, more emphatically, his follower, Diogenes, might retain portions of the Gorgian method (cf. Aristotle, *Rhet.* iii. 17. 7), the temper never. Seeking reputation and gain, the Sophists could not be entirely disinterested (cf. Xenoph. *Cyn.* xiii.). Perforce they had to adapt themselves to popular tastes; and Gorgias, conspicuously, seems to have conformed himself to current prejudices; in like manner, Hippias' ideal of a union between the Greek States, just because it was not original with him, serves to illustrate a similar tendency. Such pliability, amounting often to hollowness, revolted Antisthenes, when contact with Socrates had converted him. The times appeared to call for sterner stuff. It was not enough to suggest moral notions by elegant discourses; proselytes must be secured. Independence was needed above all else; and this could be justified on condition that a man found his ideal purposes within himself (cf. Eurip. *Troad.* 988; Plato, *Rep.* ii. 366 E). Thus the Cynics came to regard virtue, not as good, but as *the* Good, and this as an implicit quality inherent in manhood, made explicit in the 'wise man' (*i.e.* Socrates *universalized* by Cynic pragmatism); for without a universal there could be no philosophy (cf. Plato, *Parmen.* 136). No matter at what cost, the 'sage' must develop and guard this possession (cf. Cicero, *de Off.* i. 41), for on it depended the one great issue of life—self-sufficiency. Everything must be sacrificed for it; indeed, this complete sacrifice was regarded as the essence of virtue. On the other hand, vice was the sole evil; and the intermediate values of life, high or low, positive or negative,—wealth, position, health, poverty, shame, sickness, even death,—were wholly indifferent. Thus self-control implied, not the moralizing of human relations, but their total eradication, because they are invitations to weakness or to submission (cf. Diog. Laert. vi. 93). So the Cynics came to 'exceed' the nature at which they had arrived; the subjective tendency overpowered them. And there are signs that, like the Stoics afterwards, they wavered here (cf. Diog. Laert. vi. 2, 6, 13, 30, 31, 63, 72); yet their professed ideal was to possess no home, no city, to be beggars and wanderers (cf. *ib.* vi. 38). For man comprehends by nature what is just and true (cf. *ib.* vii. 53), and this internal nature is to be set free as against the law or convention of society. The declaration of Hippias (Plato, *Protag.* 357 D), transmuted now into a *φύσις ἀνθρωπίνη*, is elevated into the single principle capable of moral authority. The insight of the 'wise man,' won by renunciation, becomes the supreme test; and, according to its judgment, all laws, institutions, and arrangements of society are found arbitrary and harmful. They hamper and enslave true manhood; for, morally viewed, men are free, and therefore equal, just because they possess a specific virtuous nature in their own individual right. Consequently, man is able to realize the Good only if he renounces them. Society is the great Sophist (cf. Plato, *Rep.* 492 A); it renders evil absolute; therefore it is infinitely better to be an uneducated beggar than an educated echo of 'civilization.' Thus the Cynics desert their theoretical Nominalism, and fall into the old paradoxes resultant upon the clash between personal ideal and social opportunity. Casuistry (their species of sophistry) marks them for its own, and antitheses displace reasoning. As always, their anarchism ends in communism, for, without fraternity, liberty and equality are but barren words. The socio-political indecision and helplessness of Hellas led to this extreme conclusion. An ulterior principle, the innate prerogative of simple manhood, came to be viewed as the only escape from contemporary evils. This indifference of the Cynics to political, social, and domestic obligations led, of

course, to antinomianism (cf. Diog. Laert. vi. 12). Curiously enough, however, they did not advocate quietism (cf. F. W. Bussell, *Marcus Aurelius and the Later Stoics*, 1910, p. 51 f.) as a result of their nonconformity and repudiation. The Cynic 'missionary' became a familiar figure, and he lived in face of the public. Like Crates, he was a 'door-opener' (Diog. Laert. vi. 86), but he seems, as a rule, to have been taken more jocularly than seriously. Nor is this wonderful. Strange as it may appear, the besetting sins of Athenian character —vanity and self-sufficiency—found a new incarnation in the censoriousness and self-advertisement of some Cynics. As a matter of fact, they had not investigated morality with due care, and so they could not deliver themselves from paradox. For, after all, consistent Cynicism is tantamount to a confession of failure. Deny the existence of the problem, as the Cynics did in relation to Athenian economic conditions, for example, and—you have solved it! 'Vanity of vanities,' saith the preacher, 'all is vanity'; whereas the greatest of vanities is apt to be the preacher himself.

It is possible, and too easy perhaps, to judge Cynicism as the temporary exaggeration of a clique. But, after all, it dealt with the immortal things of life, and in later times left its mark upon ancient thought; Epictetus could idealize even Diogenes (*Diss.* iii. 24). An overwhelming personality like Socrates transmutes the fluid tendencies of his epoch, and outpaces the average man. Nevertheless, Socrates was of his age, and could not escape its limitations. Antisthenes and his followers started from this temporary factor, and, by confining the Socratic doctrine to it, impressed the ordinary mind. Rudely enough, perhaps, they proved that Greece still had a conscience. They exercised the magisterial and reproving function (cf. Epictetus, *Diss.* ii. 21), emphasizing the force and conviction, though not the dignity and sublimity, of the master; yet this very bias freed them from the sordid passions of self-interest which so afflicted their contemporaries (cf. Diog. Laert. vi. 85 f.; Xenoph. *Symp.* iv. 34 f.). As their denunciation of slavery showed, they had a glimpse of a sublime idea, and were enabled consequently to enter a splendid protest against the otiose compromises and superficial conformities of the day. And, if their zeal outran discretion, or even decency, it must be recalled that they were bred of a society which lived *in puris naturalibus* to a degree incomprehensible by us; that, by insistence upon the moral significance of much that had been deemed non-moral, they aired questions to which otherwise Aristotle's saving common sense might never have been applied (cf. e.g. *Eth. Nic.* x. 6). As a result, they paved the way for the conclusion that virtue is not a theory, but a spiritual state—it is dynamic over against the trivial. Their defence of a thesis doubtless blurred their vision of the seminal personality of the 'wise man.' Notwithstanding, they did make the 'sage' the moral norm, and thus gave the first hint that 'the "Return to nature," so far from implying reversion to animalism, and the reduction of man's needs to the level of the beasts, was found to involve fundamental differentiation of reasoning man from the unreason of the brute or the inertia of matter, to place man on a unique spiritual plane, and eventually to summon him from individual isolation to conscious brotherhood with kind' (G. H. Rendall, *Marcus Aurelius Antoninus to Himself*, 1898, p. xlvi). Driven by a theory which spelt failure, the Cynics could not perceive these great issues; but ideals, whose end is not yet, originated with them.

LITERATURE (in addition to the works mentioned in the text).—Ueberweg-Heinze, *Grundriss d. Gesch. d. Philos.* i.[10] (1910), gives a complete summary of the technical literature: see § 7, for the primary and secondary sources for the history of Greek philosophy; § 8, for literature on the pre-philosophical period of Greek culture; § 37, for literature on the Cynics specifically. For the English reader the best work is still E. Zeller, *Socrates and the Socratic Schools*, Eng. tr., London, 1868, and successive reprints; W. Windelband, *Hist. of Anc. Philosophy*, Eng. tr., London, 1899, is also very valuable; the most brilliant and readable account of the Cynics is to be found in Th. Gomperz, *Greek Thinkers*, Eng. tr. vol. ii., London, 1905. With special reference, as a rule, to the social, political, and literary environment, the following works may be added: T. C. Finlayson, *Essays, Addresses, and Lyrical Translations*, London, 1893, p. 194 f.; P. Girard, *L'Éduc. athén. au v[e] et au ive siècle avant Jésus-Christ*[2], Paris, 1891; O. Apelt, *Beitr. z. Gesch. d. gr. Phil.*, Leipzig, 1891 (the essay on Cosmopolitanism in Antiquity); R. E. Hammond, *Polit. Institutions of the Anc. Greeks*, London, 1895; A. Croiset, *Hist. de la litt. grecque*, tom. iv. [Paris, 1900] pp. 36 *f.*, 240 f.; P. Decharme, *La Critique des traditions religieuses chez les Grecs*, etc., Paris, 1904, p. 217 *f.*; R. Hirzel, *Der Dialog: ein literarhist. Versuch*, i., Leipzig, 1895; M. Clerc, *Les Métèques athéniens: Étude sur la condition légale, la situation morale et le rôle social et économique des étrangers domiciliés à Athènes*, Paris, 1893; H. Francotte, *De la Condition des étrangers dans les cités grecques*, Louvain and Paris, 1903; H. Sidgwick, *Lectures on the Philos. of Kant*, etc., London, 1905 (the essay on the Sophists); Ed. Schwartz, *Charakterköpfe d. antiken Lit.*, 2nd series, Leipzig, 1910, p. 1 f.

R. M. WENLEY.

CYRENAICS.—The name given to a school of thinkers founded at Cyrene, a Greek colony on the northern coast of Africa, towards the beginning of the 4th century B.C. It is one of the earliest attempts—and perhaps the most thorough-going—to base the conduct of life on the pursuit of the individual's pleasure. The founder of the school was **Aristippus.** He came to Athens to hear Socrates, whom he reverenced to the end of his life (Diog. ii. 65, 76), and whose scholar, in spite of the differences between them, he always avowed himself to be (*ib.* 74). Socrates would never really have accepted the pursuit of mere personal pleasure as the end of life; indeed, in the *Memorabilia* (ii. 1), Xenophon gives us an account of a keen dispute between him and Aristippus on this very point. Yet the 'pupil' might fairly have claimed to teach nothing inconsistent with his master's fundamental principles. Socrates, in fact, while claiming that man's rational life lay in the search after what was truly good, had yet left undetermined what this true good might be (see Sidgwick, *History of Ethics*, pp. 24, 31). The Cyrenaics argued that it could be found in nothing but *pleasure*, which was the one thing manifestly desirable, and which all creatures, unless perverted, did desire and choose (Diog. ii. 87, 88, 89).

This ethical doctrine seems to have been closely connected with their general view—derived probably from Protagoras—that the individual was limited to a knowledge of his own sensations. A man could know only what appeared to him, not what things were in themselves, nor even what they appeared to others; and there was thus apparently no possibility of a rational assertion that anything was noble or not in itself. All we could know of 'goodness' was what was pleasurable *to us* (Diog. ii. 92, 93; Sext. Empir. *adv. Math.* vii. 191–200). There was thus no room for the Cyrenaics to admit fundamental differences of quality in pleasure; and this, it would seem, they fully realized. One pleasure was no whit better than another (Diog. ii. 87), nor could the source from which it sprang, however base that might be called, make any difference to its worth (*ib.* 88). In this they were profoundly at variance with Plato and Aristotle, who both argued for absolute standards of value and of truth, standards going beyond the mere opinions of individual men (*e.g.* Plato, *Repub.* bk. vi. *ad fin.*; Arist. *Metaph.* bk. iii. c. 5. 1009[a], *Eth. Nic.* bk. i. c. 8. 1099[a]). The famous discussion in the *Philebus* (36 C f.) as to the possibility of a distinction between true and false

pleasures, parallel to that between true and false opinions, is in all probability written with an eye to the Cyrenaic position. It is of great interest also to note that this initial scepticism of theirs led the Cyrenaics to turn aside from scientific inquiry into Nature, as from useless speculation (Diog. ii. 92).

The anecdotes told of Aristippus and his biting wit give a vivid commentary on his theory. His seems to have been one of 'the great experiments in life' that the Greek philosophers were not afraid to make. Resolute, daring, and self-controlled, on one side it recalls the great Socratic tradition of unswerving obedience in practice 'to that argument which seemed the best,' and even the Socratic scorn for non-essentials; 'it was better to be a beggar than a dunce; if the first had no money, the second had no manhood' (*ib.* 70). But there is a sinister side as well. Aristippus will take anything he can get from Dionysius, the tyrant of Syracuse. 'I went to Socrates when I wanted knowledge, I come to you when I want money' (*ib.* 78). He does not demand constancy from his mistresses; what did it matter to him if others sailed in his ship (*ib.* 74)? Money and what money could get are not to be shunned, but used, and used freely. The evil lies in being bound by our pleasures, not in enjoying them (*ib.* 75; Stobæus, *Floril.* 17, 18). Let them be as vivid as possible—the 'calm' so near indifference, afterwards advocated by the Epicureans, is scorned as nothing better than sleep (Diog. ii. 89)—but let them not defeat their own object by fettering the mind (*ib.* 66, 67). The 'smooth motion' of the Cyrenaic pleasure was always motion, but the rippling motion of a great sea which should never be roused into storm. Though circumstances may prevent the wise man from obtaining this always, yet he will be able to attain more of it, and in a more intense form, than any one else (*ib.* 90, 91). Aristippus himself was always famous for his easy mastery over all circumstances, prosperous and adverse alike; and the line of Horace (*Ep.* I. xvii. 24) that pictures him 'at peace in the present, yet striving for greater things' ('*Tentantem maiora, fere præsentibus æquum*'), gives us Cyrenaicism at its best.

The pressure of the practical problem, how to attain the maximum of individual pleasure, is shown in the divergencies of his successors. Hegesias felt the inevitable pain of life so keenly as to disbelieve in the possibility of anything deserving the name of happiness (Diog. ii. 94). The most that could be hoped for by the wise man, acting for his own interest alone, as a wise man should, was to escape from suffering, and this could be attained best by indifference to external things (*ib.* 95, 96). Here we reach a strange likeness to the Stoics and Cynics, and, stranger still, we find this leader of what purported to be the school of vivid personal life called by the name of 'Death's Advocate,' and accused of luring men to suicide (*ib.* 86; Cic. *Tusc.* i. 83).

Annikeris, at the cost of consistency, gave a gentler tone to the whole system. It is plain that the question between what might be called individualistic and altruistic hedonism, between the pleasure of oneself and the pleasure of others, was coming to the front and pressing for solution. According to Annikeris, there were such things of genuine worth as friendship and patriotism (which Hegesias had denied). The wise man would suffer for his country and still be equally happy, although he got little pleasure from it, and pleasure alone was the end. The happiness of another was not a reasonable object of choice, yet the wise man would endure for the sake of his friend (Diog. ii. 96, 97).

Theodorus, called 'the Atheist,' seems to have been the closest, both in keenness of intellect and in hardness of temper, to the original founder. Friendship he dispensed with; the foolish could not use friends, and the wise man had no need of them (*ib.* 98). There was nothing to be ashamed of in theft and adultery and sacrilege, provided one escaped the penalties (*ib.* 99). He seems to have differed slightly from Aristippus in that he felt the need of laying more stress on the attitude of the mind, and less on the external goods of chance as necessary for the well-being of man. Thus he was led to say that the vital matters were not 'pleasure' and 'pain,' these in themselves being indifferent, but 'joy' and 'grief,' which in their turn depended on prudence and folly. This at least is the interpretation suggested by Zeller for a somewhat obscure passage in Diog. ii. 98, and it is certainly probable.

About the time of the later Cyrenaics, Epicurus was developing a more subtle and elaborate form of the doctrine, and after the 3rd cent. B.C. we do not hear of Cyrenaics as distinguished from Epicureans. See also artt. HEDONISM and PHILOSOPHY (Greek).

LITERATURE.—No writings, other than fragmentary, of the Cyrenaics themselves are in existence. The chief ancient authorities are: Diogenes Laertius, *de Clarorum Philosophorum Vitis*, bk. ii. 65–104, c. 8, 'Aristippus' [for the ethical doctrines of the school and the character of Aristippus], Paris, 1878; Sextus Empiricus, *adversus Mathematicos*, bk. vii. 190–200 [for the metaphysical position], Leipzig, 1840. See also F. W. A. Mullach, *Fragmenta Philosophorum Græcorum*, ii. 397 ff., Paris, 1867; H. Ritter and L. Preller, *Historia Philosophiæ Græcæ*, 'Cyrenaici,' 204–213 B, Gotha, 1888; F. Ueberweg, *Grundriss der Gesch. der Philos.*[8], Berlin, 1894–98, i. 95 ff.; E. Zeller, *Socrates and the Socratic Schools* (tr. Reichel), ch. xiv. [very clear and thorough, with copious quotations and references], London, 1868; J. E. Erdmann, *Grundriss der Gesch. der Philos.*[4], Berlin, 1895–96 (Eng. tr., London, 1890), i. 89 ff.; H. Sidgwick, *History of Ethics*, i. c. ii. §§ 2–4 [brief, but illuminating], London, 1896; G. W. F. Hegel, *Geschichte der Philosophie*, ii. 1. c. 2. C. 2 [the work of a master], Berlin, 1833. W. Pater, in *Marius the Epicurean*, London, 1885, gives incidentally a vivid though somewhat rose-coloured sketch of the system.

F. M. STAWELL.

D

DACOITY.—This term, which is derived from Hindī *ḍakait*, 'robbery belonging to an armed band,' probably from *ḍāknā*, 'to shout,' is now usually employed as an equivalent for brigandage (or, technically, the conspiracy of five or more men to engage in an act of robbery, or the actual commission of such an offence) arising from, or at least existing in, an unsettled condition of some of the administrative districts in India. It is in this sense that it is used with regard to Burma. Originally, however, it referred to a much more definite and curious condition of society, in which robbery with violence was not only an occupation but a religious and caste duty. Robbery was a hereditary profession, although the ranks of the Dacoits were continually augmented from the outside. The system reached its greatest development in the Native State of Oudh (shortly before its incorporation within the British Dominion in India), owing to the incapacity of its native rulers.

But it was also prevalent in nearly every Native State, and was encouraged by the rulers, who shared in the proceeds of the robberies as the price of their toleration. The Dacoits rarely committed their depredations near their native haunts, or even within the State which harboured them. As their victims were usually strangers, the Dacoits were not the objects of fear and hatred on the part of their neighbours, who were not, therefore, anxious to betray them to the authorities. Their raids were carefully planned, and the members of an expedition made their way to their rendezvous singly or in small bands, disguised as pilgrims or as holy water-carriers or as bullock-drivers. After carrying out their plans, they made their way back to their jungle fastnesses with almost incredible rapidity. As a rule, they preferred to avoid bloodshed, but on occasion they did not scruple to take life.

The Dacoits were usually of low caste, and their social and religious customs were of a totemistic character, exogamous marriage being the practice. Their raids were undertaken only when the omens were favourable, and after the exercises of religion. The deities of most of the Dacoit clans or septs were Kālī or Devī (an axe sacred to her being carried by Dacoit leaders in Central India) and Sorruj Deota (the sun-god).

The British authorities in India made great efforts in the decades preceding the middle of last century to stamp out the practice, but, as it was rooted in religion and social custom as well as encouraged by misrule in Native States, the task was very severe; and the evil came to life again when it had been apparently stamped out. But, with the final annexation of Oudh, its great stronghold no longer proved a shelter for the robber clans, and Dacoity since the Mutiny has been indistinguishable from local brigandage, to the suppression of which the police are adequate.

The attitude of the British authorities to Dacoity, as in the similar cases of Thuggee (see THAGS), affords an instance of interference with native religions and customs; but it brings out clearly the rationale of such action in that the custom must be recognizably of an anti-social and criminal character.

LITERATURE.—J. Hutton, *Popular Account of the Thugs and Dacoits*, London, 1857; E. Balfour, *Cyclopædia of India*[3], London, 1885, i. 874. See also the literature under THAGS.

JOHN DAVIDSON.

DĀDŪ, DĀDŪPANTHĪS. — 1. Dādū (A.D. 1544 to 1603) was born in Ahmadābād, of Brāhman parents. His father, Lodī Rām, had left his Shāstras and temple services for trade with foreign parts. About the time of the Reformation in Europe and a little before Dādū's birth, a Reformation of Hinduism had spread over all northern India, from Bengal to the Panjāb, and south towards Bombay. Kabīr, the founder of the Kabīrpanthīs (*q.v.*), had very thoroughly done a reformer's work round Benares. Nānak, from whom, under his ninth successor, came the Sikhs, had fought idolatry and superstition in the Panjāb. The influence of these two spread far and wide, and hundreds of earnest souls were protesting against the grosser abuses in Hinduism.

Dādū was early affected, and his religious convictions led him to spend his life in preaching the Reformation doctrines over the midlands, between Ahmadābād and Delhī. He lived for a time in Sāmbhar, where his monument is, and where his coat and sandals are kept as relics and worshipped. Amber, the old capital of Jaipur, was Dādū's home for a time, where a house of his followers still flourishes, and in the modern capital we have the headquarters of the Nāgās. Dādū visited Delhī, and had an interview with the famous Akbar. Thereafter he turned his face towards the south, making new disciples and strengthening his old ones, among whom were some nobles. After a year in Amber he went to Narainā, a village about 40 miles S.W. from the capital and 8 from Sāmbhar, and there died in A.D. 1603.

Dādū left 152 disciples to continue the work among his many followers. His teachings are embodied in the *Bānī*, a poetic work of 5000 verses. In its 37 chapters various religious subjects are treated, such as: The Divine Teacher, Remembrance, Separation, The Meeting, The Mind, Truth, The Good, Faith, Prayer. The Hymns appended are set to music, and are suitable for public and private worship.

2. From the *Bānī* it appears that Dādū condemned and rejected much that was new and false in Hinduism, and that he re-discovered and taught much truth about God, man, and salvation.

He rejected: (1) The *Vedas* and *Qur'ān* as ultimate truth; (2) the *Vedāntic* philosophy; (3) ritualism and formalism; (4) the corrupt priesthood; (5) caste and caste marks; (6) idolatry; (7) the use of the rosary; (8) pilgrimages and ceremonial ablutions. (9) He threw new light on the transmigration of the soul, holding that all possible re-births happen in man's one life on earth. The moods of mind and the quality of actions give the soul the birth of a fox, a goose, a pig, an ass, and such like. (10) He held that the gods Śiva, Viṣṇu, and Brahmā were only men who had been canonized. Their pictures and statues had been made and preserved as object-lessons, to teach men their history. (11) *Māyā*, the world, matter, was not evil in itself. The bad man made it evil by allowing it to lead his mind away from God. Worldliness, and not the world, is evil. (12) He again and again says: 'I am not a Hindu, nor a Musalmān. I belong to none of the six schools of philosophy. I love the merciful God.'

His doctrines about God, man, and salvation included the following.

'Forsake not the One God. Forsake all evil.' 'I have found that God is the unchangeable, the immortal, the fearless, the joy-giving, the best, the self-existent, the almighty, the beautiful, the glory-of-all, the pure, the unimaged, the unseen, the incomprehensible, the infinite, the kingly One.' 'He is brightness, effulgence, light, illumination, perfection.' 'I have made all things teach me of God, and I know that He is immanent in the universe with all its properties and elements.'

God is the *Creator*.

'So powerful is the Lord, that by one word He created all.' 'His works are wonderful, and cannot be fully understood. 'He alone does all and gives power to all. He blesses all His servants and is not proud.' 'He created us after a model He had formed: of His plans, His wisdom, His works, no man can see the limit.' 'Where nothing was, He made all; and when He wills it becomes nothing. Become as nothing before Him, and love Him alone.'

God is the *Preserver* of all.

'I meditate on Him, who preserves all.' 'I adore the *Parabrahma*, the unsurpassable. My God is the Holy One. I worship the pure and unimaged one.'

Man is a creature, and made to worship God.

'Who is so wretched as the man who persuades you to serve other gods?' 'Not for a moment even let God's name depart from your heart.' 'My soul, if now thou knowest not that God's name is the chief good, thou shalt repent and say, "What a fool I was!"' 'The world is an ocean of pain, God is an ocean of joy. Go to this ocean and forsake the useless world.'

Conscience spoke clearly in Dādū.

'I have done very wickedly; be not angry, O Lord. Thou art the God of patience. To Thy servant all the blame belongs. 'I have forsaken Thy service. I am a sinful servant. There is no other like me so vile.' 'I sin in every action, I am unjust in everything. I sin against Thee every moment. O God, forgive my sin.' 'I am the only great sinner in the whole world. My sins are infinite and countless.' 'From the beginning to the end of my life I have done no good; ignorance, the love of the world, false pleasure, and forgetfulness have held me.' 'I have lived in lust, anger, suspicion, and have not called on Thy name. I have spent my life in hypocrisy and the sins of the senses.' 'I am bound by many fetters. My soul is helpless. I cannot deliver myself. My beloved alone can.' 'I am a prisoner. Thou art my deliverer. Save me, O God most merciful.' 'The evil is in my soul, my heart is full of passion; reveal Thyself and slay all

mine enemies.' 'My soul is sorely afflicted, because I have forgotten Thee, O God. I cannot endure the pain; deliver me.'

Dādū knows that it is sin which separates the soul from God. The longest poem in the *Bānī* is called 'Separation.' It is the wail of a woman sick of love and maddened by the pain of separation.

'I am full of love. I greatly desire Thee. O Lord, my beloved, come and meet me; now is my time.' 'The wife, separated from her husband, calls day and night, and is sad. I call my God, my God, vehemently thirsting.' 'My whole soul calls as the *Chātrag*.[1] My beloved, my beloved, I thirst for Thee, I long to see Thee. Fulfil my desire.' 'O *Chātrag*! Thy voice is sweet. Why is Thy body so black? I am consumed of love. I call day and night, O Thou, O Thou.' 'To whom shall the wife tell her pain? By whom send news to her absent one? Watching his return, her grief turns her hair white. 'As the opium-eater longs for his opium, the hero for war, the poor for wealth, so longs my soul for God.'

Dādū had cast aside the *Vedas*, the gods, and all that men hold to be the means of salvation. He found nothing in the past or in the present, and so he rushes into the future and says:

'When will He come? When will He come? My beloved, when will He reveal Himself? Sweet will He be to me. I will embrace Him. Without Him I must die. Body and soul will find joy when God reveals Himself.'

Dādū knows from his wants what 'the meeting' ought to be and what ought to be revealed to him, and so he calls on God to come as 'the Divine Teacher,' 'the Deliverer.'

3. Dādū's disciples are called *Dādūpanthīs* ('they of the path of Dādū'). They exist in considerable numbers and in two divisions.

(*a*) The Laymen, 'the Faithful,' '*the Servants*.' These may marry, and follow any respectable trade or profession. In theory they are supposed to have given up Hinduism. They ought to store their minds with the *Bānī*, and use their creed and prayers. Discipline is lax, however, and so in practice there are various stages of attainment. At times the connexion becomes very slender indeed, for a dole to a begging *sādhū* is sufficient to maintain it.

(*b*) The Priests, 'the Esoteric,' '*the Masters*.' These are all monks, and keep up their ranks by adoption from the better castes. They devote themselves to a religious life and to teaching the *Bānī*; but this does not prevent them from bearing arms, practising medicine, lending money, or from agricultural pursuits. Only 52 of Dādū's original disciples opened, mainly in Rājputānā, 'doors of Dādū' (*Dādvārās*) and adopted successors. Some of these 'seats' have prospered in wealth and learning, and some have almost passed away. They produced a good deal of what, in relation to Hinduism, may be called Protestant Literature, written in verse, and in the common tongue (*Bhāṣā*). Probably much of this has been lost, for it has never been collected, printed, or translated.

The present distinctions arise not from difference in belief, but from locality and modes of life of the Dādūpanthīs.

(1) The *Khālsas* ('the pure, ruling').—The 'seat' of these is Narainā (Jaipur). Here Dādū died, and here lives his successor, the head of all the Dādūpanthīs. They all contribute something to keep up the dignity of their head; and here, once a year, a great gathering (*Melā*) is held.

(2) The *Nāgās* (soldier monks).—Their name, from *nagna* ('naked'), refers to the simplicity of their dress when they go to war. Their founder was Sundra Dās, a Rājput of Bīkānīr, who, seeing the value of the sword, before the Pax Britannica filled the land, trained his followers to serve as mercenaries. There are at present about 20,000 of them, in 9 camps, near the Jaipur borders, which they defend. They have fallen far behind in the modern accomplishments of the soldier in drill and arms. They have only the sword, the shield, and the match-lock. They were faithful to England in the Mutiny. They are a fine class of men, and their training to read the *Bānī* and to arms prevents them from falling into dissipation.

[1] A bird supposed to drink only the rain from heaven.

(3) The *Utrādis*.—These have come from a great and prosperous 'school' in the Panjāb. The founder was Bābā Banwārī Dās. These Dādūpanthīs take to medicine and money-lending, and many of them are very rich.

(4) The *Virkat*.—These may not touch money, but have to live on the alms they get. They wear salmon-coloured clothes and devote themselves to study. They seldom stay long in any place, but are guided by 'grain and water' (*i.e.* food) in their movements. 'The Master' has with him from one or two to many disciples—boys whom he has adopted and whom he trains. The present writer has seen them travel about in as large a 'school' as 150. They teach not only the *Bānī*, but also difficult Sanskrit books relating to Literature, Philosophy, and Religion.

(5) The *Khākīs* ('ashes-covered').—These Dādūpanthīs accentuate austerities, wear few clothes, have long coiled hair, and smear themselves with ashes. They usually go about in small companies, and believe that, like the stream, they keep pure by constant movement.

4. *The present condition of the Dādūpanthīs*.—Hinduism, against which Dādū protested, has, in a modified form, found its way amongst them again. It has come in by way of the intellect, and many are Vedāntists. It has also come in by way of the heart, and many use the rosary, worship the *Bānī* as an idol, and prostrate themselves before the sandals and old clothes of Dādū.

Hopkins, *Religions of India*, London, 1896, p. 513 f.; J. C. Oman, *Mystics, Ascetics, and Saints of India*, London, 1903, pp. 133, 189; A. D. Bannerman, *Rajputana Census Report*, Lucknow, 1902, p. 47 f.

JOHN TRAILL.

DAGAN, DAGON.—1. The Babylonian Dagân.—In Bab. and Assyr. texts a god appears whose name is written with the syllabic signs *DA-GAN*. The objections of Jensen (*Kosmologie*, 449 ff.) to the phonetic reading of these signs have been set aside by the discovery of new texts in which *gan* receives a phonetic complement, e.g. *Da-gan-na* (*Vorderas. Bibl.* i. [1907] 231), and, in the Tell el-Amarna letters (Winckler, 1896, nos. 215, 216), *Da-ga-an* (without the determinative for 'god'). We meet also *Da-gan-ni*, with a different sign for *gan* (Jensen, *op. cit.* 449; Jastrow, *Rel. Bab.* 137); and in one case *Da-gu-na* (Bezold, *Catalogue*, 1889–99, iv. 1482).

In Babylonia, Dagân first appears in personal names on the obelisk of Manishtusu (*c.* 2400 B.C., Meyer), namely, *Karib* (?)-*Dagân* (A. v. 8), *Gimil-Dagân* (A. xi. 15), and *Iti-Dagân* (C. xvi. 7). The 37th year of Dungi, king of Ur, took its name from the building of the temple of Dagân (*Vorderas. Bibl.* i. 231). A king of Isin (2145 B.C., Meyer) bore the name of *Idin-Dagân*, and his son was *Ishmê-Dagân*. In the prologue to the Code of Ḫammurabi (iv. 27 f.) the king describes himself as 'warrior of Dagân, his begetter.' Dagân is mentioned in several other early Bab. inscriptions (Jensen, *op. cit.* 449). A seal-cylinder published by de Clercq (*Cylindres orientaux*, 1888, no. 245) bears the inscription '*Dagân-abi*, son of *Ibnî-Dagân*, servant of Dagân,' and in the Ira-myth he is mentioned along with Anu (*KIB* vi. [1900] 60, line 25).

In Assyria this god first appears in the name of the king *Ishmê-Dagân* (*c.* 1900 B.C.). Itti-Marduk-balaṭu, an Assyrian ruler whose date cannot be determined, calls himself 'the chosen of Anu and *Dagân*' (Winckler, *Unters.*, 1889, p. 139). Ashur-

naṣirpal (885–860 B.C.) calls himself 'darling of Anu and Dagân' (Layard, Pl. 1, line 1; *WAI* xvii. 10–11). The eponym for the year 879 B.C. was named *Dagân-bêl-nâṣir* (*KIB* i. [1889] 204). Shamshi-Adad (825–812 B.C.) and Sargon (722–705 B.C.) also mention Dagân in connexion with Anu (*KIB* i. 175, ii. [1890] 39, 41). Dagân is not found in personal names after the 9th cent., and his worship seems to have died out in the later days of the Assyrian empire. Sargon's reference to him is an archaism.

In tablets from the kingdom of Ḫana, on the upper Euphrates near Sâlḥîjeh, Dagân is mentioned in oaths along with Shamash (*PSBA* xxix. [1907] 177 ff., xxxi. [1910] 292; Ungnad, *BASS* vi. [1909] 5, p. 28; *Vorderas. Schriftdenkmäler*, vii. [1909] 204), and in one of these the personal name *Yashshuḫ-Dagân* occurs. In a tablet from the capital of this kingdom, Shamshi-Adad, *patesi* of Assyria, styles himself 'worshipper of Dagân, builder of the temple of Dagân in the city of Tirqa' (*ZA* xxi. [1908] 247; *OLZ* xi. [1908] col. 193). In a tablet of Ḫana published by Thureau-Dangin (*JA* xiv. [1909] 149) several priests of Dagân are mentioned, and the name *Izra'-Dagân* occurs. In the Cappadocian tablets also the name *Iti-Dagân* is found (Sayce, *Babyloniaca*, i. [1907]). Finally, the Canaanite writer of two of the Tell el-Amarna letters bears the name *Da-ga-an-takala* (Winckler, nos. 215, 216). It appears, accordingly, that the cult of Dagân extended all the way from Babylonia to the shores of the Mediterranean.

On the basis of a derivation of Dagân from *dâg*, 'fish,' many writers have assumed that he was a fish-god, and have appealed to the legend narrated by Berossus (Müller, *FHG* ii. [1885] 496 ff.; Lenormant, *Fragments cosmogoniques*, 1872, p. 6 f.; Hrozny, *MVG* viii. [1903] 252 ff.), that seven beings, half-fish and half-man, came out of the Persian Gulf and taught the primitive inhabitants of Babylonia the arts of civilization. The first of these was called Ōánnēs; the second, Annēdōtos; and the last, Ōdákōn. The last is supposed to be the same as Dagân; and, on the strength of this identification, the numerous fish-men depicted in Bab.-Assyr. art (Ward, *Seal-Cylinders*, 1910, pp. 217, 282, 355 f., 385, 410) have been supposed to be representations of Dagân (*e.g.* Layard, *Nineveh*, 1849, ii. 353 and pl. at end of book; Schrader, *KAT*^{2}, 1882, p. 182; and in Riehm, *HWB*^{1}, 1874, p. 250; Menant, *RHR* xi. [1885] 295 ff.; and most of the popular handbooks). Ōdákōn, however, has nothing to do with Dagân, but is the Sumerian fish-god *U-ki-di-a*, or *U-di-a-ki*, who is associated with the fish-god *Ḫan-ni*, the prototype of Ōánnēs (Reisner, *Hymn.*, 1896, pp. 91, 137; Hrozny, *MVG* viii. [1903] 258). The fish-men in Bab. art represent Ea, the god of the sea, and his attendants; but with these Dagân is never identified (Jensen, *op. cit.* 451; Zimmern, *KAT*^{3}, p. 358; Hrozny, *op. cit.* 261; A. Jeremias, *Das AT im Lichte d. alt. Orients*^{3}, p. 470). On the contrary, Dagân is constantly equated with En-lil, or Bêl, the god of the earth. In the passages cited above he is associated with Anu, the sky-god, in the manner in which Bêl is ordinarily associated, and in *WAI* (i. 4, no. 15, line 6 ff., iii. 68, 21 *cd*) the identity of the older Bêl of Nippur with Dagân is asserted (see BAAL in vol. ii. p. 295; Jastrow, *Rel. Bab.* 137, 142, 145, 219).

2. **The Canaanite Dāgôn.**—In the OT Dāgôn appears as a god of the Philistines who had a temple at Gaza, and a temple and image at Ashdod (Jg 16$^{23f.}$, 1 S 5$^{2-7}$, 1 Mac 10$^{83f.}$ 11^4). Jerome in his com. on Is 46^1 (where some Gr. texts read 'Dagon' instead of 'Nebo') says: 'Dagon est idolum Ascalonis, Gazae et reliquarum urbium Philistim.'

The Philistines were a non-Semitic people who came from Caphtor (prob. Crete). They are first mentioned as invading Palestine in the 8th year of Ramses III. (1190 B.C.). They seem not to have brought Dāgôn with them, but to have adopted him from the Canaanites among whom they settled, since he is found in place-names that are older than the time of their conquest and that lie outside of their territory. *Bayti-Duquna* appears in a list of the Egyptian king Ramses III., which is copied from an earlier original of the XVIIIth or XIXth dynasty (Müller, *Egypt. Researches*, 1906, p. 49). It seems to be identical with Bêth-Dāgôn (Jos 15^{41}) —which is either the modern *Beit-Dejan*, 6 miles S.E. from Jaffa, or *Dâjûn*, 1½ miles farther S.—and with *Bît-Daganna* of Sennacherib (*Prism-Insc.* ii. 65=*KIB* ii. 92). There was another *Bêth-Dāgôn* in Asher (Jos 19^{27}). Jerome knows a *Kepher-Dāgôn* (*OS*, ed. Lagarde[^{2}1887], 104^{15}, 235^{14}) between Diospolis and Jamnia. There is also a modern *Beit-Dejan*, S.E. of Nâblus. All these are doubtless survivals of ancient place-names, and indicate a wide diffusion of the cult of Dāgôn in Canaan before the Philistine conquest. A borrowing of Dāgôn by the Philistines is not surprising, since they adopted the Canaanite 'Ashtart (1 S 31^{10}) and the Syrian Atargatis (see ATARGATIS in vol. ii. p. 165). Whether Marnas (Aram. *Marnā*, 'our Lord'), a deity of the Philistines at the beginning of our era, is the same as Dāgôn is unknown (see Baethgen, *Beitr.*, 1888, p. 65 f.).

Dāgôn seems also to have been a god of the Phœnicians, either through survival from primitive Canaanite religion, or through adoption from the Philistines (cf. Philo Byblius in Müller, *FHG* iii. [1885] 567 f.). The *Etym. magn.* says that Bētágōn (Bêth-Dāgôn) is Kronos among the Phœnicians. Sayce (*Higher Criticism*, p. 327) reports a seal bearing in Phœnician letters the inscription 'Ba'al-Dāgôn,' and the inscription of Eshmunazar, king of Sidon, contains the words ארצת רגן, which may mean 'land of Dāgôn,' or merely 'corn-land.'

The theory that Dāgôn is derived from *dâg*, 'fish,' and that the image of Dāgôn was half-man, half-fish, is not found in old Jewish sources such as the Targum and Talmud, or in Josephus; it first appears in Jerome, who interprets Dāgôn as compounded of דג and און, and renders it *piscis tristitiæ* (*OS*, ed. Lagarde^2, 32^7; cf. 189^{14}). This theory was adopted by Jewish commentators of the Middle Ages, from whom it has been inherited by modern scholars. It is still defended by Cumont (in Pauly-Wissowa, *RE*, iv. [1909]), Baethgen (*Beitr.* 65), Lagrange (*Rel. sém.* 131), A. Jeremias (*op. cit.* 470). In support of this view it is urged (1) that Dāgôn is derived from דג, 'fish'; but it may come equally well from דגן, 'corn,' and may be a foreign word for which no Heb. etymology is to be sought. (2) In 1 S 5^4, after the account of how Dāgôn's head and hands were broken off, the Heb. text reads רק דגון נשאר עליו, 'only Dāgôn was left upon him,' which David Ḳimḥi translates 'only the form of a fish was left.' Wellhausen (*Text Sam.*, 1871, p. 59) reads דגו instead of דגון, and translates 'only his fishy part was left'; but Lagarde (*Proph. Chald.*, 1872, p. li), with more probability, reads גוו, 'his body,' or, with the LXX, we may suppose that ג has fallen out of the text before דגון. In any case this does not prove, as Ḳimḥi says, that 'from his navel down Dāgôn had the form of a fish, and from his navel up the form of a man.' (3) Derketo, or Atargatis, at Askalon had a fish's tail (see ATARGATIS in vol. ii. p. 166), and she was possibly the consort of Dāgôn. But, even granting that the two were consorts, which is not known, there is no reason why Dāgôn should have had the same form as his spouse. The Sumerian fish-god Udaki has as wife the corn-goddess Nisaba (*MVG* viii. [1903]

263), and similarly the fish-goddess Atargatis may have had as consort the corn-god Dāgôn. (4) Coins of Arados and of Askalon dating from about 350 B.C. depict a triton-like figure holding a trident in his right hand and a fish in his left (Head, *Hist. Num.*, 1887, p. 666; Hoffmann, *ZA* xi. [1896] 279 f.; Lagrange, *Rel. sém.* 131). These are supposed to be Dāgôn, but there is no proof. They are in pure Greek style, and far more probably depict Neptune. Accordingly, there is no better evidence that Dāgôn was a fish-god than there is in the case of Dagân. From the seal referred to above we learn that he was one of the *bᵉ'ālîm*, who in Canaan were predominatingly agricultural deities (Hos 2^{7} (6)), and on this seal an ear of corn is depicted. According to 1 S 6^{5}, Dāgôn was discomfited by Jahweh's sending mice which destroyed the crops. This looks like an agricultural divinity. Dāgôn must also have been a warder-off of disease, since he was attacked by Jahweh's sending tumours upon the Philistines (1 S $5^{6ff.}$). He was also the leader of his people in war, who delivered their enemy into their hand (Jg $16^{23f.}$) and in whose presence they set the ark as a trophy (1 S 5^{2}). He was worshipped in joyous festivals with athletic sports (Jg 16^{25}). The one rite of his cult that is known to us is his priests' avoidance of treading upon the threshold of his sanctuary (1 S 5^{5}, Zeph 1^{9}).

3. The identity of Dagân and Dāgôn.—This is doubted by Jensen (*Kosmol.* 449 ff.) and by Moore (*EBi* i. 985), but is accepted by Schrader, Baethgen, Baudissin, Sayce, Bezold, Zimmern, Jastrow, Hrozny, and Lagrange. It is probable for the following reasons:—(1) The two names are precise etymological equivalents. Heb. *ô* is a modification of an original *â*, and is represented in Assyr. either by *â* or by *û*: e.g. *Ammôn*, Assyr. *Ammânu*; *Ashkelôn*, Assyr. *Iskalûna*. Hence Heb. *Dāgôn* is rightly reproduced by Assyr. *Dagân*, or *Dagûna* (Bezold, *Catalogue*, iv. 1482). The occurrence of the two forms shows that the resemblance is not accidental. (2) The Canaanite *Dagân-takala* in the Amarna letters (Winckler, 215 f.) must have been a worshipper of Dāgôn. (There can be no doubt that this is the name of a god, in spite of the lack of determinative.) (3) The Heb. name *Bêth-Dāgôn* appears in the annals of Sennacherib as *Bît-Daganna*. (4) The combination *Dāgôn-Ba'al* on the seal referred to above is analogous to the combination *Bêl-Dagân* in Babylonia. (5) The statement of Philo Byblius (*FHG* iii. 567 f.) that Dāgôn was the son of Ouranos and Gē points to his identity with Bêl-Dagân, the earth-god of the Bab. triad. (6) The character of Dāgôn, so far as we know it, as a national god of agriculture and of war, corresponds to the character of the Bab. Dagân.

4. The origin of Dagân-Dāgôn.—Schrader (*KAT*², p. 181 f.), Delitzsch (*Wo lag das Paradies?*, 1881, p. 139), Sayce (*Higher Crit.* p. 325), on the basis of the association with Anu, regard Dagân as a Sumerian deity whose cult was adopted by the Semitic Babylonians, and by them passed on to Mesopotamia and Palestine; but his name never occurs before 2500 B.C., and then only in the inscriptions of Semitic kings. All the personal names compounded with Dagân are Semitic, and many of them show the West Semitic type that is frequent in the period of the dynasty of Ḥammurabi. Now that it is known that Babylonia was invaded by the Amorites about 2500 B.C., and that the first dynasty of Babylon was Amorite (Meyer, *Gesch.*² i. [1909] 463 ff.), the theory has become exceedingly probable that Dagân was a god of the Amorites, whose worship was brought by them from their original home into both Babylonia and Palestine: so Bezold (*ZA* xxi. [1908] 254), Meyer (*op. cit.* 467), Jastrow (*Rel. Bab.* 220), Clay (*Amurru*, p. 147), Cook (*Rel. Anc. Palestine*, 1908, p. 92). This theory is favoured by the fact that Ḥammurabi in the prologue to his *Code* (iv. 28) speaks as though Dagân were the ancestral god of his race.

If Dagân-Dāgôn was originally the god of a people speaking a language similar to Hebrew, then the most probable etymology for his name is the one given by Philo Byblius (*FHG* iii. 567), and suggested as an alternate by Jerome, that it is the same as Can.-Heb. דָּגָן, 'corn.' This agrees with the facts noted above, that both in Babylonia and in Canaan he was a god of the earth and of agriculture, and that on a seal he is called *ba'al* and has the emblem of an ear of corn (so Movers, L. Müller, Schröder, Pietschmann, Wellhausen). Jensen in Baudissin (*PRE*³ iv. 426) suggests a derivation from Arab. *dagn*, 'copious rain.'

LITERATURE.—See the bibliographies under BAAL, CANAANITES; and, for the older literature, Baudissin, art. 'Dagon,' in *PRE*³ iv. (1898); also Menant, 'Le Mythe de Dagon,' in *RHR* xi. (1885) 295 ff.; Jensen, *Kosmologie der Babylonier*, 1890, p. 449 ff.; Sayce, *Higher Crit. and Mon.*, 1894, p. 325 ff.; Moore, art. 'Dagon,' in *EBi* i. (1899); Theuius-Löhr, *Com. on Sam.*, 1898, p. 30; H. P. Smith, *Com. on Sam.*, 1899, p. 38; Cumont, art. 'Dagon,' in Pauly-Wissowa, *RE*, 1909; Jastrow, *Religion Bab. und Assyr.* i. (1905) 219 f.; Hruzny, 'Oannes, Dagan, und Dagon,' in *MVG* viii, (1903) 94–106; Zimmern, *KAT*³, 1903, p. 358; Lagrange, *Études sur les rel. sém.*², 1905, p. 131; A. Jeremias, *Das AT im Lichte des alten Orients*³, 1906, p. 470; Clay, *Amurru, the Home of the Northern Semites*, 1909, p. 146.

LEWIS BAYLES PATON.

DAIBUTSU ('Great Buddha').—The name given to several colossal images found in Japan. These vary in size, posture, material, etc.; some indeed are not much larger than the ordinary size of the human body, and scarcely deserve the title of *daibutsu* popularly assigned to them. Some of them are of wood, but the majority are of bronze; some are in a sitting posture, others in a standing one; recumbent figures, such as are seen in Ceylon or Burma, are never found in Japan. The Buddhas represented are Vairochana, Amitābha, Avalokiteśvara (Kwannon), Kṣitigarbha (Jizō), and Śākyamuni, but there are also representations of other Buddhas and Bodhisattvas. For the purposes of this article, three *daibutsu* only will be considered, viz. those at Nara, Kyoto, and Kamakura. These are the *daibutsu* that are properly so called.

1. Daibutsu at Nara.—This was erected under the auspices of the Emperor Shōmu Tennō (A.D. 724–748), the most zealous, perhaps, of all the Buddhist Emperors of the country. It is of especial interest to the student of the religious history of Japan, as being connected with Shōmu's audacious but successful plan of planting Buddhism firmly on the soil of Japan by proclaiming its essential identity with the Shintoism indigenous to the country. In this plan the Emperor was ably assisted by a Korean priest of the name of Gyogi,[1] who must be considered as the true parent of the *Ryōbu*, or amalgamated Buddho-Shintoism, which continued in force until the Meiji era. Gyogi's plan was to impress the native mind with the dignity of Buddhism by the erection of a colossal statue of Buddha set up in a temple architecturally worthy to be the religious centre of the country, and then to absorb into the organized system thus established the whole of the native cults which were then, as now, bound up with the life and worship of the nation. This could not be done without the sanction of the Shinto priesthood, and the instruments chosen to

[1] Gyogi, the descendant of a Korean king, was born in A.D. 568 in Japan, where his family had been domiciled for some time. Ordained to the priesthood at 18, he soon distinguished himself by his practical schemes for the improvement of the country—road-building, etc. He became spiritual adviser to the Emperor Shōmu and his consort Kōmyō, and inaugurated the movement for the amalgamation of the two religions then existing in Japan—undoubtedly with the best of intentions He died in 749, just before the completion of the *daibutsu*.

secure their assent were Gyogi himself and the Udaijin Tachibana no Moroye. According to the *Daibutsu-engi*, Gyogi was sent to Ise, nominally for the purpose of prayer, but actually, it would seem, to confer with the authorities at the Ise shrines. A similar messenger was dispatched to the Hachiman shrine at Usa in Kyūshū. The results of these preliminary meetings having been found satisfactory, a formal embassy was sent, with Tachibana no Moroye at its head, to propitiate the Sun-goddess, and the result was a formal reply, conveyed first in a dream to Shōmu, and then in a definite message, that the Great Sun-goddess was pleased to identify herself with *Dainichi* ('great sun') *Nyorai*, whose true essence was the great Buddha Vairochana. Thus was laid the foundation of that great system which taught the Japanese to see in the gods of Shinto manifestations of the deities of Buddhism, and enabled them to become Buddhists without ceasing to be Shintoists. This was in 743. The colossal image was the perpetual memorial of the alliance thus cemented. The casting was completed in 749, the inauguration ceremony was held forthwith, and the whole work was finished in 751. The statue, which is in a sitting posture, is 53 ft. in height, 7 ft. higher than the similar image at Kamakura. It stands in the *Daibutsu den*, or 'Hall of the Daibutsu,' in the Todaiji Temple at Nara, the building in which it is enclosed serving to some extent to conceal the magnificence of its proportions.

It was the desire of the Emperor and Empress to have Gyogi perform the ceremony of inauguration. But he did not live to see the completion of the statue. At the New Year's festivities in A.D. 749, Shōmu and Kōmyō had received from Gyogi the vows of the Bodhisattva, and had retired from the world, abdicating in favour of their daughter Kōken. Gyogi, feeling the approach of death, then designated a fit person to take his place—an Indian monk of the name of Bodhisena, known in Japan as Baramon Sōjō, or the Brahman archbishop. (Japan was at the time feeling the effects of the Muhammadan upheaval. Refugees from India, Persia, and Central Europe, gathering at the court of the Tang in Singanfu, had continued their wanderings as far as Japan, and in the reigns of Shōmu and Kōken we find not only Buddhist monks from India, but Manichæans, and even a Nestorian Christian doctor, at the court of Nara.)

When the day for the inauguration of the statue came, Bodhisena mounted the platform and 'opened its eyes' with a brush dipped in water. The whole congregation had its part in the ceremony, for a long string, fastened to the brush, passed among them for those who would to take in their hands. The congregation comprised the ex-Emperor Shōmu and his Empress, the reigning Empress Kōken, and all the magnates of the court. It was an imposing congregation in another sense, for, in the parlance of the day, Shōmu was an incarnation of Kwannon; Ryōben, who was considered to be the founder of the temple, was looked upon as an incarnation of Maitreya; Gyogi, of Mañjuśrī; and Bodhisena, of Samantabhadra. The Buddhist doctrines that were at that time uppermost in the mind of Japan were those known as *Kegon*, contained in the mystic Scriptures of the Avataṃsaka.

The Nara *daibutsu* has experienced many vicissitudes. In 855 its head fell off and was with difficulty restored to its position; in 1180, during the civil wars, the temple was burned, and the head melted. The image remained headless until 1195, when it was restored, through the efforts mainly of Jūgen, a disciple of Hōnen, who had been in China, and who travelled through Japan on a wheelbarrow collecting money. In 1567, the temple was burnt, but the *daibutsu* remained uninjured. Time, however, has necessitated many repairs from generation to generation. Very little, probably, of the original material now remains, yet the *daibutsu* has retained its identity throughout all its changes.

2. Daibutsu at Kyoto.—We have seen that the temple enclosing the *daibutsu* at Nara was burnt during the civil troubles in 1567. The temple remained in a ruinous condition for many years, and this suggested to Hideyoshi, who became Kwampaku in 1585, the idea of reconstructing it on some other site, and of placing in it a colossal image which should be more magnificent even than the one at Nara, and which should also be a perpetual memorial of himself. In 1586 he selected a site on the Amida-zaka at Kyoto, and commenced the erection of his temple. It did not seem as though Heaven were propitious to his designs. The first temple, built of wood brought from the districts of Tosa, Kii, and Kiso, and containing a wooden *daibutsu* (of Lochana-Buddha), 160 ft. in height, was destroyed by an earthquake in 1596. Nothing daunted, Hideyoshi set to work again on a more substantial structure. On Jan. 15, 1603, the casting of the bronze *daibutsu* having been completed up to the neck, the building and scaffolding caught fire and were destroyed, and, Hideyoshi being by this time dead, no immediate attempt was made to repair the disaster.

A year or two later, however, Tokugawa Iyeyasu, being anxious to reduce the family of Hideyoshi to impotence, suggested to Hideyori that the completion of the *daibutsu* and temple would form a very fitting tribute to the memory of his great father. Hideyori and his mother fell into the trap, and ruined themselves financially with the carrying out of Hideyoshi's magnificent but extravagant design. Hideyoshi's structure was 150 ft. in height, 272 ft. in length, 167½ ft. in depth. The roof was supported by 92 pillars, with an average diameter of 5 ft., and the sitting figure of Lochana-Buddha was 58½ ft. in height. When the whole was finished, Iyeyasu picked a quarrel with Hideyori over an insult, real or pretended, supposed to be conveyed to him in the inscriptions on the bells. The dedication ceremonies were postponed, and it was not long before Iyeyasu took up arms against the family of Hideyoshi and crushed it for ever.

Hideyori's *daibutsu* was destroyed by earthquake in 1662, and the copper used for coinage. No interest attaches to its successors. The present Kyoto *daibutsu* dates from 1801.

3. Daibutsu at Kamakura.—This image, though smaller than the one at Nara, is much better known. It stands in the open, amidst beautiful surroundings, and is constantly being photographed. No illustrated description of Japan would be complete without it. It is an image of Amida, 49 ft. 7 in. in height, and may be taken as marking an era in Japanese Buddhism. The *daibutsu* at Kyoto had no real spiritual signification: it was erected by men devoid of religious faith, for purposes of self-glorification. That at Nara symbolizes that union of Buddhism and Shintoism which was made possible by an acceptance of the peculiar tenets of the Kegon school, with Vairochana as its chief Buddha. The Kamakura *daibutsu* is an image of Amida, and marks the period when Vairochana was going out of fashion, and Amitābha, with the sects devoted to his worship, was coming to the front.

It is said that the idea of having a *daibutsu* at Kamakura first occurred to Minamoto Yoritomo in A.D. 1195, when he was assisting at the cere-

monies of the re-dedication of the Nara image after its restoration. Yoritomo, dying in 1195, did not live to see the completion of his design. It was not, however, suffered to fall to the ground, Ita no Tsubone, one of the ladies of Yoritomo's court, undertaking to collect funds for the purpose. Ita no Tsubone's efforts were supplemented by a priest named Jōkō, who was also active in collecting contributions. A wooden image was erected in 1241, the bronze one in 1252. The first was dedicated to Amida, the second apparently to Śākyamuni. But the present image, representing Amida, is said to be the very image erected in 1252, in which case we have an image with a double dedication—to Śākyamuni and to Amida. This, however, presents no difficulty. *Ni son ichi* ('two blessed ones with one personality') is a common doctrine of the Jōdo sects, Śākyamuni and Amitābha being looked upon as identical in essence whilst distinct in personality and name. Like the *daibutsu* at Nara, this image was originally enclosed within a temple. But the temple was destroyed by tidal waves in the year 1369 and again in the year 1494, and no attempt has been made since the last catastrophe to rebuild it. Strange to say, the metal does not seem to have suffered at all from the inclemencies of the weather.

A. LLOYD.

DAITYA.—The word *daitya*, the formation of which is explained by Pāṇini (iv. 1, 85), etymologically means 'descendant of Diti,' just like *Daiteya* and *Ditija*; it occurs in classical Sanskrit literature from the Epics downwards, and is there synonymous with *Asura* and *Dānava*, which are already found in Vedic literature. This article must, therefore, treat of all three—Asuras, Dānavas, and Daityas—as denoting one kind of demons or enemies of the gods.

The word *asura* originally had not an altogether evil meaning, and it is still used in the Rigveda as an epithet of the higher gods, especially of Varuṇa;[1] but even there it has in other places the meaning 'inimical to the gods.' In the Brāhmaṇas and Upaniṣads the latter meaning is exclusively given to the word *asura*, which is there the common name of demons as enemies of the gods. Both the Asuras and the gods are descendants of Prajāpati. According to the *Śatapatha Brāhmaṇa*, the Asuras were created from the downward breathing of Prajāpati, and entered the earth;[2] they had darkness and magic (*māyā*) assigned to them by him,[3] and held to untruth.[4] Originally they had divided the world with the gods,[5] and once built three strongholds, one in each world. But they continually contended against the gods, and, though they were more numerous or more powerful than the latter,[6] they were in the end always defeated by them. Frequently they were put to flight by Indra, with or without the assistance of Bṛhaspati. Thus at last they were driven from the earth and the regions above.[7]

From these statements it appears that the authors of the Brāhmaṇas and Upaniṣads regarded the Asuras as the pre-eminently evil ones; once[8] it is even said that their alleged battles with the gods are fictitious, and that they became degraded through their own wickedness. It is, however, to be noted that they are enemies only of gods, not of men; some peoples (the Easterns and others) are even said to be of Asura-nature, and it is added that they make their burial-places round and line them with stones.[1] This seems to imply that some peoples were supposed to worship Asuras.[2]

As regards the second synonym of Daitya, mentioned above, viz. *Dānava*, we find this word, as well as *dānu*, from which it is derived, used in the Rigveda very much in the same sense as the later *asura*. A female *dānu* is mentioned (i. xxxii. 9) as the mother of Vṛtra (*vṛtraputrā*). She came in later times to be regarded as the mother of the Dānavas; for *dānava* might be taken as a metronymic from *dānu*, and mythologists, of course, gladly availed themselves of this etymology in drawing up their legendary genealogies. The Daityas are derived from Diti, as the Dānavas from Dānu; but there is this difference, that *dānava* was an ancient name for demons which gave rise to a myth of their descent, while *daitya* is a name derived, after the Vedic period, from a somewhat ill-defined and evidently not popular deity, Diti. She is mentioned thrice in the Rigveda[3] and several times in the Atharvaveda, almost always in conjunction with the well-known great goddess Aditi, apparently as her sister, to whom she may be said to owe her existence, through a popular etymology which regarded *aditi* as formed by *a* privative and *diti*, just as *asura* was derived from *sura*. Diti, a product of priestly speculation, would scarcely have given rise to the popular name Daitya; but the latter was apparently formed as a 'pendant' of Āditya—a name which already in the Rigveda denoted a class of deities including some of the highest gods, and at the same time had been regarded as a metronymic from Aditi. So, to match it, the foes of the Ādityas—the Asuras—were named, by another metronymic, Daitya, after Diti, though this goddess had scarcely any hold on the imagination of the people.

The only myth related of Diti in the *Rāmāyaṇa* (i. 46) and the Purāṇas[4] betrays a similar tendency. It is to the following effect:

In the battle between the gods and the Daityas, which ensued on the churning of the ocean, the latter were worsted and slain. Diti then performed austerities, and asked Kaśyapa for a boon, viz. that she might give birth to a son who should vanquish Indra. Kaśyapa granted the boon on condition that she should remain entirely pure for a thousand years. During her pregnancy Indra watched her closely, and at last found her in an impure position. Thereupon he entered her womb, and divided the embryo into seven parts, which became the seven lords of the Maruts, or winds.

The present writer is of opinion that this myth was invented in order to explain that the Daityas are the elder brothers of the gods. For *marut* is also used, at least in classical Sanskrit, as a synonym of *deva*, 'god.' The motive of the myth lies, obviously, in an etymology which derives *diti* from the root *dā*, 'to cut.'[5] The myth itself is evidently not an old one, for it rests on the assumption that the Daityas are the children of Diti, and that they were killed in battle by the gods.

In epic and classical Sanskrit literature, where Asura, Dānava, and Daitya are interchangeable terms, these beings continue to be regarded as rivals, and, occasionally, as deadly foes, of the gods; but the attitude of the writers has decidedly changed since the composition of the Brāhmaṇas. Thus, the great epic contains several stories in which the Asuras—Vṛtra, Bali, Śambara, Namuchi, and others—are spoken of as virtuous and wise;

[1] *Asurya* (adj. and subst.) in the Rigveda refers to gods, and not to demons.
[2] xi. 1. 6, 8.
[3] ii. 4. 2, 5.
[4] ix. 5. 1, 12 ff.
[5] i. 2. 5, 1 ff.
[6] *Bṛhad Āraṇyaka*, i. 3. 1.
[7] *Śatapatha Brāhmaṇa*, xiii. 8. 1, 5.
[8] *Ib.* xi. 1. 6, 9

[1] *Śatapatha Brāhmaṇa*, xiii. 8. 1. 5, xiii. 8. 2. 1.
[2] It may be remarked, as illustrative of the godless character of the Asuras, that the secondary word *sura*, 'god,' was formed from *asura*, the latter being wrongly understood to be *a-sura*, 'non-god.'
[3] According to Böhtlingk-Roth (*Skr. Wörterb.*, St. Petersb., 1875, *s.v.* 'Diti'), the Diti of the Rigveda is different from the Diti of the Atharvaveda.
[4] Cf. Wilson, *Viṣṇu Purāṇa*, ii. 79, note ‡.
[5] It may be mentioned that the *Mahābhārata* (ix. 38. 32 ff.) contains an entirely different account of the origin of the Maruts; they were formed from the vital seed of the *ṛṣi* Maṅkaṇaka falling into the river Sarasvatī.

and some Asuras are acknowledged by gods as their friends and protégés, *e.g.* Prahrāda by Viṣṇu, and Bāna by Śiva. Moreover, they were not believed to lead a life of wickedness, but to conform to the precepts of the Veda. They had a teacher and priest of their own, a *purohita*, in the person of Śukra, otherwise called Kāvya Uśanas, a descendant of the great *ṛṣi* Bhṛgu.[1]

Finally, the abode of the Asuras, Pātāla, is described not as a dwelling-place of demons, but as equalling, and even surpassing, the heavenly regions in beauty and splendour. In popular literature, also, the Asuras seem to have been looked upon with a decided sympathy, for bk. viii. of the *Kathāsaritsāgara* contains the story of Sūryaprabha, apparently the subject of a romantic epic, the hero of which is an Asura who is held up to our admiration. People seem to have cherished a similar feeling towards the Asuras as towards the Nāgas, who shared the Pātāla regions with them. On the other hand, whenever the contention of the Asuras with the gods becomes the subject of the writers, they are at one with the Vedic authors, and describe the Daityas as demons given to deeds of violence, skilled in sorcery and magic power, and able to make themselves invisible or to assume any shape at will.[2]

The *Mahābhārata* and the *Purāṇas* contain accounts of the origin and genealogy of the Asuras, which, however, differ considerably in details. Marīchi, one of the six mental sons of Brahmā, produced by his will a son, Kaśyapa, a *prajāpati*, or secondary creator. He married thirteen daughters (*putrikās*) of Dakṣa, who was also a *prajāpati*. The first place in the list of these thirteen daughters of Dakṣa is always given to Aditi, and the second to Diti; but the latter was the eldest, as is expressly stated in *Mahāb.* xii. 207, 20. Diti had but one son, Hiraṇyakaśipu, the ruler of the Asuras. He had five sons, Prahrāda, etc.; Prahrāda had three sons, Virochana, etc.; Virochana's son was Bali, whose son was Bāṇa. These Asuras and their progeny[3] are, properly speaking, the Daityas; but popular usage takes no account of this genealogy, and regards all enemies of the gods as sons of Diti. By Dānu, another daughter of Dakṣa, Kaśyapa had 33 or 40 sons, among whom are enumerated the most famous Asuras. The sons and grandsons of these are said to be countless; they are the Dānavas proper, but the above remark about the Daityas applies also to them. Kaśyapa's son by the fourth daughter of Dakṣa, Siṃhikā, is the famous Asura Rāhu, whose head was cut off by Viṣṇu, and who ever since persecutes sun and moon, and occasionally swallows them (mythological cause of eclipses). Danāyus, the fifth wife of Kaśyapa, became the mother of Bala and Vṛtra, the Asuras who were killed by Indra; and Kālā, the sixth wife of Kaśyapa, gave birth to the Kālakeyas, a class of Asuras. Accordingly, the *Mahābhārata* (i. 65) derives the whole race of Asuras from five daughters of Dakṣa.

According to the *Viṣṇu Purāṇa*,[4] Siṃhikā was the sister of Hiraṇyakaśipu, and wife of Viprachitti, a son of Dānu, and, as the same source does not mention the above-named wives of Kaśyapa, or at least does not make them the ancestresses of separate Asura families, there are practically only two races of Asuras acknowledged by the Purāṇas, viz. Daityas and Dānavas. There are variations in other Purāṇas which need not be detailed here.[1]

The Purāṇas, however, have another account of the origin of the Asuras at the first creation of the world:[2]

'Brahmā, being desirous of creating the four orders of beings termed gods, demons, progenitors, and men, collected his mind into itself. Whilst thus concentrated, the quality of darkness pervaded his body, and thence the Asuras were first born, issuing from his thigh. Brahmā then abandoned that form which was composed of the rudiment of darkness, and which, being deserted by him, became night.'

Wilson says in a note: 'These reiterated, and not always very congruous, accounts of the creation are explained by the Purāṇas as referring to different *kalpas*, or renovations of the world, and therefore involving no incompatibility. A better reason for their appearance is the probability that they have been borrowed from different original authorities.'

As regards the origin of the Asuras, it is probable that the myth quoted above has been developed from the statement in the Brāhmaṇas mentioned at the beginning of this article. The genealogy of the Asuras is of later growth, and introduces a new element of confusion into the accounts of them. How, for instance, could Hiraṇyakaśipu, the first-born of all Daityas and Dānavas, rule over the whole race of Daityas and Dānavas, who, according to the Pauranic theory, sprang from his children and grandchildren?

It has been said above that the Asuras reside in Pātāla, and the *Śatapatha Brāhmaṇa* already states that they entered the earth. Yet they are not restricted to Pātāla, but may own towns and fortresses on earth, in air, and in heaven. Thus the three sons of Tāraka possessed three towns, which, united into one, became the famous Tripura, which Śiva reduced to ashes with his mystical arrow. The Paulomas and Kalakañjas inhabited the flying town Hiraṇyapura, which was destroyed by Arjuna (*Mahāb.* viii. 33 f., iii. 173). Another tribe of the Dānavas, the Nivātakavachas, live on the shore of the ocean, where Arjuna vanquishes them (*ib.* iii. 168 ff.). In most stories about Asuras, the scene is laid in the upper regions, where they acquire power even over the three worlds, till some god slays them.

The belief that the Asuras dwell in the regions below has been common to all Indian sects. Thus, according to the Northern Buddhists, the world of the Asuras, who, besides the Daityas, comprise the Rākṣasas, Yakṣas, and similar demons, is the uppermost of the four *Apāyalokas*, or worlds of suffering; and it is situated exactly as far below the surface of the earth as the world of Indra is above it. Among the Asuras the foremost rank is held by Rāhu, the demon who causes eclipses of the sun and moon.[3] The Jains reckon the Asuras, or, as they call them, the Asurakumāras, as the lowest class of the Bhavanavāsin or Bhaumeyaka gods, and assign them the uppermost part of *Ratnaprabhā*, the highest hell-region, as their residence.[4]

A great many names of Asuras are given in epic and classical Sanskrit literature, some of which have already been mentioned. We add the names of a few more who are frequently mentioned in connexion with the god who slew or overcame them: Bala, Vṛtra, Namuchi, Triśiras, Jambha, and Pāka were slain by Indra; Madhu, Kaiṭabha, Bali, Mura, and Naraka by Viṣṇu (who is thence called *Daityāri*, foe of the Daityas) or Kṛṣṇa; Pralamba by Balarāma; Sambara by Pradyumna; Andhaka by Śiva, who also destroyed Tripura; Śumbha, Niśumbha, and Mahiṣa by Devī; Tāraka and Bāṇa by Kārttikeya; and Ilvala and Vātāpi by Agastya.

[1] It may be mentioned in this connexion that Indra, by killing Vṛtra, incurred the sin of *brahmahatyā*, or murder of a Brahman, and in consequence lost his celestial kingdom (*Mahābhārata*, iii. 101, v. 10, xii. 281, 342). Still, Vṛtra is but an Asura and an enemy of the gods.

[2] Cf. V. Fausböll, *Indian Mythology, according to the Mahābhārata*, London, 1903, p. 3 ff.

[3] Not enumerated in the *Viṣṇu Purāṇa*, but in some others, s.g. *Vāyu Purāṇa* (*Bibl. Ind.*), ii. 74 f.

[4] See Wilson, *op. cit.* ii. 69.

[1] Wilson, *op. cit.*, in his notes to pp. 26, 69 ff. It may be mentioned that the *Vāyu Purāṇa* gives the progeny of Danāyuṣā (ii. 7, 30 ff.).

[2] Wilson, *op. cit.* i. 97 f.

[4] *Tattvārthādhigama Sūtra*, iv. 11, tr. in *ZDMG* lx. 319.

The Asuras (Daityas, Dānavas) constitute the highest class of demons; they are the enemies of the gods, and not of mankind; indeed, men seem, as a rule, excluded from their sphere of action. This is the principal point in which they differ from the remaining classes of demons, such as Rākṣasas, Yakṣas, Nāgas, etc., who sustain hostile or friendly relations with men. See art. BRAHMANISM.

In conclusion, an opinion must be noticed which has been put forward by some writers—most recently by the Danish scholar V. Fausböll[1]—viz. that the wars of the Suras and Asuras are but a mythological account of what originally was a strife between the Aryans and the aboriginal inhabitants of India. Fausböll includes among the Asuras other classes of demons, Rākṣasas, Yakṣas, Nāgas, etc.—a course which, as has just been pointed out, cannot be admitted. As regards the Asuras proper, with whom alone we are concerned in this article, his theory is without foundation, and is quite unnecessary. The Indians had at least two war-gods—Indra, and, in later times, Kārttikeya. Warlike gods presuppose, in India as elsewhere, enemies with whom to wage war, and those enemies were the Asuras, Dānavas, or Daityas.

LITERATURE.—This has been sufficiently indicated in the course of the article. HERMANN JACOBI.

DAKHMA.—See DEATH AND DISPOSAL OF THE DEAD (Parsi).

DANAIDS.—The Danaids (Δαναΐδες) were the daughters of Danaus. Their number is variously given: Hecatæus (schol. on Eurip. *Orest.* 872) enumerates twenty, and Hesiod (*ap.* Hecatæus, *loc. cit.*) fifty; the latter figure has won general acceptance. Their fame is enshrined in two legends—the one telling how they murdered their bridegrooms during their wedding night; the other how, after death, they were condemned to pour water into vessels full of holes.

1. The standard form of the first legend is that given to it by Æschylus; it forms the basis of the story as found in the *Bibliotheca* of Apollodorus, ii. 12 ff. (cf. schol. on Homer, *Il.* i. 42), and Hyginus's *Fabulæ*, 168 (cf. schol. on Stat. *Theb.* ii. 222; schol. Strozz. on German. *Aratea*, p. 172, ed. Breysig). We find part of it in the extant Ἱκέτιδες of Æschylus—the first portion of his Danaid-tetralogy—and the entire myth in the prophecy of Prometheus in *Prom. Vinct.* 853 ff. The story is as follows. The fifty Danaids flee, under their father's direction, from Egypt to Argos, in order to escape from the unwelcome suit of their cousins, the fifty sons of Ægyptus. The youths, however, set out after them, and, by mere superiority of force, compel the maidens to marry them. Danaus, however, commands his daughters to kill their respective husbands, and all of them obey save one, Hypermnestra, who spares Lynkeus out of love. Hypermnestra, saved from her father's vengeance, and at length reconciled to him, continues the lineage of the family, and by inheritance secures for her acknowledged husband the over-lordship of Argos.

The scene of the myth is thus Argos, and, indeed, the mere name of the father and his daughters indicates this locality, as in Homer the Argives are most frequently referred to as Δαναοί. Since the publication of Preller's *Griechische Mythologie* (cf. ii.[2] [Berlin, 1861] 45 ff.) the myth has been commonly interpreted as relating to the scarcity of water in 'thirsty Argos'; the slaying of the bridegrooms is taken to mean the drying up of the springs. This hypothesis is still adhered to by Ed. Meyer (*Forschungen zur alten Gesch.* i. [Halle, 1892] 74) and Waser (in Pauly-Wissowa, iv. 2089), but its lack of evidence is on a level with its failure in lucidity (cf. P. Friedländer, *Argolica*, Berlin, 1905, p. 24). It is certainly true that the full, though not identical, lists of the Danaids given by Apollodorus, ii. 16, and Hyginus, *Fab.* 170, contain at least one name, Amymone, which is also the name of a fountain in Argos; and, while there may be another here and there which could be appositely applied to a spring, this cannot be said of the majority. Amymone, moreover, is the subject of a special myth, which bears no resemblance to that of the others: she yields herself to Poseidon, who in return reveals to her the springs of Lerna; and she bears to him a son named Nauplius (Apollod. ii. 14 and 23; Hygin. *Fab.* 169). The purport of this story is, in fact, the direct opposite of the Danaid myth; the latter really implies that the maidens, in order to preserve their virginity, do not shrink from slaying even their bridegrooms. It is true that this aspect is not made explicit in the story as related by Æschylus, who lays stress on the Danaids' hatred of the Ægyptiads only, not of men in general, and speaks of their timidity of character. His reason for making this alteration is revealed in the only passage of any length that now remains of the third portion of his Danaid-tetralogy (fr. 44), in which Aphrodite extols the might of love, and so vindicates Hypermnestra and her disobedience to her father's cruel command. The Æschylean rendering, however, is really a transformation of the original myth, as appears from the following considerations. (1) The slaying of men by the Danaids has always formed the kernel of the myth. (2) Their fruitless labour of water-drawing after death, as will be shown below (§ 2), is an indication of the fact that they were never married. (3) The only extant fragment of the epic Δαναΐδες represents them as beings of Amazon-like nature. From this epic, which, according to the Borgia tablet (Jahn-Michaelis, *Griech. Bilderchroniken*, Bonn, 1873, p. 76, K[2]), contained 6500 lines, or about half the number in the *Iliad*, Clement of Alexandria (*Strom.* iv. 120–124), when giving examples of brave women, cites the cases not only of Leaina and Telesilla, but also of the Danaids, and in support thereof quotes from the epic as follows: 'And then the daughters of Danaus armed themselves quickly by the wide-flowing stream of the lord Nile.' We may, therefore, infer that the characterization of the Danaids in this epic was quite unlike that given by Æschylus. Amazons have no occasion for a father's care, or for an admonition to guard their virginity; and, in point of fact, Danaus himself, as has been long recognized (cf. Ed. Meyer, *op. cit.* p. 73), is a mere phantasm, having neither a cult nor a special myth of his own.

The story of the Danaids as slayers of men and adepts in the use of arms must, accordingly, be brought into line with the Amazonian myths. These have been admirably dealt with by J. Töpffer (Pauly-Wissowa, i. 1754; cf. also the same writer's *Attische Genealogie*, Berlin, 1889, p. 191 ff.; Kretschmer in *Glotta*, ii. [1908] 201 ff.; O. Braunstein, *Die politische Stellung der griech. Frau*, Leipzig, 1911, p. 69 ff.). In the myths of the Amazons, Töpffer sees fragmentary reminiscences of a pre-Hellenic 'gynaikocratic' race which survived for a considerable period in Asia Minor, but had at one time been spread over Greece proper and the Archipelago. The Danaid myth finds a parallel in the story of the women of Lemnos who slew their husbands, and it is perhaps more than a coincidence that Hypsipyle, one of these Lemnian women, should appear in Argos, associated with the legend regarding the institution of the Nemean Games by the seven Argive heroes who marched against Thebes. It is also worthy of note that Bellerophon,

[1] *Op. cit.* p. 41 f.

the earliest traditional antagonist of the Amazons in Lycia, came originally from Argos (*Il.* vi. 186). Now, as we find Amazon-like women—the Danaids, namely—in Argos, it is natural to infer that they had made the same journey as Bellerophon—had come, that is, from Argos to Lycia. As a matter of fact, the Danaids bear the name of a pre-Hellenic tribe. For, since the Canaanite Philistines have been identified with the *Palisatu* mentioned in the documents of Ramses III. (1200–1175 B.C.)—one of the tribes which worshipped Minos and brought their civilization to its highest development in Crete during the 2nd cent. B.C. (cf. Bethe, in *Rhein. Mus.* lxv. [1910] 200 ff., with lit. and proofs) —we can no longer doubt that the Argive *Danaoi* and the *Danuna* mentioned in Egyptian documents as early as the 14th cent. B.C. were one and the same people (Ed. Meyer, *Gesch. d. Alterthums*, i.[2] [Stuttgart, 1909] 226).

A word or two must be added regarding Hypermnestra, the only one of the Danaids who spared her bridegroom, and the mother of the royal race of Argos. Her story, even more than that of Amymone, runs directly counter to the specific bearing of the Danaid myth. Account must also be taken of two additional facts. (1) Of all the Danaids, Hypermnestra alone had a cult in Argos (cf. Hygin. *Fab.* 168 = schol. Strozz. on German. *Aratea* [172, ed. Breysig], who speaks of a 'fanum,' while Pausan. ii. 21. 2, refers to the tomb of Hypermnestra and her husband in the city of Argos). (2) Lynkeus, again, is a standing figure in Peloponnesian legend, while the other sons of Ægyptus are but empty names. We may, therefore, assume that Hypermnestra, like Amymone, was a later addition to the group of the Danaids, designed to bring each of them into the imposing genealogical fabric of Argive mythology. This is confirmed by the legend that Lynkeus killed his sisters-in-law and their father (schol. on Eurip. *Hekuba*, 886). According to Archilochos (fr. 150, in Malalas, *Chronogr.* iv. 68), Lynkeus was depicted as a conqueror who robbed Danaus of both his dominion and his daughter.

The process of reducing the originally Amazon-like Danaids to human proportions, as we find it already consummated in Æschylus, led at length to the complete obliteration of their characteristic quality of hostility to men. After the murder of the Ægyptiads they all marry again. Their father gives them, without a price, as rewards to the victors in the games (Pindar, *Pyth.* ix. 112 f.)—a story which had originally no connexion with the Danaids (P. Friedländer, *op. cit.* p. 17).

The scene of the man-slaying was laid among the streams of Lerna (Pausan. ii. 24. 2; *Paræmiographi*, i. 108), but also in Argos itself—on the acropolis, where, as noted by Pausanias (*loc. cit.*), there stood some memorial of the sons of Ægyptus.

2. The earliest literary record of the tradition that after death the Danaids were doomed to the endless and aimless labour of ponring water into vessels with holes is found in the pseudo-Platonic *Axiochus* (3rd cent. B.C.), 371 E. In the 5th cent. B.C., Polygnotus, in his pictures of the under world, had portrayed men and women—characterized as 'unconsecrated'—engaged in a like task (Pausan. x. 31. 9; cf. Plato, *Gorgias*, 493 B, *Rep.* 363 D). Accordingly, Wilamowitz-Möllendorff (*Homer. Untersuchungen*, Berlin, 1884, p. 202) and Rohde (*Psyche*, Tübingen, 1891–94, pp. 292–297) have advanced the hypothesis that this penalty of fruitless labour forms a later accretion of the Danaid myth. But Rohde's assertion that the Danaids were ἀτελεῖς, *i.e.* that they had not attained their τέλος by marriage, suggests that the conception of the Danaids as aimless water-drawers in Hades may possibly be older than he believes. This drudgery, in fact, was regarded among the Greeks, and is regarded even to-day, *e.g.*, in the Tyrol, as the lot of the unmarried in the under world (Waser in Pauly-Wissowa, iv. 2087, 60 ff.; P. Friedländer, *op. cit.* p. 28).

The relative antiquity of this element in the story is likewise borne out by a further remark of Rohde, viz. that the Danaids could be associated with the task of drawing water only at a time when they were still thought of as unmarried. Even in Pindar's day (*Pyth.* ix. 112), however, this was no longer the case; while, according to Æschylus, at least two of them, Amymone and Hypermnestra, yield to the power of love. For that form of the myth which, as made known to us by the surviving verse of the epic Δαναΐδες, represented the Danaids as Amazon-like women hostile to men, we are thus brought to a date not later than the 6th cent. B.C. It must, therefore, have been about that time that the lot of the unmarried in Hades—the unending labour of drawing water—was first ascribed to the Danaids.

Once this feature had been added to their story, however, and had become effectually grafted upon it, the Danaids would come quite naturally to be regarded as drawers of water even in their lifetime In this way they would then be brought into connexion with Lerna in Argos—perhaps originally the district haunted by their ghosts—and at length the water-nymph Amymone would be numbered with them. It accords with all this that Danaus was extolled as the hero who provided Argos with water: so Hesiod, fr. 24 [ed. Rzach], a verse given by Strabo, viii. 370, and again (371) in a simpler rendering, which, however, is of special interest, as it states that it was not Danaus, but the Danaids, who 'made Argos, once waterless, a well-watered land.'

DAṆḌĪS.—See YOGIS.

ḌĀNGĪ ('highlanders,' Hindī *ḍāng*, 'a hill').—A tribe of Dravidian origin, which at the Census of 1901 numbered 97,422, almost entirely confined to Central India, Rājputāna, and the Central Provinces, in which last they are described as originally robbers and freebooters, whose home was in the Vindhyan range. They are doubtless ethnologically connected with the Gond and Bhīl tribes which occupy the adjoining hills; but they are rapidly becoming Hinduized, and have now gone so far as to call themselves Rājputs, and to claim descent from a mythical Rājā Ḍāng of the Raghubansī sept. In the Jhānsī District, from which we have the most complete account of the religion of the tribe, they rank as low-caste Hindus; they cremate their adult dead, and perform the *śrāddha*, or mind-rite, through Brāhmans. Like all castes on their promotion to a higher social rank, they are particularly careful to avoid ceremonial pollution. This results in its most serious form from the killing of a cow. In this case the offender, in order to procure restoration to caste rights, must make a pilgrimage to the Ganges, feed his tribesmen and Brāhmans, or perform the mock marriage of the *śālagrāma* ammonite, representing Viṣṇu, with the *tulsī*, or holy basil tree. This rite, of course, necessitates the payment of liberal fees to Brāhmans. If the offender prefers to do so, he may purchase restoration to caste by paying the marriage expenses of two poor children of the

tribe. They now worship the ordinary Hindu deities, Rāmachandra, Kṛṣṇa, Śiva, Durgā, and others. Special regard is paid to the minor gods of the village, especially to those who cause and remove disease, such as Śītalā, the goddess of smallpox, and Hardaul Lālā, the deified hero who controls cholera (Crooke, *Popular Religion*[2], 1896, i. 138 f.). Bhūmiyā, the god of the soil, is represented by an old snake, which is worshipped in June–July. At marriages they perform a rite to propitiate the sainted dead, known as *deva pitra* ('ancestor gods'); but they have no definite idea of their nature or functions. Their sacred trees are the pīpal (*Ficus religiosa*) and the chhonkar (*Prosopis spicigera*). The cows of the household, as emblems of Lakṣmī (goddess of good fortune), are worshipped at the Divālī, or feast of lamps; and horses at the Dasahra.

DANTE.—

1. Life.—Dante Alighieri was born at Florence, some time between May 18 and June 17, 1265, of an old Florentine family of supposed Roman descent. His father, Alighiero di Bellincione Alighieri, was a notary who adhered to the Guelf faction, for which his ancestors had fought. Cacciaguida, Alighieri's great-grandfather, who appears in the *Paradiso* as the founder of the house, is mentioned in a recently discovered document of 1131 as 'Cacciagnida, filius Adami.' The poet was the only child of his father's first marriage, but had a step-brother and two step-sisters (one of whom appears in the *Vita Nuova*) younger than himself. Two episodes chiefly colour his early life: his romantic love for Beatrice (probably the daughter of Folco Portinari and wife of Simone de' Bardi), whom he first saw at the end of his ninth year, and who died on June 8, 1290; and his friendship (gained by his first sonnet, written in 1283) with the older poet, Guido Cavalcanti, who died in August 1300. At an early age he fell under the influence of the Florentine philosopher and statesman, Brunetto Latini. Recent research tends to confirm the statement of his early biographers concerning his studying at the university of Bologna; a sonnet, now generally accepted as his, shows that he was in that city shortly before 1287. Dante served in the Florentine cavalry at the battle of Campaldino on June 11, 1289. After the death of Beatrice, he lapsed into a mode of life which he afterwards recognized as morally unworthy, and seems to have had relations with several women, the exact nature of which is uncertain. To this epoch belongs a series of satirical sonnets interchanged between him and Forese Donati (cf. *Purg.* xxiii. 115–119). About 1296 he married Gemma di Manetto Donati, a lady of a noble Guelf house, by whom he had four children. He entered public life in 1295, with a speech in the General Council of the Commune in support of modifications in the 'Ordinances of Justice,' the enactments by which nobles were excluded from the administration of the Republic. In May 1300, he acted as Florentine ambassador to the Commune of San Gimignano, and in the same year, from June 15 to August 15 (two months being the statutory term of office), he sat by election in the Signoria, the chief magistracy of the Republic, as one of the six priors. In this year, the Guelf party, which then swayed Florentine politics, split into the rival factions of Bianchi and Neri, 'Whites' and 'Blacks.' The former (to which Dante himself and Guido Cavalcanti belonged) was, in the main, the constitutional party, supported by the burghers of the city; the latter, led by Corso Donati, the brother of Forese and kinsman of the poet's wife, was more aristocratic and turbulent, looking to the Pope, Boniface VIII., and relying upon the favour of the populace. As prior, Dante probably played a leading part in opposing the interference of the Pope and his legate, the Franciscan cardinal, Matteo d'Acquasparta, in the affairs of the Republic, and in confining the leaders of both factions (including Guido Cavalcanti and Corso Donati) within bounds: in the following year, 1301, we find him, though no longer in office, still supporting an anti-Papal policy by his votes and speeches in the various councils of the State. On November 1, 1301, Charles of Valois, with French troops, entered Florence as Papal 'peacemaker,' and, with every circumstance of treachery and licence, restored the Neri to power. It is uncertain whether Dante was in Florence when this occurred, or in Rome on an embassy from the Bianchi to the Pope (as asserted by Boccaccio and Leonardo Bruni, but disputed by later writers). In any case, a charge of malversation in office and hostility to the Church was trumped up against him: he was sentenced to confiscation of his goods, two years' exile, and perpetual exclusion from public office (January 27, 1302), and finally to be burned to death (March 10, 1302), if he should ever come into the power of the Commune.

The rest of Dante's life was passed in exile, in the latter part of which he was joined by his two sons and one of his daughters, though he seems never to have seen his wife again. In the *Convivio* (i. 3) he speaks of himself as having 'gone through well-nigh all the regions to which this (Italian) language extends; a pilgrim, almost a beggar, showing, against my will, the wound of fortune, which is wont unjustly to be ofttimes reputed to the wounded.' Until the summer of 1303, he made common cause with his fellow-exiles at Siena, Arezzo, Forlì, and elsewhere, in attempting to return to Florence by force of arms and with Ghibelline aid, but ultimately broke with them, and found it 'for his fair fame to have made a party for himself' (*Par.* xvii. 69). Between the latter part of 1303 and the end of 1306 we find him at Verona at the court of Bartolommeo della Scala; at Bologna, where he may have made a more lengthy stay; possibly at Padua (though the document once regarded as attesting his presence there in August 1306 is now disputed); certainly in Lunigiana, with the Marquis Franceschino Malaspina (October 1306). We now lose sight of him for several years, during which he is said to have left Italy and gone to Paris.

In September 1310, the newly elected Emperor, Henry VII., entered Italy, with the avowed object of restoring the claims of the Holy Roman Empire, and healing the wounds of the country. Dante, recognizing in him the new 'Lamb of God' to take away the sins of the world, threw himself heart and soul into his enterprise. We find him, in the spring of 1311, paying homage to the Emperor in person at Milan, and writing terrible and eloquent letters to him and against the Florentines from the Casentino, whither he had, perhaps, been sent on an Imperial mission. By a decree of September 2, the Florentine government included the poet in the list of exiles to be excluded from amnesty. In April 1312, Dante was with the Emperor at Pisa, and there Petrarch, a little boy of seven, saw his great predecessor for the first and only time. Although he had urged Henry to lay Florence low, reverence for his fatherland (so Leonardo Bruni writes) kept Dante from accompanying the Imperial army which ineffectually besieged the city during the autumn of this year. Henry's death (August 24, 1313) annihilated the poet's hopes. His movements again become uncertain. It is possible that he retired for a while to the convent of Santa Croce di Fonte Avellana, in the Apennines, and afterwards sought the protection of Uguccione della Faggiuola, the great Ghibelline, at Lucca. By a decree of November 6, 1315, Dante with his sons, Pietro and Jacopo, was placed under the ban of the Florentine Republic, and sentenced to be beheaded if taken. The poet was further and finally excluded from amnesty by a provision of June 2, 1316. His famous letter to a Florentine friend, preserved to us by Boccaccio, refusing to accept recall to Florence under dishonourable conditions, probably belongs to this year. It is most likely that, in 1315 or 1316, Dante went again to Verona, attracted by the fame of Can Grande della Scala, upon whom he based what remained of his hopes for the salvation of Italy. About 1317 he finally settled at Ravenna, at the invitation of its Guelf ruler, Guido Novello da Polenta. There with his children, surrounded by a little group of friends and disciples, he passed the last years of his life. A curious process for sorcery held at Avignon in 1320 against Matteo and Galeazzo Visconti, in which Dante's name is mentioned, suggests that the poet visited Piacenza in that or the preceding year, and, if the *Quæstio de Aqua et Terra* is authentic, he went to Mantua and again to Verona about the same time. In August 1321, he was sent on an embassy from Guido da Polenta to Venice, to avert an imminent war, and, returning to Ravenna sick with fever, he died there on September 14 of that year. He was buried with much pomp in the church of the Friars Minor, crowned with laurel, 'in the garb of a poet and of a great philosopher.'

2. Works.—Dante's works fall into three periods: (*a*) the period of his youthful love and enthusiasm, finding expression in the poetry and prose of the *Vita Nuova*; (*b*) the period of the *Rime*, his later lyrics, his linguistic and philosophical studies and researches, bearing fruit in the Italian prose of the *Convivio*, the Latin prose of the *de Vulgari Eloquentia*, and his passionately developing political creed and ideals, represented by the *de Monarchia* and certain of his Latin letters; (*c*) the period of turning, for the reformation of the present, to the contemplation of another world, 'to the divine from the human, to the eternal from time' (*Par.* xxxi. 37, 38), in the *Divina Commedia*, with which are associated the prose Latin epistle to Can Grande della Scala, and the revival of the pastoral muse of Vergil in the two Latin Eclogues.

(1) The *Vita Nuova*, Dante's first book, which is dedicated to Guido Cavalcanti, tells the story of his love for Beatrice in thirty-one lyrical poems, symmetrically arranged, and connected by a prose narrative. The lyrics (twenty-five sonnets, one *ballata*, three *canzoni*, and two shorter poems in the *canzone* mould), written from 1283 to 1292, cover a period of nine years, while the prose commentary, composed between 1292 and 1295, weaves the whole into unity. Its earlier chapters, in particular, show the influence of the Provençal troubadours, together with the philosophical re-handling of their theme of chivalrous love which we find in

the poetry of Guido Guinizelli of Bologna, whom Dante elsewhere claims as his father in the use of 'sweet and gracious rhymes of love' (*Purg.* xxvi. 99). The first of the three *canzoni*, 'Donne ch'avete intelletto d'amore,' marks an epoch in Italian poetry. The later portions of the book are already strongly coloured with the Christian mysticism which inspires the *Divina Commedia*. There is much sheer allegory in the details and episodes, but the work as a whole is not to be taken in an allegorical sense. It is a mystical reconstruction of the poet's early life, in which earthly love becomes spiritual, but, being thus exalted above itself, falls to earth again when its sustenance and inspiration are removed, only to rise once more in repentance and humility to a clearer vision and a larger hope, with the resolution to turn to the daily work of life until such time as the soul may become less unworthy to attain the ideal which it has discerned.

(2) Besides the pieces inserted in the *Vita Nuova*, there exists a large body of lyrical poetry from Dante's hand, known collectively as the *Rime* (or, less correctly, the *Canzoniere*). It consists of (*a*) occasional poems in the *ballata* and sonnet form, composed at various times in Dante's life, which have not yet been satisfactorily collected or freed from spurious pieces; (*b*) a series of fifteen *canzoni*, which Boccaccio, probably following the poet's intention, arranged in a definite order to form a complete work. Two of these *canzoni* seem to belong to the period of the *Vita Nuova*; the rest represent the period in Dante's life between the death of Beatrice and the inception of the *Divina Commedia*. They give variety, dignity, and technical perfection to the metrical form which the early Italians had received and developed from the Provençals, and introduce, partly from the Provençal, two entirely new varieties to Italian poetry. Their subject-matter is partly philosophical love, in which the seeker after wisdom depicts his quest with all the imagery of an earthly lover's pursuit of an adored woman; partly, it would seem, more tangible human passion; partly, ethical and didactic themes. One of the noblest of the series is the *canzone* of the three ladies: 'Tre donne intorno al cor mi son venute' (probably written *c.* 1304); in this the legend told by Thomas of Celano and St. Bonaventura, of the apparition of Poverty and her two companions to St. Francis, is transformed into an allegory of Dante's own impassioned worship of Justice, which contains the *Divina Commedia* in germ.

(3) The *Convivio*, Dante's chief work in Italian prose, is an attempt to put the general reader of the epoch into possession of an abstract of the entire field of human learning, as attainable at the beginning of the 14th cent., in the form of an allegorical commentary upon fourteen of the poet's own *canzoni*. Its basis is the saying attributed to Pythagoras, to the effect that the philosopher should not be called the wise man, but the lover of wisdom—a conception which Dante elaborates in the terms of the chivalrous love poetry of his age, personifying Philosophy as a noble lady whose soul is love and whose body is wisdom, and identifying love with the study which is 'the application of the enamoured mind to that thing of which it is enamoured.' The work shows the influence of the *de Consolatione Philosophiæ* of Boethius (its professed starting-point), Isidore of Seville, the *Didascalon* of Hugh of St. Victor, the *Trésor* of Brunetto Latini, and the Aristotelian treatises and *Summa contra Gentiles* of St. Thomas Aquinas. Dante's aim is to make the mediæval encyclopædia a thing of artistic beauty, by wedding it to the highest poetry, and to show the world that the Italian vernacular was no less efficient than Latin as a literary medium. At the same time, it was to be his *apologia pro vita sua*, justifying his own conduct as a man and as a citizen, and, incidentally, explaining certain of his poems of earthly love as inspired purely by philosophical devotion. Internal evidence shows that it was composed between 1306 and 1308. It was left unfinished, only the introductory treatise and the commentaries upon three *canzoni* having been written.

(4) The *de Vulgari Eloquentia*, the earliest of Dante's Latin works, seems to have been begun shortly before the *Convivio* (probably in 1304 or 1305). Like the *Convivio*, it was left unfinished, only two of the projected four books having been written. In the first book, starting from the origin of language, Dante considers the rival claims for pre-eminence of the three romance vernaculars—French, Provençal, and Italian—and proceeds to examine in detail all the various dialects of the last, none of which he finds identical with the ideal language of Italy:

> 'The illustrious, cardinal, courtly, and curial vulgar tongue in Italy is that which belongs to every Italian city, and yet seems to belong to none, and by which all the local dialects of the Italians are measured, weighed, and compared.'

As Mazzini well said, Dante's purpose here is 'to found a language common to all Italy, to create a form worthy of representing the national idea'—the purpose which he was ultimately to fulfil by writing the *Divina Commedia*. In the second book, he defines the highest form of Italian lyrical poetry, the *canzone*; distinguishes the three subjects alone worthy of treatment therein—Arms, Love, and Virtue; and elaborates the poetical art of its construction, from the practice of the Provençal troubadours (Bertran de Born, Arnaut Daniel, Giraut de Borneil, Folquet of Marseilles, Aimeric de Belenoi, Aimeric de Pegulhan, together with the French poet, king Thibaut of Navarre), the poets of the Sicilian school (Guido delle Colonne and Rinaldo d'Aquino), and the poets of the *dolce stil nuovo* (Guido Guinizelli, Guido Cavalcanti, Cino da Pistoia, and himself). Dante refers to his own *canzoni* as those of 'the friend of Cino da Pistoia,' and it is possible that he intended to dedicate the work, when completed, to Cino, as he had done the *Vita Nuova* to Cavalcanti.

(5) The election of Henry of Luxemburg to the Empire, in November 1308, drew the poet back from these philosophical and linguistic studies to the political strife that was about to convulse Italy. Confronted with this new situation, of apparently unlimited possibilities for his native land, he felt that all that he had hitherto written was fruitless and insignificant. It was probably about 1309, in anticipation of Henry's coming to Italy, that Dante composed the *de Monarchia*, fearing lest he 'should one day be convicted of the charge of the buried talent.' For Dante, the purpose of temporal monarchy or empire, the single princedom over men in temporal things, is to establish liberty and universal peace, in order that the whole of the potentialities of the human race, for thought and for action, may be realized. In the first book he shows that this universal monarchy, thus conceived, is necessary for the well-being of the world; in the second he attempts to prove, first from arguments based on reason and then from arguments based on Christian faith, that the Roman people acquired the dignity of empire by Divine right. It is a cardinal point in Dante's reading of history that the history of the Jews and the history of the Romans reveal the Divine plan on parallel lines, the one race being entrusted with the preparation for the Gospel, the other with the promulgation of Roman law. For him, as for mediæval political theorists in general, the Emperor of his own day, when duly elected and

crowned, is the successor of Julius and Augustus no less than of Charlemagne and Otho. The third book proves that the authority of such an Emperor does not come to him from the Pope (the coronation of Charlemagne being an act of usurpation on the part of the latter), but depends immediately upon God, 'descending upon him without any mean, from the fountain of universal authority.' Divine Providence has ordained man for two ends: blessedness of this life, which consists in the exercise of his natural powers, and is figured in the Earthly Paradise; and blessedness of life eternal, which consists in the fruition of the Beatific Vision in the Celestial Paradise. To these two diverse ends, indicated by reason and revelation respectively, man must come by the diverse means of philosophy and spiritual teaching, and, because of human cupidity, he must be checked and directed:

> 'Wherefore man had need of a twofold directive power according to his twofold goal: the Sovereign Pontiff, to lead the human race to eternal life in accordance with things revealed; and the Emperor, to direct the human race to temporal felicity in accordance with philosophical teaching.'

This, then, is the purpose of Church and State, each independent in its own field, a certain superiority pertaining to the former in that mortal felicity is ordained for immortal felicity. We here find 'in its full maturity the general conception of the nature of man, of government, and of human destiny, which was afterwards transfigured, without being transformed, into the framework of the Sacred Poem' (Wicksteed).

(6) Dante's political letters are a pendant to the *de Monarchia*, but coloured by the realities, and finally embittered by the circumstances of the Emperor's expedition. From the Messianic fervour of his appeal on Henry's behalf to the princes and peoples of Italy (*Ep.* v. ['Oxford Dante'], written in 1310), we pass to the prophetic fury and *sæva indignatio* of his address to 'the most wicked Florentines within' (*Ep.* vi., March 31, 1311), and his rebuke to the Emperor himself (*Ep.* vii., April 16, 1311), when the former were organizing the national resistance to the Imperial power, and the latter seemed to tarry. To the latter part of 1314 belongs the eloquent letter to the Italian cardinals in conclave at Carpentras after the death of Clement v. (*Ep.* viii.), urging the election of an Italian Pope to return to Rome and reform the Church. Of Dante's private and personal correspondence, the only specimen that can be unhesitatingly accepted as authentic is the famous letter to a Florentine friend refusing the amnesty in 1316 (*Ep.* ix.); but two others, apparently accompanying two of his lyrical poems, addressed to Cino da Pistoia (*Ep.* iii., *c.* 1305) and Moroello Malaspina (*Ep.* iv., *c.* 1306 or 1311), are probably genuine.

(7) The authenticity of the letter to Can Grande della Scala, though much disputed, is gradually becoming generally recognized. Written apparently between 1318 and 1320, it dedicates the *Paradiso* to Can Grande, interprets the opening lines of its first canto, and explains the allegory, subject, and purpose of the whole poem. It is the starting-point for the study of the mystical aspect of the *Divina Commedia*, alike in its appeal to the authority of St. Augustine, St. Bernard, and Richard of St. Victor for the power of the human intellect to be so exalted in this life as to transcend the measure of humanity, and in its unmistakable claim for the poet himself that he has been the personal recipient of a religious experience too sublime and overwhelming to be adequately expressed in words.

(8) Dante's *first Eclogue*, a pastoral poem in Latin hexameters, was written about 1319, in answer to a Latin poem from Giovanni del Virgilio, a lecturer at Bologna, who had urged him to write a Latin poem and come to that city to receive the laurel crown. It is a beautiful and gracious poem, in which the Vergilian eclogue becomes a picture of the poet's own life at Ravenna in the comparative peace and calm of his latest years. A *second Eclogue* in the same spirit, sent to Giovanni del Virgilio by Dante's sons after the poet's death, is somewhat inferior, and was, perhaps, only in part actually composed by him.

(9) The *Quæstio de Aqua et Terra* professes to be a philosophical question concerning the relative position of water and earth on the surface of the globe, publicly discussed by Dante at Verona on January 20, 1320. Its authenticity has of late found several able defenders, but must still be regarded as highly problematical.

(10) It is impossible to decide at what date the *Divina Commedia* was actually begun. According to Boccaccio, the first seven cantos of the *Inferno* were composed before the poet's exile, and he was induced to take up the work again in consequence of his recovery of the manuscript in 1306 or 1307. Although this seems contradicted by internal evidence, there are some indications that these cantos were originally conceived on a different plan from that ultimately adopted in the poem. It is possible that the poem, as we now have it, was begun about 1308, interrupted by the Italian enterprise of Henry of Luxemburg, and resumed in the years after the latter's death. While there are no certain and definite allusions in the *Purgatorio* to events later than 1308, there are references in the *Inferno*, by way of prophecy, to occurrences of 1312, and possibly (though this is more open to question) of 1314, while the *Paradiso* (xii. 120) contains what appears to be an echo of a Papal bull of 1318. An allusion in the first Eclogue shows that, by 1319, the *Inferno* and the *Purgatorio* ('infera regna') were completed and, so to speak, published, but that Dante was still engaged upon the *Paradiso* ('mundi circumflua corpora astricolæque'); and we learn from Boccaccio that the last thirteen cantos had not yet been made known to the world at the time of the poet's death. In any case, it seems clear that the *Divina Commedia* as a whole, whenever it may have been begun, although the action is relegated by a poetic fiction to the assumed date of 1300, should be regarded as the work of the last period of the poet's career, when the failure of his earthly hopes with Henry of Luxemburg had transferred his gaze from time to eternity, and, himself purified in the fires of experience and adversity, he might lawfully come forward as *vir prædicans justitiam*, 'to remove those living in this life from their state of misery, and to lead them to the state of felicity.'

Dante's primary source of inspiration for the *Divina Commedia* is the actual life of his own times which he saw around him, interpreted by the story of his own inner life. His aim is to reform the world by a poem which should present man and Nature in the mirror of eternity. But he has, inevitably, his literary sources. While the sixth book of the *Æneid* may be called his starting point, Dante was probably acquainted with some of the many mediæval accounts of visits of a living man, 'whether in the body or out of the body,' to the other world, the *immortale secolo*, which, beginning with the *Visio Sancti Pauli* and those recorded in the *Dialogues* of St. Gregory the Great, became especially abundant in the latter part of the 12th cent.; though the only one that has left notable traces in the *Divina Commedia* is the *Visio Tnugdali* of the Irish Benedictine Marcus (1149). Of the Latin poets, next to Vergil,

he was most influenced by Lucan, while Ovid and Statius are his main sources for classical mythology, and Livy and Orosius for classical history. Cicero was familiar to him from his early manhood; but he shows surprisingly little acquaintance with Terence and Horace. The Latin versions of Aristotle, the Vulgate, and the works of St. Augustine permeate the poem with their influence. He knew no Plato at first hand (he was almost completely ignorant of Greek), save, perhaps, the *Timæus* in the Latin version of Chalcidius, but there is a strong vein of Neo-Platonism in the poem, derived in part directly from the pseudo-Aristotelian *de Causis* and the Dionysian writings (either in the translation of Scotus Erigena or through the medium of Aquinas). Certain elements in his thought came from Boethius and St. Gregory the Great, while, of later mediæval writers, the influence of St. Peter Damian (esp. his *de Abdicatione Episcopatus*), of St. Bernard, and of Richard of St. Victor is especially marked. Indeed, the mystical psychology of the whole poem is largely based upon the *de Præparatione animi ad Contemplationem* and the *de Contemplatione* of the last-named writer. Of the poet's own contemporaries, Albertus Magnus and St. Bonaventura impressed him less than did St. Thomas Aquinas, the influence of whose Aristotelian treatises, his *Summa contra Gentiles*, and *Summa Theologiæ*, is profound and all-pervading. Recent investigation points to Dante's acquaintance with the mystical treatises of Mechthild of Magdeburg and Mechthild of Hackeborn, though it is questionable whether either of them can be identified with the Matelda of the Earthly Paradise. There is a certain element of Joachism in the *Divina Commedia*, but Dante was probably acquainted with the doctrines of the Abbot of Flora only at second hand, in the *Arbor Vitæ Crucifixæ* of Ubertino da Casale (1305), which is chronologically the last of the sources of the poem, and from which (together with the life of the Seraphic Father by St. Bonaventura, and, perhaps, the earlier legend by Thomas of Celano) he derived his conception of the life and work of St. Francis in the *Paradiso*.

The *Divina Commedia* is an allegory of human life and human destiny, in the form of a vision of the 'state of souls after death'; it is likewise, in the mystical sense, a figurative representation of the soul's ascent, while still in the flesh, by the three ways of purgation, illumination, and union, to the fruition of the Absolute in that 'half-hour during which there is silence in Heaven.'

Above and around the material universe is the celestial rose of Divine Beauty, flowering in the rays of the sun of Divine Love, still to be completed by man's correspondence with Divine Grace; while on earth—the threshing-floor of mortality—by use or abuse of free-will, character is formed, and human drama is played out. The dual scheme of the *de Monarchia* is transplanted from the sphere of Church and Empire to the field of the individual soul. Man, in the person of Dante, vainly attempts to escape from the dark wood of alienation from truth, and is barred by his own vices from the ascent of the delectable mountain (felicity, or, perhaps, knowledge of self); but Vergil, representing human philosophy inspired by reason, guides him through the nine circles of Hell (realization of the nature and effects of sin), and up the seven terraces of Purgatory (setting love, the soul's natural tendency to what is apprehended as good, in order, and purifying the soul from the stains still left after conversion) to the Earthly Paradise, which in one sense is the happy state of a good conscience, and in another the life of Eden regained by the purgatorial pains. This life is personified in Matelda, the realization of Leah, who, in the mystical system of Richard of St. Victor, symbolizes 'affection inflamed by Divine inspiration, and composing herself to the norm of justice.' Then the soul can rightly comprehend the history of Church and State, as represented in the allegorical pageant, and is prepared for a further illumination. Beatrice, symbolizing the Divine Science as possessing Revelation, thence uplifts the poet through the nine moving heavens of successive preparation, corresponding to the nine angelic orders, into the true Paradise, the timeless and spaceless empyrean heaven of heavens, where her place is taken by St. Bernard, type of the loving contemplation in which the eternal life of the soul consists; and, after the impassioned hymn to the Blessed Virgin placed upon Bernard's lips, the poem closes in the momentary actualizing of the soul's entire capacity of knowing and loving, when desire and will move in harmony with 'the Love that moves the sun and the other stars,' in an anticipation of the Beatific Vision of the Divine Essence.

In describing the 'spiritual lives' of Hell, Purgatory, and Paradise, Dante has given a summary, illumined by imagination and kindled by passion, of all that is permanently significant in the life and thought of the Middle Ages. He is throughout harking back to a primitive ideal of Christianity, freed from the corruptions and accretions of the subsequent centuries. Under the tree of an Empire renovated by the power of the Cross, Revelation is seated on the bare ground as guardian of the chariot of the Church, with no attendants save the theological and moral virtues, who bear nought save the seven gifts of the Holy Spirit. But the ideal is never realized, because, side by side with the conquest of the world by Christianity, had come the conquest of the Church by the world. The alleged donation by Constantine of wealth and territory to the Papacy is for Dante the turning-point in history, and the primal cause of the failure of Christianity, which was bearing such bitter fruit in the corruption of mankind. The supremely significant event of his own century is thus the rise of St. Francis, and his marriage with Lady Poverty, as the first attempted return to the ideal of Christianity that Christ had left. This, in its turn, having proved but a passing episode, the poet can only look forward to the coming of the deliverer, the mysterious *Veltro*, the 'Five Hundred Ten and Five,' to be sent from God to renovate the Empire and to reform the Church by other methods. For the rest, men at all times 'are masters of their fate,' through the supreme gift of free-will, to put violence upon which, as Richard of St. Victor had said, 'neither befits the Creator nor is in the power of the creature.' The soul of man works out its own salvation or damnation; and the tragic fact consists simply in the soul's deliberate choice of evil. The *Inferno* departs less than the other two canticles from mediæval tradition in its structure and machinery; but it is here that the dramatic side of Dante's genius is especially displayed. The tragic impression is intensified, on the one hand, by the wasted virtues of the lost (the patriotism of Farinata degli Uberti, the fidelity of Piero delle Vigne, the scientific devotion of Brunetto Latini, the high conception of man's origin and nature that impels Ulysses to his last voyage); and, on the other, by frequent and effective use of dramatic contrasts between the souls in Hell and those in Purgatory or Paradise (Francesca da Rimini and Piccarda Donati; St. Peter Celestine and King Manfred; Guido and Buonconte da Montefeltro). In the *Purgatorio*, with its sunsets and starshine, its angel ministers, its allegorical quest of liberty,

in which the souls find the very purgatorial pains a solace to be willingly undergone, Dante breaks almost completely from legend and theological tradition, and presents a conception of the second realm which is entirely his own. The *Purgatorio* depends less than the *Inferno* upon the splendour of certain episodes, though many of these are among the most beautiful in the poem. It is in its sustained harmony and all-pervading tenderness that it makes immediate and universal appeal to heart and mind. The noblest passages of the *Paradiso* are lyrical rather than dramatic, and there is naturally less action and less individualization of character. With the exception of St. Bernard, who is a singularly vivid character, the human aspect of the souls in bliss is somewhat lost in the glory of their state since they have become 'sempiternal flames'—the suggestion of humanity being held in abeyance after the third sphere (where the stretch of the earth's shadow is passed), until it reappears in celestial splendour in the tenth heaven. Notwithstanding this, we are sensible of no monotony in the passage through the higher spheres; for it is part of the poet's conception, worked out alike in the allegorical imagery and in the spoken narratives of each sphere, that, although each soul partakes supremely of the Beatific Vision, which is one and the same in all, yet there are not only grades, but subtle differences in the possession of it, in which the previous life has been a factor. As Wicksteed puts it, 'the tone and colour, so to speak, of the heavenly fruition of the blessed is affected by the nature of the moral warfare through which they rose to spiritual victory.' The human interest in the *Paradiso* seems concentrated in such episodes as the appearance of Piccarda Donati and Dante's colloquy with Cacciaguida, or the exquisite passage where Beatrice, her allegorical office completed, resumes her place, in the unveiled glory of her human personality, in the celestial rose. The mystical poetry of the *Paradiso* is unsurpassable: above all, in the closing canto it reaches a height of spiritual ecstasy for which it would be hard to find a parallel elsewhere in modern literature. Shelley wrote of the *Paradiso* that it is 'a perpetual hymn of everlasting love'; and Manning, 'Post Dantis paradisum nihil restat nisi visio Dei.'

The metre in which the *Divina Commedia* is written, the *terza rima*, seems to have been created by Dante from the *sirventese*, the Italian form of the Provençal *sirventes*, employed by the troubadours for political or satirical compositions in contrast to the statelier *canso*, or *canzone*, of love. His style has the highest qualities of terseness, condensation, variety of intonation, passion, vividness. The closely packed imagery is hardly ever introduced for its own sake, but to exemplify and clarify his meaning. Even at the heights of the *Paradiso*, he does not shrink from uncompromising realism in his similes and images. The beauty and fidelity of his transcripts from Nature are likewise unapproachable. He can render a complete scene in a few lines, sometimes in a single line, whether it be the flight of birds, the trembling of the sea at dawn, or the first appearance of the stars at the approach of evening. 'Dante's eye was free and open to external nature in a degree new among poets. . . . But *light* in general is his special and chosen source of poetic beauty' (Church, *Dante*, 1901, pp. 149, 163). Dante's fidelity to Nature has been well compared with that of Wordsworth. And, when he turns from Nature to the mind of man, '*his* haunt, and the main region of *his* song,' no such revealer of the hidden things of the spirit, save Shakespeare, has ever found utterance in poetry.

3. **Position and character.**—Dante is the last poet of the Middle Ages, and the first of the modern world. He has given perfect poetical utterance to what would otherwise have been artistically silent, and has proved the most influential interpreter of mediæval thought to the present day. If it can no longer be said, without considerable reservation, that he created the Italian language, or that he founded Italian literature, it is certain that he first showed that modern literature in general could produce a work to rival the masterpieces of antiquity, and he first gave to Italy a national consciousness. His character is reflected in his works: profoundly reverent to what he deemed Divinely ordained authority, but no less enkindled with prophetic fire against the abuse and corruption of that authority, whether in Church or State, and absolutely fearless in his reforming zeal; relentless in his hatred of baseness and wickedness, above all in high places, but with a capacity for boundless tenderness and compassion; liable to be carried to excess, both in speech and in action, by his impassioned hunger and thirst after righteousness; conscious of his own greatness, but ever struggling against pride, and exalting humility above all other virtues; listening for a while to the song of the *antica strega*, the siren of the flesh (*Purg.* xix. 58), but borne up 'even to the sphere of fire' by the eagle of the spirit (*Purg.* ix. 30). The visionary experience, upon which the whole *Divina Commedia* is based, was, it would seem, a sudden realization of the hideousness of vice and the beauty of virtue, the universality and omnipotence of love, so intense and overwhelming that it came upon him with the force of a personal and special revelation; but this was not all; we gather from the letter to Can Grande that the poet himself experienced one of those contacts with the Divine attributed to the great saints and mystics of all creeds—in which, as George Tyrrell puts it, the mind touches the smooth sphere of the infinite, but is unable to lay hold of it.

LITERATURE.—I. *BIOGRAPHY.*—Our earliest sources for the life of Dante, in addition to his own works and a few extant documents, are a chapter in the *Istorie Fiorentine* of Giovanni Villani († 1348), the *Vita di Dante* of Boccaccio († 1375), the insignificant sketch by Filippo Villani († c. 1405), the more authoritative and critical treatise of Leonardo Bruni († 1444), and the first commentators. There are ten 14th cent. commentators upon part or the whole of the *Divina Commedia*, including both Dante's sons and the author of the so-called *Ottimo Commento*, who professes to have known the poet personally. The most important is Benvenuto Rambaldi da Imola (1379-1410), edited by Vernon and Lacaita (Florence, 1887). Among recent publications should be especially mentioned: G. Biagi-Passerini, *Codice diplomatico dantesco* (documents, in course of publication); C. Ricci, *L'ultimo rifugio di Dante Alighieri*, Milan, 1891; M. Scherillo, *Alcuni capitoli della biografia di Dante*, Turin, 1896; various volumes of Isidoro del Lungo; Paget Toynbee, *A Dante Dictionary*, Oxford, 1898, also *Dante Alighieri, his Life and Works*, London, 1910; N. Zingarelli, *Dante*, Milan, 1903 (a work on an exhaustive scale with full bibliographies). For the disputed story of the letter of Frate Ilario, cf. Wicksteed-Gardner, *Dante and Giovanni del Virgilio*, London, 1902; Rajna, in *Dante e la Lunigiana*, Milan, 1909; V. Biagi, *Un episodio celebre nella Vita di Dante*, Modena, 1910.

II. *MINOR WORKS.*—A critical edition is gradually being produced by the Società Dantesca Italiana, of which the *de Vulgari Eloquentia* (ed. Rajna, Florence, 1896) and *Vita Nuova* (ed. Barbi, Florence, 1907) have appeared. The *Rime* are incomplete and unsatisfactory even in E. Moore's *Tutte le Opere di Dante*, 1894 (the 'Oxford Dante,' which is of the highest authority for the text of all the other works). A more recent edition, *Vita Nuova and Canzoniere*, by Wicksteed-Okey, is in the Temple Classics. Michele Barbi's long-promised edition of the *Rime* is much needed. There are critical editions of the *Eclogæ* by Wicksteed (in *Dante and Giovanni del Virgilio*) and Albini, Florence, 1903. The translations of the Latin Works (Howell and Wicksteed) and of the *Convivio* (Wicksteed) in the Temple Classics are provided with full critical commentaries; a more recent version of the *Convivio* is by W. W. Jackson (Oxford, 1909). For the problem of the *de Aqua et Terra*, see Moore, *Studies in Dante* (second series, Oxf. 1899), and V. Biagi's ed., Modena, 1907.

III. *DIVINA COMMEDIA.*—The best Italian editions with commentaries are those of Scartazzini (epoch-making, but now a little out of date), Casini, and Torraca; of the text with English translations and notes, by A. J. Butler, the Temple Classics

editors (Wicksteed, Oelsner, Okey), and W. W. Vernon (*Readings . . . chiefly based on the Commentary of Benvenuto da Imola*, new ed. Lond. 1906–09).

IV. *SUBSIDIARY LITERATURE.*—The reader must be referred to Toynbee's *Dante Dictionary* and the bibliographies included in Zingarelli. Dante literature has, especially of late years, assumed colossal proportions. Among English works stand out pre-eminently the three volumes of Moore's *Studies in Dante*, Toynbee's *Dante Studies and Researches*, Lond. 1902, and *Dante in English Literature*, Lond. 1909. Church's well-known essay still holds its place as the most suggestive of introductions to the divine poet. The Florentine quarterly publication, *Il Bullettino della Società Dantesca Italiana*, is indispensable to students.

EDMUND G. GARDNER.

DAPHLĀ (Daflā, Daplā, Dophlā).[1]—A tribe occupying a section of the Himālaya lying N. of the Darrang and Lakhimpur Districts, Eastern Bengal, and Assam. They numbered 954 at the Census of 1901; but the greater part of the tribe is found in independent territory beyond the British frontier, whence, driven by famine or the oppression of the Abors, they have recently shown a tendency to migrate into the Darrang and Lakhimpur Districts. They call themselves Niso, Nising, or Bangnī, the last name meaning 'men.' According to Mackenzie (*Hist. of the Relations of the Government with the Hill Tribes on the N.E. Frontier of Bengal*, 541), Mirī, Daphlā, and Abor (see ABOR, vol. i. p. 33) are names given by the Assamese to three sections of the same tribe inhabiting the mountains between Assam and Tibet.

'Their principal crops are summer rice and mustard, maize, and cotton, sown in clearances made by the axe or hoe in the forest or in the jungle of reeds. Their villages, usually placed on or near the banks of rivers, consist of a few houses built on platforms raised above the naked surface of the plain, presenting a strong contrast to the ordinary Assamese village. . . . Under the houses live the fowls and pigs which furnish out the village feasts, and the more prosperous villages keep herds of buffaloes also, though these people, like so many of the non-Aryan races of Assam, eschew milk as an unclean thing' (Mackenzie, *op. cit.* 541).

1. Ethnology.—The Daphlās are probably connected with the great Bodo (*q.v.*) or Barā race, which includes the Kāchārī, Rabhā, Mech, Garo, and Tipperā tribes, and they are by origin Tibeto-Burmans, who followed the Mon-Anam from N.W. China between the waters of the Yang-tse-kiang and the Ho-ang-ho (*Census Report Assam*, 1901, i. 120). Their language is closely related to that of the Akā, Abor-Mirī, and Mishmī tribes.

'We know a good deal about Abor-Miri and Daflā. Robinson [*JRASBe*, 1851, p. 131] gave us grammars and vocabularies of both in the middle of the last century, and, to omit mention of less important notices, in later times, Mr. Needham has given us a grammar of the former, and Mr. Hamilton one of the latter' (G. A. Grierson, *Census Report India*, 1901, i. 262 f.; and see E. A. Gait, *Assam Census Report*, 1891, i. 184).

2. Relations with the British Government.—The independent portion of the tribe has long been accustomed to make raids in British territory. Even in 1910 it was found necessary to send an expedition against them. This is due not so much to friction with the British authorities as to quarrels between the independent and the settled branches of the tribe. In 1872–3 one of these outbreaks occurred because the men of the hills claimed compensation for losses of life believed to have been caused by infection introduced from the plains. On this being refused, they raided British territory and captured several slaves (Mackenzie, 31).

3. Religious beliefs.—Much information regarding their religion has been collected since, in 1872, E. T. Dalton gave the first account of them (*Descriptive Ethnology of Bengal*, 36):

'I never heard of Dophla priests, but Robinson says they have priests who pretend to a knowledge of divination, and by inspection of chickens' entrails and eggs declare the nature of the sacrifice to be offered by the sufferer and the spirit to whom it is to be offered. The office, however, is not hereditary, and it is taken up or laid aside at pleasure. So it resolves itself into this, that every man can, when occasion requires it, become a priest. Their religion consists of invocations to the spirits for protection of themselves, their cattle, and their crops, and sacrifices and thank-offerings of pigs and fowls. They acknowledge, but do not worship, one Supreme Being, which, I conceive, means that they have been told of such a Being, but know nothing about him.'

During the Census of 1881 (*Report*, § 150 ff.; Mackenzie, 543 ff.) it was ascertained that the Mikirs and Daphlās worship Yāpum and Orom, the latter the malignant spirits of the dead, the former a sylvan deity or demon, who suffices for the needs of everyday life, though in critical conjunctures some great god has to be gained over by the sacrifice of a *mithan* or *gayāl* (*Bos frontalis*).

'A hill Miri told me how he had once, while a boy, actually seen a Yāpum. The character of this god is that he lives in trees, and all the beasts of the forest obey him. My informant was throwing stones in a thicket by the edge of a pool, and suddenly became aware that he had hit the Yāpum, who was sitting at the foot of a tree in the guise of an old grey-bearded man. A dangerous illness was the consequence, from which the boy was saved by an offering of a dog and four fowls made by his parents to the offended Yāpum, who has since visited him in dreams' (Mackenzie, 543).

They also count the Sun among their deities; but their great god, who must be propitiated by the sacrifice of a *mithan*, is Uī or Wī, of whom no Daphlā cares to speak much for fear of incurring his displeasure. His character may be guessed from the Assamese equivalent of his name, Yom or Yama, the Hindu god of death (*ib.* 544). E. A. Gait (*Census Report Assam*, 1891, i. 223) adds:

'The general name for God is Uī, but there are also special names for each particular deity. Most of their gods are inimical to men, and have to be propitiated by sacrifices. The chief gods are Sonolē, the god of heaven; Siki, who presides over the delivery of women; Voglē and Lungtē, who hurt men; and Yenpu, who injures children. Then there is Yāpum, the god of trees, who frightens to madness people who go into the forest; Chili, the god of water; Proni, the god of diseases; Sotu, the god of dumbness; and numerous others. There are a few beneficent deities, such as Pekhong, the god of breath, and Yechu, the goddess of wealth. To all these gods, sacrifices are offered. When a person is ill, a sorcerer (*deondic*) is called in, and chants an incantation in a loud singsong voice, which he sometimes keeps up till he works himself up into a frenzy of excitement. The Daflās believe in a future life, but cannot say much about it, except that they expect to cultivate and hunt there. The dead are buried in a sitting position, and a small shed is put up over the grave: in it rice and drink are placed, and a fire is kept burning for five days. The mourners sacrifice fowls, pigs, and sometimes mithun, the blood of which is sprinkled over the grave; the flesh they eat themselves.'

B. C. Allen (*Census Report Assam*, 1901, i. 46 ff.) gives an account of similar beliefs among the allied tribes of this group—the creation legends of the Mikirs and Garos, and the conception of the other world held by the Mirīs, Mikirs, and Garos.

LITERATURE.—E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872; A. Mackenzie, *Hist. of the Relations of the Government with the Hill Tribes of the N.E. Frontier of Bengal*, Calcutta, 1884; *Reports of the Census of Assam*, 1881, 1891, 1901; B. C. Allen, *Gazetteers of the Lakhimpur and Darrang Districts*, Calcutta, 1905.

W. CROOKE.

DARDS.—The Dards are an Aryan race inhabiting the country round Gilgit, between Kashmīr and the Hindū Kush, and down the course of the Indus to near where it debouches on the plains. Colonies of the tribe are also found farther east in Bāltistān, where they are known as *Brokpas*, or Highlanders. Along with the Khōs of Chitral and the Hindū Kush Kāfirs of Kāfiristān, Dards are classed by the present writer as descendants of the *Piśāchas*, or Ὠμοφάγοι of Sanskrit writers. This is not accepted by all scholars, but no alternative has hitherto been suggested. Although of Aryan origin, their language cannot be classed as either Indian or Iranian, having issued from the parent stock after the former branch had emigrated towards the Kābul Valley, but before the typical characteristics of Iranian speech had become fully developed. They are mentioned by Herodotus (iii. 102–105), though not referred to by their present name. On the other hand, Sanskrit writers knew them as *Daradas*, and they are the *Derdai* of Megasthenes and Strabo, the *Daradrai* of Ptolemy, and the *Dardae* of Pliny and Nonnus. Most of the Dards belong to the tribe of Shīns, whose headquarters may be taken as Gilgit, and their

[1] The origin of the name, which, as pronounced in the Lakhimpur District, would be written *Domphilā*, is unknown.

language is either Shīnā or some closely allied form of speech. By religion, the Dards of the present day are nearly all Musalmāns, but the Brokpa colonies in Bāltistān profess the Buddhist faith of their neighbours. It is not known at what period the Muhammadan Dards were converted to Islām, but, down to the middle of last century, when a reformation was carried out by Nathū Shāh, the Governor of Gilgit, on behalf of the Sikhs, it held but a nominal sway. Even after Nathū Shāh's time remains of the old pre-Islāmitic beliefs have survived, so that many Dard practices are very different from those enjoined on the followers of the Qur'ān. For instance, until about eighty years ago the dead were burnt and not buried, and this custom lingered on sporadically down to the last recorded instance in 1877. A memory of it still survives in the lighting of a fire by the grave after burial. Instead of considering the dog as unclean, they are as fond of the friend of man as any Englishman. The marriage of first cousins, which is frequent among true Musalmāns, is looked upon with horror by the purer tribes of Shīns as an incestuous union. Although the Muhammadan lunar calendar has been introduced, an ancient solar computation, based on the signs of the zodiac, still exists. According to Biddulph, 'Islām has not yet [1880] brought about the seclusion of women, who mix freely with the men on all occasions. Young men and maidens of different families eat and converse together without restraint.' The levirate custom has a strong hold, and this often leads to two sisters being the wives of the same man simultaneously, though such a practice is forbidden by Muhammadan law.

The Dards received Muhammadanism from three directions. From the south (*i.e.* Afghanistān) came the Sunnīs, and that branch of Islām is now prevalent in Chilās. From the Pāmirs in the north came the Maulā'ī sect (famous for its wine-bibbers), and this doctrine is now commonly held north of Gilgit. On the other hand, the people round Gilgit and to the south are mostly Shī'ahs converted from Bāltistān.

On the Buddhist Dards, or Brokpas, of East Bāltistān their nominal religion sits even more lightly than on their Musalmān fellow-tribesmen to the west. The only essential Tibetan practices which they have adopted seem to be the dress of the men and the custom of polyandry. The religious ideas of the Brokpas were examined by Shaw in 1876, and of late years by A. H. Francke, whose researches into the ancient customs and religion of the neighbouring Ladakh are well known. The information gathered from these two sources agrees closely with the traces of the ancient Shinā religion observable in other portions of the Dard area, and from the whole we get a fairly clear, if incomplete, idea of its general character.

According to Francke, the origin of the world is believed by the Brokpas to be as follows:[1] 'Out of the Ocean grew a meadow. On the meadow grew three mountains. One of them is called "the White-jewel Hill," the second "the Red-jewel Hill," and the third "the Blue-jewel Hill." On the three mountains three trees grew. The first is called "the White Sandal-tree," the second "the Red Sandal-tree," and the third "the Blue Sandal-tree." On each of the trees grew a bird,—"the Wild King of Birds," "the House-hen," and "the Black Bird," respectively.'

Francke adds: 'As regards the system of colours, we are decidedly reminded of the *gLing chos*, or pre-Buddhist religion of Tibet (see GLING CHOS). I am inclined to believe that the three mountains were thought to exist one on the top of the other; the lowest being the blue mountain and tree forming the Under-world, the red mountain and tree being in the middle and representing the Earth, and the uppermost being the white mountain and tree forming the Land of the Gods. But in other respects the story of the origin of the world is at variance with the *gLing chos*, according to which the world is framed out of the body of a giant, while here it grows out of the water, as in Indian legends.'

Nothing like this cosmogony has been noted in other Shīn tracts, and it may be that it has been partly borrowed from Tibet. At the same time it may be noted that the *Klumo* or *Nāginīs*, who are prominent characters in the *gLing chos*, are also met, under the form of snakes, in Gilgit tradition, and, according to Leitner, the earth is there known as the 'Serpent World.'[1]

From the hymn from which Francke has culled the preceding information he also extracts the following two names of deities, *Yandring* and *Mandêde Mandêschen*. These names are, at any rate, not Tibetan, and are therefore probably Dard. In another prayer, the name *Zhúni* occurs as that of a house-god. *Múmmo*, which properly means 'uncle,' stands in the collection of hymns for the 'uncle of the past,' *i.e.* the 'forefather' or Adam of the race, who is also honoured almost like a god.

Francke mentions water, milk, butter, and flower offerings as sacrifices, and also burnt offerings of the pencil-cedar (see below). Sheep and goats are also offered to the gods, and in one song—that of the ibex hunter—the hunter carries all the necessaries for the offerings along with him when following his quarry, and after the lucky shot they are at once offered to the gods.

Farther west, we also come across traces of Buddhism. A rock-cut figure of the Buddha is still to be seen in a defile near Gilgit, and throughout the Gilgit and Astor valleys, as well as elsewhere, there can be found ruined *chortens* (*q.v.*), whose forms can even now be distinctly traced. One of the Shīn festivals, the *Taleni*, which commemorates the destruction of an ancient king who devoured his subjects,[2] seems to have a connexion with a similar festival among the Iranian fire-worshippers of the Pāmirs. In neither case, however, can we consider such remains as part of the true ancient Dard religion. They are just as exotic as Islām.

The practical side of Dard religion, as distinct from speculative theories regarding cosmogony and the like, is best described by Shaw in his account of the Brokpas (p. 29 ff.), which fully agrees with the information derived from other sources. The real worship is that of local spirits or demons, much like the cult of similar beings in the neighbouring Ladakh. Closely connected with this worship is a kind of cedar or juniper tree (*Juniperus excelsa*), called in Shīnā *chilī*, and by the Brokpas *shukpa*. In every village in which Shīns are in a majority there is a sacred *chilī* stone, dedicated to the tree, which is still more or less the object of reverence. Each village has its own name for the stone, and an oath taken or an engagement made over it is often more binding than when the Qur'ān is used. Shaw's account of the local Brokpa goddess of the village of Dah may be taken as a sample:

'Her name is *Shiring-mo*. A certain family in the village supplies the hereditary officiating priest. This person has to purify himself for the annual ceremony by washings and fastings for the space of seven days, during which he sits apart, not even members of his own family being allowed to approach him, although they are compelled during the same period to abstain from onions, salt, *chang* (a sort of beer), and other unholy food. At the end of this period he goes up alone to the rocky point above the village, and, after worshipping in the name of the community the deity who dwells there in a small cairn, he renews the branches of the "shukpa" (*Juniperus excelsa*) which were placed there the previous year, the old branches being carefully stowed away under a rock and covered up with stones.'

'. . . Formerly the priest used to be occasionally possessed

[1] Quoted from a private communication.

[1] Leitner, *Dardistan in 1866, 1886, and 1893*, p. 50.

[2] It is an interesting fact that all over the *Pišācha* region there are traditions pointing to ancient cannibal customs which were put a stop to by some hero or god. The Sanskrit word *Pišācha* means 'eater of raw flesh.'

by the demon, and in that state to dance a devil-dance, giving forth inspired oracles at the same time; but these manifestations have ceased for the last twelve or fifteen years [written in 1876]. The worship is now simply one of propitiation inspired by fear, the demon seeming to be regarded as an impersonation of the forces of nature adverse to man in this wild mountainous country. Sacrifices of goats (not sheep) are occasionally offered at all seasons below the rock, by the priest only, on behalf of pious donors. They talk of the existence of the demon as a misfortune attaching to their tribe, and do not regard her with any loyalty as a protecting or tutelary deity. In each house the fireplace consists of three upright stones of which the one at the back of the hearth is the largest, 18 inches or 2 feet in height. On this stone they place an offering to the demon from every dish cooked there, before they eat of it. They also place there the firstfruits of the harvest. Such is their household worship.'

This belief in demons is universal over the Dard area. They are called *Yach*. They are of gigantic size, have each only one eye, in the centre of the forehead, and, when they assume human shape, may be recognized by the fact that their feet are turned backwards.[1] They can walk only by night, and used to rule over the mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses, but, since the adoption of the Muhammadan religion, they have relinquished their possessions, and only occasionally trouble the believers. Their oath is by the sun and moon, and they are not invariably malevolent. On the occasion of their weddings they borrow the property of mankind for their rejoicings, and restore it faithfully, without the lender being aware of the loan. On such occasions they have kindly feelings towards the human race. The shadow of a demon falling on a person causes madness.

Fairies, known as *Barai*, are also common. They are as handsome as the demons are hideous, and are stronger than they. They have a castle of crystal on the top of the mighty mountain of Nanga Parbat, which has a garden containing only one tree composed entirely of pearls and coral. Although they are capable of forming love-attachments with men, like Lohengrin they have a secret, and they never forgive the human being who discovers it. Death is the only possible recompense for the indiscreet curiosity. They sometimes take the form of serpents (*Nāgas* or, feminine, *Nāginīs*).

While the shadow of a demon causes madness, that of a fairy confers the gift of prophecy. Divination is still practised, in spite of Muhammadanism. The diviner, or *Dainyal*, is one on whom the shadow of a fairy has fallen in sleep. When performing his or her office, the diviner is made to inhale the smoke of burning juniper wood till he is insensible. When he revives, the neck of a newly slaughtered goat is presented to him, and he sucks the blood till not a drop remains. He then rushes about in a state of ecstasy, uttering unintelligible sounds. The fairy appears and sings to him, he alone being able to hear. He then explains her words in a song to one of the attendant musicians, who translates its meaning to the crowd of spectators.

Amongst miscellaneous customs, we must first of all mention the remarkable abhorrence entertained for everything connected with a cow (we have already remarked the fondness for dogs). The touch of the animal contaminates, and, though they are obliged to employ bullocks in ploughing, the Dards scarcely handle them at all. They employ a forked stick to remove a calf from its mother. They will not drink milk or touch any of its products in any form, and believe that to do so causes madness. There is nothing of reverence in this. They look upon the cow as bad, not good, and base their abhorrence on the will of the local gods. Marriages are celebrated with much ceremony, for an account of which the reader is referred to Biddulph (p. 78 ff.). We trace a survival of marriage by capture in the bridegroom setting out for the bride's house, surrounded by his friends and equipped with bow, arrow, and battle-axe. An essential part of the dress of a Shīn bride is a fillet of cowrie shells bound round her head. When the bride and bridegroom take their first meal together, there is a scramble for the first morsel, as whichever eats this will have the mastery during the future wedded life. After the birth of a child the mother is unclean for seven days, and no one will eat from her hand during that period. Ordeal by fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the place appointed seven paces distant, and, should any mark of a burn remain on his hand, it is a proof of guilt. Magic has a prominent place in Dard ideas, and written charms are in great request. They are even attached to the mane and forelock of a horse. They confer courage and invulnerability. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is cast into them.

The principal festivals are as follows:—

(1) The *Nōs*, in celebration of the winter solstice. The word means 'fattening,' and refers to the slaughtering of the cattle, fat after the grazing on the pastures, which takes place. This is necessary because the pastures have become covered with snow, and only sufficient fodder is stored to keep a few animals alive through the winter. On the second day the *Talenī*, already mentioned, is celebrated.

(2) The *Bazono*, in celebration of the commencement of spring. The sacrifice is a sheep, which must be lean and miser able. The word means 'leanness.'

(3) The *Aiboi*, which took place in the first week in March, has now fallen into desuetude. It was said to mark the time for pruning vines and the first budding of the apricot trees. In some respects it resembled the Indian *Hōlī*. Prominent features were mock fighting amongst the men, and the licensed cudgelling of men by women. Its cessation is due to the Musalmān reform movement of Nathū Shāh.

(4) The *Ganonī* celebrated the commencement of the wheat harvest, and is still kept up. At dusk on the evening before the festival, a member of each household gathers a handful of ears of corn. This is supposed to be done secretly. A few of the ears are hung over the door of the house, and the rest are roasted next morning and eaten steeped in milk. The Dards of the Indus Valley below Sazin do not observe this festival.

(5) The last festival of the year, and the most important, is the *Chilī*, which formerly celebrated the worship of the juniper tree, and marked the commencement of wheat-sowing. Within the last eighty years the rites connected with the tree-worship have ceased, but the ceremonies connected with sowing are still maintained. Bonfires of *chilī* wood are, however, still lit, and the quantity of wheat to be used in the next day's sowing is held over the smoke.

It will have been observed how frequently the sacred *chilī*, or juniper tree, has been referred to in the foregoing pages. In former years the worship of this tree was performed with much ceremony, and hymns were sung in its honour. In prayers to it for the fulfilment of any desire, it was addressed as 'The Dreadful King, son of the fairies, who has come from far.' The *chilī* stone, at the entrance of every Shīn village, has already been mentioned. On it offerings to the *chilī* were placed, and from it omens were deduced. A full account of the ceremonies connected with its worship will be found in Biddulph (p. 106 ff.).

To sum up. The present writer has met in none of the authorities on the Dard religion any reference to a Supreme Deity, corresponding to the Kāfir *Imrā*. In translations from Christian scriptures, the Musalmān word *Ḫudā* has to be used for 'God.' The centre of the worship seems to be the *chilī* tree, a mighty son of the fairies; and the whole mountain region in which the Dards dwell is peopled by spirits, some benevolent, and some malevolent, probably personifications of the powers of Nature, who exercise a constant influence on the lives of the human beings who dwell under

[1] So also in India. Compare the hoofs of the European devil and the *Diable boiteux*. Whitley Stokes tells of an Irish legend, according to which the devil could not kneel to pray, as his knees were turned the wrong way.

their sway. Most of the worship is in the form of propitiation of the malevolent spirits, though we occasionally find prayers addressed to the benevolent *chilī*. Over the whole is spread a complex mist. We see traces of the Magian religion of Irān; of Buddhism, left behind on its way to Central Asia; and, in modern times, Islām, in strong possession. The pure Dard religion has nothing in common with any of them. Attempts have been made, but in the opinion of the present writer entirely without any justification, to connect it with the religions of India, and (with better reason) with the ancient *gLing chos* religion of Tibet. It is a pure Nature-religion of an agricultural and pastoral people, dwelling in a barren land, amidst the highest mountain ranges in the world. The languages of the *Piśācha* people, of which the Dard languages form an important group, are, as has been stated, something between Indian and Iranian, and one of their most characteristic marks is the wonderful way in which they have preserved ancient Aryan forms of speech almost unchanged down to the present day. The same may be said of the Dard religion. It retains many of the characteristics of the oldest form of Aryan religion with which we are acquainted. There is the same adoration of a special plant (in the Vēdas the *sōma*, and amongst the Dards the *chilī*), and the same worship, mixed with terror, of the personified powers of Nature.

DARKNESS.—See LIGHT AND DARKNESS.

DARŚANA.—The term *darśana*, the literal meaning of which is 'seeing,' 'sight,' is more usually employed in Sanskrit literature with a derivative or metaphorical significance, as 'insight,' 'perception,' *i.e.* mental or spiritual vision. It is thus at once expressive of one of the most characteristic and fundamental thoughts of Indian philosophy—the meditative and mystical attitude of mind which frames for itself an idealistic conception of the universe; *e.g.* Manu, vi. 74:

'He who is possessed of true insight (*darśanasampanna*) is not bound by deeds,
But the man destitute of insight (*darśanena vihina*) is involved in the cycle of existence.'

The word is also used of the vision of sleep, a dream or dreaming,[1] wherein the mind perceives and learns independently of the exercise of the bodily senses.

Thus *darśana* is thought, perception in general, the application of the mental faculties to abstract conditions and problems; and ultimately denotes thought as crystallized and formulated in doctrine or teaching—the formal and authoritative utterance of the results to which the mind has attained.[2] In this sense it is practically equivalent to *śāstra*.

As a technical term, *darśana* is applied to the six recognized systems of Indian philosophy, which give many-sided expression to Indian thought in its widest and most far-reaching developments. These form the six *darśanas*, systems of thought and doctrine properly so called, viz. the *Pūrva-* and *Uttara-mīmāṁsā* (the latter more usually known as the *Vedānta*); the *Sāṅkhya* and *Yoga*; the *Nyāya* and *Vaiśeṣika*. Of these, the first consists mainly of explanation and comment on the ritual texts of the Veda, while the second expounds the widely known speculative and idealistic philosophy of India. The third and fourth are nearly related to one another; and of these the ancient *Sāṅkhya* formulates a materialistic theory of the universe, which the *Yoga*—in its essential elements equally ancient—then takes up and interprets in a theistic sense. The *Nyāya* and *Vaiśeṣika* are not systems of philosophy at all in the ordinary acceptation of the term; the former treats of logic and literary criticism, the latter of natural philosophy and the physical constitution of the universe. The precise date at which these systems originated or were first reduced to order and writing is unknown; they represent, however, the outcome and final residue of Indian thought and speculation, extending probably over many centuries.

There is no reason to believe that the six *darśanas* contain all that the mind of ancient India conceived, or to which these early thinkers endeavoured to give expression. It would seem probable, however, that, while much has been lost, and the extant treatises are often fragmentary, enigmatic, highly figurative, and difficult of interpretation, there has been preserved in the *darśanas*, and in the traditional and literary sources upon which they have drawn, the best that India had to give of speculation and thought upon the problems and conditions of life.[1]

A somewhat similar word is *tarka*, 'investigation,' 'inquiry,' 'discussion,' which also in course of time was used to denote the science or system which was its outcome and fruit. It was then later employed in the same manner as *darśana*, specifically of the recognized philosophical systems. The former term, however, seems never to have obtained the same degree of acceptance or currency as the latter, which in the usage of writers of all periods was the ordinary and appropriate designation of the six systems to which alone orthodox rights and authority were secured.

A. S. GEDEN.

DARWINISM.—It has become customary to give the title of 'Darwinism' to that particular development of the doctrine of evolution which is associated with the name of Darwin (1809–1882), and which began, in 1859, with the publication in England of his *Origin of Species*. The central feature of this development of thought has been the conception of evolution as the result of Natural Selection in the struggle for existence. It has caused so great a change in the general tendencies of knowledge that Romanes probably did not exaggerate the effects when he described them to be without parallel in the past history of mankind. Nearly all the departments of thought related to the subject of religion and ethics have felt the effects of the revolution.

At first sight the *Origin of Species* accomplished nothing in itself very remarkable. The theory of evolution had long been in the air. While the conception of continuous development in the universe had come down to us from the Greeks, the modernized and scientific theory of it had become a commonplace of knowledge by the middle of the 19th century. Kant's nebular hypothesis further developed by Laplace and Herschel, had familiarized the world with the idea of development as applied to the physical universe. In Geology, workers like Murchison and Lyell had brought home to men's minds the same conception in connexion with the history of the earth. Even in the biological sciences the idea of continuous development by the modification of existing types was strongly represented by Lamarck and many other distinguished scientists. But before Darwin all these separate developments lacked vitality. In the last resort they rested largely on theory.

[1] e.g. *Hariv.* 1285.

[2] e.g. *Mahābhārata*, xii. 11045. *Śāstradarśin* is one who has insight into, intuitive perception of, the meaning of the *śāstras*.

[1] For the literature and detailed expositions of the six systems see the separate articles VEDĀNTA, etc.

In particular, the idea of the evolution of life by gradual modification was unsupported by any convincing argument drawn from facts and evidence furnished by the existing conditions of life. The most characteristic position was that which had been reached in Biology. Controversy turned upon the meaning of species. These were held to be permanent and immutable. While it was admitted that there might be a certain amount of small variation of forms, species were considered to represent special acts of creation at various times in the past history of the earth. Among the leading representatives of the biological sciences, permanence of species was the accepted view. Down to the publication of the *Origin of Species*, said Darwin,

'all the most eminent living naturalists and geologists disbelieved in the mutability of species. . . . I occasionally sounded not a few naturalists, and never happened to come across a single one who seemed to doubt about the permanence of species (*Life and Letters*, ch. ii. [vol. i. p. 87 in 1887 ed.]).

Lamarck's theory, by which he accounted for divergence of types by the accumulation of the inherited effects of use and disuse of organs, was ridiculed. Cuvier had become the representative of prevailing opinion, according to which the past history of life was one of constant cataclysms and of constantly recurring creations. Finally, this scientific view was powerfully reinforced by all the indefinite authority of general and popular opinion, which took its stand on a literal interpretation of the Hebrew account of creation in six days, contained in the first chapter of Genesis.

It was into these intellectual conditions that the doctrine of organic evolution by Natural Selection was launched by Darwin in 1859. The distinctive feature of the doctrine of development which it put forward was that it accounted for the evolution of life by the agency of causes of exactly the same kind as are still in progress. It exhibited modification and progress in life as the result of the process of discrimination always going on in the struggle for existence. It was by formulating the conception of this kind of 'Natural' Selection as the mechanism by which the transmutation of species is effected, and then by supplying in the *Origin of Species* an enormous and well-organized body of facts and evidence in support of it, that Darwin instantly converted scientific opinion and succeeded in carrying the doctrine of evolution towards a new horizon.

The theory of the mechanism of Natural Selection formulated by Darwin was extremely simple.

'There is,' he said, 'no exception to the rule that every organic being naturally increases at so high a rate, that, if not destroyed, the earth would soon be covered by the progeny of a single pair' (*Origin of Species*, ch. iii. [p. 79 in 1909 ed.]).

This tendency to increase beyond the conditions of existence is accompanied by an inherent tendency in every part, organ, and function of life to vary.

'As many more individuals of each species are born than can possibly survive, and as, consequently, there is a frequently recurring struggle for existence, it follows that any being, if it vary . . . in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be *naturally selected*. From the strong principle of inheritance, any selected variety will tend to propagate its new and modified form' (*ib.*, Introd. [p. 5 in 1909 ed.]).

This is the Darwinian doctrine of the survival of the fittest. It presented the whole succession of life as a theory of descent from simpler forms, under the stress of the process of competition for the conditions of existence.

The far-reaching effect produced by the publication of the *Origin of Species* and by Darwin's theory of Natural Selection was undoubtedly due to two main causes. The first of these was the immediate illumination which it threw on some of the most difficult problems of the special sciences which were most closely concerned. This has been often discussed, and its character and tendencies are now well understood. The second cause was the character of the impression which the doctrines produced on the general mind. The nature of this impression is much less clearly understood. It is, however, in this second relationship that the full and more lasting significance of Darwinism has to be appreciated.

The general mind almost from the beginning perceived with sure instinct, and far more distinctly than the representatives of the special sciences concerned, the reach of the theories to the establishment of which Darwin had brought such a convincing array of evidence. It appeared to many at first as if the whole scheme of order and progress in the world was now presented as the result of a purely mechanical process. The interposition of mind or of Divine agency appeared to be excluded. Man himself seemed to be deposed from the place he had occupied in all previous schemes of creation. It was true, indeed, as has been pointed out, that before Darwin the idea of a continuous development in the physical and biological worlds alike had inspired speculations in many quarters; but this conception, being rejected by current opinion, had left no permanent impression on the general mind. It was not until Darwin's work appeared, Sir William Huggins affirmed in his Presidential address to the Royal Society in 1905, that the new evidence was perceived by scientific opinion to be overwhelming in favour of the view that man is not an independent being, but is the outcome of a general and orderly evolution.

At the first presentation, therefore, of Darwin's theories popular attention became fixed, with an extraordinary degree of concentration, on the nature of the destructive changes which the doctrine seemed to involve in the ideas which had hitherto been closely associated with prevailing religious beliefs. The most familiar ideas of the system of religion which had for generations held the Western mind seemed to have had their foundation removed. Instead of a world created for man in six days of twenty-four hours each, men saw a history of development stretching away back for ages and æons into the past. Instead of a being standing, by special creation, independent and alone, as he had previously been conceived, man was presented now as but the last link in a process of evolution. With Lyell's extension of the conception of time in geology and Darwin's extension of the conception of evolution, the old order in thought seemed to have been swept away. Sir William Huggins (*loc. cit.*) graphically describes the revolution as it appeared to a contemporary from the standpoint of science:

'The accumulated tension of scientific progress burst upon the mind, not only of the nation, but of the whole intelligent world, with a suddenness and an overwhelming force for which the strongest material metaphors are poor and inadequate. Twice the bolt fell, and twice, in a way to which history furnishes no parallel, the opinions of mankind may be said to have been changed in a day. Changed, not on some minor points standing alone, but each time on a fundamental position which, like a keystone, brought down with it an arch of connected beliefs resting on long-cherished ideas and prejudices. What took place was not merely the acceptance by mankind of new opinions, but complete inversions of former beliefs, involving the rejection of views which had grown sacred by long inheritance.'

The new doctrine seemed, in short, to gather up into a focus the meaning of a number of developments long in progress and revolutionary in their nature, the recognition of which in their due place and importance had long been resisted in Western thought. It seemed to give cumulative expression to intellectual tendencies which, since the period of the Renaissance, had struggled against the overpowering weight of accepted and often intolerant religious beliefs. The first condition, therefore, was a kind of intellectual Saturnalia. The effects were felt far and wide, at almost every centre of learning, and in almost every department of thought,

philosophy, and religion. Huxley in England, Renan in France, Haeckel in Germany, were representatives of one aspect of a movement of which Darwin in biology, Tyndall in physics, and Grant Allen in popular science represented another. Most extravagant conceptions became current even in circles of sober and reasoned opinion. Religious beliefs were said to have been so far shaken that their future survival was assumed as the object of pious hope rather than of reasoned judgment. They were, according to Renan, destined to die slowly out, undermined by primary instruction and by the predominance of a scientific over a literary education, or, more certainly still, according to Grant Allen, to be entirely discredited as grotesque fungoid growths which had clustered round the thread of primitive ancestor-worship.

The deepest effects of the movement were felt in England and the United States, and this for reasons to which still other causes contributed. When Darwin published the *Origin of Species*, the resemblance which the doctrine of Natural Selection, making for progress through the struggle for existence, bore to the doctrines which had come to prevail in business and political life was recognized. Almost every argument of the *Origin of Species* appeared to present a generalized conception of the far-reaching effectiveness of competition. Darwin lifted the veil from life and disclosed to the gaze of his time, as prevailing throughout Nature, a picture of the self-centred struggle of the individual, ruthlessly pursuing his own interests to the exclusion in his own mind of all other interests; and yet unconsciously so pursuing them —as it was the teaching of the economics of the day that the individual pursued them in business —not only to his own well-being, but to the progress and order of the world.

It soon became apparent that the crudities of conception which prevailed in such inflamed and excited conditions of thought were carrying men altogether beyond the positions which the doctrine of evolution involved. It also became gradually evident, as these first impressions were lived through, that the acceptance of the evolutionary faith implied conclusions which were not only different in kind, but more significant, more striking, and even more revolutionary—although in quite a different sense—than those which the first Darwinians contemplated.

Those who had realized the depth and reality of the spiritual hold of religion on the human mind, perceived from the beginning how superficial were judgments like that quoted from Renan, to the effect that religious systems had no place in the future development of the race. But it was when the subject came to be approached in the light of the evolutionary doctrine itself that the true nature of the situation became apparent.

The Darwinian doctrine of biological evolution had centred in the principle of utility. Every part, organ, and function had its meaning in the stress out of which types and races had come. Nothing had come into existence by chance, or without correspondence with environment. The consistent labour of all the first Darwinians had been to give prominence to the necessity for the establishment and reinforcement of this — the central arch of the doctrine of evolution by Natural Selection. It was evident, therefore, that while, on the one hand, the sanctions of faith and experience must remain exactly what they had always been for the religious life, the concept of revolutionary nature was the explanation which the doctrine of evolution would be itself bound to give of the phenomenon of religion in the light of its own central principle. What was the meaning of these systems of religious belief which had filled such a commanding place in the social evolution of man? To dismiss the phenomena as merely meaningless and functionless was, the present writer pointed out, impossible and futile, in the face of the teaching of the doctrine of evolution. They must have some significance to correspond with the magnitude and the universality of the scale on which they were represented.

As observation was carried from primitive man to the most advanced civilization, the importance of the subject was not diminished but increased. The history of social development in its highest phases was largely the history of a group of Western peoples who have been for many centuries the most active and progressive nations of the world. The civilization of these peoples was the most important manifestation of life known to us, first in effects on the nations included in it, and now, to an increasing degree, through its influence on the development of other peoples in the world. This group of Western peoples had been held for thousands of years in a system of belief giving rise to ideas which have profoundly modified their social consciousness, and the influence of which has saturated every detail of their lives. These ideas had affected the development of the Western nations at every point, and had filled their history with the intellectual and political conflicts to which they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institutions, and laws. They had created the distinctive ethos of Western civilization, and they had given direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. CIVILIZATION). How could it be possible to dismiss from consideration the enormous phase of human history of which this was an example, as if evolutionists had no concern with the causes which had produced it (cf. Kidd, *Social Evolution*, ch. i.)?

Further consideration, therefore, made it evident that, if the theory of organic evolution by Natural Selection was to be accepted in human society, it would have to be accepted, like any other principle in Nature, without any reservation whatever. It would be necessary, accordingly, to seek for the function of religious belief in the evolution of society on a scale proportionate to the magnitude of its manifestations.

Throughout the forms of life below human society, the stress through which Natural Selection operated was that of the struggle for existence between individuals. But in human history the fact upon which attention had to be concentrated was that we were watching the integration of a *social* type. It was the more organic social type which was always winning. The central feature of the process was that it rested ultimately upon mind, and implied the subordination of the individual, over long tracts of time, to ends which fell far beyond the limits of the individual's own consciousness. Correspondence with environment in the case of human evolution, therefore, involved projected efficiency. It was a process of mind. If we were to hold the process of evolution as a mechanical one with no spiritual meaning in it, there would be no rational sanction whatever for the individual to subordinate himself to it. The race was destined, therefore, under the process of Natural Selection, to grow more and more religious. The ethical, philosophical, religious, and spiritual conceptions which were subordinating man to the larger meaning of his own evolution constituted the principal feature of the world's history, to which all others stood in subordinate relationship.

As the early Darwinians have continued to struggle with the laws and principles of the stress

of existence between individuals enunciated in the *Origin of Species*, and as it has become increasingly evident that the application of the law of Natural Selection to human society involves a first-hand consideration of all the problems of mind and philosophy, a remarkable feature of the situation has presented itself. This has consisted in the extremely limited number of minds of sufficient scope of view and training to enable them to deal with the new and larger problems that have arisen. The exponents of philosophy, untrained in the methods of science and largely unacquainted with its details, have necessarily continued to be without a fully reasoned perception of the enormous importance of the Darwinian principles of evolution in their own subject. The biologists, on the other hand, continuing to be immersed in the facts of the struggle for existence between animals, have in consequence, on their part, remained largely unacquainted with the principles of social efficiency in the evolution of human society. The dualism which has been opened in the human mind in the evolution of this efficiency has, in the religious and ethical systems of the race, a phenomenology of its own, stupendous in extent, and absolutely characteristic of the social process. But it remains a closed book to the biologist, and the study of it he is often apt to consider as entirely meaningless. The position has, therefore, most unusual features.

Darwin made no systematic study of human society. But, where he approached the subject in the *Origin of Species*, it was to disclose the bewilderment produced on his mind in attempting to apply the principles of the individual struggle for existence to *social* evolution. He seemed to think that Natural Selection must be suspended in civilization:

'We civilized men,' he said, 'do our utmost to check the process of elimination [of the weak in body and mind]; we build asylums for the imbecile, the maimed, and the sick; we institute poor laws; and our medical men exert their utmost skill to save the life of every one to the last moment' (*Descent of Man*, ch. v. [p. 168 in 1871 ed.]).

Darwin thus exhibited no perception of the fact that this sense of responsibility to life, which is so characteristic of advanced civilization, is itself part of the phenomenology of a larger principle of Natural Selection. That the deepening of the social consciousness, of which this developing spiritual sense of responsibility to our fellow-creatures is one of the outward marks, is of immense significance as characteristic of the higher organic efficiency of the social type in the struggle for existence was a meaning which seemed to escape him.

Alfred Russel Wallace, in approaching the study of human society in his book *Darwinism* (1889), displayed the same inability to distinguish that it is in relation to the capital problems with which the human mind has struggled in philosophy, ethics, and religion that we have the phenomena of Natural Selection in social evolution. The qualities with which priests and philosophers are concerned, he asserted, were altogether removed from utility in the struggle for existence; and he even mistakenly used the suggestion as an argument in support of religion. Here also the fact in evidence was that the naturalist, with his mind fixed on the details of the individual struggle for existence as it takes place between plants and animals, has been altogether at a disadvantage, both by training and equipment, in attempting to deal with the laws and principles of social efficiency. Huxley reached an almost equally characteristic contradiction in the Romanes lecture delivered at Oxford in 1893, in which he attempted to make a distinction in principle and meaning between the social process and the cosmic process, the lesson of evolution, like the lesson of religion, being, of course, that they are one and the same. Sir Francis Galton, one of the last and greatest of Darwin's contemporaries, recently also exhibited this characteristic standpoint of all the early Darwinians. He put forward claims for a new science, 'Eugenics,' which he has defined as a science which would deal with all the influences that improve the inborn qualities of the race, and would develop them to the utmost advantage by 'scientific breeding.' The list of qualities which Galton proposed to breed from included health, energy, ability, manliness, and the special aptitudes required by various professions and occupations. Morals he proposed to leave out of the question altogether 'as involving too many hopeless difficulties.' Here once more we see the difficulty with which the naturalist is confronted in attempting to apply to human society the merely stud-book principles of the individual struggle for existence as it is waged among plants and animals. The entire range of the problems of morality and mind are necessarily ignored. The higher qualities of our social evolution, with all the absolutely characteristic phenomena contributing to the highest organic social efficiency, remain outside his vision.

We are as yet only at the beginning of this phase of knowledge. The present remarkable situation, here of necessity only lightly referred to, in which the biologists and the philosophers remain organized in isolated camps, each with the most restricted conception of the nature and importance of the work done by the other and of the bearing on its own conclusions, cannot be expected to continue. One of the most urgent needs of the present time is a class of minds of sufficient scope and training to be able to cover the relations of the conclusions of each of these sets of workers to those of the other and to the larger science of society. DASNĀMĪS.—See ŚAIVISM.

DĀWŪD B. 'ALĪ B. KHALAF.—Dāwūd b 'Alī b. Khalaf, called al-Ẓāhirī (with the *kunya* Abū Sulaimān), a jurist celebrated as the originator of the Ẓāhiriyya school in Muslim theology, was born in Kūfa, A.H. 200 [=A.D. 815] (or, according to other authorities, A.H. 202 [=A.D. 817]), of a family belonging to Iṣfahān. Among the many eminent teachers under whom he studied in his youthful travels were two of the leading theologians of Islām, viz. Isḥāq b. Rāhawaih († A.H. 233 [=A.D. 847]) of Nīsābūr, with whom he enjoyed personal relations of the most intimate character, and Abū Thaur (Ibrāhīm b. Khālid) of Baghdād († A.H. 240 [=A.D. 854]). Having completed his career of study, he settled in Baghdād, where he soon established a great reputation, and began to attract pupils in large numbers. His audience, in fact, commonly numbered about 400, and included even scholars of established repute. At this time Baghdād possessed another teacher of renown, Aḥmad b. Ḥanbal († A.H. 241 [=A.D. 855]), the Nestor of ultra-conservative orthodoxy, whose name is borne by the Ḥanbalitic party. Dāwūd sought to come into friendly relations with Aḥmad, but all his advances were repelled, as he lay under the suspicion of having affirmed, while at Nīsābūr, that the Qur'ān was a created work—a doctrine which Aḥmad had attacked with great vigour and at heavy personal cost. It was even said that Dāwūd had been punished for his error by Isḥāq b. Rāhawaih. Though Dāwūd met

these allegations with a distinct denial, Aḥmad still refused to receive him; nor was the strain relieved by the fact that the system promulgated by Dāwūd coincided in many respects with that of Aḥmad, and was even fitted to lend it support.

Although Dāwūd, in his travels as a student, had applied himself eagerly to the study of the *Ḥadīth*, 'prophetic tradition,' he has no outstanding reputation as an authority on that subject. In point of fact, he is said to have given currency to only one prophetic dictum of note, which came to be associated with his name through the instrumentality of his son, Abū Bakr Muḥammad, a well-known *bel esprit* of his day. The saying is as follows: 'He who loves and pines and hides (his torment), and dies thereof, is to be regarded as a martyr.' As a teacher of jurisprudence, on the other hand, Dāwūd's influence was enormous, and here he ranks as the founder of a distinct school. He allied himself with the system of the Imām, al-Shāfi'ī, for whom he manifested an extraordinary reverence, and to whose high qualities (*manāqib*) he devoted two of his books. But, while Dāwūd found his starting-point in the system of Shāfi'ī, he at length developed a new method in the deduction of sacred law—a method which, in its results, diverged from that of his master in the most pronounced way, and at the same time brought its author into collision with the universally received views of Muslim jurisprudence. According to the prevailing doctrine, the bases of juristic deduction were (1) the ordinances attested by the Qur'ān; (2) those which had the support of tradition; (3) the *consensus* (*'ijmā'*) of recognized authorities; and (4) the conclusions established by speculative reasoning from analogies (*qiyās*), and by deduction of the *ratio legis* (*'illat al-shar'*) from given ordinances. In cases where positive injunctions derived from the first three sources proved inadequate, the reflective insight (*ra'y, opinio prudentium*) involved in the fourth was regarded as valid ground for juristic reasoning. Dāwūd, however, denied the legitimacy of this last-mentioned source, *i.e.* the *ra'y*, and all that it implied, as also of all inquiry into the reasons of the Divine laws and the analogical arguments founded thereon. The only sources of juristic deduction which he recognized were the positive, or, as he calls them, the 'evident' (*ẓāhir*), *i.e.* the Qur'ān and Tradition. As for the *consensus*, he restricted it to the demonstrable 'agreement of the companions of the prophet' (*'ijmā' al ṣaḥāba*), assigning no more precise limits to the scope of this factor. In thus running counter to the procedure of the dominant schools, Dāwūd found himself in alliance with the extreme section of the party known as the *aṣḥāb al-ḥadīth* ('traditionalists')—in contrast to the *aṣḥāb al-ra'y* ('speculative jurists'),—and became the founder of the Ẓāhiriyya school, which is accordingly also called the *madhhab Dāwūd*. It is true that he brought himself to the point of conceding the admissibility of the 'obvious analogy' (*qiyās jalī*) plainly indicated by positive injunctions, but only as a last resource. As a preliminary of delivering judgment, moreover, he demanded an independent investigation of tradition, and deprecated a mechanical adherence to the established doctrine of a master or a school (*taqlīd*). 'The automatic repetition of the teachings of one who is not infallible is pernicious, and shows blindness of judgment.' 'Out upon him who, having a torch (*i.e.* tradition) wherewith he may light his own way, extinguishes his torch, and moves only by another's help.' Men should not blindly follow any human authority, but should examine the sources for themselves.

Of Dāwūd's writings, a list of which is given in the *Kitāb al-Fihrist*, nothing is now extant, but it would be possible to reconstruct his doctrines from quotations in later literature. Biographical writers are at one in extolling the piety and sincerity of his character, and his abstemious mode of life. His fame spread far beyond the confines of his domicile, and from the furthest limits of the Muhammadan world those who were perplexed with theological problems came to him for light. He died in Baghdād in A.H. 270 [=A.D. 883]. Vast as his influence was, however, his system, which, owing to its limited scope, did not adequately meet the requirements of juristic practice, failed to gain a firm footing in public life. Numerous Muslim scholars associated themselves with it, but their adherence was largely personal and theoretical, and, except in a single instance, the system never attained an authoritative position in the official administration of justice. Its solitary success in this respect was achieved in the empire of the Almohads in Spain and North-West Africa, the founders of which, repudiating all adherence (*taqlīd*) to particular schools, held that the appeal to the traditional sources was the only permissible procedure. The history of Muslim learning down to the 9th cent. A.H. contains the names of famous adherents of the Ẓāhiristic principle in many different countries. The most important, and, in a literary sense, the most eminent, of these was the valiant Andalusian, Ibn Ḥazm, 'Alī b. Aḥmad, who expounded the Ẓāhiristic method in his works, and applied it not only to the jurisprudence of Islām, but to its dogmatic theology as well.

DEÆ MATRES.—The *Deæ Matres* are divinities of uncertain character and function, whose worship is found chiefly in the Celtic and German provinces of the Roman Empire (cf. art. CELTS, vol. iii. pp. 280, 286, and *passim*). How far they are to be identified or associated with so-called 'Mother-goddesses' among other peoples is a matter of dispute and will be discussed later. But there is evidence on Celtic and Germanic territory, and to some extent outside these limits, of a fairly definite cult of goddesses called usually *Matres* or *Matronæ*, and depicted in accordance with well-established conventions. Knowledge of them is derived entirely from inscriptions and monuments, of which a large number (over four hundred inscriptions) have been preserved; apparent survivals of their worship have been detected in the beliefs and traditions of the Celts and Germans of later ages; but no certain reference to them has been found in ancient literature. There is no reason for applying to them, as is sometimes done, a passage cited from Varro in the *de Civ. Dei* of St. Augustine (vii. 3, 'Unde dicit etiam ipse Varro, quod diis quibusdam patribus et deabus matribus, sicut hominibus, ignobilitas accidisset'). Varro's reference is probably general, and certainly the context in St. Augustine does not suggest an application to the particular divinities in question.

The inscriptions discovered up to the year 1887 were published and classified by Ihm in his very important monograph on the *Matronenkultus* (cited here by this short title; for exact references, see the Literature at end of article). Additional material

was included in Ihm's art. in Roscher (*s.v.* 'Matres'), and later discoveries will be taken account of, together with the results of later discussion, in the course of this article.

The name of the divinities appears in three forms in the inscriptions: *Matres*, *Matronæ*, and **Matræ* (the last being the nominative case inferred from the datives *Matris* and *Matrabus*). A fourth form **Mairæ* is held by some scholars to be preserved in five inscriptions, but the evidence for it is in no case clear. Three of the inscriptions in question are lost, and in the other two—a stone altar at Dijon and a relief at Metz—the readings are very uncertain.[1] The form **Matræ* may be due to Celtic influence, an old Celtic nominative singular **Matar* having been latinized as **Matra* and a dative plural **Matrabus* developed from it, perhaps with the aid of Celtic datives in *b* (cf. *Matronenkultus*, p. 10). But, in view of such analogous Latin forms as *nymphabus*, *fatabus*, *filiabus*, *natabus*, etc., the Celtic explanation cannot be deemed necessary.[2] In the case of the dative plural *Matris*, the parallel formation *heredis* (=*heredibus*) has been similarly used as evidence against the theory of Celtic influence.[3] Whatever be the explanation of the Latin words in question, there is one inscription which is generally held to show a Celtic (Gaulish) form of the name. This is preserved in the Museum at Nîmes and reads, in Greek letters, Ματρεβο Ναμαυσικαβο βρατουδε. The epithet Ναμαυσικαβο is almost certainly local='to the Nemausian Mothers'; but the tr. of βρατουδε is more doubtful. If it contains the root of the Ir. *bráth*, 'judgment,' it may well mean *ex judicio*, and be equivalent to the common formula *ex imperio*.[4]

Matres and *Matronæ* appear to be synonymous, though their geographical distribution, as will be seen later, is somewhat different. They even occur as equivalents on a single inscription: 'Matribus sive Matronis Aufaniabus domesticis' (*Matronenkultus*, no. 207); and the same epithet is sometimes found in combination with both terms (cf. 'Matribus [V]acall[i]neis' [*ib.* no. 215] with 'Matronis Vacal(l)nehis' [*ib.* nos. 224, 225, 227]). But such close association of the two is exceptional, and certain distinctions have been pointed out in their use. Ihm (Roscher, p. 2466) shows that *Matres* is accompanied by epithets of greater veneration ('augustae,' 'deae'). Hild (Daremberg-Saglio, iii. 1636) tries to make out a difference in the fact that men pray oftener to *Matres*, and women to *Matronæ*; but his figures can hardly be regarded as significant. Roach-Smith (in his *Collectanea Antiqua*, vii. [1878-80] 213) argues that the *Matronæ* were concerned primarily with the feminine principle in Nature, with maternity and offspring, while the *Matres* presided over the fruits of the earth and, in general, over public and private business. None of these distinctions, however, is really established as valid. It is perhaps a significant fact, which is pointed out by Haverfield (*Arch. Æl.* xv. 320), that *Matronæ* does not occur in any land where the cult is demonstrably imported; and the name may be really the Celtic *Matrŏna*, which survives in the French *Marne* and a few other names of places, rather than the Lat. *Matrōna*. Since there is no evidence outside of inscriptions, the quantity of the *o* must be regarded as uncertain; and, if it was pronounced long, as is likely enough, this might simply mean that the familiar Latin word had been substituted for the Celtic. The substitution would have been entirely natural, and the two words would have come to be regarded as identical. The fact that *Matrŏna* appears regularly in the singular, whereas the *Matrōnæ* are named in the plural and depicted in groups, might show a divergent development of the two cults, but would not preclude a common origin. Moreover, there is some doubt, as will be shown later, whether the *Matres* or *Matrōnæ* were not sometimes conceived and represented singly. Even if the identification of *Matrōnæ* with *Matrŏna* should be accepted, it would not become any easier to make a distinction between *Matres* and *Matrōnæ*, for the Celtic (or possibly pre-Celtic) *Matrona*, like the Latin, appears to be a derivative of the simple word for 'mother.' The character of the divinities bearing the name *Matrŏna* is also quite uncertain.[1] On the whole, then, *Matres* and *Matronæ* seem to be equivalent in sense, and neither of them is probably Roman in origin. In the following discussion the two words will be used interchangeably, except where a distinction is explicitly made between them.

The dates of the monuments to the *Matres* or *Matronæ* range all the way from the time of Caligula (*Matronenkultus*, no. 35) to that of Gordianus (*ib.* no. 361). They are found chiefly in Cisalpine Gaul, Gallia Narbonensis, Gaul proper, and Lower Germany, and to a limited extent at Rome itself, in Britain, and in Spain.[2] Those at Rome and in Britain are apparently due to soldiers or tradesmen, and do not prove the local existence of the cult; and the same may be true of the few inscriptions preserved on the Spanish peninsula. The latter, however, are taken by d'Arbois de Jubainville as evidence that the Celtiberi had the worship in common with the Gauls; and the epithet 'Gallaicis' favours the supposition.[3] Still more remote provinces are brought into relation with the cult by the inscriptions, 'Matres Pannoniorum et Delmatarum,' preserved at Lyons (*Matronenkultus*, no. 394), and 'Matres Afræ Italæ Gallæ,' preserved at York (*ib.* no. 348). But no inscription to *Matres* or *Matronæ* has yet been found in either Africa or the Illyrican provinces south of the Danube, and it seems probable that the names indicate simply military service in those regions on the part of the dedicants or of their soldiers.[4] Monuments are commonest on the west bank of the Rhine and in the vicinity of Lyons; and the tribes among whom the worship chiefly flourished appear to have been the Vocontii, Arecomici, Allobroges, Sequani, Lingones, and Ubii. There are almost no traces of it in Aquitania or western Narbonensis, and few in the region east of the Rhine.[5] The geographical distribution of the names is, in general, as follows: *Matronæ* seems to be the only form in Cisalpine Gaul, though some abbreviations are doubtful, and it is the prevailing form in Germany; **Matræ* occurs chiefly near Lyons

[1] In support of **Mairæ*, see Hirschfeld, *CIL* xiii. no. 5478; against it, Ihm, *Matronenkultus*, p. 12 ff.

[2] See Haverfield, *Archæol. Æliana*, xv. [1892] 32. Sommer, *Handbuch der lateinischen Laut- u. Formenlehre*, Heidelberg, 1902, p. 360, explains such forms by the analogy of *deabus*. *Matronabus* also occurs (see *Notizie degli schiavi*, 1897, p. 6).

[3] See Siebourg, *Westdeutsche Zeitschrift*, 1888, p. 115, and *Bonner Jahrbücher*, cv. [1900] 86.

[4] See Thurneysen, *Handbuch des Alt-Irischen*, Heidelberg, 1909, p. 190, and Rhys, 'Celt. Inscr. of France and Italy,' *Proc. Brit. Acad.* ii. [1905-6] 291. It should be said that some scholars do not hold the inscription to be Celtic. D'Arbois de Jubainville (*RCel*, 1890, p. 250) explains it as Latin; and Bréal (*RA* xxxi. [1897] 104) as Italic. The latter scholar translates βρατουδε by *merito de*, comparing Oscan *brateis*.

[1] The comparison between *Matrōnæ* and *Matrŏna* is old. See, for example, Pictet in *RCel* ii. 8. On the occurrences of *Matrŏna*, see Holder, *Altcelt. Sprachschatz*, s.v. For the view that it is Ligurian, not Celtic, compare H. d'Arbois de Jubainville, *Premiers habitants de l'Europe*[2], Paris, 1889, ii. 169, and G. Dottin, *Manuel pour servir à l'étude de l'antiq. celtique*, Paris, 1906, p. 240.

[2] For a map showing their distribution, see Haverfield's art. in *Arch. Æl.* xv.

[3] See *RCel* xiv. [1893] 376; also J. Leite de Vasconcellos, *Religiões de Lusitania*, ii. [1905] 176 ff.

[4] See Ihm, *Bonner Jahrb.* xcii. [1892] 258, and *Matronenkultus*, p. 120 ff., for inscriptions to 'Campestres,' 'Triviae,' etc., in Africa and the Danube provinces.

[5] On certain evidences recently pointed out for such worship in the Palatinate, see Grünenwald, *Westdeutsche Zeitschrift*, 1906, p. 239 ff.

and in Gallia Narbonensis; and *Matres* is common in Gaul proper and in Britain.

So far as we have direct evidence, then, concerning the worship, it belongs to the Celtic and Germanic provinces of the Roman Empire, the chief points of radiation being Gaul and Lower Germany. With regard to its origin and early history there is difference of opinion. The theory that it was a general Indo-Germanic institution (set forth most fully by Becker, Kuhn's *Beiträge*, iv. [1868] 146 ff.) is rejected by most recent investigators, though the relation of this to other cults of Mother-goddesses among various peoples presents obscure problems which are not by any means to be summarily dismissed. This subject will receive further mention, but in the meantime clearness will be undoubtedly served by confining the discussion, as Ihm has wisely done, to the narrower range of forms which are evidently related. These are common to Celts and Germans, and both peoples have been held to be the original possessors of the worship. The probabilities are rather in favour of the view that the Celts first developed it and that the Germans borrowed it from them. The oldest dated monument (*Matronenkultus*, no. 35, of the age of Caligula) has been found in northern Italy, and the cult was undoubtedly native also to southern Gaul. It is unlikely that the Celtic population of either of those regions derived it from the Germans, and all that is known of the relations of Germans and Celts down to the beginning of the Christian era favours the theory that the Germans, in such matters, were the borrowers or imitators.[1] It is possible, of course, that both peoples possessed the worship equally from the beginning (cf. Siebourg, *op. cit.* p. 97; also Much, *ZDA* xxxv. 315 ff.), or that they derived it independently from older populations which preceded them in the occupation of western Europe. Attention has already been called to the uncertainty concerning the history of the names *Matres* and *Matronæ* themselves.

The Mother-goddesses, in the restricted sense in which they are now being considered, were apparently conceived in triads. Only one inscription ('Matribus tribus Campestribus,' *CIL* vii. 510, preserved in Britain) designates the number; but the goddesses are often depicted in groups of three, and no monument representing a different number is definitely associated with them by an inscription. The position and arrangement of the *Matres* vary somewhat on different monuments, the prevailing type showing three draped figures, seated beneath a canopy or arch, wearing round head-dresses like a nimbus, and holding baskets of fruit on their knee. The middle goddess is usually distinguished from the others in some fashion, either by the size and position of her figure or by a difference in head-dress. On one monument she is seated while the others stand, and on another she stands while the others sit. It is hardly to be supposed, however, that there was any distinction of rank or function among the divinities. Such variations in the type were doubtless purely artistic in purpose.[2] On a very few monuments, notably the Metz relief (*Matronenkultus*, p. 43, fig. 7), the three goddesses are represented as standing.

It is doubtful how far monuments representing groups larger or smaller than three are to be associated with the worship of the *Matres*. Five dancing women on a relief at Avigliana probably do not themselves represent the goddesses, though the monument is inscribed 'Matronis' (see *Matronenkultus*, p. 48). A group of two figures on a relief at Poitiers, holding cornucopiæ and baskets of fruit, has also been taken to represent *Matres*. But the existence of other goddesses known to have been worshipped in pairs renders the identification extremely doubtful.[1] The single figures of a goddess riding a horse, often referred to in the past as an 'equestrian Matrona,'[2] are now held to be *Epona*, a divinity of distinct character, whose worship appears, however, in the same regions as that of the *Matres*.[3] Occasionally, in fact, Epona and the Mother-goddesses are associated on the same monument.[4] It is, of course, possible that Epona was originally, as Renel (*Les Religions de la Gaule avant le christianisme*, Paris, 1906, p. 281) suggests, only a Matrona with specialized function (*mère spécialisée*).

Of dubious connexion with the *Matres*, likewise, are numerous statuettes of single figures, without names, more or less resembling the inscribed representations of the goddesses. Some of these figures carry fruit or cornucopiæ, and have the same head-dress as appears on the larger monuments; others represent women with babes—a conception in itself suitable enough to *Matres* or *Matronæ*, though not in accordance with the usual convention. Ihm rejects all such figures, insisting upon the triadic group as characteristic of the cult (*Matronenkultus*, p. 53 ff.); and the existence of statuettes of the regular triad rather counts in his favour, making it more difficult, as Siebourg has argued, to identify single figures as *Matronæ*.[5] It is even doubted whether the numerous statuettes of women with babes or fruits represent goddesses at all. They may be merely votive offerings or talismanic images; but in the case of many of them the symbolism appears to indicate local or personal divinities similar in function to the *Matres*. The most reasonable conclusion, perhaps, is to recognize the probable existence of many related forms of worship, and at the same time to restrict the names *Matres* and *Matronæ* to monuments actually so inscribed or exhibiting the customary figures of the three divinities. The geographical limits already laid down for the cult were made up on this basis, and it does not seem wise to extend them by the inclusion of doubtful monuments.[6] The term 'Mother-goddesses,' which is applied, especially by French archæologists, to a great number of these statuettes of various types, is sometimes used very

[1] Cf. *Matronenkultus*, p. 57 ff.; and C. de la Saussaye, *Relig. of the Teutons*, 1902, p. 88 ff. See also, on the early relations of Celts and Germans, d'Arbois de Jubainville, *Premiers habitants*, ii. 323 ff.; Kluge, in Paul's *Grundriss*, i.[2] [1901] 324 ff.; Bremer, *ib.* iii.[2] [1904] 787 ff.; R. Much, *Deutsche Stammeskunde*, Leipzig, 1900, p. 41 ff. Kauffmann, in *Ztschr. des Ver. für Volksk.* ii. [1892] 24 ff., disputes the adoption of Mother-worship by the Germans, except when they had practically abandoned their nationality. But there is considerable evidence on the other side. See Siebourg, *Bonner Jahrb.* cv. [1900] 95 ff.

[2] Cf. *Matronenkultus*, pp. 47–48, and Siebourg, *Bonner Jahrb.* cv. 100. For an attempt to connect the type with Gr. representations of the Mother of the Gods, see Loeschcke, *Bonner Jahrb.* xcv. [1894] 261.

[1] Cf., for example, the inscription, 'Deabus Vercanae et Medunae,' at Trèves; and see, for other references, *Matronenkultus*, p. 53 ff., and Siebourg, *Bonner Jahrb.* cv. 98 ff.

[6] On the statuettes of the types under consideration there is an extensive literature. See esp. *Matronenkultus*, p. 53; Tudot, *Figurines de l'époque gallo-romaine*, Paris, 1860; Valleotin, in *RCel* iv. [1879] 28; Monceaux, *Rev. historique* xxxv. [1887] 256 ff.; Chauvet, *Hypothèse sur une statuette antique*, Angoulême, 1901; A. Blanchet, 'Figurines en terre cuite de la Gaule romaine,' *Mém. Soc. Ant.*, 6th series, i. [1890] 65 ff., x. [1901] 189 ff.; Baillet, *Mém. de la Soc. archéol. et historique de l'Orléanais*, xxix. [1905] 399 ff.; Gassies, *Revue des études anciennes*, viii. [1906] 55 ff.; and A. J. Reinach, *Pro Alesia*, iii. [1908–9] 426 ff. For a map of Gaul showing the distribution of Mother-worship in the more inclusive sense, see Renel, *Les Religions*, p. 286.

loosely. Thus Gassies, pleading against the restriction of the Mother-worship to Gaul and Germany, cites Venus, Juno, and Deiueter as *décesses mères*; and other writers (see, for example, A. Wirth, *Danae*, Vienna and Prague, 1892, p. 95) have compared the *Matres* with the Semitic Ἀστάρται. Statuettes, moreover, of the sorts just referred to have been found in widely separate regions outside of Gaul: for example, in Greece, Italy, and Northern Africa.[1]

The difficulty, if not the impossibility, of keeping the worship of *Matres* and *Matronæ* distinct from all other cults is hardly less apparent in the case of inscribed than in that of uninscribed monuments. For the ancients themselves associated, and doubtless to some extent identified, these divinities with others. Just as in the case of several of the more important individual gods of the Celts and Germans, so with regard to the *Matres*, the modern investigator is puzzled by the uncertain meaning of the *interpretatio Romana*. Roman conquerors and romanized provincials alike were eager to identify the gods of the northern barbarians with those of the old classical pantheon, and the resulting equations are neither consistent with themselves nor easy to understand.[2] The *Matres*, in this way, are sometimes associated with the *Parcæ*, on the evidence of a few inscriptions 'Matribus Parcis.' But it is not clear that an identification of the two groups was intended by the dedicants in question. Moreover, the modes of representing the *Matres* and the *Parcæ* are quite different, and their fundamental characters appear to have been dissimilar (see below, p. 410[a], and cf. *Matronenkultus*, p. 66 ff., and Haverfield, *Arch. Æl.* xv. 326). The association of the Fates with the *Matres* is also doubtful, and finds no positive support in the inscriptions.[3] In the case of the *Nymphæ*, whom some investigators have brought into relation with the *Matres*, there is little reason for the comparison, beyond the fact that both kinds of divinities have numerous monuments inscribed with local epithets.[4] Evidence is slightly better, as Ihm has shown, for connecting the *Matres* with the goddesses of the cross-roads (*q.v.*) named on various monuments as 'Biviæ,' 'Triviæ,' and 'Quadriviæ,' though the matter is by no means certain.[5] But the divinities who may with most probability be identified with the *Matres* are those who were called 'Campestres,' 'Junones,' and 'Suleviæ.' All these names appear both independently and in combination with *Matres* or *Matronæ*, and it is hard to say whether they stand for goddesses originally distinct and later identified with the *Matres*, or whether they were originally mere epithets of the *Matres* and afterwards came to be used independently. At all events the divinities concerned were closely associated in the end with the Mother-goddesses. The *Junones*, in the sense now under consideration, should probably be distinguished from the Roman *Junones*, conceived as the geniuses of women. They are very likely only *Matronæ* worshipped under another name, and the chief seat of their cult appears to have been Cisalpine Gaul.[6] The *Campestres* have sometimes been described as goddesses of the fields, but it is more probable that they were the special protectors of the military camp, or rather that their name was the epithet applied to the *Matronæ* when conceived as exercising this function.[1] In the case of the *Suleviæ* it is more probable that we have divinities originally distinct from the *Matres*, though of closely similar character and function. Inscriptions to them are far less numerous than those to the *Matres* or *Matronæ*, but their geographical distribution is similar. The origin and meaning of the name *Suleviæ* is unknown, though it is tempting to compare the British *Dea Sul*, worshipped at Bath (*Aquæ Sulis*), and to seek an etymology in the Celtic root *sul* (O. Ir. *súil*, 'eye'). If this theory is right, the meaning of the word would be similar to that of *Tutelæ*.[2]

In the absence of all ancient literary treatment of the Mother-goddesses, the only evidences of their divine functions are those furnished by the artistic representations of the divinities, and by the epithets applied to them. The customary figures of the *Matres* have been described already. The epithets, though numerous, contribute very little new information. Many of them are simply general terms of veneration, such as 'augustæ,' 'deæ,' 'divæ,' 'sanctæ,' perhaps also 'dominæ,' though the application of this to the *Matres* is not certain.[3] 'Nemetiales' is possibly equivalent to 'sanctæ,' but seems rather to be connected with the tribal name of the *Nemetes* or with some locality (see Rhys, p. 102; *Matronenkultus*, p. 16). Other epithets denote the special protective relation of the goddesses to individual dedicants or their families; for example, 'meæ,' 'suæ,' 'paternæ,' 'maternæ,' 'domesticæ,' 'trisavæ,' 'conservatrices,' 'indulgentes.' By far the greater number contain the names of nations, tribes, or localities, such as 'Afræ Italæ Gallæ,' 'Italæ Gallæ Germanæ Britannæ,' 'Omnium gentium,' 'Noricæ,' 'Treveræ,' Ναμαυσικαβο, and the numerous non-Latin or half-latinized names which, though largely unexplained, are held to belong chiefly to this class. A few of the latter have been brought into relation with definite place-names like 'Julineihiæ,' 'Albiahenæ,' 'Nersihenæ,' 'Mahlinehæ,' connected respectively with Jülich, Elvenich, Neersen, and Mechelin; but the great majority seem to go back to pre-Roman names, since displaced and lost.[4] The names *Aflims*, *Saitchamims*, and *Vatuims*—over against the latinized forms *Afliabus*, *Saithamiabus*, and *Vatuiabus*—which are of special interest as exhibiting very archaic forms of the Germanic dative plural ending, are also presumably of local significance.[5] The only native epithet which seems to have reference to function is 'Gabiæ,' with its compounds 'Ollogabiæ' (on two inscriptions at Mainz), and 'Alagabiæ' (on an inscription at Bürgel). Even this is not beyond dispute, and its meaning is not particularly individualizing at best. It is usually translated the 'Givers,' the 'All-Givers' (cf *Pandora*)—a name which is quite consistent with the representations of the goddesses. The etymology is easy in Germanic (cf. *geben*, 'give,' etc.), where

[4] See *Matronenkultus*, p. 93 ff. The old comparison has been recently repeated by J. Leite de Vasconcellos, *Religiões de Lusitania*, ii. 193.

[5] With *Matronenkultus*, p. 87 ff., cf. Ihm's later remarks in the *Bonner Jahrb.* xciv. [1893] 165, and Haverfield in the *Arch. Æl.* xv. 326.

[6] See particularly Ihm's art. 'Junones II.' in Roscher. The *Proxumæ*, sometimes identified with the *Matres*, seem to correspond rather to the regular Roman *Junones* (cf. *Matronenkultus*, p. 97).

[1] See Siebourg, *de Sulevis Campestribus Fatis*, Bonn, 1886; Ihm, *Matronenkultus*, p. 76 ff.; and Roscher, *s.v.* 'Matres,' p. 2475.

[2] See Siebourg, *de Sulevis*, etc., and *Bonner Jahrb.* cv. [1900] 89 ff.; and Ihm, *Matronenkultus*, p. 78 ff.

[3] See *Matronenkultus*, p. 98, and Rhys, *Celtic Heathendom*, 1892, p. 102 ff., the latter comparing the Gaulish *Comedovæ*.

[4] On this class of epithets, see particularly von Grienberger, in *Eranos Vindobonensis*, Vienna, 1893, p. 253 ff., and Siebourg, *Bonner Jahrb.* cv. 79 ff. A wholly different theory, connecting epithets in *-nehæ* with *Néhe*, the name of a hot spring at Dax, and explaining them as Iberian or Ligurian, was proposed by C. Jullian, *Revue des études anc.* iii. [1901] 212. See also his *Hist. de Gaule*, ii. 131.

[5] See Kauffmann, *op. cit.* ii. 44, and Siebourg, *Bonner Jahrb* cv. 94–95.

several other divine names are perhaps to be derived from the same root; but in the Celtic languages, in which the root *gab* usually means 'take,' rather than 'give,' the explanation is more difficult. It is possible, therefore, that the epithet is Germanic in origin, and that the form 'Ollogabiæ,' in which the prefix has a Celtic appearance, is simply a case of the Celtic adoption of the Germanic 'Alagabiæ.'[1] The interpretation proposed for *Gabiæ* is supported by several divine names in Lithuanian ('Matergabia,' 'Polengabia') which have similar form and meaning.[2]

With regard to the nature and function of the goddesses, various theories have been held. According to older views, now generally abandoned, they were deified druidesses of the ancient Celts, or prophetesses of the Germans, or symbols of the three Gauls or of the three seasons.[3] The occasional association of the *Matres* with the *Parcæ* has led to their interpretation as divinities of destiny; but the evidence for this has already (p. 409[a]) been shown to be slight. And the representations of the goddesses, together with the few epithets that seem to bear on the question ('Indulgentes,' 'Gabiæ,' etc.), indicate that they were primarily friendly local divinities of wealth and fruitfulness. As such, their functions would resemble those of Fortuna or Pomona rather than those of the Fates, though the two conceptions would be naturally associated, and occasional equations between *Matres* and *Parcæ* might be expected to appear. Ihm, in defining them as 'gütige Schicksalsgöttinnen,' combines the two characters, and his definition may be allowed to stand, if it is understood not to imply too large an element of Fate or too close an approximation to the classical conception of the *Parcæ*. At the same time, the sphere of the goddesses should not, on the evidence of the reliefs, be too narrowly restricted to the care of lands and flocks. The conventional representation of them, which was doubtless of classical origin, may have been purely artistic in purpose and in no sense a complete expression of the cult. Even the number three, which is also characteristic of monuments of *Proxumæ*, *Parcæ*, and *Nymphæ*, may be a formal device for representing the plural and have no literal significance. Certainly the distribution of the worship, the occasional association of the *Matres* with *Mars*, and such epithets as 'campestres' and 'victrices,' all connecting the goddesses with the military camp, suggest a considerable extension of their powers in one direction; and various dedications by women imply their influence over still other phases of life. Their functions were doubtless vaguely conceived by their worshippers, and ought not to be narrowly defined. As the tutelary geniuses of tribes or localities, they presided over all the interests of the people, and gave success to all kinds of undertakings. They belong, in short, to a stage of religion in which 'departmental' deities were scarcely conceived, and their cult doubtless survived, with slight alteration, even after the development of gods with specialized functions.[4]

Although the cult of the *Matres* was wide-spread and in a sense influential, as is shown by the numerous monuments and also by occasional temples of the goddesses, yet in the Roman period, from which our evidence comes, it does not appear to have belonged to the higher social classes. All the dedicants, so far as can be determined, are persons of low rank, except perhaps the *tribunus militum* of a single inscription (*Matronenkultus*, no. 394), and it is possible that he is offering on behalf of his soldiers. The fact, too, that the worship is not mentioned in literature is further evidence that it belonged mainly to the humbler people.[1]

So popular a worship can hardly have failed to leave traces of itself in later ages in the regions where it flourished, and apparent survivals of the ancient cult have been detected in the beliefs of both Celts and Germans in mediæval and modern times. There can be little doubt that the fairies of western European folk-lore, particularly in the Celtic countries, correspond in part to the *Matres*. It is hard to speak precisely of the history of the lower mythology, which is far from precise in its own distinctions; and one cannot expect to keep by themselves the descendants of a single group of minor divinities. The modern fairies undoubtedly derive some of their characteristics from the ancient Fates, as their name itself implies. But the *Matres* also, in their character of divinities of wealth and good fortune, have much in common with the benignant fairy; they were associated in antiquity, as has been seen, with the *Parcæ*; and they must be allowed to share with the goddesses of destiny in the later development of fairy mythology.[2] The identification of *Matres* and fairies, moreover, is occasionally supported by definite evidence, such as the existence of an ancient inscribed monument in the neighbourhood of a fairy mound or dwelling.[3] Possibly, too, one of the modern Welsh names of the fairies, *Y Mamau* ('The Mothers'), may point back to the old relation.[4]

In some peculiar instances the worship of the Mother-goddesses appears to have survived in a quasi-Christian form. The representations of the *Matres* at Metz are said to have been venerated until the 18th century as the 'three Marys' (*Matronenkultus*, no. 385, p. 162, also p. 74 ff.). Similarly, at Thumb, near Nideggen, the worship of three maidens representing Faith, Hope, and Charity has been brought into connexion with traces of the Mother-worship; and the same explanation has been proposed to account for the 'Drei Merjen,' Bellmarie, Schwellmarie, and Krieschmarie, who are worshipped at Dürboslar, near Jülich, as protectors of infants.[5] It is possible that the images of the *Matres* may have started such cults even after the actual worship of the goddesses had been entirely forgotten. Thus various local dedications to the Madonna are probably due to the discovery of old statues which were conceived by the worshippers as being in some sense miraculous images; but these statues, in so far as they represent single figures, have been seen to be of doubtful connexion with the cult of the *Matres* in the restricted sense of the present discussion.[6]

One conspicuous modern literary reference to

[1] Cf. Kern, *Verslagen en Mededeelingen der K. Akademie van Wetenschappen*, Amsterdam, 1872, ii. 304 ff.; Ihm, *Matronenkultus*, p. 48; Siebourg, *Bonner Jahrb.* cv. 98; and Much, *Festgabe für R. Heinzel*, p. 262. The possibility of Celtic *Gabiæ* in the sense of 'Givers,' is by no means to be denied. See Stokes, *Urkeltischer Sprachschatz*, *s.v.* 'Gab,' in Fick's *Vergleichendes Wörterbuch der indogerm. Sprachen*, 1894, ii. 105.

[3] On an instance at St. Romain-en-Gal, see Vallentin, *RCel* iv. [1879] 33.

[4] Cf. Rhys, *Celtic Folklore*, 1901, p. 174.

[5] See A. Schoop, *Bonner Jahrb.* cx. [1903] 364.

[6] See Rhys, *Celtic Heathendom*, 102, and Baillet, *Mém. de la Soc. archéol. et hist. de l'Orléanais*, xxix. [1905] 403.

Mother-goddesses, the familiar passage on 'Die Mütter' in the second part of Goethe's *Faust*, has been sometimes associated with the Celtic and Germanic divinities in question. But Eckermann (*Gespräche mit Goethe*, Jan. 10, 1830) testifies that Goethe himself acknowledged no source except a passage in Plutarch which said that the ancient Greeks spoke of 'Mothers' as divinities. The reference seems to be to Plutarch's *Marcellus*, cap. 20, where the Sicilian Μητέρες, worshipped at Engyion, are mentioned. Very little is known of their cult or nature, and that little does not indicate any close resemblance between them and the *Matres* of the Celts and Germans.[1]

LITERATURE.—The most important treatise on the subject is Max Ihm's 'Der Mütter- oder Matronenkultus und seine Denkmäler' (*Bonner Jahrbücher*, lxxxiii. [1887] 1-200). An earlier work by J. de Wal, *De Moeder Goddinnen*, Leyden, 1846, is superseded by Ihm's investigations. The principal contributions since the *Matronenkultus* are: Ihm, art. 'Matres,' in Roscher, ii. 2, p. 2464 ff.; J. A. Hild, art. 'Matres,' in Daremberg-Saglio, iii. 1635 ff.; F. Haverfield, in *Archæol. Æliana*, xv. [1892] 314 ff.; R. Much, in *ZDA* xxiii. [1891] 315 ff.; F. Kauffmann, in *Ztschr. des Ver. für Volkskunde*, ii. (1892) 24 ff.; Th. von Grienberger, in *Eranos Vindobonensis*, 1893, p. 253 ff.; M. Siebourg, in *Bonner Jahrbücher*, cv. (1900) 78 ff.; H. Lehner, *ib.* cxix. [1891] 301 ff. Valuable collections of references are given in Holder's *Altcelt. Sprachschatz*, Leipzig, 1896, under 'Matres,' 'Matræ,' 'Matronæ,' and under the various epithets; and many illustrations of the monuments are to be found in the *Recueil général des bas-reliefs de la Gaule romaine*, in process of publication by E. Espérandieu (Paris, 1907 ff.). For references on statuettes, see p. 408b above. F. N. ROBINSON.

Literature.

I. Introductory.—The horror of death is universal among mankind. It depends not so much on the pain that often accompanies dissolution as upon the mystery of it and the results to the subject and to the survivors—the cessation of the old familiar relations between them, and the decomposition of the body. This horror has given rise to an obstinate disbelief in the necessity of death, and to attempts, continually repeated in spite of invariably disastrous experience of failure, to escape it. Even the most natural and inevitable decease is persistently ascribed to causes not beyond human control; and, on the other hand, legends of the origin of death are familiar and wide-spread. The picture thus presented of the desperate refusal of mankind to accept a cardinal condition of existence is one of the most pathetic in the history of the race.

II. Origin of death.—The best-known type of the story of the origin of death is that contained in Gn 3. There it is represented as the result of disobedience to the Divine command to abstain from the fruit of a certain tree. Disobedience is not a very uncommon cause of death in stories elsewhere.

[1] Cf. *Matronenkultus*, p. 58 ff.

Among various tribes of New South Wales it is said that the people were meant to live for ever. But they were forbidden to approach a certain hollow tree. The wild bees made a nest in the tree, and the women coveted the honey. In spite of warnings by the men, a woman attacked the tree with her tomahawk, and out flew a huge bat. The bat was Death, which was henceforth free to roam the world and claim all that it could touch with its wings (K. Langloh Parker, *The Euahlayi Tribe*, London, 1905, p. 98; R. Brough Smyth, *The Aborigines of Victoria*, London, 1878, i. 428). The story told by the Baganda of Central Africa is to the effect that Kintu, the first man, after undergoing various tests well known in folk-tales, is allowed to marry Nambi, one of the daughters of Mugulu (Heaven, or the Above). Her father sends them down to the earth with gifts, which include a hen, telling them to hurry lest they meet with Nambi's brother Warumbe (Death), at the moment absent, and forbidding them to return to fetch anything that they may have forgotten. On the way Nambi remembers that it is time to feed the hen, and consents to Kintu's immediate return for the millet she has forgotten. Mugulu is angry at the disobedience, and the result is that Warumbe claims to go with Kintu. It is vain to object. Warumbe accordingly goes and dwells with Kintu and Nambi on the earth. Nambi gives birth to three children. Warumbe asks for one, but Kintu puts him off. In course of time many more children are born; but, when Warumbe repeats his request, Kintu again temporizes. Out of patience, he threatens to carry them all off; and the children begin to die. On appeal to Mugulu, another of his sons, Kaikuzi (the Digger), is sent to bring back Warumbe. Warumbe, however, sinks into the earth. General silence is proclaimed, and Kaikuzi goes into the earth to pursue him. He forces Warumbe out; but there are some children feeding goats at the place, and on seeing him they cry out. The cries break the spell; Warumbe returns into the ground, and by Mugulu's command he is allowed to stay (Johnston, *Uganda Prot.*, Lond. 1902, ii. 700). According to the Masai of the Uganda Protectorate, a superior being or demiurge directed a Masai, when a child died, to throw away the body, uttering a spell: 'Mao, die and come back again; moon, die, and remain away.' But, when a child that was not his died, the Masai disobeyed and reversed the spell. Afterwards, when he tried the spell on one of his own children, he found it had lost its effect; and now, when the moon dies, it comes back, but man does not return (Hollis, *Masai*, Oxford, 1905, p. 271).

In the legends of some peoples, death is the result of a god's curse unconnected with an act of disobedience.

The Bataks of Palawan in the Philippine Islands relate that their god used to raise the dead to life again. But they deceived him once with a shark wrapped up like a corpse. When he discovered the trick, he cursed them to remain for ever subject to suffering and death (*Ethnol. Survey, Phil. Islands*, ii. [1905] 188). More poetical is the Japanese tale of Prince Ninighi, who fell in love with Princess Flourishing-like-the-Flowers. Her father, the god of the Great Mountain, consented to her marriage, and sent with her her elder sister, Long-as-the-Rocks. This

lady, however, was frightfully ugly, and the bridegroom sent her back. Thereupon the god cursed his son-in-law, declaring that his posterity should be frail as the flowers (*RHR* liv. [1906] 169). A Haida story accounts for death by the fact that men were formed of grass and salmon-berry bushes. But the Haida have another legend, according to which men were made by the Raven, who decreed that they should never die. The decision was changed at the instance of the Wren, that he might have a place of resort under their grave-scaffolds (*Jesup Exped.* v. [1905] 210, 238). Among the Quinault Indians of British Columbia, where Eagle and Raven are the joint authors of things as they now are, Eagle proposes that when men die they shall come to life again. Raven, however, opposes this, and has his way. He regrets it when his own daughter dies and cannot be revived, but it is then too late (*op. cit.* ii. 111).

The enmity or the slackness of one of the lower animals is regarded by many people as the cause of death.

A story very wide-spread in Africa among Negroes, Bantu, and Hottentots alike, is found in two forms. The Hottentot version is that the hare was charged by the moon with the message to men: 'Like as I die and rise to life again, so you also shall die and rise to life again.' But the hare conveyed the message thus: 'Like as I die and do not rise to life again, so you also shall die and not rise to life again.' The angry moon split the hare's lip with a blow; but the mischief was done and was irremediable. Hence the hare is a tabued animal to the Hottentots. Among the Bantu the chameleon is made the messenger. But he is a slow creature, and after his departure the Superior Being changed his mind and dispatched the lizard with the message of death. The lizard overtook the chameleon and arrived first. When afterwards the chameleon delivered his message, it was too late: the irrevocable decree had been conveyed (Bleek, *Reynard the Fox*, Lond. 1864, pp. 71, 74). In Calabar a dog and a sheep are the rival delegates; and it is through the fault of the dog that we die (*Journ. Afr. Soc.* v. [1906] 194). The ill-will of the antelope is alleged by a tribe on the Ivory Coast as the reason for death. A man was sent to the great fetish of Cavalla for a charm against death. He was given a stone to block the path by which it came. But the antelope, offering to assist, maliciously sang a spell which rooted the stone to the spot (*Journ. Afr. Soc.* vi. [1907] 77).

The Melanesians of New Pomerania tell the story of the message wrongly transmitted. The Wise Spirit ordained that snakes should die, but men should slough their skins and live for ever. His brother, the Churl, reversed the decree (*ARW* x. [1907] 308). In the Shortland Islands the people (also Melanesians) relate that the great foremother of the race sloughed her skin at intervals and remained eternally young. The catastrophe of her death occurred because she was once disturbed in the operation by the screaming of her child, who was unluckily allowed to witness it. This was the way death came into the world (*FL* xvi. [1905] 115). A similar story is told by the Baluba, on the borders of the Congo State; but there the operation is interrupted by the woman's fellow-wife (*Globus*, lxxxvii. [1905] 193). According to the Hupa of California, people used to renew their youth, when they grew old, by sleeping in the sweat-house. But this happy condition came to an end, we learn from a ceremonial formula, because a certain mythological personage was unfaithful to his two wives, who in revenge took the two children they had borne him and buried them alive. When the children came up again they put them back, declaring that thenceforward every one should do that way (Goddard, *Hupa Texts*, Univ. California Pub. i. [1903–4] 75, 366). The Eskimo of Greenland relate that the first woman brought death by saying: 'Let these die to make room for their posterity' (Crantz, *Greenland*, Lond. 1820, i. 204).

In these stories, death is the result of curse or spell. Another Eskimo tale accounts for it as the issue of a dispute between two men, one of whom desires men to be immortal, the other to be mortal: their words are probably also spells (Rink, *Tales*, Edin. 1875, p. 41, citing Egede). A tale widely known in North America relates that, when the first death occurred, an attempt was made to bring the soul back from the land of the dead. But some prohibition was broken, the returned soul was greeted too soon, and it vanished: wherefore there is no return for mankind from the spirit-land (the Cherokee stories [*19 RBEW*, 1900, pp. 252, 436] may be taken as typical).

Similar to the Eskimo stories just cited are some Australian stories. The Kaitish and Unmatjera say that formerly, when men were buried, they came to life again in three days; and the Kaitish declare that permanent death is due to an old man who was displeased with this arrangement and wanted men to die once for all. He secured this effect by kicking into the sea the body of one who had just died and been temporarily buried (Spencer-Gillen[b], 513). So also the Wotjobaluk story runs that, when people died, the moon used to say, 'You up-again'; but an old man said, 'Let them remain dead,' and since then none has ever come to life again except the moon (Howitt, 429).

The phases of the moon naturally suggest death and restoration to life. It is, therefore, not wonderful to find that among the Australians, as among the Hottentots, the moon plays a considerable part in the legends. We have space to mention only one more.

The Arunta relate that, before there was any moon in the sky, a man died and was buried. Shortly afterwards he rose from the grave in the form of a boy. When the people ran away for fear, he followed them, shouting that if they fled they would die altogether, while he would die but rise again in the sky. He failed to induce them to return. When he died, he re-appeared as the moon, periodically dying and coming to life again; but the people who ran away died altogether (Spencer-Gillen[a], 564). The Chams of Further India see a female figure in the moon. She was a goddess who raised all the dead to life, until the great sky-god, tired of this interference with the eternal laws, transported her to the moon (Cahaton, *Nouvelles Recherches sur les Chams*, Paris, 1901, p. 19). Many other nations connect the moon with death.

Once more. The Todas of the Nilgiri Hills say that at first no Todas died. After a time a man died, and the people, weeping bitterly, were taking the body to the funeral place when the goddess Teikirzi took pity on them and came to bring him back to life. But she found that, though some of the people wept, others seemed quite happy. She therefore changed her mind, and, instead of raising the dead man, ordained the funeral ceremonies (Rivers, *Todas*, Lond. 1906, p. 400). When in the Scandinavian mythology Baldur was slain, the goddess Hel promised to release him if all things wept for his death. This too, though not in its present form an ætiological story, possibly arose to account for the permanence of death.

The foregoing are but specimens of the sagas told in the lower culture concerning the origin of death. They exhibit the universal incredulity of mankind as to its naturalness and necessity.

III. **Death believed to be unnatural.**—1. *The escape of the soul.*—In practice, among the races of the lower culture, death, if not caused by violence, is generally ascribed to the action of supernatural beings, as gods or spirits, or to witchcraft. In a few cases, as among the Wadjagga of Central Africa, the weakness of old age may be reckoned among its causes (*Globus*, lxxxix. [1906] 198). Sometimes sickness and death are ascribed to the escape of the soul from the body. Thus, among the Hareskins of Canada, sickness is believed to be due to this cause, and it is the task of the medicine-men to capture the errant soul and oblige Ettsuñe, a supernatural being who is perhaps a personification of death, to enter the patient for the purpose of replacing it (Petitot, *Trad. ind.*, Paris, 1886, p. 278, cf. p. 434). The details of the belief in the soul, its escape and restoration, cannot here be discussed. It will be sufficient to say that from Siberia to Australia, from Puget Sound to the islands of the Eastern Archipelago, means are taken to prevent the soul from wandering, and to bring it back if from any cause it departs; for the permanent loss of the soul means nothing less than death.

Some peoples have developed the theory that the soul is not single but multiple, and that some, or one only, of these souls reside in or about the body.

Thus, according to the Balong of the Cameroon, one soul is housed in the body of the man himself, a second may be embodied in an elephant, a third in a wild hog, a fourth in a

leopard, and so on. This seems to multiply a man's chances of personal misfortune. For every mishap suffered by one of the secondary souls—more strictly of the body in which it is immured—reacts on the person concerned, and is able to draw after it disease and death. If, for example, any one comes home from hunting, or from the field in the evening, and says: 'I shall soon die,' and if death really occurs, it is clear that one of his 'outside souls' has been killed by a hunter through the slaughter of a wild hog or a leopard or some other animal in which the soul was incarnate, and that the man's death is the natural consequence (*Globus*, lxix. [1896] 277).

2. *The act of a supernatural being.*—The act of a god or of the spirits of the dead is also a cause of death known widely in the lower culture. Death by lightning is an obvious instance of the former. But it is by no means the only one. Death by accident is due either to a supernatural being or to witchcraft.

On the island of Keisar, one of the Moluccas, sickness is sometimes ascribed to the malignant spirit Limsirwali, or to the god who dwells in the sky or the sun (the latter from anger at neglect of some old custom), or to the spirits of the dead who have not been duly honoured (Riedel, *De sluik- en kroesharige rassen*, Hague, 1886, p. 419). The aborigines of Kola and Kobroor (also in the Moluccas) hold that the *nitu*, or spirits of ancestors, kill the living to feed on their souls (*ib.* p. 271). The Navahos attribute a death to the direct action of Chinde, described as the devil—probably a malignant spirit (*1 RBEW* [1881] 123). Among the causes assigned by various tribes of Negroes for a death, the act of a fetish and that of a deceased relative are enumerated (Clozel and Villamur, *Coutumes indigènes de la Côte d'Ivoire*, Paris, 1902, p. 363; Spieth, *Ewe-Stämme*, Berlin, 1906, p. 255). The Andamanese attribute 'almost all deaths, sickness, and calamities' to the machination of spirits; and all sudden deaths are ascribed to the malign influence of the evil spirit of the woods, or to that of the evil spirit of the sea (*JAI* xi. [1882] 288, 289). In the north-west of Australia every illness is ascribed to the *djuno*, an evil spirit otherwise known as *warruga* or *warrunga* (*Internat. Archiv*, xvi. [1904] 8).

3. *Witchcraft.*—But by far the most usual cause assigned for a death is witchcraft—the malicious act of some open or secret foe, performed not by the obvious means of violence, but by the subtle and mystical arts of magic. This does not exclude the action of angry or envious spirits, for they are frequently held to inspire the evil-doer; or his ill intentions may be accomplished by their aid. The Mission Indians of California, indeed, in their legend of the origin of death, attribute the first death in the world to witchcraft. No one had died before; but, with the success of the first practitioners of witchcraft, death came into the world (*JAFL* xix. [1906] 55). Witchcraft, in fact, is the ordinary reason given by savage and barbarous peoples for a death. On such an occasion, one of the foremost duties of the survivors is to discover the exact cause of death, and to ascertain and punish the author of the mischief. For this purpose the ancient Gauls used to put widows to the question like slaves; if detected, the unfortunate wretches were executed with fire and all sorts of torture (Cæsar, *de Bell. Gall.* vi. 19). Peoples as far apart as the Balong already mentioned and the Koryaks of Siberia make a *post-mortem* examination. In the Wimmera district of Victoria (Australia) the clever old men and relatives of the deceased watch the corpse through the night. They see the wraith of the slayer approaching with stealthy steps to view the result of its machinations. Having apparently satisfied itself, it disappears in the direction of the hunting grounds of its own people, and the relatives of the deceased know what tribe to retaliate on. In New South Wales the Tharumba repeatedly rub the body with a mixture of burnt bark and grease. Some of the old men scrape a portion of it off when dry, and throw a few pinches of it on the embers of a fire kindled for the purpose. By the way the smoke rises they judge the direction of the murderer's camp. A party is sent out to avenge the death. After identifying the murderer by a repetition of the process, this is accomplished, not by violence, but by incantations and by terrifying the victim, so that he really believes he must die (Mathews, *Ethnol. Notes*, 1905, pp. 145, 72). Among the Warramunga the divination is accomplished differently. A little mound of earth is raised on the exact spot where a man has died. A ceremonial visit is paid to it within a day or two after the occurrence, and a search is made for tracks of any living creature. According to the tracks found, conclusions are drawn as to the totem of the guilty person. The Warramunga commit the body not to the earth but to a tree. Similar ceremonial visits are paid to the tree for the discovery of some indication of the person who has caused the death. If unable to identify the person or his tribe, the relatives may at least find a beetle of a kind supposed to resemble a man, and by killing it may ensure the death of the enemy, whoever he may be. When everything else fails, they pay a further visit and thrust a fire-stick into the body, with certain ceremonies. Then, returning hurriedly to the camp, they sit down quietly for two days, abstaining from all food and drink. After this period has passed, each of the persons who has taken part in the rite imbibes a mouthful of water and spits it out secretly in various directions. This is regarded as sufficient to cause retribution to fall on the author of the crime, and they expect to hear his death-cry (Spencer-Gillen[b], 526 ff.).

Sometimes the dead man takes a more active part in the indication of the cause of death. This is common among the Negroes. Various branches of the Ewhe-stock go to the house of the *trō* (fetish, god) and there inquire through the priest, who answers, speaking from an inner room, in an assumed voice believed to be that of the ghost (Spieth, *Ewe-Stämme*, 258, 260, 286, 492, 636, 752). So in Europe it has been believed, up to quite recent times, that the ghost of a murdered man (though not through the medium of priest or religious rites) will communicate the fact of his murder and call for vengeance on the slayer.

Other Negroes draw the information from the corpse. The Agni of Indénié cause it to be carried through the village on the heads of two men, who are made by the priest to run and turn round in all directions, until by some movement or arrest of the bearers it points out the guilty person. The ceremony practised by the Ngoulango is not so laborious. Three stakes are fixed in the earth, one representing the fetish (god), another a deceased relative, and the third a living inhabitant of the village, presumably suspected beforehand. If the corpse touch the stake representing the fetish or the deceased relative, a sacrifice of a few fowls is offered, and there is an end of the matter. If, on the other hand, the suspected man be indicated, he is immediately seized and put to an ordeal; or, in case of avowal, he is led away into the bush to execution (Clozel and Villamur, *op. cit.* 157, 362).

In Africa the ordeal is usually by means of some sort of poison, and frequently, in the case of chiefs and important persons, all the relations are compelled to undergo the test. Among the Wadjagga, a Bantu people on the Eastern side of the continent, however, it takes the form of an oath upon the ashes of the fire at which the funeral feast is cooked (*Globus*, lxxxix. 198). Ordeals, it need hardly be said, were for ages applied to persons in Europe accused of causing death and other evils by means of witchcraft. A common method was that of the ordeal by water, reported, so early as the 3rd cent. B.C., by Phylarchus, of the Thebi or Thibii, a tribe occupying the country about Trebizond (see ORDEALS, WITCHCRAFT).

Elsewhere it is deemed enough to convey to a 'wise man' some relics of the deceased.

Among the Siusi of the north-west of Brazil on the occasion of a death not long ago, some articles of clothing, together with the alleged 'poison' conjured by the witch-doctor out of the body of the patient, were sent after his death to a distant tribe, which included practitioners of renown. They inquired into the matter, performed their conjurations over the relics, calling the murderer, and solemnly burnt the 'poison.' It was believed, according to a well-known principle of witchcraft, that at the instant the 'poison' fell into ashes the enemy, whoever he was, died (*Globus*, xc. [1906] 328).

In general, throughout South America, it would

seem that it is the duty of the medicine-man to put himself into communication with the spirit-world and discover the culprit, who, at all events among some tribes, is thereupon put to death, and burnt with all his family and goods. If this were omitted the deceased would himself avenge his death on his relatives (*Internat. Archiv*, xiii. [1900], Suppl. 70; *Anthropos*, i. [1906] 880).

In old Tahiti, people were held to be killed by the gods (*atua*), either of their own motion or because they had been bribed by an enemy. It was the business of the priest to ascertain to which of these alternatives the death was to be attributed. He took a canoe and paddled slowly near the house in which the corpse lay, watching for the flight of the soul, which it was believed he could see. From the shape assumed by the soul in departing he judged of the cause of death (Ellis, *Polyn. Res.*, Lond. 1832, i. 398).

IV. Abandonment and premature burial.—1. *Abandonment of the dying.*—Among many savage peoples it is customary to abandon the dying to their fate.

The Yerkla-mining of Australia, when death approaches, leave the dying person alone, as comfortably as possible, near a fire, and quit the neighbourhood, not returning for a considerable time (Howitt, 450). The Baumanas of the French Sudan with loud cries abandon a dying man, for fear that he may drag one of them into the grave with him (Steinmetz, *Rechtsverhältnisse*, Berlin, 1903, p. 161). The fear lest the eyes of the dying man will fasten on them, and his ghost then molest and even kill them, causes similar conduct among some of the Ho in German Togo (Spieth, 632). The Selung of the Mergui Archipelago, off the coast of Burma, take the patient across to a desert island, and there leave him (*L'Anthropologie*, xv. [1904] 434). The Dorachos of Central America led a dying person to the woods, and left him, with some cake or ears of corn and a gourd of water, to his fate (*I RBEW* 115).

2. *Burial before death.*—As an alternative to leaving the sick or the aged to die, they may be buried while still living.

The Indians of the Paraguayan Chaco, oppressed by the feeling of helplessness and by superstition, when hope of recovery is gone, neglect the patient and deny him food; and, lest he should die in the village during the night, he is removed to a distance, and there left to die in solitude, or death is hastened by premature burial (Grubb, *Among the Indians of the Par. Chaco*, 1904, pp. 41, 45). The tribes of Navitilevu, Fiji, place the dying man in the grave, with food and water. As long as he can make use of them, the grave remains open; when he ceases to do so, the earth is filled in and the grave closed (*JAI* x. [1881] 144). In the Gazelle Peninsula of New Pomerania, one who is too long in dying is wrapped in pandanus leaves and carried out to the dead-house (*ARW* x. [1907] 309). Among the Northern Maidu, persons who were long sick were securely tied up, in a squatting position, in a bear-skin, with small objects of personal use (the usual way of preparing a body for the grave), and buried before death (*Bull. Am. Mus. Nat. Hist.* xvii. [1905] 245). The Hottentots used either to bury old and superannuated persons alive, or to carry them away to a cleft in the mountains, and leave them with provisions for a few days, to be starved to death or devoured by some wild beast (Thunberg, *Travels*, Lond. 1795–6, ii. 194). So the various Bantu tribes of South Africa either abandoned the dying or buried them before death (Campbell, *Trav.*, Lond. 1815, pp. 428, 515; Kidd, *Essential Kafir*, Lond. 1904, p. 247).

Practices like these may have had more than one origin. Economic causes doubtless played their part. The care of the living was more imperious than that of the dying; and, where conflict arose between these two duties (as it often must in savagery), customs would grow up out of sad necessity, which would be continued when the necessity had ceased. Such causes would be aided by the beliefs current in the lower stages of culture. In West Africa it is not uncommon that a protracted sickness wearies the attendants.

'They decide that the body, though mumbling inarticulate words and aimlessly fingering with its arms, is no longer occupied by its personal soul; *that* has emerged. "He is dead"; and they proceed to bury him alive. Yet they deny that they have done so. They insist that *he* was not alive; only his body was "moving"' (Nassau, *Fetichism in W. Africa*, Lond. 1904, p. 54).

More potent, perhaps, is the universal dread of death and horror of a corpse. This horror is very lively in the Yakuts. Among them old people burdened with years or disease often begged their children to put an end to their life. The funeral feast was held for three days; neighbours and friends were invited to it, and the dying person received the place of honour and the choicest morsels. Then he was led out into the forest, thrust into a grave dug beforehand, and buried alive, with his arms, utensils, provisions, and horses (*RHR* xlvi. [1902] 212).

3. *Removal from house or bed.*—Where it is not customary to go to the length of burial alive, horror of the corpse leads very generally to the removal of the dying from among the living.

It is a common practice, *e.g.*, of the North American tribes to carry a dying person out of the house or camp (*1 RBEW* 123, 154, 157, 201; *17 RBEW* [1898] 487). The Sinhalese frequently take a person dangerously ill from the house and place him in an adjoining temporary building, in order that, if he dies, the house may escape pollution (Davy, *Ceylon*, Lond. 1821, p. 289). The Kamtchadals are reported to have had the custom of abandoning the cabin where death had taken place, because they believed that the judge of the subterranean world paid a visit to it, and caused all whom he found there to die. But, as the construction of a new cabin gave much trouble to people who had neither axes nor mattocks, they took care to transport the sick out of their cabins, for fear that death would surprise them there when it was too late (Georgi, *Description de . . . Russie*, St. Petersburg, 1777, iii. 91). In the island of Luzon, among the Serranos, when a sick person does not show signs of recovery, a family council is held and a fixed sum voted for his cure. When this is spent, the patient is removed from his bed and laid upon a hide on the ground outside the house. A child is posted to fan him and keep off the flies, and only water is given him until he dies (Sawyer, *Inhab. of the Philippines*, Lond. 1900, p. 277). Among the Basuto, when death is seen to be at hand, the patient is taken out of the hut to a screen, because it is said the *manes* (*melimo*) obtain easier access to the latter than to the interior of the hut. In fact, a hole is cut in the screen to enable them to enter, as they cannot do so through the doorway of mortals. There the patient dies, often not without the active assistance of the two old women who are set to watch him (*FL* xv. [1904] 255).

The motive of the procedure in all these cases would seem to be the same—the horror of the corpse and the fear of pollution of the dwelling by its presence. A description is given in the Report of the Palestine Exploration Fund for 1902 of a Samaritan assembly to celebrate the Feast of the Passover in 1898, at which a woman became very ill and a cry was raised to remove her to a tent outside the camp, lest the camp should be defiled by a dead body—a ritual ban perhaps derived from some passages in the Hebrew law. In this case the defilement would extend to the whole congregation.

There are, however, some cases of removal the motive of which is different. In the Reef Islands there are certain houses called 'holy houses,' which, if we may trust the report, seem to be connected with the cult of, or at all events with the belief in, superior beings. These houses are empty. If a man is sick and does not die quickly, he is put into one of these 'that he may die quickly' (*JAI* xxxiv. [1904] 230). Among the Warundi of German East Africa the dying are carried out and placed on an *ikitabo* (a sacred circle, either public or belonging to the family). There the priests recite a sort of litany consisting entirely of conjectures as to the origin of the sick man's malady, which appears to be ascribed to the deceased father or other *manes* of the family (van der Burgt, *Warundi*, 1904, art. 'Temple'). With these we may compare a remedy prescribed by the Ottoman Jews for one *in extremis*. It is to carry him to the cemetery and lay him down there for twenty-four hours. 'He may die there; but, if he has the good luck to live, he will quickly make a complete recovery' (*Mélusine*, viii. [1896–7] 278).

In Europe a very wide-spread custom is to take a dying man out of bed, and to lay him on the earth or on straw. This is practised from Ireland to the Caspian Sea. In the Malay Peninsula a dying man's mosquito-curtains are opened, 'and in some cases, at all events,' he is taken out of his bed and laid upon the floor (Skeat, *Malay Magic*, 1900, p. 398 n.). A Nambūtiri Brahman in Malabar is placed on a bed of *kuśa*-grass in the verandah, or some convenient place outside the foundations of the house (E. Thurston, *Castes and Tribes*, Madras,

1909, v. 214). In Cochin a Nayar 'is removed to the bare ground floor, as it is considered sacrilegious to allow the last breath to escape while lying on a bed and in a room with a ceiling, which last is supposed to obstruct the free passage of the breath' (*Rep. Census of India*, xx. [1901] 162).

The reason alleged by those who practise this removal in Europe is that a man cannot die on feathers (sometimes game-feathers, sometimes those of domestic fowls), and consequently that to lie on them adds to his agonies and makes his death 'hard,' or 'unlucky.' The Cheremiss of Kozmodemjansk declare that, if he were allowed to die on a feather-bed or a felt coverlet, he would be forced in the other world to count the feathers, or the hairs of the felt (Smirnov, *Pop. finnoises*, Paris, 1898, i. 137). These reasons, however, seem to be invented to account for a practice of which the real origin has been forgotten. Alb. Dieterich (*Mutter Erde*, 1905, p. 27) has endeavoured to explain it as an attempt to bring the dying man into touch with the earth, so that the soul may pass without delay into the realm of the dead beneath. Monsenr (*RHR* liii. [1906] 204, 301), comparing it with other usages relative to the earth, attribntes it simply to a survival of the custom of lying on the earth at a time when such luxuries as bedsteads and feathers were unknown. These reasons, however, do not account for the requirement, found in Germany, Sweden, and elsewhere, to place the moribund person on straw, and afterwards to burn the straw. So the Wends in the Spreewald lay him on fresh straw spread on the ground, 'else no one would be willing to lie in the bed afterwards.' The straw is subsequently burnt in the open field, and the water wherewith the corpse has been washed is thrown over the spot where the fire was made. Any one who passes across that spot before the birds have flown over it a few times becomes withered up (von Schulenburg, *Wendisches Volksthum*, 1882, p. 110). There can be little doubt that the real object of the custom is to avoid the death-pollution upon the bed. It is probably a survival of the practice of removing the patient from the house before death. It has naturally the effect sometimes of hastening death; and it is performed in Europe avowedly for that purpose, in the belief that it abridges the sufferings of the dying and is therefore an act of kindness. The same purpose is assigned for the removal of the pillow, which is an obvious attenuation of the practice of removing the patient from bed.

V. Separation of soul and body.—The usual theory of the process of death is the separation of the soul from the body. The soul may, however, separate from the body before death, as in dreams. Sickness is frequently held to be such a separation. The distinction between such a separation and that of death is that the latter is final. Occasionally it is requisite that the soul be caught as it escapes. The population of Nias believe that the chief of a village, especially if rich and possessed of descendants, has more souls than one, of which one is an hereditary essence called the *ehèha*. This must be received in his mouth by the son of the dying man, if there be a son; if not, it is received in a purse for the purpose of securing that the deceased will watch over the family money (Modigliani, *Viaggio a Nias*, Milan, 1890, p. 277). So among the Greeks the nearest relative received the last breath of the dying man in a kiss.

Efforts are often made to recall the soul, not merely as a remedy for sickness, but to restore one dead. They may consist in simple cries to the soul to come back, as among some Tongking tribes (Lunet de Lajonquière, *Ethnog. du Tonkin sept.*, Paris, 1906, pp. 263, 274); or they may be the regular incantations of an expert, similar to those in use during sickness, as among the Dayaks of Borneo (Furness, *Home-Life of Borneo Head-hunters*, Philad. 1902, p. 50). A survival of some such custom may be found in Europe, on the death of a Pope or of a king of Spain. In these cases a high official of the court calls with a loud voice three times the name of the deceased, and, receiving no reply, he certifies the death.

VI. Before the funeral.—Death having occnrred, a number of significant customs are observed, only some of which can be enumerated here. Others will be reserved for a subsequent section.

1. *Opening of doors and windows.*—In the British Islands and all over Europe it is usual to open all doors and windows. Nor is the practice confined entirely to the uneducated classes. It was reported about twenty years ago (30th Aug. 1890) to have been performed at the death of a dignitary of the Church of England (*NQ*, 7th ser., x. [1890] 170). In France, Germany, and Switzerland it is not uncommon to take a tile off the roof. This is sometimes done before death, with the object of easing the departure of the soul. For the soul cannot escape unless the way be made open to it. Often, however, the window is permitted to remain open only for an instant, the return of the soul being feared (*Ztschr. des Vereins für Volkskunde* [=*ZVV*] xi. [1901] 267). In China a hole is made in the roof (Tylor, *Prim. Culture*, 1871, i. 409; *JAI* xxxiii. [1903] 103); and this used to be the practice of the Basuto wherever a man died within the hut (*Journ. Afr. Soc.* iv. [1905] 204).

2. *Observances in the house.*—Throughout Europe it is a common practice to stop all clocks in the house, and to cover all mirrors, or to turn them with their faces to the wall, immediately after a death. It may be conjectured that the latter was done to avoid puzzling and misleading the ghost in its efforts to quit the house. All water-vessels are emptied. Various reasons are assigned for this custom, the most usual being perhaps a desire to prevent the ghost from drowning itself. The ghost is certainly conceived in many places as thirsty or needing a bath; and a special jar or bowl of water is provided for its use. In Greece, bread and water are placed in the death-chamber (*JAI* xxiii. [1894] 37). In some parts of France a jar of water is placed beside the corpse (*RTP* xiv. [1899] 245). The Wends of the Spreewald place a dish filled with water under the bench on which the corpse is laid out, for which a sanitary reason is now given (von Schulenburg, *op. cit.* 112). The Mordvins put a cup of water on the window-sill of a dying man's house, for, on qnitting its corporeal envelope, the spirit mnst wash (Smirnov, i. 357). Hindu rites require the heir (but apparently not until after cremation) to place in the habitation of the deceased a small vessel full of water, over which he ties a thread to the ceiling, and lets it hang down as a sort of ladder for the *prana* (life-breath, spirit) to descend and slake its thirst during the ten days following; and a handful of rice is placed as food every morning beside the vessel (Dubois-Beauchamp, *Hindu Manners*[3], Oxf. 1906, p. 488). It is probable, therefore, that the object of throwing away water standing in any vessels for household use is to prevent the death-pollution conceived as contamination by the touch of the ghost. This is confirmed by the practice in some districts of the Landes in the south-west of France where, after the death of the father or mother, for a whole year the cooking vessels are covered with a cloth and their previous order reversed, though the reason now alleged for the practice is to recall the memory of the deceased and renew the grief (Cuzacq, *Naissance, mariage*,

et décès, 1902, p. 162). See also §§ VI. 9 and XVII. 1 below.

3. *Telling the bees.*—Another custom is that of 'telling the bees.' When a Dayak dies, as soon as the body is removed the head of the household calls over the names of all the children and other members of the household, to prevent the soul of the dead from alluring their souls away, in which case they would die. This ceremony is repeated on the return from the funeral (*Int. Arch.* ii. [1889] 182). The catastrophe to be prevented here is exactly that which it is desired to prevent by the practice common in Europe of telling the bees of the death of their owner. Some one goes to the hive, knocks, and whispers the fact to the tenants, sometimes also informing them who their new owner is. A humming heard inside the hive is taken as an indication that they will remain. If the ceremony be not performed, they will all die or go away. Sometimes they are put into mourning by attaching a piece of crape to the hive, or the hive is turned round or removed, or a piece of turf laid on it. These are all expedients against the attempt of the ghost to lure the bees away, though other interpretations have been given by the people who practise them and who have lost the real reason. The precaution is by no means confined to bees. In Cornwall the bird-cages and indoor plants are put into black. In various parts of France all the domestic animals must be informed, crape must be attached to the pigsties and to the cat. Even the trees must be told, and sometimes put into mourning. Elsewhere similar customs obtain (*Choice Notes, FL*, 1859, pp. 65, 90, 180, 210; Sébillot, *Folk-lore de France*, Paris, 1904–7, iii. 103, 375; Lloyd, *Peas. Life in Sweden*, Lond. 1870, p. 131). Among the Cheremiss the people even avoid watching a funeral procession from the window, for fear that the dead man may take them with him (Smirnov, i. 137). The prohibition against watching a funeral procession from a window is not uncommon.

4. *Wailing and dirges.*—The custom of wailing is universal. The wail frequently begins before death, as among the Hottentots, who are said to surround a dying person, and 'set up such a terrible howling as were enough, one would think, to fright the soul out of the body.' But this is nothing to what succeeds the death. 'The kraal shakes under the raging din; you hear them miles off' (P. Kolben, *Present State of the Cape*, Lond. 1731, p. 312). Where the funeral does not take place the same day, the wailing often breaks out with fresh force on that occasion; and it is kept up for periods of varying length among different peoples—from a few hours to months, or even years. Naturally, in the latter case it is only certain relatives (chiefly widows of the deceased) who indulge in it, and only at stated times of the day. Widows and other relatives, among many peoples, go to wail at the grave. The wailing is renewed at certain intervals of time—on the anniversary of death, or at certain feasts, or on the occasion of the exhumation of the bones. Elsewhere, among the Kaffirs, a son away at a distance, when his father dies, must wail on his return every time he enters the kraal during the next six months (Kidd, 250 f.). In many cases the men join in the wailing, while in others, perhaps among related peoples, it is left chiefly or entirely to women. It may be accompanied (at first, at all events) by the wildest demonstrations of grief, amounting to temporary insanity.

At a stage less than that, Dr. Junker describes the conduct of the women and slaves of a ruler of the A-Sandé of the Sudan. Sixty or seventy women went round the *seriba* wailing, turning somersaults, rolling in the dust, pretending to search in every corner, crying out, 'O my lord! Where is Fadl 'Allah? Lie! Lie!' They crawled about on hands and knees under the projecting roofs, constantly howling and lamenting. In the evening, with music and dance, the men joined in the wailing, which lasted all night. The next day a raid was made upon the wardrobe of the deceased, and every woman who could get hold of an article of his costume put it on, and went round in procession, until the ceremony appeared like a fancy-dress ball. All their heads were strewn with ashes, that covered with dirt their faces and bodies as they rolled and tumbled in the dust. The proceedings lasted for fifteen days, becoming gradually less and less an exhibition of sorrow, and more and more the subject of evident enjoyment, until they finally degenerated into a festival of music and dancing (Frobenius, *Heiden-Neger d. ägypt. Sudan*, Berlin, 1893, p. 408).

In the Aaru Archipelago, when a member of the family dies, all the women leave the house with hair hanging loose, to wail upon the shore, tumbling head over heels, and smearing their bodies with dirt and mud (Riedel, *Sluik- en kroesharige rassen*, 268). Even in a much higher civilization, the conduct of the mourners is characterized by excess. At the death of a Maltese, two or three women, called *neuuieha*, were hired. Dressed in long mourning cloaks, they entered the house singing a dirge. After damaging and destroying certain parts of the property of the deceased, they threw themselves on their knees before the coffin, singing the praises of the dead, and cutting off handfuls of their hair, which they spread over the coffin (Busuttil, *Holiday Cust. in Malta*, 1894, p. 128).

It is obvious that the wailing, though doubtless originating in emotions common to humanity, has everywhere taken on more or less of a ritual character. This is seen alike in the excesses, in the fact that it is emphasized almost everywhere for men, in the prescriptions of time and place when and where it is to be repeated, and in the more measured forms into which it tends to pass. Among the latter are the dirges equally familiar in all quarters of the globe. There is little difference in the substance of dirges.

'Ah, ah me! Why hast thou died? Was there lacking to thee food or drink? Why then hast thou died? Ah, ah me! Hadst thou not a beautiful wife? Why then hast thou died?' and so on, runs the lament in the Ruthenian tongue of the ancient pagan Prussians (*FL* xii. [1901] 300). The Hereros of German S.W. Africa cry: 'Now he is dead, he who always was so good; always he slaughtered cattle; always did he say, "Take only, take only"' (*S. Afr. FL Journ.* i. [1879] 53). For one killed in war the Mundurucús of South America chant: 'Thou art dead; we will avenge thee. For that we are in the world, to avenge our own who fall in fight. Our enemies are not braver or more men than we are. My brother, my son, we come to bury thee. Thou art dead; to this end wast thou born. Thou art dead in war because thou wast brave; to that end our fathers and mothers brought us into the world. We must not have fear of enemies. Who dies in war, dies with honour—not like one who dies of sickness.' And reply is made by women in the name of the dead: 'My mother, my wife, you will die in your hammock; I died in war because I was brave' (*Int. Arch.* xiii. Suppl. 114).

Probably these specimens fairly represent the general matter of the dirges: a gentle reproach to the deceased for dying, and thus leaving those who were dear to him; praise of him—sometimes, as in the Irish 'keens,' in great detail; and vows to avenge him. In the more rudimentary cultures, dirges have not developed; the wailing, so far as it is articulate, is confined to a few words or phrases.

The ritual character of the wailing is expressed very clearly, not only in the dirges, but also in the practice of hiring mourners to wail.

Among the Gros Ventres and Mandans of Dakota, 'those who mourn are always paid for it in some way by the other friends of the deceased, and those who mourn the longest are paid the most' (*1 RBEW* 161). The Chiriguanos of South America caused their dead to be bewailed thrice a day—morning, noon, and evening—for several months at the grave by women hired for the purpose (*Int. Arch.* xiii., Suppl. 105). In Malta, as we have seen, and throughout the Nearer East, hired wailers are universally employed. Among the Bedui of Abyssinia it is the prostitutes who act in this capacity (Munzinger, *Ostafr. Stud.*[2], Basel, 1883, p. 150). In Calabria, so necessary is wailing deemed that, if a stranger dies, women are hired to attend his funeral and wail over the dead (Ramage, *Wanderings*, 1868, p. 73).

The reasons for the rite have been a subject of much discussion. There may be more reasons than one. In the first place, there can be little doubt

that excessive demonstrations of grief may, in some cases, be traced to the desire to avoid suspicion of having been accessory to the death. Bentley expressly asserts that in the Congo basin, where the belief in witchcraft is so powerful and so cruel, an ostentatious exhibition of grief is to avoid the charge of witchcraft (*Pioneering on the Congo*, Lond. 1900, ii. 259). In Angola, however, the noise is supposed 'to drive away the spirits' (*JAFL* ix. [1896] 16). Similarly, it is believed by the Klamath Indians of the north-west coast of the United States that for three days during the funeral ceremonies the soul is in danger from the *O-mah-á*, or demon. 'To preserve it from this peril, a fire is kept up at the grave, and the friends of the deceased howl around it to scare away the demon' (*1 RBEW* 107). The Basuto hold that the spirits (we may assume that the ancestral spirits, including perhaps the immediately deceased, are meant) become enraged with any one who is so heartless as not to cry at the funeral of friend or relation, and punish him with some terrible sickness (Martin, *Basutoland*, 1903, p. 92). In some of the Moluccas the wailing is intended to affect the departed, to bring the spirit to its senses, or to render it conscious of its new condition (Riedel, *op. cit.* 465).

That the wailing is meant to affect the departed in some way seems to follow from the contents of the dirges, and from the fact that they are in many cases (perhaps usually) addressed directly to him. The sorrow expressed, the praises, the appeals to return, cannot but be supposed to have an effect on the spirit, which is believed to be hovering near and to partake in the ceremonies performed. A wide and careful comparison of the customs of the South American Indians has led Theodor Koch to infer that the native is fully convinced that the dirges are understood by the deceased; and he suggests that the chief motive is conciliation—the placation of one whose natural disposition would be hostile (*Int. Arch.* xiii., Suppl. 114, 117). That this motive does operate seems certain. A striking example is furnished by the Ja-Luo of East Africa. When a person dies, the whole village wails with great fervour for days, if not for months, and at stated intervals, according to the conventions laid down for the case. When a barren woman dies, the wailing is commenced in the usual way. The brothers and sisters of the deceased hasten to the place; and the first who arrives takes a sharp acacia-thorn, sticks it into the sole of the corpse's foot, and breaks it off. Immediately all wailing ceases, and it is never renewed (*JAI* xxxiii. 344). Hobley, who reports this ceremony, could obtain no account of its object. There cannot, however, be much doubt that the thorn is intended to prevent the deceased from walking after death and troubling the survivors. (A similar case is reported from the Moluccas by Riedel, *op. cit.* 81; see also § XI. 2 below.) A childless woman would naturally be envious and malicious, and would have no descendants over whose well-being she might be supposed to watch. Released, therefore, from the fear that she would leave the grave for hostile purposes, they would have no further motive for conciliating her.

But it cannot be admitted that fear is the only reason for wailing. There is abundant evidence that the dead are believed to regard their surviving relatives—in particular, their descendants—with a measure of affection (at least of friendly interest), not unmixed indeed with caprice, that they are often dependent on them for the sacrifices and other means of rendering comfortable their existence in the world of the departed, and that they grant them favours and good fortune if satisfied with their treatment and general conduct. In these circumstances, it seems inevitable to conclude that the wailing is, in part at all events, a genuine expression of affection, and is intended to call forth corresponding feelings in the deceased.

5. *Toilet of the corpse.*—Among the earliest cares after a death is the toilet of the corpse. The Yakuts perform this ceremony before death, in order doubtless to avoid embarrassment to the relatives by the defilement of death (*RHR* xlvi. 208). The body is usually washed. In the lower stages of civilization it is often merely painted. Whether washed or not, it is in these stages painted. The colour varies, but in the vast majority of cases recorded it is red. The bones of Neolithic dead in Europe are frequently found painted with red. Some of the Australian tribes rub off the outside skin, leaving the white under-skin exposed—a practice not unconnected with the belief that the dead return white, as ghosts or white men (cf., *e.g.*, Parker, *Euahlayi*, 91). The eyes are carefully closed, and the eyelids weighted to keep them shut. The uncanny look of a corpse with staring eyes accounts, partly, but not fully, for the universality of this practice. The ghost has not yet wholly deserted his mortal tenement, and the reason given by the Nicobar Islanders is probably not far wrong, namely, that it is to prevent the ghost from seeing (*Ind. Cens.* 1901, iii. 208). At least it prevents the eerie feeling of the survivors that they are being watched. The best clothes of the deceased are commonly put on the body. Very often, relatives and friends contribute new clothes for the purpose. Among many peoples, as among the Chinese, and, indeed, among European peoples, the deceased has in life prepared special clothes, for the dead must enter the spirit-world in their best array. Sometimes, as in various districts of Germany, they are buried in their wedding-clothes. Ornaments, jewels, and particularly amulets, are not omitted. By a parsimony easy to understand, some peoples remove the most valuable clothing and ornaments before cremation or burial, but they are more usually left. Where shoes are worn, the deceased is shod, for he has a long journey to take. Such, for example, is the custom in many parts of Europe; and it extends in Great Britain as far back at least as the Late Celtic period. The toilet is concluded by binding the corpse in the attitude in which it is to be buried or otherwise disposed of. This attitude in all the lower planes of culture is very generally squatting, as we find among the pre-historic dead of Europe. It is often explained as that of the infant in its mother's womb; more probably it is that of natural rest. If necessary, the sinews, as among the Basuto (*Journ. Afr. Soc.* v. 357), or even the backbone, as among the Bechuana (*JAI* xxxv. [1905] 308), may be cut to admit of the body being bound in the proper position. Among the Slavic populations of Germany, as well as among the Masurs, it is customary to throw out the water used for washing the corpse, together with the vessel containing it, after the coffin as the funeral leaves the house, by way of precaution against haunting. In Silesia the water and water-vessel are buried where no one will step over them, else they will cause a wasting disease. The Wends scatter millet upon the poured-out water, for this will prevent the birds from eating it when afterwards sown (Tetzner, *Slawen in Deutschland*, Brunswick, 1902, p. 375; Töppen, *Aberglauben aus Masuren*^{2}, Dantzig, 1867, p. 108; *ZVV* iii. [1893] 150; von Schulenburg, *op. cit.* p. 110). The Negroes in Jamaica throw out the water after the hearse or upon the grave (*FL* xv. 206, 88). On the other hand, it is said to be the custom in Oleai, one of the Caroline Islands, to drink the water in which dead children have been washed (*Globus*, lxxxviii.

[1905] 20). Possibly this is a means of securing that the children shall be born again.

6. *Mummification.*—The process of mummifying, or drying up the body, either with or without embalmment, is widely practised.

In Australia the Unghi occasionally dry the body in the smoke of a fire made with green boughs of a species of sandalwood, and then carry it about to visit the places frequented by the deceased during his life. The Kaiahara also dry the body of a man of note, and carry it about for six months (Howitt, 467, 469). The same rough-and-ready way of preparing a corpse is found more or less throughout the west of Africa. It is thus that a Niamniam chief in the Upper Nile basin, and a king of the Warundi in German East Africa, are prepared for burial (Frobenius, *op. cit.* 409; van der Burgt, 40). Some of the tribes of British Central Africa attain the result by repeatedly rubbing the corpse with boiled maize (Werner, *Brit. Cent. Afr.*, Lond. 1906, p. 163; *Journ. Afr. Soc.* v. 434). The body of the king of the Baganda was squeezed dry, the viscera being first removed, butter rubbed into it, and the viscera then replaced (*JAI* xxxii. [1902] 44). The Baoule of the Ivory Coast take out the intestines, wash them with palm-wine or European alcohol, introduce into the cavity alcohol and salt, afterwards replacing the intestines and sewing up the body. These and other preparations, however, do not entirely prevent corruption; but it comes to an end in about three weeks, giving way to desiccation, and the body ultimately presents the appearance of an Egyptian mummy (Clozel and Villamur, 115). Some Philippine tribes dry the corpse by fire, while among the Betsileo and Antankarana of Madagascar, as frequently in the South Seas, it is dried in the air, the fluids being assisted to escape. By this process, in Erub and the Murray Islands, it is described by Haddon as becoming almost as light as *papier mâché* (Sawyer, *Philippines*, 258, 277; *Madagascar au début du xx^e siècle*, 1902, pp. 282, 286; Haddon, *Torres Str. Exped.* vi. [1908] 136, *Head-Hunters*, Lond. 1901, p. 91). The bodies of chiefs in the Society Islands were dried in the sun, the more corruptible parts removed, the moisture extracted, and a species of embalmment practised with fragrant oils (Ellis, *Polyn. Res.* i. 400). A number of tribes in America, both North and South, practise desiccation, usually by fire. Some of the former inhabitants of Virginia and the more southerly Atlantic States used to perform a very elaborate process in the case of their kings and other important men, disembowelling them and filling the cavity with beads, celts, and so forth, or, in some cases, removing the flesh altogether and preserving it separately or not at all (*1 RBEW* 131, 132; *Int. Arch.* xiii. Suppl. 55, 56, 62, 79, 81, 88, 93, 103). The practice of desiccation is very ancient. Not only are buried mummified bodies constantly found in the seats of the older civilizations of South America; they have also been found in pre-historic graves in North America.

The object of mummifying is in many cases, as it was in ancient Egypt, to preserve the body as a permanent habitation, or at least as a place of resort, for the soul. It is not unconnected with the cult of the dead (see ANCESTOR-WORSHIP [Egyp.], vol. i. p. 440, and 'Egyptian' art. below, p. 458). Where other peoples set up images of the deceased, those who practised desiccation or embalmment were enabled to keep the bodies themselves without difficulty.

Thus, the ancient Macrobioi put the body, after drying it, covering it with plaster and painting it like the living man, into a hollow block of crystal, set it up in the house for a year, and offered sacrifices to it, afterwards removing it and setting it up, with similar blocks, round the city (Herod. iii. 24). The aborigines of Virginia and Carolina placed the bodies of their kings and rulers in a large hut under the care of priests or medicine-men, apparently for a similar purpose (*1 RBEW* 131).

Elsewhere, as among the Bangala of the Upper Congo (*JAI* xxxix. [1909] 451) and other African tribes, and in the South Sea Islands, mummification is a means of preserving the body until a convenient time for the funeral, which is frequently postponed, for one reason or another, over months or even years. But this object does not of necessity exclude the former.

7. *Feeding the dead.*—Many other observances take place, which we need not describe here. Two, however, may be referred to. The sitting in state of the dead, in the Aaru Archipelago of the Moluccas, has already been mentioned. While he so sits, food is offered him by the members of his family. Offerings of food and drink to the dead before burial are frequent in the lower culture; sometimes, as among the Thô of Northern Tongking, they are even placed in his mouth. These offerings are found in both hemispheres. Even in modern Europe they are not unknown.

In the Department of Loir-et-Cher, France, everything in the house that is eatable is thrown into the death-chamber (*RTP* xv. [1900] 382). De la Martinière reports, in the 17th cent., that in Russia, after death, it was usual to bring a basin of holy water for the soul to bathe, and to place a piece of bread on the corpse's head, that he might not die of hunger on the long journey before him (*ZVV* xi. 435). On account of the possibility that the ghost will put his finger in it to taste it, the watchers of the corpse about Königsberg, in the east of Prussia, avoid drinking brandy (*Am Urquell*, ii. [1891] 80).

A different precaution was taken in the north-east of Scotland, where, 'immediately on death, a piece of iron, such as a knitting-wire or a nail, was stuck into whatever meal, butter, cheese, flesh, or whisky [was] in the house, to prevent death from entering them' (Gregor, *Folk-Lore of N.E. Scot.* 1881, p. 206). Although in recent times it was believed that corruption followed the omission of this precaution, it is probable that at an earlier period it was believed that the ghost partook of them. Iron is a well-known preservative against the attacks of supernatural beings.

8. *The wake.*—A formal announcement of the death, and an invitation to the kindred and others whom it may concern to come and perform the funeral rites, are given by messenger or by drum, or, at the present day in many communities in low civilization, by firing guns. During the interval between the toilet of the corpse and its final disposal it is watched—a ceremony known in this country as the *wake*, because it involves one or more all-night sittings.

The corpse of an Australian of the Wimmera district of Victoria is watched by the clever old men and relatives, for the purpose of gaining a hint where to look for the slayer by witchcraft (Mathews, *Ethnol. Notes*, 145). Elsewhere in Australia the object is to guard the corpse 'from the spirits' (Parker, *op. cit.* 85). In this they agree with the Sabobas of California, who hold that until burial the soul hovers near the corpse, and a certain demon is on the watch to seize it; and this is prevented only by the vigilance of the survivors (*JAFL* xvi. [1903] 159). Among the Garos of Assam the watchers are kept awake by the young men of the village, who dress up as wild beasts and enter the house, 'to frighten the women with their howls and antics.' More probably, the real reason is to frighten away the ghost or other evil-disposed spirits (Playfair, *The Garos*, Lond. 1909, p. 107). The Koryaks, who practise cremation and burn the body on the day of the death, or a day or two after, allow no one to sleep while the corpse is in the house. The deceased is considered still a member of the family, and, to entertain him, they even play cards on his body (*Jesup Exped.* vi. [1908] 110). Cards are, of course, a modern introduction from the Russians; but they, no doubt, replace some other mode of amusement necessary to keep the watchers awake. So in some of the Moluccas, while children watch the dead in a separate apartment, smoking and drinking go on, and cards are played, the night before the corpse is prepared for burial. In others of the islands the corpse is watched until it is put into the coffin, and the watchers ask riddles and play games to keep awake. Two days and nights it sits in state, clothed and adorned with corals, gold, and silver. The soul remains in the house the first night; and, if any one in the house sleeps, he is liable to encounter the soul in dreams, and to sicken in consequence. In other islands, again, the soul is held to be confused and stunned immediately after death, like a man who has fallen from a tree; and the kinsmen watch through the night, until it may be supposed to have recovered its senses (Riedel, 80, 267, 210).

The wakes of Europe are founded upon similar beliefs to these, and follow much the same course. The Wends awaken every one, that none may fall into the sleep of death (the soul of the deceased may perhaps entice them away, as among the Dayaks [*Int. Arch.* ii. 182]), and even the cattle are roused and the seed-corn handled (Tetzner, 375; von Schulenburg, 110). Among the Bulgarians in Hungary, only the nearest relations actually watch beside the dead. They relieve the tedium by games, among others divining by card-playing whether the soul of the deceased is saved (*Globus*, xc. 140). In the Landes the neighbours watch the body, making copious libations to the memory of the departed (Cuzacq, 159). Irish wakes have long been a byword of extravagant merry-making and debauchery; and English wakes used to be little, if any, better (cf. Croker, *Researches*, 1824, p. 170; Aubrey, *Remaines*, Lond. 1881, p. 30). It would seem as if they thought, as the Gilyaks do, that silence in the house of the dead is sin. For that reason, among the latter, so long as the corpse remains in the house, custom requires amusements, laughing, and joking to be kept up (*ARW* viii. [1905] 472).

9. *Tabus at death.*—The horror of the dead has already been mentioned. Everywhere, contact with a corpse entails a condition for the adequate expression of which we must have recourse to the Polynesian word *tapu*, or the Gr. word *ἀνάθεμα*. In English the word usually employed is 'pollution' or 'defilement.' Since, however, neither of these words, nor any other in the language, conveys the full force of the Polynesian or the Greek, we have in modern times been fain to borrow the word *tapu* or *tabu* from the former tongue, for the condition

of a person or thing set apart and shunned for a religious or quasi-religious reason, including not only objects to which we should attribute sanctity and invest with terror on that account (as the Ark among the ancient Hebrews), but also such as excite (at least in our minds) horror, disgust, and execration. A corpse is always tabu. And, as one of the most remarkable characteristics of tabu is its excessive contagiousness, the greatest care is needed in approaching or dealing with a corpse. It is not quite clear whether the corpse is feared in and for itself as a dead body, or as the vehicle of death, or whether it is feared owing to its connexion with the disembodied spirit. The rule observed among widely sundered peoples, that every one who kills another—even a warrior who has slain an enemy in battle—must undergo purification, perhaps points to the last alternative. In any case, from the contagious nature of tabu, the prohibitions consequent on a death reach far beyond the persons who have been compelled to perform the last offices about a corpse. They extend to the whole house, the whole family, the whole clan, the whole village, nay, to the very fields, and even sometimes to the heavens.

An unburied body fills the Yakuts with horror and fear. All Nature, indeed, feels uneasiness: violent winds arise, storms howl, fires break out, strange noises, mysterious cries, are heard; and, if it be a shaman who is dead, these manifestations acquire fabulous proportions (*RHR* xlvi. 211). The result of this mysterious sympathy of the various elements is that no work can be done until the body is disposed of. All labour in the entire settlement used to be stopped when a Koryak died, until his cremation. No one went hunting or sealing, nobody went to fetch wood, and the women did no sewing (*Jesup Exped.* vi. 104). Among the Central Eskimo, singing and dancing are forbidden during the first days after a death. Moreover, for three days no one is allowed to work on iron, wood, bone, stone, ice, snow, leather, to empty the oil-drippings from lamps, or to clean lamps; women may not comb their hair or wash their faces; and all sexual intercourse is forbidden. It is believed that the soul stays with the body for three days after death. During that time any violation of the tabus affects it so much with pain that by way of retaliation it brings heavy snowfalls, sickness, and death (Boas, *Eskimo of Baffin Land*, 1901, pp. 131, 144). Among the Bareа and Kuoama of Abyssinia there is neither ploughing, nor sowing, nor grinding until the corpse is buried (Munzinger, *op. cit.* 528). In many of the Molucca Islands all work is forbidden in a village while the corpse is unburied (Riedel, 168, 197, 223, 341, 414).

At Athens, according to Cicero, after the burial the grave was sown or planted as a kind of expiation, that the fruits might be rendered to the living. The statement seems to imply that the earth was put under a ban or tabu, either by the death or by the burial (see the passage discussed in *ARW* viii. 40; Farnell, *Cults Gr. States*, 1896–1907, iii. 23). Among the Bambala, a Bantu people of the Congo basin, the inhabitants of a village where a death has occurred forsake it during the period of mourning, and sleep in the open (*JAI* xxxv. 417). It is customary on the continent of Europe to put up on the house a cross of wood or straw, or in Holland and Flanders to pile trusses of straw before the house (*Bull. de FL*, ii. [1893–95] 346). The ancient Romans hung up a branch of cypress or pine. This practice is probably to be traced to an intention to give notice of the state of tabu. The hatchments on houses in Great Britain seem to owe their existence to the same cause.

The prohibitions are naturally emphasized when the person dying is a king or a chief. When a Kaffir headman or man of importance dies, all the people of the kraal shave their heads and are unclean. They may not drink milk or transact business with other kraals until the witch-doctor has cleansed them (Kidd, *Essential Kafir*, 1904, pp. 247, 249; *Cape Rep. Nat. Laws Com.*, App. 21). Among the Nilotic Kavirondo, the villagers do not cultivate the fields for three days after the death of any one of importance. But, if it is a chief who has died, no one cultivates the fields for ten days (Hobley, *op. cit.* 28). In Tibet, on the demise of the Dalai or the Tashi Lama, the work in all the public and private offices, all business and market gatherings, are suspended for seven days. For thirty days women are forbidden to put on their jewellery, and neither men nor women may wear new apparel. All classes refrain from amusements and festivities, and from going into groves for pleasure, sports, or love-making. Rich and respectable men, when their parents die, abstain for a year from taking part in marriage ceremonies and festivities, and undertake no journeys to a distance (Chandra Das, *Journey to Lhasa*, 1902, p. 256). We may suspect our own analogous customs on the death of any near relation, or important person in the neighbourhood or the State, to be due to the same origin as those on the death of a Kaffir headman or the Dalai Lama. See also §§ VI. 2; XVII. 1.

VII. Disposal of the corpse.—1. *Object of rites.*—The chief objects of the proper disposal of the corpse and the fulfilment of all the rites and customs in connexion therewith are to free the living from the defilement of death and to give rest to the deceased. Until they are all ended, the soul is not finally dismissed to its place in the other world, it is not united to the company of the fathers, it is not elevated to its due position in the household or tribal cult, and it continues to haunt the survivors unpleasantly. This belief is little short of universal in the lower culture, and might be illustrated from all quarters of the globe. The significance of the funeral ceremonies among the ancient Greeks and Egyptians is a commonplace of anthropology. In modern Europe the prejudice in favour of Christian burial in consecrated earth, with the full rites of the Church, may be traced to the same cause.

2. *Denial of rites.*—Yet for special reasons these rites are everywhere denied to certain classes of the dead.

(*a*) Babes and children under the age of puberty, or uninitiated in the tribal rites.—

In India, where the practice of burning the dead is prevalent, children are generally buried. In some cases at least, and possibly in all, this is done with a view to securing their rebirth, for the common practice is to bury in or quite close to the house, often under the threshold. Similar practices for the same reason prevail among many other peoples of the Old and New Worlds (Hartland, *Prim. Pat.*, 1909–10, i. 227). Funeral honours are denied by the Thô of Tongking to children under eighteen years of age and unmarried women. They are simply put into the bier and taken by the priest alone to the grave (Luquet, *op. cit.* 163). Among the Negroes of West Africa and some of the Bantu and Nilotic peoples, where burial is the ordinary practice, rites are denied to children, who are, indeed, often thrown out into the bush: the Wadjagga bury them in the ditch that serves as the village latrine, subsequently digging up their bones and throwing them away (Leonard, *Lower Niger*, 1906, p. 168; *Globus*, lxxii. [1897] 43, lxxxix. [1906] 190; Cunningham, *Uganda*, 1905, p. 344). In civilized Europe unbaptized children are commonly buried without rites.

(*b*) Slaves and common people.—

Among the Haida in Masset, slaves are thrown into the sea (*Jesup Exped.* v. [1905–9] 54). In Oregon they were thrown out into the woods or left wherever convenient (*Mem. Am. Anthr. Assoc.* i. [1906] 170). Very widely in Africa ordinary and especially poor persons and slaves are simply flung out and left to the wild beasts. Common people in the Marshall Islands used to be sewed into a mat and put into the sea (Steinmetz, *op. cit.* 438). The Ahts of Vancouver Island wrap old women and men and boys of no rank in the tribe in old blankets and leave them on the ground (Sproat, *Scenes and Studies of Savage Life*, London, 1868, p. 259). A worthless fellow is buried without rites in the New Hebrides (*Rep. Austr. Assoc.* iv. [1892] 730). The Wadjagga throw childless men and women into the forest (*Globus*, lxxxix. 200).

The foregoing classes are probably regarded as impotent for good or ill after death, just as they have been during life, and therefore needing no consideration. In other cases, however, this reason will not apply.

(*c*) Those who die a 'bad death.'—The manner of death frequently determines the death rites to be performed, because it determines the fate of the deceased in the other world. The list of deaths regarded as 'bad' is not identical all over the world, but a wholesome horror of suicide generally prevails. Christian Europe agrees with pagan Africa in performing only maimed rites, or denying them altogether, in the case of such as have taken their own life.

Suicides are held by the Ewhe of Togoland to have been driven mad, either by rage or ill-treatment, or by some angry ghost, malignant spirit, or god. A suicide defiles the land and hinders the due rainfall. The relatives of the deceased must therefore be fined. A stake is driven through the body, which is dragged into the bush and there huddled into a hastily excavated hole. The subsequent solemnities are few and meagre. No drum is heard, no dances are executed, no fire is lighted in the street, no sacrifice is slain for him. A few bananas and pig-nuts and a little maize are laid beside the grave, two guns are fired, and the obsequies are over (Spieth, *op. cit.* 276, 274). The Choctaws of North America dispose of their dead on scaffolds, and afterwards collect the bones with great ceremony. But they bury at once without the usual obsequies any one who commits suicide (*1 RBEW* 168).

Death by lightning is also widely attributed to the direct action of a god.

Among the Bechuana, if a thunderbolt kills a man, no one complains, none weeps; all unite in saying that the Lord has done right. They suppose the victim to have been guilty of some crime, probably stealing, for which the judgment of Heaven has fallen on him. The beliefs of their neighbours, the Basuto, Zulus, and Baronga, are similar (Arbousset, *Exploratory Tour*, Cape Town, 1846, p. 225; Casalis, *Basutos*, Lond. 1861, p. 242; Callaway, *Rel. Syst.*, Lond. 1870, pp. 60, 118; Junod, *Les Ba-ronga*, Neuchatel, 1898, p. 422. As to the meaning of 'Lord' and 'Heaven,' see art. BANTU, vol. ii. p. 364).

Divine anger may be manifested, indeed, in any accidental death: the attack by a wild beast, the bite of a snake, drowning, a fall from a tree.

The Dayaks of South-East Borneo do not bury such as die by accident; they are carried into the forest and laid on the ground (*Int. Arch.* ii. 181). The Malays of the Patani States inter in a waste place or cast out to the dogs and vultures 'those who die of being killed,' as they phrase it—that is to say, in any violent, sudden, or unusual way (*Fasc. Mal.* ii. [1904] 77).

Death by drowning is often regarded as the seizure by the water-spirit of a victim; hence no effort is made to save him.

Persons drowned, or shot, killed by wild beasts or by falling from a tree, are held in the Babar Archipelago to be slain by the messengers of Rarawoliai, the war-spirit, in order that he may feed on their souls. Their bodies may not be laid out in the house or seen by children; they are left naked. They are put on scaffolds, with merely a piece of red linen thrown over them. Sacrifices of pigs are offered to Upulero, who is invoked on behalf of their souls. The pigs are not as a rule eaten, for fear of misfortune. Ultimately the body is laid on the ground in a spot set apart for such as have been slain by Rarawoliai (Riedel, 361). In the northern peninsula of Halmahera no funeral feast is solemnized for those who are unlucky enough to die away from the *kampong*, nor are their souls worshipped, unless they fall in battle (*Int. Arch.* ii. 209).

Everywhere those who die from the effects of the poison-ordeal, so commonly administered in Africa to discover a witch, are held to be slain by the 'fetish.' The body is usually denied sepulture, and is thrown into the bush. To die of certain diseases is to be struck by a god, or at all events tabued. Such diseases are cholera and smallpox commonly in India, smallpox or leprosy in the island of Nossi-Bé near Madagascar (Steinmetz, 378), consumption in Cochin-China (Aymonier, *Excursions et Reconnaissances*, xvi. [1883] 171). Among the Agni of the Ivory Coast, when by means of divination (§ III. 3) the corpse obstinately refuses to disclose whose witchcraft has caused the death, it is concluded that the deceased has offended some spirit, and he is denied burial as a punishment for the offence (Clozel and Villamur, *op. cit.* p. 120), or perhaps, we may conjecture, for fear of the enraged spirit. In ancient Greece executed criminals, though buried, were denied the customary rites; traitors and those guilty of sacrilege were refused burial at home (Rohde, *Psyche*[2], Freib. 1898, i. 217). On Nossi-Bé executed criminals and outcasts from the family are not buried in the family grave; wherefore in the other world they are condemned to find no rest (Steinmetz, *loc. cit.*); and the Ewhe bury them without rites (*Globus*, lxxii. 42). Down to quite modern times, in Europe it used to be the fate of certain classes of executed criminals to have their remains exposed on gateways and other places of public resort, until they rotted away. Repulsion, horror, dread, whether caused by the infringement of some tabu or by the *anathema* of supernatural beings, are doubtless the cause in all these cases of exceptional treatment and denial of the customary rites.

(*d*) Persons held in reverence are also under *anathema* or tabu. Their sacred qualities set them apart from mankind.

The Masai, whose reason for not burying ordinary persons is said to be that the bodies would poison the soil, bury their medicine-men and rich men (Hollis, 305). The inhabitants of Corisco Island, off the West Coast of Africa, lay their great men and twins (see art. TWINS) under a sacred tree (Nassau, 41). The Sea Dayaks expose their priests on a raised platform—a privilege, however, which others may share, if they desire. The rest are buried, except such as die in battle, who are left where they fall, surrounded with a paling to keep away the wild hogs (*TES*, new ser., ii. [1863] 236). By way of special honour, the Paharias of the Santal Parganas do not bury their priests, but lay them under the shade of a banyan (Bradley-Birt, *Indian Upland*, 1905, p. 308). The Caddoes of North America leave unburied the warrior slain in battle (*1 RBEW* 103). Some African tribes, as the Latuka and the Wadjagga, also leave the slain warrior unburied. But among the Wadjagga the reason is said to be that to bury him would draw a similar fate on others (Frobenius, 451; Cunningham, 370; *Globus*, lxxxix. 199).

(*e*) Women dying in childbed are buried in Africa, both East and West, apart, and deprived of ordinary rites. The belief that a woman thus dying is under a curse, and becomes a malignant ghost or vampire, is widely distributed. Special precautions are, therefore, taken against her depredations. A special rite in the shape of a sacrifice is sometimes performed to keep her quiet, as in Yunnan (Anderson, *Report on Exped. to W. Yunan*, Calcutta, 1871, p. 131). A different expedient is mentioned below (§ XI. 2).

(*f*) Lastly, in the progress of civilization it has been held that burial cannot be accorded to the corpse of a man who has died in debt, until his creditors have been satisfied. This barbarous denial of rites necessary to future happiness seems to have been the law in mediæval Europe. A corpse was arrested for debt in the neighbourhood of Shoreditch as lately as 1811; and, though damages were recovered against the creditors by the representatives of the deceased, the fact witnesses to the late survival in England of the belief that the corpse of a debtor could legally be deprived of rites (*NQ*, 8th ser. ix. [1896] 241; cf. *ib.* 356 and x. 63). Even yet in many places—the island of Celebes and West Africa, for example (*L'Anthropologie*, iv. [1893] 626; *Globus*, lxxii. 42; Dennett, *Black Man's Mind*, 1906, p. 46)—the dead cannot be buried until his debts are paid; and among the Fantis, at all events, he who has the temerity to bury a man becomes liable for his debts (Cruickshank, *Eighteen Years on the Gold Coast*, Lond. 1853, ii. 221). The incident is the foundation of a number of folk-tales, from India to Ireland, and has repeatedly formed part of a literary plot.

3. *Mode of disposal.*—The modes of disposing of the corpse may be enumerated as (*a*) cannibalism, (*b*) sub-aerial deposit, (*c*) cave deposit, (*d*) water burial, (*e*) earth burial, (*f*) preservation in hut, (*g*) cremation.

(*a*) Cannibalism.—See art. CANNIBALISM, vol. iii. p. 194, and below, § XV.

(*b*) Sub-aerial deposit.—To leave the body on the ground was probably the earliest, as it is the simplest and most savage, form of disposal of the dead. Ordinary people are still by many tribes, as we have seen, simply flung aside. Among the Masai, burial is a special honour conferred only on a man of wealth or a medicine-man. All medicine-men are descendants of one family of supernatural origin. We may conjecture that the meaning of the tradition of supernatural origin is that their ancestor was a stranger belonging to a tribe on a somewhat higher level of civilization, where burial was customary (Hollis, 305, 325). Burial is, however, not necessarily a mark of advancing civilization. The Seri of the Californian Gulf, who are among the lowest of known savages, bury their dead (*17 RBEW* 288*). On the other hand, the religion of Zoroaster seems to have imposed the rite of exposure of the corpse, to be devoured by dogs and vultures, in comparatively civilized times on a reluctant people, who were previously in the habit of burying their dead. It appears, in contrast with the rite of the Masai medicine-men, to have been at first only the practice of the sacred caste, and to have been enforced by them on all believers under the most awful sanctions, both temporal and spiritual. A thousand stripes are denounced in the *Zend-Avesta* on him who shall bury in the earth the corpse of a dog or of a man, and not disinter

it before the end of the second year; but, if he delay beyond that time, there is no atonement for ever and ever. Death and damnation are his fate. Indeed, merely to omit the exposure of the corpse within a year, though other parts of the ritual may have been complied with, is to be liable to the same penalty as the murder of one of the faithful (*SBE* iv. xlv. 8, 31, 52). We may perhaps measure the difficulty of securing uniformity by the violence of the language and the terror of the threatened penalties. It must have been almost as uncomfortable to be a heretic in Persia as in mediæval and post-mediæval Europe. Nor have the Parsis of India, in spite of their high civilization, abandoned this distinguishing characteristic of their faith. See 'Parsi' art. on present subject (p. 502)

The Veddas of Ceylon, like the ancient Chinese, simply lay the corpse in the jungle, covered with leaves and brushwood (Tennent, *Ceylon*, Lond. 1859, ii. 442; Davy, *An Account of the Interior of Ceylon*, Lond. 1821, p. 117; de Groot, *Rel. Syst. China*, Leyden, 1892 ff., ii. 368).

Among the Australian tribes and those of Tasmania the most varied methods of disposal are found—exposure, cannibalism, burial, cremation.

Where exposure was practised, it was usually on a rude platform of boughs, or in the branches of a tree. The latter is regarded by the Unmatjera as an honour denied to the very old and infirm, and to such as have violated tribal customs (Brough Smyth, i. 103–121; Howitt, 456–474; Spencer-Gillen[b], 506–545; *Int. Arch.* xvi. [1904] 8; Roth, *Abor. of Tasmania*, Lond. 1890, pp. 123–134). The same honour is also paid by the Andamanese to those esteemed worthy (*Ind. Cens. Rep.*, 1901, iii. 65). In fact the exposure of the dead on stages, or by suspension from the branches of a tree, or from cross-bars supported on poles, is very widely spread in the Eastern Archipelago, and is practised by some of the tribes of Assam.

On the American continent, deposit on scaffolds, or in the boughs of trees, was extensively practised. In the interior of North America it was the common mode of disposal, the object being to keep the body out of the way of carnivorous beasts and to facilitate desiccation.

The Hurons and some other tribes put the corpse into a coffin or box of bark or wood (often a hollowed log)—a custom also followed in British Columbia, where the 'grave-box' was frequently deposited on the ground and covered with leaves (*1 RBEW* 158–164, 166, 168, 169; *5 RBEW* [1887] 111. The various Reports on the N.-W. Tribes in the *Brit. Assoc. Reports* describe the customs of the Indians of Brit. Columbia. See also *Jesup Exped.* v. 54, x. [1908] 142). Ruder than these was the custom of the Blackfeet. 'They think it a horrible practice to expose the body to the worms and vermin that live in the ground.' So they leave it for the wild beasts and birds, above ground, on a hill-top or in a tree (*B.A. Rep.*, 1887, p. 192; Petitot, *Trad. Ind. du Canada Nord-ouest*, Paris, 1886, p. 492). The Eskimo often leave the dead on the ground, though some of them have learnt to use 'grave-boxes' (*11 RBEW*, 175, 193; *18 RBEW* [1899] 312). The Kamtchadals used to throw away their dead to be devoured by dogs. The Chukchi, Gilyaks, and other Siberian tribes followed the same practice, or else disposed of the corpse by cremation; the Yakuts, however, used to put them in boxes and suspend them from the trees or put them on rough scaffolds in the forest (*Jesup Exped.* vi. 104; *RHR* xlvi. 211; *Amer. Anthr.* viii. [1906] 289). In New Caledonia the dead are placed on the summit of a cliff, on a bed of leaves or dried grass (*L'Anthrop.* xiii. [1902] 547).

The necessity of sub-aerial deposit either on the ground or on scaffolds or in the branches of trees has been, in some at least of these cases, forced upon the survivors by the condition of the soil. In the higher latitudes of the Northern Hemisphere the ground is often frozen for months, and it is impossible during that period (especially with the rude tools available) to dig. Even with the appliances of an advanced civilization this is found impracticable in Canada. Canadian settlers often have to content themselves during the winter with placing their dead above ground in a mortuary, and leaving them there until the spring. They only follow the example of some of their aboriginal predecessors and neighbours.

The Naskopies still 'suspend their dead from the branches of trees, if the ground be frozen too hard to excavate, and endeavour to return in the following summer and inter the body' (*11 RBEW* 272).

(*c*) Cave burial.—An archaic and widely distributed mode of burial is in caves.

Human bones, remains of sepulture of the Neolithic people formerly inhabiting Liguria, have been found in caves at various points along the Riviera, notably under stalagmitic floors in the Bas-Moulins cave at Monaco (*L'Anthrop.* xii. [1901] 7). Among examples of a much more recent date, but still very ancient, is that of the Hebrews (*e.g.* the cave of Machpelah, Gn 23^{19} 25^{9} $35^{27ff.}$ 50^{13}), and the custom is not yet wholly extinct in Palestine. In the Moluccas, the Philippines, the Sandwich Islands, as well as in the coral islands of the South Seas (both Melanesian and Polynesian), where caves abound, the practice prevailed of depositing the bodies, or, after desiccation, the bones, in caves and clefts of the rock often all but inaccessible. In some of the islands the custom is now restricted to the remains of chiefs, and the motive is said to be to prevent desecration by enemies, though probably it was at one time more general (Ellis, *Polyn. Res.* i. 405; *JAI* x. 141). Similarly, among the Betsileo of Madagascar the chiefs are deposited in caverns (*Mad. au xxe siècle*, 290, 291). In Africa it is found sporadically from north to south; it was the common practice of the Hottentots and the special privilege of the kings of Quissanga and Quiteve (Kolben, 313; *Rec. S.E. Africa*, vii. [1901] 378, 382). On the western side of the North American continent it has been recorded of many tribes from Alaska to Mexico, as well as in the Aleutian and West Indian islands. Among some of the Pueblo peoples of Arizona and New Mexico the practice seems a relic of the former habitation of the caves. When they were occupied as dwellings, the dead were frequently buried in the furthest recesses; and the same caverns or other clefts and shelters of the rocks have been retained by a very natural conservatism as the appropriate dwelling-places of the dead (*13 RBEW* 348, 355; *Am. Anthr.* vi., new ser., 656).

This method of disposing of the corpse, rude as it seems, has been capable, as in ancient Egypt, of developing grandiose sepulchres, by artificial excavation and the provision of pompous doorways, and thus of influencing the development of a national architecture. Even where, as in Sicily, such a result was not attained, artificial excavation was frequently practised. Enormous numbers of such tombs, attributed to the Siculi, have been explored in the mountain of Pantalica near Syracuse (*L'Anthrop.* xii. 190). It is obvious that cave burial, whether in natural or in artificial hollows, can be adopted only in rocky or mountainous regions, and then only where the geological formation is suitable. A mode of burial widely extended in Africa and found in other parts of the globe is that of sinking a perpendicular shaft in the soil and excavating, at or near the bottom, a side-vault in which the body is placed. These graves have lent themselves to the suggestion that their form is derived from a previous practice of cave burial. They are actually found in some of the Fiji Islands concurrently with burial in caves (*JAI* x. 144). Ordinary chamber-tombs excavated in the rock are found in Crete, as on the mainland of Greece. Side by side with them at Knossos and belonging to the same period, classed by Evans as the Third Late-Minoan Period, have been found also excavated in the soft rotten limestone both simple pit-graves and graves consisting of a shaft and side-vault; as though all three types of grave had diverged from one common original, and that original a natural cave. The conclusion, so far as regards the last-named type, is perhaps rendered all the more probable by its recurrence elsewhere around the Mediterranean, where burial in natural or artificial caves was practised (*Archæologia*, lix. [1905] 391 ff.).

(*d*) Water burial.—To fling a body into the sea or a river is one of the easiest ways of getting rid of it. That doubtless is the reason for thus disposing of the corpses of slaves or common people (see above, VII. 2 (*b*)), in various places. But it does not account for every case of water burial. Where the object is not merely to get rid of the body, but to prevent the deceased from returning to plague survivors, probably few more effectual means are known to peoples in the lower culture than to throw the corpse into the water; for water is usually esteemed a barrier

to maleficent spirits, and particularly to the dead.

The corpses of pregnant and barren women (who are naturally evil-disposed), and of lepers, are regarded in Tibet as specially tabu. They are, accordingly, either thrown beyond nine hills and dales, or packed in horse- or ox-skins and thrown into the waters of the great Tsang-po River (Chandra Das, *op. cit.* 255). The Guayakis of Paraguay and the Cherokees commit their dead to the waters of the nearest river; the Gosh-Ute of Utah sink them in springs, possibly for fear of the departed spirit (*L'Anthrop.* xiii. 658; *1 RBEW* 180).

This may have been one of the reasons for the occasional practice of water burial found in various parts of the world, as among the sect of Bhagar Panthis in the Panjab (*Rep. Cens. Ind.*, 1901, xvii. 168), or some of the West African tribes (Nassau, 233). On the other hand, water burial is sometimes regarded as an honour.

One who is specially beloved or beautiful is, in the Bismarck Archipelago, not buried but laid in a boat pulled far out to sea, and there the boat and its contents are sunk (Thilenius, *Ethnog. Ergeb. aus Melanesien*, ii. [1903] 230). To fling the dead into the sea was quite common in Polynesia. The Chibchas of New Granada were reported by Oviedo to lay their chiefs in golden coffins and sink them in the water (*Int. Arch.* xiii., Suppl. 56). The corpse of the slain Baldur, with his wife and steed, and the gift of Odin's ring Draupnir, was laid in his ship upon a funeral pyre and launched forth blazing on the sea. Myth as it is, this tradition doubtless records the striking spectacle of many a Viking's funeral.

In various parts of the world earth burial or sub-aerial deposit in canoes is found—a relic perhaps of earlier exposure to the waves. Thus it was not infrequent for a Viking to be laid in his ship and the howe heaped over it.

(*e*) Inhumation.—The position of the grave is determined by various considerations. Among some peoples there is no fixed rule; and it seems that the dead may be buried anywhere, according to convenience or the caprice of the survivors. This is said to be the case with some of the Bantu tribes, as the Matabele and the Barotse. The latter, however, bury in secret, from which we may probably infer that the object is to leave no clue to the burial-place lest it be violated by wizards (*JAI* xxiii. 84; Béguin, *Ma-Rotsé*, 1903, p. 115). In some of the Moluccas, graves are scattered everywhere outside the villages (Riedel, 81, 225). The Chilcotin are said to bury wherever the death occurs (*Jesup Exped.* ii. [1900–8] 788). Among the Chinese and other nations in the Extreme East the situation of the grave is determined by diviners, whose art is called in Chinese *fung-shui*, defined by de Groot (iii. 935) as 'a quasi-scientific system, supposed to teach men where and how to build graves, temples, and dwellings, in order that the dead, the gods, and the living may be located therein exclusively, or as far as possible, under the auspicious influences of Nature.' The practice is, therefore, founded on the conviction that the dead dwell in the grave exactly as the living dwell in a house. This conviction is by no means confined to China and the surrounding countries; it is explicit or implicit everywhere in the lower culture. The imagination clings to it; and mankind has found it extremely difficult to get rid of the notion, though it has continually come into collision with the teachings of the higher philosophies and religions. Accordingly, the dying man's own wishes are often consulted as to the place of his burial, or it is determined after his death, as in the Babar Archipelago (Riedel, 359), by supposed movements of the coffin in answer to questions put to the corpse. This is, of course, a species of divination.' It is more commonly decided by the manner in which the dead are regarded, that is to say, whether fear, on the one hand, or affection and hope for future benefits, on the other hand, predominate in the minds of the survivors. But see § XIX.

(i.) Children.—As an illustration of the latter motive may be taken the wide-spread custom of burying children in, or at the door of, their mother's hut. A comparison of the reasons alleged for so doing, and of other practices and beliefs, leads to the conclusion that the object is to obtain a re-birth of the child.

The custom is found in Africa East and West, in the Panjāb, and among some of the Naga tribes of Assam, in Java, in the Andaman Islands, among the Karo-bataks, the Creeks, the Seminoles, the Chols of Southern Mexico, and in several of the Molucca Islands. On the island of Keisar it is suggestive that children are buried under their parents' sleeping-places, while in the Aaru Archipelago they are not buried, but hung up in the house above their parents' beds. In Tibet a new-born child who dies is kept in the house or on the roof. The ancient Italians buried their dead children under the eaves of the house; and to this day the Russian peasant buries a still-born child under the floor (Hartland, *Prim. Paternity*, i. 227; *JAI* xxvi. [1897] 200; *1 RBEW* 116; Starr, *Notes Ethnog. S. Mexico*, ii. [1902] 74; Riedel, 421, 267; Chandra Das, 220).

(ii.) Others than young children.—Burial or sub-aerial deposit at a distance prevails among the Australian tribes and among the Negroes and Bantu.

It is, however, far from being the universal practice among either the Negroes or the Bantu. Among both these races the head of the household is frequently buried within his own settlement or compound, or, as among the Kaffirs of South Africa, in the cattle kraal. Various tribes of Negroes bury in or near the village. On the Ivory Coast several bury under the hut (Clozel and Villamur, 118, 157, 321, 336, 410, 467). With some of these, as well as the West African Bantu, burial under the floor of the house, or in the kitchen-garden adjoining, is a distinction reserved for a chief, or a specially beloved relative. In others the custom seems more general, and the head of the household at least is usually buried in his own house (Nassau, 61; Leonard, 159; Spieth, 256, 634, 702, 752; *JAFL* ix. 17). The same rule applies to the Nilotic and Bantu tribes on the other side of the continent (Johnston, 554, 632, 693, 715, 748, 779, 793, 880; Casati, *Ten Years in Equatoria*, Lond. and N.Y., 1891, i. 303; Gessi, *Seven Years in the Soudan*, Lond. 1892, p. 32; *JAI* xxxii. 265; van der Burgt, *op. cit.*, art. 'Enterrement'; Werner, 157, 163, 165).

In Madagascar the practice differs with the tribe. The Betsimisaraka, Sakalava, and other tribes bury at a distance in solitary places, and their graves are greatly feared, while the Betsileo and Hovas bury on the roadside and even between the dwellings (*Mad. au xx^e siècle*, 278).

A similar diversity is found among the forest and pampas tribes of South America, some of which bury under the hut. The Uananas bury on small islands in the river (water is notoriously difficult for the dead to cross) or else in the hut occupied by the deceased. But in the latter case the hut is deserted (*Int. Arch.* xiii., Suppl. 85). The motive in both is obviously fear. In North America, tribes like the Hupa, Wichita, Nez Percée, Shuswap and Thompson Indians, to mention no more, laid their dead near the village or encampment. Some, like the Creeks and Seminoles, buried them under the house. Others, such as the Nomlaki of California, buried them at a distance. The Zuñis, who, like other Pueblo tribes, probably in former times buried their dead in their cave-dwellings, still pursue the practice in their modern houses on the mesas (*1st RBEW* 336, 345, 346, 365). Many of the islanders of the Eastern Archipelago and the Pacific Ocean bury in the dwelling of the deceased; but there is no uniform practice. In the interior of Viti Levu (Fiji), for instance, in the province of Ra, many persons were buried before the threshold of the house, or in case of men under the clan dormitory; elsewhere the dead are buried at a distance because they are feared (*Anthropos*, iv. [1909] 88, 96). In Assam the grave is dug in front of the house (*JAI* xxxvi. [1906] 96). In ancient Assyria and Babylonia the ordinary dead were buried under the floor of the house (*ARW* x. 105). What looks like a relic of the same custom is found among the Lolos of Western China: the day after the funeral a hole is dug in the death-chamber, and a formal prayer offered that the star of the deceased will descend and be buried in that hole. It is believed that if this were not done the star would fall and possibly hurt some one (*JAI* xxxiii. 103).

The burial-place is frequently in a grove or thicket, afterwards shunned as sacred. Chiefs or medicine-men, like Bantu monarchs and Buriat shamans, are, in particular, recipients of this honour. Chiefs and priests on the island of Rotuma are buried on the hill-tops (*JAI* xxvii. [1898] 431, 432). On a hill or a headland a noble Norseman loved to have his howe or barrow. The Arapahos, the Wichita, and other North American tribes lay their dead commonly on hills or bluffs.

Among many peoples each family or each clan has its own place of burial, whether the mode of disposal of the dead be by cave burial, in

humation, sub-aerial deposit, or cremation. This was the custom of the ancient Greeks (Rohde, i. 229) as well as of the ancient Hebrews; and it is continued to this day in the Holy Land (Wilson, *Peasant Life*, 158). Nor is it confined to a comparatively high stage of civilization. It is a natural and by no means uncommon outgrowth of the feeling of kinship; and, where ancestor-worship exists in a developed form, it adds strength to it by concentrating the cult about one spot.

The Chinese custom dates from barbarism; and the practice of *fung-shui* has never necessitated its abandonment (de Groot, iii. 829). Every clan of the Baganda, and even of the Muhammadanized Swahili, has its burial-place (*JAI* xxxii. 51; Velten, *Sitten und Gebräuche*, 1903, p. 259). Every family of the Chechens in the Caucasus and of the Barea and Kunama in Abyssinia has its vault (*Anthropos*, iii. [1908] 734; Munzinger, 528). On the Gold Coast, among the Tanala of Madagascar, the Nicobarese, and some of the British Columbian tribes the families have common burial grounds (*JAI* xxxvi. 183; *Globus*, lxxxix. 361; *Int. Arch.* vi. 24; *Jesup Exped.* i. 336, v. 54). The Uralis of Southern India have a common burial-ground at Nirgundi, in which all are finally laid to rest; but each sept has its own burial-ground close to its village, where the preliminary obsequies are celebrated (Thurston, *Castes and Tribes*, vii. 256). The Chams of Further India and the Khasis of Assam practise cremation; their ashes are deposited in the family sepulchre (Cabaton, *Chams*, 48; Gurdon, *Khasis*, 1907, pp. 132, 140). As society becomes more highly organized, the custom contributes materially to the family pride, and it becomes emphasized by kings and nobles. The kings of ancient Scythians and modern Kaffirs, Tongan chiefs and English peers, agree in displaying the same vanity.

Where, strictly speaking, there is no family sepulchre, sometimes, at least, the body is buried upon the property of the deceased or his family.

The ancient Norseman's howe was upon his own land. The Quiché of Central America buried in their maize fields (*Int. Arch.* i. [1889], Suppl. 71). The Buquidnones of the Philippines and the Mossi of West Africa are laid in their own cultivated fields (Sawyer, 347; *L'Anthrop.* xv. [1904] 687); and the Chams have their family cemetery close to their richest cornfield (Cabaton, *l.c.*). In these cases probably the deceased is thought to guard the fields and enhance their fertility. Among the Igorots, however, where the dead man is buried in his own cleared land, unless he has selected some other spot, the place is abandoned (Sawyer, 313). The modern Corsicans lay their dead in the earth or in a little building called a chapel on their own property (*RTP* xii. [1897] 523).

Other distinctions, as has already been noted, are often made between the dead. On the island of Keisar, one of the Moluccas, a great nunu-tree stands in an open square in the centre of every village. Beneath that tree the forefathers sleep, and the dead of rank are still buried around them. It is thus a sacred place, and feasts are held there (Riedel, 422). The same character attaches to the Men's House, or Bachelors' House, necessary to a village in other islands of the East Indies; and often there, if not every man, at least every important man, is buried, and his bones are preserved after the final rites (cf. *Globus*, xciv. [1908] 166, 168).

(*f*) Preservation in house.—Many peoples preserve the body above ground in the house, either with or without previous desiccation or mummification. This practice originates in a rude and archaic condition of society, and is frequently abandoned, as civilization progresses, in favour of temporary or permanent burial.

Thus in Tahiti, a native tradition, which doubtless represents something like the real sequence of custom, speaks of a period when the dead were allowed to remain on a kind of stage in the house in which they had lived, and which continued to be occupied by the survivors. But by and by separate houses were built for the dead—small temporary buildings, where they were laid, and whence they were drawn out to be exposed to the rays of the sun. The corpse was visited from time to time by the relatives, and was rubbed every day with aromatic oils. The bones were ultimately deposited in the family *marœ*, or temple, or else buried, except the skull, which was wrapped in native cloth and preserved, often suspended from the roof of the dwelling-house (Ellis, *op. cit.* i. 404).

Notwithstanding all reverence for the dead, and all precautions in the shape of desiccation and perfumes, the custom of keeping the body in the dwelling during the process of decay must have been found intolerable. Tribes to which immediate burial was repugnant therefore usually adopted one of two courses: they abandoned the hut to the corpse, or they removed the corpse until dissolution had been carried far enough to render it no longer offensive.

So the Wagogo of East Africa keep the corpse of a man of rank in the hut until it putrefies, while they mourn and drink pombe. It is then placed on a scaffold in the open air until only the bones are left, when they at last are buried (Steinmetz, 211). The Attiwandaronks, or Neutrals, of North America kept the body in the house 'until the stench became intolerable.' It was then placed on a scaffold in the open air, that the work of decay might be there completed. The remaining flesh being scraped from the bones, the latter were afterwards arranged on the sides of the cabins in full view of the inmates until the Feast of the Dead, the great day of general interment periodically held (Hale, *Book of Rites*, 1883, p. 72). The Muong or Mon of Tongking kept the corpse in a coffin for three years in the house, before the altar of ancestors; but they palliated the results of dissolution to some extent by fixing a bamboo tube in the lid of the coffin and carrying it up through the roof to permit the foul gases to escape (Lunet, 352). In West Africa the Baoulé embalm and preserve the corpse in the hut for months or years. In spite of embalmment, the odour for three weeks is horrible. It then gradually diminishes, and by the end of two months the corpse presents the appearance of an Egyptian mummy. In this state it is kept until the convenient time for the final rites, with which it is laid in a grave under the hut (Clozel and Villamur, 115, 118). The Yumbos of South America also mummify their dead, and hang them up in the house under the thatch (*Int. Arch.* xiii., Suppl. 79). In the Gilbert Islands the body of a king or warrior is often wrapt in mats and preserved on one of the cross-beams of the hut (*ib.* ii. 43). On the other hand, the Saccha of South America lay out their dead in the house, pull down the house over him, and abandon it to him (*Int. Arch.* xiii., Suppl. 85). The practice of abandoning the hut to the dead is followed in many other places. Its motive is fear—whether of the death-pollution or of the ghost is probably no more than a question of terminology. See §§ IV. 3, VI. 9, XVIII., XIX.

(*g*) Cremation is a mode of disposal of the dead that has been adopted from time to time by nations widely scattered over the earth. It is the ordinary mode in India among the aboriginal peoples, as well as among the Hindus; it extends through Further India to Tongking, and has obtained a footing by Hindu influence on some of the East Indian islands. It is practised by many tribes of Siberia and of the Pacific slope of North America. In ancient times it was also practised widely (though perhaps not exclusively) by the tribes of the North American plains and of the Mississippi basin and Atlantic shores. It is customary among some of the northern tribes of South America, and among the Melanesians of North New Mecklenburg and New Hanover, two of the islands of the Bismarck Archipelago. The funeral mounds of Europe witness to its use in pre-historic times, from the south of Russia to the British Isles. The practice seems to have begun on the Continent in the Neolithic age. It became general during the Age of Bronze, and was continued right down to the Christian era, and among many tribes probably down to their conversion to Christianity. To the northern invaders who founded the dynasties and the polity predominant during the Homeric age of Greece we may with some confidence attribute the introduction into the Eastern Mediterranean of cremation, foreign as it was to the usages and beliefs of the Mycenæan age. From Greece, or directly across the Alps, it spread to Italy; and, though among the Romans it never succeeded in entirely ousting the prior practice of inhumation, it became throughout the Roman Empire the fashionable mode of disposing of the dead among the official and wealthier classes. It is sporadic or occasional in many other parts of the world.

More than one reason may have conduced to the practice of cremation:

(i.) Tribes without a settled abode may have found it convenient, if they desired to carry about the remains of their dead, or to remove such remains beyond the possibility of desecration by their enemies.

Some such motives perhaps operated in the case of the Cocopa Indians, who occupy the lower valley of the Colorado River. By the annual floods of the river they are driven from the bottom lands to the higher grounds. 'The annual irrigations are of

great regularity, and have affected the habits of the tribes in various ways.' On the death of an adult, his effects are collected for distribution among others than his relatives. The body is laid on a pyre beside his hut; and, after all the claimants have been satisfied, the corpse and the rest of his goods are burnt, together with the hut and any neighbouring huts belonging to the clan that may happen to catch fire. The survivors then abandon the site (*Amer. Anthrop.* iv., new ser. [1902], 480). The Man Cốc are an immigrant people of Northern Tongking; and, though they have been settled as cultivators of the soil in the mountainous region of that country for many generations, their villages are still constantly removed from place to place, to suit their rudimentary method of agriculture. They formerly burnt their dead, and carried the ashes with them in their migrations. But the custom has been generally given up, because the accumulated ashes of generations became an intolerable burden. It continues, however, in the west of the Red River basin, where the bones, after incineration, are placed in earthen jars (Lunet, 246). The Northern Maidu cremated only those who died far from home; and in such cases the ashes were taken home and there buried (*Bull. Am. Mus. Nat. Hist.* xvii. 242). A similar practice was recorded among the Algonquins (Charlevoix, vi. [1744] 109), among the Haida of Masset (*Jesup Exped.* v. 54), and other tribes.

Many peoples hold that it is possible to work witchcraft by means of the bodies of the dead. It is probable that this may have been at least a contributory cause, inducing migratory tribes to burn their corpses.

(ii.) Another very powerful motive for cremation is the desire to be quit of the ghost. Various means are adopted for this purpose (see XI.). Cremation is only one of these, but it is not the least potent. This is best observed where cremation is exceptional, as on the continent of Africa.

Among the Yaos and Mang'anja a woman who was accused of witchcraft, and who refused the poison-ordeal, was burnt (Macdonald, *Africana*, 1882, i. 104). In West Africa burning is especially the mode of disposing of bodies of criminals, by which are meant persons accused of witchcraft, some of whom are also burnt to death (Nassau, 234). The Wakulwe and other tribes in the neighbourhood of Lake Tanganyika believe that a month or two after death the process of decomposition brings back the bones to life. A mysterious being called Nkiua animates them; and by means of the new body thus formed it sets about torturing, and even killing, some other member of the family of the deceased. In order to prevent this, the corpse is dug up and burnt to ashes. Not a bone must be left, for even the smallest would suffice to give shelter to the Nkiua. A witch-doctor, or diviner, presides at the ceremony, while an assistant aspergea the body with a sort of holy water, saying, 'Sleep in peace, sleep in peace' (*L'Anthropologie*, xvi. [1905] 375). The Nkiua thus roughly corresponds with the Vampire of Europe, whose misdeeds were often stopped by a similar process of burning. But there is this difference that, whereas in Europe only some persons were credited with becoming vampires, among the African tribes in question all corpses are exhumed and cremated.

We have already seen that persons who die an evil death are denied the ordinary rites. Among such persons are usually reckoned those who die of smallpox, in childbed, by murder or suicide. In Siam the corpses of these persons are treated precisely like the corpses of the Wakulwe. It is alleged that if this were not done the spirits of the departed would return and torment their friends (*Globus*, xiv. [1868] 27). The Chingpaws of Burma bury; but burning is simulated in the case of those who die of smallpox or by violent deaths (Anderson, p. 131). Among the Kols of Chotā Nāgpur, where cremation is the ordinary mode of disposing of the corpse, the body is burnt, and the remains of the bones are picked out and put into an earthen pot. This is carefully closed, taken home, and hung on a post until the final ceremony, which does not take place until the *hārbōr* feast. We are expressly told that in this way the deceased is prevented from entering his former dwelling (Hahn, *Einführung in das Gebiet der Kolsmission*, 1907, p. 83). The same fear of the ghost is visible in the ceremonies at the cremation of the former kings of Kandy. Some of the calcined bones were collected and put into an earthenware pot, which was closed and sealed. The remaining ashes were buried. The pot was placed on the head of a man, who was masked and covered all over with black, and was carried by him to the *mahawelle-ganga*. At the ferry the masked bearer was put in two canoes lashed together and covered with boughs in the form of a bower. These canoes were drawn to mid-stream by two men swimming, who when they reached that point pushed them forward and hastily swam back. The masked man then took a sword in one hand and the urn in the other, cut the urn in two, and at the same moment plunged into the stream. Diving under, he came up as far down stream as possible, swam to the opposite side, and disappeared. The canoes were allowed to float away (Davy, 162).

It has already been mentioned that the ancient Pueblo tribes of the south-west of the United States buried their dead in their cave-dwellings. Concurrent with this custom, however, there was another, by which the dead were cremated. The co-existence of these two customs was held by Cushing, one of the most careful and acute of observers, to be due to the coalescence of two peoples —namely, of Yuman and Piman tribes of the lower Colorado region—who practised cremation, with the true Pueblo tribes, who practised cave burial. The Zuñis have now abandoned cremation, if they ever practised it. 'They insist that, should they incinerate the bodies, there would be no rain, for their dead are the *uwannami* (rain-makers). Incineration, they believe, would annihilate the being' (*13 RBEW* 365; *22 RBEW* [1904] 175; *23 RBEW* [1904] 305).

(iii.) Thus cremation is an effectual protection of the survivors against haunting and injury by the dead. It is more than this: it thoroughly frees the ghost from the bonds of this life, and fits it for union with the society of the departed in the life beyond.

The Wayana of French Guiana burn their dead, 'that the soul may fly up to heaven on the smoke' (*Int. Arch.* xiii., Suppl. 87). Among the Laotians of Further India the higher classes are cremated encased in a puppet representing a mythical bird called Hatsadiling. It is said that, in order to obtain Nirvāna, the bird must be killed. Accordingly, a woman ceremonially shoots an arrow at it; and then the fire is lighted. There is, of course, a mythological tale of the slaughter of the bird in the first instance by a heroine who was an incarnation of a goddess; and the woman who shoots the ceremonial arrow pretends to be a descendant of the goddess. But there can be little doubt that Hubert's conjecture is correct, that the myth is of secondary formation, and that the bamboo bird really convoys to the other world the soul when released, together with it, by burning (*L'Année Soc.* ix. [1906] 238). In this case the shooting would be the ritual slaughter of the bird, in order to put it into the same condition as the deceased. Among the Haida of Masset, persons killed in battle or by any violent means, were believed to go, after death, to the abode of a supernatural being named Tāxet, which was suspended in the air. To enable them to do this their bodies were burnt: otherwise they would be refused admission. The precaution, however, seems to have been neglected with regard to friends killed in war at a distance from home—contrary to their practice in other cases. The practical difficulties were probably too great, and the custom may have been in decay (*Jesup Exped.* v. 54). The king of the Batutsi in East Africa was never buried. His body was exposed in his hut until putrefaction had advanced so far as to show the first worm. The hut was then set on fire, and was burnt with all its contents. When the conflagration came to an end and nothing was left, it was believed that the king had returned to heaven, whence, according to the tribal legends, his ancestors had been exiled, and whither this was the prescribed method of returning (*Anthropos*, iii. 6).

But the ghost is often conceived of as inhering in the calcined bones, and not completely disposed of until some further ceremony has been performed. The rites at the cremation of the king of Kandy are an example of this. Indeed, it is common among the tribes of India which have been influenced by Brāhmanism to throw the ashes into some sacred water, as a means of uniting the dead with the fathers. Elsewhere they are put into an urn or other receptacle, and buried, or kept in the house. This custom is familiar to us among the classic nations of antiquity. The covers of the urns were sometimes removable, in order to placate the spirit of the dead by periodically pouring libations upon his ashes.

VIII. **The grave.**—1. *Shape of the grave.*—On this subject something has been said above in dealing with cave burial. The grave is the residence of the departed; and efforts are not wanting in various parts of the world to render it as comfortable as circumstances permit. As already pointed out, the Chinese practice of *fung-shui* is traceable to this motive. It is possible also that the widespread practice of abandoning the hut to the dead, whether buried beneath it or exposed above ground, may have the same motive, in addition to that of escaping the infection of death. The destruction of the hut above the corpse, which frequently takes place, need not preclude it, since it is a common principle that things intended to be of service to the dead must themselves be killed by breakage, or even burning. Where burial does not take place in the hut, a hut or shelter is often erected over the grave.

This is the practice in lands as far apart as South America and the Philippines or New Guinea (*Int. Arch.* xiii., Suppl. 79; Sawyer, 203, 355; Chalmers, *Pioneer Life*, 1895, pp. 53, 110, 210); while, among the Baganda and other tribes of East Central Africa, kings and chiefs at least are thus honoured (*JAI* xxxii. 44, 92; Cunningham, 31, 224; van der Burgt, art. 'Enterre-

ment'); and this hut, as the abode of the deceased, becomes his shrine or temple, where his spirit is invoked. In this district of Africa miniature huts or shelters over the graves of lesser persons are not uncommon. By the Leodu the miniature hut is erected explicitly as a shelter for the spirit, which is supposed to remain seated on the grave for two months after burial (Cunningham, 337). Elsewhere, as in New Guinea, the shelter is as much for the convenience of the mourners, who go thither to weep, as of the departed (Chalmers, 110).

The underground resting-places of the dead are also provided with regard to their comfort, often to magnificence.

The Ewhe of West Africa bury beneath their huts. Rich people are buried deeper than poor, and the cavity prepared for them is as large as a room (Spieth, 634). The pre-historic graves of Crete, circular chambers of stones covered with mounds or domes, are modelled on the huts of the living (*ARW* vii. [1904] 265, viii. 520). The same intention is apparent in Etruscan tombs. So far, indeed, was it carried that, when cremation was adopted, the urns in which the ashes were placed were miniature huts. But the most striking and splendid examples of tombs as the dwelling-places of the dead are found among the ancient Egyptians (see § VII. 3 (c)).

Externally the shape of the grave has varied as much as its internal arrangements. In Europe the pre-historic dead of rank and importance were buried beneath round or elliptical barrows, frequently of huge dimensions—a custom found in many other parts of the world. These barrows are raised of stones or earth, and enclose cists of large slabs, within which the bodies were deposited. And they are generally surrounded with a trench from which the earth for the barrow has been taken, sometimes also with circles of stones. Where an elaborate structure of this kind is not made, it is quite common to cover the grave with a heap of stones, or with a simple mound of earth. Where, as among many tribes, the grave is shallow, the stones, or often (according to the nature of the country) a pile of branches, may be intended chiefly to defend the body against wild carnivora. Against human beings they are more often defended by fences, or smoothed and levelled down so as to remove the traces of burial, as is the practice of various South American tribes (*Int. Arch.* xiii., Suppl. 92, 97; *Globus*, xc. 305). Where mounds or huts are erected over graves, they become, with growing civilization, pyramids of wrought stone and mausolea.

2. *Position of the corpse.*—It is a very general custom in the lower culture to bury the dead in a crouching or squatting position. This is the natural position of rest during life for peoples who have not the civilized appliances of chairs, tables, and bedsteads. It is accentuated in the case of the dead by binding the body, sometimes even breaking the bones for that purpose. The body thus prepared is usually laid on one side in the grave, just as the skeletons in Neolithic and later graves in this country are found. Sometimes, however, it is placed seated or lying on the back.

Examples of both have been described among the West Australian natives (Calvert, 41, 42). Extended burials (lying at full length) are not so common. At Knossos, bodies have been found both flexed and extended. Extended burials were customary among the pagan Anglo-Saxons. The Wichita of North America (Dorsey, *Wichita*, 1904, p. 13), the Brignans of the Ivory Coast (Clozel and Villamur, 467), and the Yanadis of Southern India bury in the same attitude, but the last with the face downwards (Thurston, vii. 426).

The direction in which the body lies in the grave differs among different peoples, and even among the same people. In the pre-historic graves of this country, as well as of other countries, skeletons have been found quite differently orientated, though sometimes in the same barrow; and the explanation of the variations is still to seek. The Wotjobaluk of what is now the Wimmera district of Victoria, in the Commonwealth of Australia, had an elaborate system by which everything in the world was supposed to be divided among the totem-clans. Every totem had its own point of the compass; and a man was buried with his head towards the point of the compass appropriate to his totem (Howitt, 453). This arrangement is extremely rare, if not unique. More usually the direction is determined by either the rising or the setting sun.

Thus the Ngeumba of New South Wales bury with the head towards sunrise (Mathews, 72); the Awemba of Central Africa (*JAI* xxxvi. 157), the Maidu of California (*Bull. Am. Mus. Nat. Hist.* xvii. 243), and the Wichita bury with the head turned to the east. On the other hand, the Lillooet (*Jesup Exped.* ii. 269), the Mancagnes of Senegambia (*L'Anthrop.* xvi. 63), and the Brignans (Clozel and Villamur, *l.c.*), agree with the Christian populations of Europe in burying in the reverse direction. The Solomon Islanders bury with the feet turned inland (Codrington, *Melanesians*, Oxford, 1891, p. 254). Tribes which preserve a tradition of migration to their present habitat, frequently bury with reference to the direction from which they believe their ancestors to have come. For this reason some of the Bantu tribes of South Africa bury so as to face the North (Dannert, 3; Kidd, 248). This practice seems to be connected with a belief that after death the soul journeys back, as among the Miao of the Chinese province of Kwei-chow (*Anthropos*, iii. 409), to the ancestral seats of the race. Among the Wanyamwezi of East Africa a man who dies in a strange place is buried with his face to his mother's village (Burton, *Lake Regions of C. Afr.* Lond. 1860, ii. 25). Muhammadan peoples bury so that the dead may face Mecca.

3. *Coffins.*—The corpse is further defended against external influences by a case or coffin. In the early stages of culture a coffin is wanting; and, if it is deemed desirable to protect the body from the earth, this is done by means of the niche or recess at the bottom of the grave-shaft so common in Africa, or a covering of boughs is laid over it before the earth is thrown in. Even yet some peoples in a comparatively high stage of civilization reject a coffin. Wood is the usual material for a coffin. Originally, probably a hollowed tree-trunk, as still among the Niamniam (Frobenius, 410), it has evolved into elaborate forms, painted, as among the Ibouzo on the Niger (*Anthropos*, ii. [1907] 102), or carved, as among the Eskimo and Indian tribes of the North-West of America, and the Dayaks of Borneo. These carved coffins or grave-boxes, however, are not intended to be put under ground. In this connexion the richly carved sarcophagi of late Roman and early mediæval times will be recalled.

A very general custom prevails in South America, where the art of pottery is developed, of putting the dead into large urns. In pre-historic Crete it was a well-known practice to enclose the body in a terra-cotta chest called a *larnax* (*Archæologia*, lix. 396–400). In Japan, bodies were often buried in sarcophagi of wood, stone, or terra-cotta (*Archæologia*, lv. [1897] 474). The Chinese, when, as often happens, especially among the rich, the dead are disinterred to be buried elsewhere in accordance with the demands of *fung-shui*, place the bones in large earthen jars (de Groot, iii. 1058; Lunet, 90). The Tagbanuas of the Philippines bury children in jars (Sawyer, 313). Under the floors of pre-historic temples in Palestine numerous remains of new-born children have been found buried in jars (Frazer, *Adonis*[2], 1907, p. 82). The Balearic Islanders, according to Diodorus, cut up the corpse, put the pieces into an urn, and erected a cairn of stones over it (Diod. Sic. v. 18). The bones, after being denuded of their flesh, were buried in urns by many of the tribes inhabiting what is now the United States (*Amer. Anthr.* vi., new ser. [1904], 660). A similar practice is recorded by a Chinese traveller in Tibet (*ZVRW* xx. [1907] 115). And the Kukis of Assam, after the body has undergone preliminary decomposition, clean and preserve the bones in a vase, 'which they open on all important occasions, pretending that in thus consulting the bones they are following the wishes of their deceased relative' (*ARW* xii. [1909] 448).

The burial of cremated bones in urns has been common wherever cremation was practised by peoples acquainted with the art of pottery. Burial in ships or boats has already been referred to. Sometimes, as among the Sinsí of north-western Brazil, a coffin is fashioned out of the canoe of the deceased by cutting it in two and placing the body between the two halves (*Globus*, xc. 327). Lighter materials are often employed for the coffin. On the Gold Coast it is made of wicker-work, reeds, or bark (*Journ. Afr. Soc.* vii. [1908] 202). On the other hand, more than one coffin is sometimes employed in the case of a wealthy or important personage. In this wasteful practice African barbarians agree with the cultured peoples of Europe.

Nor is the object of a coffin always, or entirely, to protect the body. Possibly its original intention was to protect the living from the visits of the dead.

This was expressly alleged to Nelson by one of the western Eskimo as the reason for the grave-boxes in which the dead are deposited on the shores of Bering Strait. 'It was better,' he said, 'to keep the dead in grave-boxes, for it kept their shades from wandering about, as they used to do; besides, it was bad to have the dogs eat the bodies' (*18 RBEW* 312). The latter thus appears a mere subsidiary reason or after-thought.

Although, however, we may suspect the desire of imprisoning the deceased to have been a primary motive in the provision of a coffin, the desire to provide for his comfort in the grave was probably also—perhaps equally—present. That the intention of a coffin is not always to bottle up the soul with the body is clear in such cases as that of the Siusi just referred to, where a hole is left expressly to enable the ghost to go and come, and thus preserve its temporary connexion with the bones until the time for final severance arrives.

IX. Funeral ceremonies.—1. *Time of funeral.*—The length of time required to elapse between death and the funeral varies from a few hours to many months. Sometimes, as in the west of Africa and the Solomon Islands, it may extend for years, while the preparations for duly honouring the deceased slowly proceed. At length, however, the time comes when the solemn ceremony which is to sever the dead from the living is appointed to take place. The night is not infrequently reckoned the appropriate time.

The Hopi of North America conduct their funerals at night (*Ztschr. Ethn.* xxxvii. [1905] 634), the Dayaks of Sarawak at early dawn (*Anthropos*, i. 169). The Manausa of South Africa and the Negroes of the Lower Niger bury in the evening (Holub, *Seven Years in S. Africa*, Lond. 1881, ii. 240; Leonard, 159); while the Basuto dig the grave after dark, but defer the actual burial until just before dawn. It must be performed before the children wake, for they must not see the body (Martin, 90; *Journ. Afr. Soc.* v. [1906] 357).

The reason for the selection of the darkness as the season for burial seems to be that the survivors then cast no shadow, which is often confused with the soul, and hence that the deceased, or any evil-disposed spirit, would have more difficulty in capturing and retaining souls. The souls of children are particularly liable to attack. In the Southern Nicobar Islands, burial takes place at sundown, before midnight or early dawn, expressly in order to prevent the shadows—that is, the souls—of the attendants from falling into the grave and being buried with the corpse (*Ind. Cens.* 1901, iii. 209).

2. *Touching the dead.*—Throughout the rites and observances attendant on death, two motives—two principles—are found struggling for the mastery. On the one hand, there is the fear of death and of the dead, which produces the horror of the corpse, the fear of defilement, and the overwhelming desire to ban the ghost. On the other hand, there is the affection, real or simulated, for the deceased, which bewails his departure and is unwilling to let him go. Thus, though the touch or even the neighbourhood of the corpse causes defilement, there are not wanting peoples with whom it is a ritual necessity for mourners to touch the corpse.

The islanders of Mabuiag, Torres Straits, and the Negroes of Jamaica agree with the people of the British Isles and the neighbouring Continent in this requirement. In Europe the reason usually alleged is that it prevents being haunted by the deceased. The German-speaking population of Iglau in the hills between Bohemia and Moravia kiss the foot of the corpse that they may not be afraid, which we may interpret in the same sense (*ZVV* vi. [1896] 408); while in Montenegro every one who attends a funeral must kiss the corpse (*JAI* xxxix. 94). Among the Bulgarians all relatives kiss the right hand of the corpse, saying, 'Forgive me.' In addition, each of them who was born in the same month bends over it breast to breast and touches its head with his own thrice (Strausz, *Die Bulgaren*, Leipz. 1898, p. 450).

3. *Circumambulation.*—Another ceremony is that of walking round the corpse.

When the Argonauts in the poem of Apollonius Rhodius buried their dead comrade Mopsus, they marched round him thrice, in their warrior-gear. So among the populations of India which practise cremation, the son or other relative who lights the pyre first walks thrice round it. The custom of walking round the corpse, or the grave after burial, is recorded of peoples as far apart in space and in culture as the Central Eskimo, the Russian Lappe, the Buriats, the Shans, and the Arawaks of British Guiana. It has even been recorded as solemnly performed around the coffin of a clergyman's wife in Oxfordshire no longer ago than 1799 (*NQ* xi., 8th ser. [1897], 428). At Beauqueene in the Department of Somme (France), after placing the coffin in the grave the mourners go thrice round the grave backwards (*RTP* xv. 154).

The direction of the procession is probably sunwise, though it is rarely recorded; and it is usually performed thrice. There can be little doubt that the rite is magical, intended to keep the dead in the grave and prevent him from disturbing the survivors. Cf. art. CIRCUMAMBULATION.

4. *Carrying out the corpse.*—More widely spread still is the custom of taking the corpse out of the house by some other way than the ordinary door. Among peoples in the lower culture, from South Africa to Greenland, from Alaska to the farthest limits of Asia, the East Indian Archipelago and the isles of the Southern Ocean, where the huts are not provided with windows the dead are taken out by the smoke-hole, or a hole in the roof or side of the hut specially broken for the purpose, or, as among the Koryaks, by raising a corner of the tent. Where a window exists it is often utilized for the purpose. The hole is closed immediately after the passage of the corpse, the object being to prevent the deceased from finding his way back. As civilization progresses, the custom is gradually confined to the corpses of those that have died evil deaths.

A Norseman who, by his character or the circumstances of his death, was deemed, like Thorolf in the Eyrbyggia Saga, likely to give trouble after death was carried out in this fashion. On the Continent of Europe suicides are frequently thus carried out; and it would seem that the practice is not unknown in England (*NQ* iv., 8th ser. [1893], 189). Of the earlier and more general custom a relic has lately been discovered by H. F. Feilberg in Jutland, in a bricked-up doorway existing in some farmhouses and called the 'corpse-door' (*FL* xviii. [1907] 364). The Matse tribe of Ewhe carry out the body of a priest through a hole in the roof (Spieth, 756). The Wadjagga remove the corpse of a childless woman through a hole in the side of the hut opposite to the door (*Globus*, lxxxix. 200). On the island of Nias the same course is taken with a woman dying in childbed; while the Toba-batake break up the floor of the house (the houses being all built upon piles) and throw down the corpse of such a woman, with imprecations, to men who are waiting beneath to tie it up fast. On the other hand, they take the corpse of an important man out through the wall (Kruijt, *Animisme*, Hague, 1906, pp. 264, 252). All these dead are formidable, either from the manner of death or from character and position.

Among the Masurs of East Prussia and in Bulgaria, when parents lose a succession of children, the last to die is taken out through the window (Töppen, *Abergl. aus Masuren*[2], 112; *ZVV* xi. 268). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, *Prim. Pat.* i. 200). In that case the object is to prevent access by the dead infant to its mother, that she may not bear it again.

5. *Other precautions against return.*—To prevent the return of the dead, it is not enough to take out the corpse by an unusual way. The dead man must be prevented from seeing the way back. It is for this reason that the body is carried out feet foremost—a practice shared by the civilized nations of Europe with the savages of Mabuiag in Torres Straits (*Torres Str. Exped.* v. 248). Or he must be confused and puzzled.

The Christian Indians of Tumupasa agree with the Basuto in changing the place of the door of the hut (*Int. Arch.* xiii., Suppl. 92; Martin, 91). The Atouga swing the corpse to and fro (Werner, 161). The Siamese not only break an opening through the house-wall, but having got the body out they hurry it at full speed thrice round the house (Tylor, *Prim. Cult.* ii. 23). The Chams turn the bier about from time to time, and by marching obliquely they cause the corpse to take the most diverse positions, in order to bewilder the soul and hinder it from returning home (Cabaton, 47). Analogous

practices are found in Europe. In Leitrim the longest possible road is taken to the churchyard (*FL* vii. [1896] 181); and it is probably for the same reason that both in Ireland and in Germany the corpse is carried thrice round the church.

In various places in Europe a number of precautions are observed. The chairs or benches on which the coffin has rested are thrown down (East Prussia; Iglau). The coffin is lifted thrice over the threshold and thrice rested upon it—an indication to the deceased that this is a solemn and final farewell (Styria; Wends; Mordvins). An axe is laid on the threshold or hung over the door as soon as the corpse has passed (East Prussia; Sweden).

Water (in some places the water used in washing the corpse) is thrown out, with or without the vessel containing it, after the funeral procession (East Prussia; Poland; various parts of Germany). In Greece not only is water thus poured out and the vessel broken, but also all the water stored in houses along the route is thrown out after the procession has passed (*JAI* xxiii. 35, 41; Rodd, *Cust. Mod. Greece*, Lond. 1892, p. 124). More than one motive has probably gone to form this custom. Purification may be intended; but the object also is to prevent the return of the dead, for they, like other supernatural beings, have a difficulty in crossing water. In Greece, indeed, the custom of flinging out water is said to ease the burning pains of the dead—a later and probably Christian interpretation.

In Brittany the dead of the commune of Plouguiel are carried across a small arm of the sea called the Passage d'Enfer, instead of being taken by land (a much shorter route) to the cemetery (*RTP* xv. 631). In the same way the Haida carry a shaman to his burial by water, even though the burial-place can be reached more easily by land. It is said that they do not fear a dead shaman like other dead people, but they want 'to handle his things,' and hence, we may conjecture, to pack him off so that he cannot return to interfere with them (*Jesup Exped.* v. 53). In Sweden, linseed is strewn outside the house to prevent the deceased from appearing as a 'wandering spirit.' It is a common belief that supernatural beings must in such a case count the seeds—a task that will occupy them until daylight. The practice of strewing seeds is, in fact, another attempt to puzzle and confuse the ghost. So the Swedes also strew hay-seed on the road and about the grave, believing 'that Satan is thereby deprived of his power over the deceased'—which may be a Christianized form of the superstition (Lloyd, 131, 134). Among the Iban of Sarawak, ashes are strewn over the footprints of the bearers to prevent the soul of the dead man from finding its way back to the house to haunt the living (*Anthropos*, i. 169). The practice would appear to be not unknown in some parts of Europe. A few years ago at Budapest a woman who was supposed to have died in hospital returned home. She was taken for a ghost. The doors were slammed against her, ashes were strewn on the ground, and her husband refused her admittance (*Daily Chron.*, 30 Aug. 1904). The barefooted dwellers on the Congo strew thorns along the path from the house to the grave (*ZVV* xi. 266). In the Solomon Islands 'the return from the funeral is by another road than that along which the corpse was carried, lest the ghost should follow' (Codrington, 254)—a practice likewise followed in Corfu (Rodd, 124). Many peoples erect barriers against the ghost in returning. Thus the Koryaks (who cremate the body) strew twigs around the pyre, representing a dense forest which is supposed to surround the burning-place. An attempt is made to obscure the tracks of the officiant, and a line is drawn across the road, over which the mourners jump and shake themselves. This line is supposed to represent a river. The Chukchi customs are similar. A small cup and the bunch of grass used in washing the corpse are hidden separately on the path: the one will transform itself into a sea and the other into a dense forest (*Jesup Exped.* vi. 112, vii. [1904-9] 528). It should be pointed out that it is by such means that the hero or heroine escapes in stories, including the incident of the Magical Flight from the pursuit of the Ogre, and that the Chukchis and Koryaks are only making use of means of defence familiar to them in their traditions.

These specimens of the various methods of preventing the return of the dead will suffice for the present. Reference will be made to others below.

6. *Reluctance of the corpse.*—The dead man is often supposed to be reluctant to quit his home. Among the Nawār, or Eastern Gypsies, as well as among other Arab tribes, he goes the length of forcible resistance, compelling the bearers even to return and leave him for two or three days unburied—to the great detriment of the public health (Jaussen, *Coutumes des Arabes au pays de Moab*, Paris, 1908, pp. 100. 105). The Negroes of Jamaica aver that, when a dead body wishes to go forward, it is easily carried; when it does not wish to go, it gives great trouble (*FL* xv. 453).

A ceremony is performed on Car Nicobar which is perhaps a dramatic representation of the unwillingness of the dead to be buried. The funeral procession is met by another band of men who drive the bearers back by force, struggling over the corpse, some dragging it towards the grave and others towards the village, until it often falls to the ground. An eye-witness on one occasion tells us that the women and children, who stood at a distance, began to cry out for fear lest the corpse should forcibly enter the village. In the end, however, it was picked up and thrown into the grave in a heap, and then the usual sacrifices were offered (*JAI* xxxii. 218, 221). The ceremony was said to be performed only in the case of men of the highest repute (*ib.* 222).

7. *Farewell speeches.*—Men, however, have not been content with such broad hints to the dead and defences against their return as described in previous paragraphs. They have told them in plain terms that they are not to come back, that the separation is definitive; and a considerable part of the funeral ceremony is often devoted to this purpose, enforced both by speech and symbol.

Among the Bataks of Sumatra, prior to the burial the *begu* (soul or individuality of the deceased) is made to understand by a Shamanistic ceremony that it belongs no more to the living, and must not consort with them. Then, after a dance, a vessel filled with *djerango* (a specific against the *begu*) is carried round it. Some parts of the body are rubbed with a piece of it, and it is thrown on the corpse with the words: 'Thy younger brother (or mother, or other relative) will converse with thee no more' (*ARW* vii. 503). During cremation among the Chams, a man, who bears the significant title of Master of Regrets, is left behind at the house. His business is to curse it and then to adjure the deceased not to come back to torment his family (Cabaton, 48). The Muong or Mon of Northern Tongking perform an elaborate series of rites with this object. They begin on the night following the death. The witch-doctor comes and recites invocations, accompanied by a bell to drive away evil spirits. He advises the soul of the departed to go to the other world and find relatives who have preceded him thither. In order to guide him in his journey he enumerates these relatives by name, pointing with his finger towards the spots where they have been buried. Then he casts lots to ascertain whether the dead man has understood him. If the lots be unfavourable, he begins again as many times as may be necessary. The second night a ceremony is performed in honour of the ancestors, and also of the tutelary spirit of witch-doctors. These are prayed to show the deceased the way to the dwelling of the superior genii, with whom he will find help; and the witch-doctor again casts lots to ascertain if he has been understood. The third night the ceremonies and offerings are specially in honour of the tutelary spirit or genius of witch-doctors, who is requested to conduct the soul to the grave where the body will lie, and which has been dug during the day. Before the procession starts for the grave, the witch-doctor again casts lots to satisfy himself that the soul knows the way to the tomb. At the grave two altars have been improvised, one in honour of the *manes* of the deceased, and the other dedicated to the genius of the earth. Amid the wailing, the witch-doctor prays the former not to torment the survivors, and the genius of the earth to keep him in peace (Lunet, 350).

The Lolos of Western China give the deceased specific instructions as to the route he is to take. On the way to the grave 'the priest recites the *Jo-mo*, or Road Ritual, and he accompanies the coffin a hundred paces from the house. This ritual begins by stating that, as in life the father teaches the son, and the husband the wife, it is only the priest who can teach the dead man the road that his soul must travel after death. The threshold of the house is first mentioned, then the various places on the road to the grave, and, beyond that, all the towns and rivers and mountains that must be traversed by the soul till it reaches the Taliang mountain, the home of the Lolo race. Here the priest says that he himself must return, and entreats the dead man to pursue his way beyond the grave alone. The dead man then enters Hades, and stands beside the Thought Tree and the Tree of Talk, and there he thinks of the dear ones left behind and weeps bitterly. After this ritual is read, the priest returns to the house, and the coffin goes on to the grave' (*JAI* xxxiii. 103). On the island of Serang, in the Moluccas, the priest prays the previously dead to do no harm to the soul, but cordially to receive it, winding up with a prayer to the Lord Heaven and the Lord Earth to let all sicknesses go away from the commune with the soul of the deceased (Riedel, 141). On the Western Continent similar intimations are given to the departed. Before the body of a Hupa was lowered into the grave, he was addressed: 'Don't be lonesome for what you have left. While you were living your time came. May it be well with the people where you used to live!' This, we are told, is to prevent the ghost's return and consequent misfortune to the family (Goddard, 70). More coarsely among the Greenlanders a woman waves a lighted

chip to and fro behind the corpse when it is taken out of the house or tent, crying: 'There is nothing more to be had here!' (Crantz, i. 237). In Central Africa, likewise, as among the Awemba, a speech is made over a man's grave, promising that the survivors will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (*JAI* xxxvi. 157; cf. *Journ. Afr. Soc.* v. 436).

8. *Death at a distance from home.*—The desire to find one's last resting-place at home, among one's kindred and friends, is natural to man; and it has been translated into a number of ceremonial prescriptions which emphasize the necessity of such a burial.

Sometimes, as among the Lillooet of British Columbia, the deceased is buried in a temporary manner where he dies, and the following year his bones are brought home to be buried with his kindred. If this is impossible, the body is burnt and the ashes carried home (*Jesup Exped.* ii. 270). Sometimes only a single bone is brought home, as in the case of Roman soldiers. Among the Ho of Togoland, when a man of importance is killed in war, he is buried on the spot; but later the grave is opened, his bones, hair, and nails are taken out, put into a coffin, and carried home, or at least his brothers on the maternal side must bring home his finger- and toe-nails and his hair (Spieth, 277). A large proportion of the modern Albanians (at least of the men) die away from home, owing to their migratory habits. Their bones are collected and sent home; or at any rate the skull or a single bone is brought back (Rodd, *op. cit.* 127). When a Spartan king was killed in war an image was buried in his place (Herod. vi. 58). In some of the villages around Cosenza an image is made of a member of the family dying away from home, and laid on his bed, and the rest of the family standing around bewail him (Dorsa, *Usi e nelle credenze pop.*, 1884, p. 93). At Guessant in Brittany, when a sailor died at sea, a cross was taken to the house and made to represent the corpse. In the isle of Sein his portrait was laid on it, or, in default, some object that had belonged to him. The clergy attended, and a funeral procession and service took place over this representative of the body (*RTP* vi. [1891] 156, xiv. 346). When a man belonging to the Man Tien of Northern Tongking dies at a distance from his home, the priest calls back his souls (for a Man Tien is endowed with a plurality of souls), and causes them to enter a doll made for the purpose, to which funeral honours are then accorded (Lunet, 258). In Montenegro a dummy body is made with the clothing of the deceased; wailing and all other rites except actual burial are performed over it (*JAI* xxxix. 92). Among the Basoga a few of the relations go a little way from home, cut a twig, wrap it up in bark-cloth and treat it in all respects as the corpse, all the ceremonies being performed upon it, including burial (Cunningham, 118).

Proceedings like these are doubtless much more than mere make-believe to the people who indulge in them. Probably in the first instance a relief to the feelings of the survivors, they must be held to be of real value and importance to the deceased, who attains by their means his due place in the other world and the rest which can come only by means of the proper ceremonies. See, further, § XI.

X. Grave furniture and food.—The dead must be gratified with food, and with some or all of his most cherished worldly possessions. The practice of depositing these, either in the grave or upon it, is literally world-wide. Both fear of the dead and affection for him have concurred to carry it very often to extravagant lengths. Few examples will be required of a rite so well known.

1. *Food and drink.*—

In Tanembar and Timorlaut, two of the Moluccas, when children under two years of age die, the mother milks her breast into their mouths before burial (Riedel, 306). So, when an Urali of the Dimbhum jungles is about to be buried, a cow buffalo is brought near the car on the burial-ground, and a little milk drawn and poured three times into the mouth of the corpse (Thurston, vii. 255). The practice of placing food and water on the grave is recorded of several of the Australian tribes; it is sometimes continued for many days (Howitt, pp. 448, 455, 467, 474). Among some of the Hill Tribes of Assam, these offerings to the dead are kept up for a year (*ARW* xii. 453). Some of the Papuan tribes plant taro beside the grave (*ZVRW* xix. 163). The Iroquois, who practise sub-aerial burial, deposit with their dead a sack of flour, flesh-meat, his spoon, and generally whatever may be necessary for one who has to take a long journey (*1 RBEW* 140, quoting de la Potherie). The Achomawi Indians of California placed with the body quantities of food consisting of dried fish, roots, herbs, etc. (*ib.* 151). In Guatemala, provisions of maize and flesh were given (Stoll, *Die Ethnologie der Indianerstämme von Guatemala*, Leyden, 1889, p. 71). The Warraus of Guiana laid round the body bread, fruits, and dried fish (*Int. Arch.* xiii., Suppl. 55). And it may be said generally that similar practices are recorded of all the tribes on the American continent.

The Agni of West Africa provide the deceased with blood (reminding us of the incidents recorded by Homer, *Od.* xi.), food, and drink (Clozel and Villamur, 25). Of drink, brandy, pombe, or rum is commonly given among the Negroes. On the Lower Niger, two casks of rum or palm-wine are poured over the grave to supply the departed with spirit to entertain his friends in the next world (Leonard, 166). These customs are followed not only by the Negroes, but by most of the branches of the wide-spread Bantu race. The Kaffir tribes in the south slaughter an ox and lay a portion of its entrails on the grave. The Baganda in the north bring food and pour beer over the grave.

But it is not only in the islands of the Indian and Pacific Oceans, and among the ruder peoples of Asia, Africa, and America that the practice of providing the dead with food and drink obtains. The civilized Koreans agree with the Mannâns, one of the Hill Tribes of Travancore, in putting into the mouth of the corpse a quantity of rice (*JAI* xxv. [1896] 347); *Ind. Cens. Rep.* 1901, xxvi. 349). The carcasses of sheep and oxen, with jars of honey and oil, were among the gifts added by Achilles to the pyre of Patroclus (*Il.* xxiii. 166); and remains of the funeral banquet have been found carefully placed in graves of the prehistoric population of Greece. Nor has the custom of giving food to the dead ceased even yet in the south-east of Europe among populations of Greek tradition. In Bulgaria, for three days after a burial, women go every morning to the grave, kindle tapers, fumigate it with incense, and pour over it wine and water. On the fortieth day a woman goes with a priest carrying a cake, some *kólliva* (a funeral food made of boiled grain, sugar, almonds, sesame, parsley, and pomegranate seeds), and a bottle of wine, all of which she places on the grave, 'that the earth may be cleared from the eyes of the departed.' The priest repeats prayers, fumigates and levels the grave, digging a hole in it, into which he pours water and buries some of the food. Nor is this all. On every commemorative festival for the dead, the women go to the grave with their tapers and incense, and pour wine or water over it. Moreover, fruit (formerly also other food) is often laid on the grave. Widows whose deceased husbands were much addicted to coffee have been known to pour black coffee daily into an opening in the grave-mound (Strausz, *Die Bulgaren*, 1898, pp. 451–53). In Macedonia, an apple, a quince, or some other fruit is thrust between the feet of the corpse before the funeral (Abbott, *Macedonian FL*, 1903, p. 197). In Montenegro, apples are thrown into the grave; and, in some parts, oranges and bits of bread are among the objects hung on a young tree planted at the head of the grave (*JAI* xxxix. 93). Elsewhere, some of the *kólliva* cakes baked for the commemorative festivals are broken up over the grave, the rest being consumed by the mourners or given away (Rodd, 126). Amélineau, the distinguished Egyptian scholar, reports that at Chateaudun, in France, he has known a widow place a cup of chocolate on her husband's grave every day, for more than a year (*RHR* lii. [1905] 10 n.). The Wends and Kashubs, Slav populations of North Germany and Prussia, put a lemon into the hand of the corpse; and, among the Wends, children are said to be supplied with eggs and apples; while men addicted to drink are given pipe and brandy-flask, otherwise they will have no rest in the grave (Tetzner, *Die Slawen in Deutschland*, 1902, p. 462; von Schulenburg, *Wend. Volksst.*, pp. 113, 110). In Croatia there is a wide-spread custom of setting eggs, apples, and bread on the newly made grave for the hungry soul, and offerings of food are brought at every Hallowmass (*Globus*, lxxxv. [1904] 39).

The Bulgarian priest, as we have seen, digs a hole in the grave, more conveniently to pour down the water and bury the food. At Tronis, in ancient Phocis, was the grave of the hero-founder, who was daily worshipped with sacrifices: and there was a permanent hole communicating with the interior of the tomb, through which the blood of the victims was poured, while the worshippers consumed the flesh on the spot (Paus. x. iv. 7). Frazer, commenting on the passage, has adduced a number of cases of Greek and Roman tombs in which a permanent passage for food and libations has been found, and parallels from various parts of Africa, Peru, the East and West Indies, and elsewhere.

These examples might without difficulty be added to; but a more or less permanent communication between the living world and the interior of the grave was sometimes, as we shall find hereafter, made for other purposes than the supply of food.

2. *Wives and dependents.*—Another custom, almost too well known to need illustration, is that of killing, or burying alive with the corpse, his wives, his slaves, and other dependents or friends. This custom attains its greatest extension, of course, at the funeral of a chief or king. Its object is to provide for his comfort and his dignity in the other world, by giving him suitable companions and retinue. The best-known example is that of *satī* (*q.v.*), by which the Hindu widow was burnt alive on her husband's pyre—a rite abolished in British India in 1829, but still surviving in the native State of Nepāl. The rite was probably common to Aryan-speaking peoples while in a state of savagery, but abandoned as they progressed in

civilization, and re-introduced, after centuries of disuse, among the Aryan conquerors of Upper India, for reasons that can now only be the subject of conjecture, and perpetuated under the ecclesiastical influence of the Brahmans. Several of the non-Aryan tribes of India practised, until quite recent times, the analogous rite of burying alive slaves, or making a raid for heads to adorn the tomb (Crooke, *Things Indian*, Lond. 1906, p. 446, also *Anthropos*, iv. 473).

We need not follow the custom throughout the world. But, as showing that it prevailed among Aryan-speaking peoples, it may be of interest to recall that it is recorded by Cæsar and Mela of the Gauls, who practised cremation (Cæs. *Bell. Gall.* vi. 19; Mela, iii. 2), and the Thracians (Mela, ii. 2); that it is known in the Irish legends (O'Curry, *Manners and Cust.*, Dublin, 1873, i. cccxx.); and that the slaughter and cremation by Achilles of the twelve valiant Trojans on the pyre of Patroclus are only to be thus explained, though the fashion had changed before Homer's day. Among the Bulgarians of the Volga it was found by the Arab traveller, Ibn Fadhlan, in the year 921 or 922, when he witnessed the immolation, on a young chief's funeral pyre, of a girl, who seems to have been formally wedded to the dead youth before being thus sacrificed (*RHR* lii. [1905] 325). The old Slavs appear likewise to have put to death wives, companions, and slaves at the funeral of a person of importance; and, when they buried an unmarried man or woman, a wedding scene was enacted during the ceremonies—an obvious relic of such incidents as that recorded by Ibn Fadhlan.

Such relics are found elsewhere. Among the Baveuda in the Transvaal, if a virgin boy dies, a girl is sent after him into the other world to be his wife there. She is not now actually put to death; the witch-doctor knows of a ceremony which is quite as effectual for the benefit of the dead boy as her death (*JAI* xxxv. 381). Among the Wadjagga, or Wachaga, a Bantu tribe of Central Africa, another series of ceremonies is appointed for each of the widows, whereby 'she frees herself from death'—possibly here the contagion (*Globus*, lxxxix. 198). The Tolkotins of Oregon, with whom cremation is the rule, force the widow on the funeral pile; but, though they scorch her more or less severely, they do not burn her to death (*1 RBEW* 145).

It is, for obvious reasons, rarer to find a husband put to death with a wife than the converse. But probably the story told in the *Arabian Nights* of Sinbad, who was buried alive with his dead wife, was founded on a barbarous custom really practised by some tribe in the East.

The husband of a woman of the blood-royal of the Natchez was required to submit to this rule (*1 RBEW* 187). In Ashanti, with the king's permission, any of his sisters may marry a man who is pre-eminently handsome, no matter how low his rank and position may be. But a man of low rank who may have thus married one of the king's sisters is expected to commit suicide when his wife dies, or upon the death of an only male child; and any attempt to evade compliance is promptly defeated (Ellis, *Tshi-speaking Peoples*, Lond. 1887, 287).

After the abandonment of the custom of putting to death relatives and dependents, its relics continue to exist often for ages. Centuries ago it was abolished in Japan, China, and Korea; but the living slaves once sacrificed were for long, and indeed still are in places, represented by figures in permanent or perishable material, according to the wealth or lavishness of the survivors. To the same origin are due the statues and statuettes of servants and family found in Egyptian tombs. The Man Quâng Trang, of the province of Hung-Hoa in Northern Tongking, build a small hut beside the barrow, and place near it a doll representing a man or a woman, to be the companion of the deceased. Striking the doll, they bid it look well after him (Lunet, *op. cit.* 275).

It is perhaps necessary to add that many of our accounts of the immolation of human victims on the occasion of a death represent some, at all events, of the victims as dying willingly, or even committing suicide. It is conceivable that voluntary deaths may, in a certain number of cases, be the result of intense grief. The vast number, however, of deaths apparently voluntary are, as in the case of the Hindu widow or the dependents of a Gaulish chief, constrained by custom and the knowledge that refusal, while it destroys the religious merit of the act, will entail compulsion, or at least that life will be speedily rendered intolerable.

3. *Property.*—It is probable that in the beginnings of human civilization, when a man died, his entire property was destroyed, or left with the body, whether buried or simply exposed. This, in fact, is still done by many tribes in various parts of the world (see § XIX.). Its primitive purpose may have been to escape the death-pollution which would attach to everything closely associated with the deceased. His meagre property would be in a sense identified with him, and must therefore be put away from among the living. Such a practice, it is obvious, if everywhere persisted in, must have prevented that accumulation of wealth which has rendered progress in the arts of life possible. Consequently, most peoples have learnt to cut it down to comparatively small dimensions, giving only a selection from the goods left behind by the deceased, or reducing their gifts to a mere symbol.

(*a*) *Domestic animals.*—In a comparatively early stage, domesticated animals are often the chief wealth. Such animals are slaughtered not merely as food, but to accompany their owner into the other world. When a Herero dies, certain of his favourite cattle are at once killed, expressly in order to prevent the ghost from returning and molesting the survivors. On the following day the rest of his favourite cattle are slain as a sacrifice to the dead, and the horns are arranged on a tree adjacent to the grave (Dannert, 49). The Abipones of South America, who bury with their dead their entire property, or burn it in a bonfire, when a chief or a notable warrior dies, ceremonially stab the horses that were dearest to him, and fix them on stakes around the grave (*Int. Arch.* xiii., Suppl. 61). The Tangkhuls of Manipur kill a buffalo, in order that the creature may go with the dead into the next world and butt open the gates of heaven, which are kept shut against him (*JAI* xxxi. 307). Here the buffalo officiates as psychopomp; in other countries it is the dog. Whether it was in this capacity that some of the Lillooet hunters' dogs were killed does not appear. Their bodies were suspended from the four poles usually erected over the grave to sustain the ornaments, weapons, tools, and other valuables of the deceased, or such of these objects as were not buried with him (*Jesup Exped.* ii. 269). In pre-historic barrows of England, animal bones are frequently found. Where they are not of accidental occurrence, however, they are usually the remains of food deposited with the dead. But in one Late Celtic interment, at least, the skeletons of horses have been found with the remains of a chariot (Greenwell, *Brit. Barrows*, Oxf. 1877, p. 456). In Prussia, in graves of the Neolithic age, the war-horse has been found buried with the warrior. In Russia, what are called Scythian barrows and *kurgans* (pre-historic grave-mounds) frequently yield the remains of horses; and similar relics are recorded of Frankish graves on the Rhine, as well as of Magyar and Polish graves dating from heathendom, and of the various heathen tribes of Siberia. Some, like the Poles, buried also the falcon and the dog with their master (*Int. Arch.* i. [1888] 53). In all these cases the animals appear to have been designed not by way of food, but in order to accompany the deceased for use or state in the life after death.

(*b*) *Goods.*—Only a few of the more interesting examples can here be enumerated of a custom practically universal from the remotest times of which either history or archæology yields any record. The Negroes of Jamaica, when they think a man has been killed by witchcraft, bury him fully armed and equipped to take vengeance on his slayer (*FL* xv. 88). When a Tangkhul is killed by a tiger, a hunting-dog, a sharpened thorn, and a strong spear are put into the grave, that the deceased may have a helper and weapons to defend himself if he chance to meet a spirit-tiger on his way to heaven (*JAI* xxxi. 306). The Alsea Indians of Oregon placed goods of all kinds with the corpse, because the bodies were animated, and moved about at night if they so willed. Easy exit from the graves was afforded, and the things deposited were for use of the dead in such circumstances (*Amer. Anthr.* iii., new ser. [1901], 241). Pre-historic burials in the Aleutian Islands have been found, in which the corpse has been mummified in a lifelike posture, dressed, armed, and provided with implements, as if engaged in hunting, fishing, sewing, etc. With these burials have been found effigies of the animals that the deceased was supposed to be pursuing, also religious masks and paraphernalia, all the objects, however, being models in carved wood (*Contr. N. Amer. Ethn.* i. [1877] 90). Among the objects put into the grave by the Thompson Indians was the medicine-bag or guardian-spirit of the deceased (*Jesup Exped.* i. [1900] 328).

In Europe the corpse is often provided with corresponding gifts. In some districts of France, if the deceased could read, his Book of Hours was put between his hands; if he could not, it was enough to put the rosary over his arm. A twig of box blessed on Palm Sunday was often placed between his fingers; and, both in France and in Spain, it is believed that this branch will blossom every spring in the tomb if he be found worthy of entering heaven (Laisnel de la Salle, *Croyances et légendes du centre de la France*, Paris, 1875, ii. 72). Among the Wends of the Spree Valley and Lusatia, among the Masurs, and in Pomerania, a hymn-book is put into the coffin (von Schulenburg, 110; Töppen[2], 108; Knoop, *Volkssagen . . . aus dem östl. Hinterpommern*, Posen, 1885, p. 164). In the 17th cent. it seems to

have been not unusual, in various places, to put a knotted cord either into the hands of the corpse or upon the grave. The object of doing so, it may be conjectured, was to enable the dead to perform a penitential exercise neglected during life, or to deceive the powers of the other world into the belief that he was an assiduous penitent. However that may be, the practice was condemned as superstitious by the Synod of Ferrara in 1612, but with so little effect in France that Thiers, in his *Traité des superstitions*[2] (1697), thought it necessary to repeat the prohibition (Liebrecht, *Gerv. Tilb.*, 1856, p. 226). In the same century a French physician and traveller found among the Russian Lapps the custom of putting into the corpse's hand a purse with money, to pay for entrance into Paradise, and a passport addressed to Saint Peter and signed by a priest. A variant custom was to put a number of kopecks, or other small coins, in the mouth of the corpse, and in its hand a testimonial to the character of the deceased, addressed to Saint Nicholas by the bishop of the locality (*ZVV* xi. 434, 435). The anxiety shown in Europe to provide the dead with every comfort sometimes goes beyond the verge of grotesqueness. The Prussian Lithuanians, when the coffin has been put into the grave, open it, put a few coins under the corpse's head, a piece of earth on either shoulder, adding some of the small treasures of the deceased, and, if he were a magistrate, his whip (Tetzner, 85). In Voigtland, where the objects which the departed most delighted in are assiduously laid in his grave, his umbrella and goloshes have been known to be included (Köhler, *Volksbrauch im Voigtlande*, 1867, p. 441). In some ancient graves in Württemberg, attributed to the Alamanni, is found on either side of a body a wooden foot in the form of a last. It is conjectured that these artificial limbs are intended as toll to the ferryman, or to the keeper of the bridge of the dead, or the porter of the under world, in redemption of the real limb (*ZVV* xi. 457). But they may be intended to supply the place of a limb lost by accident in the long journey from this world to the place of the dead.

Perhaps the most pathetic of all objects found in graves are the toys buried with children. They are found almost all over the world, not less in Europe than elsewhere. The sarcophagus of a child named Crepereia Tryphæna, of the time of the Antonines, found at Rome in 1889 and now in the museum of the Capitol, contains, besides her betrothal ring, her jewels and her doll. The Masurs lay nosegays and gilded apples in the hands of children, so that when they reach Paradise they may be able to play on the great meadow provided for that purpose (Töppen[2], *l.c.*). The Wends give eggs and apples to their dead children (von Schulenburg, *l.c.*). The sterner Bosnians consign them to the other world with their school copy-books and slates (*ZVV* x. [1900] 119).

To women, who frequently own no property except their toilet utensils and personal adornments, household implements and those of their daily occupations are given. But all the objects buried with the dead are by no means his property. It is a widely spread custom for the survivors to add contributions, sometimes of large amount—a custom practised in all stages of civilization, equally by some of the Australian tribes and by the Bulgarians of Europe, who throw money into the grave before it is filled up (Strausz, *Bulgaren*, 450).

The tendency to economy in these deposits begins with the accumulation of property, though its operation is sporadic and uncertain. It may be said in general terms that among most peoples the entire property of the deceased is not buried or destroyed at his death. The greatest sacrifices of property would, as a rule, be on the death of a king or great chief. And even in those cases a part would be given for the whole, or a symbol for the reality. In burials of the Late Bronze or Early Iron age at Hallstatt and in Schleswig, rude images of oxen have been found (*ARW* v. [1902] 5); and Capt. Lyon found a decayed model of a canoe under a cairn beside an old Eskimo grave on Southampton Island (Boas, *Eskimo of Baffin Land*, p. 61). The models of boats, granaries, houses, and so forth, recovered from Egyptian graves, were doubtless all intended to do service in the other world for the originals. Gaulish warriors were buried sometimes in their chariots with their horses; but often enough, both in England and in France, excavations reveal the fact that no more than the wheels had ever been placed in Late Celtic graves (Greenwell, 455 ff.). The coin so frequently put into the mouth of the corpse, from the far east of Asia to the Atlantic Ocean, is usually interpreted as an obolus for the ghostly ferryman or the porter of the other world. This may be its use; but it is probably only an economic survival of the practice of giving a larger amount of property as an outfit for the other world and for the journey thither. Sometimes only old and worthless things are given; sometimes merely a pretence of giving is made. Both customs are illustrated in funerals of the natives of the Tami Islands, to the north-east of New Guinea. The ancient practice was to set the body afloat on the ocean in a canoe. Those of them who cling to the practice provide an old and miserable canoe, with mast, rudder, and sails equally bad, often merely indicated. The valuables of the deceased are laid on the platform of the canoe, with a couple of cocoanuts, but taken away again before the canoe is pushed into the sea (*ARW* iv. [1901] 344). In some parts of the Tyrol the convenient theory is held that the dead man cannot be happy if buried with any money or rings about his person. Careful search is therefore made, and these objects are removed to avoid any such misfortune (Zingerle, *Sitten des Tir. Volkes*, Innsbruck, 1871, p. 49).

The objects buried or left on the grave are often broken and rendered useless. This is said to have been done in order to prevent stealing. Thus, among the natives of British Central Africa, ivory and beads are first ground to powder, in order, we are told, to make them useless to witches and robbers (Werner, *Natives of Brit. Cent. Afr.*, 159). The real reason for this widely diffused custom lies deeper. In the eyes of the people who practise it the breaking of the object is the equivalent of the death of the human being to whose service it is dedicated. It is thus killed in order that its ghost may follow the ghost of the dead into the spirit-world, there to serve the purposes which it served in this world when whole. Thus the Ho of Togoland lay broken cooking-pots on the grave, expressly to serve the deceased for cooking-pots in the other world (Spieth, 634). The Hupa of California lay in the grave, with the corpse, his clothing, weapons, and other property, shell-money and dance-regalia—all first destroyed by breaking. On the grave are placed dishes and utensils, four large burden-baskets, each with a hole burnt in the bottom and a stake driven through it. Clothes, torn into strips, are hung on the poles laid across the grave. The reason for destroying the articles buried is said to be to prevent grave-robbery. But the same people tell us that all the objects accompany the spirit to the under world (Goddard, 71). We are, doubtless, justified in believing that the prevention of grave-robbery is a secondary reason.

An interesting case is reported from Lincolnshire, in which a widow put her husband's mug and jug on his grave, having first broken them. She told the rector: 'I was that moidered with crying that I clean forgot to put 'em in t' coffin. . . . So I goes and does't' next best. *I deads 'em both over his grave*, and says I to mysen, My old man, he set a vast of store, he did, by yon mug and jug, and *when their ghoastes gets over on yon side* h'll holler out, "Yon's mine, hand 'em over to me," and I'd liks to see them as would stop him a-having of them an' all' (*FL* ix. [1898] 187). Thus the anxiety to provide the dead with an outfit for the other world, which is the real intention of the customs just passed in review, whatever secondary motives may have come to be mixed up with it, lingered in England down to the last quarter of the 19th cent., and perhaps lingers even yet in remote districts.

4. *Objects used in the funeral rites.*—We have now reached a class of objects put in, or upon, the grave for a different reason. They are not necessarily the property of the dead; but, having been used in the funeral rites, they are contaminated with death, and are no longer fit for the service of the living, lest they spread the infection further.

Hence the Yakuts break and throw on the grave-mound the shovels, the sledges, the stakes—in a word, everything used in the funeral (*RHR* xlvi. 211). The Apache also leave the shovel on the grave (*Am. Anthr.*, new ser., vii. [1905] 493); the Melanesians of Efate throw it into the sea (*Rep. Austr. Ass.* iv. 727). The Warundi, in Central Africa, throw on the tomb the door of the hut, and the basket with which the earth has been taken out of the grave (van der Burgt, 39). Among the Baganda, all who have taken part in the burial must wash their hands with moist plantain fibre, and the fibre thus used is put on the grave (*JAI* xxxii. 47). The Negroes in Jamaica, as we have seen, often throw on the grave the water in which the corpse was washed (§ VI. 5). In Europe similar practices are found. In France the bowl which has contained the holy water used for aspersion during the ceremonies is thrown into the tomb; and formerly in Brittany the incense brazier was buried with the coffin (Laisnel de la Salle, ii. 79). In Central Silesia everything used for the toilet of the corpse—the comb, sponge, rags, soap, and so forth—is put into the coffin. Even the needle and thread used for sewing the shroud must not be removed, but left hanging to it (*ZVV* iii. 151). But economy sometimes prevails. In some parts of Brunswick the bier and tools remain only for a few days on the grave (*ib.* viii. [1898] 437). It is as if the infection were then at an end. Another motive may, however, be present: they may be placed there to keep the dead man down as long as there is any chance of his returning, and be removed when this is over. The author cited adduces in favour of this suggestion the fear of the dead betrayed in the haste with which the relatives left behind in the house, when the funeral procession has started, shut the door in order that the dead may not fetch any one else. But this is a wide-spread custom.

5. *Blood and hair.*—Among many peoples, the delirium of grief, or more often perhaps (in accordance with well-established custom) the desire to divert suspicion of having caused the death by witchcraft, and the fear of the deceased himself, lead the mourners frantically to cut and wound, and even to mutilate, themselves.

The practice was forbidden to the ancient Hebrews by the Deuteronomical legislation (14[1]); hence we may conclude that it had been previously in use among them, as well as among their neighbours. It is universal among the Australian Blackfellows, and is reported from Polynesia, Melanesia, the East Indian Islands, and from North and South America. In very many of these cases the custom is to let the blood drip over the corpse. Of Australian tribes, we are definitely informed that after the body was placed in the ground the mourners stood or knelt over it in turn, and were struck by a large boomerang on the head until the blood flowed over the corpse. In other cases the blood drips upon the grave after it has been filled in (*JAI* xxiv. [1895] 187; Curr, *Austr. Race*, Melbourne and Lond. 1886–87, ii. 179; Spencer-Gillen[a], 507, 509; *FL* xiv. [1903] 335). Among the Orang Sakei of Sumatra the kindred, making a cross-cut with a knife on their foreheads, drop the blood on the face of the corpse (Wilken, *Haaropfer . . . bei den Völkern Indonesiens*, Amsterdam, 1886–1887, p. 19). Four North American Indians from Montana, who were executed for murder at Helena, on the head-waters of the Missouri, in December 1890, were mourned by two squaws. One of the squaws cut off two of her fingers and threw them into the grave. The other gashed her face. Both caused the blood to flow into the grave (Letourneau, *L'Év. rel.*, Paris, 1892, p. 187).

We may assume, without much risk of mistake, that the rite in its complete and undegraded form included the dropping of the blood upon the dead body, and where this is not done the rite is in decay. Probably also it is only persons standing in certain specific relations with the dead who are commonly expected to perform it. This is certainly the rule with some of the Australian tribes. We may suspect it of other peoples also. If it has not been recorded, that may be because the point would be likely to escape not merely the casual traveller, but any one whose attention has not been specially drawn to it. But it is by no means invariable (*e.g.* the Arawaks mentioned below, § XVII. 1). The meaning of the rite has been the subject of much discussion. It is not merely a propitiatory offering; it may be this, but it is much more. A comparison of the blood-covenant and other blood-rites renders it almost certain that one object, at least, is that of effecting a corporal union with the dead. But is that the only object? First of all, there can be no question that the intention is to cause suffering to the survivors. This will be better discussed when we come to the section on 'Mourning' (§ XVII.). Further, human blood is frequently given for medical purposes, or to strengthen the recipient (Strack, *Das Blut*, 1900, 27 ff.; Spencer-Gillen[a], 461). It is, therefore, not impossible that the object of letting the mourners' blood drip over the corpse may be to strengthen the dead man for his life in the next world. This would be quite consistent with the avowed intention of expressing sorrow or pity (*Torres Str. Exped.* vi. [1908] 154). But there is, so far as the present writer is aware, no evidence pointing decisively to this interpretation. Moreover, it is always necessary to remember that rites different in intention are often similar in expression—a fact which makes their interpretation a matter of peculiar difficulty.

Parallel with the rite of dropping blood on the corpse is another mourning rite—that of cutting or tearing the hair and burying it with the corpse, or dedicating it at the grave. It is even more widely diffused than the former.

At the cremation of Patroclus his comrades cut off their hair and heaped it on the body; and Achilles, cutting off the golden lock that his father had vowed to offer at his return home to the river Spercheios, put it into the dead hands to bear away (*Il.* xxiii. 135–141). So the mourners among the Sioux cut locks of their hair and fling them on the body; and these locks are bound up with it, and with the dead man's valuables, before it is put into the grave-box or coffin (*I RBEW* 159). Locks of human hair have been found with mummies in the ancient cemetery on the bay of Chacota, in southern Peru, and a large lock of soft human hair was found beneath the head of an infant (*Rep. Peabody Mus.* xi. [1878] 285 ff.). Arab women cut their hair on the death of a husband, or of a father, or other near relation, and spread the tresses on the tomb, or hang them on stakes or cords above it (Jaussen, 94; Hartland, *LP* ii. 220); while among the Râjî of the United Provinces of India 'the children of the deceased and his younger brothers get their heads, beards, and moustaches shaved, and the hair is thrown on the grave' (Crooke, *TC* iv. 213). Among the Chechenes of the Caucasus the long queue of hair of the widow of the deceased is cut off and thrown into the grave; down to the middle of the 18th cent., it is said, her ear used to be thus sacrificed (*Anthropos*, iii. 735). The practice is not yet obsolete in modern Europe among the Montenegrin women. Not very long ago, indeed, when the men habitually shaved their heads and suffered only one long crown-lock to grow, that was cut off and thrown into the grave (*JAI* xxxix. 93).

But, as with the dropping of blood, it is by no means everywhere that the hair is dedicated in this way. It is often burnt.

The Bilqula of British Columbia, and some of the Central Tribes of Australia, *e.g.*, dispose of it thus (*Brit. Assoc. Report*, 1891, p. 419; Spencer-Gillen[b], 507, 520). The latter, indeed, sometimes mix it with some of the hair of the deceased and make it up into a girdle, which is worn by the avenger of the dead during the punitive expedition (Spencer-Gillen[b], 543; cf. 514).

More usually, however, we are not told what is done with the hair. In some instances this may be due to omission to observe, or forgetfulness to record, on the part of the reporter, a portion of the rite that is of importance. In the majority of cases we are probably right in assuming that the disposal of the hair is not an integral portion of the rite—that, in fact, the rite has ended with the cutting of the hair. Whether the dedication of the locks at or in the grave, or by burning, has in such cases ceased by ritual decay, or whether the dedication never took place, it is difficult to say. One object, at all events, of the dedication of the hair is, like that of the blood, to form a bond of union with the dead. The converse rite of taking a lock of hair of the dead may be said to be world-wide. Nor is it confined to a lock of hair: it extends in some cases to the nails and pieces of the garments. In the West Indian island of St. Croix the persons who wash the corpse prior to burial always take a lock of hair, a garment, or at least a fragment of a garment, in order to prevent the spirit from molesting them (Hartland, *LP* ii. 319). It must be borne in mind that, according to the theory of sympathetic magic, any portion of a human being, such as hair, nails, skin, bones, and so forth, which has become detached, is still, in spite of separation, in effective sympathetic union with the body of which it once formed part; for the personality inheres in every part of the body. The doctrine extended to the effigy, the

clothes, the property, and even to the personal name; so that anything done to any of these objects affects the owner as if it were done directly to him. He is in a sense present in each of them. Not only, therefore, if I take a lock of a dead man's hair do I establish effective union with him so as to prevent him from inflicting any harm upon me; but, conversely, if I give him a lock of mine or a drop of my blood, we are bound together by a similar bond. It is sometimes suggested that, as in the case perhaps of the dripping of blood, the throwing of hair on, or giving it to, the corpse is an attempt to endow the dead with some of the vital strength of the survivors. This is, according to savage theory, not impossible; but there is no direct evidence in support of it. Another suggestion is that it is a relic of human sacrifice to the dead—the gift of a part for the whole, or a mere symbol. Human sacrifices, as we have seen, are common enough. Evidence, however, of the intention of a gift of hair, as a commutation of the practice of human sacrifice, does not, so far as we know, exist. It would seem more likely in the gift of blood or of severed members, such as those of the Montana squaws above cited; but even there proof is wanting. On the other hand, there is evidence that sometimes where the rite is not completed by giving the hair to the corpse the intention is merely purification, as where the hair is cut at the end of the mourning.

Before leaving the subject it may be added that, while among many savage peoples there is weeping as well as blood-letting over the corpse, in Europe it is believed that tears ought not to be allowed to fall on the body. Even to weep overmuch, apart from the corpse, is wrong, because it prevents the dead from resting in the grave. There are many stories in European folklore of the dead who have appeared to survivors to reproach them with their excessive grief, and have exhibited their shrouds wet with their tears. Further, it is most important not to allow anything worn by a survivor to be buried with the corpse, or put into the grave. To do so means decline and death to the person to whom the article belongs; hence it is sometimes done maliciously, and is reckoned witchcraft.

6. *Fire.*—In the lower culture it is not unusual to light a fire at or on the grave—a practice common in Australia, where the reason assigned is to warm the ghost. The tribes about Maryborough add a further reason: to keep away the spirits of dead blacks of other tribes, or of bad men of their own tribe (Howitt, 470).

These fires at or on the graves are maintained for varying periods, according to the tribe, or the amount of affection for the deceased; and sometimes several are lighted. The same custom is found on several of the Melanesian islands and those of the East Indian Archipelago (*L'Anthrop.* xiii. 775; *JAI* xxxiii. 120; *Rep. Austr. Ass.* iv. 711; *Anthropos*, i. 23, iv. 465; Haddon, *Torres Str. Rep.* v. 249, 260; Riedel, 142, 143; Kruijt, 310), among various peoples of Further India and Assam (Lunet, 330; *JAI* xxxii. 135, xxvi. 200), among the insular Caribs and tribes of South America (*Int. Arch.* xiii., Suppl. 57, 59, 81). In North America, the Tarahumares of Mexico, who bury in caves, light a fire the first night after burial. All their burial-caves are consequently blackened with smoke (Lumholtz, *Unknown Mexico*, N.Y. 1903, i. 70, 383). The Seminoles of Florida make a fire at each end of the grave and keep it up for three days, while after nightfall torches are waved in the air, that the bad birds of the night may not get at the dead man (*5 RBEW* 521). The practice of lighting fires at the grave is reported of the Hupa (Goddard, 70, 72) and the Yurok on the other side of the continent in California (Powers, *Contrib. N. Am. Ethnol.* iii. [1877] 58). The latter believe the fire is necessary to light the spirit of the departed on its perilous journey to the other world. The same belief and consequent practice were known to the Algonquins; and the Klamath of the North-West keep up a fire for the three days which are occupied with the funeral ceremonies, holding that, until they are finished, the soul of the dead is in danger from O-mah-á, said to mean the devil. In addition to lighting the fire, the survivors howl around the grave in order to scare away the demon (*1 RBEW* 107).

From the numerous remains of fires in the pre-historic burial-mounds of the United States there seems reason to conjecture that at one time the practice of lighting fires at the grave extended over a wide area, of which the modern instances cited may be the survival (*5 RBEW* 17, 25, 47, 71, 78).

More than one reason, as we have seen, is alleged for the custom. On the one hand, it is to warm the ghost, and to light and comfort it on its way to the other world; on the other hand, it is to drive away evil-disposed beings. The use of fire and lights for the latter purpose is widely extended. It is, beyond reasonable doubt, the origin of the European practice of the lights in the death chamber, of the candles sometimes put into the dying hands, of the consecrated tapers that sur round the coffin at the funeral. Similarly, lights are kept burning in the chamber with a new-born child and its mother, as a protection against witches and fairies; and they are used for the like purpose on many other occasions. But there is another reason equally potent, namely, to keep away the dead man himself. This reason may not be operative in all cases, as in Australia where it is definitely believed that the ghost haunts the fire on the grave, or among the Yurok where it is required to light the ghost in its perilous passage of a greasy pole across the chasm to the other world. But in other cases it is clear that the fire is a defence against the dead man himself.

One Australian tribe is said to go the length of cutting off the corpse's head and roasting it in the fire made upon the grave. When the head is thoroughly charred, it is broken up into little bits, which are left among the hot coals of the dying fire. 'The theory is that the spirit, rising from the grave to follow the tribe, misses its head and goes groping about to find it; but, being bereft of its head, it is, of course, blind, and therefore, not being able to see the fire, gets burnt. This frightens it so terribly that it retires into the grave with all expedition, and never again presumes to attempt a renewal of social intercourse with the human denizens of this world' (*JAI* xiv. [1885] 88). We have already seen that among the Eskimo of Greenland a lighted chip is waved behind the corpse when it is taken out of the house, with a clear intimation to the dead to be gone (§ IX. 7). In the Southern Nicobars a fire is made, even before the burial, at the entrance of the hut, out of chips from the bier and coco-nut husks, on purpose to bar the ghost; while, before the grave is filled in, the spirits of those present are waved out of it by a torch, thus rendering unmistakable the intention to place a barrier of fire between the living and the dead (*Ind. Cens. Rep.*, 1901, iii. 209). So, too, among the Ewhe of Togoland, who bury under the hut, a fire is maintained during the whole period of mourning, and strongly smelling herbs are burnt in it to keep the ghost at a distance (*Globus*, lxxxi. [1902] 190). The same motive may account for the practice in some districts of Europe of burning on the road from the house to the cemetery, after the funeral procession has passed, the straw on which the corpse has lain (*Am Urquell*, vi. [1896] 201).

XI. Precautions against haunting.—1. *Burying the soul.*—Ceremonies of the kind referred to in § IX. 8 seem to be directed to securing the soul, in default of the body, and performing over it the funeral rites. This was expressly the case in China (de Groot, iii. 847). But it is not only where the body is not obtainable that the soul is buried.

Several of the tribes of Northern Tongking collect the souls of the deceased and bury them, either with the body or apart in a separate grave (Lunet, 103, 244, 274). The mixed Melanesian and Polynesian population of Savage Island stand in great fear of the *aitu*, the spirit of the departed. Their injunction to a dying man is: 'If you leave us, go altogether.' At the burial, heavy stones are thrown upon the grave to keep the *aitu* down. Prior to the burial they spread a piece of white bark-cloth beside the body, and the insect that first crawls upon it is carefully wrapped up and buried with the body; it is the *mo'ui*, the soul. Further, a dome of concrete is made over the grave to prevent the ghost from rising (Thompson, *Savage Island*, Lond. 1902, p. 52; *JAI* xxxi. [1901] 139). So the inhabitants of the Nicobar Islands bury beneath the body a cloth carefully wrapped up, which is believed to contain the soul (*Int. Arch.* vi. [1893] 24). Among some of the Ewhe of Togoland, when one has been fatally bitten by a snake (one of the kinds of evil death), on the ninth day after burial the witch-doctor starts before dawn for the place in the bush where the deceased was bitten. His object is to fetch the soul. He takes only one man with him, so as not to frighten it. He performs incantations, summons the soul, and addresses soothing words to it. Presently he is joined by the young men of the village, who unite in endeavouring to console the ghost. They dig up the earth from the spot where the fatal wound was given, and put it in a jar, which is bound with some white fabric. The jar is put on the head of somebody who has previously met with the same accident, but has recovered; and with the firing of guns the procession returns to the house. Thence, accompanied by those

who have remained at home, they proceed to the place in the bush where the unfortunate man has been buried. They set the jar upside down on the grave and leave it there: it contains the soul (Spieth, 290; cf. 756, 760). Among the Brassmen of the Lower Niger a man who dies with unhealed sores (therefore 'a bad death') is buried apart from the ordinary burial-place. But his soul is afterwards evoked, and with an elaborate ceremony embodied in a wooden figure and buried in the proper place (Leonard, 168).

2. *Binding and mutilating the body.*—The intention of burying the soul is to prevent its wandering about, haunting the survivors, and perchance causing them misfortune or death. This is, of course, by no means the only precaution. We have already met with many, and there are some others which must be noticed here. The binding of the body in the attitude proper to burial (see § VIII. 2) has this at least for one of its objects. It is indeed often expressly reported as the object (e.g. *JAI* x. 145). It is said in Lincolnshire that 'when the corpse is placed in the coffin you must never forget to tie the feet, else the dead may return, or some other spirit may take possession of the body for his own purposes' (Gutch and Peacock, *Lincs. County FL*, 1908, p. 240). The practice of tying the feet, or at least the great toes together, is, in fact, not uncommon in Europe.

But binding is not enough. We saw that the sinews and the backbone were sometimes cut.

The Basuto and Bechuana are not alone in these practices; they are found in other African peoples. The customs of Australia are even more revolting. The Herbert River tribes beat the corpse with a club, often so violently as to break the bones; and incisions are made in the stomach, on the shoulders, and in the lungs, and are filled with stones (Howitt, p. 474). A tribe in Western Australia, as has been mentioned, burns the head and breaks up the charred bones, for the express purpose of preventing the deceased from haunting the survivors. It is said that certain of the Negroes of Bahia break all the long bones and twist the neck of the corpse (Rodrigues, *L'Animisme fétichiste des nègres de Bahia*, 1900, p. 119). When one has been killed by lightning, the Omaha of North America are accustomed to bury the body on the very spot where the death occurred, face downwards, and the soles of the feet previously slit (*JAFL* ii. [1889] 190). The practice in Europe, though not literally identical, has been parallel down to within the lifetime of the present generation. It is not very long since suicides were buried at cross-roads with a stake through the body. Another way of dealing with them was to cut off the head and place it between the legs. A mediæval corpse which had suffered this mutilation was found a few years ago in a stone coffin in Royston Church, near Barnsley (*FL* xii. 101). Bodies have been found with the same mutilation in a cemetery in Albania, dating probably from the 4th or 5th cent. A.D. (*L'Anthrop.* xii. 663); it was well known throughout Europe in the Middle Ages, and was practised as lately as the year 1892 among the Lithuanian population of Somenishki in the Government of Kovno (*Am Urquell*, v. [1894] 87), in the latter case avowedly that the deceased might not be in a condition to 'walk' and injure the fields; for suicides are believed to 'walk' in the shape of Germans, or else as he-goats, to mislead wayfarers, or with the weapon or cord in their hands with which they have taken their lives. They injure the fields by causing hail and storms; and the touch of their bodies blights the earth: hence they are buried in waste places (*Am Urquell*, iii. [1892] 50, 52, 53).

The cremation of vampires has already been mentioned (§ VII. 3 (*g*)). A dead man who gave trouble among the ancient Norse by haunting was often taken up and burnt. Sometimes milder measures were successful, as in the case of Thorolf Halt-foot, who was removed to another grave with a wall so high that none but fowl flying could cross it (Morris, *Ere-dwellers*, 1892, p. 92). The fencing of graves is by no means always to protect the dead; probably it is quite as much for the protection of the living. Thus the Cheremiss fence the grave with stakes that the dead may not get out and walk the fields (Smirnov, *Pop. finnoises*, i. 138). Many of the South American tribes with the same object stamp down the earth upon the corpse; and the Achagoas even cover the grave with mortar and carefully fill up every morning any cracks that may have taken place (*Int. Arch.* xiii., Suppl. 93, 96). Cists, urns, coffins, and grave-boxes also serve the purpose of shutting in the dead, that they may not torment the survivors; and perhaps this was their original intention. Among the natives of South Australia it seems to have been the custom to stop and fasten up all the orifices of the body, doubtless to keep the ghost within (*JAI* viii. [1879] 393)—a practice adopted by the Malays (Skeat, *Malay Magic*, p. 401). The inhabitants of Nias bind not only the fingers and toes, but also the jaws, and put stoppers in the nostrils to keep in the soul (Modigliani, *Nias*, 1890, p. 283). A more barbarous precaution is practised in Bulgaria, where sometimes a needle is stuck into the navel of the corpse (Strausz, *Bulgaren*, 454). On the islands of Ambon and Uliase, in the Moluccas, this form of protection is used only in the case of women dying in child-bed. In such a case thorns and pins are stuck between the joints of the fingers and toes, in the knees, shoulders, and elbows, eggs of hens or ducks are laid under the chin and armpits, and a portion of the corpse's hair is brought outwards and nailed fast between the coffin and its lid. These elaborate precautions are intended to prevent the deceased from getting out of the coffin and flying away in the form of a bird, to plague men and pregnant women. Even if she succeeded in getting out, it is believed that she would not forsake the eggs (Riedel, 81).

It should, however, be said that the corpse is sometimes wounded with quite a different intention from that just mentioned. The Puri of South America open the breast to let out the soul (*Int. Arch.* xiii., Suppl. 87). Another South American tribe, the Lengua of the Paraguayan Chaco, in accordance with a well-known principle of sympathetic magic, cut open the stomach of one whose death they attribute to witchcraft, and insert a stone and some charred bones. This is supposed to revenge the death by killing the wizard (*JAI* xxxi. 296; cf. Hartland, *LP* ii. 109). Some of the Naga tribes of Assam wound the corpse on the head, that the deceased may be received as a warrior with distinction in the other world (*JAI* xxvi. 198; *ARW* xii. 454).

XII. Return from the funeral.—The deceased being thus comfortably provided for and admonished by word and deed to stay where he has been put, or to go into the other world, and in any case not to meddle with the living, the mourners return from the grave. What they have to dread is that, in spite of these and other precautions, the ghost may attach himself to them and thus succeed in getting home again. For, as is obvious from what has already been said, the dead man is regarded as by no means willing to be deprived of the society to which he has been accustomed. Accordingly the burial is often conducted with the greatest haste.

Thus among the Bontoc Igorot of Luzon, when the corpse has been put into the coffin, it is hustled away with the help of many willing hands; no time is wasted at the graveside; the filling up of the grave is done in the shortest possible time—probably, in the case witnessed by Jenks, not over one minute and a half; and away the mourners hurry, most of them at a dog-trot, to wash themselves in the river (A. E. Jenks, *Bontoc Igorot*, 1905, p. 78). On the other hand, so deeply defiled are the members of the family considered by the Papuan tribes, and so impossible is it for them at once to get rid of the ghost, that they erect a hut on the grave and there camp for six weeks or more, the widows in particular huddled in one corner away from the rest, invisible and unwashed (*ARW* iv. 345). The Ojibwa widow springs over the grave and then runs zigzag behind the trees, as if she were fleeing from some one. She thus dodges the ghost of her husband, that it may not haunt her (Jones, *Ojebway Indians*, 1861, p. 99).

Specimens of the obstacles put in the way of the ghost have already been given. Without going over the same ground, a few examples may here be noted of the methods of preventing the ghost from attaching itself to those who have taken part in the last rites.

The Batak priest, as the grave is being closed, heats the air with a stick to drive away the souls of the living men (*ARW* vii. 504). In the Southern Nicobar Islands the family return to the hut, where they sleep. The next day it is purified by brushing and washing, the mourners bathe and are anointed on the head and shoulder by a priest, and a lighted torch is waved 'to drive away the spirits' (*Ind. Cens. Rep.*, 1901, iii. 209) In North-Eastern Rhodesia all spit on the grave when it is filled up, and return to the village without looking back. This is now said to be a precaution against giving a clue to some watchful hyæna to dig up the body; it is more likely that the custom originated in a precaution of a different sort (*Journ. Afr. Soc.* v. 436). The Masurs of Eastern Prussia hold that the deceased accompanies the first bearer home, whereupon the latter asks him: 'Have I made thy bed properly? If not, I will make it better.' Only then is the ghost appeased and goes back to the grave (Tëppen[2], 110). The Mordvin mourners stop a little distance from the graveyard, and one of the gravediggers, with the same tool that he has used to dig the grave, draws a circle round them. This is repeated twice. When they reach the house, the oldest woman of the family throws in their way a leg and a cutlass, over which they step. The intention of the cutlass is to frighten the deceased, who, according to popular belief, is at their heels (Smirnov, i. 364). In the Babar Archipelago four stakes with cross-beams are set up over the grave and a piece of coarse red cotton stuff stretched across them in the form of a canopy. A piece of rotan is fastened to one of the stakes, and one end of it is held by the villagers present. The rotan being held taut, the head of the household, counting from one to seven, cuts it in two with one blow of his parang. The end left in the hands of the survivors is brought back by one of the kin to the house of the departed, as a symbol that all intercourse with the departed is broken off, and that he now belongs to the kindred in the other world (Riedel, 359). The firing of guns and beating of drums, so usual at a funeral in various parts of Africa, is probably intended to drive away the ghost. Elsewhere, as in Melanesia, it is avowedly hunted away.

XIII. Lingering of the soul.—The unwillingness of the soul to sever its earthly ties is not easily overcome. So far from retiring into the other world when the last breath has left the body, it habitually lingers at the place of death, or with the corpse.

The Huron ghost walks in front of the funeral procession, and remains in the cemetery until the feast of the dead; by night, however, it stalks through the village and eats the leavings of the food of the living (Le Jeune, *Jesuit Rel.* x. [1636] 143). In a Negro funeral in Jamaica the ghost sits on the coffin (*FL* xv. [1904] 208). The Korean ghost, more luxurious, rides in a sedan chair (*JAI* xxv. 351). About Königsberg, if you look through the gravedigger's arm when the coffin is being let down into the grave, you can see the ghost (*Am Urquell*, ii. 80).

In the belief of peoples in every part of the world it haunts the grave for a period variously stated from a few days to many months, or even an indefinite period. Indeed, as already indicated, the grave is often conceived as the permanent residence not merely of the body, but of the soul. Where the belief in a world of the dead is developed, the ghost usually departs at latest after the performance of certain rites to be discussed hereafter (§ XXI.). Meanwhile it is necessary to attend to its wants by the placing of food and sometimes a shelter on the grave. The tribes of Central Nigeria considerately leave a small hole in the grave-mound, where it may go in and out (L. Desplagnes, *Le Plateau central nigérien*, Paris, 1907, pp. 249, 257, 262). It even sets at defiance the precautions taken to prevent it from returning to its earthly home.

A common superstition in Europe is that a mother who dies leaving a suckling returns for six weeks after the funeral to suckle her little one. According to the Bulgarians, the ghost lingers for forty days in the house, and returns again on the first Easter Day until the first Whitsunday after the funeral (Strausz, 451, 453). The Minangkabau Malays of the Padang Highlands keep the seat and bed of the deceased clean and tidy for a hundred days, lest the ghost be offended; for it haunts the house during that period (*Bijdragen tot de Taal- Land- en Volkenkunde van Nederlandsch-Indië*, xxxix. [1890] 70). Among the Yakuts the ghost wanders round the body, visits the places the dead man frequented in his lifetime, and tries to complete any work he has left unfinished. In the silence of the night the ghosts of men attend to the cattle and meddle with the harness, while the ghosts of women may be heard washing up the dishes, sweeping the rooms, tidying the granary or the chests, sighing and whispering the while. The survivors may sometimes even see them sitting tranquilly in the firelight or walking about the fields (*RHR* xlvi. [1902] 224).

XIV. Purification of the survivors.—When the funeral is ended, all who have taken part in it must commonly be purified. As the necessity for purification attaches also to all mourners, and is sometimes deferred until, or perhaps more frequently repeated after, the completion of the death rites, the examples following are, in order to avoid repetition, not confined to the immediate return from the funeral. The most usual methods of purification are by fumigation and bathing.

The Euahlayi of New South Wales fumigate themselves beside the grave at and after a burial. A widow covers herself with mud and sleeps beside a smouldering fire all night. Three days afterwards she and her sisters (who might have been her husband's wives) are chased down to the creek, where a fire has previously been lighted. She catches hold of the smoking bush; putting it under her arm she jumps into the creek with it and extinguishes it in the water. As it goes out, she drinks some of the smoky water. On emerging she is smoked at the fire and calls to her husband, who is supposed to answer her. Not until then is she allowed to speak; the only utterances permitted to her up to that time have been lamentations. On her return to the camp another fumigation, apparently of the entire population, is made, and she continues to wear mourning for many months (K. Langloh Parker, *Euahlayi Tribe*, pp. 86, 88, 93). Among the Northern Tribes of Central Australia the women are released from their ban of silence by a ceremony, of which the chief item consists in their brushing themselves all over with burning twigs taken from a fire they have lighted for the purpose (Spencer-Gillen[b], 554). Yakut gravediggers, on returning from the cemetery, purify themselves at a fire made of chips of the coffin, before they enter the *yurt* (*RHR* xlvi. 211). When a Bechuana widower is married, both he and his new bride must undergo an elaborate fumigation (*JAI* xxxv. 307); among the Bangala one who touches a dead body is placed in a circle of fire for purification (*JAI* xxxix. 114). The Manganja mourners not only bathe, but rub themselves with 'medicine-water' (Rattray, *Some Folk-lore Stories and Songs in Chinyanja*, 1907, p. 94). The ancient Hebrews accounted every one who touched a dead body or a grave, or who came into the tent where a corpse lay, unclean for seven days; and he was excluded from the community and from all religious rites. He was sprinkled on the third and again on the seventh day with the 'water of separation,' in which were mingled the ashes of the sin-offering. So contagious was his uncleanness or tabu that it attached to everything he touched, and even to the clean person who sprinkled him. Moreover, the unclean man after the sprinkling on the seventh day was required to bathe, and both he and the clean person who sprinkled him had to wash their clothes: nor was either of them reckoned clean until the evening (Nu 19[13ff.] 5[21]). Among the Bontoc Igorot of Luzon all who take part in the burial hurry to the river to wash (Jenks, 79). Among the Indians of the Paraguayan Chaco they drink hot water and then bathe in hot water. The near relatives are considered unclean for a time and are excluded from the village. Before re-entering it they purify themselves by washing in hot water and putting aside the tokens of their mourning (Grubb, *Among the Indians*, p. 44). The Lillooets of British Columbia hold the funeral feast immediately on returning from the grave. The members of the household of the deceased pass the next four days in fasting, lamentations, and ceremonial ablutions. Their hair is then cut, they are painted and oiled, the hair is tied up, and they hold a second feast with more cheerful countenances. A young widower often goes into the forest alone for a year, builds himself a sweat-house, and drives the 'bad medicine' of his dead wife out of his body by repeated sweating or hot baths. A young widow during the whole period of mourning undergoes continuous ceremonial washings or cleansings, for the double purpose of lengthening her own life and rendering herself innocuous to her next husband, who would otherwise be short-lived (*JAI* xxxv. 137 ff.). Among the Thompson Indians the widow or widower, immediately after the death, goes out and passes through a patch of rose bushes four times. Among other ceremonies, a widower washes in the creek and cleans himself with fresh fir-twigs morning and evening for a year. It is significant that any grass or branches on which a widow or widower sits or lies down will wither up (*Jesup Exped.* i. 332, 333).

The meaning of these ceremonies is probably expressed in the belief of the Pima of California, who hold that ghosts are uncanny things to have about; they are liable to touch sleeping persons, which is a summons to accompany the ghost back to the shades (*26 RBEW* [1908] 194). Hence the Lillooet widow must free herself from the ghost, both for her own sake and for that of her next husband. And the contagious character of the death-pollution is shown by the custom of the Hupa which requires every one who has touched a corpse to cover his head until purification, 'lest the world be spoiled' (Goddard, *Hupa Texts*, 1904, p. 224 n.).

In Europe similar beliefs and practices have prevailed throughout historic times.

The ancient Greeks put at the door of the death-chamber a vessel full of pure water obtained from another house, so that all who came out might purify themselves (Rohde, *Psyche*, i. 219). It is still a very wide-spread custom on the Continent to meet the funeral party, on returning to the house, with water and towel, that all who have taken part may wash their hands before entering. In Istria the water is poured over a firebrand (*Globus*, xcii. [1907] 88). In Central France, two generations ago, the members of the funeral party used to hasten to the nearest brook or pool. In some of the villages so contagious was the pollution held that, if the funeral procession passed any clothes hanging out to dry, the clothes were always washed again (Laisnel de la Salle, ii. 79, 80). In the Tyrol all inhabitants of the house are assembled and fumigated by the house-father before the corpse leaves the house; to be absent from this ceremony is to run the risk of a speedy death. In another district when a dead body is carried out, every one must forthwith wash his clothes, otherwise a second corpse will soon be borne out (von Zingerle, pp. 49, 50).

XV. Funeral feasts.—A feast is usually (in the lower culture invariably) a part of the funeral rites. Frequently, indeed, a feast is partaken of in the presence of the corpse, another (sometimes kept up for days, or repeated at stated intervals) on the return from the funeral, and a third when the rites are closed by the second funeral, or re-burial of the bones (§ XXI.), and the mourning comes to an end.

1. *Before the funeral.*—

Among the Gilbert Islanders, when the corpse's toilet is completed, the wailing begins. In the meantime a feast with dancing and songs is prepared outside the hut where the body lies; and every one in turn, after his wailing is over, goes and joins the feast, which lasts for three days before the interment takes place (*Int. Arch.* ii. [1889] 42). In the Cauca Valley, Colombia, the dried corpse was kept in the house for two months before burial, and during the whole of that period

drinking-bouts, dirges, and singing-contests took place in honour of the departed (*Globus*, xc. 305). The relatives and friends of a deceased Araucanian sit round the corpse on the bare ground and weep for a while. Others, weeping, bring food and drink, of which all partake (*Int. Arch.* xiii., Suppl. 105). At the death of an Ainu, a large cup of food or a cake of millet, and water or *sake*, are placed by the head of the corpse after it has been laid out. The corpse is addressed in a farewell speech, and invited to partake, before he quite leaves the survivors, of food and drink such as he loved, 'for this is our good-bye feast made specially for you.' After the food has remained by the corpse for some time, it is taken and reverently divided among the nearest relations. Millet cakes and *sake* are also brought into the hut and handed round to all present, every one, before drinking, offering two or three drops to the spirit of the dead. Part of the millet cake is eaten, and the remainder buried in the ashes of the hearth, a little piece by each person. After the burial these pieces are collected and carried out of the hut to the domestic shrine (Batchelor, *Ainu and their Folk-l.*, Lond. 1901, p. 556). Among the ancient pagan Prussians the body was dressed and placed upright on a bench. The nearest relations then sat down beside it, carousing with beer and wailing (*FL* xii. 300; Tetzner, 23). The ceremony among the Masura is more elaborate. A messenger is sent through the village to summon to the burial, and the company is usually numerous. On one side of the room where the corpse lies is a long table, the middle of which is occupied by the corpse, while all around it are seats for the men. The women sit at another long table on the other side of the room. After two tedious funeral songs have been sung, schnapps and curd-cakes are served. The schnapps for the men is served in bottles with one glass, out of which all drink in turn; for the women it is served in a bowl with a spoon, and every woman takes a spoonful or two as the spoon and bowl pass down the table. The curd-cakes are handed round in a white apron or a basket (Töppen², 103).

The custom of eating and drinking in the presence of the dead is wide-spread in Europe as elsewhere; further examples will be adduced hereafter.

2. *After the funeral.*—A feast follows the disposal of the body.

The Ainu mourners return to the hut; the men make sacred willow emblems, called *inao*, pray, eat, drink, and get helplessly intoxicated (Batchelor, 559). Among the Uriya of Orissa the feast occupies several days (Rice, *Occasional Essays*, Lond. 1901, p. 56). So the pagan Norsemen feasted for three nights. The Masurs, whose ceremony prior to the burial has just been described, on returning find the tables and benches so arranged that men and women, who had previously sat apart, can sit together; and the schnapps is mixed with honey and served in bottles. Sometimes it is burnt before being mixed, and is then called by a special name. At noon a meal of flesh-meat, fish, and groats thickened with honey is served. All day the men remain in the house comforting the bereaved, and likewise comforting themselves with the remains of the food and with drink; nor do they separate until the evening (Töppen², 104). In some places the corpse, before removal, is covered with a table-cloth, and the same table-cloth is put on the table at the subsequent funeral meal (*ib.* 111). In Ille-et-Vilaine neither wine, nor cider, nor coffee, nor liqueur appears at the table; the conversation is carried on in a low tone; as the guests finish they retire (A. Orain, *FL de l'Ille-et-Vilaine*, ii. [1898] 294). A great contrast is afforded by the Frisian population of the marshes on the right bank of the lower Weser. They hurry from the church to the house, where piles of cakes, long rows of wine-bottles, clay pipes, plates of tobacco, matches, and cigars await the guests, and the feast begins. Hitherto stillness and whispering have reigned in the house. Now eating and drinking know no bounds; soon the tobacco-smoke fills the house, until it is impossible to see three paces ahead; all tongues are loosened; chattering and jesting, laughing and drinking, the clinking of glasses and the general good humour increase from hour to hour (*ZVV* ix. [1899] 55). In various parts of Europe it has been found necessary to put a limit by statute or local regulation to the expenditure on the funeral feast and the other abuses connected with it.

Among many peoples the feast is held at, or even upon, the grave.

The Ojibwas, who deposit their dead on the ground and cover them with a light roofing of poles and mats, as soon as this is finished, sit in a circle at the head of the grave and present an offering to the dead of meat, soup, or 'fire-water.' This, except a certain quantity kept for a burnt-offering, is consumed by the mourners (P. Jones, *loc. cit.*). In the Nicobar Islands, the day after the funeral a feast is held at the grave 'in the presence of the dead,' at which the relatives and friends bind themselves, according to their degree of kindred with the departed, to abstain from certain food, drink, and enjoyment for a longer or shorter period, the longest terminating with the great feast of the dead, when all the ceremonies are concluded (*Int. Arch.* vi. 25). The Gilyaks burn their dead. When the cremation has been accomplished, they sit round and partake of the flesh of dogs, killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it and throw the rest about in all directions, probably for the deceased, afterwards adjourning to the *yurt*, where further refreshments are provided (*ARW* viii. 473). The ancient Romans used to offer to the *manes* on the ninth day after the funeral at the grave; and the meal was taken there. The funeral meal is still, or was quite lately, taken in the cemetary at Argentière in the Department of the Hautes Alpes, France; and the curé and the family of the deceased sat at a table placed upon the grave itself. As soon as the meal was over, every one, led by the next-of-kin, drank to the health of the departed (Laisnel de la Salle, ii. 81). The custom is not merely wide-spread; it descends demonstrably from a great antiquity. Neolithic graves are often found containing remnants of a feast, in the shape of broken bones of animals and traces of a fire.

As already mentioned, the feast following the funeral is by no means always concluded at one sitting.

The ancient Norse were, and the Uriyas are, however, quite abstemious in this respect compared with some other peoples. In the Moluccas, on the island of Keisar, the kinsmen ordinarily feast for twenty days in the house of the dead, and, after enjoying all sorts of delicacies, wind up the solemnity with dog's flesh. The Tanembar and Timorlaut Islanders enjoy from ten to a hundred days' festivities (Riedel, 421, 306). The Lepers Islanders go on 'eating the death' for a hundred days (Codrington, 287); while the Malagasy outdo them all. The length and brilliancy of their feasts are, of course, proportioned to the wealth of the deceased. Rum flows without stint from morning to night; and every one present is more or less plunged in drunkenness. So long as there is anything to eat and drink the feast goes on, and nobody thinks of going away. The funeral feasts of high and noble persons have been known to last for months (*Mad. au xx^e siècle*, 284). Or, on the other hand, the feast may be renewed at stated intervals. The ancient Prussians held their funeral meals on the third, sixth, ninth, and fortieth days (Töppen², 111 n.). The Muhammadan Malays feast on the day of the funeral, and on the third, seventh, and fourteenth days (Skeat, *Malay Magic*, 407). The Chinese of Northern Tongking feast every seven days for a month (Lunet, 89). On the death of a Buriat shaman the funeral feast is held at the burning-place, and repeated on the third day, when his cremated bones are collected and deposited in a hole hewn in the trunk of a big fir, and the rites are at an end for the time (*JAI* xxiv. 135). This simplicity may be contrasted with the Fijian custom, which requires that wailing proceed in the house for four days after the death. On the fourth day a feast is held, and it is followed by others on the tenth, thirtieth or fortieth (when the tomb is dressed), and the hundredth days (*Anthropos*, ii. 74). Among the Patagonians the wailing lasts for fifteen days after a death. It is accompanied with feasting on horseflesh and drinking-bouts, and is renewed every month under the same stimulating influences, and closed at the end of a year with a three days' celebration (*Int. Arch.* xiii., Suppl. 103).

A feast is often held at the completion of the funeral ceremonies or of the period of mourning (see § XXI.).

3. *Object of funeral feasts.*—The object of these feasts is not simply hospitality to the invited guests; they indeed very often contribute their full share in kind. Nor is the object merely the enjoyment of those who partake, or a natural reaction from sorrow, or ostentation on the part of those who provide them. Doubtless some or all of these impulses do enter into the motives for the frequently repeated and usually extravagant displays, and the gluttony and carousing inseparable from them. But there are deeper reasons for the observance. The above reasons would be insufficient of themselves to account for the practice, shared by civilized Europeans with savage Ainu, of holding the first formal meal in the presence of the corpse, or on the grave, if they would not indeed positively repel it. Moreover, the ceremonial of such a meal is not always that of abandonment to the pleasures of the table and of social intercourse; and, finally, the deceased is himself, even after cremation or burial, regarded as one of the convives. The belief that the dead man is present and joins in the feast is very wide-spread, and is evidenced in more ways than one.

In the German districts of Prussia a seat is left for the dead man, and food and drink are placed for him. The old Prussians used to throw the food and drink destined for him under the table (Töppen², 111 n.). The Thlinket of British Columbia are divided into two intermarrying classes, descendible exclusively through women. When a man dies, his body is carried out by members of his wife's class, and the members of his own class give them a feast. Before distributing the food the name of the dead is pronounced, and a little of the food is put into the fire. By this means he is believed to receive it (*26 RBEW* 431; cf. 462). The utterance of the name is a call to its owner to come and receive his portion. In various Melanesian islands, when the name is pronounced, the chief mourner with some

of the food in his hand says expressly, 'This is for you,' and throws or puts it aside for the deceased (Codrington, 271, 282, 284). Among the Chinyaï or Chinyungwe, on the Zambesi, a portion of the drink and the blood of the slaughtered sheep are poured into the grave, through a hole made for the purpose (*JAI* xxiii. 421). The Veddas make an offering to the newly dead, and afterwards consume it themselves (*Rep. Oxford Cong. Hist. Rel.* i. 62). On some of the Moluccas the soul after burial is believed to haunt the neighbourhood of the house. On the fifth day a wooden image of the deceased is prepared, the soul is enticed into it, and a meal of rice, pork, and chicken is presented. The mouth of the image is daubed with some of the food, and the deceased is addressed: 'Eat, drink, and watch over us, that no sickness arise.' After the deceased has finished, the feast of the survivors begins, and lasts all night (Riedel, 395). It is not quite clear from the report whether they partake of the identical food that has been placed before the image; but probably they do. The Cheremiss, on the fortieth day, go to the cemetery to invite the dead man to join the feast and to bring him back. In one district one of the convives impersonates him dressed in his best clothes. He is seated in the place of honour, and is treated as the master; the widow of the deceased addresses him as husband, the children as father. All night he eats, drinks, and dances with the rest. In the intervals of the dances he relates his life in the other world and his pleasure at meeting again those who have predeceased him; he begs them not to sorrow on his account—rather let them oftener repeat the feast of commemoration (Smirnov, i. 143). So, the Kols of Chotā Nāgpur provide a meal in the dead man's house, to which they summon a man from the Mahali, a neighbouring mongrel tribe with whom they never otherwise eat. He comes to the banquet, and there represents the deceased. Until he has done this, no meal can be eaten in the house. When the meal is finished he departs, and the house is thenceforward pure, and no longer haunted by the dead man (Hahn, *Kolsmission*, 84). There is a similar practice among some of the North American tribes (M. A. Owen, *Folkl. of Musquakie Indians*, Lond. 1904, p. 83).

The ritual character of the meal is rendered obvious also by the fact that very often it consists, wholly or in part, of a special kind of food. Pulse was partaken of by the Romans, and it figures prominently in the funeral feasts of many parts of modern Europe. Cakes and biscuits of various kinds are also used, from Wales to the Volga and the Greek islands. It is probable that this ritual food represents the flesh of the corpse, and is a long-descended relic of funeral cannibalism. The Abbé Dubois, describing the ceremonies attending the cremation of the king of Tanjore, who died in 1801, and two of his wives, informs us that some of the bones which had escaped complete destruction were ground to powder, mixed with boiled rice, and eaten by twelve Brahmans. The object of this rite was the expiation of the sins of the deceased; for these sins, according to popular opinion, were transmitted into the bodies of those who ate the ashes (Dubois-Beauchamp, 366). This is precisely parallel to the old Welsh custom of 'sin-eating,' whereby, when the corpse was brought out of the house and laid on the bier, a man was found whose profession it was to perform the ceremony. A loaf of bread was handed to him over the corpse before the funeral procession started, and a mazar-bowl full of beer with a piece of money (in John Aubrey's time sixpence), 'in consideration whereof he tooke upon him (*ipso facto*) all the Sinnes of the Defunct, and freed him (or her) from walking after they were dead' (Aubrey, *Remaines*, ed. 1881, p. 35). In the Bavarian Highlands a different interpretation was put upon a similar practice. Formerly, when the corpse had been laid on the bier and the room carefully washed and cleaned, the housewife prepared the *Leichennudeln*, or corpse-cakes. Having kneaded the dough, she placed it to rise on the dead body before baking. Cakes so prepared were believed to contain the virtues and advantages of the departed, and to transmit to the kinsmen who consumed them his living strength, which thus was retained within the kin (*Am Urquell*, ii. 101). Perhaps we may interpret in the same way an obscure rite at the funeral feast of the Man Côc in Tongking. Before the meal begins, the priest presents to all the relatives in turn a piece of flesh to be smelt. At the meal each of the guests receives a piece of flesh, and the priest is paid with a leg of pork (Lunet, 245).

Similarly, in a MS of the 18th cent., preserved in the British Museum, it is related of the tribes about Delagoa Bay that they 'generally kill some beast in proportion to the ability of the deceased, and, digging a round hole, they lay the deceased at his full length; when, opening the beast, they take out the paunch yet reeking, and lay it upon the face of the deceased, and, after dancing round the corpse, tear this paunch to pieces and tumultuously eat it. This done, they bend the corpse round while warm and lay him in the hole, casting in some part of the guts [of the slaughtered beast], and closing the hole up; ending this odd funeral with dancing' (*Rec. S.E. Africa*, ii. [1898] 460).

Ritual food with another meaning is found among the Baganda, where fowls are, as a rule, tabu to women. The reason they assign for this tabu is that death came into the world by the disobedience of a woman, who insisted on returning to heaven for food for a fowl (see § II.). But at the death of a man a fowl is cooked, and each of his widows eats of it prior to the distribution of his widows and effects (*JAI* xxxii. 48).

The distribution of articles of food to persons, whether relatives, friends, or the poor, who do not share in a formal meal is an extension of the feast.

In Sardinia, on the seventh or ninth day after death savoury cakes are prepared and sent hot from the oven to all the relatives and neighbours, and to all who have joined in the funeral ceremonies; but the funeral supper is confined to the immediate family (*Rivista Trad. Pop. Ital.* i. [1893] 959). At Gainsborough, penny loaves used to be given away at funerals to all who asked for them (*Ant.* xxxi. 331). In Bulgaria the villagers bring fruit for the departed, or for the previously dead, and it is distributed among the children at the funeral (Strausz, 446). Among the Uriyas, on the death of a rich man, copper coins and fried rice are scattered as the funeral procession passes (Rice, 55). On the island of Mahuiag'a heap of food is piled up close to the platform on which the body lies, and afterwards divided among those present. Again, a few days afterwards, when the skull has been removed and cleaned and is handed over to the relatives, another quantity of food is provided by the mourners, and distributed to those who have assisted at the funeral. In both cases it seems to be consumed at home (*Torres Str. Rep.* v. 250, 251).

The money doles given to the poor in our own country are probably a commutation of the distribution of food (see Brand and Ellis, ii. 192). The analogous customs in India and elsewhere may be set down to the same cause. Doubtless, however, all have been affected by ecclesiastical influences. The fact that the gifts frequently include lavish doles and entertainments to ecclesiastics, both in Europe and in Asia, is evidence very difficult to gainsay.

Often the feast is merely a farewell banquet—a send-off of one who is unwilling to go—at the termination of which the deceased is formally but firmly shown the door.

Thus about Königsberg, in Prussia, a place is set for the dead man at the feast, in order that he may share it; and, when it is over, the hearers open all doors, that the ghost may depart (*Am Urquell*, ii. 80). The ancient Prussians used to drive the ghost out, saying: 'Be off! you have eaten and drunk' (Tetzner, 23). Among some of the Brazilian tribes, at the end of the feast, the widow, accompanied by the other women, and weeping, used ceremoniously to thank the men for their presence and help, and in the name of the deceased to call for a parting drink, that he might forthwith enter on his journey; for he could not set out while his friends tarried with him (*Int. Arch.* xiii., Suppl. 112). The Tarahumares of Mexico hold three feasts for a man, but four for a woman (see § XVIII.). These begin within a fortnight after the death and are increasingly elaborate, each lasting a day and a night. All the mourners talk to the departed. He is told to take away all they have given him, and not to come and disturb the survivors. The second feast is given half a year after the first, the third and largest later still. The sacred cactus, *hikuli*, is thought to be very powerful in chasing away the dead, driving them to the end of the world, where they join the other departed. Hence it is steeped in water and the water sprinkled over the people; and *hikuli*-dancing and singing always play a prominent part in all festivities. At these feasts for the dead other dances also take place; *tesvino*, the national stimulant, is drunk; and the survivors drink with the dead. At the third feast a large earthen bowl full of water is the subject of a ceremony by the shaman, at which he finally lifts it up and throws it in the air. It falls shattered to pieces, and the people dance and trample on the fragments. The function concludes with races by the young people. 'The men have their hall, and as they run they scatter ashes to the four cardinal points to

cover the tracks of the dead. They return rejoicing, manifesting their delight by throwing up their blankets, tunics, and hats, because now the dead is at last chased off.' Not until after the last function will a widower or a widow marry again, 'being more afraid of the dead than are other relatives' (Lumholtz, *Unknown Mexico*, i. 384 ff.).

Elsewhere the motive is stated to be the rest or the happiness of the deceased—often, however, with somewhat more than a hint at the benefit of the survivors.

Thus, among the Bulgarians of Hungary, before the burial a meal takes place, at which every one receives a loaf of bread and a taper wound with a cloth. The tapers are kindled in the house, and then extinguished. The bread is then eaten, and it is believed that the soul is now saved. In a room adjoining that where the corpse is being waked another meal goes forward, 'for the well-being of those who are left behind and that he may slumber for ever' (*Globus*, xc. 140). The Igorot dead in Luzon is admonished not to come and make the survivors sick, but to protect them from other *anito* (*manes*); he is reminded that, when they make a feast and invite him, they want him to come, but that, if another *anito* kills off all his relatives, there will be no more houses for him to enter for feasts. The Igorot are very fond of feasts; it is assumed that death makes no difference in this respect: consequently this last argument is considered very weighty (Jenks, 79). Among the Yakuts the horses or cattle killed for the feast are ridden or driven by the dead to the other world, and so add to his comfort or his state (*RHR* xlvi. 208). The Barotse take the same view. They no longer kill slaves, but they kill and eat the oxen, which will secure to the dead a favourable reception at the hands of his ancestors (Béguin, *Les Ma-Rotse*, 116). So, again, the Melanesian population of Aurora think that, if they do not kill many pigs, 'the dead man has no proper existence, but hangs on tangled creepers, and to hang on creepers they think a miserable thing. That is the real reason why they kill pigs for a man who has died; there is no other reason for it but that.' The deceased and the ghosts of others who have previously died are believed to come back to earth to attend his funeral feast (Codrington, 282, quoting a native account). In Angola it is held that the condition of the dead in the other world will depend upon the amount of food and drink consumed in their *tambi*, or mourning, which lasts from one to four weeks; and during that period wailings alternate with feasting and merry-making (*JAFL* ix. 16). The same idea may perhaps underlie the pathetic Silesian custom of adorning the house with garlands and green boughs at the funeral of an unmarried, especially of a betrothed, person, and of rendering the funeral meal a complete marriage-feast, to which others than the immediate relatives, mourners, and bearers are invited (*ZVV* iii. 152). Sometimes a more direct spiritual and unselfish motive is expressed. In Bulgaria at the meal taken before the funeral, every one, before drinking, pours a few drops of wine on the ground before the corpse and says: 'God forgive the sins of N.N.' After the burial the priest incenses the room, and then takes his place at the top of the table, saying: 'God forgive N.N.' During the meal, as the guests sit round the table, he from time to time says: 'Eat and drink and say "God forgive N.N."'; and the guests accordingly respond in chorus (Strausz, 450, 451). So, in the Lebanon, among the Christian population, a ritual food of boiled wheat, flavoured with spices, almonds, hazel-nuts, walnuts, or pine-seed, is distributed among the relatives, and especially to priests, often at the exit-door of the church. As they take it in passing, they say: 'May God bless him for whom we eat this now.' The same formula is used when it is eaten in the house of mourning (*FL* ix. 8).

XVI. **Funeral games and dances.**—Funeral games, familiar to us in classic literature, are of very wide distribution. They cannot be separated from dances, for there is no hard and fast line between the two. Many dances are mimic contests, and the ceremonies are by some observers reported as dances and by others as games. Whether dances or games, however, it would appear that the object is the same, viz. to drive away either the dead or the evil spirits to whose influence death is due, and to free the living from the resulting fear—a purpose which in process of decay first becomes divination as to the state of the deceased, and then is explained more simply as for the mere amusement of the deceased or the survivors. Naturally this object is not clear in every reported instance. Insufficient attention on the part of the reporter is sometimes the reason for this; but perhaps quite as often the decay of the ceremonies themselves, and the loss by those who practise them of their real meaning, are as much to blame.

Among the Bongo of the Egyptian Sudan a large heap of stones is erected over a grave, and upon it a number of votive poles are erected, adorned with notches and incisions, with their forked tops made to resemble horns. The meaning of these poles or stakes is said to have passed from the memory of the inhabitants; at all events Schweinfurth (*Heart of Africa*, Lond. 1874, i. 304), during his twelve months' stay in the country, failed to obtain any information on the subject. However, there is no doubt as to what is done. The entire village takes part in the digging of the grave, in covering it, and in planting the votive poles; and, when this is finished, they all equally shoot at the poles with arrows, which are left where they strike. The Yānādis of Southern India perform, on the sixteenth or some later day after death, a ceremony called *peddadinamu*. A handful of clay is squeezed into a conical mass representing the soul of the deceased, and stuck up on a platform, where the eldest son spreads cooked rice before it, lights a lamp, and burns incense. It is then taken with the rest of the cooked rice to a tank. There the recumbent effigy of a man is made close to the water with the feet to the north. This effigy is anointed with *shikai* (fruit of the *Acacia concinna*) and red powder. The conical image is set up at its head; the rice, made into four balls, is placed near its hands and feet, together with betel and money, and the son salutes it. The agnates then seat themselves in a row between the effigy and the water, with their hands behind their backs so as to reach it. In this way they slowly move it towards the water, into which it finally falls and becomes disintegrated (Thurston, vii. 428). These two customs of widely differing peoples are manifestly directed against the deceased.

A Sioux practice known as the 'ghost-gamble' presents the deceased as engaged in the contest. His effects are divided into many small piles. A man is selected to represent the ghost, and he plays for these piles of goods against all the other players. The playing is with wild plum-stones, which are marked like dice. When the deceased is a man, only men play; when a woman, only women play (*1 RBEW* 195). Of the real meaning of a contest of this kind we get a glimpse in the custom of the Bulgarians of Hungary, who while away the tedious hours of the wake with games, among others with card-playing to divine whether the soul of the departed is saved or not. At an earlier stage it probably did not merely divine, but determined, the fate of the soul, or its relations with the survivors (*Globus*, xc. 140). In the south of Ireland, formerly, on a similar occasion songs and stories, blindman's buff, hunt the slipper, and dancing were among the amusements. We are told also that 'four or five young men will sometimes, for the diversion of the party, blacken their faces and go through a regular series of gestures with sticks, not unlike those of the English morris-dancers.' This disguise and these evolutions in the presence or immediate neighbourhood of the corpse, there can be little doubt, were more than mere diversion. Comparison with other customs suggests that the players represented supernatural personages—ghosts or devils (Croker, *Researches*, 170).

This is certainly the case with savage dances in which masked and disguised figures appear. The assumption of the disguise is, according to the almost universal view of savage peoples, enough to cause the performer not merely to represent, but actually to be for the time, the supernatural being represented; and the appearance of such figures is quite common at death-dances.

Thus in the western islands of Torres Straits the performers personify the ghosts of persons recently dead, and they mimic in the dance the characteristic gait and actions of the persons so personified. 'The idea,' writes Haddon, 'evidently was to convey to the mourners the assurance that the ghost was alive and that in the person of the dancer he visited his friends; the assurance of his life after death comforted the bereaved ones'

(*Torres Str. Rep.* v. 256). In conformity, probably, with this object, a buffoon is provided, also disguised, whose antics as he follows the other performers are provocative of mirth. But the object is not the same in all savage death-dances. Among the Bataks the dance seems to be performed by the *guru* alone. The *guru* in such cases is a woman; it is her business to protect the living against ghosts. She dances both before and after the burial. As the grave is filled in, she lays about her with a stick, not, however, to drive away the ghost, but the souls of living persons—obviously to prevent their getting into the grave, or into the undesirable society of the dead (*ARW* vii. 503).

Among the Beni Amer of Abyssinia, in spite of Islām, women occupy a privileged and almost a sacred position. It is the women who perform the funeral-dance; and one of the sisters of the deceased, having dressed her hair in masculine fashion, parades with his sword and shield while his praise is sung (Munzinger, 327). The sex of the performers renders it probable that the object of the dance is prophylactic, and the appearance of a personification of the deceased is intended to do more than give assurance to the relatives of his continued life: it is to mollify him by singing his praise, so that he may do no harm to the survivors. So to ward off evil influences (probably to drive away the ghost) is the object of the dance practised by the Damaras and performed backward and forward over the grave (Kidd, *Ess. Kafir*, 251). On the burial of a chief among the Ibouzo on the Niger the last ceremony is called *i kwa ota*, 'bending the bow.' The young men, clad in short drawers and wearing caps of monkey-skin, scour the town, brandishing shields and cutlasses, as if they were starting on a warlike expedition. With an urgent air and panting as they go they utter a ferocious chant. Advancing in serried ranks they brandish the cutlasses over one another's heads, and the clash of the weapons is heard from afar. From time to time they strike their shields and leap to right and left as they chase the evil spirits before them (*Anthropos*, ii. 105).

But there is another kind of dance sometimes performed on these occasions, of which we have had a glimpse in some of the foregoing—the comic or burlesque.

Among the Indians of the Paraguayan Chaco a woman who has lost a child joins in a procession in circuit round a fire made outside the house. Young men appear dressed up as dragon-flies, and 'flit to and fro, provoking laughter by their antics and the capital imitation of the insect they present' (Grubb, 45). We are not told here the nature of the pranks played; but in many cases they are certainly of a priapic and what we should call obscene character. The description of the funeral of a king of Loango in the ninth decade of the 18th century reports performances of this kind carried out by players who were clad in feathers and masked with the heads of spoonbills. Similar dances are performed on the island of Yap on various (not necessarily funeral) occasions, especially on the death of a young girl (*Globus*, lxxxvi. [1904] 361); and in the Aru Archipelago they are presented at the termination of the mourning, as an intimation to the widow that she is now at liberty to marry again, and as an incitement to her to do so (Riedel, 268).

It was such a dance as this that was imputed by legend to Baubo when Demeter was plunged in grief for the loss of Kore; and we may conjecture that it was an archaic Greek funeral rite. Its meaning probably was to drive away death, evil spirits, and mourning by the exhibition of the instruments of life, which are widely used as amulets, and of the process of reproduction. It was not that these called up pleasurable thoughts and memories, and thus operated to banish the unpleasant and sorrowful thoughts. They had a magical force of their own that conquered death and evil. But the burlesque nature of the dance, if not obvious from its inception, must have tended to grow, because it was meant to relieve sorrow as well as to expel death. Any burlesque, therefore, that produced laughter would be dragged in to assist, with the natural result that among many peoples the priapic ceremonies were gradually forgotten and entirely superseded by merely comic antics, or ceased at any rate to play more than a subordinate part in funeral ceremonies.

XVII. Mourning.—Reference has already been frequently made to the state of tabu induced by the occurrence of a death. It remains to consider a little more closely the effect upon survivors connected with the deceased by neighbourhood or kinship.

The whole village or settlement is in the lower culture often attainted by the occurrence of a death. The rule among the Kaffirs of South Africa has already (§ VI. 9) been mentioned, and it may stand as a type of many others. But it is more particularly the near relatives and those who have been brought into contact with the corpse who are affected by the death-pollution, most of all the widow or widower. Moreover, the period of mourning, and therefore of tabu, varies among different peoples, and according to the relationship of the mourners to the deceased, or his rank, from a few days to many months and even years.

1. *Practices.*—

On Teste Island, off the coast of New Guinea, death lays the whole settlement under tabu. Dancing is forbidden, and no traveller may enter. A circuitous path must be taken through the surrounding bush in silence (Chalmers, 41). Among the Manganja, on the occurrence of a death, strict continence is required of the chief mourners and the elders of the village (Rattray, 95). On the island of Aurora the wives and parents of the deceased abstain from going out as usual for a hundred days. The restriction is particularly severe on female mourners, who are forbidden to go into the open; their faces may not be seen; they stay indoors and in the dark, and cover themselves with a large mat reaching to the ground. The widow, however, goes out thus covered morning and evening to weep at the grave. All who are in mourning refrain from certain food; the immediate relatives may not eat any cultivated food. They are restricted to gigantic caladium, bread-fruit, coco-nuts, mallow, and other things which must be sought in the bush where they grow wild. A cord is worn round the neck to indicate mourning and abstinence from 'good food' (Codrington, 281). In the Nicobar Islands the mourning begins from the feast at the grave 'in the presence of the dead.' Two degrees of mourning are distinguished: the lighter, in which all relations and friends abstain until the torch-feast, three months later, from singing, gambling, dancing, adornment of the person, and in the house of mourning from certain food; and the deeper, which concerns the immediate relations (especially the husband or wife), and extends over a longer period until the great feast of the dead, and in which, in addition to avoiding the enjoyments just mentioned, they must abstain from certain foods, from smoking and betel-chewing (*Int. Arch.* vi. 25). The ancient Hurons likewise observed two degrees of mourning: the greater lasted for ten days. During that time the mourners remained lying on their mats with their faces to the earth without speaking, and replying with no more than a simple exclamation to those who came to visit them. They went out only at night for necessary purposes; they did not warm themselves in the winter, or eat warm food. A lock was cut from the back of the head as a sign of the deepest sorrow. The lesser mourning lasted all the year. Visiting was permitted during this period, but no salutations, nor the greasing of the hair. But women, although they might neither do these things nor go to a feast, might order their daughters to do either. Neither wife nor husband married again during the year, 'else they would cause themselves to be talked about in the country' (*5 RBEW* 111, translating *Jesuit Rel.*). Among the Arawaks of South America the nearest relations of the deceased cut his widows' hair short, and the widows laid aside their clothing. Some months later a drinking-feast was held, at which all the men of the village assembled and scourged one another with whips made of the fibres of a climbing plant, until the blood ran in streams, and strips of skin and muscle hung down. Those who participated often died of their wounds (*Int. Arch.* xiii., Suppl. 77, 71). Among the Charruas the widow and the married daughters and sisters of a man each cut a finger-joint off and inflict other wounds on themselves. They also remain shut up alone in their dwellings for two full months, fasting and lamenting. The husband, on the other hand, does not mourn for his wife, nor the father for his child. Grown-up sons, however, remain for two days entirely naked in their huts, and almost without food. Then, having suffered the infliction of certain painful wounds on the arm, the mourner goes forth quite naked into the wilderness, where he rests all night up to the breast in a hole previously dug in the earth, over which he builds himself a little hut, and stays there for two days without eating or drinking. On the third day his friends bring him food and lay it down, hastening away without speaking a word. It is only after the expiration of ten or twelve days that he may return to the village (*Int. Arch.* xiii., Suppl. 72).

In South America, as in many other places, the women especially were made to bear the weight of the mourning observances. In Guiana, mourners laid aside all clothing and adornments (among some tribes even the women went stark naked) and retired into solitude. The women in particular concealed themselves, and ventured out only early in the morning and late in the evening to weep at the grave. Among the Mbayas and Guaycurú the women and slaves were forbidden to speak for three or four months. Among the former they were allowed only a vegetable diet; among the latter general fasting and abstinence were the rule on the death of a chief (*ib.* 73, 75, 76). The Warramunga women in Central Australia fight with one another and cut one another's scalps; and all who stand in any near relation to the deceased, reckoned according to the classificatory system, cut their own scalps open with yam-sticks besides, the actual widows even searing the wound with a red-hot fire-stick. A strict ban of silence is also imposed on women who reckon as wives, mothers, sisters, daughters, or

mothers-in-law of the deceased. They are not released from this ban until the final mourning ceremonies have been completely enacted—a period which may cover one or even two years (Spencer-Gillen[b], 621, 625). Among the Ewhe of Togoland the mourning lasts for six months, that being the time taken by the deceased to reach the kingdom of the dead. He is buried beneath the hut; and for the first six weeks of mourning a widow must remain in the same hut concealed, only leaving it to bathe and for other absolutely necessary purposes. When she goes out she goes entirely naked, with bowed head, eyes bent down, and arms crossed over her breast, 'that no mischief may befall her from the dead man.' In fact, she has nothing so much to fear as the deceased. She carries a club to drive him away, for he may wish to renew marital relations with her, and that would be death. For greater security she sleeps upon the club. She must not answer any call. Beans, flesh, fish, palm-wine, and rum are forbidden to her; and the food and drink that she is allowed must be sprinkled with ashes, to prevent her deceased husband from sharing the meal, in which case she would die. By way of further protection, on the charcoal fire that burns by night in the hut she strews a powder consisting of peppermint-leaves dried and rubbed down, mingled with red pepper. This produces a smoke such as the dead man is naturally averse to encountering. A man undergoes similar seclusion on the death of his wife, but only for seven or eight days. In Agué the widows are not let out of the dead-hut until after six months; and even then they must submit to tedious purification ceremonies before they are quite free (*Globus*, lxxii. 22, lxxxi. 190).

Among the Matse trihe of Ewhe the mourning for the oldest man or woman in the family lasts from five to seven months, for others one to two months. The entire period does not last beyond a year, unless in case of mourning by a spouse who lived happily with the deceased, and who may choose to mourn for another year. For a widow the restrictions are very severe. She must sleep on the mat on which the deceased lay until his burial; she must remain in a dark part of the hut; instead of on a stool she must sit on a stone; the clothing must be made of similar stuff to that in which the corpse was buried; she may not put on any other clothes at midday or evening; she may greet nobody; she may talk with nobody; she may not walk through the main street of the village; if she has occasion to go to see any one she must steal round by a path on the outskirts of the village; she must stay in the hut, and is not allowed to leave it often; when she goes out she must put a maize-cob (?) between her toes; lastly, if she has things to sell she must not haggle over the price, for if the wares she has for sale remain on her hands it will be unlucky, and, when her mourning comes to an end and she wants to sell anything, nobody will buy. It is said that if a widow omits to observe all these customs strictly the mourning will stick to her and eat her up, with the consequence that she will go crazy and never cease chattering. A prospect so terrifying causes the tabus to be strictly observed (Spieth, 754).

We have referred in an earlier section (§ VI. 9) to the restrictions on cultivation, hunting, and other kinds of labour.

In Europe, death tabus have been and still are practised. Among the ancient Romans the touching of the corpse entailed pollution, and the near relatives and the house itself were deemed impure, requiring ceremonies of purification. In the south of Italy in modern times the impurity is not such as to prevent friends from paying visits of condolence, which indeed they are required by etiquette to do. But they must be received by the mourners seated on the bare floor. No fire can be lighted in the house for several days; hence the mourners are dependent on their friends for food. A lamp, however, is kept alight in the death-chamber, probably for reasons already considered. The men do not shave their beards for a month (Ramage, *Nooks and By-ways of Italy*, Liverpool, 1868, p. 72). In Malta no fire used to be lighted for three days; when dinner was kindly sent by some relative or friend, the mourners ate it sitting cross-legged on the floor: they were debarred from the ordinary use of the furniture. Women were secluded in the house for forty days, but men went out on the seventh day with their faces unshaven (Busuttil, *Holiday Customs in Malta*, 131). In ancient Athens all relatives who were reckoned within the ἀγχιστεία were affected by the defilement of carrying out a corpse and assisting at a funeral; and after the funeral the house could not be entered save by those naturally thus polluted, at any rate not by any woman (Seebohm, *Gr. Tribal Soc.*, Lond. 1895, p. 79). Although this particular prohibition does not seem to be observed in Greece now, there are others pointing to the same region of ideas. After a death the house is kept unswept for three days, and it is imperative that the broom then used be burnt immediately. The men allow the beard to grow; and during mourning the sweetmeats usually brought in before the coffee to entertain visitors are omitted. In Maina the men scratch their faces with their nails, and the women cut off locks of hair to fling into the grave. In Northern Greece the women dress in white and keep the head uncovered, with the hair hanging down (Rodd, 125). In Bulgaria, on returning from the funeral and before the funeral meal is set, the chips caused in making the coffin are collected and burnt, in order to burn the sickness remaining in the house—a ceremony of purification. For forty days the men neither shave nor cut their hair; the women neither oil their hair nor dance the Horo for a year. Before the burial and the day after it no one in the house works, on peril of having chapped hands (Strausz, 451, 452). In various parts of Germany nothing must be lent or given out of the house before the funeral, and only the most necessary work must be done. For some time after the funeral there must be no washing in the house, and the mourning clothes must not be changed on a Sunday (Wuttke[3], 461, 467). In the North Riding of Yorkshire the fire was put out at the moment of death and not lighted again until the body was carried forth. In Cleveland, however, this seems to have been disregarded in favour of the requirement to keep a fire lighted for purposes referred to above (§ X. 6) (Gutch, *FL Yorkshire*, 1901, p. 300).

2. *Garb.*—Everywhere mourning garb is an essential part of the observances. Primarily it seems intended to distinguish those who are under the tabu. For this reason it is usually the reverse of the garb of ordinary life. Peoples who wear their hair long cut or shave it; those who habitually cut or shave it allow it to grow. Those who paint omit the painting. Those who braid their hair unbind it and wear it loose. Those who wear clothing go naked, or wear scanty, coarse, or old worn-out clothes. Ornaments are laid aside or covered up. Those who habitually dress in gay clothing put on colourless—black or white—garments. Ainu mourners at a funeral wear their coats inside out or upside down (Batchelor, 106). Among the Bangala a man sometimes wears a woman's dress in token of sorrow (*JAI* xxxix. 453). Peoples who ordinarily cover their heads uncover them, and *vice versa*. Women, especially widows, cover themselves with a veil, and hide in the house—a practice pointing probably to the contagiousness of the tabu. But mourning garb is more than merely distinctive: it is, like other mourning rites, intended to express sympathy for the deceased and grief at his loss; it is intended to call forth pity, to avert the suspicion of foul play on the part of the mourner, and to deprecate the anger or ill-humour of the deceased at his separation. It has sometimes been suggested that there is a further motive, namely, the desire to escape by means of disguise the persecution of the deceased. A careful examination fails, however, to disclose sufficient evidence in favour of this interpretation. Protection is often held to be needed; but it usually takes a different form. The Charrua mourner is armed with a stick, the Ewhe widow with a club. And various other means are taken—fires or lights, incense and foul smells, exorcism—to drive off the ghost or to hold it at arm's length. In short, open war rather than guile is the favourite defence. But so protean are human motives that it is impossible to aver that in no case is disguise the intention.

3. *Duration.*—The death of a member of the community inflicts a wound not merely on the individual relatives and friends, but on the community as a whole. His place knows him no more; and time is required to fill the void thus created and to heal the wound. As we have seen, he is regarded as still in a sense living, and even active, though his activities are uncanny. They are at first likely to cause injury to the survivors, from his bewilderment and resentment at being cut off from the relations he has hitherto sustained with the society of which he has been part. The efforts of the survivors are, therefore, directed to soothing him, to guiding his footsteps to the permanent home of the dead, and smoothing his reception there. There he will find those who have gone before, he will be admitted to their society, the counterpart in the unseen world of the earthly community he has left. But the home of the dead and his place in it are not reached all at once. Until he is admitted, he is not at peace, and the survivors are subject to the risk of visits from him. Rather, he hangs about them, the contagion of death is upon them more or less heavily, according as they were more or less nearly connected with him in his lifetime, or according to the length of time that has elapsed since the death. The length of the period of tabu thus set up varies among different peoples. Our records

are very imperfect, and accurate statistics are not available. All that can here be done is to note a few examples showing how it is reckoned in some typical cases.

In the Babar Archipelago mourning lasts to the next new moon, and is brought to an end by bathing in the sea (Riedel, 363). Among the Lenguas of Paraguay the relatives cut their hair, and the mourning lasts until it has grown again (*Int. Arch.* xiii., Suppl. 76). Among the Musquakies it lasts for thirty days. At the end of that time the mourners wash and paint themselves, relinquishing the old torn garments they have been wearing for whole ones, and a feast is set. The deceased is summoned, and a representative appears, who joins in the festivity. He is called the 'ghost-carrier.' When sunset is near he departs toward the west with an escort of young men. It is believed that he carries the ghost to the Happy Hunting Ground, and on his return he is called by the name of the dead man whom he has represented (Owen, *FL of Musquakie Indians*, 80). In the New Hebrides the mourning lasts for 100 days (Codrington, 281). A year is supposed to be the period of mourning among the Agni of Baoulé on the Ivory Coast; but very often it is reduced to 6 or even 3 months, except for the widows, who must always mourn the full year. Although funeral ceremonies are proceeding during this period, the actual burial may be postponed for years (Clozel and Villamur, 115). In Korea the length of mourning depends on the degree of kinship. For father, mother, husband, adoptive parents, or first-born son, it is 27 months, though nominally 3 years; for relatives under 19 years of age it may be as little as 3 months (*JAI* xxv. 342). Among the Ewhe the survivors mourn in the hut for eight months. A feast is then held, the remains of the food when it is finished are thrown away, and the mourning is over: 'they say they have to-day sent the dead to his brethren—those who have gone before' (Spieth, 258). Among the Dayaks all the kindred are 'unclean' for a short period, from 3 to 7 days; they can pay no visits, and are restricted in diet, and so forth. The house also is 'unclean.' Then fowls are slaughtered, the mourners and the entrances of the house are daubed with the blood, and so purified. But for the immediate relatives—husband, wife, and children—the tabu lasts much longer; nor are they released until they have held the *tiwah*, or final feast of the dead, which gives the soul of the deceased admittance into the city of the dead, and is a costly solemnity to be provided for out of his estate. During that period they must wear mourning garb, and neither widow nor widower can marry again: hence the *tiwah* is held as quickly as possible (*Int. Arch.* ii. 182). The Warramunga mourn until the body has decayed away, and left nothing but bones—a process extending over a year, or even two years. The bones are then taken down from their temporary resting-place in a tree and, with one exception, put into an ant-hill as a permanent burial-place. The one exception is the radius of one of the arms. It is brought to the camp, where wailing and gashing of the limbs are repeated. After certain ceremonies the bone is solemnly smashed and the fragments buried and covered with a stone. As soon as this has been done, the spirit of the dead goes back to the camp of ancestral spirits of its totem, and there awaits its turn for re-incarnation. The mourning is over (Spencer-Gillen[b], 530 ff.). Among the Dieri, who hold that the deceased haunts the grave, when his footsteps are no longer to be traced the surviving spouse washes away the ochre from his or her countenance, smears it with a fresh mixture of ochre and fat, and is free to marry again (*Globus*, xcvii. [1910] 57).

4. *No mourning.*—Attention has been drawn to the common rule that the mourning tabus weigh more heavily on the women than on the men. The necessity of the labour and vigilance demanded from the latter for the provision of food, and for protection from wild animals and human foes, may probably form at least an excuse for their comparative exemption. Instances of total exemption are not quite unknown. In ancient Greece it is said the men of Keos wore no mourning garb (Rohde, *Psyche*, i. 257 n.); and the same statement is made of the inhabitants of some of the Moluccas (Riedel, 395). Where there are no outward signs there is probably (not certainly) no tabu. In the district of Kita (French Sudan), however, we are told, mourning is almost unknown for either sex. When a married woman dies, her sister is offered to the widower, even before the funeral is over; and the widower often marries again in eight days, though some wait longer—a month or two months; while others take a concubine at once. If a man dies, his widow may marry as soon as she likes, unless she is pregnant, when she must wait until the child is born (Steinmetz, 156). In Seguela, on the Ivory Coast, the burial and funeral dance take place the same day, and there is an end of the matter: mourning is quite unknown (Clozel and Villamur, 337). Among the Meo of Northern Tongking the funeral rites last for three days, during which the only sign of mourning is that the hair is untied and allowed to hang down upon the shoulders. There are no other mourning customs and apparently no tabus. For a day or two some food is laid on the grave for the deceased, and then he is forgotten (Lunet, 318).

XVIII. Purification of house and village.—In spite of the elaborate precautions to prevent the dead man from returning (§§ IX. 5; XI., XII.), he is often thought to be present in the dwelling after the actual disposal of the corpse (§ XIII.). Accordingly, either after the body has been removed or at the completion of the ceremonies (which may be long subsequent), measures must be taken to purify the place and remove the tabu. This is accomplished by driving away the ghost.

At the last of the funeral feasts of the Tarahumares the deceased, as we have seen, is driven away. Three feasts are required to get rid of a man, but four to get rid of a woman, because she cannot run so fast, and it is therefore harder to chase her off (Lumholtz, i. 387). Noise is a potent means of driving away ghosts, and indeed all inconvenient and hostile spirits. For, though often dangerous, they are all fortunately not only easily deceived, but possessed of very weak nerves. In these ceremonies there is often no clear distinction drawn between the different kinds of spirits, all alike being liable to be bluffed and tricked and frightened by the same means. It is impossible to say whether the guns universally fired in West Africa at Negro funerals are directed against the ghost or against other spirits. In South America the Macusi fire before the hut in which the corpse is lying, to scare off both the ghost and the evil spirit that has caused the death (*Int. Arch.* xiii., Suppl. 88). Drums, trumpets, musical instruments of all kinds, shouts, and yells are all very commonly employed. Among the ancient Greeks, brass was beaten to drive away spirits (Rohde, *Psyche*, ii. 77). In the Tyrol an approved method to banish a ghost is for the householder to collect his keys and jingle them. He can thus drive the ghost to the boundary of his property. Over the boundary, however, he must not step on peril of being torn to pieces (Zingerle, 57). Many of the funeral dances, as already mentioned, have the same intent.

In various parts of Europe, especially among Slav populations, the house is solemnly swept out after the funeral. Among the Dayaks, after the *tiwah*, or final feast of the dead, the priests take a besom made of the leaves of certain plants, moisten it with blood and rice-water, and asperge all who have taken part in the feast and everything in the house, 'to sweep away the pollution.' The priests then start in procession for the river. As they set out, the others beat the walls and floor, and the priests invite all causes of ill-luck to mount on them; they pretend to totter beneath the weight; and arrived at the river they load little floats with the misfortunes thus cleared out, and send them to the great black ship in the middle of the sea, where the king of the small-pox dwells (*Int. Arch.* ii. 201). When a death among the Thompson Indians of British Columbia took place in a winter house, it was purified with water in which tobacco and juniper had been soaked, fresh fir-boughs were spread on the floor every morning, and tobacco and juniper placed in various parts of the house. But, if more than one death took place in the house, or if a death took place in a summer house, then the house was burnt (*Jesup Exped.* i. 331). The ancient Greeks employed black hellebore in the purification of their houses and flocks (Rohde, ii. 73). An 'evil death' requires special ceremonies of purification, as among the Ewhe, where the whole village is defiled by a suicide, and the kindred are called upon to pay special compensation for the defilement and the risk of drought (Spieth, 274, 276; see § VII. z (c)).

XIX. Destruction or abandonment of house and property.—The purification of house and village presupposes a settled life and a certain advance in civilization. At a lower stratum of culture, where the huts are of little value and easily erected, or where economic, defensive, or sentimental reasons have not as yet rooted the population to one spot,

the house is destroyed or abandoned, or the whole settlement may be quitted and a new site chosen. In many of such cases, it may be noted, the deceased is either buried beneath the hut, or left unburied within it.

The Australian natives commonly remove the camp when a death occurs. Among the Bantu it is usual only to burn or pull down the hut of an ordinary person; but if a chief dies the entire kraal is quitted, at all events for a time; among some tribes it is burnt down. The reason given by the Ngoni for abandoning the house is not that the ghost of the deceased always lives there, but that it may return to its former haunts (Elmslie, *Among the Wild Ngoni*, Edinb. and Lond. 1899, p. 71). The coast is therefore left clear for it. Similar customs are reported of various tribes of Negroes, North and South American Indians, the Andaman Islanders, the Karens, the Yakuts, the Kamtchadals, of many of the peoples inhabiting the great Eastern Archipelago and the Melanesian Islands, the Central Eskimo, and others. The Ainu assert that it was customary when the oldest woman of a family died to burn down the hut, because they feared the ghost would return malignant and bring evil upon them. She is now given a tiny hut to herself, and when she dies it is burnt (Batchelor, 130). In earlier times at the death of a Japanese sovereign the capital was removed to a fresh site (Aston, *Shinto*, 1905, p. 252).

A relic of the custom of destroying the house is found in some of the Nicobar Islands, where the supporting post is cut through, or so severely notched that it requires renewal (*Ind. Cens. Rep.*, 1901, iii. 209). The Cheremiss, more economical still, when the coffin is placed on the cart, pray the dead man not to take away his house, but to leave it to his heirs (Smirnov, i. 137). A relic of the abandonment of the house may perhaps be found in the modern Roman custom by which 'the family, if they can find refuge anywhere else, abandon the house and remain away a week' (Hare and Baddeley, *Walks in Rome*, 1909, p. 433, quoting Story).

At an early stage of culture all the property of the deceased was buried with him or destroyed at his death. Either the custom or relics of it are reported from every quarter of the globe. Its object seems to have been not merely to give the property over to the deceased, that he might enter the spirit-world with all his earthly possessions and state, but to prevent his haunting them to the discomfort of the survivors. Originally, no doubt, it was to get rid of the death-pollution, for the practice often extends beyond his property to all objects associated with him. On the Melanesian island of Bougainville a man's work and its produce are regarded as the supreme manifestations of his personality, inseparably linked with their author (*ZVRW* xxiii. [1910] 351). Doubtless the same view was taken elsewhere; and it accounts for the destruction of his crops and fruit-trees so constantly reported from the East Indies and Melanesia. Naturally his garments and bedding, where such things are in use, are impregnated with his personality, are indeed a part of himself. The superstitions connected with witchcraft afford abundant evidence of this.

In Europe the Votiaks throw away in the forest or into a lake all the clothing of the deceased (*RTP* xiii. [1898] 254). In Worcestershire it is ominously said: 'The clothes of the dead will not wear long' (*FL* xx. [1909] 346). In Lincolnshire it is believed that, even though they be put away, they will rot as the body decays in the grave (*Antiquary*, xxxi. [1895] 332). In the French Department of Ille-et-Vilaine it is believed that everything belonging to the departed will soon disappear: his clothes, despite all that can be done to preserve them, will be promptly eaten by maggots; his cattle will die by accident or disease, if not sold to the butcher (Orain, ii. 299). From the Hebrides to the Caucasus the bed on which death took place is burnt or thrown away (see § IV. 3).

A custom so hostile to the growth of civilization and to the individual greed of survivors could not maintain its ground. Hence all sorts of compromises to satisfy the consciences, the fears, the affection, and the avarice of the survivors.

Among the Hareskins of North America part of the clothing is distributed among the relations, part interred with the body, and the rest tabued and burnt, or thrown into the water or to the winds (Petitot, 272). In some of the villages of Serang a part of the sago-plantation of the deceased is destroyed; in others a tabu is merely laid upon it, redeemable by a third person on payment of a large gong, a sarong, and ten dishes. He thus appropriates it, and afterwards gives it back to the blood-relations (Riedel, 142, 143). In others of the Moluccas the dead man is allotted a share of the trees of various kinds in his plantation, and these are cut down; the rest remain to the survivors (*ib.* 360, 394). A similar practice prevails on the Tami Islands. There the canoes are too valuable to be destroyed; accordingly a few chips are cut off them, and a figure-head detached (*ZVRW* xiv. [1900] 337). The same principle is applied in Malta, where the hair is cut off the tail of every horse in the stable. The hired mourners cut away branches of such vines as form arbours in the courts, disturb the furniture in the house, overturn the flower-pots in the windows, break some of the ornamental furniture, and, carrying the fragments to a retired spot, throw them into a cauldron of boiling water, in which they mix soot and ashes, afterwards staining all the doors in the house with the liquid (Busuttil, 139, 128). Among the Kirghiz no one will mount the steed of a dead man without first reversing the saddle, with the object, no doubt, of unhorsing his former owner (*ZVV* xii. [1902] 16). The Sioux used to gamble away the effects of the dead in a ceremony called the 'ghost-gamble,' in which the dead man himself was conceived to take part (*1 RBEW* 195); or his effects were given away among those who took part in the funeral rites, even though the family might be left destitute; and one or more of his horses was shot and placed under the burial-scaffold (*ib.* 159, 164). The Nicobarese, before appropriating anything belonging to one who has died, require it to be purified by the conjurations of a *minloven* (priest or sorcerer) (Featherman, *Races of Mankind*, ii. [1887] 250).

Many peoples, however, consider it sufficient to delay the appropriation and division of the goods for such a period as is requisite to elapse before the departed attains his final destination in the land of the dead—a period often coinciding with the completion of the mourning rites. During this time the property, like the widows, remains under tabu.

In New Georgia the final rites are performed and the bones disposed of at the end of 100 days. Not until then can the property be touched (*JAI* xxvi. 403). Among various Bantu tribes nothing is touched until the mourning is at an end. Among the Minangkabau Malays of the Padang Highlands in Sumatra, where the husband goes to reside with his wife in her village, his goods are divided the day after his burial, because his soul at once goes back to his own family village. When the wife dies, on the other hand, the husband has the right to remain in the house for 100 days. During that time the marriage-bond is deemed not to be entirely sundered, and he has common use with his wife of her property. On the 100th day she departs for good to the land of souls. The property can then be disposed of (*Bijdragen*, xxxix. [1890] 71). The Thompson Indians of British Columbia placed a portion of the property of the deceased in or near his grave. Such as was not so given up to him was divided among his relatives. But no one could with impunity take possession of his bow and arrows, leggings, or moccasins; nor was it safe for any one who had not a strong guardian-spirit to smoke his pipe. Clothing taken was washed or put for some time in running water, and afterwards hung out for several days; while the traps and snares of the deceased were hung up in a tree a considerable distance from human habitation or graveyard, for a long time before being used (*Jesup Exped.* i. 331). In Europe, among the Sorbs of the Spree Valley deep mourning lasts for four weeks. The inheritance remains untouched until it comes to an end; though the nearest relations are mourned for a year (Tetzner, 325).

XX. Tabu of name.—Many peoples avoid mentioning the dead by name, or even prohibit it. In some cases the intention seems to be to forget the deceased. This is expressly stated of the Arawak, Salivas, and other South American tribes. But the intention to forget probably arises from fear.

The Insular Caribs feared the souls of their forefathers as evil spirits, and never named them. The Guaycurús and Lenguas not only never mentioned the name of the deceased, but on the occasion of a death the survivors changed their own names so as to baffle the dead man (or death, or the evil spirit which had caused the death) when he came again to find them. Among the Guajiros, if the name of the dead was mentioned in the family-hut the penalty was death, or at least a heavy fine (*Int. Arch.* xiii., Suppl. 99). The Yahim of New Guinea avoid mentioning the names of the dead, lest their ghosts may be disturbed at their occupation in the forest of eating otherwise uneatable fruits, and their anger be thus incurred (*ZVRW* xiv. 336). Among the Lillooet the name of a dead person must not be uttered for a year or more, 'not so much out of regard to the feelings of the surviving relatives, as on account of the mystic connection which is supposed to exist between names and their owners. To utter or use the name of a dead person is to affect and disturb his ghost or spirit, and draw it back to its earthly haunts. This is inimical both to the ghost itself and to the person using the name, and thus attracting the ghostly influence.' But time removes the danger (*JAI* xxxv. 138).

It should be observed, however, that this widely spread tabu is not inconsistent with the cult of the dead. On the islands of Nossi-Bé and Mayotte near Madagascar a king at his death becomes sacred; he is believed to have taken his place among the gods; yet no one in the district dares henceforth to utter his name (Steinmetz, 383). So

among many Bantu tribes, where ancestor-worship is the religion, the name of the dead and all similar sounds are tabued—a custom that frequently leads to considerable, though usually not permanent, changes in the vocabulary. This extension of the rule of avoidance is not confined to the Bantu: it is found in other parts of the world.

The tabu of the name of the dead is very well known, and need not be further illustrated here. If widely spread, it is not universal. Among the ancient Egyptians the opposite rule prevailed. The great desire of an Egyptian was to continue his ghostly existence. To be remembered by the living was one means to this. Accordingly the statue of a high official under Psammeticus I., in the Museum at Berlin, bears the following remarkable sentences in the course of its inscription: 'May the gods of this temple recompense you if you pronounce my name! He whose name is pronounced lives; and if another see that you act thus towards me, he will do the same for you' (*RHR* lix. [1909] 185). There is in the contemplation of many peoples more than a mystical connexion between the name and its owner; the name is part of its owner, and while it lives the owner too survives.

XXI. Second funeral. Ossuaries.—Among a very large number of peoples who practise earth-burial in one form or another, the ceremonies are not completed until the bones have been taken up, cleaned, and put into a place of final deposit. In many of the cases of sub-aerial deposit, also, the bones are collected at the end of a certain period and put into the tribal or local ossuary. Until this rite has been performed, the dead man is not at rest, and in many cases the mourning is not at an end.

1. *Decay or destruction of the flesh.*—Not merely is the journey of the soul often long and difficult: it is bound to the body until the process of decay is complete. Indeed, so refined a conception as that of the soul immaterial and independent of the body is beyond the imagination of the lower culture.

A Wonkatjerri man told a missionary in South Australia that in the grave the flesh separates from the bones; the bones that remain are the *kutchi*, the ghost; while the flesh goes as *mungara*, the soul, to heaven, where it reveals itself as still living, by thunder and lightning (*Globus*, xcvii. 56). So at the other end of the world the Hurons called the bones of the dead *atisken* (souls), believing 'that we have two souls, both divisible and material, and yet both rational; one leaves the body at death, but remains, however, in the cemetery until the feast of the dead [see below], after which either it is changed into a turtle-dove, or, according to the more general belief, it goes immediately to the village of souls. The other soul is attached to the body; it marks the corpse, as it were, and remains in the grave after the feast, never to leave it unless it be born again.' 'This is why they call the bones of the dead *atisken*, "the souls"' (*5 RBEW* 114, translating *Jesuit Rel.* 1636). The Toradjas of Celebes hold that the soul cannot enter the village of the dead so long as the body stinks, that is, until the soft parts have perished. 'So long as the soul [*sic*] stinks it is still a human being (*Mensch*), and the dwellers in the land of souls will not admit it into their territory' (Kruijt, 328). The Caribs likewise were persuaded that the dead did not go to the land of souls so long as the flesh remained. Rites performed by the Betsileo of Madagascar are intended to facilitate putrefaction and the transformation or re-incarnation of the dead in a snake called the *fanany*, supposed to issue from the decaying corpse (van Gennep, *Rites de passage*, 1909, p. 213, *Tabou et totémisme à Madagascar*, 1904, p. 277). In the Aaru Archipelago all the possessions of the deceased are collected on his grave, and his relatives must lay food there every day, until all the flesh has rotted away from his bones and they can be ceremonially transferred to the family burial-place. The transfer is preceded by a feast, and the ceremony already referred to which gives formal authority to the widow to marry again (Riedel, 267, 268). It is obvious that, until the flesh has perished, the soul is still within reach; it has not yet entered its final home; it clings to its property and must be duly fed like a living man. So, too, the Greek Church in its burial service prays that the body may 'be dissolved into its component elements.' Three years after burial the body is disinterred, and, if found thoroughly decomposed so that the bones can be removed to the ossuary, it is looked upon by the people as a certain proof that the soul of the dead is at rest. Partial or total absence of decomposition indicates, on the other hand, the sinfulness and sad plight of the departed. A common curse accordingly is 'May the earth not consume your body!' (Abbott, *Maced. Folkl.*, 210; Rodd, 127). This is in curious contrast to the belief in the Western Church, as well as among the Chinese and other nations of the East, that total absence of decomposition is an infallible mark of saintship. Such contrasts are, however, by no means uncommon in all kinds of superstition.

The process of decomposition is, therefore, frequently assisted by artificial means. Some examples of this have already been incidentally given (§ VI. 6). Thus the deceased is the more speedily dismissed to his final destination, alike to his comfort and that of the survivors. A different motive, however, sometimes underlies the practice. In the Solomon Islands the souls of chiefs and others who are held to have *saka* (to be hot with spiritual power) become ghosts of power. At Saa, on the island of Malanta, common people are buried in a common burial-place, and their flesh is allowed to decay in a natural way. But it is believed that even a ghost of power is weak so long as the corpse continues to smell. Hence water used to be, and still is in some places, poured over it to hasten decay. Exposure, sinking in the sea, and cremation—all of them occasionally practised—probably owe their use to the same motive. For, by taking the skull, hair, or nails of the corpse, the wonder-working power—what elsewhere is called the *mana*—of the ghost is then secured for the benefit of the survivors (Codrington, 260 ff.).

Nor is it only by such indirect means that the final ceremony is accelerated. Some of the South American tribes wait no more than ten to fourteen days. After the lapse of that time they disinter the body, strip the flesh from the bones, and after an elaborate ceremony re-bury the latter (von den Steinen, 458, 505; *JAFL* xv. [1902] 290). The Choctaws were said to have 'a set of venerable old gentlemen,' with very long nails, whose business it was to tear the flesh off the bones and burn it with the entrails preparatory to the final deposit of the bones in the bone-house (*1 RBEW* 168, 169). So in South Tetoen, on the island of Timor, a few days after the death of a king the bones are separated from the flesh and other soft parts of the body; and not until nothing but the skeleton remains does the wailing begin, 'for it is only then that the dead is dead indeed.' The skeleton is accorded a funeral suitable to the rank of the deceased; the flesh is simply thrust into a hole (Kruijt, 330).

Where the decay of the flesh is left to natural means, the length of delay before the bones are finally disposed of differs very widely among different peoples in different climates.

The Kukis of Manipur are satisfied with the decomposition of 'a month or so': they wrap what remains in a new cloth and bury it (*JAI* xxxi. 305). 'Fifty or a hundred days' suffice in the Banks Islands (Codrington, 267). Few tribes elsewhere exhume their friends in less than a year. Many wait two years or more. The Chinese of Tongking after three years take the bones from the coffin, encloae them in jars, and re-bury them in the grave, over which a small mausoleum is erected, or in columbaria on the hillsides (Lunet, 90). There is some evidence that a similar custom was formerly followed in China itself (de Groot, iii. 1070). Among the Bulgarians the parents of a dead child after three—in some districts, after as long as nine—years dig up the bones, wash them with wine, and let them lie for a whole year in the church before they are again buried (Strausz, 458). Throughout Europe it was customary during the Middle Ages and later to dig up the bones after a certain period and place them in a charnel-house. This custom is usually ascribed to want of room in the churchyard. The explanation is hardly sufficient: the origin of the custom is more likely due to causes considered here.

2. *Feast of the Dead.*—The tendency to postpone the final ceremony, where it involves exhumation or the collection of exposed bones or of ashes, is accentuated among small but closely organized communities by making a common ceremony, often called the Feast of the Dead, for a number of the departed. Even among the Bororo of Brazil, where the exhumation is so speedy, the relics of one person cannot be disposed of alone: one dead man must wait for a second, and the two leave the village in company (von den Steinen, 510). In these cases there is usually a common grave or place of deposit. The stock example is that of the Hurons, who every twelve years used to dig up the bones of those who had died since the last Feast of the Dead. The bones were first of all cleaned. If corruption had not finished its work, all the remaining flesh was stripped off and burned, unless the body was so newly buried as to be practically whole. The bones were then wrapped in sacks or blankets, covered with rich robes of beaver-skin, taken severally into the cabins, and mourned over. They were afterwards brought together, and a feast was held in their presence, with funeral games. On a subsequent day they were taken to a large pit, where they were all buried together, with much

ceremony and the distribution of gifts (*5 RBEW* 112). We need not determine whether these rites are more elaborate than those of other nations, or whether they are only more vividly described. It is certain that similar rites take place elsewhere. The Khasis, who burn their dead, deposit the ashes in small cairns. Thence they remove them to larger bone repositories, of which one belongs to every branch of a clan. The contents of these repositories are periodically, after the settlement of all outstanding disputes between the members of the clan, removed, with sacrifices, dancing, and other rites, to the common sepulchre of the clan, a massive stone building, where the remains of all the departed members of the clan eventually rest (Gurdon, 140). Corresponding ceremonies are observed elsewhere in India, and are common in the East Indian islands. They economize the energies of the survivors, and concentrate them on one occasion; but their chief value is to bring home to the members of the clan or community their common life, with its common sorrows and joys—in a word, their unity among themselves and with their dead.

3. *Destination of the remains.*—The final destination of the remains, like the preliminary disposal, is by no means the same everywhere. This will have been inferred from the examples just cited.

Various Australian tribes, after carrying the bodies or the bones about with them for a time, either bury or deposit them in the branches of trees (Howitt, 467, 470, 471). The Choctaws of Carolina had a common bone-house (*1 RBEW* 169), which doubtless was regarded as a sacred building. The name of temple is expressly given by older writers to the repositories of the dead Indians of Louisiana and Virginia, where religious rites were constantly performed, at all events to departed chiefs (*1 RBEW* 124). Of the natives of Sofala, in S.E. Africa, it was reported by the old Portuguese writer, João de Barros: 'After the flesh of the body is consumed they take the bones of their ancestors or descendants, or of the wife who bore many children, and keep them, with signs to denote whom they belonged to, and every seven days in the place where they keep these bones, as in a garden, they spread cloths and lay a table with bread and boiled meat, as if they were offering food to the dead, to whom they pray,' afterwards eating the food thus offered (*Rec. S.E. Afr.* vi. [1900] 113, 269). The Caribs hung the cleansed bones in a basket from the rafters of their dwellings (Boyle, *Archæol. Rep.*, 1903, 142); and in the Banks Islands, while the bones of a favourite son were hidden in the bush, some of them would be hung up in the house (Codrington, 267). Among the Andaman Islanders the relatives weep over the bones, each of them taking a bone, and the nearest relative taking the skull and lower jaw, and carrying them about for months suspended from the neck. Sometimes the bones are bound to posts of the hut (*Trans. Ethnol. Soc.*, new ser., ii. [1863] 37).

4. *Object of the practices.*—The rite of exhuming or collecting the bones and making a permanent disposition of them is thus generally connected with, or has for its object, the definitive severance of the dead from the society of the living, and their union with the fathers in the life beyond. The ceremonies for this purpose, however, are not always concerned with the bodily remains.

On the Timorlaut and Tanembar Islands, ten days after the burial of a warrior who has fallen in battle, the people of the village assemble on the shore, the men armed and the women in festival array. An old woman calls back the soul with wailing. A bamboo with all its leaves is then erected in the ground, a loin-girdle on the top. This bamboo is regarded as a ladder, up which the soul climbs to its destination. The *sernitu* (a sort of priest or shaman) pronounces a eulogy on the deceased, punctuated by the applause of the audience. When from the movement of the bamboo it is judged that the soul has climbed to the top, the bamboo is severed in two and the loin-girdle burnt, to prevent the soul from subsequently wandering about or causing mischief. A dish containing rice and an egg, previously provided for the ceremony, is also broken to pieces. Appeased in this way, the soul betakes itself to the little island of Nusnitu, off the north-west coast of Seelu, one of the islands of the group which is believed to be the dwelling-place of souls. The bones, it would seem, are disposed of at a later time (Riedel, 307). The Chechenes of the Caucasus hold what is called a Bed-memorial-feast a short time after the funeral. It is believed that the deceased has then reached the other world, but lies in bed there and cannot rise until this feast has been celebrated. It is therefore held as soon as possible, and consists of funeral games—chiefly shooting and horse-racing—followed by eating and drinking. The honour done to the deceased is measured by the drunkenness. Before it is over the four best horses which have taken part are consecrated—the horse which has won the first prize to the deceased in whose honour the feast is held, and the others to three of his ancestors by name. This consecration does not involve the entire loss of the animals by their owners, but only permission to the dead to whom they are consecrated 'to ride them whither they will.' The final or great memorial-feast is, however, not held for two years, when it is given by the widow. She then lays aside her mourning, and may marry the brother or some other relative of the deceased (*Anthropos*, iii. 736).

As to the races and other contests at the Bed-memorial-feast, see § XVI. They are expressly intended to affect the condition of the deceased in the other world. Pre-historic remains in various parts of both the Old World and the New point to the great antiquity of practices of exhumation and re-burial of the bones comparable with those discussed above.

5. *Disposal of the skull.*—Among the practices which we have just considered, special mention has several times been made of the skull of the deceased. The skull is sometimes worn or carried about for a time, most frequently that of a man by his widow. In such a case it is perhaps merely a dear memorial of the deceased, or at most an amulet. Thus in the Andaman Islands, where the bones are broken up and made into ornaments, and the skull is 'worn down the back tied round the neck, usually, but not always, by the widow, widower, or nearest relative,' not only is great importance attached to them as mementoes, but 'they are believed to stop pain and cure diseases by simple application to the diseased part' (*Ind. Cens. Rep.*, 1901, iii. 65). But amulets are on their way to become objects of cult. Accordingly, wherever we find bones, especially skulls, preserved in the house or in a special shrine, whether common or not to other similar relics of the family, or clan, or even of a larger community, we may suspect a more or less developed cult, though it may not be expressly recorded by our authorities. In many instances, however, this cult is recorded.

Folk-tales of the western islands of Torres Straits, in accord with the practices which obtain in those islands, describe the hero picking scented leaves, with some of which he rubs the skulls of his father and mother, and on others of which he beds them. They describe his telling the skulls his adventures, and inquiring as to the future. They tell the responses made to him by the skulls in his sleep, and the success which attended his following their directions and observing their warnings (*Torres Str. Rep.* v. 41 ff., 47; cf. 250, 251, 257, 258, 261, 362). In the Solomon Islands the skull is regarded as hot with spiritual power; and by its means the help of the ghost can be obtained. At Santa Cruz it is kept in the house in a chest, and food is set before it, for 'this is the man himself' (Codrington, 262, 264). Similarly, a Fan chief in West Africa keeps in a chest the heads of his ancestors, and invokes its contents on the eve of great events, such as war or the chase (Roche, *Au Pays des Pahouins*, 1904, p. 91).

It is this belief in the spiritual power associated with the head even of an enemy that forms the foundation of the practice, common in the East Indies, of head-hunting. The head is not a mere trophy; 'it is an object of heart-felt veneration, an earnest of blessing to the whole community.' 'Those who were once our enemies hereby become our guardians, our friends, our benefactors' (Furness, *op. cit.* 65, 59). They are addressed, soothed, and propitiated on all proper occasions; and it is to them that the happy owner ascribes his plentiful harvests, and his immunity from sickness and pain.

XXII. Effigies of the deceased.—Many peoples complete their funeral ceremonies by the erection of an effigy of the dead. Thus the Kāfirs of the Hindu Kush, one year after the death of an adult, set up a coarsely carved wooden statue, and inaugurate it with a feast (Robertson, p. 645). The Thompson Indians of British Columbia erect on the grave a wooden figure, carved and painted as nearly as possible in the likeness of the deceased—a practice of considerable antiquity, since posts carved with human faces are found on ancient graves, the ownership of which has passed out of memory (*Jesup Exped.* i. 329, 335, 405). In such cases the

effigies are, so far as our reports go, simple memorials. In other cases they seem to be something more than that.

'When a respected Ostiak dies, his nearest relations make a figure of him, which is kept in the tent of the deceased, and enjoys the same honour as himself when alive. At every meal the figure is brought in; every evening it is undressed and put to bed; every morning it is dressed and set in the usual seat of the deceased. The figure is honoured in this way for three or four years and then thrown into the grave' (Abercromby, *Finns*, Lond. 1898, i. 169). An Ojibwa widow ties up a bundle of clothes in the form of an infant; she lies with it and carries it about for twelve months, 'as a memorial of her departed husband.' Then she discards it with her mourning, and is free to marry again (Jones, *Ojeb. Ind.* p. 101). Among the Maidu in California a periodical burning of gifts in honour of the dead of the tribe or village takes place. On the first such occasion after the death of a person an image representing him is often made of skins, stuffed, and burnt, along with the gifts (*Bull. Am. Mus. Nat. Hist.* xvii. [1902] 36). In a certain Turkish tribe a wooden image of every dead man is laid in his grave (*ARW* v. 31). How far effigies like these may be identified with the departed may be questioned. In any case, they are only of temporary use, or entitled to respect for a very limited period. Elsewhere, however, images are expressly made as an embodiment for the spirit. Among the Bantu people of Bondei, on the east coast of Africa, when the head of a house dies he is washed and shaved by his maternal uncle. His hair, finger-nails, and toe-nails are taken and incorporated in an earthen image, which thereupon becomes a *mzimu*, the object of religious rites paid to the dead (*JAI* xxv. 236). On the islands of Leti, Moa, and Lakor, in the Moluccas, there are men who carve statues of a special sort of wood for funeral purposes. On the fifth day after burial one of these statues is procured, and the soul of the deceased is, by means of an offering of food, enticed into it for a temporary sojourn. It is implored to eat and drink, and to watch over the survivors that no sickness may betide them. A general feast of the family follows (Riedel, 395). Among the Lolo of Northern Tongking, with a stalk of a kind of orchid and some wisps of paper a figure of the deceased, about 10 centimetres high, is made. It is placed in the house between the wall and the roof, or fastened to one of the partition-walls, and serves the purpose of an ancestral tablet, such as the Chinese dedicate (Lunet, 331). Examples might be multiplied, for the practice is wide-spread. But at this point funeral ceremonies merge into cult of the dead (see ANCESTOR-WORSHIP).

LITERATURE.—On death and death rites in general, see E. B. Tylor, *Primitive Culture*, London, 1871 (4 1903), vol. i. ch. xi., vol. ii. ch. xii.; J. G. Frazer, 'On certain Burial Customs as illustrative of the Primitive Theory of the Soul,' in *JAI* xv. [1886] 64–104; R. Hertz, 'Contribution à une étude sur la représentation collective de la mort,' in *ASoc* x. [1905–6] 48–137; A. van Gennep, *Les Rites de passage*, Paris, 1909, ch. viii.; E. S. Hartland, *Legend of Perseus*, ii. (London, 1895) ch. xiii. The death rites of a particular people and its ideas on the subject of death must ordinarily be studied in the ethnographical accounts of that people. Many have been cited in the foregoing article. Detailed studies relating to special areas have been made by Theodor Koch, 'Zum Animismus der südamerikanischen Indianer,' forming the Supplement to *Internat. Archiv für Ethnographie*, xiii. [1900], and William Crooke, 'Death Rites among the Dravidian and other Non-Aryan Tribes of India,' in *Anthropos*, iv. [1909]. See also the following series of articles.

E. SIDNEY HARTLAND.

DEATH AND DISPOSAL OF THE DEAD (Babylonian).

—In common with other Semitic races, the Babylonians regarded the present life as incomparably superior to that beyond the grave. It is not likely that the Sumerians, whose religion forms the principal element in the religious ideas of the Babylonians, differed from this pessimistic view of death so universal in antiquity. For the Sumerian period we have no direct statement concerning the life beyond the grave; but the evidence concerning their burial customs, their sacrifices to the dead, their communion meals with the souls of the dead, etc., is abundant. The word employed by them for the soul is *zid*, lit. 'the rush of wind,' and is translated into Bab. by *napištu*, 'breath,' which may also mean 'throat and organs of respiration.' The dread of death is revealed in the expressions for dying. In Sumerian the word is *dig*, lit. 'to seize away.' The early Bab. expression is, 'his god has gathered him' (*ilu-šu ikter-šu*), as yet found only for women in the phrase, 'when her god gathers her' (see *Cuneiform Texts of the Br. Mus.*[1], ii. 24, 27; viii. 5*a*, 17; 12*c*, 18; 17*c*, 18; Meissner, *Assyr. Stud.* iii. [Berlin, 1905] 53; Schorr, *Altbab. Rechtsurkunden*, i. [Vienna, 1907] 85, who compares Gn 25[8]), or 'she has gone to her fate' (*ana šimati-ša illiku* [*C.T.* vi. 47*b*, 13 f.]; *ana šimtim ittalak* [*Code of Hammurabi*, viii. 5 f. and *passim*]), or 'fate has carried him away' (*šimtu ubbil-šu*). Ashurbanipal, describing the death of Tarḳû, says that 'the fate of his night came upon him.'

[1] Hereafter cited as *C.T.*

The life of man is fleeting and determined by the decrees of the gods of the lower world, says the poet:

'Build we an house for ever? seal we (our tablets) for ever?
Do brothers divide their inheritance for ever?
Shall hatred exist in the land for ever?
Doth the river rise bringing floods for ever?
.
He that sleepeth, he that dieth when together [they lie?]
In death they preserve not their (solid) form.
When the *gallû*[1] and the guardsman have greeted them,
The Anunnaki, the great gods, assemble.
Mammit, fashioner of destiny, with them fixes destiny.
Death and life they arrange.
But of death the day they make not known.'[2]

Thus man, whose destiny at birth had already been fixed by Mammit, identical with Bau, goddess of childbirth, must pass a second ordeal before the same goddess and the judges of Arallû.[3]

After mortal dissolution the soul descended to *Arallû*, 'the desolate land,' to pass at best a dreary existence, in the dust and shadows of Hades. The body, in which the departed soul had still a lively interest, was either buried or burned, and the kinsmen supplied it with food, drink, clothing, and the implements which characterized the occupation of the person on earth. Cremation and body-burial existed side by side from the earliest times. In cases of cremation, the ashes were gathered carefully in an urn, in which jars of drink (beer in the early period, water in the later), bread, etc., were placed, to provide for the immediate needs of the soul. At Nippur funeral-urns of this kind were found in the court of the stage-tower in the earliest period (before 3000 B.C.). Two vast fire-necropolises have been partly excavated near Lagash, at modern Surghul and el-Hibba. Here the bodies were placed in narrow clay casings upon a brick platform, wrapped with inflammable material and covered with soft clay. The body was reduced to ashes by burning wood over the clay casing. After the fire was extinguished, a small hole was opened in the clay casing, which was now baked and quite imperishable, and the results of the cremation were examined. In cases where the heat reduced the body to ashes, these were removed, placed in an urn, and buried in the family plot. If, however, the heat did not reduce the body to ashes, the clay casing became the tomb and was left *in situ*. The more important families owned vaults, or rather narrow brick rooms, in which the urns of the family were placed, the pavement being drained by tile sewers descending to the water level. [These sewers were wrongly taken for wells by certain archæologists.]

Cremation appears to have been the rule in certain parts of ancient Sumer and Akkad, as in the region south of Lagash; but in other parts interment in coffins and vaults is more frequent. In the case of those burials in which bodies were committed directly to the earth (as represented on the Vulture Stele, *c.* 3200 B.C., where soldiers are buried in a huge pile, being covered with earth simply), every vestige has long since disappeared. Preservation of the body seems to have been a sentimental rather than an essential matter; never-

[1] A conductor of the shades to the lower world (cf. Craig, *Assyr. and Bab. Religious Texts*, Leipzig, 1895, lxxix. 9, and Langdon, *Sumer. Bab. Psalms*, Paris, 1909, pp. 314, 26).

[2] *KB* vi. 1, 228.

[3] Nergal, god of Arallû, is called 'the god of investigation, and of judgment' (*C.T.* xxiv. 41, 67 f.); and as a star he appears as the *kakkab šipti mitûti*, 'star of the judgment of the dead' (ii. R. 49, no. 3, 40).

theless both Sumerian and Semite exercised much care in this respect. At Ur brick vaults of considerable size containing several skeletons were excavated by Taylor. Ordinarily each skeleton is accompanied by jars, platters for bread and food, the deceased's seal, combs, and, in case of women, even brushes (for colouring the eyes?). The cheaper method of interment consisted in placing the body upon a slightly raised platform of bricks, which was first covered with a reed mat. Over the body was fitted a large cover, made of one or two pieces of baked clay, and large enough to admit both the body and the articles of food and raiment. Taylor found round platforms, in which case the body lay with knees drawn towards the chest.[1] A still more economical method of burial consisted of a clay or porcelain coffin of capsule form, made by fitting together two huge bowls. Bodies were even mutilated and crushed into a huge vase, accompanied in all cases by food and drink. Common in later times is the bath-tub-shaped coffin, deep but not long, in which the body sits upright, with the back against one end, and the limbs stretched out along the bottom, the whole being, of course, protected with a clay covering. The flask-shaped coffin, bulging towards the base, is common in the late period. The excavators of Aššur found many elaborate stone family-vaults, probably of kings and priestly families. To each of these an opening at the west end, closed by a stone not too difficult to be moved, made access to the vault possible. Stone staircases led down to these openings. At the east end the vaults at Aššur generally contain a small niche for a lamp. The Assyrians employed such vaults both for body burials, the skeletons being found in orderly rows side by side on the pavement, and for cinerary urns. The latter are cone-shaped and made of baked clay.

Thus we see that cremation was practised at all periods—probably for sanitary reasons. The earliest graves are found in the temple courts, but these sacred spots must have proved altogether inadequate for the vast populations of Sumer, Babylonia, and Assyria. The only practical method would be to set aside certain parts of the city (as at Ur), or whole districts (as at Surghul).

The Sumerian word for the departed soul is *gidim*, 'creation of darkness' (*gig-dim*), which, by apocopation of the initial letter, became *idim*, *edim*, and passed into Semitic as *edimmu*.[2] There is no doubt that the Babylonians regarded the souls of the dead as minor deities, capable of interfering for good and evil in the affairs of men. Whether, in fact, the entire conception of divinity rests ultimately upon the notion of ancestor-worship cannot be determined from our sources. We can no longer doubt that the Bab. conception of the devils, spirits of disease and misfortune, rests absolutely upon the notion of evil ghosts which rise from hell to torment humanity. See DEMONS AND SPIRITS (Assyr.-Bab.).

Although the souls of those whose bodies were improperly buried, or whose memories were not cherished at the *parentalia*, return to the earth and must be driven back to the nether world by incantation and ritual, yet the vast majority of souls lead a shadowy existence in the dreary land of the dead. See STATE OF THE DEAD (Assyr.-Bab.).

We come now to that significant part of Bab. religion—the *communion with the souls of the dead*. We have seen that the kinsmen of the dead provided the soul with food and raiment in the grave. These are remnants of an ancient belief that the soul actually consumed the elements and wore the raiment left for his use. Although the Sumerians and the Babylonians continued to deposit these symbols of the material needs of man in the graves of the dead, they soon rose to a more spiritual interpretation, in which, behind the symbolic bread and drink, lay the mystery of communion with the deified souls and with Divine life itself. Each family seems to have made monthly offerings to the shades of its ancestors, which consisted in a communion meal at which images of the departed were present. In official accounts of the early period we find frequent reference to offerings made to the statues of deceased persons.[1] A list of official sacrifices in the period of Sargon of Agade mentions a lamb offered to the statue of an ancient Sumerian king, Entemena;[2] and Gudea, a later priest-king (*c.* 2400 B.C.), prays for his own statue that it may receive mortuary sacrifice.[3] Entries in official documents occur, stating the items of the monthly sacrifice for the souls of deceased persons whose service to the State had been great. This is especially true of kings and priests. More frequently the documents mention the mortuary sacrifices for all the souls who have died, a Feast of All Souls, occurring monthly and performed by the priests in various temples. The word ordinarily employed in the ancient inscriptions is *kianag*, 'place where one gives to drink'; but the notion of 'place' is often lost, and the idea of drinking is made to cover sacrifices of animals, bread, cakes, etc., as well as of liquors. That these sacrifices really consisted in a communion meal is made evident from one inscription which states expressly that the *kianag* was eaten.

Another word—also Sumerian, and employed for the *parentalia* less frequently in the early period, but ordinarily by the Semites—is *kisig*, 'breaking of bread,' where the emphasis is laid upon the eating of bread at a common meal (*kispa kasāpu*). The word occurs in the most ancient name of the fourth month as *sig-ba*, and later as *kisig-ninazu*, or month of the breaking of bread to Ninazu, god of the lower world. This month was followed (in the calendar of Nippur) by the month of the feast of Ninazu. These two months correspond with our December and January, or the period of greatest darkness, when the gods of the under world, as deities of the shades, whither the sun-god and the god of vegetation had descended, were particularly honoured. We fortunately possess a letter from Ammiditana, a king of the first Semitic dynasty, concerning the feast of the breaking of bread for the fourth month (December):

'Unto Šumma-ili, son of Idin-Marduk, say, Thus saith Ammiditana: "Milk and butter for the *kisigga* of the month Neneoig are withheld. As soon as thou readest this tablet, may thy superintendent take 30 cows and 60 *ka* of butter and come to Babylon. Until the *kisigga* is finished, may he supply milk."'

Here we have direct evidence for a communion meal, 'breaking of bread,' for the souls of the dead, permanently adopted by the Semites at an early period. At Eski Harran an inscription has recently been found containing the autobiography of the high priest of the temple of the moon-god of Ḫarran. In col. iii. he refers to the monthly sacrifices which he performed for the souls of the departed. After a reference to the raiment which he wore for the service he says:

'Fat sheep, breads, date wine, cypress oil, fruit of the garden . . . I broke[4] unto them. As incense offering, the choice incense as a regular offering I fixed for them and placed before them.'

The high priest here performs for the kinsmen

[1] The coffins in which the body lay in a cramped position appear to have been called *napalsuḫu* (v. R. 16, 44).
[2] Possibly connected with *idim*, 'oppressed,' 'weak and miserable' (see Langdon, *Sumer. Gram.*, Paris, 1911, p. 221).

[4] *akassap-šunuti*.

the sacred ceremony of breaking bread for the souls of the dead. The expression 'placing incense before them' refers to the statues of the departed, whose souls are thus represented at the communion meal, and whose portion is the incense. In an incantation service against evil souls, stools are brought for the souls that they may sit at the service of breaking of bread.[1] Ashurbanipal restored the memorial services for the souls of his royal predecessors, of which he says: 'The regulations for the breaking of bread and the pouring of water for the souls of the kings who preceded me I arranged for.'[2] The king himself was supposed to perform this ceremony, as appears from another passage: 'The regulations of the day of offerings the king gave not, but the high priest gave.'[3] The practice of pouring water to the soul in connexion with the common meal gave rise to the title 'pourer of water,' applied to one's nearest kinsman. This appears in the terrible curse so common in the Semitic period, 'May God deprive him of an heir and a pourer of water!'[4]

The repose of the soul, we may say even its immortality, depends upon the communion sacrifice performed monthly for it by its kinsmen. Real immortality consists, therefore, in leaving male descendants; and the prayers of kings seldom fail to plead with the god for male lineage. In actual practice the family paid the priests for performing the ceremony of the breaking of bread, and consequently separate temples, called *é-kisigga*, or *bit kasap kispi*, were built for this purpose.[5] It is highly probable that the State had a regular fund to provide for the Feast of All Souls, for we find official accounts containing entries for this fund at all periods.

Concerning the *wailing for the dead* our sources are meagre. In an ancient Sumerian inscription there is a probable reference to an official wailer, whose pay is mentioned along with the food placed in the tomb.[6] Wailings at the death of a king are described in a letter of the period of Ashurbanipal. The chief great men clothe themselves in garments of mourning, and wear rings of gold, and the official singer sings.[7] The burial of an official (?) is reported to the king in the following manner:

'The tomb we made; he and the woman of his palace rest in peace; the psalms (?)[8] are ended; they have wept at the grave; a burnt-offering has been burnt; the anointings (?) are all performed; rites of loosing in the house of washing and the house of baptism, ceremonies of incantation, penitential psalms . . . they have finished.'[9]

Gilgameš wailed for his departed comrade Eabani six days and nights.[10] When the mother of Nabonidus, last king of Babylon, died, the king's son and all his troops put on mourning and wailed three days. The following month was entirely devoted to official mourning for the king's mother.[11]

Traces of embalming have not been found, but Herodotus says that the Babylonians embalmed in honey,[12] and a text has been cited which mentions embalming with cedar oil.[13] At any rate, embalming is not characteristic of Bab. burials, and the custom may be due to Egyptian influence.

LITERATURE.—(*a*) *BURIALS.*—Perrot-Chipiez, *Histoire de l'art*, Paris, 1882–99, ii. 247–378, based principally upon the reports of the explorers Layard at Nineveh, Taylor at Ur and Eridu, and Loftus at Warka; for the fire-necropolises at Surghul and el-Hibba, see Koldewey, *ZA* ii. (1887) 403–30; for the necropolises at Fara and Abu-Harab, see *Mitteil d. deutschen oriental. Gesellschaft*, Berlin, 1896–1911; for tombs and coffins at Babylon, *ib.* xxxvi. 12, xxxviii. 13; at Aššur, *ib.* xxi. 36, xxv. 48, 55, xxvii. 29, xxxi. 10, 18, xxxvi. 23, etc.; at Nippur, H. V. DEATH AND DISPOSAL OF THE DEAD (Buddhist).

1. Death inevitable and painful.—There are certain questions that must have an absolute and definite answer (*ekāṃsavyākaraṇāt*). As a type of these the commentators cite: 'Will all beings (*sattva*) die? Buddha said: "Short, O monks, is the life of man . . . we must do good; it is impossible that what is born should not die."'[1] In other words, 'Life, indeed, ends in death.'[2] 'All men fear death.'[3] For death is accompanied by physical and moral suffering; the formulæ of dependent origination enumerate 'sorrow, lamentation, misery, grief, despair' as the companions of death.[4] For death is only the beginning of a new existence for the punishment of sins: death and punishment (*daṇḍa*) are almost synonymous. It is in order to avoid death, and the consequent second death—in order to gain immortality—that the Hindus practise the religious life, the holy behaviour (*brahmacharya*) which enables one to pass above the sun, which is death (*Brāhmaṇas*).

If death inspires fear, it also generates that salutary emotion (*saṃvega*) which ends in a distaste for pleasure and existence. Death must be thought of.[5] Visits to the 'cemetery,' the place of cremation, or the place where dead bodies are left, and meditation upon the corpse and the various aspects of decomposition, play an important part in the spiritual hygiene of the Buddhist monk, be he a beginner (*navaka*), a more advanced disciple (*śaikṣa*), or a perfect disciple. They even become absorbing for some, who are called 'cemetery monks' (see TANTRAS). We find a number of details regarding the treatment of the dead[6] in the Buddhist texts.

To know that 'life ends in death,' and to be resigned to this law, is, as we learn from several conversion-stories, to know the essentials of Buddhist doctrine and to escape from the fear and the control of death. To detach oneself from the things of which death will deprive one, to detach oneself from the body itself, is to abolish pain: thus a man suffers when he sees a woman whom he loves in the possession of another man; he ceases to suffer

[5] See H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, p. 55, n. 5. Cf. and ct. *Suttanipata*, 574 f. (*SBE* x. 105).
[6] On this subject, see the 'Chinese,' 'Japanese,' and 'Tibetan' artt. on DEATH AND DISPOSAL OF THE DEAD; and cf. Rhys Davids, *Buddhist India*, London, 1903, p. 78 ff., and sources cited, esp. *Dīgha*, ii. 295; Csoma, tr. Feer, *Analyse du Kandjour*, *AMG* ii. (Lyons, 1881) 194; *A.K.V.*, fol. 239: 'When a man has fulfilled his time, when a man is dead, his friends burn his honoured body with fire, or submerge it in the sea, or bury it in the ground, or leave it to dry, wither, and disappear with wind and heat. But what is called thought, mind, intellect, being saturated (or 'informed,' *paribhāvita*) with faith, morality, indifference, religious instruction (*śruta*), goes up above, attains to a privileged state (*viśeṣa*), goes into the heavens.'

whenever he ceases to love (*Majjhima*, ii. 223). Thus the saint (*arhat*) has no fear of death (*Aṅguttara*, ii. 173); he awaits his time without desire and without fear (*Therīgāthā*, 196, 703; see art. SUICIDE [Bud.]), for he is freed from desire, he knows that this existence is the last existence for him (*Therīgāthā*, 705; *Dhammapada*, 39). For others death is only a passing; for the saint it is 'interruption' or 'annihilation' (*samuchchheda*).[1]

If death is hateful to men, it is not less so to the gods (*devas*), though certain texts say that the gods are perfectly happy (*Aṅguttara*, v. 291). It is not that death for them is accompanied by the sufferings of human death, for they usually die without suffering (*A.K.V.*, fol. 254*b*). But, the greater the enjoyments of the gods, the more painful it is for them to give them up; death for them is not 'suffering consisting in suffering,' 'suffering of death' (*Mahāvyutpatti*, § 112, 4), but it causes 'suffering consisting in the change' to be accomplished at death (see H. C. Warren, *Buddhism*, Cambridge, Mass., 1896, p. 181).[2] The Brāhmaoic views are all alike, or very similar (see, *e.g.*, *Viṣṇu Purāṇa*, vi. 5, in Wilson, *Works*, London, 1870, v. 208).

2. **Definition of death.**—The Buddhist doctrine is opposed to that of the 'unbelievers' (deniers [of the other life]), according to whom the intellect (*vijñāna*) scatters into the ether, while the material elements (*bhūta*) of the body return to the mass of the earth, sea, etc. (cf. *Dīgha*, i. 55; *Saṃyutta*, iii. 207); it is also opposed to the popular idea of the transmigration of the soul, well expressed by comparison with a bird flitting from tree to tree (*Sumaṅgala-vilāsinī*, p. 114; S. Hardy, *Manual of Budhism*, London, 1860, p. 390). Death is the end of life—the end of a life or of an existence (see below, § 3); or, more exactly, death is the dissociation of the organism constituted at birth to experience the fruits of a certain set of actions. This organism, both material and mental, does not contain a single stable principle; it continues to renew itself moment by moment; in other words, it undergoes an 'incessant death' (cf. Warren, *Buddhism*, p. 252; *Madhyamakavṛtti*, p. 174, n. 4); but death marks the end of this homogeneous renewing: it is the separation of the constituent elements of the pseudo-individual, the dissociation of the elements (*skandha*), *i.e.* of the gross elements (*mahābhūta*, *rūpakāya*) and of the *vijñāna*, or intellect.[3]

We must consider for a little this idea of *vijñāna*. There is nothing permanent or individual in the complex union of the *skandhas*, which lasts from birth to death. Men were led, however, to regard it as 'individualized,' like a town with the *vijñāna* as master. The later works of Abhidhamma teach that, from the origin of an existence, the first thought, the thought which gives rise to the formation of the new being in the matrix (*pratisaṃdhi-vijñāna*, 'conception-intellect'), gives birth to certain thought, which is the master part of the existence, and is called *bhavāṅga*, or *bhavāṅga-santati*, 'existence-limb,' 'existence-limb-series,' because it is the limb of existence.[4] This thought evolves into an uninterrupted and relatively homogeneous mental series, like the flow of a river. To look at it in a somewhat different way, this thought constitutes what we might call the foundation of the soul, the support and origin of particular thoughts, which interrupt it. At the end of life, at death, it disappears by being transformed into 'thought in a dying state,' 'dying thought,' 'falling *or* emigrating thought.' Existence, *i.e.* one existence in the series of existences, is ended at the disappearance of the *bhavāṅga*; a new existence commences, in a new *status*, since the 'thought in a dying state' is reflected (we dare not say continued)[1] in a 'thought in a state of being born.' Death, then, is the transformation of this 'fundamental thought' called *bhavāṅga*, 'limb of existence,' into 'emigrating thought' (*chyutichitta*).[2]

'When the dead man is laid ont npon his bed of death, the sinful action for which he is responsible, or the motive (or sign) of this action, presents itself at the door of his spirit. Then there is inaugurated the series of rapid intellectual operations (*javana*='swiftness') which ends in absorption with this object (action or motive) (*tadārammaṇa*),[3] and then is further produced the "emigrating thought" depending upon the *bhavaṅga* (*bhavaṅga-visayam ārammanaṃ katvā*). When that disappears, the "thought in a state of being born" is produced; and this, because of that action (or that motive for action) which presents itself before the spirit, moved by uninterrupted passion, belongs to an evil destiny.'[4]

On the other hand, death is often regarded as the end of a particular organ or sense, the *jīvitendriya*, the vital sense. Life, the activity of the organs, 'the persistence, subsistence, going on . . . of the bodily and mental functions or states' presupposes a 'vital organ'[5] supporting the living complex as the water supports the lotus, and playing a part analogous to that assigned by the Vedānta school to the 'principal breath' (or 'breath in the mouth,' *mukhya prāṇa*).[6] Death, therefore, will be 'the interruption of the series [of evolution] of the vital organ corresponding to a given existence' (*Nettippakaraṇa*, p. 29).[7]

Leaving out of consideration the schools which pay little attention to the 'vital sense,' some schools do not make it die at death. The theologians who admit an 'intermediate state' (*antarābhava*) between two existences properly so called assign a special rôle to the 'vital sense' in the mechanism of transmigration. 'Life' would then be prolonged from existence to existence, as long as these continue to be existences belonging to the same category (*nikāya-sabhāga*) (after *A.K.V.*, Burnouf MS, 68*a*).

The schools are not agreed as to the nature of the *jīvitendriya*, as may be seen from *Kathāvatthu*, viii. 10. Pāli theology appears to regard it as the eighteenth term of the *rūpakkhanda* (S. Hardy, *Manual*, p. 399). But the *Dhammasaṃgaṇi* treats it successively as mental and as material (*rūpa*). The *Abhidharmakośa* makes it an *arūpa chittaviprayukta*, 'immaterial, having no connexion with thought' (see *Dharmasaṃgraha*, p. 69), as do also the Yogāchāras (see *Muséon*, vi. [1905] 178 *f.*).

It must not be forgotten that 'life' is attributed to the body (*A.K.V.* 313*a*: 'The body lives when it is endowed with sense (*sendriya*), i.e. life is of the body endowed with sense, and not of a soul (*ātman*): and it is the body [and not a soul] which, when robbed of sense, is called "dead"'). By 'sense' or 'senses' must be understood either the organs of sense which depend upon the *jīvitendriya*, or the *jīvitendriya*, which is just the same as the *kāyendriya*, 'body-sense.' The working and persistence of the intellect (*vijñāna*) depend upon the *kāyendriya*, which, at death, perishes in various parts of the body according to the state in which re-birth is to take place: in the feet for a future damned soul, in the navel for a future man, in the heart for a future god . . . (*A.K.V.* 254*a*; cf. and ct. Beal, *Catena of Buddhist Scriptures*, London, 1871, p. 41; see also Rhys Davids, *Buddhist India*, p. 254 *f.*; Oldenberg, *Buddha*[5], p. 265).

Instead of *jīvita*, *jīvitendriya*, we sometimes find the terms *āyus*, 'life,' and *uṣman*, 'heat'—a popular conception of life.[8] 'What is the ground of persistence or continuity of the five senses?'—'Life'—'And of life?'—'Heat'—'And of heat?'—'Life.' (Just so the radiance of a lamp depends on its flame, and *vice versa* [*Majjhima*, i. 295].) Similarly, death is defined as the disappearance

[1] See, *e.g.*, the story of 'Gotamī the Thin,' in J. H. Thiessen, *Die Legende von Kisâgotamî*, Breslau, 1880; Rogers, *Buddhaghoṣa's Parables*, London, 1870, p. 98; E. Hardy, *Buddhismus*, Münster, 1890, p. 124.

[2] See Wenzel's tr. of 'Nāgārjuna's Friendly Epistle,' 98 *f.*, *JPTS*, 1886, p. 27. On 'the five prognostics announcing death in heaven' (body becoming ugly, decaying of flower-wreaths, etc.), Wenzel refers to *Ityuttaka*, § 83, and *Divyāvadāna*, p. 193.

[3] See *Dīgha*, ii. 305 (=Warren, p. 368); *Visuddhimagga*, in Warren, pp. 241, 252; *Vibhaṅga*, p. 137.

[4] *Abhidhammatthasaṅgaha*, in *JPTS*, 1884, p. 25; see S. Z. Aung and C. A. F. Rhys Davids' tr. and notes, *Compendium of Philosophy*, *PTS*, 1910 (Index, *s.v.* 'Bhavāṅga').

[1] We read, however, in *A.K.V.* 213*a*: 'the "conceptional" state (at conception), *upapattibhava*, forms a series with the "mortal" state (at death).'

[2] There is no death without 'emigrating thought,' therefore trance or rapture is an obstacle to death (cf. *Dhammapada*, ed. Fausböll, Copenhagen, 1855, p. 299).

of heat (*Mahāvyutpatti*, § 245, 53). An ancient stanza associates the intellect (*vijñāna*) with *āyus* and *uṣman*.[1] The Dignāga school defines death as the 'destruction of the *vijñāna*, of the organ, and of life,' and claims authority from this definition to deny (in opposition to the Jains) that trees 'die.'

In the old version of the 'last days of the Buddha' (*Dīgha*, ii. 106; *SBE* xi. 44), it is said: 'The Blessed One rejected the *āyusaṃkhāra*' (according to Rhys Davids = 'the rest of his allotted sum of life'). In the Sanskrit sources (*Divyāvadāna*, p. 203; *Mahāvyutpatti*, § 235, 52) we have: 'The Blessed One entere such concentration of thought as to control his "vitality-virtualities" (*jīvitasaṃskārān adhiṣṭhāya*), and he begins to reject his "life-virtualities" (*āyuḥsaṃskārān*).' The plural ('virtualities,' 'co-efficients of life') indicates, according to a commentator, that life is not one thing but a collectivity. The Sautrāntikas say that *āyus*, 'life,' meane the multiple *saṃskāras* which co-exist (having for nature the four or five *skandhas*), and is nothing beyond theee *saṃskāras* (*A.K.V.*, fol. 74). The *Majjhima* (i. 296) enumerates the *āyusaṃkhāras* as follows: *āyus*, heat, and intact senses, which disappear at death, but persist in life even when plunged into the deepest ecstasies (see Warren, p. 389).

As to the vital breath (*prāṇa*), it is a wind (*vāyu*) which depends on both the body and the thought—for it disappears during the so-called 'cessation-trance' ecstasy (Sarvāstivādin *Abhidharmaśāstra*, quoted *A.K.V.* 312; see Rhys Davids, *Dialogues of the Buddha*, i. 71, London, 1899–1910 [= *Sacred Books of the Buddhists*, vol. ii.]). Although the Buddhists deny the existence of a *prāṇin*, *anima*, 'being endowed with breath,' they use this expression; but, for them, to kill a *prāṇin* is only to stop the future production of the *prāṇa*.

3. Duration of life.—What is meant by an existence, *ātmabhāva*, and why is the eternal transmigration divided into this succession of fragments called lives or existences? Actions are by nature very variable, and very different actions are performed by the same person; in strict language—for Buddhism does not admit of the existence of a person, of an author of actions—actions very different from each other are 'caused' in one and the same series of states of consciousness, and must be rewarded in the same series. It is necessary, then, that the agent (to use a convenient expression) should pass through varying conditions,—god, man, animal, damned,—for it is not the nature of actions to get their reward in any state whatever. And, by a mechanism which will be explained in art. KARMA, a certain existence (*ātmabhāva*) falls to the lot of the agent, as the reward for a certain set of actions,[2] and this existence will be followed by another determined in the same way. Death marks the moment of the exhaustion of the actions called to 'ripen,' to fructify in some one existence, and of the maturity of actions called to ripen in the next existence.

In certain states of existence the length of life is fixed; the number of actions to be rewarded in the course of a divine existence of a certain class always corresponds exactly with the normal length of life of the gods of this class (see COSMOGONY AND COSMOLOGY [Buddhist]); the god will die at the exhaustion of the meritorious actions to be rewarded and the exhaustion of life. But it may happen that a life ends by the exhaustion of the actions, before the normal time: if, *e.g.*, a certain good action has caused a certain divine existence, and is not good enough to prolong this existence against the influence of evil actions striving to ripen. It is also possible to die by the exhaustion of life, without the merit being exhausted: in this case, re-birth takes place into a condition similar to that just left. Lastly, if one commits one of the sins demanding immediate retribution (*ānantarya*) and immediate dispatch into hell, one dies without the exhaustion of the vital forces: the retribution of the set of actions, begun at birth, is interrupted by an 'action cutting off [the fruit of] action.'[1]

Death is called 'timely' (*kālamaraṇa*) when it occurs at the end of a life of normal duration (see AGES OF THE WORLD [Bud.], vol. i. p. 189). It may be caused by a trouble of the bile (the essential fire-element of the body), of the phlegm (water-element), or the wind, either singly or all together: there are, therefore, four illnesses; for every class of illness, there are 100 deaths 'before the time' (*akālamṛtyu*)[2] and one timely death: or else there are 404 illnesses causing death (*Bodhicharyāvatārapañjikā*, ii. 55; *A.K.V.* 254*b*). A kindred expression to *akālamṛtyu* is *antarāmṛtyu* or *antareṇa kālakriyā*, 'death during the time, during the course of the normal duration of life': a death, which, according to certain sources, occurs even in the *ārūpya*, and in all stages of existence, except among the Uttarakurus (*Abhidharmakośa*). According to the Sautrāntikas (*A.K.V.*, fol. 218), it is a mistake to explain the phrase *antarāpariṇirvāyin* with certain (Pāli) scholars as meaning 'a saint who attains to *nirvāṇa*, by *antarāmṛtyu*, during the course of a heavenly existence, and before the close of this existence.' The reference is to a saint who attains *nirvāṇa* in the intermediate period between two existences (*antarābhava*).

The Buddhists believed that, just as the saint can abandon the 'co-efficients of life' (see preceding column), so he can also stop them (*sthāpayati*). According to the Vaibhāṣikas (*A.K.V.*, Burnouf MS, fol. 74), the saint says: 'May [the action] that is to ripen for me in enjoyment ripen in life!' By its nature, life (or the vital organ) is 'ripening' (*vipāka*), and it can replace any enjoyment which, normally, ought to ripen from a former merit, and which the saint no longer desires and has escaped by his sainthood. By this process, 'vanquishing death,' the Buddha prolonged his life three months for the salvation of men, and the disciples employ this to assure the duration of the law.

This term of three months seems to be given as a maximum, and as the mark of the victory of the Buddha over *Mṛtyumāra*, '*Māra* (=death, Satan), who is death.' The 'dominion of death,' which is a 'dominion of life' (*Mahāvyutpatti*, § 27, 1), is much more powerful in the *Mahāparinibbāna* (*Dīgha*, ii. 103=*SBE* xi. 42), and in *Śikṣāsamuchchaya*, p. 189, where the Bodhisattvas enjoy a life of almost infinite length by the protection of the Buddhas and 'deities' (*devatās*).

4. The last thought and re-birth.—Most of the Hindu theologians teach that the last thought, the thought of the dying, is of prime importance with regard to the future lot.[3] This doctrine is particularly dear to the devout sects: thinking of Kṛṣṇa on the death-bed assures salvation. The Brahmans everywhere believe as a rule that the Lord (*īśvara*) establishes the moral balance-sheet of the whole life, in order that the agent may be re-born into the world at the proper stage. In conformity with their psychology and their metaphysics, the Buddhists have to assign capital importance to the last thought. For not only do they refuse to admit a Lord, judge of all the

[1] *Saṃyutta*, iii. 143; and *A.K.V.*, Burnouf MS, 453*b*.

[2] Cf. the *āyuṣkakarman* of the Jains (*SBE* xlv. 165, 192).

[1] See *Abhidhammasaṅgaha*, v. 12 (*JPTS*, 1884, p. 25); *Visuddhimagga*, in Warren, p. 252; *Sumaṅgalavilāsinī*, p. 110.

[2] The Śaivite Buddhists have made a deity of 'premature death' (Wilson, *Works*, ii. 24).

[3] See, *e.g.*, *Bhagavad-Gītā*, viii. 5 f. (A. Barth, *Religions of India*, London, 1891, p. 227; R. Garbe, *Bhagavadgītā übersetzt . . .* Leipzig, 1905, p. 52): 'Rememberiog whatever form of being he in the end leaves this body, into that same form he ever passes, assimilated to its being' (Thibaut, *Vedāntasūtras*, iv. 1, 12=*SBE* xxxviii. 352); 'Whatsoever being a man at his end in leaving the body remembers, to that same he always goes, inspired to being therein' (L. D. Barnett, *The Lord's Song*, London, 1905). See also the sources cited in *Vedāntasūtras*, *loc. cit.*, and Cowell, tr. of *Aphorisms of Śāṇḍilya*, Calcutta, 1878, § 81; for the Jain sect, see *Majjhima*, i. 376. Folk-lore is abundant on this subject; see, *e.g.*, *Kathā-sarit-sāgara*, tr. Tawney, 1880, i. 242, and *passim*. Rhys Davids compares Plato, *Phædo*, 69 (*Indian Buddhism*, London, 1881, App. viii., *Dialogues of the Buddha*, i. 298).

actions of a life, but they do not even admit of a permanent soul which would be responsible for all the actions. At the time of death, all that exists is the 'dying thought' (*chyutichitta*) and the '*skandhas* (dispositions, etc.), which come to an end at death.'[1] The 're-birth thought' (*pratisaṁdhi*°, *upapattichitta*)—and the *skandhas* associated with it—can be determined only by the 'dying thought,' which it continues. Hence it follows that, if the mental state at death is good, a pleasant birth will take place; if it is bad, an unpleasant one. The agent will be re-born into the spheres of desire, matter, non-matter (see COSMOGONY, etc. [Bud.]), according to the *fulcrum* (*ālambana*) of the last thought (*Abhidhammasaṅgaha*, v. 12–13 [*JPTS*, 1884, p. 25]); and 'to die with the thought fixed on space [or the void]' is to obtain *nirvāṇa* (*Madhyamakavṛtti*, p. 53).

But, if the last thought (or last action) is, according to the principle of the Buddhist system, the sole determining cause of the future life, good sense and equity require that the previous thoughts (or merit) should come into account in the retribution. Buddha was very categorical on this point. The conclusion arrived at will be that, if the last thought, in the quality of act 'close at hand' (*āsanna*), determines the future life, the latter may be conditioned by other acts, important from other points of view.

The difficulty or contradiction may be resolved by affirming that the last thought is the resultant of the life or of a former act which, by its importance or repetition, has to be rewarded in the next existence:

'It is at the moment of death (*chyuti*, 'fall of thought') and of re-birth that the thoughts are enabled to ripen' (*A.K.V.*, Burnouf MS, fol. 112*b*). 'The *Karman* remembered at death springs up in re-birth' and is therefore named 'close at hand.'

At death the mental working is weak and dull; therefore any passion which has been intense or habitual during life enters upon a state of activity (*A.K.V.* 249*a*). In short, the treatises of Abhidharma teach that the object of the last thought is either present (*pachchupanna*) or past (*atīta*), being determined both by the life that is completed, and by the state in which it is proper (by reason of this life or of even earlier merits) for the new life to be passed. It is, therefore, by the 'force of the merit' that there presents itself to the spirit of the dying either the action (accomplished previously by him) which is to determine the re-birth[2] (and above all others the 'heavy' action, *guru*, the reward of which comes before all others [*A.K.V.*, Burnouf MS, fol. 482]), or the object (sensation, etc.) experienced at the time of performing the action, or the motive or means of the action, or, lastly, the picture of the state about to be reached by the re-birth, the sign of the future lot.[3]

But this theory, that the last thought is the resultant of the life, is discouraging to piety. It is certainly the opinion of the Buddhist that we should not wait for death to become 'converted,' for the agonies and suffering of the last moment make thought very feeble (*Bodhicharyāvatāra*); the good thoughts of the last hour are by nature very weak: they may procure a little of paradise, but they cannot prevent a fall back into hell immediately after, if it is merited (Spence Hardy, *Manual*, p. 489). But numerous writings show that the last thought is not always determined beforehand, that it is possible to prepare oneself and others for death, and to make sure of a good re-birth by helping the 'production of good dispositions.'

We may quote some examples. Milinda says: 'Your people [Buddhists] say . . . that, though a man should have lived a hundred years an evil life, yet if, *at the moment of death*, thoughts of the Buddha should enter his mind, he will be re-born among the gods. . . . And thus do they also say: "By one case of destruction of life a man may be re-born in purgatory."' When asked if this was not a contradiction, Nāgārjuna replies: 'Would even a tiny stone float on the water without a boat? . . . Would not a hundred cart-loads of stone float on the water if they were loaded in a boat? . . . Well, good deeds are like the boat' (*Milinda*, p. 80, tr. Rhys Davids, *SBE* xxxv 123 *f.*).

Mahāmoggallāna sees a poor wretch, condemned to death, to whom the compassionate Sulasā has just given some cakes. He thinks: 'This man, with no merits, a sinner, will be re-born in hell; if he gives me these cakes, he will be re-born among the terrestrial deities.' He presents himself before the condemned man, who thinks, 'What is the good of eating these cakes? If I give them away, they will serve me as a *viaticum* for the other world.' But, as he thinks also with affection of Sulasā: 'It is through Sulasā's kindness that I was in possession of this alms,' his thought, purified by the gift to the saint and soiled by this affection, causes him to be re-born as a tree-deity (inferior deity) (Petavatthu, *Commentary*, p. 5).

The deities of the gardens, the woods, the trees, and plants crowd around the master of the house, Chitta, who is very ill: 'Make your resolution, utter your prayer: "May I be a chakravartin king in a next existence"' (*Saṃyutta*, iv. 302; cf. Rhys Davids, *Early Buddhism*, London, 1908, p. 77).

A man is stained (*sāṅgaṇa*); he acknowledges his stain and does his utmost by prayer, effort, and exertion to wipe it out; he will die free from attachment, from hate, from error, and from stain, with pure thought. A man is free from stain; he knows it; he then conceives complacence, and through this, attachment enters into his thought; he will die re-clothed in attachment, hate, error, stain, with impure thought (*Majjhima*, i. 26).

The Buddhists began early to think of preparation for death. Aśoka grants three days for this purpose to the damned (Pillar-Edict, iv.; see V. A. Smith, *Asoka*, Oxford, 1901, p. 165). The *Mahāvagga* commands the monks to attend, even during the rainy season, at the bed of a sick layman (iii. 5, 9 = *SBE* xiii. 304). The *Visuddhimagga* (xvii. line 1190) explains the ceremonies performed for the dying. The friends say to him: 'We are about to perform the *pūjā* (cult) of Buddha for you, quiet your spirit [in Buddha].' The *pūjā* includes flowers, etc. (*rūpa*, 'form' or 'colour'). 'See this offering we are making for you,' they say to the sick man—the recitation of texts and music (*sadda*, 'sound') . . ., perfumes (*gandha*, 'smell'), honey, etc. (*rasa*, 'taste'), and cloths (*poṭṭhabba*, 'tangible')—'Touch this offering.' Thus by the five senses the impressions penetrate which will be the object of the last thought.

Spence Hardy (*Manual*, 489) tells the story of a fisher who is made to recite the five precepts by a monk ('I renounce murder' . . .), and this wins a heavenly re-birth for him; and, when he recites them again in his last moments, he obtains re-birth among the higher gods.

Tantrism substitutes formulæ in abracadabra for the 'thought of the Buddha' and the repetition of precepts: the *oṁ maṇi padme hūṁ* plays a great part (see C. F. Köppen, *Die Religion des Buddha*, pt. ii. 'Die lamaische Hierarchie,' Berlin, 1859, p. 59); the cults of Amitābha substitute the repetition of ejaculatory invocations to Avalokiteśvara or Amita: 'Whosoever shall have heard the name of Buddha Bhaisajyaguru, to him will eight Bodhisattvas come at the moment of death to show him the way [to paradise]' (*Śikṣāsamuchchaya*, p. 175). In *Karaṇḍavyūha* (Calcutta, 1873), pp. 23, 95, twelve Buddhas surround the dying; in *Sukhāvativyūha* (Oxford, 1883), p. 47 (= *SBE* xlix. 45), Amitābha himself appears surrounded by [magic] monks. 'Seeing Bhagavat, their thought is quieted, and, falling from this world, they are born in Paradise' (cf. *Samādhirāja*, iv., at the end). In *Saṃyutta*, iv. 302, it is the forest-deities who care for the dying man and suggest to him the wish for such and such a re-birth.[1]

LITERATURE.—This is given throughout the article.

L. DE LA VALLÉE POUSSIN.

[1] We need not spend time over the acts and ceremonies for the benefit of the dead. Some bibliographical indications may be useful. Pāli sources (gifts for the dead): *Aṅguttara*, v. 296, Petavatthu, i. 5 (*Paramatthadīpanī*, pt. iii. pp. 23, 35).

[1] See *Madhyamakavṛtti*, p. 228 *f.*, and sources cited.

[2] See *Śūraṅgamasūtra* quoted from the Chinese by Beal, *Catena*, p. 43: 'At the end of life, before losing animal heat, the good and the evil deeds are summoned up, as it were, in a moment.' Then the dying one thinks of his sin and of his good action, and, by a process well described by Nāgasena (*Milinda*, p. 297, tr. Rhys Davids, *SBE* xxxvi. 155), becomes absorbed into the sin committed, even while regretting it.

[3] Aung and C. Rhys Davids, *op. cit.* p. 149. See *Avataṃsakasūtra*, quoted by Beal, *op. cit.* 44: 'If he possesses a bad *karman*, he beholds all the miseries attending a birth in hell . . . he sees the infernal lictors.' Cf. the 'death of the sinner' in the *Bodhicharyāvatāra* of Śantideva, ii. 41 (Poussin's tr., *Introd. à la pratique des futurs Bouddhas*, Paris, 1907, p. 41; L. D. Barnett's tr., *Path of Light*, London, 1909, p. 42).

DEATH AND DISPOSAL OF THE DEAD (Chinese).—The Chinese discriminate between premature death and the inevitable ending of the term of natural life. The pictogram for untimely death is composed of the radical denoting 'evil' (originally depicting the cutting up of bones) and that for 'man,' the combination being interpreted by S. Wells Williams (*Syllabic Dict.*, Shanghai, 1889, p. 836) as 'the evil which parts men.' The character thus formed is explained as conveying the idea of 'the running out of the vital issues,' 'the emptying out of the breath'; whilst that for normal death, *i.e.* in old age, represents the end of a cocoon or ball of silk. The express mention of death is generally avoided, the Chinese preferring to employ some euphemistic phrase such as 'passed away,' 'returned to Heaven,' 'no more,' etc., or sometimes an expressive gesture—the hands tightly clenched, and the head thrown slightly back.

The customs which prevail in different parts of China in connexion with the treatment of the dying and the disposal of the dead are so dissimilar that a complete statement of them would be impossible; it will be sufficient to describe the observances which may be regarded as fairly characteristic. The details which follow do not apply in the case of children and unmarried persons. In these instances the dead are disposed of with as little ceremony as possible; in many cases the bodies of infants are simply rolled np in a coarse wrapper of matting, and deposited in a convenient spot of open ground, perhaps in a 'baby tower' specially intended for the purpose.

The conduct of funeral rites is described as early as the Chow dynasty (1122–255 B.C.), and it is evident that *burial*[1] has always been the mode adopted for the disposal of the dead. In the Chinese sense this does not consist in the lowering of the remains into a dug-out grave, but in the placing of them in a sarcophagus upon the surface of the ground, and the piling up of earth in the form of a mound, as a result of the annual visits to the place of interment. It was usual in early times to place in the coffin certain articles which the deceased valued during life; and specimens of jade, chess-men, etc., are frequently discovered in ancient tombs. In the case of kings it was often difficult to ascertain where the royal corpse was actually buried, as sometimes a number of separate coffins were interred in different places, each nominally containing the 'remains' of the late monarch, in order to render more remote the possibility of rifling the tomb.

The custom of immolating a number of slaves or relatives of the deceased was sometimes practised in China. Cases are quoted as early as the 10th cent. B.C., as, *e.g.*, that of the Duke Muh, at whose funeral some 177 persons were buried alive. References to the practice are found in the time of Confucius (551–478 B.C.), and even as late as the present dynasty an instance is quoted in connexion with the Emperor Shun-che (A.D. 1644–1661). The burning of paper effigies of servants and attendants at the present day may be a survival of this barbarous custom.

1. **Importance of the subject.**—The importance of the subject will at once be evident when we consider that there is, perhaps, no event in the 'pilgrimage' of the 'Chinaman' which demands so great attention, such scrupulous observance of immemorial custom, and such lavish expenditure of labour and capital, as the carrying out of a 'decent funeral.'

2. **The dictum of Confucius.**—Confucius lays down no rules with regard to the treatment of the dead, beyond the admonition that all things should be done 'decently and in order'; that the family circumstances should be taken into account, and that the various classes of society should be guided by the precedents which obtain in each class. The tradesman should not seek to emulate the official, and so forth; but Confucius enunciates one general principle which should govern the conduct of the entire affair: 'In mourning it is better to be sorrowful than punctilious.'

It is hardly necessary to say that the observance of the conventional funeral customs is inseparably connected with the extraordinary development of the idea of filial piety, and the ancestral worship of which it is the inspiration and the key.

3. **Treatment of the dying.**—When all remedies have failed to retain the departing spirit, the dying man is prepared for entering the presence chamber of the gods, before whom he must appear: the god of the local temple, the god of the city walls and moats, and the god of Hades. His head is shaved; his body and extremities are washed; the nails of his hands and feet are cut, the parings being carefully preserved; and his underclothing is changed. When *in articulo mortis* he is supported in a sitting posture, it being believed that the soul makes its escape from a recumbent figure by the lower part of the body, and, as a result, on re-incarnation will be gross and stupid; whilst from the upright body it flies aloft through the mouth, and re-appears eventually, by transmigration, in a highly developed condition. Tinsel money and charms are burnt before him, and the ashes are collected, wrapped in paper, and placed in his hand, whilst he is informed that the expenses of the journey have all been provided. Sometimes a small lantern, obtained from a Buddhist temple, and already used in the worship of Heaven, is placed in his hand, and he is advised to hold it fast, as the way before him will be dark. If the family can afford it, a sedan-chair with two bearers, all of paper and bamboo, is purchased. To die in the early morning is in some places considered felicitous, because there are three meals left for the dead man's posterity to enjoy; but to die after the consumption of the evening meal is considered to be ill-omened, for then, by implication, there is nothing left for his successors. It is important that the sons of the dying man and other relatives should be present to attend the death-bed; and, as they weep, they call upon him not to leave them but to awaken from his sleep. The cries of daughters are considered to have special virtue in opening Heaven's gate, and a man who does not possess a daughter or two is much to be pitied—contrary to a prevailing but very erroneous idea current among Europeans.

4. **First duties of mourners.**—As soon as death takes place, an elder conducts the proceedings, and orders the queues of the sons to be unravelled, and candles to be lighted before the ancestral shrine and the god of the hearth, because the warrant for the capture of the departed soul is supposed to have arrived from the god of Hades, and it must be countersigned by the ancestral spirits, or their representatives, and by the god of the hearth.

[1] The practice of cremation is repugnant to the Chinese view of the necessity of preserving the body intact as far as possible, and is employed only in the case of Buddhist monks and nuns, though historical references may be cited in proof of its frequency in certain periods, probably as a result of foreign influences.

5. The dread messengers.—The messengers of the god of Hades are said to be two, viz. the *living Wu-ch'ang* and the *dead Wu-ch'ang*, the word *wu-ch'ang* meaning 'uncertain,' and being explained by the uncertainty of the summons of death. The living Wu-ch'ang is not a demon, but the soul of a living man who is employed by the Wu-ch'ang to guide him to the house of his victim. The true 'Uncertain,' as coming from the hidden world, is unable to find his way in the light of day, and requires a mortal spirit to guide him. Some say that these two characters represent, not individual agents of the god of Hades, but only the two souls (the animal and the spiritual, *i.e.* the *psyche* and the *pneuma*)—the *hun* and the *p'o*, as they are called in Chinese. The first of these is written in Chinese with a character which means 'black' attached to the word for 'spirit' or 'demon,' and hence represents 'black spirit,' and the other has the character which stands for 'white' prefixed to the same word meaning 'spirit,' and hence represents 'white spirit.' These have been personified, by the ignorant, as the lictors who come to carry off the soul; whereas they themselves are the essential parts of the soul which of its own accord is about to leave its tenement. The *hun*, in conformity with its nature, soars aloft and is dissipated; the *p'o* descends into the element of earth and haunts its old neighbourhood.

6. Post-mortem lustration.—The matting on which the deceased is lying is given a pull, with the idea that this will prevent a lingering illness in the next incarnation. The chief mourner, generally the eldest son, invests himself in the clothes which are eventually to be put upon the corpse, and, holding a bucket in one hand and a bundle of incense in the other, walks, or, in the case of an infant, is carried, to the waterside, an umbrella being held over his head all the time, as he is impersonating the dead and must be screened from the eye of heaven. In some cases he is escorted with music and fireworks. Paper money of different kinds is burnt; a coin, with a large nail fastened in the centre, is thrown into the water; and the water is thus supposed to be bought, and is drawn up and taken to the house. Here it is warmed, and a few rubs are given to the chest of the corpse by way of a bath. The hair of the dead man is next combed by the daughters and daughters-in-law, each taking a turn, kneeling and weeping at the same time; and then it is rolled up into a kind of knot on the top of the head, somewhat like the top-knot worn by the Chinese of the Ming dynasty, thus exemplifying the popular proverb, 'The living submit [to the Manchus], the dead do not.' After this perfunctory washing the dead man is removed from his bed and supported on a chair; and the matting and straw on which he has been lying are burned in the open street. It is of the utmost importance that the feet of the corpse should not touch the ground, and they are generally covered with a cotton cloth, and supported in the lap of the daughter-in-law. A small table is spread before the body, holding two bowls—one of rice, and the other containing vegetables with long stalks, to represent and bespeak a long life and firm root in the next stage of existence.

7. Announcement of the death.—The sons of the deceased, with the braid removed from their queues, wearing white gowns, aprons, and white fillets round their heads, and shod with straw sandals, take candles and paper money of two kinds, and proceed to the temple of the god of agriculture. On arrival at the temple, the eldest son, as chief mourner, lights the candles, makes his prostrations, and burns the paper money; this money is supposed to act as a guerdon to the god of agriculture, who is represented as the agent of the god of Hades in the arrest of the soul, and hence requires remuneration. The whole process is described as *p'u t'ang*, or 'strewing the hall'—a phrase applied in real life to 'squaring' the officials at a Yamen in order to be assured of 'justice'; and it is fairly inferred that the officials in the nether world are equally amenable to a 'consideration.'

8. Removal of the corpse.—On returning to the house, they make arrangements for removing the dead to the middle hall, which is reserved for special occasions, and which also contains the ancestral shrine. The position of the corpse is first reversed, indicating the hope that the dead man may return from the hidden world, and this is illustrated by the transposition of the fœtus before birth. A meal is laid out on a large sieve and placed before the dead, with wine and candles, and is then carried in procession to the front of the house and laid outside the door; the members of the family, in white clothing, kneel on a piece of coir matting, weeping and prostrating themselves alternately. The body is next carefully secured to a chair by broad bands, and four strong men are selected to convey it to the state apartment; the head is supported by the eldest son, and the feet by the daughter-in-law. The burden must on no account be laid down until its destination is reached; a fall would be considered a frightful calamity. An umbrella is held over the chair as it moves, to hide one who is now a denizen of the shades from the light of heaven, and handfuls of rice are thrown upon it, with the idea of expelling all evil influences. The corpse is then placed on the bed and a coverlet spread over it. A sheet of white paper is laid upon the face, and the feet are placed close together and propped in position; to allow them to fall apart would involve the death of the nuptial partner shortly after.

9. The public announcement.—A messenger is then sent to a Taoist priest to inform him of the date of the deceased's first attack of illness, the time of his death, and the number of his years. The priest writes a large sheet of yellow paper mentioning these particulars, and the date on which the spirit may be expected to return, together with the classes of persons, born under certain auspices, whose presence at the coffining is contra-indicated. On obtaining this information, which is sometimes pasted up diagonally on the wall of the house, the family is able to prepare for the return of the departed spirit and his attendant.

A large sheet is hung to screen the body from the observation of people passing the door, and a rude lamp, consisting of a bowl of oil with a wick in it, contained in a basket of lime, is kept constantly alight, day and night, so that the deceased may have 'a lamp to his feet' wherever he journeys.

10. Ceremonies connected with death in old age.—If the deceased happens to be aged, say seventy years old or more, the curtain at the foot of the bed is red in colour, to show that death, in his case, should not be considered an occasion of sorrow; and no word of consolation is spoken or sign of grief shown by the visitors; on the contrary, nothing but compliments are heard that such a happy consummation has been reached, full of years and in the midst of a numerous posterity. Wine-drinking, the 'Morra,' etc., are all the rule, and any one would be laughed at who insinuated that there was any occasion for grief. It is to be noted that, until the actual coffining takes places, the candles used are of the usual red variety; white candles are not employed until all hope of revival has departed, and the body is about to be placed in the coffin. The head and feet of the corpse are

supported on specially-made pillows of yellow cotton, stuffed with paper waste, or, in country districts where cotton is manufactured, a reel on which cotton is wound is used instead.

11. Notifying the relatives.—A swift messenger is dispatched to inform the relatives, who are expected to send gifts to the bereaved family. The presents consist of small quilts, about three feet long and a little more than a foot wide, which are carefully marked and reserved for placing in the coffin in due course; they are thus marked to ensure that those furnished by important members of the family shall have a first place.

12. Visits to the house of mourning.—Notice of the arrival of visitors is given by the gateman, who beats three times on a drum; a trumpet is sounded and a hand-cannon discharged. The musicians then strike up, and the mourners are warned of the approach. The chief mourner kneels at the side of the spirit table; the stewards escort the visitor to the curtain, where he kneels four times and bows four times.

13. Coffins.—The style of the coffin varies throughout the empire. In some places it represents the trunk of a tree; in the north the lid projects considerably over the head. The quality is determined by the circumstances of the family. Wealthy people prefer to buy their own coffins beforehand and keep them stored either in an outhouse or in a temple. Some buy the planks, keep them till seasoned, and then employ carpenters to make the coffin when required; whilst others buy theirs from a coffin-shop or from one of the Charitable Societies. At the end of the coffin a lotus flower is carved, expressing the hope that the deceased may become a Buddha and take his stand on a lotus, as Buddha is represented doing.

14. The process of coffining.—The time for coffining in some places is at full tide, and preferably after dinner, so that the deceased may not be put hungry to his 'narrow bed'; but in others it must be before daylight in the morning, or in the dark of evening, or on a day bearing an odd number, 3, 5, 7, etc., for fear of another death taking place if an even day should be selected. The floor of the coffin is covered with a layer of fine sifted lime or charcoal; then five large squares of coarse paper; upon these a narrow strip of matting, sometimes manufactured of special material like lamp-wick, is placed, and upon the top of all a cotton mattress. The garments for the dead are specially made for the occasion, if the family can afford it, and are fashioned after the pattern of the old Chinese costume, like that of the present Koreans; no buttons or knots are permitted—the Chinese word for 'knot' being pronounced like that meaning 'difficulty' or 'trouble,' and all such difficulties must be prevented from accompanying the traveller. The son now divests himself of the clothes he has assumed, taking them all off in one movement, without separating the several garments; and they are suspended over the backs of two chairs and perfumed or aired, by means of a brazier, containing fragrant herbs, placed underneath. Furs and leather of any kind whatever are carefully excluded, lest the dead should be turned into an animal in his next re-incarnation. The clothes are laid out on the inverted lid of the coffin, and the dead man is carefully placed in position for convenience of dressing; his arms are drawn through the sleeves; a long cord, which runs through the sleeves, is then fastened in a 'lucky' knot, and the clothes are carefully smoothed into position. The hands are placed crosswise over the lower part of the body, the left hand uppermost in the case of males, and the right in the case of females. A pair of cheap shoes are placed on his feet, and an official hat with a red tassel is put on his head. In upper-class families a winding sheet of deep red is used, sometimes of satin and elaborately embroidered, forming a sort of large bag like a sleeping-bag, in which all but the head is enclosed, and it is fastened at one side with tapes. A satchel containing paper money, a piece of silver, and the Taoist placard is put on his shoulder; and a piece of silver is placed under his tongue. A small pearl, called 'tranquillizing the heart pearl,' is placed on his breast; and, in the case of a woman, a small pearl is inserted in the toe of each shoe.

The corpse is now lifted and placed carefully in the coffin, the son supporting the head and the daughter-in-law the feet, with others assisting at the sides. It is important that it should rest exactly in the centre. Small bags of lime are then inserted to keep the head and feet in position; the pipe, fan, and handkerchief of the deceased are also inserted, and five small bags of different colours, containing nail-parings, old teeth which have fallen out from time to time, tea, and rice; a small casket containing a rosary, and the undress cap and 'riding-jacket' are also added; for the garments which the dead is at present wearing are his ceremonial clothes, required for his audience with the gods; these others he will wear on his journey. Then each person present takes from his breast a small piece of cotton wool, called 'warm the heart cotton,' and, rolling it up into a small ball, throws it into the coffin; the relatives are invited to take a last look, and care must be taken that no tears are allowed to drop in, lest the corpse should be found in another existence with marks or stripes on his face. Then the various coverlets are laid on in regular order, those presented by near relatives being given first place, and so on in order of precedence, until the coffin is quite full; whatever quilts are unable to find a place inside the coffin are burned. Before the lid is put on, all who are regarded as representing astral influences inimical to the deceased are requested to withdraw, and are allowed to return only when the lid has been put in place. The lid is smeared with crude varnish, to make it air-tight, or sometimes a cement made of rice, vinegar, and flour is used. Usually four large nails are employed to fasten the lid; but sometimes a sort of double wedge, fitting into a socket in the lid above and another in the side of the coffin, is used instead. The nails are driven in by a senior, the sons and, in some cases, the daughters meanwhile crouching under the trestles on which the coffin rests, lest the eyes of the departed should start out at the hammering.

15. Preparation for removal.—When the lid is fixed in position, the mourners are allowed to plait their queues with hemp-cord, and wear coarse shoes instead of the straw sandals they have been wearing, and they are permitted to eat. Food is now placed at the side of the coffin, and the dead and his gaoler are invited to partake; the friends and relatives kneel to pay their last respects, and the chief mourner returns the compliment on behalf of the departed. Two piles of paper money are then burned, one for the dead and the other for his guardian.

16. Meals served before the coffin.—The 'filial curtain,' made of white cotton, is next hung up before the coffin, drawn partially back at both sides, with a table and chair placed at the opening, a white cover like an altar-cloth draping the table. Regular meals are served to the deceased on this table every day, and, each time a meal is served, the server is expected to wail and cry. This continues until the funeral.

17. The fairy guides.—On each side of the chair are placed tall paper structures representing hills, one called the 'golden,' and one the 'silver' hill, intended to indicate the vast sums which the fond

relatives have provided for the voyager, and behind these are tall figures of the 'Golden Youth' and the 'Jade Maiden,' bearing streamers to guide him across the 'Fairy Bridge.' The portrait of the deceased is hung up, behind the chair, supported on each side by scrolls bearing doleful inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted tub, and crowned by a piece of red silk fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

18. **Untying the knots.**—The day before the funeral, Bonzes and Taoists are invited to conduct 'masses,' called 'the Water Mass,' the object of which is to cleanse the departed of all sins and transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trouble, unties the knots in succession, putting the coins one by one into his vest. This untying of knots is meant to illustrate the release from all tightness and difficulties in the next world.

19. **The journey through the 'shades.'**—A Taoist takes his stand at the corner of the table, holding a bell in his hands, and, as he rings it, he chants a sort of sermon whose text is 'All is vanity,' and whose language has a remarkable similarity to the twelfth chapter of Ecclesiastes. He then describes the different stages of the journey to Hades. The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a wealth of impromptu illustration and elaboration; and the moral of all is the importance of repentance for not having spent one's days in vegetarianism and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the 'spirit table,' and a large square with ornamental borders is mapped out on the floor with chaff; twelve oil lamps, provided by the Taoist priests, are disposed round the sides of the square, and are supposed to illumine the darkness of the gate of Hades.

20. **Funeral frivolities.**—A table is placed at which a Bonze and six Taoists sit, each performing on a different instrument. In the intervals they sing ribald or humorous songs, with the intention of exciting laughter. They also sing the 'Flower Song of the 12 Moons,' describing the different flowers which bloom in the different months, and other compositions which have apparently very little funereal reference.

21. **Offerings to the spirits.**—After supper the ceremony known as 'Fang Yen-kow' takes place. The spirit table and chair are removed; another chair is substituted, on which a priest takes his seat. Two tables, supporting two large candles and twenty-four bowls of vegetable food, are placed at a little distance in front, intended for the delectation of the various gods. Four other tables are disposed at the sides of the hall, two on each side, intended for the sacrifice to the family ancestors; a small table a little lower down contains the offerings intended for the dead person; and the spirit tablet sits at this table in the chair as before, attended on each side by relatives in light mourning garments. When the priests have finished their reciting, a quantity of paper garments and money is burned outside the house.

22. **Sacrifice to the dead.**—The apartment is now re-arranged, and preparations for the sacrifice to the dead are made; musicians are requisitioned; large quantities of flesh and fowls are laid out; lamps are hung all over the room, and the chief mourner appears from behind the curtain, leaning upon the 'filial staff,' and supported by attendants. He kneels before the tablet and makes humble offering of the meats, etc. As he prostrates himself, a person standing at the side reads a long panegyric on the dead in a melancholy voice, and the chief mourner weeps as he lies upon his face. He is then escorted to the rear of the screen, and repeats the process three times; all the relatives and friends present follow him in his genuflexions. When all is finished, the offerings and all the temporary fittings are removed, and preparations are made for the funeral.

23. **The funeral procession.**—In some places the funeral takes place in the fifth watch, *i.e.* between 4 and 5 in the morning, perhaps in the fifth week, or as late as one hundred days after death, sometimes even later, and in cases of poverty the coffin is left in the house, or put in a mortuary chamber for the time being.

Every one is awake and stirring at daylight when the day arrives, and arrangements are made for the start. An immense paper figure, representing the 'Clear-the-way god,' leads the van; next come two large bamboos bearing streamers, and four 'wagheads'—paper figures of men, whose heads bob continually as they are carried along. The son-in-law or nephew carries a dish containing rice, in which is placed the ancestral tablet. In wealthy families the tablet is placed in a sedan-chair, which is supported on each side by a son-in-law or nephew. The bearer of the tablet is robed entirely in white, and the friends of the family walk on either side of him. Then follows the coffin, borne by four men or a larger number, according to the rank of the deceased, and covered with a red pall or with a satin embroidered cover. After the coffin comes the chief mourner, wearing a head-dress of coarse hemp gauze, shaped somewhat like a biretta, with 'pom-poms' of cotton-wool placed at the intersections of the frame, and worn over a small white cap. He hangs his head as he walks, and is followed by the relatives, male and female. The daughter-in-law wears a cowl or hood of coarse gauze over her head, and a jacket and skirt of the same material; she also carries a staff or wand like that borne by the chief mourner; she sometimes sits in a sedan-chair, and the heavy head-dress is then placed on the top of the chair instead of on her head. She weeps and cries aloud as she goes, like the 'keener' at an Irish wake. Rice is thrown over the coffin and chief mourners as soon as they move towards the outside door. The figure of a crane, with outstretched wing and uplifted foot, is placed upon the centre of the coffin, and is supposed to convey the soul to the 'Western Heaven.'

24. **The entombment.**—When the place of burial is reached, the coffin is temporarily supported by a couple of blocks, whilst the exact location is being considered, with special reference to orientation. In wealthy families, a stone receptacle is prepared beforehand, and the coffin laid very carefully in the exact centre. A meal is laid out, to which the deceased and also the denizens of the neighbouring tombs are invited. The mourners' head-dresses and cinctures are burnt, with a quantity of paper money, and the streamers and staves are left at the grave. All present now set up a cry; the stone door of the tomb is placed in position, and the tomb sealed. The head-stone is set up, bearing the names of the deceased, with the date of erection. The mourners then join hands and perform a sort of 'merry-go-round' about the tomb, which is repeated three days later.

25. **Return of the ancestral tablet.**—The procession returns in the same order as before, escorting the ancestral tablet to the home, with crying and burnings. On arrival at the house a great bonfire is made outside the door, and all who have attended the funeral are expected to step across it before gaining the threshold; no one is exempted. In some places a little water is sprinkled over each person by the Taoist priests. The son, in (lighter) mourning garments of blue, kneels and offers the viands prepared, and burns a quantity of paper money. He next climbs by a ladder to the ancestral shrine over the central partition, lights candles before each shrine, and then carries up the new tablet and places it in position. All present are invited to partake of the feast which follows. On the third day a visit is paid to the tomb, and offerings of food, etc., are presented. Those who are present join hands, forming a ring round the grave, and circle round in one direction three times and then reverse three times; this is with the idea of confining the spirit in his proper habitat.

26. **The seven 'weeks.'**—On the seventh day a number of Taoists are hired, seven in all, to 'open the road,' and a great variety of ceremonies take place on this day—morning, afternoon, and evening. In the evening the hall is again arranged, with a table and chair, and a portrait of the deceased hanging behind the chair. Two cups of tea are put on the table, and two bowls of light food, together with candles and incense. The daughter-in-law weeps before the picture, as she 'invites' the spirit to partake of refreshment, and a quantity of paper money is also burned. At daylight, tea, etc., is laid as before. At breakfast-time, food of different kinds is offered and candles are lighted. The performance is repeated at noon, with this difference, that the viands are more elaborate. This takes place every 'week' until the seventh, the only exception being that in the fifth week a further meal is laid in the death chamber. In the fifth 'week,' Taoists are called to 'force the city,' or 'force the gate of hell.' A paper city with men, horses, etc., is set up, and, when night comes, a Taoist priest in full robes breaks through the city with the sword he carries, and liberates the imprisoned soul; afterwards a great bonfire is made in the open air, and three or four priests take their stand around it, holding long bamboos, to which are attached elaborate 'fireworks.' In the sixth 'week' the daughters are expected to provide a feast for the dead, and they are given a share in the division of the clothing which he has left. At the end of the seventh 'week' the chief mourner is allowed to shave his hair for the first time, but, if the coffin has not yet been removed, he is not permitted to do so until one hundred days have expired. The next year the mourners, wearing white garments, pay their first annual visit to the grave on the day known as 'clear bright,' and on this day the sounds of wailing may be heard in all directions. A further visit is sometimes paid in the ninth moon; and at the winter solstice paper garments, representing warm winter clothes, are presented and burnt.

27. **The spirit's homecoming.**—On the night appointed for the return of the spirit, a table of eatables is laid in the death chamber, which is then evacuated by the relatives. In the kitchen a quantity of lime is placed beneath and around the fireplace. When the hour arrives, as announced by the Taoist priest, a procession is formed, the priest leading, and all enter the chamber. The kitchen is then visited and the lime examined, the traces of the spirit's presence being discovered by the marks, as of the feet of a goose, upon it. A white cock is caught and carried in one hand in front of a basket-lid, and, as the lid is struck by a measure held in the other hand, the cock crows; he is then escorted outside, and paper money burnt. This represents the sending off the spirit's escort. A white cock is said to be a protection against baneful astral influences, and to be the only capable guide of transient spirits.

DEATH AND DISPOSAL OF THE DEAD

(Coptic).—When the decaying religion of ancient Egypt gradually gave place before the advance of Christianity, many of the beliefs, and much of the symbolism that had been so dear to the Egyptians for over three thousand years, survived the change of religion for some considerable time, and, as was to be expected from a people by whom burial rites had been magnified into a great and complicated magical system, the old customs were given up only gradually and reluctantly. To the Egyptians, Christianity presented itself in a somewhat different light from that in which it appeared to the other civilizations of the ancient world. From the dawn of history they had believed in a continuation of life after death, in a future existence that was well defined; and in order to secure this existence for the soul of man they had elaborated countless magical rites which were performed at the burial of the dead. They had also a god of the dead—a god who had once lived an earthly life, who had been slain by the power of Evil, and who by certain magical ceremonies had come to life again, and ruled as King of the under world. It was thus that in Osiris lay their hope of living again, and with him they considered the dead identified. The Christian belief in a resurrection was therefore not, in certain aspects, a new one to them, and the doctrine that the dead in Christ shall live in Christ was strangely familiar to all who had been reared in the Osirian creed. Thus it is not strange that, when Christianity began to be accepted in Egypt, the early believers continued to practise the ancient funeral rites, only slightly modified to meet the requirements of the new religion.

The chief concern of the pagan Egyptians had been the preservation of the bodies of the dead by embalming, so that the spirit of the deceased might pass to and fro between the kingdom of Osiris and the earthly shell which lay in the tomb; and the early Christians of Egypt saw no reason to alter the custom of their forefathers, more especially since the Christian and pagan doctrines of the resurrection had so much in common. Mummification of the dead, therefore, continued to be practised by the Christians until the beginning of the 5th cent., and only died out after that owing to the general opposition of the Church.[1] Mummies of anchorites and holy men and women have been found in various parts of Egypt, one of the most notable cemeteries containing Christian dead being the recently excavated burying-ground at Antinoë. The bodies are usually well preserved, the head being sometimes adorned with a garland. In the case of the men, the beard was allowed to grow, contrary to the ancient usage, and when the face is thin or emaciated it represents very much the type of the Good Shepherd as depicted in later iconography, but unlike the criophoric figures in the catacombs.[2] The body was carefully wrapped in bandages, usually intercrossed, and sometimes

[1] Anthony, the founder of Christian asceticism, had so great a dislike to it that he desired to be buried secretly, in order that his body might not be subjected to the general custom. It was probably his opposition that led to the suppression of the practice.

[2] Gayet, *AMG* xxx.

the face was covered with a painted plaster mask, as was the pagan custom of the time. In the case of a supposed Christian priest found at Deir el-Baḥarî, the outer wrapping was painted to represent the deceased holding the Eucharistic cup in his hand. On his left shoulder was the *swastika* ornament, which was much adopted in early Christian symbolism, while the lower part of his robe bore a representation of the boat of Isis.[1]

But it was not only the belief in the efficacy of embalming that survived the change brought about by Christianity, for many of the other old funeral customs lingered on, although it is difficult to decide how far their import was understood by the Christians. There is some evidence to show that offerings of food continued to be made to the dead. In the Christian cemetery in the oasis of el-Khargeh the tombs follow the ancient design, the body being laid at the end of a long shaft, at the opening of which is a chamber containing niches for offerings.[2] Wine-jars and baskets for food were sometimes buried with the dead, and in a will made by a Christian at Antinoë the deceased requests that the holy offerings may be made for the repose of his soul. This, however, may refer to an *agape*, or a kind of mass said for the dead.[3] It is interesting that at the Synod held at Hippo in A.D. 393, at which Augustine was present, the habit of placing the host in the mouth of the dead, which had become general amongst Oriental Christians, was strongly condemned. It was apparently also the custom to enclose some of the holy elements in the coffin. Some other pagan usages seem to have continued. As the dead were formerly buried with amulets and little figures of protecting gods, so the pious Christian was buried with figures of St. George and the Evangelists. In one case, at least, at Antinoë a sort of ivory praying-machine, a kind of primitive rosary, appears to take the place of the papyrus inscribed with prayers and magical formulæ. There was also found, held in the hands of this body, a flower of Jericho similar to the mystic rose which was supposed to be the emblem of immortality, and to flourish every year on the day Christ was born. Hitherto this symbol was not considered to have been employed before the Crusades, but its presence in the cemetery of Antinoë points to its use in very early times. It is interesting also to note that the body of a monk named Serapion, from the same burial, was encircled by an iron band from which hung a cross.[4] In cases where portraits of the deceased were painted on the outer coverings of the body, the ancient sign for life, the *ankh*, ☥, is sometimes represented grasped in the hand.[5] This symbol is very frequent in Egyptian iconography, and was often employed where the cross would have been expected. Its use was so persistent that it afterwards became identified with the cross, and was known as the *crux ansata*. See art. CROSS.

As the influence of the Bishop of Alexandria increased over the remoter parts of Egypt, many customs which appeared semi-pagan died out, and the funeral rites were performed more in accordance with orthodoxy. After the Council of Chalcedon (A.D. 451), when the Coptic Church was definitely separated from the orthodox body, there could be but few remaining. From descriptions in the Coptic writings, it would appear that the dead, wrapped in a winding sheet, were immediately carried out into the desert and buried. Persons of peculiar sanctity it was the custom to bury in a reliquary. The Coptic *Life of Shnoute* states that he was buried in a reliquary pierced with holes, probably in order that pilgrims might have the benefit of gazing on the holy remains.[1] As these relics are usually described as bones, it is evident that embalming had by then been abandoned. A Mass, or offering of the Eucharist, was sometimes performed before the funeral, but Masses for the repose of the dead in the Roman sense seem to have been unknown in the Coptic Church. The use of tombstones at this period was almost universal. They usually contain the words: 'One God who helpeth,' and the date on which the deceased 'fell asleep' or 'entered into rest.' Occasionally they contain pious ejaculations and quotations from Scripture. Rarely they are conceived in a more pagan spirit, with such phrases as 'Grieve not, no one is immortal,' an especially good instance of this being a tombstone in the British Museum [no. 400] which runs: 'O how dreadful is this separation! O departure to the strange land which removes one for all time! O condition of Hades, how do we come to thy gate! O Death, name bitter in the mouth! . . . Let all who love to weep for their dead come to this place and mourn greatly.'[2] This recalls the ancient Egyptian funeral prayer to the passer-by: 'O ye who love life and hate death . . . pray for the deceased.'

The Copts have undergone centuries of oppression under Muslim rule, which has driven many to embrace Islām. The Khalîf al-Mutawakkil (850) even went so far as to interfere with their burial customs, and ordered that all the graves of the Copts should be level with the ground. Possibly owing to the influence of Islām, which has surrounded them on all sides for so long a period, the funeral rites of the Copts to-day have become very similar to those of their Muhammadan fellow-countrymen. The corpse is borne to the cemetery on a bier, followed by the female relatives and women of the house wailing and mourning. At the burial-ground a sheep is often killed by the more well-to-do, and its flesh given to the poor; the poorer give bread alone. Professional mourning women are hired to wail in the house for three days after death—a survival, perhaps, of the ancient Egyptian custom, or possibly only a ceremony borrowed from the Muslims. The lamentations are renewed on the seventh and fourteenth days after death, and sometimes for longer still. On the eve of the festivals of *al-Mîlad*, *al-Ghîtas*, and *al-Kiyamah* (*i.e.* the Nativity, the Baptism of Christ, and Easter), it is the custom of the Copts to visit the cemeteries and spend the night there, many of the richer having houses built specially for these occasions. The women spend the night in the upper rooms, the men below. Next day an ox or sheep is killed, and the flesh distributed among the poor. Lane (*Modern Egyptians*, p. 296) states that the Copts say that these visits to the tombs are merely for the sake of religious reflexion. This custom, however, together with the practice of slaughtering animals for food, possibly goes back to pre-Christian times in Egypt, when the relatives of the dead made periodical visits to the tombs, and brought food-offerings for the *ka* of the deceased to refresh him in the under world. The funeral services of the Copts are according to the liturgy of St. Mark. One is in use for ordinary periods of the year, and a special one is employed during Easter (Tuki, *Rit. Copt. Arab.* p. 525).

DEATH AND DISPOSAL OF THE DEAD (Early Christian).—1. During the earlier years the Christians followed in general the burial customs of the Jews. But a livelier hope in the resurrection robbed death and the grave of many of their terrors. This gradually modified inherited funeral rites. To the followers of Jesus death was a sleep, and the grave a resting-place (κοιμητήριον) for those who had died in the faith (Jn 11^{13}, Ac 7^{60}, 1 Th $4^{13f.}$, 1 Co $15^{18\text{-}20}$). Not less but more respect was accordingly paid to the mortal remains of the departed, for their bodies had been 'temples of the Holy Ghost,' and were to rise and be glorified (1 Co 3^{16}, 6^{19}, 15^{43}, Rev 7^{15}). When death ensued, the eyes were closed, the body washed, the limbs swathed, the whole body wrapped in a linen sheet with myrrh and aloes, and laid upon a couch in an upper room (Ac $9^{37f.}$; cf. Mk 15^{46} 16^{1}, Jn 11^{44} $19^{39f.}$ $20^{5ff.}$). These acts were performed by the elder women—kindred and friends of the family. Relatives and intimates were admitted to view the face of the deceased, and an interval of eight or more hours was required before burial. The younger men carried the bier to the place of interment, followed by the relatives and friends (Ac 5^{6}; cf. Lk 7^{14}). Flute-players, hired mourners, and noisy demonstrations of grief were doubtless dispensed with (Mt 9^{23}, Lk 8^{52}, Ac 8^{2}, 1 Co $15^{54f.}$). The place of burial was outside the city or village, in a natural cave, or in a tomb cut out of the rocky hill-side, or in a subterranean chamber, or simple grave. Local conditions were determinative. The description in the Gospel of John of the tomb of Lazarus and of that of Jesus will hold for the early Christian Palestinian place and form of burial (Jn 11^{38} 19^{41}; *Gosp. of Peter*, chs. 6 and 10). In fact, the form and character of Jesus' entombment influenced all subsequent Christian practice (1 Co $15^{20f.}$). Tombs were, as a rule, private family possessions (Mt $27^{57ff.}$), and were large enough to receive several bodies, which were laid upon the ledges or in the niches cut in the sides. The brotherhood, however, from the beginning undoubtedly provided for the burial of its own poor (Ac 2^{44}; Aristides, *Apolog.* [Syr.] xv. 18). A large stone, rolling in a rabbet, closed the door of the hill-side sepulchre against prowling beasts and robbers (Mk 16^{3}). It is altogether probable that the Jewish Christians whitewashed their tombs, as did their compatriots (Mt 23^{27}). In Rome and in general throughout the West, as well as in Egypt and North Africa, the Jews had already adapted the Palestinian form of interment to local conditions, and the early Christians modified this still further to meet their own peculiar requirements. Of course they borrowed this and that local practice from the current pagan usage. The wide-spread development of 'catacombs' (*q.v.*) as places of Christian burial was but a re-adaptation of Jewish and pagan burial customs. Simplicity and even plainness must have characterized the earlier forms of Christian entombment in all lands, partly on account of the poverty of the brotherhood, and also because of the hope of a speedy resurrection. A brief inscription expressing the hope of immortality (εἰρήνη σοι, κοίμησις ἐν εἰρήνῃ, *in pace*, etc.), sometimes accompanied by a consecrated symbol (a palm-branch or anchor, fish or dove), was the final tribute to those who had died 'in the Lord' (Bingham, *Antiq. of Chr. Church*, ed. 1870, bk. xxiii.; *Am. Cath. Quart. Rev.*, 1891, xvi. 501 f.; Kaufmann, *Handb. d. chr. Arch.*, 1905, pp. 74 f., 111 f., 205 f., 277 f.; art. 'Koimeterien,' in *PRE*[3] x.).

2. But changing conditions produced manifold developments. The wide-spread and increasing alienation between Jews and Christians in the early decades must often have suggested, if it did not compel, separate burial arrangements. And the rapid increase of the Gentile element in the various churches throughout the Empire naturally tended strongly in the same direction. The Jewish cemeteries, indeed, would hardly have been open for the interment of deceased Christians with pronounced pagan antecedents. Our sources, it is true, are practically silent regarding the progress of this development, but it is safe to say that separation between Jews and Christians as regards cemeterial requirements had taken place before the close of the first century, especially in prevailingly Gentile Christian communities. And a similar separation must have been going on as between pagans and Christians. Hostility between them became marked towards the close of the 1st century (Ac $8^{1f.}$ $15^{23f.}$, 1 Co $7^{12f.}$, 2 Co $6^{14f.}$, Col 2^{8}, 1 Jn $2^{18f.}$ 3^{13}, Rev $2^{10.20f.}$ $3^{9f.}$ $6^{1f.}$, and chs. 8–20), and martyrdom was not uncommon (Clem. Rom. *ad Cor.* 5–7; Tac. *Ann.* xv. 44; Suetonius, *Nero*, 16; Melito *ap.* Euseb. *HE* iv. 26, iii. 17–20; Pliny, *Ep. ad Traj.* x. 96, 97; Ign. *Ep. ad Rom.* 5, *ad Phil.* x. 2; Polyc. *ad Phil.* 1). The Christians would naturally wish to ensure the sanctity of the graves of their martyred dead, but in order to do so they had to provide separate cemeteries. That this began to be done in Rome by the opening of the 2nd cent. is generally admitted (de Rossi, *Roma Sott.* 1864–77, i. 343 f., iii. 386 f.; *Bull.* 1865, p. 36 f., 1886, p. 136; *Nuov. Bull.* 1901, p. 71 f., 1902, p. 217 f.; Bosio, *Roma Sott.*[2] 1650, p. 141 f.; Armellini, *Gli Antiche Cimit.*, 1893; V. Schultze, *Katakomben*, 1882, p. 307; Kaufmann, *l.c.* 111 f.). But that it did not come to pass throughout the Empire is abundantly proved (Ramsay, *Cities and Bishopries of Phrygia;* 1897, i. 500 f. and 717 f.). Influences other than hostility would often operate to hasten or prevent the institution of separate Christian cemeteries. In some lands, such as Syria and Asia Minor, it took even centuries to accomplish the separation of Christians on the one hand, and Jews and pagans on the other, as regards burial accommodation (Ramsay, *l.c.*).

3. The earliest distinctly Christian cemeteries of which we have any knowledge are to be found in the neighbourhood of Rome. The Neronian persecution, followed by that of Domitian, doubtless constrained the Christian brotherhood to provide separate resting-places for their honoured heroes who had 'fallen asleep.' And, as martyrs to the faith multiplied, such cemeteries became consecrated ground, and the tombs of the martyrs were ere long places of pious meditation and devotion. In certain communities this often necessitated chapels, where the brethren could gather without imminent danger of molestation. Then funeral rites and ceremonies soon shared in the general development, and these in turn reacted powerfully upon the whole manner and mode of burial. The entire catacomb development at Rome, Naples, Syracuse, Alexandria, Trèves, and elsewhere, for example, is adequately explained only on such presuppositions. Instead of family tombs and brief temporary resting-places for the dead, the Church, especially in the West, gradually made provision for the burial of all its deceased members (by A.D. 250). There accordingly arose, in the suburbs of every considerable Occidental city, Christian burying-grounds. And, where the remains of noted martyrs were laid, chapels were erected, and the brethren gathered to observe the Holy Eucharist and to hold fellowship with the 'saints who had gone before.' The chapel was named after the martyr; often the title was given to the whole cemetery; more frequently the cemetery bore the name of the patron who had provided the ground; occasionally of the bishop who enlarged and elaborated it. Instances of each are the cemetery of the martyr Prætextatus, of the patron Priscilla, and

of the bishop Calixtus—all in the neighbourhood of Rome. In the Orient, developments were different. Palestine is rich in rock-tombs, and so is the whole of Syria. Asia Minor has few ancient church-cemeteries; it has mostly family burial-places. And this is largely true of the whole Orient. Stone sarcophagi with Christian inscriptions are frequently found. These were placed in simple graves beneath the surface, or in tombs erected on the hill-side, with more or less elaborate façades. In all this there is little that was distinctively Christian (Ramsay, *op. cit.* i. 500 f., 717 f.). But in the West the pre-Constantine developments were quite unique. Beginning with the Jewish or pagan type of family tomb, the Christian churches soon provided cemeteries for all their dead (Aristides, xv. 8, 11; Tert. *Apol.* xxxix.). The most common form of these was that which was later known as 'catacombs' (*q.v.*). These underground cemeteries are enormously extensive in the neighbourhood of Rome, and were used as burial-places by the Christians down into the 5th century. They give us the larger part of our information on the theme in hand. The transition, for example, from the private family-tomb to the common church-cemetery is illustrated by the St. Lucina crypt and the Calixtus catacomb, by the so-called *spelunca magna* and the Prætextatus catacomb, the Flavian vestibule and the Domatilla catacomb, and the 'Acilii Glabriones' chamber and the Priscilla catacomb. The growing use of obituary inscriptions can also be seen in the catacombs, from the simple εἰρήνη σοι to the most elaborate personal tribute on the tomb of Sixtus II. (A.D. 258). The development of Christian symbolism can likewise be traced therein, from the rude but suggestive 'anchor' to the portrayal in fresco of the Last Supper or of the story of Jonah. Christian art in general had its beginnings and early elaborations in the catacombs, and every phase of it was closely related to the burial of the dead. This is especially true of painting, sculpture, and church architecture. The same is also true of the development of the liturgical and sacerdotal rites in the early Church, and the worship of the dead. The ante-Nicene development of burial customs is, however, quite amply reflected also in the current literature. The *Martyrium S. Polycarpi* speaks of celebrating 'the anniversary of his martyrdom,' or birthday, at his tomb (xviii.). Tertullian says: 'As often as the anniversary comes round, we make offerings for the dead (martyrs) as birthday honours' (*de Cor.* iii.; see also *de Monog.* x., and Cyprian, *Epp.* xii., xxxiii., xxxvi. 2; cf., further, art. COMMEMORATION OF THE DEAD).

The Christians did not fear cremation, though they preferred 'the ancient and better custom of burying in the earth' (Min. Felix, *Oct.* xxxiv.; cf. *Mart. Polyc.* xviii.; Tert. *de Anima*, li., *de Res. Car.* lxiii., *Apol.* xlii.; Origen, *c. Cels.* v. 23, viii. 30; Lactantius, *Div. Inst.* vi. 12; Eusеb. *HE* v. 2, vii. 22; August. *de Civ. Dei*, i. 12, 13). Simplicity prevailed throughout the 2nd cent. (Min. Felix, *Oct.* xii. and xviii.), but by the opening of the 4th cent. everything had become elaborated. Associations had been formed in the West to hold the property; space was sold in the cemeteries; gravediggers (*fossores* = κοπιάται) had become a separate class, and there were artists, stonecutters, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and perhaps the thirtieth and fortieth days after burial were celebrated (*Apost. Const.* viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowshipping with the dead; lighted tapers were placed at the grave; personal ornaments, toilet articles, bottles, vases, etc., were interred with the corpse (Synod of Elvira, can. 34; of Laodicea, can. 9; of Gangra, can. 20; Euseb. *HE* vii. 16, *Vita Const.* iv. 66, 67, 70, and 71; Epiph. *Hær.* lxxv. 3; Socrat. *HE* i. 40, iii. 18; Jerome, *Ep.* xxvii. [cviii.] *ad Marcellam*).

4. With the recognition of Christianity by Constantine a new era opened. Recent martyrdoms had multiplied the number of saints and holy places, furnishing fresh sites for sacred buildings as well as holy relics for altars. Imperial favour and funds now facilitated the erection of churches throughout the Empire, and the graves of apostles, martyrs, and honoured saints were soon covered by imposing basilicas or mausoleums. In the suburbs of Rome, for example, the basilica of St. Peter arose on the Vatican Hill, that of St. Paul on the Via Ostiensis, that of St. Lawrence on the Via Tiburtina, that of St. Agnes on the Via Nomentana, and that of SS. Marcellinus and Peter on the Via Prænestina. These all were, or became, cemeterial churches, with which Imperial mausoleums were frequently connected, as in the case of the mausoleum of St. Helena, near the last-named church, and that of Constantina, near St. Agnes. All around this latter basilica were placed minor monuments in a large open-air cemetery. The 'churchyard' now soon becomes the prevailing type of cemetery throughout the West, including North Africa. Persecution having ceased, the Christians were free to bury *sub divo*, yet the martyr graves beneath the altars usually drew the cemeteries near the churches. Of course, local conditions were determinative. Churches within the walls of the cities could not have extensive cemeteries, though their crypts were used for burial purposes. Western Europe followed in general the lead of Italy and Rome as regards cemeterial churches and churchyards. North Africa seems to have early developed the open-air cemetery, independent of particular churches. Egypt continued for the most part the ancient practices of the native Egyptians and naturalized Jews. Syria also persisted in its old burial customs, though the elaborate mausoleums of antiquity were not erected as Christian tombs; and the same was true of Asia Minor.

5. The elaborate funeral ceremonies and the interment of the Emperor Constantine in Constantinople (Eusebius, *Vita Const.* iv. 60 and 66–72) indicate the stage which the development had reached and also lines of future progress:

> The body 'was placed in the principal chamber of the palace, and surrounded by candles,' and 'encircled by a numerous retinue of attendants, who watched around it incessantly night and day'; the second son, Constantius, himself headed the procession, 'which was preceded by detachments of soldiers in military array, and followed by vast multitudes, the body itself being surrounded by companies of spearmen and heavy armed infantry. On the arrival of the procession at the church dedicated to the apostles of our Saviour, the coffin was there entombed. . . . As soon as Constantius had withdrawn himself with the military train, the ministers of God came forward, with the multitude and the whole congregation of the faithful, and performed the rites of Divine worship with . . . prayers for his soul. . . . His statue was erected . . . in every province.'

The funeral and entombment of Basil, Bishop of Cæsarea, as described by Gregory of Nazianzus, is likewise instructive (*Paneg. on Basil*, 80):

> 'The saint was being carried out, lifted high by the hands of holy men, and every one was eager to seize the hem of his garment, or to touch his shadow or the bier which bore his holy remains. . . . The psalmody was overpowered by the lamentations . . . the body was consigned to the tomb of his fathers . . . and now he is in heaven, where, if I mistake not, he is offering sacrifices for us and praying for the people.'

Panegyrics on deceased distinguished personages, and over the remains of relatives and friends, became common (Euseb. *Vita Const.*; Ambrose on Valentinian and on Theodosius; Greg. Naz. on his brother, sister, and father [*Orat.* vii. viii. and xviii.] and on Athanasius; Greg. Nys. on Meletius;

August. *Conf.* ix. 12; Jerome, *Epp.* lxi. etc.). The anniversaries of famous martyrs were also occasions for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches for re-burial in the crypts, where shrines were erected and services held. The Synod of Gangra (*c.* 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the services performed there, and the commemoration of them, let him be anathema' (can. 20). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship' (can. ix.). Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyries and churches. Pelagius II. (A.D. 578) protested against the growing custom, but with slight effect. Burial around churches, or in porches, vestibules, and cloisters, soon became universal. Gregory the Great (*c.* 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we do not forbid, but you must not ask it' (bk. ix. *Ep.* iii.). Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

6. A summary of the theme in hand may be given under the following heads. (1) The simple funeral rites and burial customs of the early days gradually gave way to more and more elaborate ceremonies and practices. (2) These developments were different in different lands, but they all tended in the same general direction. (3) Two universal influences were at work to produce these manifold changes: one arising out of the persistent faith and life of the Church, the other pressing in from the universal pagan environment. (4) Funeral rites were extended so as to include the elaborate ceremonials which have been described above, most of which were drawn more or less unconsciously from the surrounding pagan practices, although the Christians never lost the primitive faith and feeling which distinguished their early funeral customs. (5) The manner and forms of entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

EDWIN KNOX MITCHELL.

DEATH AND DISPOSAL OF THE DEAD (Egyptian).

—Of no other country in the world have the burial customs always attracted so much attention as have those of ancient Egypt. The artificial preservation of the body, the elaborate care with which it was provided with covering and ornament, the monumental nature of the tombs which were built or excavated to contain it, struck the earliest foreign observers with astonishment, and are still the theme of wonder and admiration in our own day. Moreover, the dry and microbe-free climate of Egypt, in which nothing is destroyed by the disintegrating action of the atmosphere or the attacks of bacilli, has helped the artificial aids of mummification and carefully-sealed burial to preserve the human body and its appurtenances intact just as they were placed in the tomb. Even if removed from its wrappings, it is but rarely that a mummy is affected by any agency except damp; while the textile fabrics, the mats and haskets, and even the loaves of bread sometimes placed with it, are, if delicate and brittle and without elasticity, to all outward appearance the same now as when they were buried with the mummy. It is chiefly to their preservative methods of burial that we owe our present remarkable knowledge of the ancient Egyptians and their manners and customs, whereas in the case of Greece and Rome we have become acquainted with the course of daily life, and the objects of daily use, mainly through the medium of literary descriptions or the representations on painted vases. In Egypt we have the actual objects themselves, from the precious ornaments of gods and kings to the humblest bead-necklaces or rude idols of the *fellahin*; we have chariots perfectly preserved, splendid furniture and marvels of cabinet-making which once adorned palaces, simple wooden benches, and the shoes, mallets, and baskets of the common peasants. The majority have been preserved in the tombs. Naturally we possess actual objects of daily use from Greece and Rome also, but they are rare, and tell us little compared with the vast corpus of knowledge which we have derived from the sepulchres of Egypt. And one thing we have from Egypt which is the most wonderful of all, and this we can never have from Greece and Rome. No man has seen the actual face and form of Themistocles, Pericles, or Cimon, of Solon, or of Socrates, of Alexander, Hannibal, or Augustus; yet every man now who wishes may gaze upon the actual bodies of kings whose ancient names were told by the priests to the Father of History, whose deeds as they were written on temple-walls were recounted to the nephew of Augustus, and whose statues were venerated as those of deities by the Emperor Hadrian. Sesostris, Ramses, and Osymandyas, who were ancient names to Hellenes and Romans, and were actually contemporaries of Greek kings who were the heroes and demi-gods of the classical period, lie now in the glass cases of the Cairo Museum. Mycerinus, of whom Herodotus (ii. 129–134) tells a merry tale, is No. 6006 of our national collection in the British Museum. Their preservation to the present day is due to the peculiar burial customs of their nation, and was intended.

The chief peculiarity of the Egyptian burial customs is the artificial preservation of the body. No doubt in later times a theory of resurrection was adopted, according to which, after a space of three thousand years, the several parts of a man—his *ikhu*, or spark of intelligence which had rejoined the gods, his *ba*, or bird-like soul which fluttered around the tomb, his *khaibit*, or shadow, and the *ka*, or double of him, which was born with him and accompanied him on earth during life and in the tomb during death—rejoined his *sahu*, or noble and venerable mummy, which had lain so long in solitary majesty in the tomb, and then the whole man rose again from the dead. But it is not clear that this actual man was to live again on earth as he had lived before. He was to live with the gods rather. According to another theory, the *sahu* was not the actual mummy, but a sort of spiritual body which germinated in the *khat*, or corruptible body, and sprang up out of it just as the wheat springs up out of the seed: so the dead Osiris gave birth to a new living Osiris. It was in this *sahu* that the concomitant parts of the man were re-united. A symbol of this belief is found in many tombs; it is a figure of Osiris on his bier, made of earth, in which seed was sown just

before the burial; as we find it now, we see the wheat which grew up and withered in the darkness. The two different ways of regarding the *sahu* probably arose from two different ideas of the actual dead body. In one aspect it was a mere dead thing, not different from a dead fish—the *khat* of a man like the *khat* of a fish—and was expressed in the hieroglyphic writing by the figure of a dead fish. But in another it was a fearful and wonderful thing—the *sahu*, dwelling in majestic loneliness and silence in the tomb, and endued with marvellous magical powers, which naturally included the power of summoning back to it at will the departed principles of life and intelligence, the shadow, the heart, and the name, ever regarded with awe by primitive races. So the *sahu* is represented as the human mummy lying on its bier. The two ideas were combined in later times by regarding the *sahu* as a spiritual body (which originally it was not) which sprang from the *khat*. The *khat* was simply the profane name for a dead body of any kind. In the oldest religion, when the actual human mummy was alluded to, it was called the *sahu*, and one prayed to the gods to allow the *ba* to re-enter the *sahu* and re-vivify it, so that it could feed upon the offerings which its descendants brought to it. It was probably out of this idea that the conception of a resurrection, whether of a spiritual *sahu* or of the actual man, grew. The real origin of mummification is to be found in a simple desire to preserve the dead man to his family. In the dry soil of Egypt bodies were found by experience not to decay utterly when they were buried in shallow graves, and the simple expedient of smoking or scorching was no doubt resorted to in order to stave off putrefaction even more. How far smoking is responsible for the crouched and drawn-up position of the oldest Egyptian bodies is doubtful. Real mummification was not known to the oldest Egyptians, but that it was introduced before the close of the Neolithic period is shown by the hieratic use, even in the very latest time, of a flint knife only, in order to make the incision through which the entrails were removed. Herodotus records for us this use of 'an Ethiopian stone' (see below). The ancient and holy stone-knife alone could be used for this act; the new-fangled metals were profane. Of this desire to preserve the dead as long as possible to 'those on earth who love life and hate death,' in the words of the Egyptian funeral-prayer, we may find a proof in the custom of keeping the mummy above ground for a specified period, in its own home, before it was finally committed to the tomb (see below, p. 462).

Wiedemann regards this custom, which we shall discuss further later on, as a survival of what he calls 'secondary' interment. In the most ancient days he considers that the primitive Egyptians buried the body first in ground near or under the house till it had partially decayed, and then transferred it to its final resting-place in the desert necropolis. In this way he explains, too, the fact of the disturbed condition of the bones in most of the Neolithic graves, which Flinders Petrie explains as due to a ceremonial cannibalism. Wiedemann thinks that the body was intentionally cut up after putrefaction had set in during the first burial in order to clean the bones before the second and final burial. He finds confirmation of this view in many texts of the 'Book of the Dead,' in which the cutting off of the limbs of the dead is referred to, while the deceased prays that his limbs may be restored to him, and that he may be whole. There is also the legend of the cutting up of the body of Osiris. That these passages are rightly interpreted as referring to a primitive custom of cutting up the body is possible. At Deshasha, Flinders Petrie found definite proof of dismemberment in some cases. But there is little proof that the reason for the practice is that advanced by Wiedemann. And, as a matter of fact, dismemberment was not so usual as has been thought, for much of the disturbance of the remains in pre-historic graves is no doubt due merely to predatory beasts and to wady-torrents (*séls*).

The primitive custom of burial in a crouched-up posture gradually gave place, during the early dynastic period, to that of burial at full length, with which real mummification is associated. At Mêdûm, Flinders Petrie found both customs existing side by side in the graves of the age of the IIIrd–IVth Dynasty. It was probably not till the time of the Vth Dynasty, when Egyptian customs became crystallized in the form which they more or less retained ever afterwards, that the old custom of the Neolithic people finally died out and the burial customs of the Egyptians took the final shape which we know so well. At least from the time of the IIIrd Dynasty, prayers were made for the dead in the ancient form: 'May Anubis [the protector of the tomb at Abydos] or Osiris [the Busirite god of the dead] grant a royal offering: may he give thousands of flesh, fowl, and everything good and pure on which the god there liveth, to the *ka* of N., justified and venerated' (see below). And the piety of those 'on earth' erected a gravestone 'in order to make his name to live on earth.' This was as far as the Egyptians ever went in the direction of ancestor-worship. As has been shown in the art. ANCESTOR-WORSHIP (Egyptian), the belief that the dead man was absorbed in the personality of the great god of the dead, Osiris—a belief universal throughout Egypt by the end of the 'Old Kingdom'—prevented any worship of him under his own name: he was venerated as being himself Osiris, not as an ancestor. Otherwise a developed ancestor-worship would, no doubt, soon have grown up; for family life was close and affectionate in Egypt, far more so than among the surrounding nations; and the names and figures of parents, children, and other relatives were constantly commemorated on the gravestones of the dead. 'Those living on earth who loved life and hated death' (*ankhiu tep ta mer ankh mestjetj mut*) were always full of sympathy with and affection for those who had gone down before them into the mysterious tomb-world, and to this is due the whole elaborate paraphernalia of Egyptian burial. The smoked body of the earliest period was provided with a mat on which to lie peacefully, with jars of food to live upon, and with flint weapons to use if it could. For how did one know what happened to the venerated *sahu* in his tomb? Would not *ka* and *ba* return to it, bringing back beloved life? That he who had been alive was now absolutely and irrevocably dead was as inconceivable to the childlike mind of the oldest Egyptian as it was to that of any other primitive man. And among this most conservative of all races, the primitive idea merely became more elaborate and overgrown with ritual as civilization progressed.

A better means was devised of preserving the body in order that *ka*, *ba*, and *ikhu* might come back to it and give it life and intelligence to live upon the offerings of its pious friends on earth, to go whithersoever it would, to take any form it pleased, to exercise its undoubtedly magical powers (was not death itself magic?) for good. The easily putrefying entrails and brain were removed, and the body, reduced to skin, flesh, and bone only, was salted in natron, filled with spices, and carefully bound up, in order that decay might never come to it. The removed portions were not cast aside, but were also mummified, and stored in four special jars, which we call 'canopic jars,' each under the protection of a certain demon, so that the dead man could have them at his need. And the shallow grave on the sand became for the well-to-do Egyptian a great sealed tomb in the rock, in which he could rest with his body, safe from the prowling jackal or hyæna, and with his protective amulets and funerary furniture, often made of precious materials, guarded from the impious hands of human robbers. For in Egypt,

as elsewhere, lust of gold drove men to theft; and even in Egypt, the most pious of lands, many could at all times be found who would brave the anger of gods, priests, and the outraged dead themselves to obtain riches. Many tombs were violated within a century of the burial of their owners, in spite of all the precautions taken in order to hide them. That of Thothmes IV. was already violated during the troubles of the reign of the heretic Ikhnaten, and the royal burial was 'restored' in the reign of Horemheb. The knowledge shown of the precise position of the carefully-hidden tombs makes it evident that the thieves, no doubt, came from among the ranks of the priests and guardians of the necropolises themselves; and in the reign of Ramses IX. the scandal had become so great that a royal inquisition into the robberies of tombs was held, which resulted in the conviction and punishment of many offenders. But tomb-robbery went on gaily; the prizes were worth having; and fifty years later all the royal mummies at Thebes had to be taken out of their original tombs and hidden in remote hiding-places, where they remained till discovered in our own time, and placed in the Museum of Cairo. The primitive Egyptian, however, had no fear of tomb-robbers, or of any disturbance beyond that of a storm-flood which might descend from the hills and lay his bones bare to the winds, or of the prowling jackal. This last was a very real danger, and a naive way of forestalling it was devised by regarding the magic-working beast who lived among the tombs as their protector as well as their ravager, and praying to him to take care of the resting-places of the dead and to allow the offerings of the living to remain in peace, and himself to give funerary offerings of the very best ('a kingly offering'), of thousands of flesh, fowl, and everything good and pure on which the god there (the dead man) lives, to the *ka* of the dead man. This is the origin of the well-known *di-ḥetepsuten Anup* formula, which we have already quoted (p. 459[b])—'May Anubis (the jackal) give a royal offering,' etc., which was inscribed on every Egyptian gravestone, till Osiris or another god took the place of Anubis, in which case, however, the formula remained the same. Another theory has explained the occurrence of the word *suten*, 'king,' in this formula as referring to an actual intervention of the earthly reigning king on behalf of the dead man. It is known that the kings often provided magnificent burials for favourite courtiers or nobles; but whether in the early period the monarch was always expected at least to make offerings vicariously at the grave of every subject is very doubtful.

The process by which Anubis lapsed into the position of a mere satellite of Osiris, whose worship as god of the dead spread from Busiris in the Delta over the whole of Egypt, has already been traced (see ANCESTOR-WORSHIP [Egyptian], *B*). The inscriptions and decorations of the tombs, especially those of the royal tombs at Thebes, exhibit to us a temporary degeneration of Osiris himself, at any rate at Thebes. During the Theban period Theban ideas naturally coloured the beliefs of the majority of Egyptians, and Osiris had become largely identified with Amen-Rā. The ideas of Busiris, Saḳḳâra, and Abydos as to Osiris-Sekri-Khentamenti had all become blended with the Heliopolitan idea of the dead sun-god who, after his midday glory as Rā, set as Tum, and during the night sailed through the tomb-world beneath the earth in his barque, attended by the souls of the blessed; and to this was added the identification of the ram-headed Amen of Thebes with Rā. So that we find the dead Amen-Rā-Osiris, blue in colour like the dead Osiris but ram-headed like Amen and called by the mystic name of Auf, 'his limbs,' passing, attended by Isis and Nephthys, the companions of Osiris at Busiris, through the lower world. The Theban priests developed a set of the ancient systems of spells and incantations designed to protect the dead man in the under world and describing his proceedings there (which the Egyptians called 'The Book of Coming Forth from the Day,' and we have named 'The Book of the Dead') into two 'books,' entirely separate from the ordinary 'Heliopolitan' and other recensions of the Book of the Dead. These they called 'The Book of the Gates,' and 'The Book of That-which-is-in-the-Underworld,' which are written and pictured on the walls of the royal tombs at Thebes. There is no doubt that the Egyptians pictured the *Duat*, or Underworld, as actually beneath the earth. This arose from the fact of the tomb being excavated in the earth. The houses of the dead in the necropolis, the *Kherti-neter*, or 'divine under-place,' as the Egyptians called it, formed in their ideas a subterranean world of their own, in which the *sahus* resided in awful majesty each in his tomb, while the ghosts could pass from tomb to tomb through the mazes of the under world. Later, the boat of the sun, in which the god of light crossed the heavens by day, was thought to pass through this dead world between his setting and his rising, accompanied by the souls of the righteous. In this under-Egypt, over which Osiris presided as the mortal king presided over the living Egypt above, and to which a dead sun gave illumination as the living sun gave light to living Egypt, the soul was supposed by some to live very much as the man had lived on earth: there were rivers and lakes to be navigated and fields to be tilled there, and the dead might be called upon to do work as he had worked on earth. But surely rest was the guerdon of a man who had lived a laborious life, so that with the dead were buried boxes full of little Osiris figures called *ushabtiu*, or 'answerers,' because, as the sixth chapter of the 'Book of the Dead' inscribed upon many[1] of them said, 'If one calleth Osiris at any time to do any labours which are to be done there in the under world, to plough the fields, to fill the canals with water, to carry sand from east to west, behold! say, "Here am I when ye call!"' They answered for the dead man. There is little doubt that these *ushabtiu* were the descendants of very real 'answerers' in the shape of dead slaves, who in very ancient times were strangled and buried with their lords in order to serve them in the other world as they had done in this. Growing humanity and culture substituted wooden and stone slaves for real ones; but it may be that the custom of giving real 'answerers' was continued in the case of the kings till quite a late date. It may be even that the dead bodies found lying by the wooden boat in the tomb of Amenḥetep II. (1450 B.C.) were murdered slaves. In the earlier days of Mentuhetep II. (2200 B.C.?) priestesses of Hathor who were members of his harem seem to have been killed and buried in the precincts of his tomb-temple at Deir el-Baḥarî in order to accompany him to the next world. And naturally enough we find the bodies of slaves in the tombs of the Ist Dynasty kings at Abydos.

Although in later times the Egyptians were certainly more humane than either the Greeks or the Assyrians, it would be a mistake to suppose that they had always been so. In earlier days they had been, like all semi-civilized races, more or less children, and a child has no idea of the sanctity of life. Certainly the Egyptians had originally no conception of the sanctity of *human* life as distinct from other life. The slaves followed their masters

[1] Some have merely the inscription 'Illuminate the Osiris N!'

to the tombs as the food did, or the caskets, or the jewellery.

In the tombs, if they are tombs, of the kings of the Ist Dynasty at Abydos, we find an immense *bandobast* for the journey to the next world. There were stacks of great vases of wine, corn, and other food, covered up with masses of fat to preserve the contents, and corked with a pottery stopper, which was protected by a conical clay sealing, stamped with the impress of the royal cylinder-seal. There were bins of corn, joints of oxen, pottery dishes, copper pans, and other things which might be useful for the ghostly cuisine of the tomb. There were numberless small objects, used, no doubt, by the dead monarch during life, which he would be pleased to see again in the next world—carved ivory boxes, little slabs for grinding eye-paint, golden buttons, model tools, model vases with gold tops, ivory and pottery figurines, and other *objets d'art*, the golden royal seal of judgment of king Den in its ivory casket, and so forth. There were memorials of the royal victories in peace and war, little ivory plaques with inscriptions commemorating the founding of new buildings, the institution of new religious festivals in honour of the gods, the bringing of the captives of the royal bow and spear to the palace, and the discomfiture of the peoples of the North-land. All these things, which have done so much to re-constitute for us the history of the earliest period of the Egyptian monarchy, were placed under the care of the dead slaves whose bodies were buried round the tomb-chamber of their royal master at Abydos.

Passing over a space of two thousand years, we see the burial of Iuaa and Tuyu, father and mother of Queen Tii, the consort of Amenhetep III., at Thebes. Here we have the same *bandobast* for the next world: beautifully carved chairs and beds, boxes for wigs and garments, even a chariot, besides all the regular appurtenances of the dead as now prescribed by religion. But the place of the dead slaves is taken by the stone and wooden *ushabtiu*. All this funerary pomp and circumstance grew up from the simple burial of the Neolithic Egyptian with his mat, his pots, and his flints. What kind of religious services were celebrated at the grave in the earliest period we do not know, but it is certain that they contained the germs of the later ritual as it was carried out in Pharaonic times. The descriptions given by Herodotus and Diodorus of the different processes of mummification and the funeral ceremonies are well known. They were eye-witnesses of what they describe; and their descriptions, with exceptions in the case of Diodorus, tally entirely with what we know from the monuments and inscriptions. The account of Herodotus (ii. 85 ff.) is as follows:

'When in a house a man of any importance dies, all the women in that house besmear their heads and faces with mud, and then, leaving the body in the house, they wander about the city, and beat themselves, with their clothes girt up and their breasts exposed; and all their relations accompany them. And on their part the men beat themselves, being girt up in like manner. After they have done this, they carry out the body to be embalmed. There are those who are appointed for this purpose and practise this art: these, when the body has been brought to them, show to the bearers wooden models of dead men made exactly like by painting. And (they show) the finest style (of embalming), which they say is His [*i.e.* Osiris'] whose name I do not think it right to mention in connexion with this matter. And they show the second style, which is inferior and cheaper; and the third, which is cheapest. Having explained them all, they learn from them in what way they wish the body to be prepared; then the relations, when they have agreed upon the price, depart; and the embalmers remaining in the workshops thus proceed to embalm in the finest manner. First they draw out the brain through the nostrils with an iron hook, taking part of it out in this manner, the rest by pouring in medicaments. Then with a sharp Ethiopian stone they make an incision in the flank, through which they take out all the bowels; and, having cleansed the interior and rinsed it with palm-wine, they next sprinkle it with pounded incense. Then, having filled the belly with pure myrrh pounded, and cassia, and other perfumes, with the exception of frankincense, they sew it up again; and, when they have done this, they pickle it in natron, entirely covering it for seventy days: longer than this it is not allowable to pickle it. When the seventy days are expired, they wash the corpse, and wrap the whole body in bandages of flax cloth, smearing it with gum, which the Egyptians ordinarily use instead of glue. Then the relations, having taken the body back again, make a wooden case in the shape of a man, and, when it is made, they enclose the body in it; and thus, having fastened it up, they store it in a sepulchral chamber, setting it upright against the wall. Thus they embalm bodies in the finest manner.

Those who desire the second method, in order to avoid great expense, they prepare in the following way: when they have charged their syringes with oil made from cedar, they fill the abdomen of the corpse with it without making any incision or taking out the bowels, injecting it at the fundament; and, having prevented the injection from escaping, they pickle the body in natron for the prescribed number of days, and on the last day they let out from the abdomen the oil of cedar which they had before injected; and it has such power that it brings away the intestines and vitals in a state of dissolution, while the natron dissolves the flesh, and nothing of the body is left but the skin and bones. When they have done this, they return the body without any further operation.

The third method of mummification is this, which is used only for the poorer people: having thoroughly rinsed the abdomen with a purge (*συρμαία*), they pickle it in natron for seventy days, and then deliver it to be carried away.'

Diodorus gives much the same account; he adds that the first method cost one talent of silver (about £150), the second twenty minæ (about £60), the third much less. He gives additional details about the mourning, saying that during the interval between the death and the burial the relatives abstained from the baths and from wine, ate the simplest food, and wore no fine clothes; and also with regard to the embalmers themselves, adding the picturesque detail of the stoning and flight of the *paraschistes*, which is of considerable religious interest.

He says (i. 91) that, after the 'scribe' had made the mark on the body indicating the place where the incision was to be made by the *paraschistes*, or 'ripper,' the latter performed his duty with the 'Ethiopian stone' (as Herodotus says), and then immediately fled away, pursued by a volley of stones and imprecations from the other embalmers, for the Egyptians held in abomination any person who wounded or committed any act of violence on the human body. We can see that this reason was not quite the correct one. The ceremonial stoning and fleeing away of the *paraschistes* was, like his ceremonial use of the 'Ethiopian stone' for the performance of his duty, an act of religious significance: the necessary cutting of the holy body of the Osiris had from the first been regarded as an impious act though one necessary for the preservation of that body; therefore a religious act of disapprobation and punishment had to be performed, though doubtless no one but a fanatic would really endeavour to hurt the agent of necessary impiety. That the *paraschistes* was universally regarded as unclean, however, is certain; whether the actual embalmers, or *choachytæ*, shared this reputation to any extent or not is uncertain. Diodorus says that they consorted freely with the priests, to whose lower orders they in fact belonged, and were allowed to enter the sanctuaries. Diodorus also mentions the practice, to which we have already referred, of keeping the mummy in the house after death, with considerable detail, even going so far as to say that the richer Egyptians kept their dead in magnificent chambers, and enjoyed the sight of those who had been dead for several generations. There is little doubt that this is rather a misunderstanding than an exaggeration: the magnificent chambers can hardly be other than the real tombs, in which the Egyptian could always, if he were so disposed, see the sarcophagi which contained the bodies of his ancestors. In all probability the tombs of private persons were not entirely covered up and hidden away, as those of the kings were, for many years after their deaths.

We have one instance in the tomb of Aahmes, son of Abana, the admiral of king Aahmes in the war against the Hyksos, at el-Kab. In it we see a portrait of his grandson, the well-known Paheri, and an inscription which says: 'Lo! here is the son of his daughter, the director of the works of this tomb as making to live the name of the father of his mother, the scribe of the reckonings of Amen, Paheri, deceased.' From this we know that he embellished his grandfather's tomb as well as constructed his own, and we see that an inscription about him could be inserted on the walls of the earlier tomb after *his* death even, which shows that at least the hall of offerings in a tomb usually remained accessible to the relatives of the deceased for generations after his death. Thus, indeed,

may the Egyptians well have felt satisfaction in seeing the coffins which contained their dead, and have regarded the dead, to a certain extent, as contemporaries, as Diodorus says they did, though we know that they never looked upon the actual bodies themselves, as he seems to think. Yet that the dead were actually kept in the houses for some time before their burial seems certain, and Lucian gives his personal testimony to the fact: ταριχεύει δὲ ὁ Αἰγύπτιος· οὗτος μέντοι—λέγω δ' ἰδών—ξηράνας τὸν νεκρὸν ξύνδειπνον καὶ ξυμπότην ἐποιήσατο (*de Luctu*, § 21). This may have been a very ancient custom,—we may compare the way in which barbarian tribes still preserve the bodies of their dead chiefs or the dried heads of their enemies, *e.g.* the Dayaks of Borneo,—but we have no illustration of it on the Egyptian monuments, and we cannot doubt that Diodorus' account is due to a misunderstanding. The 'storehouse' in which Herodotus says the body was kept (θησαυρίζουσι ἐν οἰκήματι θηκαίῳ, ἱστάντες ὀρθὸν πρὸς τοῖχον [see above]) may either be a place for the temporary storage of the mummy, or the actual tomb. The detail as to the position of the coffin might seem to point to the former alternative, as the proper thing for the coffin was to be placed horizontally on the ground; but in later times it would seem that the coffin was often actually placed on end in the tomb, probably to economize space. Diodorus gives the same detail about placing the coffin on end, but says that this was done in a chamber which those who had not private tombs built on to their houses, in order to contain the mummy. Now it seems very probable that something of this sort was done by poorer Egyptians. Children are often found buried under the floors of the ancient houses, and during his recent examinations among the brick ruins of the ancient Thebes burnt by the generals of Esarhaddon in 668 B.C., Legrain found a burial chamber containing a mummy with *ushabtiu* of the 7th century B.C. This was undoubtedly a chamber built on to a house. Perhaps this may be the explanation of Herodotus' οἴκημα θηκαῖον, and of Diodorus' apparent statement as to the retention of the body for a long period above ground. Ordinarily, however, the body of a well-to-do person would be buried in a tomb when the period of mourning was over and the tomb ready, till which time it was, no doubt, kept in a special chamber in the house. The time between the death and the actual burial is given differently by different authorities as from three to ten months. According to Gn 50[3], the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Diodorus (i. 93) gives some details which are not borne out by the monuments, and are evidently due to misunderstanding. His description of the exaggerated mourning at the death of a king is probably correct, but the details about the funeral oration pronounced over the body by the priests, and the liberty allowed to the people to express their disapproval of a bad king and so prevent his proper burial, have no actual authority to back them up, and seem highly improbable. Yet we have a curious sentence in the inscription describing the battle of Momemphis, in which Amasis says that he gave Apries proper burial, 'in order to establish him as a king possessing virtue, for His Majesty decreed that the hatred of the gods should be removed from him'—which seems to tally somewhat with Diodorus' statement. Evidently a king not considered to be *neb menkh*, 'possessing virtue,' could be debarred proper burial as an Osirian. But the judge would doubtless be a successful rival or usurper, not the common people. No doubt all usurpers had not always been so politic as Amasis was, and we know that the bodies of rival kings were often torn from their tombs and cast to the winds by their enemies, whether usurpers or 'usurpees': Amenmeses, of the XIXth Dynasty, is an instance in point.

A funerary ceremony of very peculiar character which was actually carried out in the case of the kings is not mentioned by Diodorus. This is the remarkable 'Festival of the End' (literally, 'of the Tail'), or *Heb-sed*. It would seem that in primitive times, as has been the case among many semi-savage peoples, the Egyptian king was not allowed to live beyond a certain term. He was then killed, and another took his place upon the throne, only to be killed himself eventually unless he died or was killed before his term had expired. The term was one of thirty years; at the end of his thirty years' reign the monarch was solemnly murdered and buried with all pomp and ceremony. But, as in the case of the human *ushabtiu* mentioned above, the growing humanity of later days, and doubtless the growing reluctance of the kings to let themselves be slaughtered, brought about a compromise. The king was no longer killed, but all the paraphernalia of the ceremony of his 'end' were preserved: he himself celebrated his own funeral ceremony, and performed mystic ceremonies before his own image as Osiris beneath the standard of the funerary wolf-god of Siut, Upuaut (sometimes called *Sedi*, the god 'with the tail'). At the same time his eldest son or other heir-apparent was usually associated with him on the throne, so that a new king appeared in fact as well as in theory. We have illustrations of the 'Festival of the End' from the time of king Den, or Udimu, of the Ist Dynasty; well-known later representations of it are taken from the temple of Amenhetep III. at Sulb in Nubia and the 'Festival Hall' of Osorkon II. at Bubastis. In later times the festival lost all significance, and Ramses II. and other kings celebrated it at far shorter intervals than thirty years. In the old days, even so late as the time of the Middle Kingdom, so far did the pretence of killing and burying the old king go, that very probably an actual *Heb-sed* tomb was made for his supposed dead body, a statue which was ferried over the river and carried in procession to the *sed*-temple and tomb. It may well be that the funerary temple of king Menthuhetep Nebhetep-Rā, of the XIth Dynasty, discovered by Naville and the present writer at Deir el-Baḥarî in 1903, is in reality a *ḥeb-sed* temple: the great hypogæum beneath its western hall, which they called a '*ka*-sanctuary' or a 'cenotaph,' may then, if it is not the actual tomb, be the *ḥeb-sed* tomb of the king, and the neighbouring tomb called the *Bab-el-Hosân* may be the *ḥeb-sed* tomb of another king of the dynasty.

Connected with Diodorus' statement as to the popular judgment of the virtue of a deceased king is his remarkable description of the carrying of the body of every man to a certain lake, where it was judged by forty judges, before whom any one could make accusations against the dead man: if these were substantiated, he was adjudged unworthy of proper burial; if not, his traducers were heavily mulcted, and his body was placed in a *baris*, or boat, and ferried across the lake to the place of burial. There is no doubt whatever that nothing of this kind actually took place, and that Diodorus or his informants were misled into thinking that the judgment of the dead man by Osiris and his forty-two assessors happened upon earth instead of in the next world: the lake and the boat are equally taken from the pictures of the 'Book of the Dead.' A full description of what is known to us from Egyptian sources as to the real proceedings at the funeral of an Egyptian of high rank will be found in Wallis Budge's book *The Mummy*, p. 153 ff. This account is based largely upon the evidence of the well-known 'Papyrus of Ani,' in the British Museum.

In accordance with Egyptian conservatism in religious matters, the bier and the various chests containing canopic jars, etc., which were borne to the tomb, were not till a comparatively late period placed upon wheels. The ancient sledge-runners of the days before the invention of the wheel were still used when the funerary rites were elaborated, and, when, at a later period, wheeled carriages were introduced for the funerary procession, the old sledge-runners were still preserved, and the wheels were placed beneath them. Oxen were used to drag the carriages to the tomb. The chief priestly participants in the procession and in the rites performed at the tomb were the *kher-ḥeb*, or 'cantor,' as the word is sometimes translated, the *sem* or *setem*, and the *an-mut-f*. The *kher-ḥeb* seems to have acted as a sort of general director of the funeral; he was often a relative of the deceased.

He read the appointed prayers and spells. The function of the *an-mut-f* is not clear. He seems to have represented the god Osiris, and walked in the procession, bearing the crook and flail, the emblems of the god. The *sem* had very peculiar duties. On the night before final burial, after the procession, he proceeded to the tomb, and there laid himself down to sleep, covered with the mystic cow-skin, before the upright coffin containing the mummy. During his sleep he was supposed to 'see all the transformations of the god,' *i.e.* the dead man, in the next world. In the morning three persons preceded the procession and solemnly aroused the *sem*, who then took part with the *kher-ḥeb* in a sort of antiphonal service, in which the two took the parts of Horus and Isis, that of Osiris probably being taken by the *an-mut-f*. Finally the *sem* donned the skin of a leopard, and performed the very important ceremony of the 'Opening of the Mouth and Eyes,' in order that the dead man might be able to see and eat the offerings brought to him. The 'opening' was performed by touching the mouth and eyes of the mummy with a model adze or chisel of antique form. The ordinary ceremonies of offering at the grave were performed by the *ḥen-ka*, or 'servant of the ghost,' in the case of a private person a near relative, in that of the king a regularly appointed priest. The funerary chapels of the kings had broad lands assigned to them for their maintenance, and in the time of the XIXth Dynasty developed into huge temples, of which the Ramesseum and Medinet Habu at Thebes are examples. These, like the royal tombs, were decorated with funerary subjects taken from the Theban 'Books of the Under World,' already mentioned; but in the royal temples scenes of the ordinary life of the monarch were also introduced. The private tombs are almost exclusively decorated with such scenes, as they had been in earlier days.

An interesting circumstance in connexion with the funerary chapels and tombs may be mentioned here. Since Osiris had become, in succession to Anubis, pre-eminently the god of Abydos, the necropolis of that place became, so to speak, the metropolis of the under world, to which all ghosts who were not its rightful citizens would come from afar to pay their court to their ruler. So the man of substance would have a monumental tablet put up to himself at Abydos as a sort of *pied-à-terre*, even if he could not actually be buried there; while for the king, who, for reasons chiefly connected with local patriotism, was buried near the city of his earthly abode, a second tomb would be erected, a stately mansion in the city of Osiris, in which his ghost could reside when it came to Abydos. We know that both Senusret III. and Aahmes I. had second tombs, which they never occupied, made for them at Abydos; queen Teta-shera, grandmother of Aahmes, had an imitation pyramid made for her there by her grandson (see ANCESTOR-WORSHIP [Egyptian], *B*); and it is by no means improbable that the so-called royal 'tombs' of the kings of the Ist Dynasty, the contents of which have already been described, were in reality cenotaphs also, the monarchs being buried elsewhere. And Seti I. and Ramses II. had funerary chapels at Abydos, which, as at Thebes, are large temples.

From this sketch it will be seen that, in spite of the conservatism of the Egyptians, especially in such matters as these, considerable development and alteration took place in their burial customs and cult of the dead during the course of centuries. A difference is noticeable between the appurtenances of the mummy under the Old and Middle Kingdoms and under the New Kingdom. In the earlier period *ushabtiu* of the conventional type were rare, one wooden models of boats and boatmen, butchers and bakers at work, field-labourers, soldiers, women carrying baskets, and other figures of the same kind, which were all *ushabtiu*, were *de rigueur*. Under the New Kingdom these all disappear, with the exception of an occasional boat, and their place is taken by the boxes of conventional *ushabtiu* in the form of a mummy holding two hoes for agricultural work in the next world, and by a much greater number of amulets than had been usual before. Chief among these were the 'pectoral' and the 'heart-scarab,' often combined in one, and inscribed with a certain chapter of the 'Book of the Dead.' The ordinary small scarab is, of course, constantly found, but was quite as much an amulet of the living as of the dead. As a matter of fact it is commoner as an amulet of the dead under the Middle Kingdom than under the New Kingdom. The names of dead persons are constantly commemorated on scarabs of the Middle Kingdom, very rarely on those of the later period, except during the Saïte archaistic revival. It must be remembered that, although the idea of the design or inscription on the base of a scarab was originally derived from the inscription of a seal, and although actual scarabs were often used as seals, yet the scarab itself was always an amulet, typifying 'coming into being' or 're-birth,' expressing the hope that the 'members' of a man would ultimately re-unite in a new life.

From the time of the Theban domination onwards, papyri containing chapters of the 'Book of the Dead' were always buried with the mummy, so that he could have with him his guide to the next world and its dangers. In earlier times this was not done; only in the case of kings were the older series of spells, out of which 'The Book of Coming Forth from the Day' developed, inscribed upon the walls of their tombs. These are known to us as the 'Pyramid Texts,' and they are a most interesting monument of the archaic stage of the Egyptian language. Later such kings, as we have seen, had the spells of 'The Book of the Gates' and 'The Book of That-which-is-in-the-Underworld' similarly painted on the walls of their tombs. The style of mummification and of the coffin varied at different periods: the great rectangular coffins and sarcophagi of the early period are very different from the gaily painted cartonnage coverings and coffins in the human shape which were usual in later days. Later still a casket-like form was again preferred, and in the Roman period painted portraits of the dead, either on flat panels or modelled in plaster in the round, were inserted in the coffins. The *ushabtiu*, which from the XIXth to the XXIInd Dynasty often represented the deceased in his habit as he lived, not as a mummy, in later days reverted to the mummy-form, till in early Ptolemaic days their use was practically abandoned. One of the latest known (now in the British Museum) is of the Roman period: it is of faience, but very rude in style, and bears in Greek letters the simple inscription Σωτὴρ ναύτης — 'Soter, a sailor.' By this time the Egyptian mummies and funerary ceremonies had become the theme of the half-derisive wonder of the rest of the world, and indeed we need hardly be surprised at the derision, for the whole spirit and practice of the ancient rites had degenerated utterly and they became mere ridiculous exhibitions, while the ideas which they were supposed to express became the sources of religious charlatanism and more or less humbugging 'philosophies.' So Egypt 'expired, a driveller and a show.'

DEATH AND DISPOSAL OF THE DEAD

(Europe, Pre-historic).—1. Palæolithic period.—Owing to the negative evidence of archæological researches, there are no data with which to combat the supposition that during the earlier stages of the evolution of humanity little or no attention was paid to the disposal of the dead, the deceased members of a family or community being simply abandoned by the way, like those of the lower animals. Nor is it known in what precise phase of social culture the custom of burial became recognized as a sacred duty of the survivors, for it is still a debatable problem among archæologists whether the reindeer hunters of the Palæolithic period, who frequented the caves and rock-shelters of the Dordogne and other parts of Western Europe, were in the habit of systematically burying their dead The few human remains hitherto encountered in the débris of these inhabited sites, which are accepted without cavil as belonging to the people of that period, are held by some archæologists to be those of persons who had been accidentally killed by the fall of materials from overhanging rocks, and their skeletons are now occasionally met with under circumstances which clearly establish the above sequence of events. On the other hand, those which show from inherent evidence that they had been intentionally deposited in the Palæolithic débris and attended with sepulchral rites are still regarded by some anthropologists as interments of later times. The three well-known skeletons found in the rock-shelter of Cro-Magnon have long been regarded as representing the people of the later Palæolithic period; but, as they were lying on the surface of the culture strata of the shelter, in a small open space between it and the roof which only became covered up by a subsequent talus, they are now often regarded as belonging to the Neolithic period.

That Neolithic people were in the habit of burying their dead in caves formerly inhabited by Palæolithic races has been frequently noticed and recorded by explorers. Thus, in the upper strata of the débris in the Schweizersbild rock-shelter, a Neolithic civilization was attested, not only by a characteristic assortment of relics, but also by the fact that the shelter had been latterly made use of as a cemetery which contained no fewer than 22 interments. The graves were dug into the underlying Palæolithic deposits, and ten of them contained the remains of children, as well as those of adults. Fourteen adult skeletons reported on by Kollmann belonged to two very different races, one of a fair size (5 ft. 3 in.), and the other so small as to be characterized as a race of pygmies. Dr. Nüesch, the explorer of this rock-shelter, thought that man in the Neolithic time visited it only for the purpose of burying, or perhaps cremating, the dead —an idea suggested to him by the large quantity of ashes in the upper strata. It would appear, from the facts disclosed during the exploration of this early inhabited site, that there had been no discontinuity in the human habitation of this part of Switzerland since the reindeer hunters made this rock-shelter their rendezvous up to the Bronze Age; but no evidence of systematic burial had been detected till the true forest fauna of the Neolithic period had taken possession of the land (*Neue Denkschriften der allgem. schweizerischen Gesellschaft für die gesammten Naturwissenschaften*, vol. xxxv.).

The celebrated station of Solutré (Saône-et-Loire), which has given its name to one of the intermediate phases of Palæolithic civilization in de Mortillet's classification, had also been subsequently utilized as a cemetery up to, if not beyond, Roman times; but, although some of the graves were clearly shown by their contents to be of greater antiquity than others, it was impossible to assign any of them with certainty to the Solutréen period. Moreover, the cephalic indices of 18 crania submitted to Broca varied from 68·34 to 88·26—an extent of variability which could be better accounted for by a post- than by a pre-Neolithic population.

Palæolithic burials.—Formerly it was commonly held among anthropologists that the Palæolithic people had no religion. But a fresh examination of old materials and some more recent discoveries supply data which modify this deduction, if, indeed, they do not prove the contrary. It is difficult to epitomize the facts and arguments thus raised, but the effort must be made, as otherwise our evidence would resolve itself into a series of bare assertions.

The sepulchral phenomena associated with some of the human skeletons disinterred in the Mentone caves (Balzi-Rossi), notably those known under the names of *Barma Grande* and *La Grotte des Enfants*, leave no doubt that the bodies had been intentionally buried with their personal ornaments, coiffures, necklets, pendants, etc., made of perforated shells, teeth, fish vertebræ, pieces of ivory, etc. Among the grave-goods discovered along with some of these skeletons, were one or two well-formed implements of flint, which differed from those met with in the surrounding matrix in being made of large flakes of foreign material, and showing a style of workmanship more akin to the Neolithic period. The discovery of two skeletons, of a negroid type, in the *Grotte des Enfants*, which Verneau describes as belonging to a new race, intermediate between those of Neanderthal and Cro-Magnon, marks an important addition to human palæontology.

The *Chancelade* skeleton, found in the small rock-shelter of Raymonden (Dordogne) and described as that of a man of about 60 years of age, lay at a depth of 5 ft. from the surface, in Magdalénien débris, on the left side, with the hands and knees strongly bent towards the face.

L'Homme écrasé de Laugerie Basse (Dordogne) is here noted, because the evidence is conclusive that during life this individual had been crushed, probably while asleep, by a fall of rock from the roof, and that consequently the victim must have been contemporary with the Magdalénien débris in which he reposed. He lay on his side, with the knees bent upwards in front of the breast, and appeared to have been adorned with a series of shells distributed symmetrically on different parts of his person. The corner of a great stone, part of a fallen mass, lay across his spine, and doubtless had caused his death, as the underlying bones were crushed.

A remarkable contrast to the skeletons of Chancelade and Laugerie Basse is that recently found in a small grotto at La Chapelle-aux-Saints (Corrèze).

It is described as that of an aged man, about 5 ft. 3 in. in height, who had been buried in a prepared grave beneath a bed of undisturbed Moustérien débris, 12 to 16 in. thick. The grave measured 4 ft. 8 in. in length, 3 ft. 3 in. in breadth, and 1 foot in depth. The body lay on the back, with the legs bent upwards, the right hand flexed under the head, and the

left extended. Around the body were bones of various animals broken for their marrow, together with a few flint scrapers and bone pointers—supposed to have been the remains of a funeral feast (*L'Anthropologie*, xix. 519).

Another skeleton, which has a striking resemblance to that just described, was recently found in the under strata of the rock-shelter of Le Moustier, in the upper valley of the Vezère.

It is described as having been buried intentionally in the attitude of sleep, beneath undisturbed strata of Moustérien age. The right arm was folded under the head, and the left extended. Near the left hand lay a pointed flint implement of the *coup-de-poing* type (6¾ in. long), and a little further on a flint scraper. The cranium is described as having the osteological characters of the Neanderthal and Spy skulls. The face was strongly prognathic, and there was no chin. The skeleton was that of a young man, about 4 ft. 10 in. in height, whose wisdom teeth had not yet been fully developed. Bones of various animals, some of them being described as partially calcined, were close to the body. Both the discoverers and Dr. Klaatsch, who examined this skeleton, formed the opinion that it had been intentionally buried with sepulchral rites (*ZE*, 1909, p. 537).

A further discovery of a portion of a human skull has been announced, at a place called Combe-Capelle, near the town of Montferrand-du-Périgord (Dordogne). From its osseous characters and associated relics this individual is regarded as occupying a chronological horizon intermediate between the Moustérien and Magdalénien periods.

It is a fact of some significance that all the races hitherto recognized as coming within the Palæolithic range of Western Europe are dolichocephalic, and that brachycephalic skulls are rarely found outside Neolithic burials, and then only in deposits of the transition period, to which reference will now be made.

2. Transition period.—Outside the haunts of these highly skilled hunters, artists, and workers in stone and bone, there existed, in certain parts of Europe, other communities, probably emanating from the same stock, who, owing to the exigencies of a changing climate and the gradual disappearance of wild animals from the plains, began to exploit new sources of food, which, in the course of time, caused a considerable divergence in their domestic economy. Thus, while the Chelléen and Moustérien culture relics can be more or less paralleled throughout the whole of Southern Europe, the artistic phases of the later civilization of the reindeer hunters are not forthcoming beyond a limited area, mostly in Southern France. Implements of Moustérien types have been found in the Mentone caves, but not a trace of the relics characteristic of the Magdalénien stations of France; and yet both sets of cave-dwellers may have been contemporary.

Perhaps the most interesting feature of the investigation of the 'kitchen middens' of Mugem, in the valley of the Tagus, was the discovery of upwards of a hundred interments at various depths in the shell-mounds; but it does not appear that any special grave-goods had been associated with them.

From the data at our disposal the point of most importance to the present inquiry is that the recently discovered skeletons at Moustier and Chapelle-aux-Saints, which undoubtedly were survivals of the earlier types of humanity, appear to have been interred with sepulchral rites, so circumstantially carried out as to suggest that they were founded on an already established cult of the dead. But, however this may be, it cannot be gainsaid that, during the Neolithic civilization, there is unmistakable evidence to show that the disposal of the dead had become a sacred obligation on the surviving relatives and friends. By this time the sepulchral materials are overwhelmingly conclusive in support of the doctrine that religiosity and a belief in a future life were the dominating factors in the social organizations of the period.

3. Neolithic period. — During the Neolithic period the cult of the dead prevalent among the peoples of Western Europe was the outcome of psychological ideas which linked human affairs with the souls of men, animals, and things in the spirit world. The writer agrees with the animistic theory of Tylor, which represents man as first attaining to the idea of spirit by reflexion on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, hallucinations, breath, and death, and so gradually extending the conception of soul or ghost till all Nature is peopled with spirits. However this may be, there can be no doubt that the religion of these pre-historic peoples, as disclosed by their sepulchral remains, involved a belief in intercommunications between mankind and the supernatural world. When a prominent man died, his weapons, ornaments, and other cherished objects were placed in the tomb along with suitable viands for his supposed journey to the Unseen World; and, indeed, there is evidence to show that in some instances his favourite wives, slaves, and pet animals were sacrificed, and buried in different parts of the mound. The selected grave-goods were appropriate to the standing and tastes of the individual, so much so that on this ground alone the graves of distinguished men, women, and children are readily recognizable. Such facts undoubtedly suggest that the people of those times did not regard life beyond the grave as differing widely from that on earth. To them death was the portal to the community of departed heroes and friends, to which they looked forward, across the span of human life, with hopeful anticipation of a more perfect state of existence. Hence the abodes of the dead were considered of greater importance than those of the living. Constructed of the most durable materials, and generally placed on a commanding eminence so as to be seen from afar, the tomb became an enduring memorial for many generations, till eventually its actual purpose and meaning became lost amidst the changing vistas of succeeding ages. One of the most common and effective methods of perpetuating the memory of the dead was by rearing a mound of stones or earth over the grave. To this custom we owe some of the grandest monuments in the world's history—the Pyramids of Egypt, the topes and *dagobas* of India, the mighty mounds of Silbury and New Grange, the megalithic circles of Stonehenge and Avebury, together with the numberless rude stone monuments known as dolmens, cromlechs, menhirs, etc., scattered along the western coasts of Europe and extending into Africa. To comprehend fully the motives which underlay the construction of ancient sepulchral monuments, it would be necessary to examine not only their structural peculiarities and contents, but also their surface accessaries, such as stone circles, cairns, mounds, menhirs, earthen ditches, etc. Although a strong family likeness permeates the whole series in Western Europe, they differ so widely in certain districts that to deal with their local peculiarities and distribution alone would entail at least as many chapters as the number of countries within that area. Then the attentions paid to the dead before, at, and subsequent to, the burial disclose a wide field of speculative research, involving the foundations of religion, ancestor-worship, and general cult of the dead.

(1) *Inhumation and cremation.* — Pre-historic sepulchres vary so much in form, structure, position, and contents that to make a systematic classification of them on the lines of their chrono-

logical development is almost an impossibility. One special element which complicates such an inquiry was the custom of cremating the dead, which appears to have originated in Eastern lands, and to have spread westwards, reaching the British Isles towards the close of the Stone Age. This practice, of course, introduced various innovations on the sepulchral customs previously in vogue. Burial by inhumation, which, according to Greenwell, was much more common in the Yorkshire Wolds, is thus described by that veteran explorer:

'It [the unburnt body] is almost always found to have been laid upon the side, in a contracted position, that is, with the knees drawn up towards the head, which is generally more or less bent forward: the back, however, is sometimes quite straight. So invariable is this rule, that out of 301 burials of unburnt bodies, which I have examined in the barrows of the Wolds, I have only met with four instances where the body had been laid at full length' (*British Barrows*, p. 22). 'In most cases there is nothing to protect the body against the pressure of the overlying soil, but now and then a few large blocks of flint or thin slabs of chalk have been placed round it, thus forming a kind of rude covering; and from the appearance of the earth immediately in contact with the bones, it would seem that turfs had sometimes been laid over the corpse' (*ib.* p. 13).

On the other hand, when the body was cremated, the incinerated remains were carefully collected and usually placed in an urn, and then buried. When no urn was used, the remains were laid in a little heap, either in the grave, over which a mound was subsequently raised, or in a hole in earth already consecrated to the dead, such as a former barrow. The corpse, thus reduced to a few handfuls of ashes and burnt bones, required no great space for its preservation either in a public cemetery or in a family burying-ground. Hence sprang up a tendency to diminish the size of the grave, and thus megalithic chambers gave place to short stone cists containing the body placed in a contracted position.

Simple inhumation, *i.e.* placing the body in a hole in the earth and re-covering it with the excavated earth, was probably the earliest method of disposing of the dead; and to mark the site the survivors naturally raised over the spot a mound of earth or stones. Among a sedentary population the next step in advance would be to protect the body from the pressure of the surrounding earth. This was usually done by lining the grave with flagstones set on edge, over which a larger one was placed as a cover, thus forming the well-known cist; sometimes, instead of flagstones, wooden planks were used in the shape of a rude coffin. The material used was not always a matter of choice, but rather depended on what was most readily procurable in the neighbourhood. Greenwell tells us that in the Yorkshire Wolds the stone cist, so common in other parts, was almost entirely wanting, because in chalk districts the requisite slabs were unprocurable. On the other hand, wood is so liable to decay that it is rare to find evidence of its having been used.

On one occasion the writer of this article was present at the excavation of a barrow, near Bridlington, under the guidance of Greenwell, and on reaching the primary interment there was only a large empty cavity, with nothing but the enamel of a few teeth lying on the floor to show that a burial had taken place. Greenwell, however, soon cleared up the mystery by pointing out the unmistakable impression of wooden beams on the clay walls of the empty space, which, doubtless, had formed some kind of coffin. A few instances of tree coffins have been discovered both in this country and on the Continent. One well-known specimen from a barrow at Gristhorpe is now preserved in the Scarborough Museum. It consisted of the trunk of a large oak, 7½ ft. long and 3 ft. 3 in. wide, roughly hewn and split into two portions; one of the portions was hollowed out to make room for the corpse, and the other formed the lid of this improvised coffin. Among the grave-goods were a small bronze dagger, 3½ in. long, containing 2 rivet holes for the handle, fragments of a ring and of an oval disk both of horn, together with a few flint objects (Jewitt, *Grave Mounds*, p. 48). Another remarkable discovery of a grave was made at Treenhöi, in Jutland, which contained a woollen garment, leg bandages, a horn comb, a small bronze knife, and a bronze sword in its wooden sheath. The whole of the deposit in the grave was wrapped up in a large deer-skin, which probably had served as the warrior's outer cloak (Worsaae, *Danish Arts*, London, 1882, p. 52).

The stone-lined cist is perhaps the most widely distributed type of early grave known. From this to the megalithic chamber, with its sepulchral compartments, entrance passage, and superincumbent cairn, was an easy transition. But the chronological sequence thus suggested is of little value in dating these monuments throughout the British Isles, as there is evidence to show that some of the chambered cairns and long barrows were constructed before the introduction of cremation. Thus, in the counties of Gloucester, Wilts, Somerset, and some neighbouring localities, there are chambered cairns in which the primary burials were by inhumation, and the human skulls found in them belonged to a dolichocephalic race. Similar chambered cairns, containing remains of a dolichocephalic race, have been found in the Island of Arran; but as regards the analogous groups of sepulchral monuments further north, such as those in the counties of Argyll, Inverness, Sutherland, Caithness, and the Orkneys, it is conclusively proved that cremation and inhumation were contemporary from the very beginning; and the same remarks apply to the dolmens of Ireland. It would thus appear that, subsequent to the erection of the early chambered cairns of the Stone Age in Britain, there was a period of degradation in this kind of sepulchral architecture, during which the well-known barrows of the Bronze Age became the prevailing mode of burial.

In Scandinavia the Giant graves belonged to the Stone Age, but gave place during the Bronze Age to large stone-lined cists, suitable for more than one corpse. Finally, in the early Iron Age, both these monuments were discarded for simple burial, either by inhumation or after cremation; and there were then raised huge earthen tumuli, such as the mounds of Thor, Odin, and Freya at Gamla Upsala, and the ship barrow at Gokstad. The dolmens of the Iberian Peninsula, known as *antas* in Portugal, belonged to the Stone Age, and their interments, which were almost exclusively of unburnt bodies, showed that the people who constructed them were a dolichocephalic race—a remark which also applies to the cave burials of that country, some of which were older than the dolmens. Cremation appeared at a comparatively late period in the Bronze Age, probably owing to the distance of the Iberian Peninsula from the seat of its supposed origin.

The primary object of inhumation might have been nothing more than protection of the corpse from enemies and wild beasts; but, in the evolution of the grave from a mere hole in the earth up to the elaborately constructed chambered cairn, we must seek for a higher motive than a pious act of respect to the memory of a departed friend. The general idea entertained by archæologists on the subject is that the grave was looked upon as also the temporary abode of the ghost, who was supposed to hover around the corpse till the natural decay of the latter had been completed —a process which took some time, and entailed on the ghost the irksome ordeal of passing through a sort of purgatory, or intermediate stage, between this life and that of the spirit-world. It is now surmised that the effect of fire had long been known as a means of purifying not only the body, but also the soul, from the pollution which death brings with it—an opinion which may account for the finding of so large a number of partially burnt bodies in graves, even before cremation was generally adopted. As soon as it became fully realized that burning was merely a speedy method of accomplishing the dissolution of the

body,—now regarded as nothing more than a mass of corrupt matter,—cremation became the culminating point of a religious cult, which taught that it was a most desirable object to set free the soul from its association with the corpse as speedily as possible.

But, whatever were the motives which led to the adoption of cremation, whether religious or sanitary, there can be little doubt that burial by inhumation was associated with religious rites and ceremonies long before its introduction into Western Europe. Subsequently both methods were practised concurrently during the whole of the Bronze Age, and down to the time when Christianity superseded paganism. According to classical writers, the Greeks and Romans practised both methods, but in fluctuating proportions, probably due to the influence of fashion or current religious opinions. That cremation was more prevalent among the richer classes was partly due to its being an expensive process, and, therefore, beyond the means of the common people. But one has to be cautious in drawing deductions founded on motives, as the predominance of one or other of these burial customs varied in separate districts, even within such a limited area as the Wolds of Yorkshire. On this point Greenwell writes (*op. cit.*, p. 21):

'In some localities on the Wolds it has been seen that cremation prevailed, though inhumation was the general custom throughout the whole district. In other parts of Yorkshire, however, cremation was all but universal; as, for instance, in Cleveland, where Mr. Atkinson's very extensive investigations did not produce a single instance of an unburnt body; and near Castle Howard, where a large series of barrows contained nothing but burnt bodies.'

Burial mounds are called 'cairns' when their constructive material consists of small stones, and 'barrows' when that material is ordinary soil; but not infrequently both substances were used in the same mound—a small cairn being often inside an earthen barrow. Their great diversity in external form gave rise to a number of qualifying epithets, such as 'long,' 'round,' 'oval,' 'bell-shaped,' etc. Sometimes the mound was surrounded by a ditch, or a stone circle, or both; and instances are on record in which one or both of these features were found within the area covered by the mound. Also, an interment, whether by inhumation or after cremation, may be found beneath the natural surface without any superincumbent mound, or any surface indications whatever. At other times, when the mound or cairn is absent, a standing stone, or a circle of stones or of earth, or a ditch may indicate the site of a burial. Sometimes the mound may be raised over an interment, whether burnt or unburnt, which had been simply laid on the surface of the ground. At other times a mound, seemingly of earth, and covered with vegetation, may contain a megalithic chamber with an entrance passage, and sometimes divided into sepulchral compartments. Structures of the latter kind were evidently family vaults, and often contained the osseous remains of several generations. As the abodes of the dead, specially adapted for the burial of unburnt bones, were continued after cremation began to be practised, it often happens that both burnt and unburnt remains are found in the same barrow. We have already seen that the earliest interments in the chambered cairns in the North of Scotland were burnt bodies.

(2) *Dolmens.*—Among the sepulchral monuments still extant in Europe, the megalithic graves, known as 'dolmens,' take the first place, not only for the wealth of evidential materials which they have supplied, but also on account of their great number, imposing appearance, and wide geographical distribution. A dolmen, in its simplest form, may be defined as a rude stone monument, consisting of at least 3 or 4 stones, standing a few feet apart, and so placed as to be covered over by one megalith, called a capstone or table.

A well-known example of this kind in England is Kits Coity House, near Maidstone, which in its present condition consists of three large free-standing stones supporting a capstone measuring 11 ft. by 8 ft. Originally the spaces between the supports had been filled up by smaller stones, so as to enclose a small sepulchral chamber, and after interment the whole was then covered over by a mound of earth, but without an entrance passage.

Between this simplest form and the so-called *Giants' Graves, Grottes des Fées, Allées couvertes, Hunnebedden*, etc., there is an endless but regular gradation of structures in proportion to the number of supports and capstones used.

The well-known *Allée couverte* of Bagneux, near the town of Saumur, measures 18 mètres in length, 6·50 in breadth, and 3 in height. It is constructed of huge flagstones, standing on edge, 4 on each side, with 4 capstones—the largest of which measures 7·50 mètres in length, 7 in breadth, and 1 in thickness. Another, near Esse (Ille-et-Vilaine), called La Roche aux Fées, and about the same length, is constructed of thirty supports and eight capstones, including the vestibule.

Although many of these free-standing dolmens show no signs of having been at any time embedded in a cairn or mound, some archæologists maintain that that was the original condition of all of them—a theory which derives some support from their present dilapidated condition, for many of them may be seen throughout the whole area of their distribution in all stages of denudation. Were the materials which compose the tumulus of New Grange, in Ireland, removed, leaving only the large stones of which its entrance passage and central chambers are constructed, there would be exposed to view a rude stone monument similar in all essentials to that at Callernish in the Island of Lewis.

The covered dolmens greatly vary in shape and appearance, owing to vegetation and other natural surface changes; and, as to size, they range from that of an ordinary barrow—a few yards in diameter—up to that of New Grange, which rises, in the form of a truncated cone, to a height of 70 ft., with a diameter at the base of 315 ft. and of 120 ft. at the top. Silbury Hill is 170 ft. in height, and over 500 ft. in diameter at the base.

There is no rule as to the position of the entrance gallery, it being attached, sometimes to the side, as in the Giant's Grave at Oem, near Roskilde, in Denmark, and sometimes to the end, as in the tumulus of Gavr'inis (Morbihan). The Drenthe Hunnebedden, which in the present day are all uncovered, had both ends closed and the entrance passage on the side facing the sun, as was the case in all the dolmens.

Ruined dolmens are abundantly met with in the provinces of Hanover, Oldenburg, and Mecklenburg. According to Bonstetten, no fewer than 200 are distributed over the three provinces of Lüneburg, Osnabruck, and Stade; but the most gigantic specimens are in the Duchy of Oldenburg. In Holland they are confined, with one or two exceptions, to the province of the Drenthe, where between 50 and 60 still exist. The Borgen Hunnebed, the largest of the group, is 70 ft. long, 14 ft. wide, and in its primitive condition contained 45 stones, ten of which were capstones.

In Scandinavia the dolmens are confined to Danish lands and a few provinces in the south of Sweden. In the former country, in addition to the great chambered tumuli, free-standing dolmens may be seen situated on the tops of artificial mounds, and surrounded by enclosures of standing stones either in the form of a circle (*Rundysser*) or oval (*Langdysser*).

Only one dolmen has been recorded in Belgium, but in France their number amounts to close on 4000, irregularly distributed over 78 Departments, of which no fewer than 618 are in Brittany. From the Pyrenees they are sparsely traced along the north and west coast of Spain, through Portugal and on to Andalusia, where they occur in considerable numbers. The most remarkable monument of the kind in Spain is that near the village of Antequera, situated a little to the north of Malaga. The chamber is slightly oval in shape, and measures 24 mètres long, 6·15 mètres broad, and from 2·7 mètres to 3 mètres high. The entire structure comprises 31 monoliths—ten on each side, one at the end and five on the roof. The huge stones are made of the Jurassic limestone of the district, and, like those of Stonehenge, appear to have been more or less dressed. The

entire structure, now partially exposed, was originally covered with earth, forming a mound 100 ft. in diameter. In Africa, dolmens are met with in large groups throughout Morocco, Algeria, and Tunis. According to General Faidherbe, who has examined five or six thousand specimens, they are quite analogous to those on the European Continent, with the exception that, in his opinion, none of them had been covered with a mound (*Congrès Internat.*, 1872, p. 408). In Great Britain, Ireland, and the Channel Islands every type of the sepulchral monument is met with, especially chambered cairns, stone circles, and barrows.

The manner in which these sepulchral monuments are distributed along the Western shores of Europe, to the exclusion of central parts of the Continent, in which no dolmens are found, has given rise to the theory that they were erected by a migratory race called 'the people of the dolmens,' moving, according to some, from Scandinavia to Africa, and, according to others, in the opposite direction. But this theory has fallen into disrepute. Their magnitude and local differences in structure, even in districts bordering on each other, show that their builders were a sedentary population. Besides, the skeletons found in their interior belonged to different races. Against the theory advanced by Aubrey and Stukeley, that these rude stone monuments had been used as Druidical altars, there is *prima facie* evidence in the care taken by their constructors to have the smoothest and flattest surface of the stones composing the chamber turned inwards. Also, cup-marks and other primitive markings when found on capstones are invariably on their under side, as may be seen on the dolmens of Keriaval, Kercado, and Dol au Marchant (Morbihan).

(3) *Cromlechs.*—The word 'cromlech,' as used by some English archæologists, is almost synonymous with 'dolmen'; but, as defined by Continental authorities and adopted by the present writer in this article, it is exclusively applied to enclosures (*enceintes*), constructed of rude standing stones placed at intervals of a few feet or yards, and arranged roughly on a circular plan—circle, oval, horse-shoe, or rectangle. In this sense it comprehends the class of monuments known in this country under the name of 'Stone Circles' or 'Circles of Standing Stones.' Stone circles are, or were formerly, more numerous in the British Isles than elsewhere in Europe. They generally consist of one line of stones, but not infrequently two or more circles are arranged concentrically, as may be seen in those at Kenmore near Aberfeldy, and Callernish in the Island of Lewis. At Avebury one large circle, 1200 ft. in diameter, surrounds two other circles placed eccentrically to the former, and each containing a second circle arranged concentrically.

Cromlechs may also be associated with alignments, menhirs, and other megalithic monuments, as at Carnac, Callernish, etc. In the British Isles, Scandinavia, some Departments of France, and elsewhere, they surround dolmens, tumuli, and cairns. Outside the ordinary stone circle there is often a ditch, as at Avebury, Stonehenge, Arbor Low, Ring of Brogar, etc. The most remarkable monument under this category now extant is Stonehenge, which differs from all others of its kind in having the monoliths of the outer circle partially hewn and connected at the top by transverse lintels. That most of the smaller circles have been used as sepulchres has been repeatedly proved by the finding of urns, burnt bones, and skeletons, sometimes deposited in the centre and sometimes at the base of the standing stones, or indeed anywhere within the circular area. It is difficult to believe that burial was the sole purpose of the large cromlechs such as Avebury, Stonehenge, the Giant's Ring near Belfast, Mayborough near Penrith, etc. This last consists of a circular mound composed of an immense aggregation of small stones in the form of a gigantic ring, enclosing a flat space 300 ft. in diameter, to which there is access by a wide break in the ring. Near the centre of the area there is a fine monolith, one of several known to have formerly stood there. It is more probable that such enclosures were, like our modern churches, used not only as cemeteries, but for the performance of religious ceremonies in connexion with the cult of the dead.

(4) *Sepulchral caves.*—The custom of burying the dead in natural caves, to which we have already referred as having been met with in the Palæolithic period, was continued throughout the Neolithic and Bronze Ages. Discoveries of this character have been recorded in numerous localities throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most remarkable examples of caves used as sepulchres in Britain are to be found in a group clustering round a refuse-heap at Perthi-chwareu, a farm high up in the Welsh hills, in Denbighshire:

'The human remains belong for the most part to very young or adolescent individuals, from the small infant to youths of 21. Some, however, belong to men in the prime of life. All the teeth that had been used were ground perfectly flat. The skulls belong to that type which Professor Huxley terms the "river-bed skull." All the human remains had undoubtedly been buried in the cave, since the bones were in the main perfect, or only broken by the large stones which had subsequently fallen from the roof. From the juxtaposition of one skull to a pelvis, and the vertical position of one of the femora, as well as the fact that the bones lay in confused heaps, it is clear that the corpses had been buried in the contracted posture, as is usually the case in Neolithic interments. And, since the area was insufficient for the accommodation of so many bodies at one time, it is certain that the cave had been used as a cemetery at different times. The stones blocking up the entrance were probably placed as a barrier against the inroads of wild beasts. . . . The Neolithic age of these interments is proved, not merely by the presence of the stone axe or of the flint flakes, but by the burial in a contracted posture, and the fact that the skulls are identical with those obtained from chambered tombs in the South of England proved to be Neolithic by Dr. Thurnam' (*Cave-Hunting*, pp. 155–158).

The same writer describes similar remains from caves in the limestone cliffs of the beautiful valleys of the Clwyd and the Elwy, near St. Asaph. He has also shown that the people who buried their dead in these caverns were of the same race as the builders of the neighbouring chambered tomb of Cefn, just then explored. The crania and limb bones were identical, and in both the tomb and caves the dead were buried in a contracted position.

In Scotland, human remains regarded as sepulchral have been found in some caves at Oban, which had been exposed by quarrying operations at the foot of the cliff overhanging the ancient raised beach on which part of the town is built. In one of these caves (M'Arthur Cave), along with some fragmentary skeletons, were two skulls sufficiently preserved to enable Sir William Turner to take correct measurements of their special character, from which it appears that their owners belonged to a dolichocephalic race, their cephalic indices being 70·2 and 75·4. Although no grave-goods are known to have been associated with these bodies, there is sufficient evidence from collateral phenomena to show that the chronological horizon to which they must be assigned is the Neolithic period.

Of all the countries of Western Europe, France has yielded by far the largest number of burials under this category. De Mortillet, writing in 1883 (*Le Préhistorique*, p. 598), states that he could count 117 in France distributed over 36 Departments, 24 in Belgium, 8 in Italy, and only 1 or 2 specimens in each of the other countries.

The following epitomized notices of one or two examples will give the reader some general idea of the importance attached to this class of sepulchral remains:

In the course of exploring the natural cave of Casa da Moura, near Lisbon, a large quantity of human bones, representing some 150 individuals, was disinterred. It appears that the Neolithic inhabitants had converted the grotto into a cemetery —which would account for the large number of bodies it contained. The bones were much decayed, only three or four entire skulls being amongst them, which so far indicated a dolichocephalic race. The upper portion of one of these skulls is of exceptional interest, inasmuch as it furnishes positive evidence of having been partially trepanned, thus disclosing the initiatory stage of the method of performing that operation (Cartailhac, *Les Âges préhistoriques de l'Espagne*, p. 84).

Of the French caverns which contained only long skulls, the two most remarkable are those of L'Homme Mort and Baumes-Chaudes, both in the Department of Lozère. In the former were nineteen skulls sufficiently well preserved to furnish the necessary measurements. Of these the cephalic indices of seventeen varied from 68·2 up to 76·7, and the other two were 78·5 and 78·8. There were, therefore, no brachycephalic skulls in this sepulchre, so that the race appears to have been comparatively pure. It may also be mentioned that some of the crania had been trepanned—a feature which, though at first overlooked, subsequently became the subject of much interest to anthropologists. The animal remains were those of the Neolithic epoch, but among them were none of the reindeer, horse, ox, or stag. Among the relics were a lance-head, and a portion of a polished stone axe. Drs. Broca and Prunières were of opinion that the individuals whose remains had been consigned to this ossuary belonged to an intermediate race, who flourished in the transition period between the Palæolithic and Neolithic civilizations, and thus became connecting links between the people of the reindeer caves and the dolmens.

The crania recorded from the station known as Baumes-Chaudes were found in two natural caverns distinct from each other, but opening on a common terrace. They contained a vast collection of human bones, representing some 300 individuals; but both were regarded by the investigators as the continuation of the same family burying-place, which, indeed, had not been altogether abandoned till the beginning of the Bronze Age, as one of the skeletons in the upper deposits had beside it a bronze dagger. In one of these caverns only chipped flints, rude implements of horn, etc., were discovered; but in the other there were a few arrow-points, a head, some roundlets of deer-horn, etc., which suggested some progress in culture. The crania measured and classified in M. Salmon's list from the Baumes-Chaudes ossuary amount to thirty-five, and they are all dolichocephalic, the indices varying from 64·3 to 76·1. The average height of this race was calculated to be about 5 *ft.* 3½ in.

As examples of sepulchral caverns in which brachycephalic crania formed the majority, a series of caverns at Hastières and Furfooz in Belgium may be cited. Of 33 skulls from the former measured by Professor Houzé, six are dolichocephalic, eleven mesaticephalic, and sixteen brachycephalic. The well-known cave at Furfooz (*Trou du Frontal*) was merely a rock-shelter with a projecting cavity extending inwards for some 2 mètres, and about one mètre in height and one mètre in breadth, and closed in front by a large slab. This cavity was filled with human bones mixed with earth and stones, but none of the bones retained their relative positions as regards the rest of the skeleton, so that dismemberment must have taken place before their final deposition in the cave. From the number of lower jaws, whole or broken, it was calculated that this sepulchre contained 16 individuals, of whom 5 were children. The cephalic index of some of the skulls was over 80. A disturbing element in the conclusions suggested by this discovery was the presence of fragments of pottery among the contents of the cave; while outside the slabstone there was an accumulation of débris and food refuse, which, judging from the fauna represented by its osseous remains, belonged to the Palæolithic period. Hence, at the time, the human remains of Furfooz were regarded as belonging to that period—an opinion which is no longer held, as the sepulchre is now admitted to be of the Neolithic age (*Rev. de l'école d'anthr.*, 1895, p. 155 f.).

Artificial caves used for sepulchral purposes have also been discovered in certain Departments of France, more especially those with chalky formations, like the Marne district. Here upwards of a dozen stations, each containing a number of artificial caves excavated in the flanks of low hillocks, have been most successfully explored by Baron de Baye (see his *Archéologie préhistorique*, 1880). Among some hundreds of interments, over 120 crania, including various trepanned specimens and cranial amulets, have been collected and are now preserved in the Château de Baye. Associated with them were a number of implements, weapons, and ornaments of Neolithic types, such as stone axes and their handles, arrow points, flint knives, bone pointers, polishers, beads and pendants of amber, bone, stone (one of callais, like those of the tumuli of Brittany), fossil shells, teeth, and so on. Of the crania, 44 were submitted to Dr. Broca for examination, and are thus classified:—dolichocephalic (71·6 to 76·7), 15; mesaticephalic, 17; and brachycephalic (80 to 85·7), 12.

Dr. Broca recognized in these human remains the union of two races analogous to those of Furfooz and Cro-Magnon—the latter having already been identified by him as of the same type as the dolichocephalic people of L'Homme Mort and Baumes-Chaudes.

Some of these caves, especially those of Petit-Morin, are supposed to have been constructed in imitation of the dolmens, as they were preceded by an entrance passage and occasionally a vestibule, from which a low door, closed with a stone slab, led to the sepulchral chamber. Baron de Baye thinks that some of them had been used as habitations for the living before being appropriated to the dead, as they had sometimes niches and shelves cut out of the solid chalk walls, on which various industrial relics had been deposited. A rudely executed human figure with a bird-like nose, two eyes, a necklet, and breasts, together with the form of a stone axe in its handle, was sculptured in relief on the wall of the vestibule of one of the larger caves. This cave appeared to have been much frequented, as the threshold was greatly trodden down by the feet of visitors. M. Cartailhac explains this peculiarity by supposing that it was a place for temporarily depositing the dead before transferring them to their final resting-place. All these caves contained abundance of relics characteristic of an advanced Neolithic civilization, but without any trace of metals, and the surrounding neighbourhood is rich in flint objects of that period.

Finally, it may be observed that sepulchral phenomena and grave-goods associated with the artificial caves of France are precisely of the same character as those of the neighbouring dolmens and natural caves, thus conclusively showing that all these monuments belonged to the same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Etruria, Palestine, and other countries, we must leave to readers to work out for themselves.

(5) *Grave-goods.*—The gifts to the dead, as already mentioned, bear some relationship to the social position among the community in which the deceased lived. They include all manner of things —ornaments, weapons, tools, utensils, pet animals, and even the wives and slaves of great heroes. When a departed friend appeared in a dream dressed in his usual garments and armed with his favourite weapons, it was natural to suppose that these objects, as well as their owner, had shadowy existences in the spirit world. From this it is supposed that the pre-historic people believed that not only men, but animals and inanimate objects, had souls—a belief which may account for the frequency with which weapons and other grave-goods were broken.

The quality of grave-goods varied according to the culture and civilization prevalent at the time of the interment. During the Stone Age they consisted of perforated shells, teeth, pendants of ivory and coloured pebbles, stone axes, spear-heads, arrow points, bone pins, buttons, and other objects of the toilet. During the Bronze and early Iron Ages, to the above objects were added necklets made of beads of jet, amber, and coloured glass, rings, armlets, and fibulæ of bronze, and sometimes gold rings. The stone weapons gave place to others made of metal. In the absence of written records, the objects thus collected and collated form the principal materials on which archæologists base a more or less positive system of chronology. Among the calcined bones of cremated subjects, small articles such as pins, beads, buttons, etc., are occasionally found, showing that the corpse had been clothed when subjected to the fire. When de-

posited in the earth without an urn, it has been argued that such objects had been used for binding the cloth or skin in which the calcined bones were wrapped up. From the quantity of objects sometimes deposited in the grave, it has been surmised that, when a person was possessed of property of rare and exceptional value, it was customary to bury it along with him, evidently with the intention of its being utilized in the world of spirits. As an illustration of this the following notice of a remarkable discovery of axes made of jade and other materials will be of interest:

The tumulus of Mont-Saint-Michel, which occupies a conspicuous position among the Carnac group of antiquities, rises to the height of 10 mètres, on an elongated base measuring 115 mètres in length by 58 mètres in breadth. In recent times the top of the mound was flattened, and the eastern third is now occupied by a chapel, while at the other extremity there are the ruins of a modern observatory. In 1862 a small megalithic chamber, some two mètres square and rather less than one mètre in height, was discovered, and on the floor of the chamber, amidst a thick deposit of dust, the following objects were found: (1) Eleven beautifully polished axes of jade, varying in length from 9½ to 40 centimètres. Two of these celts were pierced near the point for suspension. One was broken into three portions, two of which were lying at one end of the crypt and the other at the opposite end. (2) Two large celts of a coarser material, both broken. (3) Twenty-six very small celts of fibrolite. (4) Nine pendants of jasper and 101 beads of jasper and turquoise, supposed to have formed a necklet; also a number of very small beads made of some kind of ivory. After the entire débris had been removed from the floor of the chamber, there were found, under a flagstone, remains of an interment occupying a shallow space between the floor and the natural rock (René Galles, *Bull. de la soc. polym. du Morbihan*, 1862).

(6) *Pottery.*—The pottery found with pre-historic burials consists of a variety of vessels collectively called 'urns'; but, as they are found in graves containing either burnt or unburnt bodies, they could not all have been intended for cinerary purposes, so that they have to be classified according to their ascertained special functions. Vessels associated with inhumed bodies are supposed to have contained food and drink—hence they are called 'food-vessels,' and 'drinking-cups' or 'beakers.' The cinerary urns, used exclusively for the purpose of preserving the cremated remains of the corpse, vary considerably in size, form, and ornamentation, being generally 10 to 18½ in. in height. They are narrow-based and wide-mouthed, with a broad overhanging rim to which the ornamentation is commonly confined; or they may be flower-pot-shaped, and ornamented by one or two transverse ridges. The food-vessel, which is considerably smaller, more globular, and more highly ornamented than the cinerary urn, is also wide-mouthed and narrow-based. As a rule it was placed with an unburnt burial in the vicinity of the head of the corpse.

Drinking-cups, or beakers, are tall, highly ornamented vessels, narrowing from the mouth to near the middle, then bulging out and again narrowing at the base. A few specimens have been found with a handle like a jug. Beakers are almost invariably associated with unburnt burials—only two out of 24 having been found by Greenwell in the Wold barrows, with cremated burials. Very small cup-shaped urns, often pierced with two or more holes in the side, and generally found inside a large cinerary vessel, are known under the name of 'incense cups'; but there is no evidence to support this suggested use of them, and they are now regarded as cinerary urns for infants.

The Hon. John Abercromby holds that the beaker is not only the oldest Bronze Age ceramic in the British Isles, but also an imported type from Central Europe by way of the Rhine Valley (*JAI* xxxii. 373 ff.). As an interesting corollary to Mr. Abercromby's views, it has been observed that, in almost all the instances in which the beaker has been found associated with human remains, the skull was brachycephalic.

That sepulchral ceramics of the beaker type have rarely, if at all, been found in Ireland may be accounted for on the supposition that the Continental brachycephali were later in penetrating as far as Ireland; or, perhaps, that the few who did find their way to that country did so by a different route from those who entered Britain by way of the Rhine Valley. Anyhow, the rarity of both beakers and brachycephalic skulls in the pre-historic burials of Ireland is a suggestive fact to the student of Irish ethnology.

(7) *Cemeteries.*—As population increased and the influence of religion became more powerful as a governing factor in social organizations, the isolated and sporadic graves of the earlier people gave place to their aggregation in the form of cemeteries in certain selected localities, which were thus, as it were, consecrated as common burying-grounds for the disposal of the dead. The remains of such cemeteries may be found dispersed throughout the whole of Europe. There is documentary evidence that in pagan times the Irish had regal cemeteries in various parts of the Island, appropriated to the interment of chiefs of the different races who then ruled the country, either as sole monarchs or as provincial kings.

This authority consists of a tract called *Senchus-na-Relec* ('History of the Cemeteries'), being a fragment of one of the oldest Irish MSS, and in it reference is made to the cemetery of *Taillten*, which Mr. Eugene Conwell of Trim has identified as a group of chambered cairns on the Loughcrew Hills, near the town of Oldcastle, Co. Meath. Mr. Conwell also quotes the following stanza, among others, from a poem in the same old MS, viz. *Leabhar na hUidhre*:

> 'The three cemeteries of Idolaters are
> The cemetery of Taillten, the select,
> The ever-clean cemetery of Cruachan,
> And the cemetery of Brugh.'

On the ridge of this range of hills, which extends for a distance of about two miles, are situated from 25 to 30 chambered cairns, some measuring as much as 180 ft. in diameter, while others are much smaller and nearly obliterated. They were examined in 1867–8 by E. A. Conwell, and an account of his discoveries was published in 1873 under the title of *Discovery of the Tomb of Ollamh Fodhla.*

An analogous group of dilapidated chambered cairns, with settings of stone circles, may be seen at Clava near Inverness, and other localities in Scotland. Stonehenge is in the centre of a vast burying-ground consisting of barrows in groups over the downs.

Urn cemeteries, without any external markings to indicate the site of the burials, are frequently met with in the British Isles, being exposed by agricultural operations, and especially by the removal of clay beds for the making of bricks. As the underlying clay slides from under the covering of soil to a lower level, urns are frequently seen sticking in the broken margin of the surface soil. A small urn cemetery was recently discovered at the digging of the foundation of a villa in the town of Largs. The site was a low gravelly mound, and the cemetery disclosed an unique feature in the finding of a stone-lined cist covered over with a large flagstone and containing seven flower-pot-shaped urns, all having more or less calcined bones in them (*Archæologia*, lxii. 239–250).

In 1886, in the course of removing the surface-earth above a gravel- and sand-pit at Aylesford in Kent, the following relics were discovered: a wooden pail or *situla*, with a bronze band ornamented with late Celtic designs; a bronze jug (*oenochoë*); a long-handled pan and two *fibulæ*, also of bronze, together with calcined bones and fragments of pottery. 'These objects were discovered in what had been a round burial-pit, about 3½ ft. deep, the sides and bottom of which had been coated with a kind of chalky compound. The bronze *situla* contained burnt bones and the *fibulæ*,

the bronze vase and pan lying outside it, while around were the remains of several earthenware urns, some of which had been used as cineraries.' The discovery, fortunately, came under the notice of Dr. A. J. Evans, who lost no time in making a full inquiry into the circumstances. The result of his researches was a paper, 'On a Late Celtic Urn-Field at Aylesford,' which appeared in 1890 (*ib.* lii.). The conclusion to which Dr. Evans comes, after a wide comparison of Continental ceramics, is that the Aylesford urns are 'the derivatives of North Italian, and in a marked degree old Venetian prototypes.'

Perhaps the most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

'The ancient necropolis, known as Hallstatt, lies in a narrow glen in the Noric Alps, about an hour's walk from the town of Hallstatt, situated on the lake of the same name. Discovered in 1846, and systematically explored for several years under the superintendence of Bergmeister G. Ramsauer, the results were published by Baron von Sacken in 1868, in a quarto volume with twenty-six plates of illustrations. One of the peculiarities of this cemetery was that it contained burials by inhumation and incineration indiscriminately dispersed over the entire sepulchral area, both, however, belonging to the same period, as was clearly proved from the perfect similarity of their respective grave-goods. The graves were thickly placed over an irregular area, some 200 yards in length and about that in breadth, but there were no indications above ground to mark their position. They were not arranged in any order, and their depth varied within the limits of 1½ to 5 ft.—a disproportion partly accounted for by the sloping nature of the surface, which caused a considerable rain-wash of the soil to the lower levels.

Out of 993 tombs described in v. Sacken's work, 525 contained simple interments; 455 had incinerated human remains; and in 13 the bodies had only been partially burnt before being interred. The inhumed bodies lay, generally, from east to west, having the face towards sunrise with the head occasionally resting on a stone. At other times the body lay on a prepared bed, or coarse casing, of hardened clay. In two instances traces of a wooden coffin were observed. Sometimes two or more skeletons were found in the same grave, while, at other times, some portion of the skeleton was wanting. The skeletons were not so scientifically examined as could be desired, but, according to Dr. Hoernes, they belonged to a well-developed dolichocephalic race, of medium height (5 ft. 6 to 8 in.), with a prominent occiput, long and slightly prognathic face, and a straight or gently receding forehead. The ashes and charred bones were carefully collected and deposited in the natural soil, sometimes laid over a flat stone, and sometimes in a roughly burnt trough of clay. Only twice were burnt bones found in a bronze vase, and once in a clay urn. When the cremated remains had been deposited the grave-goods were placed near them, after which the coarser pieces of charcoal were heaped over the whole.

An analysis of the contents of the graves gave the following results:—The 538 tombs, after inhumation, contained: bronze—18 objects of armour, 1543 articles of toilet, 57 utensils, and 31 vases; iron—165 objects of armour, and 42 utensils; 6 articles of gold, 171 of amber, and 41 of glass; 342 clay vessels; and 61 diverse objects (spindle-whorls, sharpening stones, etc.). Similarly classified, the relics in the 455 tombs after incineration were as follows: bronze—91 objects of armour, 1735 of toilet, 55 utensils, and 179 vases; iron—348 objects of armour, and 43 utensils; 59 articles of gold, 106 of amber, and 35 of glass; 902 clay vessels; and 102 diverse objects.

From these statistics it would appear that the burials after cremation were richer in articles of luxury—such as bronze vases and fibulæ, beads of glass, gold cloth stuffs, etc., with the exception of objects of amber, which were more abundant with inhumed bodies' (*Rambles and Studies in Bosnia*[2], p. 399 ff.).

It may be noted as a point of some significance, that neither silver nor lead has been found in Hallstatt. Their absence, together with that of money, has been used to support the opinion that the cemetery was discontinued before these metals came into general use about the beginning of the 4th cent. B.C.

Baron von Sacken assigned the Hallstatt cemetery to the second half of the millennium immediately preceding the Christian era, and thought that it might be in continuous use till the advent of the Romans into that part of Europe. But, according to other writers, this range ought to be extended further back by several centuries, even to 1000 B.C. Owing to commercial currents from Eastern lands, especially by way of the Adriatic, and also, no doubt, to changes initiated by native skill, we might expect a considerable variation in the *technique* of the Hallstatt relics, even on v. Sacken's hypothesis of the more limited duration of the cemetery. The collection as a whole is thus a mere jumbling together of an assortment of objects, influenced not only by a rapidly progressing civilization, but also by a continuous importation of new materials; hence the difficulty of classifying them into a more precise division than earlier and later.

In the cemetery of S. Lucia, near Tolmino, above the head of the Adriatic, in which incineration was almost exclusively the mode of sepulture—there being only three interments by inhumation out of 3000 tombs examined by Dr. Marchesetti—the warlike element was represented by only one sword, two spears, and seven lances (all of iron). The sword is distinctly the La Tène type—thus suggesting that the peaceful ways of the people had been disturbed only in later times, probably during one of the marauding excursions of the Gauls into Italy. On the other hand, the *fibulæ* numbered 1629 of bronze and 108 of iron; of which 248 were of the 'Certosa' type—*i.e.* not much earlier than 400 B.C.—and 3 of the La Tène type. Of metallic vases there were eighty of bronze and one of iron, among the former being six *ciste a cordoni*. A few of these bronze vessels were decorated with dots, circles, and perpendicular flutings, but rarely with animal figures, and all in the same style of art as the analogous objects from Hallstatt.

(8) *The proto-historic people of Western Europe.*—As a general result of the preceding remarks on the sepulchral phenomena of Western Europe, the following propositions may be accepted as a fair summary of the ethnic elements, so far as these have been determined by modern research, which have helped to mould the physical characters of the highly mixed population now inhabiting the British Isles, but, of course, altogether apart from the influence of the environment.

(*a*) Anthropological researches have shown that during the Neolithic Age a long-headed race, of short stature but strong physique (average height 5 ft. 5 in.), who buried their dead in rudely constructed stone chambers, had spread over the whole of Western Europe, from the Mediterranean to the south of Scandinavia. Tacitus informs us that he identified the Silures, a people then occupying South Wales, as Iberians, on account of their swarthy complexion and curled hair (*Agricola*, xi.). The inference that these Silures were the direct descendants of the primitive long-headed people was not unreasonable, more especially as by that time the eastern parts of Britain had been taken possession of by successive waves of Gaulish and Belgic immigrants from the Continent—thus causing the earlier inhabitants to recede more and more westwards. And, if this is so, it follows that the long-headed men of the chambered cairns of Britain, Ireland, and France, as well as many other parts of the Continent, had a swarthy complexion, with dark hair and eyes, like so many people still inhabiting the more secluded parts of these localities.

(*b*) The incoming brachycephali were taller than the dolichocephali already in possession of the country—a statement which is proved by actual measurements of skeletons (average height 5 ft. 8 in.). Although they have been described by many modern writers as 'light in hair and complexion' (Greenwell, *op. cit.* p. 636), there does not appear to be any archæological evidence to support this assertion. The mistake seems to have arisen from inadvertently applying to the Bronze Age brachycephali qualities which were undoubtedly applicable at a later period to the Celts of history. The former buried their dead in short cists and round barrows, and carried with them a knowledge of bronze. While these two early races (the dolichocephali and brachycephali) were living together, apparently in harmony, the custom of disposing of the dead by cremation spread over the land—a custom which was introduced from the Continent, and had its origin probably in the strong religious

elements of the time, as it was practised by both races.

(*c*) At a considerably later period, but not many centuries prior to the occupation of Britain by the Romans, there was another Continental wave of immigrants, generally regarded as an offshoot of the *Galli* of classical authors, and probably the *Belgæ* of Cæsar, who introduced the industrial elements of the civilization known in this country as 'Late Celtic.' These newcomers differed radically from the former so-called Celtic invaders in having dolichocephalic heads — a statement which is supported by archæological evidence; for example, a skull found in a characteristic Late Celtic tumulus at Arras, Yorkshire, was described by Dr. Thurnam as having a cephalic index of 73·7. They were a branch of the Celts of history, whose very name at one time was a terror in Europe; and by classical writers they are described as very tall and fierce-looking, with fair hair, blond complexion, and blue eyes.

(*d*) The next and last of the great racial elements which entered into the ethnic composition of the British people of to-day were the successive Teutonic invasions from Germany, Denmark, and Scandinavia, all belonging to a tall blond dolichocephalic people who existed in Central Europe from time immemorial—possibly the descendants of the Neanderthaloid races of Palæolithic times.

There is no reference made here to the Roman occupation as a factor in British ethnology, because the Romans were a mere ruling caste, who, although they introduced new arts, industries, and customs into the country, kept themselves aloof from the natives, and did not, as a rule, intermarry with them. Hence, when they finally abandoned Britain they left its inhabitants racially unaffected, much as would be the case with India if the British were now to retire from it. To-day we hunt for remains of military roads, camps, accoutrements of war, and other relics of their civilization, but of their skeletons we know very little, and of their British offspring nothing at all.

R. MUNRO.

DEATH AND DISPOSAL OF THE DEAD (Greek).

—Burial was the method of disposing of the dead followed by all the Mediterranean peoples during the Neolithic epoch, and the same custom obtained in Greece, and was continued without interruption at least until the Homeric period. That the Greeks of the pre-Mycenæan and Mycenæan civilization buried their dead is evident from the tombs discovered in Crete, in the Cyclades, at Mycenæ, Orchomenus, and Vaphio. It has also been proved that Schliemann was mistaken in believing that he found in the Mycenæan tombs indications of a partial cremation of the dead. In the island of Crete, Evans and Halbherr, who discovered many tombs of the Mycenæan epoch and others of different periods, found burial to be the invariable custom without any sign of cremation, either partial or total.

Apparently, then, the first notice of cremation occurs in Homer; it is described with grim vividness, especially in the account of the obsequies of Patroclus (*Il.* xxiii. 110 ff.). Homer also offers an explanation of this new funerary custom, which appears to be contrary to the beliefs of the Greek people. He makes Nestor say that it is necessary to burn the bodies of those who died in battle, in order that the bones might be carried back to their native land to the sons of the dead (*Il.* vii. 331 f.). But this reason is inadequate to account for so profound a change of custom. The change from burial to cremation must already have taken place in the Homeric age, just as it had previously been made in Central and, in part, in Southern Europe. It was then introduced into Greece as it had been into Italy, and very probably by the same races who were afterwards known under the name of Aryan, and who originated many other changes in the customs of the peoples subdued by them.

While in some regions of Europe there was a period during which cremation prevailed (and among these regions must be included Northern and also, in part, Southern Italy), in Greece the ancient and the new practices flourished for a long time side by side, just as was the case in Rome; but in Rome, from the discoveries in the Forum and from those made in other parts of the city and in Latium, we can plainly recognize the substitution of cremation for burial. This does not appear so clearly in Greece; but it cannot have happened otherwise. At the time of the Homeric rhapsodies, cremation must have been in use quite as much as burial. In succeeding epochs both methods were employed, as may be gathered from Greek authors, who attest the existence now of the one custom and now of the other.

We have at the present day full information regarding the forms of the tombs used by the Greeks previous to the classic epoch, and especially in those characteristic periods which are to be referred to pre-Mycenæan and Mycenæan civilization both on the continent and in the various islands. The funerary architecture of these periods may be classified under four chief forms: (1) dome-tombs, (2) chamber-tombs, (3) shaft-tombs, and (4) pit-tombs.

The finest example of a dome-tomb is that of the tomb called the Treasury of Atreus at Mycenæ, discovered by Schliemann. Then come those of Orchomenus, of Vaphio, of Heraion, of Eleusis, and of other places, which are magnificently and splendidly decorated, not indeed like that at Mycenæ, although they have the same architectural form.

The chamber-tombs are distinguished from the dome-tombs by the rectangular form of their plan, the dome-tombs being circular; by their more or less flat roof; and also by the diminished height of the mortuary chamber. But, like the others, they have a corridor (*δρόμος*) for entrance, with a door of ingress, and they may also have a varying number of lateral chambers. These tombs were excavated in the rock, and are found throughout the whole of Greece and in the islands, especially in Crete, where they were discovered by Evans and Halbherr. Sarcophagi are found in them—sometimes one, two, or even four—made of terra-cotta and painted on the outside; or else there is a trench in them in which the corpse has been placed; or sometimes the corpse was laid upon the floor of the sepulchral chamber (Evans, *Prehistoric Tombs of Knossos*, p. 5; Orsi, *Urne funebri cretesi*, p. 2 ff.).

The shaft-tombs were dug in the ground and

covered with either rough or squared slabs of stone. In these graves the body was usually placed on its back; sometimes it was curled up.

The pit-tombs consist of a kind of well which was almost always excavated in the rock, with steps to descend into it; at the bottom an arched aperture is found which gives access to the sepulchral cell. The cell is generally supported by a double wall of rude blocks, and is sufficiently long to contain a skeleton stretched out at full length. But Evans remarks that this type of tomb, although it has different characteristics, resembles in its cell the shaft-tombs.

In the island of Crete no dome-tombs have been discovered like those of Mycenæ or of Orchomenus; but the royal tomb of Isopates described by Evans and re-constructed by Fyfe (Evans, *op. cit.*) fills up the lacuna.

It appears to have been the primitive custom of the Greeks to bury their dead in the village where they dwelt, and sometimes in the houses themselves. It is certain that at Mycenæ tombs have been found in the houses, here and there in groups of five, or even of twenty, among the remains of habitations. At Athens, also, houses with tombs have been discovered. Plato makes mention of this custom, and calls it barbarous (*Min.* 315). It seems to have been abolished by the laws of Solon. The *agora* also appears to have been used for burying: Mycenæ supplies an example of this. Further, it is well known that in the classic epoch many Greek cities had, or believed that they had, in the *agora* the burial-place of their more renowned heroes.

It appears, further, that the Greeks in primitive times offered human sacrifices at funerals. This seems certain not only from the Homeric account of the obsequies of Patroclus, but also from some indications in the tombs of Mycenæ. In the *dromos* of the rock-tombs, human bones have often been found, and in front of one sepulchre there were discovered six human skeletons placed crosswise and mingled with the bones of animals and broken pieces of common utensils. From this it has been suspected that the bodies were those of victims sacrificed to the dead (Perrot-Chipiez, *Histoire de l'art*, vi. 564). Further, Plato says (*ib.*) that human sacrifices were offered in Lykaia (Λυκαῖα), and also by the descendants of Athamas, although they were Greeks and not barbarians.

From the most remote antiquity, as we gather from the pre-historic tombs, the Greeks had a religious cult for their dead. They considered the right of sepulture as sacred, and consequently as a law. This sentiment was handed down to the historic Greeks, the true Ἕλληνες. It was also a duty and a kind of Pan-Hellenic law (Πανελλήνων νόμος, Eurip. *Suppl.* 524) to give sepulture to enemies who died in battle. The law of Solon, which exempted a son from the obligation to support a father who had rendered himself unworthy, imposed upon him the duty of burying him with all due honours (Æsch. *in Timarch.* 13; the very words δίκαια, νόμιμα, affirm the right of the dead to sepulture). In the classic epoch, religious belief was permeated with the notion that the spirit of the dead could not enter into the subterranean realm if the body had not received burial—the soul (ψυχή) would wander about without a resting-place, and would not be able to pass over the fatal river in order to enter Hades.

We do not know how the primitive Greeks conducted themselves between the death and the burial of the deceased; but from what we know of the historical epoch we may infer without any doubt what were their customs in primitive times.

In the pre-historic tombs of Knossos the corpse was buried in a grave, or else was laid on the pavement of the sepulchral chamber, or in a sarcophagus in a *larnax* of clay. It was usually placed stretched out at length, or sometimes curled up, either in the grave or in the sarcophagus. There was no fixed direction or orientation of the position of the dead. In tombs of every type, objects belonging to the deceased are found, according to sex and condition: weapons, swords, knives, arrows, razors, ornaments of gold and of bronze, rings, seals, lamps, and so on. Tombs like those of Mycenæ and Vaphio have furnished objects of great value both as to their material—principally gold—and as to their artistic make. Objects which were most dear to the deceased, and which he had possessed when living, were placed with him in the tomb. This usage continued without interruption into the historic epoch, together with other usages which were gradually abolished by various successive laws, because they were held to be barbarous. We have proof of this in the Homeric period, which may be regarded as an intermediate one between the pre-historic and the historic periods, primitive funeral customs being still found which were no longer practised in the period which followed, as well as others which were retained.

In order to give an idea of this, it will be sufficient to relate in full what was done at the funeral of Patroclus, so admirably described by Homer (*Il.* xviii., xxiii.). We shall follow the poet's order:—

[illegible] purpose also of the [illegible] cow, which is led along in the funeral train, and whose members are finally laid upon those of the dead, its kidneys being deposited in his hands as food for Yama's dogs. The streams which have to be crossed are probably indicated by the piece of reed which is introduced into the wall of the tomb, and which is meant to serve as a boat (cf. CERBERUS, BRIDGE).

The realm of the dead is variously located in the west or the south—occasionally in the east, no doubt in conformity with the conception of Rigv. x. 15. 7, which speaks of the fathers as *aruṇīnām upasthe*, 'in the bosom of the dawn.' The dead are sought for in earth and air and heaven, in sun and moon and stars—in the last-named very rarely. In fact, we encounter a number of frequently contradictory views, which originated at different times and among different races, and which, after undergoing artificial amalgamation, now emerge in the Vedic ritual and its hymns (Hillebrandt, *Ved. Myth.*, Breslau, 1891–1902, iii. 414 ff.).

The usual method of disposing of the dead is cremation. But the well-known distinction drawn in Rigv. x. 15. 14 between *agnidagdhas* and *anagnidagdhas* (cremated and un-cremated *manes*) shows that other forms were known and practised. It is not at all impossible that Rigv. x. 18. 10 ff. originally referred to the rite of burial (Winternitz,

In the classic period the dead body was washed, anointed with unguents and oil, and wrapped in a white garment. It appears, however, that the garment was not always white; it might be black. The eyes were closed, and the jaw was bound to the head in order that the mouth might remain shut when rigidity came on. The care of the dead was the business of the people of the house, especially the relatives, and among these the women. Further, a garland was placed on the head of the deceased. Afterwards the corpse was laid on an ordinary bed (κλίνη), and was exposed to view. This exposing (πρόθεσις) took place in the house, the feet of the dead being turned towards the door; a law of Solon prohibited an exposing before the door, as seems to have been done at first. This exposing took place the day after death. An earlier time was prohibited in order, naturally, that there might be assurance that

actual death had taken place; and, on the other hand, a too prolonged exposing was not allowed. According to Greek beliefs, the dead must be buried relatively soon in order that the soul might be able to enter the realm of the dead and might not wander about. Patroclus, whose body, on account of the solemn funeral rites, was exposed for twelve days after his death, says to Achilles, to whom he appears in a dream, *θάπτε με ὅττι τάχιστα, πύλας Ἄϊδαο περήσω* (*Il.* xxiii. 71).

At what seems to be a late period, a piece of money was placed in the mouth of the deceased as a *ναῦλον* to pay the ferryman who transported him to the further side of the river into the realm of the dead. A honey cake (*μελιτοῦττα*) was buried with him, as an appropriate offering to the guardian of the doors of the infernal regions (Aristoph. *Lys.* 599). The scholiast on Aristophanes adds that the cake serves for Cerberus (*q.v.*), the piece of money for the ferryman, and the dead man's garland is for the struggle which he has undergone in issuing from life.

Upon the bier was placed a vessel of earth, usually a *λήκυθος*, which contained an unguent. On this vessel, which was of a characteristic form, were depicted appropriate funeral scenes; and, in fact, it represented the deceased. At the door of ingress was placed an earthen vessel (*ὄστρακον*) containing spring water (Aristoph. *Eccl.* 1033), which was to serve for purifying those who had been in contact with the dead, and in general all

the Romans were a mere ruling caste, who, though they introduced new arts, industries, a customs into the country, kept themselves alo from the natives, and did not, as a rule, inte marry with them. Hence, when they finall abandoned Britain they left its inhabitants racial unaffected, much as would be the case with India the British were now to retire from it. To-day w hunt for remains of military roads, camps, e coutrements of war, and other relics of the civilization, but of their skeletons we know ve little, and of their British offspring nothing at a

stone. But the dead were not always laid in a tomb of stone without a coffin (*σορός, λάρναξ*). When the latter was used, it was made of cypress or other wood.

The different stages of the funeral were usually accompanied by weeping and lamentation on the part of the relatives and friends, and of other persons who visited the dead when exposed to view and attended him to the sepulchre. These manifestations of grief must originally have been excessive, and not different from those we have met with in Homer. They were prohibited by legislators like Solon and Charondas, who desired to restrain what appeared to many Greek writers to be clamorous and barbaric forms of grief. Plato describes as indecorous the weeping for the dead, and would have liked to prohibit lamentations (*θρηνεῖν*) outside the house (*Legg.* xii. 960). It is true that Æschylus (*Choeph.* 20 f.) and Euripides (*Hec.* 642 f.) describe displays of grief such as striking the breast, tearing and lacerating the face and garments, and pulling out the hair; but probably these two authors wished to reproduce primitive customs which were no longer permitted in their day. In spite of legislative prohibitions, however, there was no cessation at funerals of more or less exaggerated manifestations of grief; the bier was certainly accompanied by funeral-singers (*θρηνῳδοί*). Plato himself speaks of them (*Legg.* vii. 800) in the masculine only. This duty, however, was carried out also by women called *Καρίναι, θρηνῳδοί, μουσικαί*, probably, as is supposed, from their Carian origin, whence came the employment of the term for those women who sang over the dead, just as a kind of flute was called Phrygian as having been invented by the Phrygians, *e.g. αὐλὸς θρηνητικός* (Poll. iv. 75).

While in pre-historic times the places of sepulture were either the houses or the streets of the city or village, or even the *agora*, in the classical period the Greeks had fixed places outside the city, cemeteries in the common and broad signification of the term; or else they made use of the roads outside of the city, as may still be seen in Italy, *e.g.* at Pompeii. Moreover, distinguishing signs or inscriptions were placed upon the sepulchres. The sepulchres themselves had different names, as *θῆκαι, τάφοι, μνήματα*, and they might have different forms, among which was that of the tumulus (*χῶμα*, barrow). There were placed upon them stelæ (*στῆλαι*), a kind of posts, or actual columns (*κίονες*), or little temples (*ναΐδια, ἡρῷα*), or else horizontal slabs of stone (*τράπεζαι*), with inscriptions (*γραφαί*).

In the sepulchres in Greece, from the most ancient and primitive onwards, have been found objects and vessels frequently of great value, such as those of Mycenæ, of Vaphio, and of Crete. These were deposited in the tomb with the dead, and were objects which had belonged to him. Thus there have been found objects for the toilet, weapons, little figures of earth or of bronze, and, especially, bronze or earthen vessels. The sepulchres themselves contain the bones of domestic animals, among which are those of the horse. In the ideas and beliefs of the Greeks there was the conviction that the dead person must have for his journey to the subterranean world the same objects of use and of ornament which he had possessed when living, and also utensils and vessels which were proper for eating and drinking from, and containing food and drink. This usage did not cease in classic Greece, as has been proved by the vessels and other objects which have been found in the sepulchres of this epoch.

The burial was followed by the funeral meal (*περίδειπνον*), already met with in the Homeric period, though not by the games, which had been abolished; and also by the purification (*καταλούεσθαι*). But solicitude for the deceased did not end here: on the third day after the burial, sacrifices (called *τρίτα*) were offered upon the tomb, especially on the stele or other object placed on it; these sacrifices were repeated on the ninth day (*ἔνατα*); and in the meanwhile the mourning began. This, in the majority of cases, lasted thirty days; the shortest period was twelve (Plut. *Lyc.* 27). As to external signs, mourning was shown by abstinence from everything which might cause joy and pleasure, and also by putting on a black garment, or clothing which was only in part black. According to Plutarch (*Quæst. Rom.* xiv.), it was a custom with the Greeks that during the mourning the women should shave off their hair, and the men should let theirs grow, if the regular usage was for the men to shave off the hair, and the women to let theirs grow. Euripides makes mention (*Iphig. Aul.* 1437 f.) of the cutting off of the hair

and the putting on of a black *peplum* for mourning. The Argive custom of wearing a white garment for mourning instead of a black one (Plut. *op. cit.* xxvi.) seems to have been an exception.

In Athens there was also an anniversary of the death called by Herodotus (iv. 26) γενέσια, a funeral feast, during which sacrifices were offered to the earth (τῇ γῇ)—a commemoration called by others νεκύσια or ὡραῖα. It is to be supposed that such a commemoration was chiefly found in the case of men well known and highly thought of, notwithstanding that no distinction of persons or classes is made by Greek writers. But a general feeling of respect for tombs, and especially for ancestors, may be inferred from what one reads in Æschylus (*Pers.* 401 ff.) concerning the tombs of forefathers (θήκας τε προγόνων). Just as in the commemoration on the third and ninth days after burial, so at the annual commemorations, there were sacrifices, offerings and libations (ἐνάγισμα) to the dead, who was supposed to be already in the subterranean world; whence such libations took also the name of χοαί, and of χθόνια λουτρά.

The unhappy criminal alone was denied sepulture and a funeral. In Athens the bodies of criminals were thrown behind the tower Melita and along by the northern walls of the city (Plut. *Them.* xxii.; Plato, *Repub.* iv. 439). The suicide's right hand was cut off; but he was granted burial. Plato would have the suicide buried in silence and without any sign of sepulture (*Legg.* ix. 873). Finally, to those whose bodies could not be obtained, cenotaphs or empty monuments were erected. Euripides (*Hel.* 1241) says that it was a law of the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (κενοῖσι θάπτειν ἐν πέπλων ὑφάσμασιν).

G. SERGI.

DEATH AND DISPOSAL OF THE DEAD (Hindu).

—Life and death stand in perpetual contrast. To give expression to this fact is the aim of Hindu ritual in all its processes, down to the minutest details. In the case of offerings to the gods the participants circumambulate the fire with their right side turned towards it, and in a direction from left to right; in offerings to the *manes* the left side is turned, and the direction is from right to left—the opposite of the sun's course (see CIRCUMAMBULATION); in the former case the right knee is bowed, in the latter the left; in the one the sacrificial cord is put on from left to right (under the right arm), in the other from right to left (under the left arm); ropes are twisted from right to left; even numbers are assigned to the gods, odd ones to the *manes*; to the former belongs everything that is young, healthy, and strong, to the latter what is old, weak, or deformed. Everything that is bright-coloured—the forenoon, the ascending half of the month or the year—is assigned to the gods; whereas the *manes* have their portion in all that is dark—the afternoon, the descending half of the month or the year. Even in the course of a human life the 50th year marks a boundary, those who have not reached it belonging to the gods, those who have passed it to the *manes*.

Dread of the evil influence of the dead, their impurity, their return, and their interference with the living is another characteristic of the ritual. Fire-brands and jets of water serve to ward off this influence; stones are laid down between the village and the place of cremation; on the way home from the latter, care is taken to obliterate footprints in order to prevent the dead from finding the way, or perhaps to save the footprint, which is a possible subject of magic, from being exposed to the influence of hostile spirits; at the funeral ceremonies plants are selected whose names—such as *apāmārga*, *avakā*, *yava*—have a protective sense.

The living are bound to prepare the way for the dead in the other world, to provide them with food for their great journey into Yama's realm, and to supply them with means for crossing the rivers. These ends are served by the *utkrānti* or *vaitaraṇī* cow, which in some cases has been presented to the Brāhmans before his death by the deceased himself or his son. The same was originally, no doubt, the purpose also of the *anustaraṇī* cow, which is led along in the funeral train, and whose members are finally laid upon those of the dead, its kidneys being deposited in his hands as food for Yama's dogs. The streams which have to be crossed are probably indicated by the piece of reed which is introduced into the wall of the tomb, and which is meant to serve as a boat (cf. CERBERUS, BRIDGE).

The realm of the dead is variously located in the west or the south—occasionally in the east, no doubt in conformity with the conception of Rigv. x. 15. 7, which speaks of the fathers as *aruṇīnām upasthe*, 'in the bosom of the dawn.' The dead are sought for in earth and air and heaven, in sun and moon and stars—in the last-named very rarely. In fact, we encounter a number of frequently contradictory views, which originated at different times and among different races, and which, after undergoing artificial amalgamation, now emerge in the Vedic ritual and its hymns (Hillebrandt, *Ved. Myth.*, Breslau, 1891–1902, iii. 414 ff.).

The usual method of disposing of the dead is cremation. But the well-known distinction drawn in Rigv. x. 15. 14 between *agnidagdhas* and *anagnidagdhas* (cremated and un-cremated *manes*) shows that other forms were known and practised. It is not at all impossible that Rigv. x. 18. 10 ff. originally referred to the rite of burial (Winternitz, *Gesch. d. ind. Litt.*, i. [Leipzig, 1905] 85). But our present ritual is not acquainted with burial except as applied to young children and ascetics, in whose case, from a motive half-philosophic, half-superstitious, and after a fashion known even at the present day, the skull was split with a coco-nut (Caland, *Altind. Bestatt.* § 50, p. 95). The only other trace which appears to point with any certainty to burial is found in the *śmaśānachiti*, which follows the placing of the remains in the urn. The Brāhmans were reluctant to abandon old customs; they modified them when necessary, and linked them on to other existing usages. Just as the *pravargya* ceremony—once an independent milk-offering—was combined with the soma-offering, so the non-obligatory *śmaśānachiti* may have been originally an independent custom. In the measures of this *chiti* Caland (*l.c.* 181 f.) has rightly seen the 'survival' of original burial; and the circumstance

that there the urn is not interred, but cast away, also appears to point to the independence of the *śmaśānachiti*, for which urn-burial is not a necessity.

The data as to burial are found in the Vedic hymns, and especially in the Sūtras—the Gṛhya and Pitṛmedha and kindred texts—and in the records of modern usages. It is not without interest that many of the regulations of the Sūtras find parallels at the present day among Indian tribes. As we find the injunction that those returning from the place of cremation are to deposit stones or other objects between the dead man and his village, so 'the Mangars of Nepal obstruct the road leading from the grave with a barricade of thorns, through which the soul, conceived of as a miniature man, very tender and fragile, is unable to force its way' (*Census of India*, 1901, i. 355). On the other hand, our Sūtras do not contain an account of all the customs that existed or may have existed, and do not coincide with the ritual known to the Rigveda. An interesting illustration of this is supplied by Dr. Bloch (*Annual Report of the Archæol. Survey*, Bengal circle, for the year ending April 1905, Calcutta, 1905 [*ZDMG* lx. 227 ff.]), who opened some burial-mounds at Lauriya, and found in the midst of them remains of a wooden post (*sthūnā*), which recalls the post mentioned in Rigv. x. 18. 13, and of whose meaning the Sūtra ritual gives us no idea.

It would be quite out of place here to treat even superficially of the huge mass of prescriptions to be found in published and unpublished texts, or of the variations presented by the usages of different schools and families. Caland divides the whole ceremonial into 114 acts, not to speak of the variations found in each of these. It is equally impossible to discuss the numerous verses which accompany the particular acts, and whose real relation to these is not always clear; or, more especially, the circumstantial casuistry with which the highly ingenious spirit of Brāhmanism has sought, in a manner that is far from uninteresting, to provide for all possibilities. Like the ceremonies connected with birth, those attending on death are a *saṁskāra*. 'It is well known,' says the *Baudhāyana Pitṛmedha*, iii. 1. 4, 'that through the *saṁskāra* after birth one conquers earth; through the *saṁskāra* after death, heaven.' Ritualists are therefore eager to have this *saṁskāra* performed with care and with regard to all circumstances. It may happen, for instance, that the Hindu dies in a foreign land and must be brought home, or that he dies there and remains forgotten. In the latter case cremation is performed in effigy upon a human figure composed of *palāśa* stems. Should it chance, however, that after all the man returns alive, the ritual provides even for this, and ordains that he must be born anew—*i.e.* undergo all the rites of *jātakarman*, in which he sits speechless and with clenched fists, like an embryo in the womb (Caland, § 44). When a prostitute dies, she must not be cremated, according to some teachers, with ordinary fire, but with that of the forest, wild and unchecked. Other regulations apply to the death of a widow or a woman in childbirth. If a man longs for death, he presents an offering, the various acts in which symbolize this longing (cf. *Kāt. Śr. S.* xxii. 6. 1). If one dies in the act of presenting an ordinary offering, certain rules are to be followed. But it is impossible to go into all this; only when the *Śrauta* Sūtras have been translated, will the historian of religion and the ethnographer obtain full insight into this circle of ideas. Here we must content ourselves with a brief account of the most important features of the ritual.[1]

[1] For fuller details, see the present writer's sketch in *GIAP* iii. 2; and Caland (*op. cit. infra*), whose work is thorough, and yet does not exhaust the enormous quantity of material.

1. Death.—When the Hindu feels the approach of death, he must summon his relatives, hold friendly converse with them, and, if the dying-hour is very near, have himself placed on a cleansed spot on sandy soil. It promotes his future weal to make presents before his death to Brāhmans; among these gifts a special value attaches to the *vaitaraṇī*-cow as his conductor over the stream of the under world. His dying-couch is prepared in proximity to the three fires, or, if he keeps up only one, near to it, viz. the domestic fire, and here he is laid down with his head turned towards the south. In his ear are repeated passages from the Veda of his school, or, if he is a Brahmavid, from an *Āranyaka*. When death has taken place, they bring the corpse to a covered place, and then (or, with many, at a later stage) cut his hair and nails, which, according to Gautama (ii. 24), should be deposited in a hole in the ground. Many follow the practice (prohibited by others) of opening the body, removing the excrements, and replacing the entrails after they have been washed in water and filled with butter—a procedure intended, in the opinion of the present writer, simply to facilitate cremation, which would be hampered by the heavy *fæces*. Then the corpse, with its head turned towards the south, is laid upon a bier covered with a black skin; on the dead man's head is placed a wreath of nard; he is clothed down to the feet in a new robe, the old one being given to the son, to a pupil, or to the wife of the deceased, to be worn for life or till it becomes too old for use. Others have a piece of the death-robe cut off, and hand it over to be kept by the sons. Noteworthy is the practice of some, who bind together the thumbs (or the toes) of the deceased—a custom which, as Caland (*l.c.* 176) and Steinmetz (*ap.* Caland) remark, is found also among other than Indian peoples (see above, p. 433[a]).

If the deceased has in his lifetime presented animal-offerings, three he-goats are provided; if he has offered *sāṁnāyya* (sweet and sour milk libations) at new and full moon, a milk-offering (*āmikṣā*) is to be presented [evidently slight differences of cult going back to primeval times]. If goats are not used, many take 'black rice-grains,' of which from one to three rice-paps are made. A remarkable figure is that of an old, un-horned, vicious cow (*anustaraṇī*). When the cow is brought, the servants of the deceased have each to throw three handfuls of dust over their shoulders. At the head of the procession (according to the teaching of many) walks a man with a firebrand which he has kindled at the domestic fire; he is followed by the sacrificial fires of the deceased and the apparatus for the cremation ceremony, including the above-mentioned *anustaraṇī* cow; next in order is the dead man on his couch, which is placed on a mat or on the before-mentioned bier, carried by servants, old people, sons, or relatives near and remote, according as the custom may be. In many circles it is the practice—still followed in certain instances in India—to employ for the transport of the corpse a waggon drawn by black oxen, and to place upon it also the fires and sacrificial utensils of the deceased. Behind the corpse come the relatives, the older ones first, men and women, the latter with loose dishevelled hair and their shoulders besprinkled with dust. [In points of detail we meet with many variations.] When the corpse is lifted, the invocation, 'May Pūṣan bring thee from here!' is addressed to Pūṣan, who in the whole ceremonial appears as *ψυχοπομπός*—a rôle already assigned him in the Rigveda. When a third or a fourth of the way has been covered, one of the goats is killed, or one of the paps of rice (or, if there be only one, a third of it) is poured upon a clod of earth thrown to the south. Thereupon the

company, with the younger ones in front, thrice circumambulate the corpse and the clod from right to left, with their hair loose on the left side and bound up on the right, at the same time striking their right thigh with the hand and fanning the corpse with the extremity of their garments. Then comes a thrice-repeated circumambulation from left to right, with the hair loose on the right side and bound up on the left, with a striking of the left thigh, but, according to the view of certain scholars, without another fanning of the corpse. The same procedure is repeated at the second third of the journey and at its termination. The rice-vessel is finally dashed on the ground, and its fragments so shattered that water will not remain upon them. [The variations encountered here in the practice of the different schools are numerous. Some walk along strewing small pieces of iron or roasted grains of rice upon the ground, while they recite or sing Yama-hymns. The Mādhyandinas deposit a rice-clod at the place of death, one near the door as they leave the house, one for the *bhūtas* half-way between the dwelling and the place of cremation, and one for the wind as soon as the place of cremation is reached, while one is deposited in the hand of the deceased.]

2. Cremation.—Special regulations, particularly as to its orientation, are offered for the choice of the place of cremation, which in some respects resembles the place of offering for the gods, while in others it is quite different. The duly selected spot is purified, and a formula is employed to scare away demons or ghosts. The kind of wood used, the size and orientation of the pyre, and everything of a like kind are regulated by rigid prescription, scarcely anything being left to caprice. The corpse is now (or later) laid on the pyre, the threads which bind the thumbs are loosed, the cords which hold the bier together are severed, and the bier itself is flung into the water or laid on the pyre, upon which the fires of the deceased also find a place. When all is done according to rule, the *anustaraṇī* cow is brought forward, and so held by the relatives of the deceased that the youngest of them touches her hind-quarters, while the others are so arranged that an older person always touches a younger. The cow may either be slaughtered or —manifestly in connexion with a later custom—let go. The latter course must be followed in the case of one who has presented no animal-offerings. The animal is in that case led round the fires, the pyre, and the corpse, and with certain formulæ set free. To the north of the pyre the widow of the deceased crouches down, but (with formulæ which originally belonged to an entirely different ritual) is called on to rise and return to the world of life. There, too, is placed the bow of the deceased, which is afterwards cast upon the pyre. Upon the openings of the face are laid small pieces of gold, or at least melted butter is allowed to trickle down upon them. The sacrificial utensils of the dead, which he has had in his possession since the kindling of the fires, are distributed over his limbs, those of them that have a cavity being filled with butter—plainly for the purpose of feeding the fire; the two millstones (according to one version) are appropriated by the son, and so is everything made of copper, brass, or clay. In like manner the parts of the cow are distributed over the members of the deceased: the caul, for instance, being laid on his head and face, the kidneys (for Yama's dogs) being placed in his hands, along with a lump of curds (for Mitra-Varuṇa) if he has presented *sāṁnāyya*-offerings. Before or during the process of cremation [here, as almost everywhere, different opinions prevail in the schools] the pyre is asperged after a fashion that may still be observed: the person performing this office walks round the pyre carrying on his left shoulder a pitcher, in the back of which there has been made, by an axe or a stone, a hole through which the water runs out. After a triple circumambulation he casts the pitcher behind him.

Now begins the *cremation*, which is regarded as an offering into the fire, conducting the corpse to heaven as a sacrificial gift. In the *Dakṣiṇa*-fire are offered libations for Agni, Kāma, Loka, etc., and finally a libation on the breast of the deceased to Agni, 'who is now to be born of him as he once was of Agni.' If the man was an Anāhitāgni, the firebrand is taken from the domestic fire; if he was an Āhitagni, the cremation is performed by the flames of the three or five fires kept up by him. Note is taken of which fire reaches him first, and it is augured therefrom whether the deceased has gone into the world of the gods or of the *manes*, or into some other world. To the north-east of the *āhavanīya* a knee-deep trench is dug, in which a certain water-plant is placed—clearly an ancient superstition—in order to cool the heat of the fire. The traditional explanation of the custom is that 'the dead man rises from the trench and ascends along with the smoke to heaven.' Behind the pyre a goat is fastened, but in such a manner that it is possible for it to break away, and, if it does so, nothing is done to prevent it. The cremation is accompanied by a number of verses or songs selected according to the school to which the deceased belonged. While the pyre continues to blaze, the relatives move off without looking round. The officiant gives them seven pebbles, which on their way home they scatter with the left hand turned downwards. [According to the prescription of another school, three trenches are dug behind the pyre; they are then filled with water from an uneven number of pitchers, and gravel is thrown in. The relatives enter the trenches, touch the water, and then creep through branches set in the ground behind, and bound together by a rope made of *darbha*-straw. The last to creep through tears the branches apart. Gautama directs a thorny branch, Vaikhānasa a grass snare, to be held in front of them, under which they must creep.] The company, as they leave the place of cremation, must restrain themselves from any exhibition of mourning, and go forward with heads bent down, entertaining one another with well-omened speeches and virtuous tales. Many tears, it is said, burn the dead (cf. *Raghuvaṁśa*, viii. 86). Yudhiṣṭhira is rebuked by Vyāsa for bewailing the death of his nephew. Story-tellers (*paurāṇikas*, etc.) are therefore engaged in order to drive away by their skill the sorrows of the relatives (Lüders, *ZDMG* lviii. 706 ff.).

3. Udakakarman.—The offering of water to the deceased which follows is carried out in a variety of ways. According to one view, all the relatives —down to the seventh or tenth generation—must enter the water. They wear only a single garment, and the sacrificial cord hangs over the right shoulder; many also direct that the hair must be dishevelled and dust thrown upon the body. They turn their face towards the south, plunge under the water, call upon the dead by name, and offer him a handful of water. Then they emerge, bow the left knee, and wring their dripping garment.

An interesting usage prevails at the present day. Immediately after the bath a quantity of boiled rice and peas is set out for the crows (Caland, p. 78). This recalls the primitive notion that the dead appear as birds, and the comparison of the *Maruts* with birds, for the *Maruts* are an offshoot from the cult of the dead. Scarcely anything connected with the history of cults can be seen more interesting or more strongly reminiscent of the earlier times than an enormous Pipal tree—not the one sacred to the Buddhist community on the western side of the *stūpa*—growing to the north of the Buddhist sanctuary at Bodh-Gayā, beneath which offerings to the *manes* are continuously presented, while blackbirds fly to and fro amongst its branches.

After the bath the relatives seat themselves

upon a clean grassy spot, where they are regaled with stories or Yama-songs. They do not return to the village till the first star shows itself, or the sun is partly set, or the herds come home. At the door of the house they chew leaves of the *pichumanda* (*Azadirachta indica*), rinse their mouth, touch water, fire, cow-dung, etc., or inhale the smoke of a certain species of wood, tread upon a stone, and then enter.

4. Āśaucha (uncleanness).—The occurrence of death renders those associated with it unclean—a condition which lasts from 1 to 10 days, and is variously regulated according to circumstances and the usages of particular schools. 'After ten days' the mourning ceremonies for Indumatī are ended (*Raghuvaṁśa*, viii. 73). The prescriptions to be attended to during the *āśaucha* are partly negative—in so far as they forbid certain things, such as the cutting of the hair and beard, study of the Vedas, *Gṛhya*-offerings; and partly positive—*e.g.* the enjoining of certain offerings. The first night a rice-ball is offered to the dead, before and after which water for washing is poured out for him, and he is called on by name. Milk and water are set out for him in the open air. Many set out perfumes and drinks for him, as well as a lamp to facilitate his progress through the terrible darkness that enshrouds the road to the city of Yama. Others cause a trench to be dug, into which perfumes and flowers are cast, while a pot suspended by a noose is hung over it. Even to-day the notion is to be met with that a thread serves the spirit of the deceased as a ladder to reach the drink suspended by it (Caland, p. 88).

5. Saṁchayana.—The collecting of the bones after cremation is usually carried out on an uneven day; according to some, during the dark half of the month, and under certain constellations. For the bones of a man a plain urn is employed; for those of a woman, a 'female' one, *i.e.* one adorned with breasts. The bones are picked up one by one, with the thumb and ring-finger, and are laid without noise in the urn. Among the Taittirīyas this duty is performed by women, regarding the selection of whom the prescriptions vary. According to the rules of Baudhāyana they must attach a fruit of the *bṛhatī*-plant to their left hand with a dark-blue and a red thread, mount upon a stone, wipe their hands once with an *apāmārga*-plant, and with closed eyes collect the bones with the left hand. The urn, which is closed with a lid, is placed in a trench prepared in the same manner as the place of cremation, and having no flow to it except rain-water; or it may be laid under the root of a tree. Others place grass and a yellow cloth in a trench, and then throw in the bones. From the latest period we have an account of how one 'puts [the remains] into a little new barrel, and throws them into the water, if there be any at hand, or, if not, into some desert and lonely place.' The Kapola-Banias tie up the bones in a piece 'of silken cloth, and the bundle so made is suspended to the bough of a tree in the burning-ground' (*JASB* iii. 8, p. 489; Caland, 105[384]). Many schools enjoin a second cremation, in which the bones that have survived the first process are pulverized, mixed with butter, and then offered in the fire.

6. Śāntikarman.—This is another important department of the death-ritual. [In many ceremonies it comes at the point we have now reached, in many not till after the *śmaśānakaraṇa*. The reason for this appears to be that the *saṁchayana* and the *śmaśānakaraṇa* were originally parallel usages, which were only afterwards brought into connexion, and the *śāntikarman* continued in several schools to hold the place which belonged to it at first.] According to Āśvalāyana, the ceremony is to be held on the day of new moon. The same authority directs that a fire, with ashes and fireplace, is to be carried southwards and set down at a cross-road or elsewhere; then the participants are to circumambulate it thrice, striking the left thigh with the left hand. [Others kindle an ordinary fire at a spot between the village and the *śmaśāna* ground.] Then they return without looking round, touch water, and furnish themselves with a number of new articles—jugs, jars, fire-sticks of *śamī*-wood, etc. The fire is kindled afresh, and they sit till nightfall around it, entertaining one another with auspicious stories. When the stillness of night reigns, an uninterrupted stream of water is poured around the house from the south to the north side of the door, and then the participants take their places on an ox-skin that is spread for them. The formulæ uttered during this and other parts of the ceremony have regard to life and the averting of death. A stone is laid down to the north of the fire, 'to keep off death.' The young women anoint their eyes with fresh butter. Many texts speak also of the leading around of an ox, of which the company take hold and walk behind it: the one who closes the procession has to obliterate the footmarks. A strange notion entertained by certain Indian tribes is cited by Caland (*l.c.*) from the *Bombay Gazetteer* (xiii. 1, *passim*), to the effect that, at an assembly held on the 12th day, the dead man takes possession of one of the company and intimates what his friends are to do for him, or takes leave of his relatives.

The fundamental aim of the *śāntikarman* is to take effective measures to ward off evil and to return to ordinary life. Hence even the fire that served the deceased is removed—not, however, by the door—and extinguished outside. Its ashes are placed on a mat or in an old basket, and carried to the south or the south-west, where they are set down on a saliferous, and therefore unfruitful, piece of ground (Caland, 114). The new fire is kindled by the eldest son, after (or, sometimes, before) the removal of the old. The Rigveda is acquainted with a similar ceremonial, but the details of the ritual are considerably different (Hillebrandt, *Ved. Myth.* ii. 108 ff.).

Many of the ceremonies prescribed by the ritual literature for the *śāntikarman* are connected by some authorities with the *śmaśāna*; e.g. the digging of seven trenches to represent the seven rivers is met with sometimes in the one ceremony, sometimes in the other; but for the general interest of the subject it is a matter of no great importance to what part of the death-ritual we assign particular actions.

7. Pitṛmedha or śmaśāna.—The questions for whom and at what time the *śmaśāna* is to be performed have given rise to ritual discussion, and have been variously answered by the different schools. The season of the year and the reigning constellations are also of significance; on the whole, a preference seems to have been given to the day of the new moon. On the preceding day certain plants are rooted up at the spot destined for the *śmaśāna*, to the north of which earth is dug up, and from this are made the 600–2400 bricks which serve for the structure, besides the number (not precisely defined) employed for packing. The urn with the ashes is brought and laid between three *palāśa*-stakes driven into the ground inside a hut which must be between the village and the *śmaśāna* spot. If the bones are not to be found in the trench mentioned above, dust is taken from this spot, or the dead man is called upon from the bank of a river, and then any small animal (this being taken to represent him) that happens to spring upon an outspread cloth is treated as if it were the bones. Upon the three stakes is placed a perforated vessel containing sour milk and whey, which trickles through the numerous holes upon the urn below. To trumpet blast and the sound

of the lute the company circumambulate the spot after the fashion already described (striking the left thigh with the hand, etc.), and fan the urn with the extremities of their garments. [Many ritual authorities speak also of song and dance and female dancers: some do not mention the hut; others have additions to, or modifications of, the above. The variations are great, indeed: *e.g.* some place an empty kettle in the hut, and beat it with an old shoe.]

The ceremonies take place during the first, middle, and last parts of the night. The company repairs quite early to the *śmaśāna* spot, regarding whose extent there are widely deviating prescriptions. It must be out of sight of the village, in a hidden situation, yet visited by the rays of the midday sun. The spot must be staked off and surrounded with a rope, and—as in the case of the *agnichayana*, with whose ritual the *śmaśāna* has many points of contact—its surface must be covered with small stones. Furrows must be opened with a plough drawn by six or more oxen, and various seeds cast into them. In the middle of the ground a hole is made, into which gravel, saliferous earth, etc., are cast. Milk from a cow whose calf died is poured into the half of a bowl and stirred up with groats into a kind of drink; and this, or something else, is set out as food for the dead. [Towards the south (according to some) two crooked trenches are to be opened, and filled with milk and water. It may be mentioned, as one of the numerous and frequently characteristic details, that in the *śmaśāna* a piece of reed is immured, apparently to serve the purpose of a boat to the deceased (cf. above, p. 475[b]).] The bones are laid down upon a bed of *darbha*-grass, arranged in the figure of a man, covered with an old cloth, and asperged. The urn is destroyed. Over the remains is erected the monument, which conforms to a definitely prescribed plan, and in which the present writer sees the precursor of the *stūpa* of later days. When the structure has reached a certain height, food for the dead is walled in. After its completion, the *śmaśāna* is covered with earth, and water is poured over it from pitchers which it is the custom to destroy, or it is bestrewn with *avakā*-plants and *kuśa*-grass. Much is done also to separate the world of the living from that of the dead: the boundary betwixt them is marked by lumps of earth, stones, and branches; and the same purpose is served by the uttering of certain formulæ.

The soul of the deceased does not pass at once into the world of the Pitaras; it remains separate from them for a time as a *preta*, or 'spirit,' and has special offerings presented to it. But, after the lapse of a certain period, or when some fortunate circumstance occurs, the dead man reaches the circle of the *manes* through the instrumentality of the *sapiṇḍīkaraṇa*. The grandfather now drops out, since, as a rule, only three rice-balls are presented; but, as one of the *manes*, he receives his place in the ancestor-cult. This cult has struck its roots deep in Indian life. To feed the ancestors, to propitiate or keep them away, and to summon their aid, are the purposes served by the *śrāddhas* described in ritual- and law-books. The *śrāddhas* are offered either on special occasions, when fortunate occurrences take place, or regularly at certain periods of time. To the first category belong the birth of a son, the *nāmakaraṇa*, and other festivals, when the *manes* are spoken of as 'cheerful,' and are honoured in the same way as the gods: to the second belong the daily worship of the *manes*, that on the day of the new moon, the monthly worship, the great offering to the *manes* at the four months' sacrifices, at the soma-sacrifices, and the *aṣṭakā* celebration with the *anvaṣṭakya*, which coincide with the close of the year (see, for details, the present writer's sketch in *GIAP* iii. 2).

A. HILLEBRANDT.

DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan).—1. Conception of death: not due to natural causes.—The conception of death among the non-Aryan tribes of India does not materially differ from that entertained by other savage and semi-savage races. Death is not regarded as the result of natural causes, but is supposed to be due to the interference of devils, demons, or other evil spirits. This is particularly the case with diseases like dementia, the delirium of fever, and the like, which seem to indicate action by some indwelling spirit. This belief is naturally extended to accidents caused by wild animals, and deaths due to epidemic diseases, each of which is attributed to the working of a special disease-spirit. Hence many of these tribes use special means to identify the spirit, and the methods usually partake of the nature of Shamanism. The soul, again, is regarded as a little man or animal occupying the individual, which causes him to move. It leaves the body through the skull-sutures or other pure orifices of the body, in the case of persons who have lived virtuous lives; in the case of the wicked, by one or other of the impure exits. The soul may at times live apart from the body—a theory which explains to those who hold it the nature of dreams and the danger of waking a sleeper. There may be more souls than one, and these may have separate abodes—a belief accounting for the performance among some tribes of funeral rites at the place of death, at the grave, or at some other spot, where offerings are made to appease the spirit, and explaining much of the vagueness which characterizes their funeral ceremonies. The soul, again, is believed to be mortal; and with their lack of interest in their national history, and their imperfect recollection of past events, these people, after a time, regard their deceased ancestors as no longer objects of reverence or fear, and the attention of the survivors is concentrated on the more recently dead. The soul, when it leaves the body, is figured as a

naked, feeble mannikin, exposed to all kinds of injury until, by the pious care of its friends, a new body is provided for it. This often takes the form of a temporary refuge—a hut, a stone, a tree, or a piece of sacred grass. Or the soul may abide in an animal or insect; and this temporary refuge, or, among tribes who accept the theory of metempsychosis, this form of re-birth, may be identified by laying out ashes or flour at the scene of death. These, when carefully examined, often show the footmarks of the creature by which the soul has been occupied. Among the jungle tribes the soul is commonly supposed to abide in a tree—a belief which may in some instances have been suggested by the habit of tree-burial (see § 4 (*h*)). In W. India a common refuge of the soul is the *jīvkhāḍa*, or 'life-stone,' which is selected at the time of the funeral rites, and to which offerings and libations are made. This naturally leads to a further development, when a rude image of the deceased is made, placed among the household gods, and honoured with gifts of food and drink. In some cases, as among the Kachins of Upper Burma, an attempt is made to enclose the soul within a barrier of bamboos, from which it is solemnly released at the termination of the funeral rites (*Gazetteer Upper Burma*, I. i. 409). Sometimes, again, during this intermediate period, the soul is believed to haunt the scene of death, and at a later period it abides in the grave or at the cremation-ground. When beliefs such as these are current among the people, it is obviously of supreme importance that the funeral rites should be duly performed. No infective tabu is more dangerous than that which proceeds from a corpse unpurified by the customary rites; and perhaps no people in the world devote more anxious care than the Hindus to placating the friendly, and repressing or scaring away the malignant, spirits of the dead.

2. Spirits friendly and malignant.—The line between these two classes of spirits is clearly drawn, and it is based on the close family- and clan-organization of the non-Aryan tribes. The souls of the family dead, unless they are irritated by neglect, are generally benevolent; the souls of strangers are, as a rule, malevolent and hostile. In the case of the former no means of placation are neglected. Some tribes, after the soul has left the body, endeavour to recall it, and invite it to abide with them as a house-guardian; others make a miniature bridge to enable it, as it returns, to cross a stream, and thus evade the water-spirit (cf. art. BRIDGE, ii. 2, *e*); others, again, make a pretence of capturing the soul and bringing it back to its home. The provision of fire and light for the soul, either in the house itself or at the grave, is more general. Sometimes rites are performed to guide the soul to its longed-for place of rest; or it is solemnly invited to leave the grave and ascend to the other world, where it is welcomed by the friends who have gone before—a conception of the realm of the sainted dead which may have been independently arrived at by the non-Aryan tribes, though the details may be due to Hindu influence. To secure the peaceful departure of the soul, it is essential that the due egress should be provided for it by removing the dying person into the open air or into an upper chamber—a precaution which possesses the additional advantage of relieving the house from the death-tabu. With the same object, the skull is often broken at the time of cremation. When death occurs, the soul is placated by the wailing of its relatives; or, as among the Kāndhs, it is exhorted to keep quiet, to employ its time in working in the other world, and not to transform itself into a tiger and plague its friends (Risley, *TC* i. 408). More remarkable is the procedure of the Nēgas of Assam, who curse the evil spirit which has removed their friend, and threaten to attack it with their spears (*JAI* xxvi. 195, xxvii. 34; Dalton, 40). This custom apparently does not prevail among the Manipuri branch of the tribe (T. C. Hodson, *The Nāga Tribes of Manipur*, 1911, p. 146 ff.).

After death, the wants of the dead are provided for by gifts of food and drink (see art. FOOD FOR THE DEAD). Among some tribes the feeling prevails that the goods of the dead man should be appropriated to his use, and not taken by his friends, lest the envious spirit may return and claim them (Dalton, 21, 205; cf. Crawley, *Mystic Rose*, Lond. 1902, p. 98). In some cases a viaticum, in the shape of a coin or some article of value, is placed with the corpse to support it on its way to the other world, as among the Pahāria (Hosten, 'Paharia Burial-Customs,' *Anthropos*, iv. 670, 672). But people in this grade of culture, while strictly governed by a regard for precedents, contrive to evade the duty by placing worthless representations of the dead man's effects in the grave, or by merely waving them over his pyre (Rivers, *The Todas*, 362 f.). The arms and implements which are often buried with the corpse, or placed upon the grave, are obviously intended for the protection or use of the dead; and these are sometimes intentionally broken, either in the belief that, if left uninjured, they are useless to the dead, or to render them unavailable, and thus prevent the rifling of the tomb. Special clothing is also sometimes provided for the soul, and, as the garments of the dead man are supposed to be infected by the death-tabu, they are generally presented to some menial priest, whose sanctity guards him from danger in using them. Ornaments are sometimes placed in the grave: a set of diadems, for instance, like those of Mycenæ, having been found in a S. Indian interment at Tinnevelly, where they were probably deposited as amulets to protect the soul from evil spirits (Thurston, *Notes*, 149 f.). Some deposit with the dead a prayer written by the tribal priest; others, like the Gāros of Assam, slay a dog at the grave to guide the soul to Chikmang, the tribal paradise; or, as among the Gonds, clay images of horses, on which the soul may ride to heaven, are placed on the tomb (A. Playfair, *The Garos*, 1909, p. 109; Oppert, 84 f.). Closely connected with this is the custom of slaying human victims at the funeral, in order that they may accompany and serve the soul. Some of the wilder Assam and Burma tribes, down to quite recent times, killed slaves with this object (*Gazetteer Upper Burma*, I. i. 553; F. Mason, *Burmah*, 1860, p. 92 f.). Blood being the favourite form of refreshment for the dead, it is provided by animal sacrifices. The victim is often slain at the grave, and its blood is poured upon it. The Andamanese mother places a shell full of her milk on the grave of her child, and the Dosādh of the United Provinces pours blood into a pit, so that it may reach the soul (*JAI* xii. 142; Crooke, *TC* ii. 354). With the same intention water is poured on the grave, or dropped into the mouth of the dead or dying man. Many articles of food placed with the dead serve the additional purpose of scaring evil spirits. Rites such as these, performed at the grave, naturally develop into a periodical feast held in the house or in some holy place; food, again, is offered to a rude image representing the dead. The final stage is reached when it comes to be believed that, by feeding the tribal priest or a Brāhman, the food passes on for the use of the soul.

3. Rites performed to repel evil spirits.—The rites performed in the case of the malignant dead assume another form. Such spirits are the souls of those who have been removed from this world by an untimely or tragical death—those of the

murdered, the unburied, the unmarried, childless women, robbers, men of evil life, and strangers. These are included under the general title of *bhūt* (Skr. *bhūta*, 'formed,' 'produced')—a term which does not necessarily connote malignancy, but is now generally accepted in this sense. They all cherish feelings of envy and malignancy towards the living, and it is necessary to placate or, more generally, to repress and coerce them. The souls of the unmarried dead are often propitiated by a mock posthumous marriage, in which a boy or girl represents the dead youth or maiden. For the unburied dead a mock funeral is performed over such relics of the dead as may have been recovered, or over an image representing the deceased. The soul of a dead bandit, as among some of the robber tribes of N. India, is sometimes deified and worshipped. The most common example of the discontented spirit is the *churel* of N. India, or, as she is called in the S., the *alvantin*, the spirit of a childless woman, or of one who has died within the period of sexual impurity. Like demons in other countries, she has her feet turned backwards, and is much dreaded. She is repelled by scattering grain on the road from her grave. When she rises, she halts to collect this, until the morning call of the cock forces her to return—a practice extended even to the benignant dead by the Pahārias of British Sikkim, who drive a nail through each finger and toe of a prospective *churel*, to prevent her from harassing the living (Hosten, 673, 679). The ghost of a mutilated person is also an object of fear; but, except among the Chakmas of the E. frontier (Lewin, *Hill Tracts*, 74), there seems to be no Indian example of the custom of mutilating the corpses of enemies to prevent them from 'walking' (though Hosten, 679, records, without having been able to obtain any explanation for it, the custom of the Yākhās of British Sikkim, who, 'when a man has died, split open his hands from the middle knuckles to the wrist'). Spirits of this description of the malignant dead are repelled in various ways. Some tribes have an annual ghost-hunt, by which the evil spirits are scared from the house and village. Guns are fired, gongs and drums are beaten, and rockets are exploded. Dances and other revels, in which the rules of morality are disregarded—indecency being a mode of scaring evil spirits—are performed. Sometimes the rite takes the form of a mock combat—one band of performers representing the evil, and another the friendly, spirits; and it is always arranged that the latter shall be victorious (Lewin, *Wild Races*, 185). Some tribes measure the corpse, or watch it until it is buried, lest it may be occupied by an evil spirit.

The devices intended to prevent the return of malignant spirits are manifold. In some cases a cairn is raised over the grave (§ 4 (*d*)), or, as an additional precaution, the excavation is filled up with stones or thorns; or, as among many of the wilder tribes, the body is buried face downwards—a practice adopted by the Thugs. In Upper India the ghosts of menial tribes, such as sweepers, are so much dreaded that riots have followed an attempt to bury their dead in the usual way with the face turned to the sky. Sometimes the grave is enclosed by a fence too high for the ghost to 'take it,' particularly without a 'run.' Such an enclosure has the additional advantage of marking the place as tabu, and was the origin of the stone circles, erected round cairns, which subsequently developed into the artistic railings of Buddhist *stūpas*. Another common method is to deceive the spirit by carrying out the corpse feet foremost or by a special door, so that it may be unable to find its way back, by removing the house-ladder, or by forcing the bearers to carry their burden at a trot and to change places on the road. Special precautions are taken not to name the dead, at least for some time after death, lest the soul may consider it an invitation to return.

4. **Methods of disposal of the dead.**—(*a*) *Cannibalism.*—Of that most archaic method of disposal of the dead, the funeral feast, 'when the meat is nothing less than the corpse of the departed kinsman' (Hartland, *LP* ii. 278), India has so far supplied no clear examples. There are, however, cases of eating the aged with a view to reproducing the virtues or powers of the departed, as among the Lushais of Assam, and the Chingpaws and Was of Upper Burma (Lewin, *Hill Tracts*, 107; *Gazetteer Upper Burma*, I. i. 436, 496). But this custom is confined to the most isolated and savage tribes, and the similar tradition recorded by Dalton (220 f.) of the Birhors of Chotā Nāgpur is probably quite baseless—possibly an echo of a story told of tribes much further east.

(*b*) *Dolmens and other stone monuments.*—The earliest form of corpse-disposal of which physical evidence exists is that in dolmens, kistvaens, and other forms of stone monuments, of which India furnishes numerous examples. Though sporadic remains of such structures have been found in many parts of N. India, the assertion of Fergusson (*Rude Stone Monuments*, 475 f.) may be accepted as generally correct, that they are peculiar to the country south of the Vindhyan Hills, and are numerous in the country drained by the Godāvarī and its affluents, and in particular in the valley of the Kistna and its tributaries, on both sides of the Ghāts, through Coimbatore down to Cape Comorin, and especially in the neighbourhood of Conjeeveram. The most complete account of these stone monuments is that of Breeks, who describes them under three heads—cairns, or rather mounds enclosed by a stone circle; barrows; and kistvaens. In the cairns have been discovered earthen jars containing fragments of burnt bones, and some beautiful bronze vessels, probably imported from Babylonia or some other foreign country. Questions connected with the origin, purpose, and date of this series of monuments have given rise to much controversy. The fact that stone circles, of a form analogous to that of the ancient monuments, are used by the modern Todas has led to the inference that the members of this tribe are the successors of, or closely allied to, the old circle-builders. The character of the remains discovered does not, as a rule, suggest a date earlier than the Iron Age, which, if the analogy of Europe be accepted (though there are no materials for such a comparison), need not imply a date earlier than 850–600 B.C. But V. A. Smith (*IGI*, new ed., 1908, ii. 98) supposes that the Iron Age in N. India may go back to 1500 or even 2000 B.C. The difficulty of fixing an approximate date for these structures largely depends upon the fact that modern tribes, like the Kols and their kinsfolk in Chotā Nāgpur, as well as the Nāgas and Khāsis of Assam, still erect stone monuments of a type closely resembling the pre-historic examples. The modern funeral monuments of the Khāsis have been fully described by Gurdon (*The Khāsis*, 144 ff.), who divides them into three classes—those intended as seats for the souls of the dead while their bones are being conveyed to the tribal ossuary; memorial stones erected in honour of deceased ancestors; and stones which mark tanks used for purifying the mourners from the death tabu. Many monuments in Madras and among the tribes of the E. frontier take the form of ossuaries, into which the bones are removed after disinterment.

(*c*) *Exposure to beasts and birds of prey.*—Among other modes of disposal of the dead the most crude is that of exposure of the remains to beasts and
